CUTTING, in the manege, is when the horse's feet interfere; or when with the shoe of one foot he beats off the skin from the pastern joints of another foot. This is more frequent in the hind feet than the fore: the cause is commonly bad shoeing.

CUTTING IN WOOD is a particular kind of sculpture or engraving; the invention of which, as well as that in copper, is ascribed to a goldsmith of Florence: but it is to Albert Durer and Lucas they are both indebted for their perfection. See **ENGRAVING** and **PRINTING**. Hugo da Carpi invented a manner of cutting in wood, by means of which the prints appeared as if painted in clair-obscur.

CUTTINGS, or slips, in gardening, the branches or sprigs of trees or plants, cut or slipped off to set again; which is done in any moist fine earth. The best season is from August to April; but care is to be taken, when it is done, that the sap be not too much in the top, lest the cut die before that part in the earth have root enough to support it: nor must it be too dry or scanty; the sap in the branches assisting it to take root. In providing the cuttings, such branches as have joints, knots, or burrs, are to be cut off two or three inches beneath them, and the leaves to be stripped off so far as they are set in the earth. Small top branches, of two or three years' growth, are fittest for this operation.

CUTCH, an extensive province of the south-western part of Hindostan, situated principally between the twenty-third and twenty-fourth degrees of north latitude. It is bounded to the north by a sandy desert and the province of Sind; to the south by the gulf of Cutch; to the east by Gujrat, and to the west by Tatta, from which it is separated by the most eastern branch of the Indus. Its limits northward are not accurately defined, but it may be estimated at 110 miles in length, by seventy the average breadth. The greater part of the province is composed of woods and uncultivated plains; where a number of very fine horses are bred, superior camels, and black cattle. Other parts produce grain and cotton. It is chiefly possessed by various independent chiefs, who are often connected with the pirates of the coast: the inhabitants are principally Mahommedans. The chief towns are Boojeeboojee, Luckput, Bundar, and Mandavie.

CUTCH GUNDAVA, a district of Baloochistan, in Persia, situated at the bottom of the mountains south-east of Kelat, and about 150 miles in length, by forty-five in breadth. The soil is black and rich, growing every species of grain, together with cotton, madder, and indigo. The rains are in June, July, August, and in the spring months, during the summer, the simoom, or pestilential wind, is frequent and very destructive. The climate is otherwise good, and the soil excellent, producing a large revenue to the khan of Kelat. Great quantities of grain are exported to the sea-ports of Corachie and Sonmeany. To the northward of Cutch Gundava lies Anund Dijil.

CUTCHWARA, a district in the province of Malwah, Hindostan, situated about the twenty-fifth degree of north latitude, and mostly tributary to the Malwah Mahrattas. It is intersected

by the Gillysinde river. The chief towns are Dewagur and Soonel.

CUTH, signifies knowledge or skill. So Cuthwin is a knowing conqueror; Cuthred, a knowing counsellor; Cuthbert, famous for skill. Much of the same nature are Sophocles and Sophianus.

CUTH, or **CUTHAH**, a province of Assyria, on the Araxes, the same with Cush; but others take it to be the country which the Greeks called Susiana, and which to this day, says Dr. Wells, is by the inhabitants called Chusistan. Calmet is of opinion that Cuthah and Scythia are the same place, and that the Cuthites who were removed into Samaria by Salmaneser (2 Kings xvii. 24), came from Cush or Cuth, mentioned in Gen. ii. 13. They worshipped the idol Nergal, id. ibid. 30. He adds that they came from Cush, or Cutha upon the Araxes; and that their first settlement was in the cities of the Medes, subdued by Salmaneser and the kings of Syria, his predecessors. The Scriptures inform us, that the Cuthites, upon their arrival in this new country, continued to worship the gods formerly adored by them beyond the Euphrates. Esarhaddon, king of Assyria, who succeeded Sennacherib, appointed an Israelitish priest to go thither, and instruct them in the religion of the Hebrews. But these people thought they might reconcile their old superstition with the worship of the true God. They therefore framed particular gods for themselves, which they placed in the several cities where they dwelt. But afterwards they gave up idolatry, and adhered solely to the law of Moses. The Samaritans were their descendants.

CUTICLE, *n. s.* } Lat. *cuticula*. The outward skin of the body; a
CUTI'CLAR, *adj.* }
CUTA'NEOUS, *adj.* } thin skin formed on the surface of any liquor. Belonging or relating to the skin.

This serous, nutritious mass is more readily circulated into the *cutaneous* or remotest parts of the body.
Floyer on Humours.

When any saline liquor is evaporated to *cuticle* and let cool, the salt concretes in regular figures, which argues that the particles of the salt, before they concreted, floated in the liquor at equal distances in rank and file.
Newton's Opticks.

Some sorts of *cutaneous* eruptions are occasioned by feeding much on acid unripe fruits and farinaceous substances.
Arbutnot.

In each of the very fingers there are bones and gristles, and ligaments and membranes, and muscles, and tendons, and nerves and arteries, and veins and skin, and *cuticle* and nail.
Bentley's Sermons.

Where the spontaneous adhesive electric atmospheres are employed to charge plates of air, as in the Galvanic pile, or probably to charge their animal membranes or *cuticles*, as perhaps in the shock given by the torpedo or gymnotus, it seems necessary that the intervening non-conducting plate must be extremely thin.
Darwin.

Those parts of our system which are in health excited into perpetual action, give us pain when they are not excited into action: thus, when the hands are

CUTLERY.

for a time immersed in snow, an inaction of the *cutaneous* capillaries is induced, as is seen from the paleness of the skin, which is attended with the pain of coldness. *Id.*

CUTICLE. See **ANATOMY.**

CUTLASS, *n. s.* Fr. *coutelas*. This word is written sometimes cutlase, sometimes cutleax; in Shakspeare, cutleax; and in Pope, cutlash. A broad cutting sword: the word is much in use among the seamen.

Were 't not better

That I did suit me all points like a man?

A gallant cutleax upon my thigh,

A boar spear in my hand?

Shakspeare. As You Like It.

Mores, in his curious dissertation on letter founders, calls a *cutlass*, as it seems, a *courtclasse*, among the antique typographic ornaments. *Warton.*

CUTLER (Sir John), bart. and citizen of London, was a great benefactor to the grocers' company, and contributed largely to the rebuilding of the college of physicians in Warwick-lane. After his death, however, in 1699, his executors claimed the sum which he had advanced, with interest, amounting in all to £7000. They finally compromised the claim for £2000. Pope commemorates this circumstance in some well-known verses; describing our baronet as a perfect miser. It appears, however, that he liberally subscribed to many charities, and built at his own charge the north gallery of his parish-church, St. Margaret's, Westminster. He had two daughters, who were respectively married to John, earl of Radnor, and Sir William Portman, bart. His funeral it is said cost the sum of £7666.

CUTLERS, COMPANY OF. This company was incorporated in 1413 by Henry V.; their arms are *gules*, six daggers in three crosses saltire *argent*, handled and hilted *or*; the crest an elephant with a castle.

CUTLERY, in connection with the mechanical arts, will embrace all kinds of edged and sharp tools, of iron or steel, and the modes of their manufacture.

It might be expected, that in no department of the arts of a country, would the progress of civilisation be more distinctly marked, than in the degree of excellence attained in this manufacture. A knife will purchase half the lands of a village from a barbarous tribe; and Great Britain has well sustained her superiority among civilised nations in the general quality of her cutlery goods.

But in other, and far less civilised countries, a superior steel has been manufactured for ages. It is a little remarkable, that none of our modern discoveries in chemistry have enabled us to imitate, successfully, the sword and sabre blades of Damascus; and that, within a very few years, in 1795, we believe, a new kind of foreign steel, the wootz of India, has been introduced into this country, and been found superior to any thing manufactured here for the blades of pen-knives.

The Damascene blades are supposed, by European cutlers, to be constructed of fine iron and steel-wire welded together in alternate layers;

the wave or water being given to them by sulphate of alumina applied to the final surface. Other accounts state them to be hardened by repeated immersions, when red-hot, in goat's blood. But the real process has never been accurately known in this country; and it is not improbable, that the iron ore of Syria may possess some peculiarity which is the foundation of this excellence in its manufactured steel.

Such a conjecture has been offered by Mr. Stodart, with regard to the ores out of which the wootz of India is formed. For the introduction of it into this country, we are indebted to the late distinguished naturalist, Sir Joseph Banks, who first procured a pen-knife to be made from a cake of it, in the year above-mentioned. The forging was attended with some difficulty, owing to the unequal fusion of the metal, some parts being overcharged with the steely principle, and others being as much deficient in it. But the pen-knife made was excellent. The Indian method of making wootz has been described as follows: forged iron, in pieces, is enclosed in a crucible, and heated in a furnace with wood. Two or three pairs of bellows are employed to augment the heat, until the wood is completely charred, and the iron fused and converted into steel. The chief peculiarity of the process seems to be the use of uncharred wood. A variety of cutting instruments have been manufactured from this steel with great success.

Those articles of cutlery which do not require a fine polish, and are of low price, are made from what is called blistered steel, or that which has not undergone fusion. See our article **STEEL**. Those which require the edge to possess considerable tenacity, but in which superior hardness is not required, are made from sheer steel. The finer kinds of cutlery are made from steel which has been in a state of fusion, and which is termed cast-steel, no other kinds being susceptible of a fine polish. Table-knives are mostly made of sheer-steel, the tang and shoulder being of iron, and the blade being attached, by giving them a welding heat. The knives, after forging, are hardened, by heating them red-hot, and plunging them into water; they are afterwards heated over the fire, till they become blue, and then ground. Forks are made, almost altogether, by the aid of the stamp and appropriate dies. The prongs only are hardened and tempered. Razors are made of cast-steel, the edge of a razor requiring the combined advantages of great hardness and tenacity. After the razor-blade is forged into its proper shape, by the aid of a convex-faced hammer and anvil, it is hardened, by gradually heating it to a bright red heat, and plunging it into cold water. It is tempered by heating it afterwards until a brightened part appears of a straw color. This would be more equally effected by the use of sand, or, what is still better, by hot oil, or a fusible mixture, consisting of eight parts of bismuth, five of lead, and three of tin; a thermometer being placed in the liquid at the time the razors are immersed, for the purpose of indicating the proper temperature, which is about 500° of Fahrenheit. After the razor has been ground into its proper shape, it is finished by polishing.

CUTLERY.

The glazer, used in polishing, is formed of wood, faced with an alloy of lead and tin; after its face is turned to the proper form and size, it is filled with notches, which are filled up with emery and tallow. This instrument gives the razor a smooth and uniform surface and a fine edge. The polisher consists of a piece of circular wood, running upon an axis, like that of the stone or the glazer. It is coated with leather, having its surface covered with crocus martis. The handles of razors and knives are made of ivory and tortoise-shell, bone, or other materials, directed by fashion, or the use for which they are designed. The horn of razor-handles is commonly cut into pieces, and placed between two dies, having a recess of the shape of the handle. By this process it admits of considerable extension, and is dyed black by means of logwood and green vitriol. The clear horn-handles are sometimes stained, so as to imitate tortoise-shell, by being coated with a composition of three parts of potash, one of minium, ten of quicklime, and as much water as will reduce the whole into a pulpy mass. Those parts of the handle requiring darker shades are more thickly covered, and the stains are dried in before the fire.

The manufacture of pen-knives is divided into three departments; the first is the forging of the blades, the spring, and the iron scales; the second, the grinding and polishing of the blades; and the third, the handling, which consists in fitting up all the parts, and finishing the knife. The blades are made of the best cast-steel, and hardened and tempered to about the same degree with that of razors. In grinding they are made a little more concave on one side than the other, in other respects they are treated in a similar way to razors. The handles are covered with horn, ivory, and sometimes wood; but the most durable are those of stags-horn. The general fault in pen-knives is that of being too soft. The temper ought to be not higher than a straw color, as it seldom happens that a pen-knife is so hard as to snap on the edge.

The beauty and elegance of polished steel is never displayed to more advantage than in the manufacture of the finer kinds of scissors. The steel employed for this purpose should be of the choicest description; it must possess hardness and uniformity of texture for the sake of securing a fine polish, and great tenacity, when hot, for the purpose of forming the bow or ring of the scissor, which requires to be extended from a solid piece, having a hole previously punched through it. It ought also to be very tenacious when cold, to allow that delicacy of form observed in ladies' scissors. After they are forged as near to the same size as the eye of the workman can ascertain, they are paired. The bows and some other parts are filed to their intended form: the blades are also roughly ground, and the two sides properly adjusted to each other, after being bound together with wire, and hardened up to the bows. They are afterwards heated till they become of a purple color, which indicates their proper temper. Almost all the remaining part of the work is performed at the grinding mill, with the stone, the lap, the po-

lisher, and the brush; the last being used to polish those parts which have been filed, and which the lap and the polisher cannot touch. Previous to screwing the scissors finally together, they are rubbed over with the powder of quicklime, and afterwards cleaned with soft sheep leather. The quicklime absorbs the moisture from the surface. Scissors are ornamented by bluing and gilding; also with studs of gold or polished steel. Very large scissors are manufactured partly of iron and partly of steel; the shanks and bows being of the former. These, as well as those all of steel, which are not hardened all over, cannot be polished: an inferior sort of lustre, however, is given to them by means of a burnish of hardened polished steel, which is very easily distinguished from the real polish, by the irregularity of the surface. Having entered into these particulars, relating to the manufacture of the usual articles found in cutlers' shops, we shall now enter upon some of the more general principles that are applicable to the finer articles of cutlery.

Cutlers do not use any coating to their work at the hardening heat, as the file-cutters do; indeed, it seems evidently unnecessary when the article is intended to be tempered and ground. The best rule is to harden as little as possible above the state intended to be produced by tempering. Work which has been overheated has a crumbly edge, and will not afford the wire hereafter to be described. The proper heat is a cherry-red, visible by day-light. No advantage is obtained from the use of salt in the water, or cooling that fluid, or from using mercury instead of water; but it may be remarked, that questions respecting the fluid are, properly speaking, applicable only to files, gravers, and such tools as are intended to be left at the extreme of hardness.

While Mr. Stodart does not seem to attach much value to peculiarities in the process of hardening, he mentions it as the observation of one of his best workmen, that the charcoal fire should be made up with shavings of leather: and that he never had a razor crack in the hardening since he had used this method. It appears from a consideration of other facts, that this process is likely to prove advantageous. When brittle substances crack in cooling, it arises from the outside contracting and becoming too small to contain the interior parts. But it is known, that hard steel occupies more space than soft, and it may be easily inferred, that the nearer the steel approaches to the state of iron, the less will be this increase of dimensions. If, then, we suppose a razor, or any other piece of steel, to be heated in an open fire with a current of air passing through it, the external part will, by the loss of carbon, become less steely than before; and when the whole piece comes to be hardened, the inside will be too large for the external part, which will probably crack. But if the piece of steel be wrapped up in the cementing mixture, or if the fire itself contain animal coal, and is put together so as to operate in the manner of that mixture, the external surface, instead of being degraded by this heat, will be more carbonated than the internal part, in consequence of which

CUTLERY.

it will be so far from splitting or bursting during its cooling, that it will be acted upon in a contrary direction, tending to render it more dense and solid.

One of the greatest difficulties in hardening steel-works of any considerable extent, more especially such articles as are formed of thin plates, or have a variety of parts of different sizes, consists in the apparent impracticability of heating the thicker parts before the slighter are burned away; besides which, even for a piece of uniform figure, it is no easy matter to make up a fire which shall give a speedy heat, and be nearly of the same intensity throughout. 'This difficulty,' says Mr. Nicholson, 'formed a very considerable impediment to my success in a course of delicate steel-work, in which I was engaged about seven years ago; but, after various unsuccessful experiments, I succeeded in removing it by the use of a bath of melted lead, which, for very justifiable reasons, has been kept a secret till now. Pure lead, that is to say, lead containing little or no tin, is ignited to a moderate redness, and then well stirred: into this the piece is plunged for a few seconds; that is to say, until when brought near the surface, that part does not appear less luminous than the rest. The piece is then speedily stirred about in the bath, suddenly drawn out, and plunged into a large mass of water. In this manner, a plate of steel may be hardened so as to be perfectly brittle, and yet continue so sound as to ring like a bell; an effect which I never could produce in any other way. Mr. Stodart has lately made trial of this method, and considers it to be a great acquisition to the art, as, in fact, I found it.'

The letting down, or tempering of hard steel, is considered as absolutely necessary for the production of a fine and durable edge. It has been usual to do this by heating the hardened steel till its bright surface exhibits some known color by oxidation. The first is a very faint straw color, becoming deeper and deeper, by increase of heat, to a fine deep golden-yellow, which changes irregularly to a purple, then to an uniform blue, succeeded by white and several successive faint repetitions of these series. It is well known, that the hardest state of tempered instruments, such as razors and surgeons' instruments, is indicated by this straw color; that a deeper color is required for leather-cutters' knives, and other tools, that require the edge to be turned on one side; that the blue, which indicates a good temper for springs, is almost too soft for any cutting instrument, except saws, and such tools as are sharpened with a file, and that the lower states of hardness are not at all adapted to this use. But it is of considerable importance, that the letting down, or tempering, as well as the hardening, should be effected by heat equally applied, and that the temperatures, especially at the lower heats, where greater hardness is to be left, should be more precisely ascertained than can be done by the different shades of oxidation. Mr. Hartley first practised the method of immersing hard steel in heated oil, or the fusible compound of lead five parts, tin three, and bismuth eight. The temperature

of either of these fluids may be ascertained in the usual manner, when it does not exceed the point at which mercury boils; and, by this contrivance, the same advantages are obtained in lowering the temperature of a whole instrument, or any number of them at once, as have already been stated in favor of my method of hardening. Oil is preferable to the fusible mixture for several reasons. It is cheaper; it admits of the work being seen during the immersion, by reason of its transparency; and there is no occasion for any contrivance to prevent the work from floating.

Mr. Nicholson requested Mr. Stodart to favor him with an account of the temperatures at which the several colors make their appearance upon hardened steel; in compliance with which he made a series of experiments upon surgeons' needles, hardened, highly polished, and exposed to a gradual heat, while floating at the surface of the fusible mixture. The appearances are as follow: No. 1, taken out at 430° of Fahrenheit. This temperature leaves the steel in the most excellent state for razors and scalpels. The tarnish, or faint yellowish tinge, it produces, is too evanescent to be observed, without comparison with another piece of polished steel. Instruments, in this state, retain their edge much longer than those upon which the actual straw color has been brought, as is the common practice. Mr. S. informs me, says Mr. Nicholson, that 430° is the lowest temperature for letting down, and that the lower degrees will not afford a firm edge. No. 2, at 440°, and 3, at 450°. These needles differ so little in their appearance from No. 1, that it is not easy to arrange them with certainty when misplaced. No. 4 has the evident tinge, which workmen call pale straw color. It was taken out at 460°, and has the usual temper of pen-knives, razors, and other fine edge-tools. It is much softer than No. 1, as Mr. Stodart assures me, and this difference exhibits a valuable proof of the advantages of this method of tempering. Nos. 2, 6, 7, and 8, exhibit successive deeper shades of color, having been respectively taken out at the temperatures 470°, 480°, 490°, and 500°. The last is of a bright brownish metallic yellow, very slightly inclining to purple. No. 9 obtained an uniform deep blue at the temperature of 580°. The intermediate shades produced on steel, by heats between 500° and 580°, are yellow, brown, red, and purple, which are exhibited irregularly on different parts of the surface. As I had before seen this irregularity, particularly on the surface of a razor of wootz, and had found, in my own experience, that the colors on different kinds of steel do not correspond with like degrees of temper, and probably of temperature in their production, I was desirous that some experiments might be made upon it by the same skilful artist. Four beautifully polished blades were, therefore, exposed to heat on the fusible metal. The first was taken up when it had acquired the fine yellow, or uniform deep straw color. The second remained on the mixture, till the part nearest the stem had become purplish; at which period, a number of small round spots, of a purplish color, appeared in the clear yellow of the blade. The third was left till the thicker parts of the blade were of a deep

CUTLERY.

ruddy purple; but the concave face still continued yellow. This also acquired spots like the other, and a slight cloudiness. These three blades were of cast-steel; the fourth, which was made out of a piece called Styrian steel, was left upon the mixture till the red tinge had pervaded almost the whole of its concave face. Two or three spots appeared upon this blade; but the greater part of its surface was variegated with blue clouds, disposed in such a manner, as to produce those waving lines which, in Damascus steel, are called 'the water.' Two results are more immediately suggested by these facts: first, that the irregular production of a deep color upon the surface of brightened steel, may serve to indicate the want of uniformity in its composition; and, secondly, that the deep color, being observed to come on first at the thickest parts, Mr. Stodart was disposed to think, that its more speedy appearance was owing to those parts not having been hardened. See STEEL.

An ingenious method of hardening delicate steel-work was some time since communicated to Mr. Stodart by Dr. Wollaston. The steel enclosed in a tube is surrounded by the fusible alloy of eight parts lead, two tin, and five bismuth. The tube, with its contents, is then heated in a furnace to redness, and plunged into a cooling fluid. It is afterwards thrown into boiling water, by which the alloy is fused, and the steel is left perfectly hardened and unaltered by twisting or cracking.

Suppose our cutting instrument to be forged, hardened, and let down or tempered; it remains to be ground, polished, and set. The grinding of fine cutlery is performed upon a grind-stone of a fine close grit, called a Bilston grind-stone, and sold at the tool shops in London at a moderate price. The cutlers use water, and do not seem generally to know any thing of the use of tallow. The face of the work is rendered finer by subsequent grinding upon mahogany cylinders, with emery of different fineness, or upon cylinders faced with hard pewter, called laps, which are preferable to those with a wooden face. The last polish is given upon a cylinder faced with buff leather, to which crocus, or the red oxide of iron, is applied with water. This last operation is attended with considerable danger of heating the work, and almost instantly reducing its temper along the thin edge, which at the same time acquires the colors of oxidation.

The setting now remains to be performed, which is a work of much delicacy and skill: so much so, indeed, that Mr. Stodart says, he cannot produce the most exquisite and perfect edge if interrupted by conversation, or even by noises in the street. The tool is first whetted upon a hone with oil, by rubbing it backwards and forwards. In all the processes of grinding or wearing down the edge, but more especially in the setting, the artist appears to prefer that stroke which leads the edge according to the action of cutting, instead of making the back run first along the stone: for if there be any lump or particle of stone or other substance lying upon the face of the grinder, and the back of the tool be first run over it, it will proceed beneath the edge and lift it up, at the same time

producing a notch. But on the other hand, if the edge be made to move foremost and meet such particle, it will slide beneath it, and suffer no injury. Another precaution in whetting is, that the hand should not bear heavy; because it is evident, that the same stone must produce a more uniform edge if the steel be worn away by many, than by few strokes. It is also of essential importance that the hone itself should be of a fine texture, or that its silicious particles should be very minute.

The grind-stone leaves a ragged edge, which it is the first effect of whetting to reduce so thin that it may be bent backwards and forwards. This flexible part is called the wire, and if the whetting were to be continued too long it would break off in pieces without regularity, leaving a finer though still very imperfect edge, and tending to produce accident while lying on the face of the stone. The wire is taken off by raising the face of the knife to an angle of about fifty degrees with the surface of the stone, and giving a light stroke edge foremost, alternately towards each end of the stone. These strokes produce an edge, the faces of which are inclined to each other in an angle of about 100 degrees, and to which the wire is so slightly adherent that it may often be taken away entire, and is easily removed by lightly drawing the edge along the finger nail. The edge thus cleared, is generally very even: but it is too thick, and must again be reduced by whetting. A finer wire is by this means produced, which will require to be again taken off, if, for want of judgment or delicacy of hand, the artist should have carried it too far. But we will suppose the obtuse edge to be very even, and the second wire to be scarcely perceptible. In this case the last edge will be very acute, but neither so even nor so strong as to be durably useful. The finish is given by two or more alternate light strokes with the edge slanting foremost, and the blade of the knife raised, so that its plane forms an angle of about twenty-eight degrees with the face of the stone. This is the angle which by careful observation and measurement Mr. Stodart habitually uses for the finest surgeons' instruments, and which he considers as the best for razors, and other keen cutting tools. The angle of edge is therefore about fifty-six degrees. The excellence and uniformity of a fine edge may be ascertained, by its mode of operation when lightly drawn along the surface of the skin, or leather, or any organised soft substance. Lancets are tried by suffering the point to drop gently through a piece of thin soft leather. If the edge be exquisite, it will not only pass with facility, but there will not be the least noise produced, any more than if it had dropped into water. This kind of edge cannot be produced, but by performing the last two or more strokes on the green hone. The operation of strapping is similar to that of grinding or whetting, and is performed by means of the angular particle of fine crocus, or other material bedded in the face of the strap. It requires less skill than the operation of setting, and is very apt, from the elasticity of the strap, to enlarge the angle of the edge or round it too much. The chief manufactories of cutlery in

England, are at Sheffield and in London. At the former by the local advantages of coal, &c. on the spot, and the greater division of labor, cutlery in general is afforded at much lower prices than in the metropolis, where the finer descriptions of this important manufacture are more attended to, and surgical instruments, in particular, are made with the greatest skill.

CUTLET, *n. s.* *Fr. côtelette.* A steak; strictly, it means a rib.

So mutton *cutelets*, prime of meat.

Swift.

CUTTACK, a considerable district of Orissa, Hindostan, situated between the twentieth and twenty-second degrees of north latitude. It is bounded on the north by Midnapoor and Mo-hurbunge; on the south by the Circars; on the east by the Bay of Bengal; and on the west by several small states of the interior. Its length is about 150 miles, and breadth about sixty, containing a population of 1,200,000 souls. Between Gaintee and Bamori the country is richly productive, and is inhabited by weavers, who manufacture muslins in pieces for turbans. From Arickpoor to Cuttack the land is chiefly arable, but interspersed with bushes, and not thoroughly cultivated. The Mahanuddy River, in passing through this country, often changes its name, according to the vicinity of different towns and villages. It is also watered by other considerable streams. The rents are chiefly paid in cowries.

The holy land of Juggernauth extends about fifteen miles on each side of the temple of Juggernauth, to the north and south. Its occupants have from time immemorial been exempt from the taxes which Hindoos pay for access to the temple, except during the ruth and dole jattries, when they also are liable to a small impost.

The chief towns are Cuttack, Juggernauth, Buddruck, and Balasore. This district is mentioned by the Mahommedan historians as early as the year 1212, under the title of Jagepore, or Jehazpore. It was then subject to a Hindoo prince, who resided at Jagepore; it was subdued by and annexed to Bengal in the reign of Solyman Kerang, 1569. Thus it remained till the year 1751, when it was ceded by the nuwah Alyverdy Khan to the Nagpore Mahrattas, who, in 1803, were again compelled to resign it to the victorious arms of the British, and it is now managed by a civil establishment of judge, collector, &c.

CUTTACK, the capital of the above district, called also Cuttack Benares, formerly Saringgur, was once fortified, and a highly respectable town; but, during the period it was governed by the Mahrattas, it fell to decay. In the year 1592 it withstood the Mogul arms for nearly a month, and is naturally strong, but the climate is unhealthy. It is at present the residence of the gentlemen of the civil establishment, and has a cantonment for a corps of native infantry.

CUTTER, a small vessel, commonly navigated in the channel of England. It is furnished with one mast, and rigged as a sloop. Many of these vessels are used in an illicit trade, and others are employed by government to take them; the latter of which are either under the direction of the admiralty, or custom-house.

CUTTLE. Ang.-Sax. *cutele.* A fish, which, when pursued, darkens the water with an inky substance; a foul-mouthed fellow; a knife.

Away, you entpurse rascal; you filthy bung, away. by this wine, I'll thrust my knife in your mouldy chaps, if you play the saucy *cuttle* with me.

Shakspeare. Henry IV.

It is somewhat strange, that the blood of all birds and beasts, and fishes, should be of a red colour, and only the blood of the *cuttle* should be as black as ink.

Bacon.

He that uses many words for the explaining any subject, doth, like the *cuttle* fish, hide himself for the most part in his own ink.

Ray on the Creation.

CUTTLE-FISH. See **SEPIA**.

CUTTS (John lord), was son of Richard Cutts, esq. of Matching in Essex; where the family were settled about the time of Henry VI., and had a large estate. He entered early into the service of the duke of Monmouth, was aide-camp to the duke of Lorraine in Hungary, and signalised himself in a very extraordinary manner at the taking of Buda by the imperialists in 1686; which important place had been for near a century and a half in the hands of the Turks. Returning to England at the Revolution, he obtained a regiment of foot; was created baron Gowran in Ireland, December 6th, 1690; appointed governor of the Isle of Wight, April 14th, 1693; was made a major-general; and, when the assassination project was discovered, 1695-6, was captain of the king's guard. He was colonel of the Coldstream guards in 1701; when Mr. Steele, who was indebted to his interest for a military commission, inscribed to him his first work, *The Christian Hero*. On the accession of queen Anne, he was made a lieutenant-general of the forces in Holland; commander in chief of the forces in Ireland, under the duke of Ormond, March 23d, 1704-5; and afterwards one of the lords justices of that kingdom. He died at Dublin January 26th, 1706-7, and was buried there in the cathedral of Christ Church. He wrote a poem on the death of queen Mary, and published, in 1687, *Poetical Exercises*, written upon several occasions, and dedicated to her royal highness Mary, princess of Orange. One of his songs is quoted by Steele in his *Tatler*; but his *Muse Cavalier* is erroneously ascribed by Walpole to lord Peterborough.

CUT-WATER, the sharp part of the head of a ship below the beak, so called because it cuts or divides the water before it comes to the bow, that it may not come too suddenly to the breadth of the ship, which would retard it.

CUT-WORK, *n. s.* Embroidered work.

CUVIER (George Leopold Christian Frederic Dagobert), baron and peer; born Aug. 25, 1769, at Monthéiard, in the duchy of Würtemberg. His brilliant talents early excited great expectations. His father was an officer. As the son's health did not allow him to become a soldier, he resolved to be a clergyman, and was obliged to pass an examination for the stipend, by the help of which he expected to study at Tübingen. A malicious examiner rejected him. The affair, however, was marked by so much injustice, that prince Frederic, brother of the duke, and governor of the district, thought it his duty to

compensate Cuvier by a place in the Charles Academy at Stuttgart, where he gave up his intention of becoming a clergyman. In Stuttgart he studied law, although fond of natural history, and to this period of his life he is indebted for his accurate knowledge of the German language and literature. The narrow circumstances of his parents compelled him to accept the office of tutor in the family of count D'Hericy, in Normandy, where he devoted his leisure to natural science. Cuvier soon perceived that zoology was far from that perfection to which Linnæus had carried botany, and to which mineralogy had been carried by the united labors of the philosophers of Germany and France. The first desideratum was a careful observation of all the organs of animals, in order to ascertain their mutual dependence, and their influence on animal life; then a confutation of the fanciful systems which had obscured rather than illustrated the study. Examinations of the marine productions, with which the neighbouring ocean abundantly supplied him, served him as a suitable preparation. A natural classification of the numerous classes of *vermes* (Linn.) was his first labour, and the clearness with which he gave an account of his observations and ingenious views, procured him an acquaintance with all the naturalists of Paris. Geoffrey St. Hilaire invited him to Paris, opened to him the collections of natural history, over which he presided, took part with him in the publication of several works on the classification of the *mammalia*, and placed him at the central school in Paris, May, 1795. The institute, being re-established the same year, received him as a member of the first class. For the use of the central school, he wrote his *Tableau Élémentaire de l'Histoire Naturelle des Animaux* (1798), by which he laid the foundation of his future fame. From this time he was considered one of the first zoologists of Europe. He soon after displayed his brilliant talents as professor of comparative anatomy. His profound knowledge was not less remarkable than his elevated views, and the elegance with which he illustrated them before a mixed audience. In the lecture-room of the Lycée, where he lectured several years on natural history, was assembled all the accomplished society of Paris, attracted by the ingenuity of his classifications, and by his extensive surveys of all the kingdoms of nature. In January, 1800, he justly received the place formerly occupied by D'Aubenton, in the Collège de France. Nor did his merits escape the sagacity of Napoleon. In the department of public instruction, in which, one after another, he filled the most important offices, he exercised much influence by his useful improvements and indefatigable activity. He delivered a report very honorable to Germany, in 1811, when he returned from a journey in Holland and Germany, as superintendent of instruction. He was accompanied in his journey by Noël. In 1813 the emperor appointed him *Maître des Requêtes* to the council of state, and committed to his care the most important affairs in Meniz. Louis XVIII. confirmed him in his former offices, and raised him to the rank of counsellor. As such, he belonged at first to the committee of legisla-

tion, and afterwards to that of the interior. As a politician, he drew upon himself the reproaches of the liberals. In general, the political course of Cuvier forms a contrast to his scientific one, and is, besides, of little importance. The measures of the abbé Frayssinous, then chancellor of the university of Paris, determined him to resign the office of university-counsellor, in December, 1822. The principal of his works are, *Recherches sur les Ossements Fossiles*, 5 vols., 4to., with plates (the classical introduction to this work is printed separately); *Discours sur les Révolutions de la Surface du Globe, et sur les Changemens qu'elles ont produit dans le Règne animal* (Paris, 1825); also, *Le Règne animal* (1817, 4 vols.); *Leçons d'Anatomie Comparée, recueillies par Duméril et Duvernoy* (1805, 5 vols.); *Recherches anatomiques sur les Reptiles regardés encore comme douteux* (1807, 4to.); *Mémoires pour servir à l'Histoire de l'Anatomie des Mollusques* (1816, 4to.). As perpetual secretary, &c., of the academy, in the class of physical sciences, he pronounced eulogies on the deceased members of the institute. The *Recueil d'Éloges Historiques* (Paris, 1819, 2 vols.), contains models worthy of imitation. The French academy received him, in consequence, among their forty members, and almost all the learned societies of the world sent him honorary diplomas. France is indebted to him for the establishment of a cabinet of comparative anatomy, which is the finest osteological collection in Europe. Cuvier may be said to have created the science of natural history, having, by his extraordinary and almost instinctive perception of the organic analogies, as traced in the fossil remains which had previously been considered as the mere ornaments of a cabinet of curiosities, thrown a light on the universal system of creation, of which those formed in previous schools could not have even the remotest idea. In the political changes which France underwent, the estimation in which he was held continued unaffected. King Louis Philippe conferred upon him the rank of peer, his title of baron being merely nominal. Cuvier expired on the 13th of May, 1832, in the 63rd year of his age, leaving no property but his library and cabinet of natural history, both which were purchased by the French government for 72,000 francs. The French king, also, as a testimony of his regard for the learning and abilities of the deceased naturalist, conferred a pension of 6000 francs on his widow, with the enjoyment of the apartments in the Jardin des Plantes, occupied by her late husband.

CUXHAVEN, a sea-port of Germany, in the duchy of Bremen, situated on the left bank of the Elbe, at its embouchure. The harbour, being very large and commodious, is much frequented, and vessels generally take in pilots here, in order to ascend the river to Hamburg. A yacht is stationed out at sea, near the outermost buoy, with pilots ready to conduct any vessel that may demand them. The town and bailiwick belong to the corporation of Hamburg, who have held them ever since the fourteenth century. During the late revolutionary wars Cuxhaven became a place of great importance as an entrepôt of

British goods. On the fall of Hamburg in 1806, it came into the possession of the French, and remained under their domination above seven years. When, at the close of the war, the French defended Hamburg, Cuxhaven was the scene of some severe fighting. It is sixty miles north-west of Hamburg, and the light-house is in long. $8^{\circ} 43' 1''$ E., lat. $53^{\circ} 52' 21''$ N.

CUYO, or *Cuyo*, an extensive province of Peru, and a portion of the former vice-royalty of Buenos Ayres, is bounded on the north by Tucuman, on the east by the Pampas deserts, on the south by deserts, and on the west by the Andes. It is mild in climate, and very fertile in grain of all kinds, and pasturage: much wine and brandy are made, and immense herds of cattle range the valleys.

CYATHUS, *κυθος*, from *χυω*, to pour out, was a common measure among the Greeks and Romans, both of the liquid and dry kind. It was equal to an ounce, or the twelfth part of a pint, and was made with a handle like our punch-ladle. The Romans frequently drank as many cyathi as there were muses, i. e. nine; or as many as there were letters in their patron's name. The cyathus of the Greeks is said by Galen and others to have weighed ten drachms; elsewhere he says, that a cyathus contains twelve drachms of oil, thirteen drachms and one scruple of wine, water, or vinegar, and eighteen drachms of honey. Among the Veterinarii, the cyathus contained two ounces.

CYAXARES I., son of Phraortes, king of Media and Persia. He bravely defended his kingdom against the Scythians; made war against Alyattes, king of Lydia; and subjected to his power all Asia, beyond the river Halys. He died after a reign of forty years, in the year of Rome 160.

CYAXARES II. is supposed by Dr. Prideaux and others to be the same as Darius the Mede, the son of Astyages, king of Media. He added seven provinces to his father's dominions, and made war against the Assyrians, whom Cyrus favored.

CYBELE, in Pagan mythology, the daughter of Coelus and Terra, wife of Saturn, and mother of Jupiter, Neptune, Pluto, &c. She is also called Rhea, Ops, Vesta, Bona Mater, Magna Mater, Berecynthia, Dindymene, &c., and by some is reckoned the same with Ceres: but most mythologists make these two distinct goddesses. According to Diodorus, she was the daughter of a Lydian prince, and, as soon as she was born, she was exposed on a mountain. She was preserved by sucking some of the wild beasts of the forest, and received the name of Cybele from the mountain where her life had been preserved. When she returned to her father's court, she had an intrigue with Atys, a beautiful youth, whom her father mutilated, &c. Most of the mythologists mention the amours of Atys and Cybele. In Phrygia the festivals of Cybele were observed with the greatest solemnity. Her priests, called Corybantes, Curetes, Galli, &c., it is said were not admitted to the service of the goddess without a previous mutilation. In the celebration of the festivals, they imitated the manners of madmen, and filled the air with shrieks and howlings,

mixed with the confused noise of drums, tabrets, bucklers, and spears. This was in commemoration of the sorrow of Cybele for the loss of her favorite Atys. The goddess was generally represented as a robust woman, far advanced in pregnancy, to imitate the fecundity of the earth. She held keys in her hand, and her head was crowned with rising turrets, or with leaves of oak. She sometimes appears riding in a chariot, drawn by two tame lions: Atys follows by her side, carrying a ball in his hand, and supporting himself upon a fir-tree, which is sacred to the goddess. She is also represented with a sceptre in her hand, and with many breasts, to show that the earth gives aliments to all living creatures; and she generally carries two lions under her arms. From Phrygia the worship of Cybele passed into Greece, and was solemnly established at Eleusis under the name of the Eleusinian mysteries of Ceres. The Romans, by order of the Sibylline books, brought the statue of the goddess from Pessinus into Italy; and when the ship which carried it had run on a shallow bank of the Tiber, the virtue of Claudia was said to have been vindicated, by removing it with her girdle. It is supposed that the mysteries of Cybele were first known about 257 years before the Trojan war, or 1580 years before the Augustan age. The Romans were particularly superstitious in washing, every year on the 6th of the kalends of April, the shrine of this goddess in the waters of the river Almon. Many obscenities prevailed in the observation of the festivals; and the priests themselves were the most eager to use indecent expressions, and to show their unbounded licentiousness.

CYBELICUM MARMOR, a name given by the ancients to a species of marble dug in the mountain Cybele. It was of an extremely bright white, with broad veins of bluish-black.

CYCAS, in botany, a genus of plants of the monœcia class, and polygamia order. The fruit is a dry plum, with a bivalved kernel. There is but one species described by Linnæus, viz. the circinalis; but professor Thunberg mentions another, viz. 1. *C. calfra*, broad broom, or bread tree of the Hottentots. This plant, discovered by professor Thunberg, is described in the Nova Acta Reg. Soc. Scient. Ups. vol. ii. p. 283, tab. V. The pith, or medulla, which abounds in the trunk of this little palm, Mr. Sparrman informs us, is collected and tied up in dressed calf or sheep skins, and then buried in the earth for the space of several weeks, till it becomes sufficiently mellow and tender to be kneaded up with water into a paste, of which they afterwards make small loaves or cakes, and bake them under the ashes. 2. *C. circinalis*, or sago-tree, which grows spontaneously in the East Indies, and particularly on the coast of Malabar. It runs up with a straight trunk to upwards of forty feet in height, having many circles the whole length, occasioned by the old leaves falling off; for standing in a circular order round the stem, and embracing it with their base, whenever they drop, they leave the marks of their adhesion. The leaves are pinnated, and grow to the length of seven or eight feet. The pinne or lobes are long, narrow, entire, of a shining green, all the way of a

breadth, lance-shaped at the point, closely crowded together, and stand at right angles on each side the mid-rib, like the teeth of a comb. The flowers are produced in long bunches at the foot-stalks of the leaves, and are succeeded by oval fruit, about the size of large plums, of a red color when ripe, and a sweet flavor. Each contains a hard brown nut, enclosing a white meat which tastes like a chestnut. This is a valuable tree to the inhabitants of India, as it not only furnishes a considerable part of their constant bread, but also supplies them with a large article of trade. See *SAGO*.

CYCEON, from *κυκαίνω*, to mix, a name given by the ancient poets and physicians to a mixture of meal and water, and sometimes of other ingredients. These constituted the two kinds of cyceon; the coarser being of the water and meal alone; the richer and more delicate composed of wine, honey, flour, water, and cheese. Homer, in the 11th Iliad, speaks of cyceon made with cheese, and the meal of barley mixed with wine, but without any mention either of honey or water; and Ovid, describing the draught of cyceon given by the old woman of Athens to Ceres, mentions only flour and water. Dioscorides understood the word in both these senses; but extolled it most in the coarse and simple kind: he says, when prepared with water alone, it refrigerates and nourishes greatly.

CYCINNIS, a Grecian dance, so called from its supposed inventor, one of the satyrs belonging to Bacchus. It consisted of a combination of grave and gay movements.

CYCLADES, in ancient geography, islands so called, as Pliny informs us, from the Cyclus or orb in which they lie; beginning from the promontory Geraestum of Eubœa, and lying round the island Delos. Their situation and number is not so generally agreed upon. Strabo says, they were first reckoned twelve, but that many others were added: yet most of them lie to the south of Delos, and but few to the north, so that the middle or centre, ascribed to Delos, is to be taken in a loose, not in a geometrical sense. Strabo recites them, after Artemidorus, as follows: Helena, Ceos, Cynthus, Seriphus, Melos, Siphnus, Cimolus, Prepesinthus, Olearus, Naxos, Paros, Syrus, Myconos, Tenos, Andros, Gyarus; but he excludes from the number, Prepesinthus, Olearus, and Gyarus.

CYCLADES, GREAT. See *HEBRIDES*, NEW.

CYCLAMEN, sowbread, a genus of the monogynia order, and pentandria class of plants: natural order twenty-first, *precia*. cor. verticillated, with the tube very short, and the throat prominent: the berry is covered with the capsule. There are but two species, which, however, produce many beautiful varieties. They are low, herbaceous, flowery perennials, of the tuberous rooted kind, with numerous, angular, heart-shaped, spotted, marbled leaves; and many fleshy foot-stalks six inches high, carrying monopetalous, five-parted, reflexed flowers, of various colors.

CYCLE, *n. s.* } Lat. *cyclus*; *κύκλος*.

CYCLEMETRY, *n. s.* } A circle; a round of time; a space in which the same revolutions begin again; a method, or account of a method till the same course begins again; imaginary

orbs; a circle in the heavens. **Cyclometry** is the art of measuring cycles.

How build, unbuild, contrive

To save appearances; how gird the sphere
With entrick, and excentrick, scribbled o'er
Cycle and epicycle, orb in orb! *Milton.*

We do more commonly use these words, so as to style a lesser space a *cycle*, and a greater by the name of period; and you may not improperly call the beginning of a large period the epocha thereof.

Holder on Time.

We thought we should not attempt an unacceptable work, if here we endeavoured to present our gardeners with a complete *cycle* of what is requisite to be done throughout every month of the year.

Beelyn's Kalendar.

Chained to one centre whirled the kindred spheres,
And marked with lunar cycles solar years. *Darwin.*

I must tell you that Sir H. Savile had confuted Joseph Scaliger's *cyclometry*. *Wallis.*

CYCLE OF EASTER. See *CHRONOLOGY*.

CYCLE OF THE MOON. See *CHRONOLOGY*. It is called also the golden number, and the Metonic cycle, from its inventor Meton the Athenian. At the time of the council of Nice, when the method of finding the time for observing the feast of Easter was established, the numbers of the lunar cycle were inserted in the kalendar, which, upon the account of their use, were set in golden letters, and the year of the cycle called the golden number of that year.

CYCLE OF THE SUN. See *CHRONOLOGY*.

CYCLISUS, in surgery, an instrument in the form of a half moon, used in scraping the scull, in cases of fractures of that part.

CYCLOID, *n. s.* } *Κυκλοειδής*. A geome-

CYCLOIDAL, *adj.* } trical curve, of which the genesis may be conceived by imagining a nail in the circumference of a wheel: the line which the nail describes in the air, while the wheel revolves in a right line, is the cycloid. Relating to a cycloid; as the cycloidial space is the space contained between the cycloid and its substance.

A man may frame to himself the notion of a parabola, or a cycloid, from the mathematical definition of those figures. *Reid.*

CYCLOID, or **TROCHOID**, a mechanical or transcendental curve, which is thus generated:—Suppose a circle F E H to roll along the straight line A B, so that all the parts of its circumference be applied to the straight line in succession; the point E, that was in contact with A B at A, will, by a motion thus compounded of a circular and rectilinear motion, describe a certain curve line A, to E D B, which is called a cycloid. The straight line A B is called the base, and the line C D perpendicular to A B, bisecting it at C, and meeting the curve in D, is called the axis of the cycloid. The circle by whose revolution the curve is described is called the generating circle. The following are some of the most remarkable properties of this curve.—1. The base A B is equal to the circumference of the generating circle. 2. The axis C D is equal to the diameter of the generating circle. These two properties are obvious from the definition of the curve. 3. Let the generating circle C K D be described on the axis C D as a diameter, and let G K E be perpendicular to the axis, meeting the circle in K,

CYCLOPTERUS, the sucker, in ichthyology, a genus belonging to the order of amphibia nantes. The head is obtuse, and furnished with saw teeth: there are four rays in the gills, and the belly fins are connected together in an orbicular form. There are ten species. The chief are:—1. *C. liparis*, or the sea snail, so called from the soft and unctuous texture of its body, resembling that of the land snail. It is almost transparent, and soon dissolves and melts away. It is found in the sea near the mouths of great rivers, and has been seen full of spawn in January. The length is five inches; the color a pale brown, sometimes finely streaked with a darker. Beneath the throat is a round depression of a whitish color like the impression of a seal, surrounded by twelve small pale yellow tubera, by which probably it adheres to the stones like the other species. 2. *C. lumpus*, the lump fish, cock paddle, or sea owl, grows to the length of nineteen inches, and weighs seven pounds. The shape of the body is like that of the bream, deep and very thick, and it swims edgeways. The back is sharp and elevated: the belly flat, of a bright crimson color. Along the body there run several rows of sharp bony tubercles, and the whole skin is covered with small ones. The pectoral fins are large and broad, almost uniting at their base. Beneath these is the part by which it adheres to the rocks, &c. It consists of an oval aperture, surrounded with a fleshy, muscular, and obtuse soft substance, edged with many small threaded appendages, which concur as so many claspers. The tail and vent fins are purple. This fish is sometimes eaten in England, being stewed like carp: but is both flabby and insipid.

CYDER, *n. s.* A fermented drink, made of the juice of apples. See **CIDER**.

A tendency to these diseases is certainly hereditary, though perhaps not the diseases themselves; thus a less quantity of ale, *cyder*, wine, or spirit, will induce the gout and dropsy in those constitutions whose parents have been intemperate in the use of those liquors. Darwin.

CYDER, in rural economy, is particularly used for the liquor expressed and prepared by fermentation from the juice of apples. It has been made in this country from a very early period. Henry of Huntingdon, in describing a quarrel that arose at the court of Edward the Confessor, between the two sons of earl Godwin, represents one of them as departing in a rage to Hereford, (still famous for this beverage) where his brother had ordered a royal banquet to be prepared. 'There he seized his brother's attendants, and cutting off their heads and limbs, he placed them in the vessels of wine, mead, ale, pigment, morat, and cyder.' Henry Hunt., vol. vi. p. 367. But the art of preparing it has never been investigated with much attention, nor improved by science: it is principally, to this day, in the hands of the growers of the fruit. We shall present the reader with the best practical directions that have been given to the public on the subject, viz. by Messrs. Marshall, Crocker, and Knight.

The first of these gentlemen made a tour through the cyder counties with a view to ob-

serve the different methods of preparing it. This may be divided into three processes:—I. Preparing the fruit. II. Grinding and expressing the juice from it. III. Fermenting and bottling.

I. *In preparing the fruit*, care must be taken both as to its peculiar quality, and its stage of ripeness, or the season at which it is gathered. Few apples are ready for gathering before Michaelmas; though they are sometimes manufactured before that time. For sale-cyder, and keeping-drink, they are allowed to remain on the trees till fully ripe; and in general the middle of October is considered a proper time for gathering the store apples. The ripeness of the fruit is judged of by its falling from the tree; and Mr. Marshall, as well as Mr. Crocker, thinks that the forcing it away before that time robs it of some of its most valuable properties. 'The harvesting of fruit,' says the former, 'is widely different in this respect from the harvesting of grain, which has the entire plant to feed it after the separation from the soil; while fruit, after it is severed from the tree, is cut off from all possibility of a further supply of nourishment, and, although it may have reached its wonted size, some of its more essential particles are undoubtedly left behind in the tree. Fruits which are late in ripening, however, will sometimes hang on the tree until spoiled by frost, and particularly the weak watery fruits. The general practice of beating them down with poles is much disapproved of by Mr. Marshall, because the fruit must thus be unequally ripe, the apples on the same tree not ripening all at the same time; and thus part of the richness and flavor of the fruit is entirely lost: besides, if the fermentation is interrupted or rendered complex by a mixture of ripe and unripe fruits, and the liquor is not, at first, sufficiently purged from its feculencies, it will be difficult to clear it afterwards. To avoid these inconveniences, arising from the unequal ripening of the fruit, the trees ought to be gone over first with a hook when the fruit begins to fall naturally, and the trees may be afterwards cleared with the poles when it is all sufficiently ripened, or when the winter is likely to set in. Mr. Marshall observes, that the due degree of maturation of fruit for liquor is a subject about which men differ much in their ideas. The prevailing practice of gathering it into heaps until the ripest begin to rot, is wasting the best of the fruit, and is by no means an accurate criterion. Some shake the fruit, and judge by the rattling of the kernels; others cut through the middle, and judge by their blackness: but none of these appear to be a proper test. It is not the state or the kernels, but of the flesh; not of a few individuals, but of the greater part of the prime fruit, which renders the collective body fit or unfit to be sent to the mill. The most rational test of the ripeness of the fruit is, that of the flesh having acquired such a degree of mellow-ness, and its texture such a degree of tenderness, as to yield to moderate pressure; thus, when the knuckle or the end of the thumb can with moderate exertion be forced into the pulp of the fruit, it is deemed in a fit state for grinding.

Mr. Marshall is of opinion that one of the grand secrets of cyder-making is the skilful sepa-

ration of the ripe and unripe fruit, before sending it to the mill; and as by various accidents they may be confounded, the most effectual method of distinguishing them is by the hand. He also seems to think that the practice of mixing fruits for liquor is improper, because the finer liquors are made from select fruits; and observes, that it might be better to mix liquors after they are made, than to put together the crude fruits.

Mr. Crocker recommends making three distinct gatherings of the crop, and keeping each by itself. The prime cyder will then be made from the first, and the latter gathering and wind-falls make a fair common article. According to Mr. Knight, the merit of cyder will always depend much on the proper mixture, or rather on the proper separation of the fruits. Those whose rinds and pulp are tinged with green or red, without any mixture of yellow, as that color will disappear in the first stages of fermentation, should be carefully kept apart from such as are yellow, or yellow intermixed with red. The latter kinds, which should remain on the trees till ripe enough to fall without being much shaken, are, as we have noticed, alone capable of making fine cyder. Each kind should be collected separately, as noticed above, and kept till it becomes perfectly mellow. For this purpose, in the common practice of the country, they are placed in heaps of ten inches or a foot thick, and exposed to the sun and air, and rain; not being overcovered except in very severe frosts. The strength and flavor of the future liquor are, however, he says, increased by keeping the fruit under cover some time before it is ground; but unless a situation can be afforded it, in which it is exposed to a free current of air, and where it can be spread very thin, it is apt to contract an unpleasant smell, which will much affect the cyder produced from it. Few farms are provided with proper buildings for this purpose on a large scale, and the improvement of the liquor will not nearly pay the expense of erecting them. It may reasonably be supposed that much water is absorbed by the fruit in a rainy season; but the quantity of juice yielded by any given quantity of fruit will be found to diminish as it becomes more mellow; even in very wet weather, provided it be ground when thoroughly dry. The advantages, therefore, of covering the fruit, will probably be much less than may at first sight be expected. No criterion appears, the writer says, to be known, by which the most proper point of maturity in the fruit can be ascertained with accuracy; but he has good reason to believe that it improves as long as it continues to acquire a deeper shade of yellow. Each heap should be examined prior to its being ground, and any decayed or green fruit carefully taken away. The expense of this will, he observes, be very small, and will be amply repaid by the excellence of the liquor, and the care with which too great a degree of fermentation may be prevented in the process of making it into cyder. In seasons ordinarily favorable half a hogshead of cyder may be expected from the fruit of each tree of an orchard in full bearing. As the number of trees on the acre varies from ten to forty,

the quantity of cyder must vary in the same proportion, that is, from five to twenty hogsheads, Pear trees, in equally good bearing, yield fully one-third more liquor: therefore, although the liquor extracted from pears sells at a lower price than that produced from apples, yet the value by the acre, when the number of trees is equal, is nearly the same.

II. *Of grinding the fruit, &c.*—The cyder-makers in Herefordshire generally agree in considering it necessary towards the perfection of the cyder, to grind the rinds and seeds of the fruit, as well as the fleshy part, to a pulp; but Mr. Marshall complains, that the mills are often very imperfectly finished, and little indebted to the operation of the square and chisel. As perfectly smooth rollers, however, would not lay hold of the fruit sufficiently to force it through, it might be proper, he suggests, to grind the fruit first in the mill to a certain degree, and afterwards put it between two smoother rollers to finish the operation. A bag, containing four corn bushels, is the usual quantity with which they charge a middle-sized mill; and this should yield an equal quantity when ground. After the fruit is ground, it generally remains some time before pressing, that the rind and seeds may communicate their virtues to the liquor; and for this reason Mr. Marshall reprobates the practice of pressing the pulp of the fruit whenever the grinding is finished. The ordinary cyder mill is exhibited on the right hand of our plate CYDER PRESS, &c., and will be further described at the close of this article.

A difference of opinion exists as to the propriety of pressing the fruit immediately after it is ground. Mr. Knight, an able writer on the apple and pear, contends that it should remain at least twenty-four hours before it is taken to the press. Others recommend two days; but many take it at once from the mill to the press when the grinding is finished. Mr. Crocker thinks both extremes wrong. There is an allalogy, he observes between the making of cyder from apples, and wine from grapes; and the method which the wine-maker pursues ought to be followed by the cyder-maker. When the pulp of the grapes has lain some time in the vats, the vintager thrusts his hand into the pulp, and takes some from the middle of the mass; and when he perceives, by the smell, that the luscious sweetness is gone off, and that his nose is affected with a slight piquancy, he immediately carries it to the press, and by a light pressure expresses his prime juice. In like manner, should the cyderist determine the time when his pulp should be carried to the press. If he carry it immediately from the mill to the press, he may lose some small advantage which may be expected from the rind and kernels, and his liquor may be of lower color than he might wish. If he suffer it to remain too long unpressed, he will find to his cost that the acetous fermentation will come on before the vinous is perfected, especially in the early part of the cyder-making season. He will generally find that his pulp is in a fit state for pressing in about twelve or sixteen hours. If he must of necessity keep it in that state longer, he will find a sensible heat therein, which will engender a prema-

ture fermentation; and he must not delay turning it over, thereby to expose the middle of the mass to the influence of the atmosphere.

In order to press the fruit, or pommage as it is now called, it is folded up in pieces of hair-cloth, or placed between layers of clean, sweet straw or reed, and piled up in a square frame or mould: the press is then pulled down and squeezes out the juice, forming the matter into thin and almost dry cakes. Care ought to be taken to keep the straw, reed, or hair-cloths sweet, or the ill effects of their acidity will be communicated to the cyder. The first runnings come off foul and muddy, but the last, particularly in perry, will be as clear and fine as if filtered through paper. The refuse is generally thrown away as useless, or, when dry, used as fuel; if it has not been thoroughly squeezed, the pigs will sometimes eat it; and some people grind it a second time with water, and press it for an inferior liquor for family use. As long as a drop can be drawn, Mr. Marshall recommends to continue the pressure. Even breaking the cakes of the refuse with the hands only, he says, gives the press fresh power over it: regrinding them has a still greater effect: in this state of the materials, the mill gains a degree of power over the more rigid parts of the fruit, which in the first grinding it could not reach. The most eligible management in this stage of the process appears to be this: grind one pressful a-day; press, and regrind the residuum in the evening; infuse the reduced matter all night among part of the first runnings, and in the morning repress while the next pressful is grinding.

III. *Of fermentation and bottling.*—In the fermentation of the liquor, the common practice is to have it put into casks or hogsheds, immediately from the press, and to fill them quite full; when the casks are put into airy sheds, where the warmth differs little from the open atmosphere. They are sometimes even exposed to the open air without any covering but a piece of tile or flat stone, propped up over the bung-hole to carry off the rain. It would seem, from Mr. Marshall's account, that the time with cyder, when the fermentation begins, is quite uncertain, in general varying from one day to a month after it is tunned; though liquor taken immediately from the press, if much agitated, will sometimes pass directly into a state of fermentation. If the commencement of the fermentation is uncertain, its continuance is no less so; liquors that have been agitated will frequently go through it in one day; but otherwise, when allowed to rest, it will take from two to six days. The appearance of the liquor also varies according to the ripeness of the fruit: if the fruit has been properly matured, a thick scum is generally thrown up, resembling that of malt liquor. After the liquor has remained some time in the fermenting vessels it is racked off from the lees, and put into fresh casks. But as a fresh fermentation frequently takes place after racking, when this becomes violent, the liquor must be racked again; and sometimes, before the fermentation is checked, the racking must be repeated five or six times; but when there is only a small degree of fermentation, called fretting, the liquor is suffered to remain in the same cask; this degree,

however, is also very undetermined. The best informed cyder-makers are said to repeat the rackings until the liquor appears quiet or nearly so; and when this cannot be accomplished by the ordinary methods of fermentation, they have recourse to fumigating the casks with sulphur, which is called stooming or stumming. For this purpose a match made of thick linen cloth, about ten inches long and an inch broad, well coated with brimstone for about three-fourths of its length, is lighted and hung in at the bung-hole of the cask (which has been previously well seasoned, and every other vent stopped), and, while the match burns briskly, the bung is driven in, keeping the uncoated end of the match by its side. The match thus suspended, burns as long as the air contained in the cask will supply the fire; and when it dies the bung is taken out with the remnant of the match, after which the cask is allowed to remain two or three hours, more or less, according to the degree of power the sulphur ought to have, before it is filled with liquor. A smell of the sulphureous acid is thus communicated to the liquor, but it goes off in a short time. Mr. Crocker says, when the fermentation ceases, and the liquor appears tolerably clear to the eye, it has also a piquant vinous sharpness upon the tongue, and if in this state the least hissing noise be heard in the fermenting liquor, the room is too warm, and atmospheric air must be let in at the doors and windows. 'Now,' he continues, 'is the critical moment, which the cyderist must not lose sight of; for if he would have a strong, generous, and pleasant liquor, all further sensible fermentation must be stopped. This is best done by racking off the pure part into open vessels, which must be placed in a more cool situation for a day or two; after which it may again be barrelled, and placed in some moderately cool situation for the winter.'

It is advisable in racking, that the stream from the racking-cock be small, and that the receiving-tub be but a small depth below the cock, lest, by exciting a violent motion of the parts of the liquor, another fermentation be brought up. The feculence of the cyder may be strained through a filtering-bag, and placed among the second-rate cyders, but it must not be returned to the liquor designed for prime cyder.

It is observed by Mr. Knight, that 'after the fermentation has ceased, and the liquor is become clear and bright, it should instantly be drawn off, and not suffered on any account again to mingle with its lees; for these possess much the same properties as yeast, and would inevitably bring on a second fermentation. The best criterion to judge of the proper moment to rack off will be, he says, the brightness of the liquor; and this is always attended with external marks, which serve as guides to the cyder-maker. The discharge of fixed air, which always attends the progress of fermentation, has entirely ceased; and a thick crust, formed of fragments of the reduced pulp raised by the buoyant air it contains, is collected on the surface. The clear liquor being drawn off into another cask, the lees are put, he says, into small bags, similar to those used for jellies, being made, as noticed above; through these, whatever liquor the lees contain gradually

filtrates, becoming perfectly bright; and it is then returned to that in the cask, in which it has the effect, in some measure, of preventing a second fermentation, as already hinted. It appears, he says, to have undergone a considerable change in the process of filtration. The color is remarkably deep, its taste harsh and flat, and it has a strong tendency to become acetous; probably by having given out fixed, and absorbed vital air. Should it become acetous, which it will frequently do in forty-eight hours, it must not on any account, he says, be put into the cask. If however, the cyder, after being racked off, remains bright and quiet, nothing more is to be done to it till the succeeding spring; but if a scum collects on the surface, it must immediately be racked off into another cask; as this would produce bad effects if suffered to sink. If a disposition to ferment with violence again appears, it will be necessary, he thinks, to rack off from one cask to another, as often as a hissing noise is heard. The strength of cyder is much reduced, he says, as noticed above, by being frequently racked off; but this, he supposes, arises only from a large portion of sugar remaining unchanged, which adds to the sweetness, at the expense of the other quality. The juice of the fruits which produce very strong cyders, often remains muddy during the whole winter, and much attention must frequently be paid, to prevent an excess of fermentation.

‘The casks into which the liquor is put, whenever racked off, should always have been thoroughly scalded, and dried again; and each should want several gallons of being full, to expose a larger surface to the air of the atmosphere.’ ‘But,’ he adds, ‘should the cyder-maker neglect the above precautions, the inevitable consequence will be this: another fermentation will quickly succeed, and convert the fine vinous liquor he was possessed of into a sort of vinegar; and all the art he is master of will never restore it to its former richness and purity.’

He suggests, however, the following corrections:—‘A bottle of French brandy, half a gallon of spirit extracted from the lees of cyder, or a pail full of old cyder, poured into the hogshead soon after the acetous fermentation is begun; but no wonder, continues he, if all these should fail, if the cyder be still continued in a close warm cellar. To give effect to either, it is necessary that the liquor be as much exposed to a cooler air as conveniently may be, and that for a considerable length of time. By such means it is possible fermentation may, in a great measure, be repressed: and if a cask of prime cyder cannot from thence be obtained, a cask of tolerable second-rate kind may. These remedies are innocent; but if the farmer or cyder-merchant attempt to cover the accident, occasioned by negligence or inattention, by applying any preparation of lead, let him reflect that he is about to commit an absolute and unqualified murder on those whose lot it may be to drink his poisonous draught. Such means should, therefore, on no account be ever had recourse to.’

The time of bottling depends greatly on the quality of the liquors themselves: good cyder can seldom be bottled with propriety until a year old, and sometimes not till two years. It is

stated by the writer just mentioned, that in the month of April the cyder, in general, will be in a fit state for this operation; but that the critical time for this process is, when the liquor has acquired in the cask its highest degree of perfection: then, when the weather is fair, the barometer high, and the wind in some northerly point, let the bottles be filled, setting them by uncorked until the morning; then let the corks be driven very tightly into the necks of the bottles, tied down with small strong twine or wire, and well secured with melted rosin, or other material of the same nature.

Mr. Knight thinks, that cyders which have been made from good fruits, and have been properly manufactured, will retain a considerable portion of sweetness, in the cask, to the end of three or four years; but that the saccharine part, on which alone their sweetness depends, gradually disappears, probably by a decomposition and discharge of fixed air, similar to that which takes place in the earlier stages of their fermentation.

The premises of a cider manufacturer consist of a mill-house, mill, press, vat, and cask, with their appurtenances. The mill-house is generally one end of an out-building; or perhaps a shed, under which straw or small implements are occasionally laid up. The smallest dimensions, to render it any way convenient, are twenty-four feet by twenty; a floor thrown over it, at seven feet high; a door in the middle of the front, and a window opposite; with the mill on one side, the press on the other side of the window; as much room being left in front, towards the door, for fruit and utensils, as the nature of the mill and the press will allow. It consists of two beams supported by uprights with strong braces of wood. The apples being introduced between the pressing surfaces, the juice exudes. To produce this effect the more rapidly, a roller is previously employed, very similar to that used for crushing gypsum, in the manufacture of plaster of Paris; and the cohesive fibre of the fruit is by this means broken down. When a screw-press is substituted for this instrument, a spur wheel should be added, and the whole apparatus may then be erected for about £10. We mention this circumstance the more particularly as, while we are now writing, the whole of the duty has been taken off this valuable and healthy beverage, so that it bids fair to be more generally made than heretofore.

The apple-mill does not differ essentially from that of a common tanner's mill for grinding bark; and consists of a mill-stone from two feet and a half to four and a half in diameter, running on its edge in a circular stone trough, from nine to twelve inches in thickness, and from one to two tons in weight: the bottom of the trough in which the stone runs is somewhat wider than the thickness of the stone itself; the inner side of the groove rises perpendicularly, but the outer is levelled in such a manner as to make the top of the trough six or eight inches wider than the bottom, by which means there is room for the stone to run freely, and likewise for putting in the fruit, and stirring it up while grinding. The bed of a middle sized mill is about nine feet, some ten, and some twelve, the whole being composed of two, three, or four stones, bound

together with cramps of iron, and finished after being cramped in this manner. The best stones are found in the forest of Dean, generally a dark reddish gritstone, not calcareous; for if the stone was of a calcareous quality, the acid juice of the fruit would act upon it and spoil the liquor; a clean-grained grindstone grit is the fittest for the purpose. The runner is moved by means of an axle passing through the centre with a long arm reaching without the bed of the mill, for a horse to draw by; on the other side is a shorter arm, passing through the centre of the stone. An iron bolt, with a large head, passes through an eye in the lower part of the swivel, on which the stone turns into the end of the inner arm of the axis; and thus the double motion of it is obtained, and the stone kept perfectly upright. There ought also to be fixed on the inner arm of the axis, about a foot from the runner, a cogged wheel, working in a circle of cogs fixed upon the bed of the mill; these not only prevent the runner from sliding, which it is apt to do, when the mill is full; but likewise make the work more easy for the horse.

The bottom of the press ought to be made entirely of wood or of stone; the practice of covering it with lead being now well known to be pernicious. A few inches within its outer edges a channel is cut to catch the liquor as it is expressed, and convey it to a lip formed by a projection on that side of the bed opposite the mill; having under it a stone trough or wooden vessel, sunk within the ground, when the bed is fixed low to receive it. The press is worked with levers of different lengths, first a short, and then a longer one, both worked by the hand; and afterwards a bar, eight or nine feet in length, worked by a windlass. Mr. Marshall computes the expense of fitting up a mill-house at about £20 or £25, or on a small scale at £10 or £15, but if the stone has to be brought from a distance, the carriage will make a difference.

'Where iron-mills have been tried, this metal has been found to be soluble in the acid of apples, to which it communicates a brown color, and an unpleasant taste. No combination has been ascertained to take place between this acid and lead; but as the calx of this metal readily dissolves in, and communicates an extremely poisonous quality to, the acetous juice of the apple, it should never be suffered to come into contact with the fruit or liquor.' *Knight on the Apple and Pear*,—which may justly be considered as one of the most valuable treatises on this important subject.

There is a cyder-mill in use in the south of France, worked on a circular platform of boards, and, instead of stone, the wheel or conical roller is of cast-iron. The fruit is thinly spread over the platform, and the roller moved round by one man or woman. From the rollers covering more breadth than the narrow wheels in use in England, more fruit is crushed in a short time by this sort of mill.

Another and very convenient cyder-mill sometimes consists, in its simplest form, of two toothed or indented wooden cylinders of about nine inches in diameter, each being enclosed in the manner of other mills, having a feeder at the top; and

being made so as to be turned by the hand. The cylinders are so arranged as to be capable of being removed to a greater or less distance from each other, and thus the business advances in a regular progressive manner, from the first cutting of the fruit until the cylinders are brought so close together that a kernel cannot pass without being bruised; if a second pair of finer toothed cylinders be made to work under these, the pulp will be brought into a perfect state of fineness. It is with difficulty that the same degree of fineness can be effected by the horse-mill.

A hand-mill, where cyder is only made for private use, sometimes consists of a pair of fluted rollers working into each other. They are of cast-iron, hollow, about nine inches diameter, with flutes or teeth, about an inch wide, and nearly as much deep: two men work them by hand against each other. The fruit passes between them twice; the rollers being first set wide, to break it into fragments, and afterwards closer to reduce the fragments and the seeds.

Cyder-vats are vessels for receiving the pom-mage, or the cyder before it is racked off into the cask. They should be made of wood, as, where lead is employed, it is liable to be corroded by the acid. Of the casks we have already spoken.

Mr. Crocker observes that, in the districts of Hereford and Worcester, the following are considered as the best liquor fruits: the bennet apple, captain Nurse's kernel, Elton's yellow, Normandy apple, and the yellow or forest stire. And that, in the county of Somerset, the Jersey, the white sour, the margill, vallis apple, barn's-door, crab red-streak, Du-ann, Jack Every, cocagee, Clark's primo, Buckland, Pit crab, Slater's pearmain, Slater's No. 19, Slater's No. 20, Slater's No. 21, castle pippin, saw-pit, and the pomme apis, are supposed most valuable. But that in Devonshire, the most esteemed fruits are; the Seaverton red-streak, the sweet broady, the lemon bitter sweet, josey, Orcheton pippin, wine apple, marygold spice-apple, Ludbrook red-streak, green Cornish, the butter-box, red Cornish, broad-nosed pippin, cat's head, brandy-apple, Pine's red-streak, winter red, sweet pomme roi, and the Bickley red-streak. Marshall mentions the stire-apple, hagloe crab, the golden pippin, the old red-streak, and the woodcock, as favorite old cyder fruits, now on the decline. It was during the reign of Charles I. that the plantations of Herefordshire acquired the peculiar eminence which they yet retain, when by the spirited exertions of lord Scudamore, and other gentlemen of the county, Herefordshire 'became, in a manner, one entire orchard.' The principal markets for the fruit liquors of this county, are those of London and Bristol, whence great quantities are sent to Ireland, to the East and West Indies, and to other foreign markets, in bottles. The price of the common cyder is generally fixed once a year by a meeting of the dealers at Hereford fair, on the 20th of October.

CYDER SPIRIT, is a spirituous liquor drawn from cyder by distillation, in the same manner as brandy from wine. Its flavor is not agree-

CYNÆGIRUS, an Athenian, celebrated for his extraordinary courage. He was brother to the poet Æschylus. After the battle of Marathon, he pursued the flying Persians to their ships, and seized one of their vessels with his right hand, which was immediately severed by the enemy. Upon this he seized the vessel with his left hand, and when he had lost that also, he still kept his hold with his teeth.

CYNANCHE, a species of quinsy, in which the tongue is inflamed and swelled, so that it hangs out beyond the teeth. Dr. Cullen distinguishes five species of this disease; viz. 1. *cynanche maligna*; 2. *cynanche parotidæ*; 3. *cynanche pharyngæa*; 4. *cynanche tonsillaris*; and 5. *cynanche trachealis*. See **MEDICINE**.

CYNANCHUM, bastard dogsbane, in botany, a genus of the digynia order, and pentandria class of plants; natural order thirtieth, contortæ. The nectarium is cylindrical and quinque-lobed. There are six species; of which the following are the most remarkable: viz. 1. *C. acutum*, commonly called Montpellier scammony; and 2. *C. Monspeliacum*, the round-leaved Montpellier scammony. They abound with a milky juice like the spurge, which issues out wherever they are broken; and this milky juice when con- creted has frequently been sold for scammony. These plants propagate so fast by their creeping roots, that few people care to admit them into their gardens.

CYNANTHROPY, *n. s.* Κυνωνθρωπος, and ανθρωπος. A species of madness in which men have the qualities of dogs.

CYNARA, the artichoke, in botany, a genus of the polygamia æqualis order, and syngenesia class of plants: *car.* dilated, imbricated with carnosous squame, and emarginated with a sharp point. Of this genus there are eight species; of which only two are cultivated for use: viz. 1. *C. cardunculus*, the cardoon, greatly resembles the artichoke, but is of larger and more regular growth: the leaves being more upright, taller, broader, and more regularly divided: the stalks of the leaves blanched are the only edible parts of the plant. This is a very hardy plant, and prospers in the open quarters of the kitchen garden. It is propagated by seed sown annually in the full ground in March; either in a bed for transplan- tation, or in the place where they are designed to re- main. 2. *C. scolymus*, the garden artichoke, has large, thick, perennial roots, crowned by a consider- able cluster of large pennatifid, erect leaves, two or three feet long. In the middle are upright stalks rising a yard high, on the top of which is a large round scaly head, composed of numerous, oval, calycinal scales, enclosing the florets, sitting on a broad fleshy receptacle, which, with the fleshy base of the scales, is the eatable part of the plant. The varieties of this species are, 1. The conical green-headed French artichoke, having the small leaves terminated by spines, a tall stalk, the head somewhat conical, and of a light green color, with the scales pointed at top, opening and turn- ing outward. 2. The globular-headed red Dutch artichoke, having leaves without spines, a strong stalk, the head large, globular, a little compressed at top, and of a reddish green color; broad ob- tuse scales emarginated at top, growing close,

and turning inward. Of these varieties the last is deservedly the most esteemed, both on account of its superiority in size and the agreeableness of its flavor. Both varieties are perennial in their root; but the leaves and fruit-stem die to the ground in winter; and the roots remaining, send up fresh leaves and stems every summer, pro- ducing a supply of artichokes for twenty years if required. The flowers and seed of all the plants of this genus are produced in the centre of the head; the scales of which are the proper calyx of the flower, which consists of numerous small bluish florets, succeeded by downy seeds sitting naked on the receptacle. Both the varieties of the artichoke are propagated by slips or suckers, arising annually from the stool or root of the old plants in spring, which are to be taken from good plants of any present plantation in March or the beginning of April, and planted in the open quarter of the kitchen garden, in rows five feet asunder; and they will produce artichokes the same year in autumn. It should however be re- marked, that, though artichokes are of many years duration, the annual produce of their fruit will gradually lessen in the size of the eatable parts after the third or fourth year, so that a fresh plantation should be made every three or four years.

CYNARCTOMACHY. Κυναρκτος, μαχη. A word coined by Butler, to denote bear-baiting with a dog.

That some occult design doth lie
In bloody *cynarctomachy*,
Is plain enough to him that knows
How saints lead brothers by the nose.

Hudibras.

CYNEAS, or **CINEAS**, the friend of Pyrrhus and scholar of Demosthenes, who flourished A. A. C. 275. Pyrrhus and he wrote a treatise of War, quoted by Tully.

CYNEGETICKS, *n. s.* Κυνηγητικά. The art of hunting; the art of training and hunting with dogs.

There are extant, in Greek, four books of *cynę- ticks*, or venation. *Brown's Vulgar Errors.*

CY'NICK, *n. s. & adj.* } Κυνικος. A philo-
CY'NICAL, *adj.* } sopher of the snarling
or currish sort; a rude man; a snarler; a mis-
anthrope. Having currish qualities; brutal;
snarling; satirical.

How vilely doth this *cynick* rhyme!—
Get you hence, sirrah; saucy fellow, hence.

Shakespeare.

Or been the manes of that *Cynic* spright
Cloathed with some stubborn clay and led to light?
Or do the relic ashes of his grave
Revive and rise from their forsaken cave? *Hall.*

He doth believe that some new-fangled wit (it is
his *cynical* phrase) will some time or other find out
his art. *Wilkins.*

Without these precautions the man degenerates into
a *cynick*, the woman into a coquette; the man grows
sullen and morose, the woman impertinent and fan-
tastica *Addison.*

The *Cynics* of old, and some of the Stoics, main-
tained, that in words there is no indelicacy; that
there can be no harm in speaking of any thing that is

natural; and that, if we may speak without blame of any one crime, or any one part or function of the human body, we may, in like manner, of any other. But this is vile sophistry, tending to the utter debasement of man, and founded in the grossest ignorance of human nature and human language. *Beattie.*

CYNICS, a sect of ancient philosophers, who valued themselves upon their contempt of riches and of pomp, of the arts and sciences, and of every thing in short except virtue and morality. The cynic philosophers owe their origin and institution to Antisthenes of Athens, a disciple of Socrates; who being asked of what use his philosophy had been to him, replied, 'It enables me to live with myself.' Diogenes was the most famous of his disciples, in whose character the system of this philosophy appears in its greatest perfection. See **DIOGENES**. These sages are said to have regarded chastity and modesty as weaknesses; and coarseness, even to indelicacy, was certainly one of their characteristics. They argued that what was right to be done, might be done at all times and in all places. Their chief principle, indeed, in common with that of the stoics, was, that we should follow nature. But the stoics clearly included the government of reason, in the rule of nature, which the cynics, for the greater part, rejected.

CYNIPS, in zoology, a genus of insects belonging to the hymenoptera order. The mouth is armed with jaws, but has no proboscis: the sting is spiral, and mostly concealed within the body. There are many species. We can only mention two:

1. *C. quercus folii*, or oak-leaf cynips, is of a burnished shining brown color. The antennæ are black; the legs and feet of a chestnut brown; and the wings white, but void of marginal spots. It is in the little smooth, round, hard galls, found under the oak leaves, generally fastened to the fibres, that this insect is produced, a single one in each gall. These latter are ligneous, of a hard compact substance, formed like the rest, by the extravasation of the sap of the leaf, occasioned by the puncture of the gall fly when it deposits its eggs. Sometimes, instead of the cynips, there is seen to proceed from the gall a larger insect, of a brown color, which is an ichneumon. This ichneumon is not the real inmate of the gall, or he that formed it.

2. *C. quercus gemmæ*, or oak bud cynips, is of a very dark green, slightly gilded: its antennæ and feet are of a dun color, rather deep. It deposits its eggs in the oak buds, which produce one of the finest galls, leafed like a rosebud beginning to blow. When the gall is small, that great quantity of leaves is compressed, and they are set one upon another like the tiles of a roof. In the centre of the gall there is a kind of ligneous kernel, in the middle of which is a cavity; and in that is found the little larva, which feeds there, takes its growth, undergoes its metamorphosis, and breaks through the enclosure of that kind of cod in order to get out. The whole gall is often near an inch in diameter, sometimes more when dried and displayed; and it holds to a branch by a pedicle.

CYNBELINE, a king of the South Britons, who flourished in the reign of Claudius, and

fought several battles with the Romans under Plautius, the prætor; about A. D. 43-46.

CYNOGLOSSUM, hound's tongue, in botany, a genus of the monogynia order, pentandria class of plants; natural order forty-first, asperifolia: cor. funnel-shaped, with its throat closed up by little arches formed in it; the seeds depressed, and affixed to the style or receptacle only on their inner side. There are eight species, not remarkable for beauty. *C. officinale*, the common greater hound's tongue, was formerly used in medicine, and its root supposed to possess narcotic virtues; but it is discarded from the present practice. The smell of the whole plant is very disagreeable. Goats eat it: sheep, horses, and swine refuse it.

CYNOMETRA, in botany, a genus of the monogynia order and decandria class of plants; *cal.* tetraphyllous: *anth.* bifid at top; the legumen carnos, crescent-shaped, and monospermous. Species two, Indian trees.

CYNOMORIUM, in botany, a genus of the monandria order and monœcia class of plants; natural order fiftieth, amentacæ: *cal.* imbricated catkin: cor. none: one style; and one roundish seed. Species one only.

CYNOPHONTIS, in antiquity, a festival observed in the dog-days at Argos, and so called *απο της κυνης φονιης*, i. e. from killing dogs; because it was usual on this day to kill all the dogs they met with.

CYNOSARGES, a place in the suburbs of Athens, named from a white or swift dog, who snatched away part of the sacrifice offering to Hercules. It had a gymnasium, in which strangers or those of the half blood performed their exercises; the case of Hercules, to whom the place was consecrated. It had also a court of judicature, to try illegitimacy, and to examine whether persons were Athenians of the whole or half blood.

CYNOSCEPHALÆ, in ancient geography, a place in Thessaly, near Scotussa; where the Romans, under Q. Flaminius, gained a great victory over Philip, son of Demetrius king of Macedon. These Cynoscephalæ were small tops of several equal eminences; named from their resemblance to dogs' heads, according to Plutarch.

CYNOSSEMA, the tomb of Hecuba, on the promontory Mastusia, over against Sigeum, in the south of the Chersonesus Thracica; named either from the figure of a dog, to which she was fabled to have been changed, or from her sad reverse of fortune.

CYNOSURA, in astronomy, a denomination given by the Greeks to *ursa minor*, or the little bear, from *κυνοςσαρα*, the dog's tail. This is the constellation next our pole, consisting of seven stars: four of which are disposed like the four wheels of a chariot, and three lengthways representing the beam; whence some give it the name of the chariot, or Charles's wain. See **CYNOSURE**.

CYNOSURA, in mythology, a nymph of Ida, in Crete, said to have nursed Jupiter, who changed her into a star.

CYNOSURA, **CYNOSURE**, or **CYNOSURIS**, in ancient geography, a place in Laconia; but whether maritime or inland, is uncertain. Here Æsculapius was buried. 134

CYNOSURE, *n. s.* From *κύων* *ovpa*. The star near the north pole, by which sailors steer.

Towers and battlements it sees
Bosomed high in tufted trees,
Where perhaps some beauty lies,
The *cyposure* of neighbouring eyes. *Milton*.

CYNOSURUS, in botany, dog-tail grass; a genus of the digynia order and triandria class of plants; natural order fourth, graminæ: *cal.* bivalved and multilobous; the receptacle proper, unilateral, and foliaceous. There are ten species, four of which are natives of Britain, viz. the cristatus, or crested dog-tail grass; the echinatus, or rough dog-tail grass; the caruleus, or blue dog-tail grass; and the paniceus or bearded dog-tail grass.

CYNTHUS, in ancient geography, a mountain of the island Delos, so high as to overshadow the whole island. On this mountain Latona was fabled to have brought forth Apollo and Diana; hence called Cynthius and Cynthia.

CYNURIA, or **CYNURUS AGER**, in ancient geography, a district of Laconia, on the confines of Argolis, that proved a perpetual bone of contention between the Argives and Spartans.

CYON. See **CION**.

Gather *cyons* for graffs before the buds sprout.
Beelym.

CYPERUS, in botany, a genus of the monogynia order and triandria class of plants; natural order third, calamariæ. The glumes are paleaceous, and imbricated towards each side; the corolla is wanting, and there is one naked seed. There are thirty species; the only remarkable are,

1. *C. longus*, the English, Flemish, or long sweet cyperus, grows in the water, and along banks and river sides. Its root is as thick as an olive, full of little knots or specks, of an oblong figure, gray color, sweet and somewhat sharp taste, and almost without smell when it is newly taken out of the ground. It is much used by perfumers and glovers.

2. *C. rotundus*, the round cyperus, is a native of the East Indies, and grows by the sides of rivulets and ditches. The root is knotty, wrapped round with fibrous strings, not easy to break, of a brown color without any gray within; of a pleasant scent, especially when fresh and well dried; the leaves are green, and resemble those of the reed and leek. The roots of both species are esteemed cordial, diuretic, cephalic, resisters of poisons, and expellers of wind.

CYPHER. See **CIPHER**.

CYPHERING, *n. s.* Skill in arithmetic; the art of arithmetic.

Is a fine clerk, and has his *cyphering* perfect.
Ben Jonson.

CYPHON, in antiquity, a kind of punishment used by the Athenians. It was a collar made of wood; so called because it constrained the criminal to bow down his head.

CYPHONISM, **CYPHONISMUS**, from *κυφω*, derived from *κυφω*, crooked, a kind of torture or punishment in use among the ancients. The learned are at a loss to determine what it was. Some suppose it to be that mentioned by St. Jerome, in his life of Paul the Hermit, chap. 2,

which consisted in smearing the body over with honey, and thus exposing the person, with his hands tied, to the warm sun, to invite the flies and other vermin to torment him.

CYPRÆA, the gowrie, in zoology, a genus of insects belonging to the order of vermes testacea. It is an animal of the limax or snail kind; the shell is one involuted, subovated, obtuse, smooth valve. The aperture on each side is linear, longitudinal, and toothed. There are forty-four species, distinguished by the form of their shells. This genus is called *cypræa* and *venerea* from its being peculiarly dedicated to Venus; who is fabled to have endowed a shell of this genus with the powers of a remora, so as to impede the course of the ship which was sent by Perander, tyrant of Corinth, with orders to mutilate the young nobility of Coreyra.

CYPRESS-TREE, *n. s.* Lat. *cupressus*. A tree anciently used in funerals; thence, poetically, the emblem of mourning. See **CUPRESSUS**.

He taketh the *cyprus* and the oak, which he strengtheneth for himself among the trees of the forest.
Isaiah xlv. 14.

The aspine, good for staves, the *cyprisse* funeral.
Spenser. *Fæerie Queene*.

In ivory coffers I have stufed my crowns;
In *cyprus* chests my arras counterpanes.
Shakspeare.

Poison be their drink,
Their sweetest shade a grove of *cyprus* trees.
Id. *Henry VI*.

Bind ye my brows with mourning *cyperisse*,
And palish twigs of deadlie poplar tree. *Hall*.

Poplars and alders ever-quivering played,
And nodding *cyprus* formed a fragrant shade.
Pope's Odyssey

Long aisles of *cyprus* waved their deepened glooms,
And quivering spectres grinned amid the tombs.

Though no funeral *cyprus* shade thy tomb,
For thee the wreaths of Paradise shall bloom.
Huddesford.

Oh, snatched away in beauty's bloom,
On thee shall press no ponderous tomb;
But on thy turf shall roses rear
Their leaves, the earliest of the year;
And the wild *cyprus* wave in tender gloom.
Byron. *Hebrew Melodies*.

CYPRESS. See **CUPRESSUS**.

CYPRIANUS (Thascius-Cacilius), a father of the church, born at Carthage, about the end of the second or beginning of the third century. His parents were heathen; and he himself continued such till the last twelve years of his life. Applying early to the study of oratory, he taught rhetoric in Carthage with the highest applause. His conversion is fixed by Pearson, A. D. 246, at Carthage, where, as St. Jerome observes, he had often employed his rhetoric in the defence of paganism. Cyprian, although a married man, as soon as he was converted, resolved upon a state of continence, which was then thought a high degree of piety. He wrote ably in defence of Christianity, and addressed to Donatus his first production *De Gratia Dei*. He next composed a piece *De Idolorum Vanitate*, upon the vanity of idols. Cyprian was now ordained priest, and, when the bishop of Carthage died,

none was judged so proper to succeed him as Cyprian. His first episcopal engagement was to draw up a piece *De Habitu Virginum*, on the dress of young females; in which he inculcates many lessons of modesty and sobriety. In 249 Decius issued very severe edicts against the Christians; and in 250 the heathens, in the circus and amphitheatre of Carthage, insisted upon Cyprian's being thrown to the lions. Upon this he withdrew from Carthage, and wrote, in his retreat, some excellent letters to the Libellatici, or those pusillanimous Christians, who procured certificates of the heathen magistrates, to show that they had complied with the emperor's orders, in sacrificing to idols. At his return to Carthage he held several councils on the repentance of those who had fallen off during this persecution, and other points of discipline; he opposed the schemes of Novatus and Novatianus; and contended for the rebaptising of those who had been baptised by heretics. At last he died a martyr in the persecution under Valerian and Gallienus, in 258. Cyprian wrote eighty-one letters, and several treatises. The best editions of his works are those of Pamelius in 1568; of Rigaltius in 1648; and of Oxford in 1682.

CYPRINUS, in ichthyology, a genus of fishes belonging to the order of abdominales. The mouth is toothless; there are three rays in the gills; the body is smooth and white; and the belly fins have frequently nine rays. There are thirty-one species, principally distinguished by the number of rays in the vent-fin. The most remarkable are 1. *C. alburnus*, the bleak. These fish keep together in large shoals. At certain seasons they seem to be in great agonies; they tumble about near the surface of the water, and are incapable of swimming far from the place; but in about two hours they recover and disappear. Fish thus affected, the Thames fishermen call mad bleeks. They seem to be troubled with a species of Gordius, or hair worm, which torments them so, that they often rise to the surface and die. The bleak seldom exceeds five or six inches in length. Artificial pearls are made of the scales of this fish, and probably also with those of the dace. They are beaten into a fine powder, then diluted with water, and introduced into a thin glass bubble, which is afterwards filled with wax. The French were the inventors of this art. 2. *C. auratus*, the golden fish, a small fish domesticated by the Chinese, and generally kept for ornament in their courts and gardens. They breed them in small ponds made for the purpose, in basins, and even in porcelain vessels. This fish is no larger than our pilchard. The male is of a bright red color from the top of the head to the middle of the body: the rest is of a gold color: but it is so bright and splendid, that the finest gilding cannot approach it. The female is white: but its tail and half of its body resemble the lustre of silver. F. du Halde, however, observes, that a red and white color are not always the distinguishing marks of the male and female; but that the females are known by several white spots which are seen round the orifices that serve them as organs of hearing, and the males, by having these spots much brighter. Gold fish are light and lively; they love to sport on the

surface of the water, soon become familiarised, and may even be accustomed to come and receive their food on sounding a small rattle. Great care is necessary to preserve them; for they are extremely delicate, and sensible of the least injuries of the air: a loud noise, such as that of thunder or cannons, a strong smell, a violent shaking of the vessel, or a single touch, will oft-times destroy them. These fish live with little nourishment: those small worms which are engendered in the water, or the earthy particles that are mixed with it, being sufficient for their food. In winter they are removed from the court to a warm chamber, where they are kept, generally shut up in a porcelain vessel. During that season they receive no nourishment; however, in spring, when they are carried back to their former basin, they sport and play with the same strength and liveliness as they did the preceding year. In warm countries these fish multiply fast, provided care be taken to collect their spawn, which floats on the water, and which they almost entirely devour. This spawn is put into a particular vessel exposed to the sun, and preserved there until vivified by the heat: gold-fish, however, seldom multiply when they are kept in close vases, because they are then too much confined. In order to render them fruitful, they must be put into reservoirs of considerable depth, in some places at least, and which are constantly supplied with fresh water. They were first introduced into England about A.D. 1691; but were not generally known till 1728, when a great number were brought over, and presented to Sir Matthew Dekker, and by him circulated round the neighbourhood of London, from whence they have been distributed to most parts of the country. 3. *C. brama*, the bream, is an inhabitant of lakes, or the deep parts of still rivers. It is a fish that is very little esteemed, being extremely insipid. 4. *C. carpio*, the carp. This was introduced into England about 1514, by Leonard Maschal. Russia wants these fish at this day. Sweden has them only in the ponds of people of fashion. They chiefly abound in the rivers and lakes of Polish Prussia, where they are sometimes taken of a vast size. They are there a great article of commerce, and sent in well-boats to Sweden and Russia. The merchants purchase them out of the waters of the noblesse of the country, who draw a good revenue from this article. They grow also to a very great size: some authors speak of carp 200 lbs. in weight, and five feet in length. They are prodigious breeders: the quantity of roe has been sometimes found so great, that when taken out and weighed against the fish itself, the former has been found to preponderate. From the spawn of this fish caviare is made for the Jews, who hold the sturgeon in abhorrence. The carp is extremely cunning, and is sometimes styled the river fox. They will sometimes leap over the nets, and escape that way; at other times they will immerse themselves so deep in the mud, as to let the net pass over them. They are also very shy of taking a bait; yet at the spawning time they are so simple as to suffer themselves to be tickled, handled, and caught by any body that will attempt it. This fish is apt to mix its milt with the roe of other fish; from

which is produced a spurious breed. 5. *C. cephalus*, the chub, is a very coarse fish and full of bones. It frequents the deep holes of rivers; and in summer commonly lies on the surface, beneath the shade of some tree or bush. It is very timid, sinking to the bottom on the least alarm, even at the passing of a shadow, but soon resumes its former situation. It feeds on worms, caterpillars, grasshoppers, and other coleopterous insects that happen to fall into the water; and it will even feed on cray-fish. It will rise to fly. Some of this kind have been known to weigh eight or nine lbs. 6. *C. barbus*, the barbel, a common inhabitant of most fresh waters in Europe, and easily distinguished from the other species of cyprinus, by the upper jaw being advanced far beyond the lower one, and in having the four beards appendant, from which the appropriate name of barbus or barbel is derived. This fish, during the summer, prefers the rapid currents and shallows of rivers, and retires at the approach of winter to the more full and deeper places. They live in societies; lurking in holes along the sides of the water under shelter of the steepest banks, and feed on smaller fish, and worms and flesh of all kinds, for which they dig in the banks like swine. In the day-time they love to lurk occasionally among weeds, and between the stones in retired parts of the river, and wander out at night in search of prey. They spawn in April, and begin to be in season in May and June. The flesh of the barbel was never in great esteem for the table. Mr. Pennant quotes a passage in Ausonius, which, as he observes, is no panegyric on its excellence, for he lets us know it loves deep waters, and that, when it grows old, it is not absolutely bad:

*Laxos exerceo barbe natatus
Tu melior pejore ævo, tibi contigit uni
Spirantum ex numero non inlaudata senectus.*

And he adds himself, that 'they are the worst and coarsest of fresh-water fish, and seldom eaten but by the poorer sort of people, who sometimes boil them with a bit of bacon to give them a relish.' 'The barbel,' says old Walton, 'though he be of a fine shape, and looks big, yet he is not accounted the best fish to eat, neither for his wholesomeness nor his taste; but the male is reputed much better than the female, whose spawn is very hurtful.' 7. *C. gobio*, the gudgeon, is generally found in gentle streams, and is of a small size, the largest not exceeding half a pound weight. They bite eagerly; and are assembled by raking the bed of the river; to this spot they immediately crowd in shoals, in expectation of food. 8. *C. leuciscus*, the dace, is gregarious, haunts deep still waters, is a great breeder, very lively, and during summer is very fond of frolicking near the surface of the water. It never exceeds the weight of a pound and a half; the scales are smaller than those of the roach. 9. *C. rutilus*, the roach, is a common fish found in many of the deep still rivers of this country. They are gregarious, keeping in large shoals. It has never been known to exceed five lbs. in weight. 10. *C. tinca*, the tench, was treated with the same disrespect by the ancients as the barbel;

but is now in much more repute. It has by some been called the physician of the fish; and its slime has been said to be of so healing a nature, that the wounded fishes apply it as a styptic. In this country it is reckoned a wholesome and delicious food; but the Germans are of a different opinion. By way of contempt they call it the shoemaker. Gesner even says that it is insipid and unwholesome. It does not commonly exceed four or five lbs., though some have been known to weigh ten, and even twenty. They love still waters, and are rarely found in rivers; they are easily caught. They are thick in proportion to their length. The color of the back is dusky; the corial and ventral fins of the same color; the head, sides, and belly, of a greenish cast, most beautifully mixed with gold, which is in its greatest splendor when the fish is in highest season.

CYPRIPEDIUM, the lady's slipper, in botany, a genus of the diandria order, and gymandria class of plants: natural order seventh, orchideæ. The nectarium is ventricose, inflated, and hollow. There are three species, of which only one, viz. *C. calceolus*, is a native of Britain. It grows in rough ground in different parts of the island. The other two species are natives of America. None of them are easily propagated in gardens, and therefore must be transplanted from those places where they are natives.

CYPRUS, *n. s.* I suppose from the place where it was made; or corruptly from cypress, as being used in mourning, says Dr. Johnson. A thin transparent black stuff.

*A cyprus, not a bosom,
Hides my poor heart!* *Shakspeare.*

*Lawn as white as driven snow,
Cyprus black as c'er was crow.*

Id. Winter's Tale.

CYPRUS, or *KUPRIS*, as it is called by the Turks, is the most important island of the Levant, and subject to Turkey. It is situated between 33° and 36° E. long., and 30° and 34° N. lat. It is about 150 miles in length by seventy-five broad, and is traversed from east to west by two remarkable mountain ranges, one of which yielded the third Olympus of the ancient mythology. The whole are covered with snow during the winter months, but seem only to render the heat of summer more oppressive. This island was called *Macaria*, the happy, by the Greeks. Homer celebrates its fertility, calling it by its present name, in *Iliad*.

Σεῖατ' ἐπὶ Τροίην, πολυπᾶσι ἐνὸδεα Κύπρον.

It is also known in history by the names of *Acamantis*, *Erosa*, *Amathus*, *Cerastis*, *Colinia*, *Paphia*, *Salaminia*, and *Spechia*: but its most common name was that which it still bears. The principal towns of ancient Cyprus were *Paphos*, *Citium*, *Amathus*, *Salamis*, *Idalion*, *Lapathus*, *Arsinoe*, &c. There were three celebrated temples here: two dedicated to *Venus*, who was said to be born here, and was called the Cyprian queen, and one to *Jupiter*. The females of the island were proverbially dissipated.

Cyprus, according to *Eratosthenes*, was first discovered by the Phœnicians two or three gene-

rations before Asterius and Minos, kings of Crete; that is, according to Sir Isaac Newton's computation, 2006 years before the Christian era. It was then so full of wood that it could not be felled, and the Phœnicians first cut down that wood for melting copper, with which the island abounded; afterwards, when they began to sail without fear on the Mediterranean, that is, after the Trojan war, they built numerous vessels of this wood. But Josephus informs us, that the descendants of Clittim, the son of Javan, and the grandson of Japhet, were the original inhabitants of Cyprus. According to his account, Clittim, seeing his brother Tarshish settled in Cilicia, where he built the city of Tarsus, settled with his followers in this opposite island; and either he or his descendants laid the foundations of Citium, which, according to Ptolemy, was the most ancient city in the island. As Cyprus was too narrow to contain the great numbers who attended him, he left here as many as might serve to people the country, and with the rest passed over into Macedon. Cyprus was divided among several petty kings till the time of Cyrus. He subdued them all; but left each in possession of his kingdom, obliging them only to pay him an annual tribute, and to send supplies of men, money, and ships, when required. The Cyprian princes lived thus subject to the Persians till the reign of Darius Hystaspis, when they attempted, but with little success, to shake off the yoke; their forces being entirely defeated, and themselves again obliged to submit. They made another more successful attempt about A. A. C. 357; but they could never become entirely independent. They submitted, it is probable, to Alexander the Great, though historians are silent as to this event. On his death, the dominion of Cyprus was disputed by Antigonus and Ptolemy. At last Antigonus prevailed, and the whole island submitted to him about A. A. C. 304. He and his son Demetrius kept possession of it for eleven years, when it was recovered by Ptolemy, and quietly possessed by him and his descendants till A. A. C. 53, when it was unjustly seized by the Romans. In the time of Augustus, it began to be ranked among the proconsular provinces, and to be governed by magistrates sent thither by the senate. In 648 it was conquered by the Saracens; but recovered by the Romans in 957. They held it, however, but for a very short time, and the barbarians kept possession of it till the time of the crusades. It was then reduced by Richard I. of England, who gave it to the princes of the Lusignan family, who held it till A. D. 1570. They divided it into twelve provinces, in each of which was a capital city, from which the province was denominated. So considerable was the island at this time, that besides the cities abovementioned, and others of less note, it contained 800 villages. In 1570 it was taken by the Turks, and it has ever since continued under their yoke.

Cyprus has no river, and the torrents that descend from the mountains in winter do not reach the sea in summer, but form unhealthy stagnant lakes and marshes in the low grounds. It is generally fertile, producing wine, oil, cotton, silk, and pasture; but has large tracts of forest. In minerals it is rich, having mines of

gold and silver, and yielding emeralds, rock-crystal, red jasper, agate, amianthus, terre d'ombre, and other minerals, besides the Paphian diamond. It has no wild animals but foxes and hares. The population is, according to Olivier, 60,000, half Greeks and half Turks; according to Malte Brun 83,000. Dr. Clarke says that its present state may be expressed in a few words. 'Agriculture neglected; inhabitants oppressed; population destroyed; pestiferous air; contagion; poverty; indolence; desolation.'

The bay of Salinas, between Cape Grego and Cape Tagista, or Chiti, is pointed out by the highest summit of the island, Mount Cius, or Rusie, being directly over it, whence it bears west. Larnaca, on the east shore of this bay, has a tolerable road even in winter, though exposed to the south-east and south. The town, which is a heap of ruins, is half a mile from the shore, on which is a suburb on the site of the ancient Citium: in the vicinity are many salt marshes, whence the name of the bay, which afford considerable quantities of salt, but render the air unhealthy. Salinas (Salamis) is at the head of the gulf; it has a citadel falling to ruin.

The Bay of Limasole, or Limisso, is sheltered on the west by point Della Gatta: the village at the head of the bay is supposed to stand on the site of Amathonte, and a league east of it are considerable ruins. Piscochia is a village east of the south point of the island, and in the most fertile part of it. On the west coast is Baffa, supposed to be on the site of Paphos: it is a small town with a fort and port for small vessels; the town is on an eminence one mile from the port, and is entirely inhabited by Greeks. Solea (Sole and Epeia) is on the north coast, as are Cerino (Ceronia), a village of 200 inhabitants with a castle in good order, and a small port within two rocks, but open to the north and unsafe in winter, Maceria (Macaria and Aphrodisum), and Artemisia.

The commerce of Cyprus is considerable, exporting of its own produce cotton, which is considered the best of the Levant, 5000 bags of 600 lbs. each, chiefly to Venice, Holland, and England; silk, 25,000 bags of 300 lbs. each, wool, 500 bags of 600 lbs. each; wine chiefly to Venice and Leghorn; coloquintida, 100 quintals, chiefly to Holland and Leghorn; laudanum, madder, chiefly to France; cochineal a small quantity; soda to Marseilles; turpentine to Venice; green earth for painters, and brown umber, chiefly to Holland; corn, though prohibited, finds its way out of the island; salt to Syria and Constantinople; carob beans, pitch, tar, and planks, in small quantities, and some manufactured silks and cottons. The exports are chiefly paid for in specie. About 600 European vessels are computed to visit the island annually.

Wine is the staple product of this island. Its grapes, yielding a juice which is almost a concentrated essence, are considered among the richest and most luscious in the world. The wines made from them strongly resemble Tokay, and, in the language of the east, are said to have power to restore health and youth to the most exhausted frames. They are kept in casks, without any other precaution to exclude the

air than that of placing a piece of sheet lead over the bung hole. At the age of forty years this noble beverage is supposed to be in perfection, and its qualities are then truly balsamic. All the valuable kinds are white, the red being merely used as *vin du pays*. The apricot of Cyprus are also delicious. Near Baffia is found an amianthus, or mineral cloth, peculiarly distinguished for its flexibility, whiteness, and delicate structure. Cyprus is likewise noted for the common Turkey manufactures of leather, carpets, and printed cottons. The first is remarkable for its brilliant and lively color. The carpets are of excellent workmanship; and, though barely large enough to cover an English hearth, bring from forty to fifty piastres a-piece. The cottons have the valuable quality of preserving their colors in washing; which, in fact, rather improves them. The principal towns are Nicotia, Famagusta, and Larnica all situated in the south-east part of the island.

Of the appearance of the females of Cyprus, renowned from an early period of history, Dr. Clarke gives the following account:—"The interesting costume presented in the dress of the Cyprian ladies ought not to pass without notice. Their head apparel was precisely modelled after the kind of Calathus represented upon the Phœnician idols of the country, and upon Egyptian statues. This was worn by women of all ranks, from the wives of the consuls to their slaves. Their hair, dyed of a fine brown color, by means of a plant called Henna, hung behind in numerous long straight braids; and, in some ringlets disposed near the face, were fastened blossoms of the jessamine, strung together, upon slips from leaves of the palm-tree, in a very curious and pleasing manner. Next to the Calmuck women, the Grecian are, of all others, best versed in cosmetic arts. They possess the valuable secret of giving a brown color to the whitest locks, and also tinge their eyebrows with the same hue; an art that would be highly prized by the hoary courtezans of London and of Paris. The most splendid colors are displayed in their habits; and these are very becoming to the girls of the island. The upper robe is always of scarlet, crimson, or green silk, embroidered with gold. Like other Greek women, they wear long scarlet pantaloons, fastened round the ancle, and yellow boots, with slippers of the same color. Around the neck, and from the head, were suspended a profusion of gold coins, chains, and other trinkets. About their waists they have a large belt or zone, fastened in front by two large and heavy polished brass plates. They endeavour to make the waist as long as possible, and the legs, consequently, short. Naturally corpulent, they take no pains to diminish the size of their bodies by lacing, but seem rather vain of their bulk, exposing their bosoms, at the same time, in a manner highly unbecoming. Notwithstanding the extraordinary pains they use to disfigure their natural beauty by all sorts of ill-selected ornaments, the women of Cyprus are handsomer than those of any other Grecian island. They have a taller and more stately figure; and the features, particularly of the women of Nicotia, are regular and dignified, ex-

hibiting that elevated cast of countenance so universally admired in the works of Grecian artists. At present this kind of beauty seems peculiar to the women of Cyprus."

The Turkish governor resides at Nicotia; his appointment is renewed annually, and obtained by purchase. So that each succeeding ruler has only the one great point of his personal aggrandisement for a short period in view, and the permanent interests of the island are no topic of consideration with any of its masters. A common type on the medals of this island is the temple of the Paphian goddess, as in the annexed figure; inscription, *KYPIQN*; sometimes it contains the name of their kings, and sometimes that of the emperors Augustus, Caligula, Claudius, Galba, Vespasian, Titus, Domitian, Trajan, Septimius Severus, Julia, Caracalla, Geta, or Macrinus.

CYPRUS, KNIGHTS OF, an order instituted by Guy de Lusignan, titular king of Jerusalem, to whom Richard I. of England, after conquering Cyprus, made over his right.

CYRENAICA, an ancient kingdom of Africa, corresponding to the present kingdom and desert of Barca and Tripoli. It was originally inhabited by a number of barbarous nations, differing little from gangs of robbers. Afterwards some colonies from Greece settled in it, and Cyrenaica became so powerful a state, that it waged war with Egypt and Carthage, often with success. In the time of Darius Hystaspis, Arcesilaus, the reigning prince in Cyrenaica, was driven from the throne; on which his mother Pheretima applied for assistance to the king of Cyprus. Her son afterwards returning to Barca, was there assassinated together with his father-in-law. Pheretima, finding herself disappointed by the king of Cyprus, applied to Darius Hystaspis, and by the assistance of the Persians reduced Barca. Here she behaved with the utmost cruelty. Cyrenaica, however, seems to have remained free till the time of Alexander the Great, who conquered it along with Egypt. Soon after his death, the inhabitants recovered their liberty; but were in a short time reduced by Ptolemy king of Egypt. Under these kings it remained till Ptolemy Physcon made it over to his illegitimate son Apian, who, in the 658th year of Rome, left it by will to the Romans. The senate permitted all the cities to be governed by their own laws; and this immediately filled the country with tyrants, those who were most potent in every city or district endeavouring to assume the sovereignty of it. Thus the kingdom was thrown into great confusion; but Lucullus considerably restored the public tranquillity, during the first Mithridatic war. It was found impossible, however, totally to suppress these disturbances, till the country was reduced to the form of a Roman province, which happened about twenty years after the death of Apion A. A. C. 76. Upon a revolt, the city of Cyrene was ruined by the Romans; but they afterwards rebuilt it. In process of time it fell to the Arabs; and then to the Turks, who still retain it

CYRENAICS, a sect of ancient philosophers, so called from their founder Aristippus of Cyrene, a disciple of Socrates. The great principle of their doctrine was, that the supreme good of man in this life is pleasure; whereby they not only meant a privation of pain, and a tranquillity of mind, but an assemblage of all mental and sensual pleasures, particularly the last. Cicero makes frequent mention of Aristippus's school; and speaks of it as yielding debauchees. Three disciples of Aristippus, after his death, divided the sect into three branches, viz. the Hegesiac school, the Annicerian, and the Theodoran; from the names of their authors. Under this division it languished and sunk.

CYRENE, in ancient geography, the capital of Cyrenaica, and one of the five cities called Pentapolis, distant from Apollonia, its sea-port, ten miles, situated on a plain of the form of a table, according to Strabo. It is now called Caibon.

CYRILL (St.), bishop of Jerusalem, succeeded Maximus in 350. He was afterwards deposed for selling the treasures of the church, and applying the money to the support of the poor during a great famine. Under Julian he was restored to his see, and firmly established in all his honors under Theodosius; in which he continued unmolested to his death in 386. The remains of this father consist only of twenty-three catecheses, and one letter to the emperor Constantius.

CYRILL (St.), patriarch of Alexandria, succeeded Theophilus, his uncle, in 413. Scarcely was he installed, when he began to exert his authority with great vigor; and drove the Novatians and Jews from Alexandria, permitting their wealth and synagogue to be taken from them. This proceeding highly displeased Orestes, the governor. Upon which a civil war broke out between them; many tumults were raised and some battles fought in the very streets of Alexandria. St. Cyrill also distinguished himself by his zeal against Nestorius bishop of Constantinople, who, in some of his homilies, had asserted that the Virgin Mary ought not to be called the mother of God. The dispute at first proved unfavorable to Cyrill, whose opinion was not only condemned, but himself deprived of his bishopric and thrown into prison. But he was soon after released, and gained a complete victory over Nestorius, who in 431 was deposed from his see of Constantinople. Cyrill returned to his see at Alexandria, where he died in 444. St. Cyrill also wrote against Theodorus of Mopsuesta, Diodorus of Tarsus, and Julian the Apostate. He composed commentaries on St. John's gospel, and wrote several other books. His works were published in Greek and Latin in 1638, in six volumes folio.

CYRUS THE GREAT, the founder of the united empire of the Medes and Persians. The two chief historians, who have written the life of Cyrus, are Herodotus and Xenophon; but their accounts of him are extremely different. The former tells us, that Astyages king of the Medes, dreaming that a vine sprung from the womb of his daughter Mandane, the branches whereof overshadowed all Asia, was told by the sooth-

sayers, that this portended the future power and greatness of a child who should be born of his daughter; and further, that this child should deprive him of his kingdom. Astyages, to prevent the accomplishment of the prediction, married his daughter to Cambyzes, a Persian of mean condition, and commanded one of his officers, named Harpagus, to destroy the infant as soon as it came into the world. Harpagus, fearing the resentment of Mandane, put the child into the hands of the king's shepherd. The shepherd's wife, we are told, was so extremely touched with the beauty of Cyrus, that she desired her husband rather to expose her own son, who was born some time before (a story equally unnatural and incredible), and preserve the young prince. Thus Cyrus was brought up among the shepherds of the king, and one day, as the neighbouring children were at play together, being chosen for their prince or chief, he punished one of his comrades with some severity, and the child's parent complained to Astyages. This prince sent therefore for the youthful Cyrus, and observing something noble in his air, together with a great resemblance of his daughter Mandane, he made particular enquiry into his history, and discovered that Cyrus was his grandson. Harpagus, who was the instrument of preserving him, was now punished with the death of his own son; but Astyages, believing that the royalty which the soothsayers had promised to the young prince, was only that which he had lately exercised among the shepherds' children, laid aside his fears. Cyrus being grown up, Harpagus disclosed the secret of his birth to him, with the manner in which he had delivered him from his grandfather's cruelty. He encouraged him to come into Media, and promised to furnish him with forces, in order to make him master of the country, and depose Astyages. Cyrus now, therefore, engaged the Persians to take arms against the Medes, marched at the head of them to meet Astyages, defeated him, and possessed himself of Media. He carried on many other wars; and at length sat down before Babylon, which, after a long siege, he took.

Xenophon's account of the early life of Cyrus is more credible. According to that writer, Astyages king of Media married his daughter Mandane to Cambyzes king of Persia, son and successor to Achæmenes. Cyrus was born at his father's court, and was educated with all the care his birth required. When he was about the age of twelve, his grandfather Astyages sent for him to Media, together with his mother Mandane. Some time after, a prince of Assyria having invaded Media, Astyages, with his son Cyaxares and his grandson Cyrus, marched against him. Cyrus distinguished himself in this war, and defeated the Assyrians. Cambyzes afterwards recalled him, that he might have him near his own person; and Astyages dying, his son Cyaxares, uncle by his mother's side to Cyrus, succeeded him in the kingdom of Media. Cyrus, at the age of thirty, was, by his father Cambyzes, made general of the Persian troops; and sent at the head of 30,000 men, to the assistance of his uncle Cyaxares, whom the king of Babylon and his allies, the Cappadocians,

Carians, Phrygians, Cilicians, and Paphlagonians, were preparing to attack. Cyaxares and Cyrus prevented them, by falling upon them and dispersing them. The latter now advanced as far as Babylon, and spread terror throughout the country.

From this expedition he returned to his uncle, towards the frontiers of Armenia and Assyria, and was received by Cyaxares in the tent of the Assyrian king whom he had defeated. After this, Cyrus carried the war into the countries beyond the river Halys, entered Cappadocia, and subdued it entirely. From thence he marched against Croesus king of Lydia, defeated him in the first battle; then besieged him in Sardis the capital; and after a siege of fourteen days obliged him to surrender. See CROESUS. After this Cyrus, having almost reduced all Asia, repassed the Euphrates, and made war upon the Assyrians. He marched directly to Babylon, took it, and there prepared a palace for his uncle Cyaxares. After these expeditions Cyrus returned to his father and mother in Persia, where they were still living; and some time after visiting Cyaxares in Media, he married his cousin the only daughter and heiress of his uncle's dominions, and returned with her to Babylon. He is now stated to have again engaged in several wars, and subdued all the nations which lie between Syria and the Red Sea. He died at the age of seventy years, after a reign of thirty: but authors differ much concerning the manner of his death. Herodotus, Justin, and Valerius Maximus relate, that he died in a war against the Scythians; that falling into an ambush, which their queen Tomyris had laid for him, she ordered his head to be cut off, and cast into a vessel full of blood, saying, 'Thou hast always thirsted after human blood, now glut thyself with it.' Diodorus the Sicilian states, that he was taken in an engagement and hanged. Ctesias assures us, that he died of a wound which he received in his thigh: but by Xenophon's account he died peaceably in his bed, amidst his friends and servants; and certain it is, that in Alexander's time his monument was shown at Pasargarda in Persia. From all this it is obvious, that we are but imperfectly acquainted with the history of this great prince, the founder of the Persian, and destroyer of the Chaldean empire.

Cyrus was monarch of all the east; or as he himself speaks (2 Chr. xxxvi. 22, 23; and Ezra i. 1, 2), 'of all the earth,' when he permitted the Jews to return into their own country; A.M. 3466, and A.A.C. 538. The enmities of the Hebrews, making use of this prince's affection to his own religion, prevailed with him to countermand his orders for the building of the temple at Jerusalem (Ezra iv. 5). The prophets frequently foretold the coming of Cyrus; and Isa. (xlv. 28) mentions him by name 200 years before he was born. Josephus (Antiq. I. II. c. 2) says, that the Jews of Babylon showed this passage of the prophet to Cyrus, which is extremely probable; and that this prince, in the edict which he granted them for their return, acknowledged that he received the empire of the world from the God of Israel; that the same God had described him by name in the writings of the

prophets; and had foretold that he should build a temple to him at Jerusalem. Cyrus is expressly styled in scripture, 'the Lord's anointed, and the shepherd of Israel,' (Isaiah xlv. 1, and xlv. 28.); and God says of him (Isa. xlv. 5) 'I girded thee, though thou hast not known me.' Daniel is supposed to allude to this prince. Chap. viii. v. 3—20, under the figure of the ram. The taking of Babylon by Cyrus was clearly foretold by the prophets. See BABYLONIA and BELSHAZZAR. Archbishop Usher fixes the birth of Cyrus to A. M. 3405; his first year at Babylon to 3466, and his death to 3475.

CYRUS THE YOUNGER, son of Darius Nottus, and brother of Artaxerxes. He was sent by his father at the age of sixteen, to assist the Lacedaemonians against Athens. Artaxerxes succeeded to the throne at the death of Nottus; and Cyrus, mad with ambition, attempted to assassinate him. He was discovered, and would have been punished with death, had not his mother Parysatis saved him by her tears and intreaties. This circumstance did not check the ambition of Cyrus; he was appointed over Lydia and the sea coasts, where he secretly fomented rebellion and levied troops under various pretences. At last he took the field with an army of 100,000 barbarians, and 13,000 Greeks, under the command of Clearchus. Artaxerxes met him with 900,000 men near Cunaxa. The battle was long and bloody; and Cyrus might have perhaps obtained the victory, had not his rashness proved his ruin. It is said that the two royal brothers met in person, and their engagement ended in the death of Cyrus, 401 years before the Augustan age; and Artaxerxes, having boasted that his brother had fallen by his hand, put to death two of his subjects for declaring that they had killed him. The Greeks, who were engaged in the expedition, obtained much glory in the battle; and no less by their retreat, which is particularly recorded by Xenophon, one of their leaders. See XENOPHON.

CYST, or	} <i>Κυστις</i> . A bag containing morbid matter. Contained in a bag. The art of opening or extirpating encysted tumors.
CYSTIC, <i>n. s.</i>	
CYSTICK, <i>adj.</i>	
CYSTOTOMY, <i>n. s.</i>	

In taking it out, the *cystis* broke, and shewed itself by its matter to be a meliceris. *Wise man's Surgery.*

There may be a consumption, with a purulent spitting, when the vomica is contained in a *cyst* or bag; upon the breaking of which the patient is commonly suffocated. *Arbuthnot.*

The bile is of two sorts: the *cystick*, or that contained in the gall-bladder, a sort of repository for the gall; or the hepatick, or what flows immediately from the liver. *Id.*

CYTHERA, in ancient geography, an island opposite to Malea a promontory, and to Boe a town of Laconia; sacred to Venus, with a very ancient temple of that goddess, who was exhibited in armour, as in Cyprus. It is now called Cerigo.

CYTHERÆA, in mythology, the surname of Venus, so called from Cythera, her birth-place, where she had a temple, and on the shores of which she was believed to be wafted by the Zephyrs, surrounded by the Cupids, the Graces

the Tritons, and the Nereides, reclining in a languishing posture in a sea-shell.

CYTINUS, in botany, a genus of the dodecandria order, gynandria class of plants; natural order eleventh, sarmentaceæ: *cal.* quadrifid, superior: *cor.* none; the antheræ are sixteen, and sessile; the fruit an octolocular polyspermous berry. Species one, a Cape shrub.

CYTISUS, tree treefoil, a genus of the decandria order, and diadelphia class of plants; natural order thirty-second, papilionaceæ: *cal.* bilabiated, with the upper lip bifid; inferior, tridentate; the legume attenuated at the base. There are eleven species; of which the most remarkable are, 1. *C. Austriacus*, the Austrian, or Tartarian evergreen cytissus, has a shrubby stem, dividing low into many greenish branches, forming a bushy head three or four feet high, having smooth whitish-green leaves, and bright yellow flowers in close umbellate heads at the ends of the branches, having a cluster of leaves under each head. These flowers appear in May. 2. *C. laburnum*, or large deciduous cytissus, has a large upright tree-stem, branching into a full spreading head, twenty or thirty feet high, having smooth greenish branches, oblong oval entire leaves, growing by threes on long slender foot-stalks; and from the sides of all the branches numerous yellow flowers collecting into long spikes, hanging loosely downward, and appearing in May.

CYZICENI, **CYZICENIANS**, the people of Cyzicum, who were noted by the ancients for their timidity and effeminacy. Hence the proverb in Zenodotus and others, *tinctura Cyzicénica*, applied to persons guilty of an indecency through fear; but *stateres Cyziceni*, *nummi Cyziceni*, denote things executed to perfection.

CYZICUM, in ancient geography, an island of the Propontis, on the coast of Mysia; joined to the continent by two bridges, the first of which was built by Alexander the Great.

CYZICUM, or **CYZICUS**, one of the noblest cities of the Hither Asia; situated in the above island. It was a colony of the Milesians, and is famous for its siege by Mithridates, which was raised by Lucullus. The inhabitants were made free by the Romans, but forfeited their freedom under Tiberius. It was adorned with a citadel and walls; had a port and marble towers; and three magazines, one for arms, another for warlike engines, and a third for corn.

CZAR, *n. s.* Slav. *czar*, *tzar*, from Per.

CZARINA, *n. s.* } *tajur*, a crown; *taijzar*, a
CZARISH, *adj.* } monarch. The emperor of Russia. Czarina is the feminine. Relating to the czar.

There were competitors, the *czar* of Muscovy's son, the duke of Newburg, and the prince of Lorraine.

Brown

His *czarish* majesty dispatched an express.

The Tatler.

The *czarina* was satisfied with introducing them, for she found it impossible to render them polite.

Goldsmith.

CZASLAU, or **TZASLAU**, a town of Bohemia, the capital of a circle of the same name, on the Crudimka. It is said to possess the highest spire in Bohemia; and within the beautiful church is interred the famous Zisca. The circle of Czaslau, or Csaslau, is enclosed by Moravia, the circle of Tabor, Caurzim, Bitschow and Chrudim. The soil is productive, but the manufactures are not flourishing. It contains eight towns, thirty-three boroughs, and 829 villages.

CZERNIGOV, or **TSCHERNIGOV**, a government of European Russia, erected in the year 1781, and lying between those of Mohilev, Smolensko, Orel, Kursk, Pultava, Kiev, and Minsk. The soil is very fertile. It has been augmented beyond its original boundaries by the addition of the government of Novgorod-Sieverskoi; and now contains, according to official returns, 741,850 inhabitants. Czernigov, or Tchernigow, the capital, situated on the right bank of the Desna, is fortified, and is the see of a Greek archbishop. Population 5000. Seventy-five miles north of Kiev, and 344 south-west of Moscow.

CZERNOVICZ, or **TSCHERNOWITZ**, a town of Austria, the capital of the Bucharvine, or, more properly, of a circle in Galicia. It is situated at the foot of mountains, on the south bank of the Pruth, on the high road from Lemberg to Jassay, 110 miles south-east of the former, and ninety-five north-west of the latter. It was much enlarged and improved in 1771, and contains 5400 inhabitants. Here is a Greek bishop, a custom-house, a criminal court, a provincial and a charity school. The population of the circle, in 1803, was 195,263.

CZIRKNITZ ZEE, a very extraordinary lake of Austria, in Carniola, five miles long and three broad, which annually produces both fish and corn: for, being dry in summer, its bottom is cultivated, and it produces corn, grass, &c.; but about the 29th of September the water rushes in from several subterraneous passages, which, with the rains and streams that fall from the mountains, quickly fill it again for the winter season. These subterraneous passages are probably connected with some gulf, the ebbing or flowing of whose waters depend upon periodical winds or currents.

CZONGRAD, a market town of Hungary, in a county of the same name, situated at the conflux of the Korosch and the Theyss.

CZONGRAD, a county of Hungary, enclosed by the counties of Hewesch, Bekesch, Chonad, Batsch, Pesth, and Little Cumania. It is thirty miles in length and eighteen in breadth.

D.

D. The fourth letter of the Hebrew, Syriac, Greek, Latin, and French languages, is traced by Minsheu in its shape to the Heb \daleth , signifying, says he, a gate, which the figure of this letter partly resembles. Hence, with a slight alteration, came the Greek Δ , and by rounding two of the angles of the delta, the Roman *D*.

D is generally ranked among the lingual letters, having a middle sound between *t* and *th*, formed by a stronger impulse of the tongue to the roof of the mouth than the former letter. In Latin words the *t* and *d* are often changed for one another, as *at* for *ad*, *set* for *sed*, *haut* for *haud*, &c. And in the formation of words from the Latin, *di* frequently assumes the shape of *gi* or *j*, as *journal* for *diurnal*. In English the sound of *d* never varies, nor is it ever mute. *D*, as a numeral, signifies five hundred; \overline{D} , five thousand.

DAB, *v. a. & n.*

DA'BBLE, *v. a. & n.*

DA'BBLER, *n. s.*

DA'B-CHICK.

Gr. $\delta\epsilon\upsilon\omega$, $\epsilon\upsilon\pi\tau\omega$;

Chald. *dab*; Ger. *dogg-*

wa, *dopa*; Sax. *dapan*,

dippan; Scot. *dub*;

Belg. *dabben*, *dabbelen*; Fr. *dauber*. All probably, as Minsheu suggests, from the sound of mud, when struck. To *dab* is to apply something soft or moist, as to a sore; to strike a soft blow. *Dab*, as a substantive, is a low word for a man expert at something: also a small fish. Mr. Todd thinks it a corruption of adept, *adab*. To *dabble* is to move about; to strike, or strike in water or mud; and, by consequence, to smear, daub, or bespatter: metaphorically, to 'meddle without mastery,' as Dr. Johnson well says; and hence a *dabbler* is 'a superficial meddler.' A *dab-chick* is a small water-fowl. We first illustrate *dab*.

A sore should never be wiped by drawing a piece of tow or rag over it, but only by *dabbing* it with fine lint.

Sharp.

Of flat fish there are rays, flowks, *dabs*, plaice.

Curew.

One writer excels at—a title-page; another works away at the body of the book; and the third is a *dab* at an index.

Goldsmith's *Essays*.

A shadow, like an angel, with bright hair

Dabbled in blood. *Shakespeare. Richard III.*

The little one complained of her legs, that she could neither swim nor *dabble* with them.

L'Estrange.

Neither will a spirit, that dwells with stars, *dabble* in this impurer mind.

Glauville's *Ajod*.

I scarified, and *dabbled* the wound with oil of turpentine.

Wiseman's *Surgery*.

But when he found the boys at play,

And saw them *dabbling* in their clay,

He stood behind a stall to lurk,

And mark the progress of their work. *Swift.*

He dares not complain of the tooth-ach, lest our *dabblers* in politicks should be ready to swear against him for disaffection.

Id.

Shakespeare shall be put into your hands, as clean and as fair as it came out of them: though you, I think, have been *dabbling* here and there with the

text, I have had more reverence for the writer and the printer, and have left every thing standing.

Atterbury to Pope.

A *dab-chick* waddles through the copse

On feet and wings, and wades, and flies, and hops.

Pope.

DA CARO, (Ital. from the head), in music, an Italian term signifying that the beginning of the tune is to be repeated to complete the piece.

DACCA JELALPORE, an important and productive district of Bengal, situated for the greater part between the twenty-third and twenty-fourth degrees of northern latitude. It is bounded on the north by Mymensingh, on the east by Tipperah, on the south by Backergunge, and on the west by Ranjeshahy and Jessore. It contains a great number of valuable zemindaries or estates, and is every where intersected by the Ganges and Brahmapootra, and their various branches, so that every town of consequence has its river or canal. These rivers, however, frequently occasion considerable damage by their inundations. In this district it is not uncommon to find fields of rice covered with water, six or eight feet deep. Rice is its principal produce, and has been sold, in cheap years, at the rate of 640 lbs. the rupee. Its other productions of consequence are the betel nut, tobacco, and cotton; but it imports large quantities of the last article, which is manufactured in every town and village. Its muslins are very fine and delicate. A deputy of the nabob, called the *naib nazim*, was the chief of this district during the Mahommedan government: the last person who held this office was Jessarut Khan, who having been ordered in 1763, by the nabob Cossim Aly Khan, to put all the English at Dacca to death, kindly put them on board boats, and sent them under the protection of a guard to Calcutta; in reward for which he was appointed, after the expulsion of his master, to act in his former office on behalf of the British, and, on his decease, a pension was settled on his family, and the eldest son honored with the title of nabob. The principal towns of this district are Dacca, Narraingunge, Sunergong, and Rajanagur. It contains nearly 1,000,000 inhabitants, most of whom are Mahommedans.

DACCA, a considerable city of Bengal, capital of the foregoing district, and for eighty years the capital of Bengal, when it was called Jehangireanagur. It is the residence of a judge, collector, &c., and is situated on the north bank of the Boor Gunga (Old Ganges), which is here very deep and broad, at the distance of about 100 miles from the sea. The best houses are built of brick, but the bazaars are often thatched; and every vacant spot is filled with trees. The French, Dutch, and English East India Companies had factories here at an early period; those of the two former are gone to decay. The ancient citadel at the west end of the town is in ruins, but the palace or *Poosteh* is in good repair. In this city are manufactured beautiful muslins, and shell bracelets much worn by the

Hindoo ladies. The hot winds which pervade almost all other parts of India, are, through the abundant irrigation of the neighbourhood, little felt here. The months of September and October are, however, unhealthy. The neighbourhood abounds with game of all sorts, from the tiger to the quail. Provisions and fish are also here very cheap and abundant. Distant by land from Calcutta, 180 miles.

DACE, *n. s.*, called also **DACE** and **DART**, provincially. Sax. *dagian*, from *dag* to shine as in Lat. *luciscit*, *luciscus*; a small fish.

Let me live harmlessly, and near the brink
Of Trent or Avon have a dwelling place;

Where I may see my quill or cork down sink
With eager bite of perch, or bleak, or *dace*. *Walton*.

DACE, in ichthyology, a species of **CYPRINUS**, which see.

DACIA, in ancient geography, a country which Trajan, who reduced it to a province, joined to Moesia by an admirable bridge. This country lies extended between the Danube and the Carpathian Mountains, from the river Tibiscus, quite to the north bend of the Danube; so as to extend thence in a direct line to the mouth of the Danube and to the Euxine; being on the north next the Carpates, terminated by the river Hierasus, now called the Pruth; on the west by the Tibiscus or Teiss; and comprising a part of Upper Hungary, all Transylvania and Walachia, and a part of Moldavia. 134

DACIA AURELIANA, a part of ancient Illyricum, which was divided into the eastern and western; Sirmium being the capital of the latter, and Savlica of the former.

DACIER (Andrew), was born at Castres in Upper Languedoc, 1651, and studied at Saumur under Tannegui le Fevre, then engaged in the instruction of his celebrated daughter, who became Madame Dacier. The duke of Montausier, hearing of his merit, engaged him in an edition of Pompeius Festus, which he published in 1681. His edition of Horace printed at Paris in ten volumes, 12mo., and his other works, raised him to great reputation. He was made a member of the Academy of Inscriptions in 1695. When the history of Louis XIV. by medals was finished, he was chosen to present it to his majesty; who settled upon him a pension of 2000 livres, and appointed him keeper of the books of the king's closet. When that post was united to that of library keeper to the king, he was not only continued in the privileges of his place during life, but the survivance was granted to his wife, a favor of which there had been no former instance. The death, however, of Madame Dacier in 1720, rendered this grant, which was so honorable to her, ineffectual. He died September 18th, 1722, of an ulcer in the throat.

DACIER (Anne), daughter of Tannegui le Fevre, professor of Greek at Saumur in France, went after her father's death to Paris, whither her fame had already reached: she was then preparing an edition of Callimachus, which she published in 1674. Having shown some sheets of it to M. Huët, preceptor to the dauphin, and to several other men of learning, the work was so highly admired, that the duke of Montausier made a proposal to her of publishing several

Latin authors for the use of the dauphin. She now, therefore, undertook an edition of Florus, published in 1674. Her reputation being soon after spread over Europe, Christina, queen of Sweden, ordered count Konigsmark to compliment her, and offer her a settlement at Stockholm, in return for which Mademoiselle le Fevre sent the queen a Latin letter, with her edition of Florus. In 1683 she married M. Dacier; and soon after declared her design of reconciling herself to the church of Rome. Both she and her husband made their public abjuration in 1685. In 1693 she applied herself to the education of her son and daughter; the former, however, died in 1694, and the daughter, after making great attainments, became a nun in the abbey of Longchamp. Her mother has immortalised her memory in the preface to her translation of the Iliad. Madame Dacier was in a very infirm state of health the last two years of her life; and died, after a painful sickness, August 17th, 1720, aged sixty-nine.

DACOLITHUS, in ichthyology, a name given by zoologists to a small fish, supposed to be a species of loache, and called by Ray and some others *cobitis barbatulea aculeata*. It is a very small fish, seldom exceeding two or at most three inches in length. The head is broader and flatter than the body: its back is of a dusky brown color spotted with black, and its belly yellow. It has two beards on each side of the upper jaw; and on the coverings of the gills, on each side, two prickles, or a double-pointed sharp hook, whereby it moves itself among the stones. It delights in shallow waters, with a stony bottom, and spawns in May and June.

DACTYLE, *n. s.* } Gr. *δακτυλος*, a finger,
DACTILET, } (from *δακω* to point) be-

DACTYLIC, *adj.* } cause composed of three parts, the first longer than either of the others; Minshew. A poetical foot, consisting of one long syllable and two short, like the joints of a finger; as *cāndīdūs*. Bishop Hall uses *dactilet* as a diminutive.

The nimble *dactils*, striving to outgo
The drawling spondee, pacing it below:
The lingering spondee, labouring to delay
The breathlesse *dactils*, with a sudden stay.
Whoever saw a colt, wanton and wilde,
Yoked with a slow-foote oxe on fallow field,
Can right agree how handsomly besets
Dull Spondee with the English *dactilets*.

Bp. Hall. Satire, l. 6.

A *dactyl* has the first syllable accented, and the two latter unaccented: as, labourer, possible.

Murray. On Prosody.

The *dactylic* measure being very uncommon, we shall give only one example of one species of it.

From the low pleasures of this fallen nature,
Rise we to higher, &c.

Id.

DACTYLE. The dactyle is said to have been the invention of Dionysius or Bacchus, who delivered oracles in this measure at Delphos, before Apollo. The Greeks call it *πολιτικός*. The dactyl and spondee are the most considerable of the poetical feet; as being the measures used in heroic verse, by Homer, Virgil, &c. These two are of equal time, but not equal motion.

DACTYLETHIRA, or **DACTYLITHRA**, digitalis, among the ancient physicians, a medicine used to excite vomiting. It was a sort of topical application, and is described at large by Oribasius.

DACTYLIC VERSES are hexameter verses, ending in a dactyle instead of a spondee; as spondaic verses are those which have a spondee in the fifth foot instead of a dactyle. An instance of a dactylic verse occurs in Virgil: *Æn.* vi. 33.

His patriæ cecidere manus: quin protinus omnia.

DACTYLI IDÆI, q. d. the Fingers of Mount Ida, in pagan mythology, personages very differently described by ancient authors. The Cretans paid divine worship to them, as to those who had nursed and brought up the god Jupiter; whence it appears, that they were the same as the Corybantes and Curetes. Nevertheless Strabo makes them different; and says, that the tradition in Phrygia was, that the 'Curetes and Corybantes were descended from the Dactyli Idæi: that there were originally 100 men in the island, who were called Dactyli Idæi; from whom sprang nine Curetes, and each of these nine produced ten men, as many as the fingers of a man's two hands; and that this gave the name to the ancestors of the Dactyli Idæi.' He relates another opinion, which is, that there were but five Dactyli Idæi; who, according to Sophocles, were the inventors of iron: that these five brothers had five sisters, and that from this number they took the name of fingers of Mount Ida, because they were in number ten; and that they worked at the foot of this mountain. Diodorus Siculus says, 'the first inhabitants of the island of Crete were the Dactyli Idæi, who had their residence on mount Ida: that some said they were 100; others only five, in numbers equal to the fingers of a man's hand, whence they had the name of Dactyli: that they were magicians, and addicted to mystical ceremonies: that Orpheus was their disciple, and carried their mysteries into Greece: that the Dactyli invented the use of iron and fire, and that they had been recompensed with divine honors.' Diomedes the grammarian says, the Dactyli Idæi were priests of the goddess Cybele: called Idæi, because that goddess was chiefly worshipped on Mount Ida in Phrygia; and Dactyli, because that, to prevent Saturn from hearing the cries of infant Jupiter, whom Cybele had committed to their custody, they used to sing certain verses of their own invention, in the Dactylic measure. Strabo gives us the names of four of the Dactyli Idæi: viz. Salaminus, Damnanæus, Hercules, and Acmon. See **CORYBANTES**, **CRETE**, and **CURETES**.

DACTYLIOMANCY, or **DACTYLIOMANTIA** from *δακτυλιος*, a ring, and *μαντεια*, divination, a sort of divination performed by means of a ring. It consisted in holding a ring, suspended by a fine thread, over a round table, on the edge of which were made divers marks with the letters of the alphabet. The ring in shaking, or vibrating over the table, stopped over certain of the letters, which, being joined together, composed the answer required.

DACTYLIS, in botany, cock's foot grass;

a genus of the digynia order, and triandria class of plants; natural order fourth, gramina: *CAL.* bivalved and compressed, with the one valve longer than the other, carinated, or having the rachis prominent and sharp. There are two species, both natives of Britain; viz. 1. *D. cynosuroides*, the smooth cock's foot grass, which grows in marshy places; and 2. *D. glomeratus*, the rough cock's foot grass, which is common in meadows and pasture grounds. It is eaten by horses, sheep, and goats; but refused by cows.

DACTYLONUMIA, or **DACTYLONUMY**, from *δακτυλος*, and *νομος*, a rule, the art of numbering by the fingers. The rule is this; the left thumb is reckoned one; the index or fore finger two: and so on to the right thumb, which stands for the cypher.

DACTYLI'US, in zoology, a name given by Pliny to the pholas. In Toulon harbour, and the road, are found solid hard stones, perfectly entire; containing, in different cells, secluded from all communication with the air, several living shell-fish, of an exquisite taste, called dactyli, i. e. dates: to come at these fish the stones are broken with mauls. Along the coast of Ancona, in the Adriatic, are stones usually weighing about fifty pounds, and sometimes even more, the outside rugged and easily broken, but the inside so hard as to require a strong arm and an iron maul to break them; within them, and in separate niches, are found small shell-fish, quite alive and very palatable, called solenes and cappe laughe. These facts are attested by Gassendi, Blondel, Mayol, the learned bishop of Salsurara, and more particularly by Aldrovandi, a physician of Bologna. The two latter speak of it as a common fact, which they themselves saw.

DADUCHI, Gr. *δαδωχες*, torch-bearers, in antiquity, priests of Ceres. The goddess having lost her daughter Proserpine, say mythologists, began to make search for her at the beginning of the night. In order to do this in the dark, she lighted a torch, and thus set forth on her travels throughout the world: for which reason she is represented with a lighted torch in her hand. In commemoration of this pretended exploit, it became a custom for the priests, at the feasts and sacrifices of this goddess, to run about in the temple with torches after this manner:—one of them took a lighted torch from off the altar, and, holding it with his hand, ran with it to a certain part of the temple, where he gave it to another, saying to him, *tibi trado*: the second ran after the like manner to another part of the temple, and gave it to the third, and he to another and so on.

DAD, *n. s.* } Heb. *דוד*, *dodh*, beloved; Gr.

DAD'DY. } *arra*; Hind. *ata*; Lat. *tata*; Goth. *atta*; Fr. *papa*. One among those familiar words with which, in all languages, children first salute their father; and which are universally compounds of *a* and *t* or *d*; or *a* and *b* or *p*.

I was never so bethumt with words,
Since first I called my brother's father *dad*.

Shakspeare.

His loving mother left him to my care,
Fine child, as like his *dad* as he could stare.

Guy.

DADF, *v. a.* Dut. *douden*. To hold up by a leading string.

The little children when they learn to go,
By painful mothers *daded* to and fro. *Drayton*.

DÆD'AI, *adj.* Lat. *dedalus*; Gr. *δαίδαλλω*; to variegate skillfully, first applied to needlework. Why Dr. Johnson warns us against using the word with this meaning is difficult to divine. See Ainsworth; and the fine example from Spenser. Various; variegated. Skillful.

But living art may not least part expresse,
Nor life resembling pencill it can paynt,
All were Zeuxis or Praxiteles;
His *Dadale* hand would faile and greatly faynt,
And her perfections with his error taynt.

Spenser. Fæerie Queene.

Nor bath
The *dedal* hand of nature only poured
Her gifts of outward grace. *Philips.*

DÆDALA, two festivals in Beotia; one of them observed in Alalcomenios by the Plataeans in a large grove, where they exposed in the open air pieces of boiled flesh, and carefully observed whether the crows that came to prey upon them directed their flight. All the trees upon which any of these birds alighted were immediately cut down, and with them statues were made, called *Dadala*, in honor of *Dadalus*. The other festival was of a more solemn kind. It was celebrated every sixty years by all the cities of Beotia, as a compensation for the intermission of the smaller festivals, for that number of years, during the exile of the Plataeans. Fourteen of the statues called *Dadala* were distributed by lot among the Plataeans, Lebadæans, Coroneans, Orchomenians, Thespians, Thebans, Tanagraeans, and Chæroneans, because they had effected a reconciliation among the Plataeans, and caused them to be recalled from exile about the time that Thebes was restored by Cassander, the son of Antipater. During this festival a woman, in the habit of a bride-maid, accompanied a statue which was dressed in female garments, on the banks of the Eurotas. This procession was attended to the top of Mount Cithæron by many of the Beotians, who had places assigned them by lot. Here an altar of square pieces of wood cemented together like stones was erected, and upon it were thrown large quantities of combustible materials. Afterwards a bull was sacrificed to Jupiter, and an ox or heifer to Juno, by every one of the cities of Beotia, and by the most eminent that attended. The poorest citizens offered small cattle; and all these oblations, together with *Dadala*, were thrown into the common heap and set on fire, and totally reduced to ashes. They originated in this fable. When Juno, after a quarrel with Jupiter, had retired to Eubœa, and refused to return to his bed, the god, anxious for her return, went to consult Cithæron king of Plataea, to find some effectual measure to break her obstinacy. Cithæron advised him to dress a statue in woman's apparel, and carry it in a chariot, and publicly to report that it was Plataea the daughter of Asopus, whom he was going to marry. The advice was followed; and Juno, informed of her husband's future marriage, repented in haste to meet the chariot, and was

Vol. VII.

easily united to him when she discovered the artful measures he made use of to effect a reconciliation.

DÆDALUS, in fabulous history, the son of Eupalamus, descended from Erectheus king of Athens. He was the most ingenious artist of his age; and to him we are said to be indebted for the invention of the wedge, with many other mechanical instruments; as well as the sails of ships. He made statues, we are told, which moved of themselves, and seemed to be endowed with life. After the murder of Talus, he, with his son Icarus, fled from Athens to Crete, where Minos gave him a cordial reception. *Dadalus* made a famous labyrinth for Minos, and assisted Pasiphae the queen to gratify her unnatural passion for a bull. For this action *Dadalus* incurred the displeasure of Minos, who ordered him to be confined in the labyrinth which he had constructed. Here he made himself wings with feathers and wax, and carefully fitted them to his body and that of his son, who was the companion of his confinement. They took their flight in the air from Crete; but the heat of the sun melted the wax on the wings of Icarus, whose flight was too high, and he fell into that part of the ocean, which from him has been called the Icarian Sea. The father, by a proper management of his wings, alighted at Cumæ, where he built a temple to Apollo, and thence directed his course to Sicily, where he was kindly received by Cocalus, who reigned over part of the country. He left many monuments of his ingenuity in Sicily, which still existed in the age of Diodorus Siculus. He was despatched by Cocalus, who was afraid of the power of Minos, who had declared war against him because he had given an asylum to *Dadalus*. The flight of *Dadalus* from Crete, with wings, is explained by observing that he was the inventor of sails, which in his age might pass at a distance for wings. He lived about A. A. C. 1400.

DÆMON, *δαίμων*, a name given by the ancients to certain spirits or genii, which they say appeared to men both to do them service and to injure them. The word is derived, according to Plato, in his *Cratylus*, from *δαίμων*, knowing or intelligent; but according to others from *δαίω*, to distribute. They held a middle rank between the celestial gods and men, and carried on all intercourse between them. It was the opinion of many that the celestial divinities did not themselves interpose in human affairs, but committed the entire administration of the government of this lower world to these subaltern deities. Hence they became the objects of worship. 'If idols are nothing,' says Celsus (Origen cont. Cels. lib. viii. p. 393), 'what harm can there be to join in the public festivals? If they are demons, then it is certain that they are gods, in whom we are to confide, and to whom we should offer sacrifices and prayers, to render them propitious.' Plutarch teaches, Vit. Romul. p. 36, ed. Paris, 'that according to a divine nature and justice, the souls of virtuous men are advanced to the rank of demons; and that from demons, if they are properly purified, they are exalted into gods, not by any political institution, but according to right reason.' He

says in another place, *de Is. et Osir.* p. 361, 'that Isis and Osiris were, for their virtue, changed from good dæmons into gods, as were Hercules and Bacchus afterwards, receiving the united honors both of gods and dæmons.' The word dæmon is used indifferently in a good and in a bad sense. In the former sense it is very common among the ancient heathens. Pythagoras held that dæmons sent diseases to men and cattle. Diogen. Laert. Vit. Pythag. Zaleucus, in his preface to his Laws, supposes that an evil dæmon might be present with a man to influence him to justice. The dæmons of Empedocles were evil spirits, and exiles from heaven. And Plutarch in his life of Dion says, 'it was the opinion of the ancients that evil and mischievous dæmons, out of envy and hatred to good men, oppose whatever they do.' Scarce did any opinion more generally prevail in ancient times than this, viz. that as the departed souls of good men became good dæmons, so the departed souls of bad men became evil dæmons. Besides the two forementioned kinds of dæmons, the fathers, as well as the ancient philosophers, held a third, viz. such as sprang from the congress of superior beings with the daughters of men. In the theology of the fathers these were the worst kind of dæmons. Different orders of dæmons had different stations and employments assigned them by the ancients. Good dæmons were considered as the authors of good to mankind; evil dæmons brought innumerable evils both upon men and beasts. Amongst evil dæmons there was a great distinction with respect to the offices assigned them; some compelled men to wickedness, others stimulated them to madness. See DÆMONIAC. Much has been said concerning the dæmon of Socrates; who declared to the world that a friendly spirit, whom he called his dæmon, directed him how to act on every important occasion in his life, and restrained him from imprudence of conduct. See SOCRATES.

We have seen above, not only the meaning of the word dæmon, but how the ancients worshipped dæmons. They were of various orders, and, according to the situation over which they presided, had different names. Hence the Greek and Roman poets talk of satyrs, dryads, nymphs, fauns, &c. &c. See MYTHOLOGY. These different orders of intelligences, which, though worshipped as gods or demigods, were yet believed to partake of human passions and appetites, led the way to the deification of departed heroes, and other eminent benefactors of the human race; and from this latter probably arose the belief of natural and tutelary gods, as well as the practice of worshipping these gods through the medium of statues cut into a human figure. Dæmons, however, were not more zealously worshipped among the heathens, than they have been among Christians. Bishop Newton, after establishing the meaning of Paul's prophetic words, 1 Tim. iv. 1, above referred to, as corresponding exactly to the heathen dæmon worship, says, 'It appears then that the doctrines of dæmons, which prevailed so long in the heathen world, should be revived and established in the Christian church; and is not the worship of saints and angels now in all respects the same that

the worship of dæmons was in former times? The name only is different, the thing is identically the same.'

DÆMONIAC, a human being, whose volition and other mental faculties are overpowered and restrained, and his body possessed and actuated, by some created spiritual being of superior power. Such seems to be the determinate sense of the word; but it is disputed whether any of mankind ever were in this unfortunate condition.

It is the opinion of some, that neither good nor evil spirits are known to exert such authority at present over the human race: but in the ancient heathen world, and among the Jews, particularly in the days of our Saviour, evil spirits, at least, are thought by many to have possessed more influence than they do now. The Greeks and Romans imagined that their deities, to reveal future events, frequently entered into the prophet or prophetess who was consulted, overpowered their faculties, and uttered responses with their organs of speech. Apollo was believed to enter into the Pythoness, and to dictate the prophetic answers received by those who consulted her. Other oracles, besides that of Delphi, were supposed to unfold futurity by the same machinery. And in various other cases, either malignant dæmons or benevolent deities were thought to enter into, and to actuate, human beings. The Lymphatici, the Cerriti, the Larvati, of the Romans, were all of this description; and the Greeks; by the use of the word *δαμονισμοί*, show that they referred to this cause the origin of madness. Among the ancient heathens, therefore, it appears to have been a generally received opinion, that superior beings entered occasionally into men, overpowered the faculties of their minds, and actuated their bodily organs. They might imagine that this happened in instances in which the effects were owing to the operation of different causes; but an opinion so generally prevalent had surely some plausible foundation. The Jews, too, both from the sacred writings, and Josephus, appear to have believed in dæmoniacal possession. The case of Saul may be recollected as one among many in which superior created beings were believed by the Jews to exert in this manner their influence over human life. The general tenor of their history and language, and their doctrines concerning good and evil spirits, prove the opinion of dæmoniacal possession to have been well known and generally received among them.

We shall here subjoin the chief popular arguments on each side of this interesting subject, and add a few remarks. Those who are unwilling to allow that angels or devils have ever intermeddled with the concerns of human life, urge a number of specious arguments. The Greeks and Romans of old, say they, did believe the reality of dæmoniacal possession. They supposed that spiritual beings did at times enter into the sons or daughters of men, and distinguish themselves in that situation by capricious freaks, deeds of wanton mischief, or prophetic enunciations. But, in the instances in which they supposed this to happen, it is evident that no such thing took place. Their accounts of the

state and conduct of those persons whom they believed to be possessed in this supernatural manner, show plainly that what they ascribed to the influence of dæmons were merely the effects of natural diseases. Whatever they relate concerning the larvati, the cerniti, and the lymphatici, shows that these were merely people disordered in mind, in the same unfortunate situation with those madmen and idiots, and melancholy persons, whom we have among ourselves. Festus describes the larvati as being furiosi et mentemoti. Plato, in his *Timæus*, says, *ἡδὲ γὰρ ἐννοὺς ἐφαπτεται μαντικῆς ἐνδοῦκ, ἀληθοῦς*.

Lucian describes dæmoniacs as lunatic, and as staring with their eyes, foaming at the mouth, and being speechless. It appears still more evidently, that all the persons spoken of as possessed with devils in the New Testament, were either mad or epileptic, and precisely in the same condition with the madmen and epileptics of modern times. The Jews, among other reproaches which they threw out against our Saviour, said, He hath a devil, and is mad: why hear ye him? The expressions, he hath a devil, and is mad, were certainly used on this occasion as synonymous. With all their virulence they would not surely ascribe to him at once two things that were inconsistent and contradictory. Those who thought more favorably of the character of Jesus, asserted concerning his discourses, in reply to his adversaries, These are not the words of him that hath a dæmon; meaning, no doubt, that he spoke in a more rational manner than a madman could be expected to speak. The Jews appear to have ascribed to the influence of dæmons, not only that species of madness in which the patient is raving and furious, but also melancholy madness. Of John, who secluded himself from intercourse with the world, and was distinguished for abstinence and acts of mortification, they said, He hath a dæmon. The youth, whose father applied to Jesus to free him from an evil spirit, describing his unhappy condition in these words, Have mercy on my son; for he is lunatic, and sore vexed with a dæmon; for oftentimes he falleth into the fire, and oft into the water, was plainly epileptic. Every thing, indeed, that is related in the New Testament concerning dæmoniacs, proves that they were people affected with such natural diseases as are far from being uncommon among mankind in the present age. When the symptoms of disorders cured by our Saviour and his apostles, as cases of dæmoniacal possession, correspond so exactly with those of diseases well known as natural in the present age, it would be absurd to impute them to a supernatural cause. It is much more consistent with common sense and sound philosophy, to suppose, that our Saviour and his apostles wisely, and with that condescension to the weakness and prejudices of those with whom they conversed, which so eminently distinguished the character of the author of our holy religion, and must always be a prominent feature in the character of the true Christian, adopted the vulgar language in speaking of those unfortunate persons who were groundlessly imagined to be possessed with dæmons, though they well knew the notions which had given rise to such modes of expression

to be ill founded, than to imagine that diseases which arise at present from natural causes, were produced in days of old by the intervention of dæmons, or that evil spirits still continue to enter into mankind in all cases of madness, melancholy, or epilepsy. Besides, it is by no means a sufficient reason for receiving any doctrine as true, that it has been generally received through the world. Error, like an epidemical disease, is communicated from one to another. In certain circumstances, too, the influence of imagination predominates, and restrains the exertions of reason. Many false opinions have extended their influence through a very wide circle, and maintained it long. On every such occasion as the present, therefore, it becomes us to inquire, not so much how generally any opinion has been received, or how long it has prevailed, as from what cause it has originated, and on what evidence it rests. When we contemplate the frame of nature, we behold a grand and beautiful simplicity prevailing through the whole. Notwithstanding its immense extent, and though it contains such numberless diversities of being, yet the simplest machine constructed by human art does not display greater simplicity, or a happier connexion of parts. We may therefore infer, by analogy, from what is observable of the order of nature in general to the present case, that to permit evil spirits to intermeddle with the concerns of human life, would be to break through that order which the Deity appears to have established through his works; it would be to introduce a degree of confusion unworthy of the wisdom of Divine Providence.

In opposition to these arguments the following are urged by the Dæmonianists. In the days of our Saviour, it would appear that dæmoniacal possession was very frequent among the Jews and the neighbouring nations. Many were the evil spirits whom Jesus is related in the gospels to have ejected from patients that were brought unto him as possessed and tormented by those malevolent dæmons. His apostles, too, and the first Christians, who were most active and successful in the propagation of Christianity, appear to have often exerted the miraculous powers with which they were endowed on similar occasions. The dæmons displayed a degree of knowledge and malevolence which sufficiently distinguished them from human beings: and the language in which the dæmoniacs are mentioned, and the actions and sentiments ascribed to them in the New Testament, show that our Saviour and his apostles did not consider the idea of dæmoniacal possession as being merely a vulgar error concerning the origin of a disease or diseases produced by natural causes. The more enlightened cannot always avoid the use of metaphorical modes of expression; which, though founded upon error, yet have been so established in language by the influence of custom, that they cannot be suddenly dismissed. But in descriptions of characters, in the narration of facts, and in the laying down of systems of doctrine, we require different rules to be observed. Should any person, in compliance with popular opinions, talk in serious language of the existence, dispositions, declarations, and actions of a race of

beings whom he knew to be absolutely fabulous, we surely could not praise him for integrity: we must suppose him to be either exulting in irony over the weak credulity of those around him, or taking advantage of their weakness, with the dishonesty and the selfish views of an impostor. And if he himself should pretend to any connexion with this imaginary system of beings; and should claim, in consequence of his connexion with them, particular honors from his contemporaries; whatever might be the dignity of his character in all other respects, nobody could hesitate to brand him as an impostor. In this light must we regard the conduct of our Saviour and his apostles, if the idea of dæmoniacal possession were to be considered merely as a vulgar error. They talked and acted as if they believed that evil spirits had actually entered into those who were brought to them as possessed with devils, and as if those spirits had been actually expelled by their authority out of the unhappy persons whom they had possessed. They demanded, too, to have their professions and declarations believed, in consequence of their performing such mighty works, and having thus triumphed over the powers of hell. The reality of dæmoniacal possession stands upon the same evidence with the gospel system in general. Nor is there any thing unreasonable in this doctrine. It does not appear to contradict those ideas, which the general appearances of nature and the series of events suggest, concerning the benevolence and wisdom of the Deity, by which he regulates the affairs of the universe. We often fancy ourselves able to comprehend things to which our understanding is wholly inadequate: we persuade ourselves at times that the whole extent of the works of the Deity must be well known to us, and that his designs must always be such as we can fathom. We are then ready whenever any difficulty arises to us, in considering the conduct of Providence, to model things according to our own ideas; to deny that the Deity can possibly be the author of things which we cannot reconcile; and to assert that he must act on every occasion in a manner consistent with our narrow views. This is the pride of reason; and it seems to have suggested the strongest objections that have been at any time urged against the reality of dæmoniacal possession. But the Deity may surely connect one order of his creatures with another. We perceive mutual relations and a beautiful connexion to prevail through all that part of nature which falls within the sphere of our observation. The inferior animals are connected with mankind, and subjected to their authority, not only in instances in which it is exerted for their advantage, but even where it is tyrannically abused to their destruction. Among the evils to which mankind have been subjected, why might not their being liable to dæmoniacal possession be one? While the Supreme Being retains the sovereignty of the universe, he may employ whatever agents he thinks proper in the execution of his purposes: he may either commission an angel or let loose a devil, as well as bend the human will, or communicate any particular impulse to matter. All that revelation makes known, all that human

reason can conjecture, concerning the existence of various orders of spiritual beings, good and bad, is perfectly consistent with, and even favorable to, the doctrine of dæmoniacal possession. It is mentioned in the New Testament in such language, and such narratives are related concerning it, that the gospels cannot well be regarded in any other light than as pieces of imposture, and Jesus Christ must be considered as a man who took advantage of the weakness and ignorance of his contemporaries, if this doctrine be nothing but a vulgar error. It teaches nothing inconsistent with the general conduct of providence. In short, it is not the caution of philosophy, but the pride of reason, that suggests objections against this doctrine.

Such are the leading arguments generally urged on this subject; the reader must of course judge for himself between them; but we cannot dismiss the article without a few additional remarks. It is argued by those who deny the influence of demons or evil spirits, that to permit such an influence on the concerns of human life, would be to break through that order which the Deity appears to have established throughout his works, and to introduce a degree of confusion unworthy of the Divine Providence. This, to say the least of it, is a most gratuitous assertion. For surely those who make it are well aware of the existence of much real evil in the affairs of human life, and yet the Divine government moves on with a regularity and an order that cannot fail to excite the admiration of every well-disposed mind. Now to meet the objection in all its bearings, we would ask those who make it, whether they think that all the evil which they see existing around them, or any part of it, is effected without the medium of any kind of agency? This, we conceive, no rational man would venture to maintain. The question then is simply this,—of what nature is this agency? To this question, as the point at issue rests solely on the authority of Divine Revelation, we reply,—it is of a purely spiritual nature, and has its origin in the spiritual world. The existence of such agency, both of a good and of an evil nature, is as clearly taught as any fact made known by the sacred writings. It is by means of it that the various affections of the human mind are produced; nor would any difficulty be experienced by us on this point were we constantly to keep in mind that man, in his present state, is intimately connected with both worlds; with the invisible by means of his spirit, and with the visible or material world by means of his body. The cases of dæmoniacal possession that occurred during the time of Christ's sojourning on earth were exactly what, from the information of Scripture, might have been expected to take place. The Eternal (according to the opinion of a vast body of Christians) assumed the human nature, that in it he might, in the sight of mankind, effect their deliverance from the infernal influence which threatened their destruction. This was accomplished by His passing through a series of the most unparalleled trials, which terminated in a conflict unutterably awful. The numerous cases of dæmoniacal possession that are introduced to

our notice in the sacred history appear to have been so many specimens of the ascendancy which this influence had gained, and the certainty of its being removed; for we find, in every case, that the evil spirit was cast out: and certainly it was no obscure allusion that Jesus made to this when in the immediate prospect of the last great conflict with the invisible powers of darkness, and in reference to the grand effect of his triumph over them in the spiritual state, he said, 'Now is the judgment of this world: now shall the prince of this world be cast out.' Does not this very declaration seem to allude to the circumstance of such possessions being less frequent since that time? We say *less* frequent, because we think there can be no doubt but that *some* instances of extraordinary evil agency are, for wise purposes, still permitted to appear in the world; although certainly, in no case, to the same extent as before our Lord's subjugation of such agency. We do not deny that superstition has much augmented the number of these; yet it would be easy to specify *some* cases that have powerful claims on the most rational and enlightened belief.

DÆMONIACS, in church history, a sect whose distinguishing tenet was said to be, that the devils shall be saved at the end of the world.

DAFF, v. a. & n. s. } Goth. *doef*; Fr. *dofiea*,
DAFT, n. s. } to stupefy. But Dr. Johnson thinks our word *daff*, or *daft*, is a corruption of to do aft, or throw aside, and the examples from Shakspeare seem to justify him. To cast off; to daunt. A person treated contemptuously; a dolt, or coward.

When this jape is told another day,
I shall be halden a *daffe* or a cokenay,
I wol arise and aunte it by my fay;
Unhardy is unsely, thus men say.

Chaucer. Cant. Tales.

The nimble-footed mad-cap prince of Wales,
And his comrades, that *daft* the world aside,
Bid it pass.

Shakspeare. Henry IV.

I would she had bestowed this dottage on me: I would have *daft* all other respects, and made her half myself.

Id.

DAFFODIL, n. s. } Supposed by Skinner
DAFTODILLY. } to be corrupted from as-
DAFFODOWNDILLY. } phodelus. A common flower.

Strew me the green round with *daffodowndillies*,
And cowslips, and kingcups, and loved lilies.

Spenser.

Bid amaranthus all his beauty shed,
And *daffodillies* fill their cups with tears,
To strew the laureat herse where Lycid lies.

Milton.

The daughters of the flood have searched the mead
For violets pale, and cropped the poppy's head:
The short narcissus, and fair *daffodil*,
Pansies to please the sight, and cassia sweet to smell.

Dryden.

DAFT. See **DAFF.**

DAG, or DAGGE, n. s. Because the Dacians, says Minshew, first used it. A pistol or hand gun. Dr. Meyrick says, 'the name is peculiar to Great Britain.'

D'ye call this gun a *dag*?

Beaumont and Fletcher.

DAG, or
DAGGE, n. s.
DAGGER.
DAGGER-DRAWING } Old Fr. *dagge*; Ital.
 } *dagga*; Span. *daga*.
 } Wel. and Arm. *dagr*,
 } from Heb. דָּגֶר, to
 pierce; Minshew. A cutting and stabbing weapon, principally the latter.

Upon his arme he bare a gaie bracer,
And by his side a sword and a bokeler,
And on that other side a gaie *daggere*,
Harneised wel, and sharpe as point of spere.

Chaucer. Prol. to Cant. Tales.

She ran to her son's *dagger*, and struck herself: a mortal wound.

Sidney.

This sword a *dagger* had his page,
And was but little for his age,
And therefore waited on him so
As dwarfs upon knights-errant do. *Hudibras.*

They always are at *daggersdrawing*,
And one another clapperclawing.

Id.

I have heard of a quarrel in a tavern, where all were at *daggersdrawing*, till one desired to know the subject of the quarrel.

Swift.

He strikes himself with his *dagger*, but being interrupted by one of his friends, he stabs him, and breaks the *dagger* on one his ribs.

Addison.

The Roman, when his burning heart

Was slaked with blood of Rome,

Threw down the *dagger*, dared depart

In savage grandeur home,

Byron.

DAG, v. a. & n. s. } Sax. *dag*, to sprinkle,
DAGGLE, v. a. & n. } *dag*, dew. To be-
DAG'TAILED. } mire; let fall into water;
DAG'GLETAIL. } besprinkle. Dagtailed, or
daggletailed, is bemired, bespattered, or muddy.

Would it not vex thee, where thy syres did keepe,
To see the dinged foldes of *dag-tayld* sheepe?
And ruined house, where holy things were said,
Whose free-stone wals, the thatched roof: upbraid?

Bp. Hall.

Now in contiguous drops the flood comes down,
Threatening with deluge this devoted town:
To shops in crowds the *daggled* females fly,
Pretend to cheapen goods, but nothing buy.

Swift.

The gentlemen of wit and pleasure are apt to be choaked at the sight of so many *daggletailed* parsons, that happen to fall in their way.

Id.

Nor like a puppy *daggled* through the town,
To fetch and carry sing-song up and down.

Pope.

DAGELET, an island on the coast of Corea, about three leagues in circumference, covered with fine trees, and surrounded with steep rocks, except a few sandy creeks, which form convenient landing places. It was discovered by La Peyrouse in 1787, who found some boats of a Chinese construction upon the stocks. The men employed upon them, were supposed to be Corean carpenters, but as the ships approached they fled to the woods. The French navigator supposed that the island was uninhabited; except during summer by people from Corea, for building boats. Long. 131° 22' E., lat. 37° 25' N.

DAGHESTAN, a country of Asia, west of the Caspian Sea, between the efflux of the Koisin and the Rubas. It is about 134 miles in length, by between thirty and forty in breadth. It is almost wholly mountainous; but the soil is productive, and fine crops of grain are raised. The

Russians claim the sovereignty of Daghestan, which is divided into four districts; but their authority is not universally acknowledged. Many of the inhabitants subsist by plunder; but it has recently been the scene of contest between the Persians and Russians. The chief towns are Tarki, Derbend, Baschli, and Ottermisch.

DAGO, or DAGNO, an island in the Baltic Sea, on the coast of Livonia, between the gulf of Finland and Riga. It is of a triangular figure, and may be about twenty miles in circumference. It has nothing considerable but two castles called Daggerwort and Paden. Long. 22° 50' E., lat. 53° 44' N.

DAGOE, DAGHO, or DAGEX, an island of the Baltic, at the entrance of the gulf of Finland, near the coast of Esthonia, and separated from the island of Oesel by a narrow channel. It is about forty miles long, and from twenty-six to thirty-six broad, and is well peopled. At Dage-rort there is a lighthouse.

DAGON, the idol of Ashdod or Azotus. He is commonly represented as a monster, half man and half fish; whence most learned men derive the name from the Hebrew *dag*, which signifies a fish. Those who make him to have been the inventor of bread corn, derive his name from the Hebrew דגן, Dagon, signifying corn; whence Philo-Biblus calls him *Zere Aparguor*, Jupiter Aratrius. This deity continued to have a temple at Ashdod to the time of the Maccabees: for the author of the first book of Maccabees tells us, that 'Jonathan, one of the Maccabees, having beaten the army of Apollonius, Demetrius's general, they fled to Azotus, and entered into Bethdagon (the temple of their idol); but Jonathan set fire to Azotus, and burnt the temple of Dagon and all those who were fled into it.' Dagon, according to some, was the same with Jupiter, according to others Saturn or Veius; but according to most Neptune.

DAHALAK, DALAK, or DALACCA, an island in the Red Sea, near the coast of Abyssinia, about twenty-five miles in length, and twelve in breadth, anciently celebrated for its pearl fishery. It is low and flat, with a sandy soil, and in summer destitute of every kind of herbage, except a small quantity of bent grass, which is barely sufficient to feed a few antelopes and goats. From the end of March to the beginning of October, they have no rain in Dahalak; but in the intermediate months they have heavy showers, when the water is collected into artificial cisterns, to supply the inhabitants during the ensuing summer. Of these cisterns, which are supposed to be either the work of the Persians or of the first Ptolemies, upwards of 300 remained at a recent period, cut out of the solid rock. Its principal port is Dahalee-el-Kebar, but it will only admit small vessels; and its trade is with Masuah. It was formerly much more populous than at present. This as well as the neighbouring islands is dependent upon Masuah; and the governor is furnished monthly with a goat from each of the twelve villages; besides which every vessel putting in here for Masuah, pays him a pound of coffee, and every one from Arabia, a dollar. From these his revenue chiefly arises. Long. 39° 0' E., lat. 15° 40' N.

DAHL, or DAL, a large river of Sweden, which runs through the provinces of Dalecarlia and Gestricia, and falls into the gulf of Bothnia, four leagues E. S. E. of Gefle. Near Elfkärlaby it forms a celebrated cataract, scarcely inferior to the fall of the Rhine at Lauffen.

DAHLIA, in botany, a genus of plants belonging to the syngenesia class and polygamia order, thus named by Cavanilles in honor of Dr. Andrew Dahl, a Swedish botanist. The stems die every winter, but the root is perennial and tuberous. The known species are but four. 1. *D. pinnata*, figured by Cavanilles, and in Andrew's Botanical Repository: it has bipinnate leaves of a deep purple color. 2. *D. rosea*, a rose-colored variety figured by Cavanilles in his Icones. 3. *D. coccinea*, a scarlet variety; and, 4. *D. crocata*, a saffron-colored species. These beautiful plants are now becoming so general in British gardens, that a lengthened description would be superfluous: it is sufficient to say, that they elevate the stem like the holly-hock, and bear fine showy axillary and terminal flowers late in the autumn.

DAHOMEY, or DAUMA, a kingdom of Africa, on the coast of Guinea, situated about sixty or seventy miles from the Atlantic, to the east of Ashantee. This kingdom, which is correctly placed in various old maps, particularly that of Mercator, who names its ancient capital Dauma, was erased from the maps of Africa in 1700, and the existence of the nation of Dauma denied; but it emerged from obscurity in 1727, by the fame of its conquests of the maritime states of Whidah and Adra. Dahomey, as known at present, is supposed to reach from the sea coast 150 miles inland, but no European has yet penetrated to that distance from the coast. The soil is a deep rich clay, of a reddish color, with a little sand on the surface, except about Calmina, where it is more light and gravelly; but there is not to be found a stone so large as an egg in the whole country, so far as it has been visited by Europeans. Of farinaceous vegetables, the country yields a plentiful supply, in proportion to the culture. The Dahomese likewise cultivate yams, potatoes, the cassida or mamoka, the plantain, and the banana. Pine-apples, melons, oranges, limes, guavas, and other tropical fruits, also abound in this fertile country. Nor is it destitute of productions adapted for commerce and manufacture; such as indigo, cotton, the sugar-cane, tobacco, palm-oil, with a variety of spices, particularly a species of pepper, very similar in flavor, and indeed scarcely distinguishable from the black pepper of the East Indies. The Dahomese, like the other inhabitants of tropical climates, plant twice a-year, viz. at the vernal and autumnal equinoxes; after which the periodical rains prevail. The harmattan, or dry wind, blows here strongly from the north-east; but Mr. Norris does not ascribe to it those pestilential qualities which have often been supposed, for while it parches up the ground, and injures every species of vegetable, it does not induce any fatal diseases. It is even said to cure cutaneous eruptions, and stop the progress of small pox, fluxes, and reñittent fevers. The greatest bane of the climate is the periodical rains; which are attended with tern-

ple tornadoes. The language is that which the Portuguese call *Lingua Geral*, and is spoken not only in Dahomey Proper, but in Whidah, and the other dependent states. The Dahoman religion is vague and uncertain in its principles, and rather consists in the performance of some traditional ceremonies, than of any fixed system of belief, or moral conduct. According to Mr. Norris, human sacrifices are not unfrequent among the Dahomese. Their kings, he says, water the graves of their ancestors every year with the blood of human victims. The same traveller mentions that the people in general take a peculiar pleasure in contemplating human skulls. The king said to a traveller, 'Some heads I place at my door: others I throw into the market-place. This gives a grandeur to my customs; this makes my enemies fear me; and this pleases my ancestors to whom I send them.' The king is even said to sleep in a room paved with the skulls of prisoners of distinction taken in war; and frequently to exclaim, 'Thus I can trample on the skulls of my enemies whenever I please.' It appears to be customary with the Dahomese to cut off the ears of the prisoners they take in war, and to send them as a present to the Grand Seigneur: upwards of 300 pairs of ears have been sent to him at one time. They believe more firmly in their amulets and fetiches, than in the deity; their national fetiche is the tiger; and their houses or huts are decorated with images, tinged with blood, stuck with feathers, besmeared with palm oil, and bedaubed with eggs. The government is perhaps the most perfect despotism upon earth, and seems to admit of no intermediate degree of subordination between the king and slave. Norris having asked a soldier if he did not think the enemy numerous in a war in which he found the Dahomese engaged; the latter replied, 'I think of my king, and then I dare engage five of the enemy myself.' He added, 'it is not material, my head belongs to the king, not to myself; if he pleases to send for it, I am ready to resign it; for if it is shot through in battle, it is no difference to me, I am satisfied.' A minister of state crawls towards the apartment of audience on his hands and knees, till he arrives in the royal presence, where he lays himself flat on his belly, rubbing his head in the dust, and uttering the most humiliating expressions. Being desired to advance, he receives the king's commands, or communicates any particular business, still continuing in a recumbent posture; for no person is permitted to sit, even on the floor, in the royal presence, except the women; and even they must kiss the earth when they receive or deliver the king's message. The king of Dahomey maintains a considerable standing army, commanded by an *agaow* or general, with several other subordinate military officers; the payment of these troops chiefly depends on the success of the expeditions in which they are engaged. Sometimes the king takes the field at the head of his troops; and on very great emergencies at the head of his women. For within the walls of the different royal palaces in Dahomey, are immured not less than 3000 women; several hundreds of whom are trained to arms under a female general, and subordinate officers appointed by the king.

These Amazons are regularly exercised, and go through their evolutions with much expertness; their accoutrements being precisely similar to those of the male troops. The dress of the men in Dahomey consists of a pair of striped or white cotton drawers, of the manufacture of the country, over which they wear a large square cloth of the same, or of European manufacture. This cloth is about the size of a common counterpane for the middling class, but much larger for the grandees. It is wrapped about the loins, and tied on the left side by two of the corners, the others hanging down, and sometimes trailing on the ground. A piece of silk or velvet, of sixteen or eighteen yards, makes a cloth for a grandee. The head is usually covered with a beaver or felt hat, according to the quality of the wearer. The king, as well as some of his ministers, often wears a gold or silver laced hat and feather. The arms and upper part of the body remain naked, unless when the party travels, or performs laborious work, when the large cloth is laid aside, and the body is covered with a sort of frock or tunic without sleeves. The feet are always bare, none but the sovereign having a right to wear sandals. The dress of the women, though simple, consists of a greater number of articles than that of the men. They use several cloths or handkerchiefs; the neck, arms, and ancles, are adorned with beads and cowries; and rings of silver, or baser metal, encircle the fingers. The ears are so pierced as to admit the little finger, and a coral bead of that size, red sealing wax, or a piece of oyster-shell, stuck into each. Girls, before the age of puberty, wear nothing but a string of beads or shells round the loins, and young women usually expose the breasts. The general character of the Dahomese is marked by a strange mixture of ferocity and politeness. The former appears in the treatment of their enemies; the latter they possess far above most of the African nations with whom we have hitherto had any intercourse. Abomey, the capital, lies between long. 3° and 4° E., and in lat. 7° 50' N.

DAILLE (John), a protestant minister of the seventeenth century, the most esteemed by the Catholics of all the controversial writers among the Protestants. He was tutor to two of the grandsons of the illustrious M. du Plessis Mornai. Mr. Daille having lived fourteen years in this family, travelled into Italy with his two pupils; one of them died abroad; with the other he visited Italy, Switzerland, Germany, Flanders, Holland, and England, and returned in 1621. He was received minister in 1623, and became chaplain to the family of M. Mornai. In 1625 he was appointed minister of the church of Saumur, and in 1626 removed to Paris, where he spent the rest of his life, and composed several works. His first work, *Of the Use of the Fathers*, was his masterpiece; printed in 1631. He died in 1670, aged seventy-seven.

DAILY. See DAY.

DAINT, *adj.*

DAINTFEUS, *adj.*

DAINTY, *n. s. & adj.*

DAINTLY, *adv.*

DAINTNESS, *n. s.*

Fr. *dain*, delicate. From Lat. *dens*, a tooth, because pleasing to the palate, as 'Minsheu says: delicious, exquis-

site, or of agreeable taste; elegant. The adverb and substantives follow the meanings of the adjective.

Be not desirous of his *dainties*; for they are deceitful meat. *Proverbs xxiii. 3.*

Both halle and chambres, eche in his degree,
Houses of office stuffed with plente; ;
Ther mayst thou see of *deinteous* vitaille
That may be found as far as lasteth Itaille.

Chaucer. Cant. Tales.

Ther may men fest and realtee beholde,
And *deintees* mo than I can you devise,
But all to dere they bought it or they rise. *Id.*

Ne poets witt, that passeth painter farre
In picturing the parts of Beauty *daynt*,
So hard a workmanship adventure darre.

Spenser. Faerie Queene.

Higher concoction is required for sweetness, or pleasure of taste, and therefore all your *dainty* plumbs are a little dry. *Bacon.*

Truth is a naked and open day-light, that doth not shew the masks and mummeries and triumphs of the world, half so stately and *daintily* as candlelight. *Id.*

My house, within the city,
Is richly furnished with plate and gold,
Basons and ewers to lave her *dainty* hands.

Shakespeare.

Which of you all
Will now deny to dance? She that makes *dainty*,
I'll swear hath corns. *Id. Romeo and Juliet.*

Therefore to horse;
And let us not be *dainty* of leave-taking,
But shift away. *Id. Macbeth.*

Why, that's my *dainty*; I shall miss thee;
But yet thou shalt have freedom. *Id. Tempest.*

What should yet thy palate please?
Daintiness and softer ease,
Sleeked limbs and finest blood? *Ben Jonson.*

The duke exceeded in the *daintiness* of his leg and foot, and the earl in the fine shape of his hands.

Wotton.

It was more notorious for the *daintiness* of the provision which he served in it, than for the massiness of the dish. *Hakewill on Providence.*

Why should ye be so cruel to yourself,
And to those *dainty* limbs, which nature lent
For gentle usage and soft delicacy? *Milton.*

She then produced her dairy store,
And unbought *dainties* of the poor. *Dryden.*

Your *dainty* speakers have the curse,
To plead bad causes down to worse. *Prior.*

The shepherd swains, with sure abundance blest,
On the fat flock and rural *dainties* feast. *Pope.*

DAIRY, *n. s.* } From *dey*, says Lye, an
DAIRY-MAID. } Old word for milk. The
milk-house, or place where it is managed. A
dairy-maid and milk-maid, are nearly synonymous. In Gloucestershire, the dairy is still called a *dey*-house. Yet we supply a very early use of 'dairies.'

Cities and burghes, castles high and towres,
Thorpes and barnes, shepenes and *dairies*,
This maketh that thir ben no *Faeries*.

• *Chaucer. Cant. Tales.*

Dairies being well housewived, are exceeding com-
modious. *Bacon.*

Children, in *dairy* countries, do wax more tall than where they feed more upon bread and flesh. *Id.*

You have no more worth

Than the coarse and country fairy,
That doth haunt the hearth or *dairy*. *Ben Jonson.*

She in pens his flocks will fold,
And then produce her *dairy* store. *Dryden.*

The poorest of the sex have still an itch,
To know their fortunes, equal to the rich;
The *dairymaid* enquires if she shall take
The trusty taylor, and the cook forsake. *Id.*

Come up quickly, or we shall conclude that thou art in love with one of Sir Roger's *dairy*-maids.

Addison.

DAIRY. The operations of the dairy are connected with the domestic comforts of almost every English family. Man is here seen taking that useful and honorable direction of the works of nature for which he was designed, and his original companion, when a good housewife, is almost more than 'a help meet' for him. She is generally, and for the great benefit of both parties, entrusted with the practical management of this department, even of extensive farming establishments; and so large a portion of 'skill, frugality, cleanliness, and industry,' is required, as a modern author well observes, in hardly any other of the duties of a farmer's wife.

In our articles AGRICULTURE and BOS we have entered pretty largely into the natural history and peculiarities of the only animal whose milk is extensively used in this country; we shall, in this paper, principally advert,—1. To the selection and general management of cows kept for the dairy, and by cow-keepers, as they are termed. 2. To the operations of the regular dairy in our cheese and butter counties, particularly the former: for in our article BUTTER will be found many useful directions with regard to that important manufacture. 3. We shall offer a few remarks on the structure of the dairy-house and its furniture.

i. *Of the selection and management of cows.*—

In and about London the Holderness cows, a variety of the short-horned breed, are preferred. They have large carcasses and yield a great quantity of milk. They take their name from a district in Yorkshire, where, as well as in the county of Durham, they are extensively bred; but most English counties have cultivated the breed in some degree. The Edinburgh dairy-men select the short-horned cow of Roxburghshire for similar reasons. Ayrshire has also a celebrated breed. In Lancashire (and in the neighbourhood of Liverpool this topic has been well canvassed) a native long-horned cow is said to have a general preference. The Guernsey breed is also highly valuable for its rich and abundant milk. At Caton, in Lancashire, in Mr. Hodgson's dairy establishment, a long-horned cow yielded eight quarts of milk a day and four pounds of butter per week on an average of twelve months, during which period one of the short-horned breed gave nine quarts per day and four pounds and a half of butter per week, both having what they chose to take of exactly the same kind of food. But the quantity each consumed was not noted. Dr. Anderson's strong recommendation of the Alderney cows, as affording 'the richest milk hitherto known; though there are many

individuals of different kinds which afford much richer milk than others,' as he says, seems long to have kept up the public preference for them in many districts.

Cows known to afford milk and butter of the best qualities, will of course be selected; but neither size nor breed seems to be a uniform criterion. Respectable cow-keepers rarely breed cattle, so that actual experience of the animal is the only final test; and the *quantity* of milk yielded seems to be, in this case, the sole ground of favoritism. Those who supply the metropolis with milk generally purchase their cows at from three to four years old, and in calf, at Islington, or Smithfield. Some of them own several hundreds. The number scattered in and about London is calculated at about 9000. Ten bulls are generally allowed to a stock of 300 cows, and the calves are sent to Smithfield market at one, two, or three days old. The quantity of milk given on an average, by each cow, is said to be nine quarts a day, or 3285 quarts per annum. The weekly expense of their food is estimated in the Middlesex Report at 10s. 3d., and the other charges about £5. 7s. per annum.

These cows are often confined in the cow-house, or the premises adjoining, during the whole time of their being devoted to the purposes of the cow-keeper; but respectable establishments turn them out to grass in the spring. In the night they are turned into their stalls, and fed at about three in the morning with half a bushel each of grains. From four to half-past six or seven they are milked for the retail dealers; then they receive a bushel each of green food or turnips, and soon after at the rate of a truss or meadow hay to ten cows. They are now turned out into the cow-yard, from eight to twelve o'clock, and about half-past one to three are milked and fed again as in the morning. This is the regular plan from September to May at east, or during the turnip season. At other parts of the year cabbages and tares diversify their food until they are turned out to grass where that change of food is supplied to them), and now they remain in the field all night; but are frequently fed with grains to increase their milk, even at this period.

The cow-feeders of Edinburgh, according to the Supplement of the Encyclopædia Britannica, do not find it for their interest to keep their cows or more than one year, or even so long, if they can be fattened sooner. 'Their object is to have as great a quantity of milk as possible in the first instance; and when the cows fall off in milking, as they almost always do from between four and six months after calving, to prepare them speedily for the butcher. Most of the cows continue to give a good deal of milk while they are fattening, and even until they are sent to the shambles. It is expected they should sell to the butcher at the price paid by the cow-keeper. Their food in summer is brewers' and distillers' grains and dreg, wheat shellings or small bran, grass and straw; and in winter the same grains, dreg and straw, with turnips and potatoes, and hay instead of grass. When grains are scarce, cut or chopped hay is mixed with them. Some of them are sent to pasture in fields near the city, for about two

months, during the best of the grass season; but even then a certain number must be kept in the house, for consuming the grains, which are purchased by contract for a whole year.'

'With regard to management, the cow-keepers begin with grains, dreg, and bran, mixed together, at five o'clock in the morning; feed a second time at one o'clock in the afternoon; and a third from seven to eight in the evening. Grass in summer, and turnips or potatoes in winter, are given at both intervals. A small quantity of straw is laid below the grass, which absorbs its moisture, and is eaten after the grass; and, in winter, straw or hay is given after the turnips. Part of the turnips or potatoes are boiled, particularly when there is a scarcity of grains, and intermixed with them. The expense in summer is said to be 2s. 10½d., and in winter 3s. 7½d. per day, for each cow. The cows are seldom milked more than twice a-day: for about a month after being bought, it is sometimes necessary to milk them three times. The common periods of milking are six o'clock in the morning, from three to four in the afternoon, and, when milked a third time, nine in the evening. Their produce in milk, when fed as already stated, may average about seven Scotch pints, or nearly twelve quarts and a half daily, per cow. When the cows are smaller, and not so well fed, five pints, or about nine quarts, are said to be the average. The price of milk in Edinburgh used to be 6d. per pint, but of late it has been sometimes lower in summer. This is said to be very little more than the price of the food. For interest of money, risk, expenses of management, and profit, there is the dung, worth £3. 10s. for each cow; some savings on the cows while at grass, which costs only 1s. 8d. per day; and, probably, a small advance of price may be commonly got from the butcher, when the cows are skillfully selected and well managed. There have been instances of cow-feeders contracting with others to retail their milk; but the practice is not common. The cow-keepers generally retail it themselves. In one instance a guinea a-week for the milk of each cow was paid by retailers to a farmer in the vicinity of Edinburgh.'

'Comparing the London and Edinburgh dairies,' continues the above writer, 'there seems to be a difference in favor of the best of the latter of no less than three quarts and a half per day. If this be the fact, perhaps it is owing to the whole of the Edinburgh cows being always in milk; none of them being kept for years, and bred from, as in the London dairies.'

Dr. Anderson's general aphorisms on the subject of the qualities of milk cannot be too well impressed on all dairy and cow-keepers. He says, 1. Of the milk drawn from a cow at any time, that which comes first is always thinnest, and continues to increase in thickness to the last drop. This is proved by experiment; and so great is the importance of attending to it, that the person who, by bad milking of his cows, loses but half a pint of his milk, loses, in fact, as much cream as would be afforded by six or eight pints at the beginning, and loses besides that part of the cream which alone can give richness and high flavor to his butter. 2. When milk throws up

cream to the surface, that portion which rises first will be thicker, and of better quality, as well as in greater quantity, than that which rises in a second equal portion of time. 3. Thick milk throws up a smaller quantity of cream to the surface than such as is thinner; but that cream is of a richer quality. If water be added to that thick milk, it will afford a considerably greater quantity of cream than before, but its quality is at the same time greatly debased. 4. Milk when carried in vessels to any distance, so as to suffer considerable agitation, never throws up cream so rich, nor in such quantity, as if the same had been put into the milk-pans without any agitation. From these aphorisms, the following corollaries are deducible.

1. The cows ought always to be milked as near the dairy as possible.
2. The milk of different cows should be kept by themselves, that the good cows may be distinguished from the bad.
3. For butter of a very fine quality, the first-drawn milk ought always to be kept separate from the last.

The Farmers' Magazine, vol. xv. supplies the following directions on the subject of feeding stalled cows, as those which are practically given by a very intelligent dairy-man, to his cow-feeder and milkers, at Farnham, in Surrey:—

1. *To the feeder.* 'Go to the cow-stall at six o'clock in the morning, winter and summer; give each cow half a bushel of the field-beet, carrots, turnips, or potatoes cut; at seven o'clock, the hour the dairy-maid comes to milk them, give each some hay, and let them feed till they are all milked. If any cow refuse hay, give her something she will eat, such as grains, carrots, &c., during the time she is milking, as it is absolutely necessary the cow should feed whilst milking. As soon as the woman has finished milking in the morning, turn the cows into the airing ground, and let there be plenty of fresh water in the troughs; at nine o'clock give each cow three gallons of a mixture composed of eight gallons of grains and four gallons of bran or pollard; when they have eaten that, put some hay into the cribs; at twelve o'clock give each three gallons of the mixture as before; if any cow looks for more, give her another gallon; on the contrary, if she will not eat what you give her, take it out of the manger, never at one time letting a cow have more than she will eat up clean. Mind and keep your mangers clean, that they do not get sour. At two o'clock give each cow half a bushel of carrots, field-beet, or turnips; look the turnips, &c., over well before you give them to the cows, as one rotten turnip, &c. will give a bad taste to the milk, and most likely spoil a whole dairy of butter. At four o'clock put the cows into the stall to be milked; feed them on hay as you did at milking time in the morning, ever keeping in mind that the cow whilst milking must feed on something. At six o'clock give each cow three gallons of the mixture as before. Rack them up at eight o'clock. Twice in a week put into each cow's feed, at noon, a quart of malt dust.'

2. *To the dairy-maid.* 'Go to the cow-stall at seven o'clock; take with you cold water and a sponge, and wash each cow's udder clean before milking; dows the udder well with cold water, winter and summer, as it braces, and repels heats.

Keep your hands and arms clean. Milk each cow as dry as you can, morning and evening, and when you have milked each cow, as you suppose, dry, begin again with the cow you first milked, and drip them each; for the principal reason of cows failing in their milk is from negligence in not milking each cow dry, particularly at the time the calf is taken from the cow. Suffer no one to milk a cow but yourself, and have no gossiping in the stall. Every Saturday night give in an exact account of the quantity of milk each cow has given in the week.'

'Where butter is the principal object,' says Mr. Loudon, 'such cows should always be chosen as are known to afford the best and largest quantity of milk and cream, of whatever breed they may be. But the quantity of butter to be made from a given number of cows must always depend on a variety of contingent circumstances; such as the size and goodness of the beasts, the kind and quantity of the food, and the distance of time from calving. As to the first, it need scarcely be mentioned that a large cow will give greater store of milk than one of a smaller size; though cows of equal size differ as to the quantity of cream produced from the milk of each: it is, therefore, on those cows whose milk is not only in large abundance, but which, from a peculiar inherent richness, yields a thick cream, that the butter dairy-man is to place his chief dependence; and where a cow is deficient in either of these, she should be parted with, and her place supplied by one more proper for this use. As to the second particular, namely, the kind and quality of the food, those who would wish to profit by a dairy, ought to provide for their cows hay of a superior goodness, to be given them in the depth of winter, and this in an unlimited degree, that they may always feed till they are perfectly satisfied. And, when the weather will permit, the cows should be indulged with an outlet to marshes or low meadow-grounds, where they may feed on such green vegetables as are present; which is far preferable to the practice of confining them the whole day on dry meat, will enable them to yield greater plenty of milk, and will give a fine yellow color to the butter even in the winter season.'

- ii. *The operations of the regular dairies of the cheese and butter counties* have been justly stated to be very little improved by the application of modern science to farming. Dr. Anderson and Mr. Marshall are the only scientific writers whose attention seems to have been turned to the subject. The latter, in his *Rural Economy of Gloucestershire*, has registered a number of observations on the heat of the dairy-room, and of the milk when the rennet was applied in cheese-making; on the time required for coagulation; and the heat of the whey after: but the chemistry of these arts and productions has been wholly neglected at present. We cannot therefore do better than present the reader with the following popular account of the cheeses best known in this country

Cheshire cheese is prepared in the following manner:—The evening's milk is not touched till the next morning, when the cream is taken off, and put to warm in a metal pan heated with boiling water. The cows being milked early in

the morning, the new milk, and that of the preceding night, thus prepared, are poured into a large tub, together with the cream. A piece of rennet, kept in luke-warm water from the preceding evening, is put into the tub in order to coagulate the milk; with which, if the cheese is intended to be colored, a small quantity of annatto (or of an infusion of marigolds, or carrots,) is rubbed fine and mixed; the whole is then stirred together, and, being covered up warm, it is allowed to stand about half an hour, when it is turned over with a bowl, to separate the whey from the curds, and broken soon after into very small particles: the whey being separated, by standing some time, is taken from the curd, which sinks to the bottom, and is then collected into a part of the tub provided with a slip, or loose board, to cross the diameter of the bottom, for the sole purpose of effecting this separation; on which a board is placed, weighing from sixty to 120 pounds, in order to press out the whey. As soon as it acquires a greater degree of solidity it is cut into slices, and turned over several times, to extract all the whey, and again pressed with weights. See *Coagulum*, in CHEMISTRY.

These operations may consume about an hour and a half. It is then taken from the tub and broken very small by the hand, salted, and put into a cheese-vat, the depth of which is enlarged by a tin hoop fitted to the top. The side is then strongly pressed, both by hand and with a board at top, well weighted; and wooden skewers are placed round the cheese, at the centre, which are frequently drawn out. It is then shifted out of the vat, a cloth being previously put on the top of it, and reversed on the cloth into another vat, or again into the same, if well scalded before the cheese be returned to it. The top, or upper part, is next broken by the hand down to the middle, salted, pressed, weighted and skewered as before, till all the whey is extracted. This being done, the cheese is again reversed into another vat, likewise warmed with a cloth under it, and a tin hoop, or binder, put round the upper edge of the cheese and within the sides of the vat; the former being previously enclosed in a cloth, and its edges put within the vessel. These various operations are performed from about seven o'clock in the morning till one at noon. The pressing of the cheese requires about eight hours more, as it must be twice turned in the vat, round which thin wire skewers are passed and shifted occasionally. The next morning it ought to be turned and pressed again, as likewise at night, and on the succeeding day, about the middle of which it is removed to the salting-room, where the outside is salted and a cloth binder tied round it. After this process the cheese is turned twice daily, for six or seven days; then left two or three weeks to dry, during which time it is turned and cleaned every day; and at length deposited in the common cheese-room, on a boarded floor covered with straw, where it is turned daily till it acquires a sufficient degree of hardness. The room should be of a moderate warmth, but no wind, or current of air, must be permitted to enter, as this generally cracks the cheese. Their outsides, or rinds, are sometimes rubbed with butter or oil to give them a coat.

'A dairy farm of 100 acres,' says an intelligent writer on the agriculture of Cheshire, 'is generally divided into the following proportions: from ten to fourteen acres of oats, from six to eight acres of fallow wheat, and the like quantity of summer fallow; the remainder consists of meadow and pasture, the former occupying about twelve acres. The good dairy farmer attends more to the size, form, and produce of the udder of his cow than to any fancied beauty of shape. This consideration induces him to be particular in the breeding and rearing his calves, and in the management of his cows during the winter and summer seasons. The annual quantity of cheese made from each cow varies from 50 to 500 lbs. and upwards, the produce depending on the goodness of the land, the quality of the pasture, the seasons, and the manner in which the stock are wintered. On the whole, the average produce may be estimated at 300 lbs. from each animal. The quantity of milk yielded daily by each cow, according to this estimate, will be about eight quarts, which it is calculated will produce one pound of cheese.

'On the dairy farms one woman-servant is generally kept to every ten cows, who is employed in winter in spinning, and other household business, but in milking is assisted by all the other servants of the farm. The cheese is chiefly sold in London, being exported from Chester, Frodsham-bridge, and Warrington. A large quantity goes to Liverpool and Bristol, some more is disposed of to the Yorkshire dealers, and some goes into Scotland. The proper season for calving is reckoned to be from the beginning of March to the beginning of May; and during these months there is more veal fed in Cheshire than in any other county in the kingdom, though generally killed to spare the milk.'

Gloucester cheese is made of milk immediately from the cow; but which, in summer, is thought too hot, and is therefore lowered to the requisite degree of heat, before the rennet is added, by pouring in skim-milk, or, if that will not answer, by the addition of water. As soon as the curd 'is come,' it is broken with a double cheese-knife, and also with the hand, in order to clear it from the whey, which is ladled off. The curd, being thus freed from the principal part of the whey, is put into vats, which are set in the press for ten or fifteen minutes, in order to extract all the remaining liquid. It is then turned out of the vats into the cheese-tubs again; broken small and scalded with a pail-full of water, lowered with whey, about three parts water to one of whey; and the whole is briskly agitated, the curd and water being equally mixed together. After having stood a few minutes, to let the curd subside, the liquor is poured off; and the former collected into a vat, the surface of which is, when about half full, sprinkled with a little salt, that is worked in among the curd. The vat is then filled up, and the whole mass turned two or three times in it, the edges being pared and the middle rounded up at each turning. At length the curd is put into a cloth and placed in the press, whence it is carried to the shelves, and turned, generally, once a day till it has acquired a sufficient degree

of compactness to enable it to undergo the operation of washing.

Parmesan cheese has long been famous for its richness and flavor; the following mode of manufacture is described in the *Annales de Chemie*. The size of these cheeses varies from sixty to 180 pounds, according to the number of cows in each dairy. During the heat of summer cheese is made every day, but in the cooler months milk will keep longer, and the cheese is made every other day. The summer cheese, which is the best, is made of the evening milk, after having been skimmed in the morning and at noon. Both kinds of milk are poured together into a caldron capable of holding about 130 gallons, of the shape of an inverted bell, and suspended on the arm of a lever so as to be moved off and on the fire at pleasure. In this caldron the milk is gradually heated to the temperature of about 120°; it is now removed from the fire, and kept quiet for five or six minutes. When all internal motion has ceased, the rennet is added; this substance is composed of the stomach of a calf, fermented together with wheat meal and salt; and the method of using it is to tie a piece, of the size of a hazel nut, in a piece of linen cloth, and steep it in the milk, squeezing it from time to time; a sufficiency of rennet soon passes through the cloth into the milk, which is now to be well stirred, and afterwards left to rest that it may coagulate. In about an hour the coagulation is complete, and then the milk is again put over the fire, and raised to a temperature of about 145 degrees.

During the time it is heating the mass is briskly agitated, till the curd separates in small lumps; part of the whey is then taken out, and a small portion of saffron is added to the remainder in order to color it. When the curd is thus broken sufficiently small, nearly the whole of the whey is taken out and two pailfuls of cold water is poured in; the temperature is thus lowered so as to enable the dairyman to collect the curd, by passing a cloth underneath it and gathering it up at the corners; the curd is now pressed into a frame of wood like a bushel without a bottom, placed on a solid table and covered by a round piece of wood, having a great stone or weight on the top. In the course of the night it cools, assumes a firm consistence, and parts with the whey; the next day one side is rubbed with salt, and the succeeding day the cheese is turned and the other side is rubbed with salt in the same manner as before. This alternate salting of each side is practised for about forty days; after this period the outer crust of the cheese is pared off, and the fresh surface is coated with linseed oil. The convex sides are then colored red with annatto, and the cheese is fit for sale.

The *Stilton* cheeses, called the *Parmesan* of England, are usually made in cylindrical vats, and weigh from six to twelve pounds each. Immediately after they are made they should be put into boxes made exactly to fit them, as they are so extremely rich, that, without this precaution, they would be apt to bulge out and break asunder. In these boxes they should be daily turned, and kept two years; they are then fit for sale. Some make them in a net like a cabbage-net, so that

they appear when made like an acorn; but these are never so good as the others, having a thicker coat, and wanting the rich flavor and mellowness of the others. The manufacture of these cheeses is not confined to Stilton and its neighbourhood; as many other persons in Huntingdonshire, and also Rutland and Northampton shires, make a similar sort, sell them for the same price, and give them the name of Stilton cheeses. It is observed by Mr. Hazard, that, though the farmers about Stilton are remarkable for the cleanliness of their dairies, they take very little pains with the rennet; for if they did they would not have so many faulty and unsound cheeses. The inhabitants of other countries might make as good cheese as that of Stilton if they would adhere to the same plan, which is this:—They make a cheese every morning, and to this meal of new milk they add the cream taken from that which was milked the night before. This, and the age of their cheeses, it is said, are the only reasons why they are preferred to others, their land not being in any respect superior to that of other countries.

In the Bath Papers, Mr. Hazard gives the following receipt for making *rennet*. 'When the maw-skin is well prepared and fit for the purpose, three pints or two quarts of soft water, clean and sweet, should be mixed with salt, wherein should be put sweet-brier, rose-leaves and flowers, cinnamon, cloves, mace, and, in short, almost every sort of spice and aromatic that can be procured; and if these are put into two quarts of water, they must boil gently till the liquor is reduced to three pints, and care should be taken that this liquid is not smoked; it should be strained clear from the spices, &c., and, when not warmer than milk from the cow, it should be poured upon the vell or maw; a lemon may then be sliced into it, when it may remain a day or two; after which it should be strained again and put into a bottle, where, if well corked, it will keep good for twelve months, or more: it will smell like a perfume, and a small quantity of it will turn the milk, and give the cheese a pleasing flavor.'

The method of making *green cheese* we should not, perhaps, omit. In a cheese of this sort, of about ten or twelve pounds weight, an infusion is made by steeping about two handfuls of sage, and one of marigold leaves, with a little parsley, after being bruised, one night in a proper quantity of milk. In the morning the greened milk is strained off, and mixed with about one-third of the whole quantity to be run. The green and the white milks are then run separately, keeping the two curds distinct, until they are ready for vatting. The mixing of them depends on the fancy of the maker. In some cases the two are connected together, blending them in an even and intimate manner; in others, the green curd is broken down into irregular fragments, or cut out in irregular figures by means of proper tins. In the operation of vatting, the fragments or figures are placed on the outsides. The bottom of the vat is first set with them, crumbling the white or yellow curd among them. As the vat fills, others are placed at the edges, and the remainder buried flush with the top. In the management

afterwards, the same plan is pursued as those which we have already described for common cheese.

A *dairy house* should have a northern aspect, if possible, and good ventilation. The regulation of temperature may be accomplished on the plan suggested by Dr. Anderson, of having double walls and roofs; or by means of hollow walls; and for common purposes by the walls having a vacancy left, of eight or ten inches in width, between the lath and plaster. According to the nature of the business to be carried on in them, these buildings will be of course regulated, both in regard to their size and the number of their conveniences: as whether they are used for butter, cheese, or milk; the number of cows which are kept, &c. In the Gloucester dairy houses twenty feet by sixteen are the usual dimensions for forty cows; and thirty feet by forty for 100 cows.

A butter dairy should consist of three rooms, or apartments: namely, a milk room, a churning room with necessary apparatus, and a room for the different utensils, and the cleaning and airing them in, when it may be requisite. The cheese dairy should, in the same manner, be composed of three rooms; one for the reception of the milk; another for the scalding and pressing of the cheese; and a third for the purpose of salting it in. In addition, there ought to be a room for the stowing of the cheese, which may conveniently be a loft made over the dairy. It is frequently at a distance, which is inconvenient and troublesome.

The milk dairy only requires two good rooms, one for the reception of the milk, and another for the purpose of serving it out in, and that of scalding, cleaning, and airing the different utensils.

The *utensils of a cheese dairy* are, the cheese tub, in which the curd is broken, and prepared; the cheese-knife, commonly a thin spatula of wood or iron, for the purpose of cutting or breaking down the curd; the cheese-cloth, a piece of thin gauze, in which the cheese is placed in the press; a circular cheese-board; a strong wooden vat, and cheese-press.

The last article is generally constructed with a common wooden screw, though sometimes a large weight is used. The diagram represents a

very commodious one. Churns are almost endless in their variety of shapes, and supposed recommendations. Our article CHURN exhibits an improved mode of working this important utensil. We may add, in conclusion, that Mr. Dicus of Liverpool has lately invented a lactometer 'for ascertaining the richness of milk from its specific gravity, and its degree of warmth taken by a thermometer, on comparing its specific gravity with its warmth.'

• It is a glass tube a foot long, with a funnel at top; the upper two inches being marked in small divisions, just under the funnel; when the instrument is filled to the height of one foot with milk, the depth of cream it yields is noted by the gradations on the upper part.

An invention of a similar kind has been noticed by the Highland Society of Scotland, in their Report for 1816: Mrs. Lovi's areometric beads, by which the specific gravity of the milk is tried first when new milked, and again when the cream is removed.—'When milk is tried as soon as it cools,' observes this Report, 'say to 60°, and again, after it has been thoroughly skimmed, it will be found that the skimmed milk is of considerably greater gravity; and as this increase depends upon the separation of the lighter cream, the amount of the increase, or the difference between the specific gravity of the fresh and skimmed milk, will bear proportion to, and may be employed as a measure of, the relative quantities of the oily matter or butter contained in different milks.'—'The specific gravity of skimmed milk depends both on the quantity of the saccharo-saline matters, and of the curd. To estimate the relative quantities of curd, and by that determine the value of milk for the purpose of yielding cheese, it is only required to curdle the skim milk, and ascertain the specific gravity of the whey. The whey will, of course, be found of lower specific gravity than the skimmed milk, and the number of degrees of difference affords a measure of the relative quantities of the curd. According to this hypothesis, the areometric beads may be employed to ascertain the qualities of milk, relatively both to the manufacture of butter and cheese.' But neither of these inventions, though in themselves ingenious, have been extensively used.

The *fixtures of a respectable dairy* are, a copper boiler in the scalding-room; benches and shelves in this room and the cheese-room; a bench or table about two feet wide round the milk-room; and a pump in the centre of the latter.

The *utensils of a butter dairy* are, pails; sieves of hair cloth, or silver-wire cloth for straining the milk; milk dishes or coolers; an ivory or bone cream-knife, and skimming dishes of willow or ivory; bowls; barrel, or other milk churns; butter-makers; and a portable rack for drying dishes in the air; tubs, &c.

DAIS, in botany, a genus of the monogynia order, and decandria class of plants; natural order, thirty-first, veprecuke: involucre tetraphyllous: cor. quadrid, orquinquefid: fruct monospermous berry. Species three, natives of South Sea Isles.

DAISY, *n. s.* ? Sax. *dæge-rege* day's-eye; **DAISIED**, *adj.* } or, as Mr. Thomson conjectures, *dah's*, i. e. does-eye. Minsheu says, from *δαῖω*, to divide, because of the divisions of the leaves; but this etymology seems too profound for the name of a common flower.

DAISY. See **BELLIS PERENNIS**.

DALE, *n. s.* Teut. *thal*; Ang.-Saxon, Spanish, Belgic, and Irish, *dal*, from *dalen*, *descendere*, to descend. A valley or low place.

DALE (Richard), an American naval commander, was born in Virginia, Nov. 6, 1756. At twelve years of age he was sent to sea, and, in 1775, he took the command of a merchant vessel. In 1776 he entered, as a midshipman, on board of the American brig of war *Lexington*, commanded by captain John Barry. In her he cruised on the British coast the following year, and was taken by a British cutter. After a confinement of more than a year in Mill prison, he effected his escape into France, where he joined, in the character of master's mate, the celebrated Paul Jones, then commanding the American ship *Bon Homme Richard*. Jones soon raised Dale to the rank of his first lieutenant, in which character he signalized himself in the sanguinary and desperate engagement between the *Bon Homme Richard* and the English frigate *Serapis*. He was the first man who reached the deck of the latter when she was boarded and taken. In 1781 he returned to America, and, in June of that year, was appointed to the *Trumbull* frigate, commanded by captain James Nicholson, and soon afterwards captured. From 1790 to 1794 he served as captain in the East India trade. At the end of this period the government of the United States made him a captain in the navy. In 1801 he took the command of the American squadron of observation, which sailed, in June of that year, from Hampton roads to the Mediterranean. His broad pendant was hoisted on board the frigate *President*. Efficient protection was given by Dale to the American trade and other interests in the Mediterranean. In April, 1802, he reached Hampton roads again. He passed the remainder of his life in Philadelphia, in the enjoyment of a competent estate, and of the esteem of all his fellow-citizens. He died February 24, 1826. Captain Dale was a thorough, brave and intelligent seaman. He was several times severely wounded in battle. The adventures of his early years were of the most romantic and perilous cast. No man could lay claim to a more honorable and honest character.

DALEA, in botany, a genus of plants of the diadelphia class and decandria order. Stamina five or ten, with the wings growing to their column, and united without separate filaments: leguminous: SEED one. Species fourteen, natives of North and South America.

DALECARLIA, or **STORA-KOPPARBERG**, as it has been recently named, is an extensive province of Sweden, bounded on the west by Norway, on the north by Herjedal, on the east by Helsingland, and on the south by Westmannland. It contains nearly 1300 English square miles, and about 125,000 inhabitants. Though its general aspect is hilly, the mountains are of

little elevation, except in the neighbourhood of Norway; the greater part of the province is finely diversified with hills, dales, and lakes. It contains also two large rivers, the Dal and the Ljusne. In the south fine rye and barley fields meet the eye; and the potatoe is cultivated with some success; but the perpetual changes of the property and badness of the roads have been formidable obstacles to improvement. Lime-trees, elms, and maples, are found growing here nearly under the sixty-second degree of latitude. Dalecarlia has its chief riches, however, in its copper and iron mines, the chief of which (of copper) are at Fahlun and Afvestad. At the beginning of the present century the iron mines employed seventy-two smelting-furnaces, and fifty-six forges; the total annual produce being about 113,000 cwt. Sulphur is likewise found; and at Elfvedal are quarries of porphyry. The chief towns are Fahlun, Hedemora, and Soter. The Dalecarlians are of noble make and appearance, and have long been celebrated for their love of liberty. During the struggles of Gustavus Vasa for the crown, they obtained their chief privileges, and have since distinguished themselves on similar occasions. They seem to have imbibed from these circumstances much of the spirit of faction; and they have great contempt for the other Swedes.

DALECHAMPIA, in botany, a genus of the monadelphia order, and monœcia class of plants, natural order thirty-eighth, *tricoccæ*. Male involucre, common and quadripartite: cal. hexaphyllous; cor. none; nectarium laminated or scaly; the stamina monadelphous or coalited at the base, and polyandrous or numerous. Female involucre, common and triphyllous; style one: caps. tricoccus. Species two, viz. 1. *D. scandens*, a native of Jamaica, and a climbing plant which rises to a considerable height, and is remarkable for nothing but having its leaves armed with bristly hairs, which sting the hands of those who unwarily touch them. 2. *D. Goroleta*, a native of New Granada.

DALGARNO (George), a learned Scottish writer of the seventeenth century, was born at Aberdeen, and projected a plan for a universal language, in a work entitled *Ars Signorum*, *Vulgo Character Universalis et Lingua Philosophica*, London 1661, 8vo. This exhibits a classification, as the author and his admirers state, of all possible ideas, and a selection of characters adapted to them. He admits only seventeen classes of ideas, and uses the letters of the Latin alphabet, with two Greek characters. His plan resembles that of bishop Wilkins. He was the author also of *Didascalophus*, or the Deaf and Dumb Man's Tutor. Oxford, 1680, 8vo.

DALIN (Olof Von), a Swedish historian and poet, born at Winberga in Holland in 1708, was designed for the medical profession, which he abandoned. In 1735 he published a weekly paper, called *The Swedish Argus*, which gave great satisfaction to the diet, and he was rewarded with the situation of librarian at Stockholm. He has been termed the father of Swedish poetry. His two chief poems are, *The Liberty of Sweden*; and *Brunhilda*, a tragedy. In 1744 he was en

gaged by the diet to write The History of Sweden, and successively raised himself to be preceptor to Prince Gustavus, counsellor in ordinary of the chancery, knight of the northern star, and chancellor of the court. He died in 1763. He was the author of a Translation of Montesquieu's Causes de la Grandeur et de la Décadence des Romaines; and several poems, fables, &c., printed in 6 vols. 1767.

DALKEITH (Gael. i. e. a plain between two rivers), a parish of Scotland, in Mid Lothian, situated between the south and north Esk, and not exceeding two miles in length or breadth. The soil is partly light and sandy, partly deep clay.

DALKEITH, a considerable town in the above parish, is six miles south-east of Edinburgh, seated on the north Esk. It contains several good streets, and has a weekly market on Thursday, reckoned one of the best in Scotland for grain; which is all sold for ready money, and supplies the west country about Glasgow, Paisley, Carron, &c., as well as Edinburgh in part. It has also markets on Monday and Tuesday for meal and cattle, in winter; and a fair the third Tuesday in October. The seat of the duke of Buccleuch is the principal ornament of the place, and the plantations which surround it are laid out with great taste. The house was built in the beginning of the eighteenth century on the site of Dalkeith castle. Long. 2° 20' W., lat. 55° 50' N.

DALKEITH CASTLE formerly stood at the east end of the town of Dalkeith. It was built on a perpendicular rock of great height, and inaccessible on all sides, except the east where it was defended by a fosse, through which the river is said to have run. On the defeat of the Scots at the battle of Pinkie, in 1547, James earl of Morton, Sir David Wedderburn, and many others, fled to this castle; where they were besieged for some time by the English, but were obliged to surrender at last for want of provisions. Here, in 1660, it being the head quarters of general Monk, the restoration of monarchy, by calling home Charles II. was planned.

DALLA, an important island and district of the Delta of the Irrawaddy River, Hindostan. It is covered generally with wood, which shelters numerous wild beasts, but contains also fine pastures, and produces rice and salt in considerable quantities. During the contest between the Birmans and Peguers, in the middle of the last century, this district was often overrun by both armies. The principal towns are Dalla, Cowack, and Gnapce Ghewen.

DALLY, *v. a. & n.* } Ancient Belg. *dollen*;
DALLANCE, *n. s.* } Goth. *duella*; Saxon,
DALLIER, *n. s.* } dwolian. To talk foolishly or idly. Hence both to delay, and to trifle in love or otherwise.

They that would not be reformed by that correction, wherein he dallied with them, shall feel a judgment worthy of God. *Wisdom xii. 26.*

A Frore ther was a wanton and a mery,

A limitour, a full solempne man :

In all the ordres fourre is non that can

So moche of dalliance and fayre language.

Chaucer. Prolog. to Cant. Tales.

With faile disport, and courting dalliance
 She intertainde her lover all the way;
 But when she saw the knight his speare advance,
 Shre soone left off her mirth and wanton play,
 And bad her knight addresse him to the fray,
Spenser. Faerie Queene.

The daily dalliers, with pleasant words, with smiling countenances, and with wagers purposed to be lost, before they were purposed to be made. *Ascham.*

Not dallying with a brace of courtezans,
 But meditating with two deep divines. *Shakspeare.*

She her airie buildeth in the cedar's top,
 And dallies with the wind, and scorns the sun. *Id.*

— Good lord, you use this dalliance to excuse
 Your breach of promise. *Id.*

Nor gentle purpose, nor endearing smiles,
 Wanted; nor youthful dalliance, as be seems,
 Fair couple linked in happy nuptial league,
 Alone as they.

He left his cur, and laying hold
 Upon his arms, with courage bold
 Cried out, 'tis now no time to dally,
 The enemy begin to rally. *Hudibras.*

I'll head my people;
 Then think of dalliance when the danger's o'er :
 My warlike spirits work now another way,
 And my soul's tuned to trumpets. *Dryden.*

One hundred thousand pounds must be raised, for
 there is no dallying with hunger. *Swift.*

DALMANUTHIA, in ancient geography, a city of Judea, on the east side of the sea of Tiberias; either the same with Magdala, or situated near it. Hence Mark says, viii. 10, that our Saviour and his disciples landed in the parts of Dalmanutha: while Matthew, recording the same fact, says that they came into the coast of Magdala.

DALMATIA, a country of Europe, in a former maritime division of Austria, was bounded on the north by Bosnia and Croatia, on the east by Servia, and on the south and west by the Adriatic. The country is, as it were, strewed with mountains and hills, which are not altogether unfruitful; olives, vines, myrtles, and a great variety of palatable and wholesome vegetables growing amongst them. It has also many fertile plains; and feeds considerable numbers of horned cattle and sheep. The rivers of Dalmatia have no long course, but are mostly navigable. The principal are the Clierka and the Narenta. The air is temperate and pure. The Dalmatians use the Slavonian language and customs, and profess the Roman Catholic religion.

Dalmatia was distinguished as follows:—1. Hungarian Dalmatia, lying on the upper part of the Adriatic Sea, containing part of ancient Liburnia, and which is more generally called Morlachia. 2. Venetian Dalmatia, or that part which was possessed by the Venetians, lying to the south-east of Hungarian Dalmatia, and abounds in ancient castles and fortresses. The inhabitants are estimated at 25,000, and are distinguished by different names, as well as diversity of manners. See MORLACHS, and UBIANS. They are warlike, intrepid soldiers, and excellent seamen. The nobility and people were well attached to the republic; malignance made them faithful subjects to Venice; their privileges were

respected, and it was dangerous to offend them. The chief towns are Spalatro, the capital, Amissa, Narenta, Sebenico, Trau, and Zara. Besides what the Venetians possessed on the continent, several islands in the Adriatic belong to them, which are considered as part of Dalmatia. This portion belonging to Austria, is strictly the only part to which the name Dalmatia now applies. 3. Turkish Dalmatia, lying east of Venetian Dalmatia. The principal towns are, Herzegovina, the capital, Clinova, and Scardova. 4. The late republic of Ragusa formed another part of Dalmatia.

DALMATIA, ISLANDS OF. Besides the islands included in the above province, Dr. Oppenheim mentions other seven islands of the late maritime division of Austria, as forming two distinct provinces; viz. the Four islands of Quarnero, and the Three Dalmatian islands, peculiarly so called, viz. Brazza, Lesina, and Curtola.

DALMATIA, LOWER, OR ALBANIA, a province of the late maritime division of Austria, divided from the ci-devant Venetian Dalmatia, by the late republic of Ragusa, and a part of Turkish Dalmatia. It comprehended the canal, town, &c., of Cattaro, the mountains and valleys of Buda, and the bailiwick of Pastrovichi. It is mountainous, but produces some corn, much oil, and fine fruits. The inhabitants have also considerable trade in the Levant.

The name of Dalmatia is said to be derived from the ancient capital Delmum, or Delminium. In the latter ages of the Roman empire this country suffered frequently from the inroads of barbarians, and was finally incorporated with Hungary in the twelfth century. When the Venetians, however, had occupied the sea-coast, they succeeded in the fifteenth century in conquering the interior, which long remained in their possession. By the treaty of Campo Formio, in 1797, the whole was ceded to Austria; but after the campaign of 1805 Buonaparte claimed it as king of Italy, and afterwards united it with the Illyrian provinces. Cattaro, and the southern part, were in 1806 seized by the Russians; but delivered up to the French at the peace of Tilsit. In the final arrangements of 1814 the whole was again transferred to Austria.

DALRYMPLE (Sir David), an eminent and learned judge of Scotland, born at Edinburgh, Oct. 28th, 1726. He was educated at Eton, and from thence went to Utrecht, where he remained till after the rebellion in 1746. He was admitted a member of the Faculty of Advocates, Feb. 23rd 1748. In March, 1766, was appointed a lord of Session, and in May, 1776, one of the lords of Justiciary. During this time he wrote several occasional papers, in *The World*, the *Gentleman's Magazine*, &c. In 1773 he published his *Remarks on the History of Scotland*, which first displayed his talent for minute and accurate enquiry into doubtful points of history. This prepared the public mind for his *Annals of Scotland*, of which the first appeared in 1776, and the second in 1779, and fully answered the hopes he had excited. In 1786 lord Hailes evinced his unshaken attachment to religious truth, by publishing a 4to. volume, entitled, *An Enquiry into the Secondary Causes, which Mr.*

Gibbon has assigned for the rapid progress of Christianity. This was the last work he published; but he attended his duty on the bench till within three days of his death, which happened Nov. 29th, 1792, in the sixty-sixth year of his age. Lord Hailes was twice married; first to the daughter of the late lord Coalston, and afterward to the daughter of lord Kilkerran, by each of whom he had one daughter. As he left no male issue, his nephew succeeded to his title. His knowledge of the laws was accurate and profound; and he applied it in judgment with the most scrupulous integrity. Affectionate to his family and relations, simple and mild in his manners, pure and conscientious in his morals, enlightened and entertaining in his conversation, he left society only to regret that, devoted as he was to more important employments, he had so little time to spare for intercourse with them. His labors in illustration of the history of his country, and many other works of profound erudition, remain as monuments of his accurate and faithful researches for materials, and his sound judgment in the selection of them. Besides the works above enumerated, lord Hailes published the following: 1. *Memorials and Letters relating to the History of Great Britain*, in the reign of James I. 8vo. 1765. 2. *The Secret Correspondence between Sir Robert Cecil and James VI.* 12mo. 1766. 3. *Accounts of the Persecution of Charles II. after the Battle of Worcester*, 8vo. 1766. 4. *Memorials and Letters relating to the History of Great Britain*, in the reign of Charles I. 8vo. 1767. 5. *Canons of the Church of Scotland*, drawn up in the provincial Synod held at Perth, 1242, 4to. 1769. 6. *Historical Memorials concerning the Provincial Councils of the Scottish Clergy*, 4to. 7. *Ancient Scottish Poems*, from a MS. of George Bannatyne, 12mo. 1770. All in 4to. in 1787. Lord Hailes has also left many valuable MSS.

DALTON (John), D.D. an eminent divine and poet, was the son of the Rev. John Dalton, rector of Dean in Cumberland, where he was born in 1709. He was educated at Queen's College, Oxford; and became tutor to lord Beauchamp, only son of the earl of Hertford; during which time he adapted Milton's mask of Comus to the stage, by a judicious insertion of several songs and different passages selected from other of Milton's works, as well as of several songs and other elegant additions of his own, suited to the characters and to the manners of the original author. During the run of this piece he industriously sought out a grand-daughter of Milton's, oppressed both by age and poverty, and procured her a benefit from it, the profits of which amounted to a considerable sum. He was promoted by the king to a prebend of Worcester; where he died on the 2nd of July 1763. Besides the above, he wrote a descriptive poem, addressed to two ladies at their return from viewing the coal-mines near Whitehaven; and *Remarks on twelve historical designs of Raphael*, and the *Museum Græcum et Egyptiacum*.

DALTON, a market town of Lancashire. It is seated on the spring-head of a river in a champaign country, not far from the sea; and the ancient castle is made use of to keep the records,

and prisoners for debt, in the liberty of Furness. The church is an ancient, neat building, and has an organ. This town, being in an excellent sporting country, is much resorted to during the season. The port here is large and commodious; and a light-house has been erected at the south end of the Isle of Walney. A canal has been cut from the sea up to this town, one mile and a half in length, capable of navigating ships of great burden, which is of great advantage to the trade and commerce of the place. Market on Saturday. This is four miles from Ulverston, and 275 N. N. W. of London.

DAM, *n. s.* } Fr. *dame*; Span. *dama*; Heb. *DAME*, *n. s.* } and Chald. *ܕܡܐ*; Arab. *ama*; Lat. *dama*, *domina*; which, however, Minshew derives from Heb. *דָּמָה*, to govern; Sans. *amma*; Teut. *ama*, to which Thomson thinks Sax. *dey*, or *die*, one that gives milk, has been prefixed. A human mother; a female who has borne young animals. Also, a title of honor; a lady; an elderly woman.

But of hire song, it was as loud and yerne
As any swallow sitting on a berne;
Therto she coude skip and make a game,
As any kid or calf following his dame.

Chaucer. Cant. Tales.

Their *dam* upstart out of her den effraide,
And rushed forth, hurling her hideous taile
About her cursed head. *Spenser. Faerie Queene.*

This brat is none of mine;
It is the issue of Polixena:
Hence with it, and, together with the *dam*,
Commit them to the fire.

Shakespeare. Winter's Tale.

The *dam* runs lowing up and down,
Looking the way her harmless young one went,
And can do nought but wail her darling loss.

Id.

Not all these lords do vex me half so much
As that proud *dame*, the lord protector's wife. *Id.*

Bless you, fair *dame*! I am not to you known,
Though in your state of honor I am perfect. *Id.*

Another layeth a well-mannered lambe,
Or spotted kid, or some more forward steere,
And from the payle doth praise their fertile *dam*.

Bp. Hall. Defiance to Envy.

Who would not repeat that bliss,
And frequent sight of such a *dame*
Buy with the hazard of his fame? *Waller.*

Mother, says a sick kite, let me have your prayers.
Alas, my child, says the *dam*, which of the gods shall
I go to? *L'Estrange.*

They killed the poor cock; for, say they, if it were
not for his waking our *dame*, she would not wake us.

Id.

Birds bring but one morsel of meat at a time, and
have not fewer, it may be, than seven or eight young
in the nest together, which, at the return of their *dams*,
do all at once, with equal greediness, hold up their
heads and gape. *Ray.*

The word *dame* originally signified a mistress of a
family, who was a lady; and it is used still in the
English law to signify a lady: but in common use,
now-a-days, it represents a farmer's wife, or a mis-
tress of a family of the lower rank in the country.

Watts's Logick.

As is the hedgehog's,
Which sucks at midnight from the wholesome *dam*
Of the young bull, until the milkmaid finds
The nipple next day sore and udder dry. *Byron.*

No spectre gaunt she saw of bones entwined,
With scythe wide brandished as to sweep mankind,
But a plump *dame*, of pampered aspect sly,
With fiendlike, scowling merriment of eye.

Dr. T. Brown.

DAM, *v. a. & n. s.* From Gr. *δαμαζω*, *δαμαω*,
to reduce to quiet, or stillness; Ang.-Sax. *deim-*
man; Belg. *damm*. To confine and overcome
the force of water; to shut up by moles or banks.
To stop up an opening. *Shakspeare* applies it
to fire, and *Milton* to light, restrained or con-
fined.

I'll have the current in this place *dammed* up;
And here the smug and silver Trent shall run
In a new channel, fair and evenly.

Shakspeare. Henry VI.

The more thou *damdest* it up, the more it burus.

Id.

Now will I *dam* up this thy yawning mouth
For swallowing the treasure of the realm. *Id.*

Moon! if your influence be quite *dammed* up
With black usurping mists, some gentle taper,
Though a rush-candle from the wicker hole
Of some clay habitation, visit us
With thy long levelled rule of streaming light.

Milton.

As when the sea breaks o'er its bounds,
And overflows the level grounds,
Those banks and *dams*, that like a skreen
Did keep it out, now keep it in. *Hudibras.*

Home I would go,
But that my doors are hateful to my eyes,
Filled and *dammed* up with gaping creditors,
Watchful as fowlers when their game will spring.
Ottway.

Not with so fierce a rage the foaming flood
Roars, when he finds his rapid course withstood,
Bears down the *dams* with unresisted sway,
And sweeps the cattle and the cots away.

Dryden.

The inside of the *dam* must be very smooth and
straight; and if it is made very sloping on each side,
it is the better. *Mortimer's Husbandry.*

'Tis you must drive that trouble from your soul;
As streams, when *dammed*, forget their ancient current,
And, wondering at their banks, in other channels flow.

Smith.

DAMAGE, *v. a., v. n. & n. s.* } Fr. *domages*
DAMAGEABLE, *adj.* } *dommage*; Goth.
damnage, from Lat. *damnus*, injury. To injure
hurt, impair; and the injury, or harm done.
Damages are an estimated value or supposed,
reparation of injury done. Damageable goods
are those readily susceptible of injury.

His heart exalts him in the harm
Already done, to have dispeopled heaven,
My *damage* fondly deemed! *Milton.*

Gross errors and absurdities many commit for want
of a friend to tell them of them, to the great *damage*
both of their fame and fortune. *Bacon.*

The bishop demanded restitution of the spoils taken
by the Scots, or *damages* for the same. *Id.*

Such as were sent from the *dam* did commonly do
more hurt and *damage* to the English subjects than to
the Irish enemies, by their continual cess and extortion.

Davies.

They believed that they were not able, though they should be willing to sell all they have in Ireland, to pay the *damages* which had been sustained by the war.

Id.

I consider time as an immense ocean, into which many noble authors are entirely swallowed up, many very much shattered and *damaged*, some quite disjointed and broken in pieces.

Addison.

When the judge had awarded due *damages* to a person into whose field a neighbour's oxen had broke, it is reported that he reversed his own sentence, when he heard that the oxen which had done this mischief were his own.

Watts.

Obscene and immodest talk is offensive to the purity of God, *damageable* and infectious to the innocence of our neighbour, and most pernicious to ourselves.

Government of the Tongue.

I have been for fifteen years a very laborious member of parliament; and in that time have had great opportunities of seeing with my own eyes the working of the machine of our government; and remarking where it went smoothly and did its business, and where it checked in its movement, or when it *damaged* its work.

Burke.

DAMAR, a considerable town and district of Arabia, in the country of Yemen. It is well-built, and has a large castle and a university of the Mussulman sect Zeidi, which, Niebuhr was informed, contained 500 students. It is said to contain 5000 houses. Distant fifty-six miles north of Sana, and ninety-four north-east of Mocha.

DAMASCENE, Lat. *damascenus*. From Damascus; a plum. See PRUNUS.

In fruits the white commonly is meaner, as in pears, plums, and *damascenes*; and the choicest plums are black.

Bacon.

DAMASCENUS (John), an illustrious father of the church in the eighth century, born at Damascus, where his father, though a Christian, enjoyed the office of counsellor of state to the Saracen caliph, to which the son succeeded. He retired afterwards to the monastery of St. Sabas, and spent the remainder of his life in writing books of divinity. His works have been often printed; but the Paris edition, in 1712, two vols. folio, is esteemed the best.

DAMASCIUS, a celebrated heathen philosopher, born at Damascus, A.D. 15-40, when the Goths reigned in Italy. He wrote the life of his master, Isidorus, and dedicated it to Theodora, a very learned and philosophical lady, who had also been a pupil to Isidorus. In this life, which was copiously written, he frequently made oblique attacks on the Christian religion. We have nothing remaining of it but some extracts preserved by Photius. Damascius succeeded Theon in the rhetorical school, and Isidorus in that of philosophy, at Athens.

DAMASCUS, דמשק, Heb.; a very ancient city of Syria, in Asia. The ancients supposed it to have been built by one Damascus, from whom it took its name; and one of the medals of the city represents a hind suckling a child, supposed to have an allusion to the founder of the city, who is said to have been brought up by dama, a hind, whence his name. This city was in being

in the time of Abraham, Gen. xiv. 15; and consequently may be looked upon as one of the most ancient cities in the world. In the time of David it seems to have been a very considerable place; as the sacred historian tells us that the Syrians of Damascus sent 20,000 men to the relief of Hadadezer, king of Zobah. We are not informed whether, at that time, it was governed by kings, or was a republic. Afterwards, however, it became a monarchy, and proved very hostile to the kingdom of Israel, and would have destroyed it entirely, had not the Deity miraculously interposed in its behalf. This monarchy was destroyed by Tiglath Pileser, king of Assyria, and Damascus was never afterwards governed by its own kings. From the Assyrians and Babylonians it passed to the Persians, and thence to the Greeks, under Alexander the Great. After his death it belonged, with the rest of Syria, to the Seleucidae, till their empire was subdued by the Romans, about A. A. C. 70. From them it was taken by the Saracens, A. D. 633; and it is now in the hands of the Turks.

Notwithstanding the tyranny of the Turkish government, Damascus is still a considerable place. It is situated in a plain of so great extent, that one can but just discern the mountains, which compass it on the other side. It stands on the west side of the plain, about two miles from the head of the river Barrady, which waters it. It is of a long, straight figure, extending about two miles in length, adorned with mosques and steeples, and encompassed with gardens, computed to be full thirty miles round. The river Barrady, as soon as it issues from the clefts of the Antilibanus into the plain, is divided into three streams; the middle one, which is the largest, runs directly to Damascus, and is distributed to all the cisterns and fountains of the city. The other two seem to be artificial; and are drawn round, one to the right, and the other to the left, on the borders of the gardens, into which they are let by little currents, and dispersed every where. This river finally flows into a hollow of the south-east desert, called Behairat-el-Merdi, the Lake of the Meadow.

The houses of the city, whose streets are very narrow, are all built on the outside, either with sun-burnt bricks, or Flemish wail; and yet it is no uncommon thing to see the gates and doors adorned with marble portals, carved and inlaid with great beauty and variety; and, within these portals, to find large courts, beautified with fragrant trees and marble fountains, and surrounded with splendid apartments. In these apartments the ceilings are usually richly painted and gilded; their duans, which are a sort of low stages, seated in the pleasantest part of the room, and elevated about sixteen or eighteen inches above the floor, are floored, and adorned on the sides with variety of marble, mixed in mosaic knots and mazes, spread with carpets, and furnished all round with bolsters and cushions, to the very height of luxury. No city in the world has an equal number of fountains, or more splendid private houses. The interior of some of them is said to contain furniture worth £5000 or £6000. In this city are shown the church of John the Baptist, now converted into

a famous mosque; the house of Ananias, which is only a small grotto, or cellar, wherein is nothing remarkable; and the house of Judas, with whom Paul lodged. In this last is an old tomb, said to be that of Ananias, which the Turks hold in such veneration, that they keep a lamp continually burning over it. There is a castle belonging to Damascus, which is like a little town, having its own streets and houses; and here a magazine of the famous Damascus steel was formerly kept. The principal public building worth notice is the Zekia mosque, remarkable for its noble dimensions and general architecture. This is of the Corinthian order throughout; it has two minarets, and is of an oblong figure, crowned by a large stone cupola, supported by four enormous pillars. The gateway is supported by large columns of red granite; on the outside is a superb fountain, which throws the water twenty feet high. Another, with a grove of trees on each side, stands in a spacious court within. Numerous columns support galleries within, and portions of the walls exhibit the remains of mosaic work, with which they were once adorned. An hospital for the indigent sick is attached. This mosque is said to have been originally the cathedral church of Damascus. The Christians affirm, that it was dedicated to St. John Damascenus, whose body reposes here; but the Turks call it the mosque of St. John the Baptist. Another mosque is beautifully adorned with all kinds of fine marble, like mosaic pavement; and the tower or minaret of a third, is entirely cased with pantiles. The finest of its numerous hospitals is that constructed by the sultan Selim, consisting of a spacious quadrangle, lined by an interior colonnade, which is entirely roofed by forty small domes, covered with lead. On the south side of the court there is a mosque, with a magnificent portico, and two exquisite little minarets, surmounted by a spacious cupola. The patriarch of Antioch has his see at Damascus, where he commonly resides. There is also a Greek, Maronite, Syrian, and Armenian church; and three convents of Franciscan monks. There are eight Jewish synagogues.

Damascus was, at one time, noted for its general ill-treatment of Europeans; but, although no one can venture to traverse the streets, unless in the Oriental costume, without insult, there is now little difference between the citizens of Damascus, and those of other eastern cities. A number of persons are generally seen in the streets, calling themselves saints, and appearing like ideots or madmen.

The fruit-tree, called the damascene, and the flower, called the damask-rose, were transplanted from the gardens belonging to this city; and the silks and linens, known by the name of damasks, were first manufactured by its inhabitants. Niebuhr, who has given a plan of this city, makes it 3250 toises, or something less than a league and a-half in circumference, and it probably contains 180,000 inhabitants. The greater part of these are Arabs and Turks; the number of Christians is estimated at 20,000. Damascus is the rendezvous for all the pilgrims who go to Mecca, from the north of Asia, as

Cairo is for those from Africa. Their number, every year, amounts to from 30,000 to 50,000. Many of them repair here for four months before the time, but the greatest number only at the end of the Ramadan. Damascus then resembles an immense fair; nothing is to be seen but strangers from all parts of Turkey, and even Persia; and every place is full of camels, horses, mules, and merchandise. By means of this caravan, Damascus is become the centre of a very extensive commerce. By Aleppo, the merchants of this city correspond with Armenia, Natolia, Diarbekir, and even with Persia. They send caravans to Cairo, which, following a route frequented in the time of the patriarchs, take their course by Djesryakoub, Tiberias, Naplous, and Gaza. In return, they receive the merchandise of Constantinople and Europe, by way of Said and Bairout. The home consumption is supplied by silk and cotton-stuffs, which are manufactured here in great quantities, and are very well made; by the dried fruits, of their own growth, and sweetmeats, cakes of roses, apricots, and peaches, of which Turkey consumes to the amount of about 40,000 lbs. The remainder, paid for by course of exchange, occasions a considerable circulation of money, in custom-house duties, and the commission of the merchants. The pachalic of Damascus comprehends nearly the whole eastern part of Syria. In this vast extent of country, the soil and its productions are very various; but the plains of Hauran, and those on the banks of the Orontes, are the most fertile; they produce wheat, barley, sesamum, doura, and cotton. This city was one of the objects of Buonaparte's ambition while in the east: a small detachment of his cavalry had defeated the pacha's troops, and he was about to proceed to take possession of Damascus, when he was checked in his progress, in this direction, by British prowess and the disastrous results of the siege of Acre. In the year 1811 the city was menaced by the Wahabees, but the pacha going out to meet them, at the head of 6000 men, they retired. Damascus is 190 miles south of Antioch, 136 N. N. E. of Jerusalem, and 276 S. S. W. of Diarbekir.

DAMASCUS STEEL. See STEEL and CUTLERY.

DAMASK, *v. a. & n. s.* } Fr. *damasquin*;

DAMASKEN'ING, *n. s.* } Ital. *damaschino*.

DAMASK-ROSE, *n. s.* } Damask is a silk, first manufactured at Damascus: damaskening an operation of cutlery, whereby the blades of swords and locks of pistols are ornamented, as at Damascus: and damask-rose, a rose variegated, after the manner of damask, with red and white: hence the damask of a cheek.

Not any weaver which his work doth boast
In diaper, *damask*, or in lyne. *Spenser.*

Damask-roses have not been known in England above one hundred years, and now are so common. *Bacon.*

And for some deale perplexed was her spirit,
Her *damask* late, now changed to purest white. *Fairfax*

They sat recline
On the soft downy bank, *damasked* with flowers. *Milton.*

D A M I E T T A.

Wipe your shoes, for want of a clout, with a *damask* napkin.
Swift's Rules to Servants.

Around him dance the rosy hours,
And *damasking* the ground with flowers,
With ambient sweets perfume the morn. *Fenton.*

No gradual bloom is wanting from the bud,
Nor broad carnations, nor gay spotted pinks,
Nor, showered from every bush, the *damask-rose*.
Thomson.

Loud claps the grinning fiend his iron hands,
Stamps with black hoof, and shouts along the lands;
Withers the *damask* cheek, unnerves the strong,
And drives with scorpion lash the shrieking throng.
Darwin.

DAMASK, a silk stuff, with a raised pattern, so that the right side of the damask is that which has the flowers raised above the ground. Damasks should be of dressed silk, both in warp and woof. Those made in France are half an ell in breadth.

DAMASK is also a kind of wrought linen, made chiefly in Flanders; so called, because its large flowers resemble those of damasks. It is chiefly used for tables.

DAMASKEENING, or DAMASKING, partakes of the mosaic, of engraving, and of carving; like the mosaic, it has inlaid work; like engraving, it cuts the metal, representing divers figures; and, as in chasing gold and silver, is wrought in relieve. There are two ways of damasking; the one, which is the finest, is when the metal is cut deep with proper instruments, and inlaid with gold and silver wire; the other is superficial only.

DAMAUN, a sea-port in the province of Aurungabad, Hindostan, 100 miles north from Bombay. The Portuguese, who still retain it, reduced this place so early as 1531. Its houses and churches make a conspicuous figure from the sea; but the commerce is now reduced. Ship-building, however, is carried on to a considerable extent, the teak-forests of the vicinity supplying excellent timber. A ship, coppered, and equipped for sea, in the European style, in 1800, cost about £14 sterling per ton, according to Mr. Hamilton. The harbour is commodious for vessels of a small size.

DAMIENISTS, in church history, a branch of the ancient Acephali Severitæ. They agreed with the catholics in admitting the sixth council, but disowned any distinction of persons in the God-head; and professed one single nature incapable of distinction; yet they called God 'the Father, Son, and Holy Ghost.'

DAMIENS (Robert Francis), a French assassin, of some notoriety for his attempt on the life of Louis XV., and for the tortures inflicted on him for that attempt, was born in Artois in 1715. He was the son of a small farmer; and his character, even in his childhood, procured him the name of Robert le Diable. He enlisted, when young, for a soldier, deserted, and afterwards became the servant of an officer, whom he attended to the siege of Philippsburgh. He was afterwards a domestic in the Jesuits' College at Paris. He finally left their service in 1738. He is accused of having afterwards poisoned one of his masters, after which he fled into Flanders. On the last day of the year 1756, he returned

to Paris, whence he proceeded to Versailles; and on the evening of the 5th of January, 1757, went to the palace, and, as his majesty was about to get into his carriage, to go to Trianon, pushing aside the attendants, made his way up to the king, and stabbed him in the side. He made no effort to escape, but was taken immediately; and, after having been interrogated at Versailles, was transferred to Paris. On his trial he denied having any accomplices, nor did the application of the most cruel tortures wring from him any probable accusation. On being questioned as to the cause of his crime, he said he did not mean to kill the king, and that he could have done it, if he had thought proper. He added, 'What I did was, that God might touch the king's heart, and induce him to restore order and tranquillity to the nation. The archbishop of Paris is the sole cause of our troubles.' Having been repeatedly tortured, he was sentenced to be put to death in the same cruel manner with Ravallac, the murderer of Henry IV.

DAMIETTA, a port-town of Egypt, on the east mouth of the Nile, four miles from the sea-coast. The present town stands upon a different site from the ancient Damietta, so repeatedly attacked by the European princes. The latter, according to Abulfeda, was 'a town surrounded by walls, and situated at the mouth of the eastern branch of the Nile.' Stephen of Byzantium informs us, that it was called Thamiatis, under the government of the Greeks of the lower empire, but that it was then very inconsiderable. It increased in importance, in proportion as Pelusium, which was frequently plundered, lost its power. The total ruin of that ancient town, occasioned the commerce of the eastern parts of the Delta to be transferred to this. It was, however, no longer a place of strength, when, about the year 238 of the Hegira, the emperors of Constantinople took possession of it a second time. The importance of a harbour, so favorably situated, opened the eyes of the caliphs. In the year 244 of the Hegira, Elmetouakkel surrounded it with strong walls. This obstacle did not prevent Roger, king of Sicily, from taking it from the Mahomedans, in the year 550 of the Hegira. He did not, however, long enjoy his conquest. Salah Eddin, who about that period mounted the throne of Egypt, expelled the Europeans from Damietta. They returned to besiege it fifteen years after; but the sultan baffled all their efforts. Notwithstanding their land army was supported by a fleet of 1200 sail, they were obliged to make a disgraceful retreat. It was the fate of this place to be often besieged. In the year 615 of the Hegira, under the reign of Eladel, the crusaders attacked it with a very considerable force. They landed on the western shore of the Nile, and their first care was to surround their camp with a ditch and pallasadoes. The mouth of the river was defended by two towers, furnished with numerous garrisons. An enormous iron chain, stretching from one side to the other, hindered the approach of vessels. The crusaders carried, by storm, the tower on the same side with their camp, broke the chain, and opened the entrance of the river for their

fleet. Nejm Eddin, the sultan's son, who was encamped near Damietta, covered it with an army. To stop the enemy's vessels, he threw a bridge over the Nile. The Franks overturned it, and the prince adopted the measure of choking up the mouth of the river, which he rendered almost impassable by several large boats he sunk there. After alternate successes, many bloody battles, and a siege of seventeen months, the Christian princes took Damietta by storm. They did not, however, long enjoy the fruit of so much blood spilt, and of an armament which had cost immense sums. Completely invested near the canal of Achmoun, by the waters of the Nile, and by the Egyptian army, they purchased their lives and their liberty by the sacrifice of their conquest. Thirty-one years after this defeat, St. Louis carried Damietta without striking a stroke. The Arabs, however, soon recovered it; but, tired of keeping a place, which continually drew upon them the most warlike nations of Europe, they totally destroyed it, and built another further up in the country. This modern Damietta, first called Menchie, as Abulfeda tells us, has preserved the memory of its origin, in a square still called by that name. Writers, in general, have confounded these two towns, ascribing to the one the attributes of the other.

The present Damietta is of a semicircular form, and stands also on the east bank of the Nile, seven miles and a-half from its mouth. It is reckoned, by Savary, to contain 80,000 souls, but this has been thought an excessive estimate. It has several squares, the most considerable of which has retained the name of Menchie. The bazaars are filled with merchants. Spacious okals, or khaus, collecting under their porticos the stuffs of India, the silks of Mount Lebanon, sal ammoniac, and pyramids of rice, proclaim its commercial respectability. The houses, those in particular which are on the banks of the river, are very lofty. They have, in general, handsome saloons on the top of their terraces, open to every wind; where the Turk, reclining on a sofa, passes his life in smoking, or in looking on the sea, which bounds the horizon on one side; on the great lake that extends itself on the other; and on the Nile, which, running between them, traverses a rich country. Several large mosques, adorned with minarets, are dispersed over the town. The public baths, lined with marble, are distributed in the same manner as those of Grand Cairo. The linen is clean, and the water very pure. The heat, and the treatment in them, so far from injuring the health, serve to strengthen and improve it, if used with moderation. This custom, founded on experience, is general in Egypt. The port of Damietta is continually filled with a multitude of boats and small vessels. Those called *scherms* serve to convey the merchandise on board the ships in the road, and to unload them: the others carry on the coasting-trade. This town carries on a great trade with Syria, Cyprus, and Marseilles. The rice, called *mezelaoui*, of the finest quality in Egypt, is cultivated in the neighbouring plains. The exports of it amount, annually, to about six millions of livres. Other articles of the produce of the country are licens, sal ammoniac, corn, &c. The Christians

of Aleppo and Damascus, settled in this town, have, for several ages, carried on its principal commerce. The bad state of the port is very detrimental to Damietta. The road, where the vessels lie, being exposed to every wind, the slightest gale obliges the captains to cut their cables, and take shelter in Cyprus, or stand off to sea. The tongue of land, on which Damietta is situated, straitened on one side by the river, and on the other by the western extremity of the lake Menzale, is only from two to six miles wide from east to west. It is intersected by innumerable rivulets in every direction, which render it the most fertile spot in Egypt. There are many villages around the town, in which are manufactures of the most beautiful linens. The finest napkins, in particular, are made here, fringed with silk. Damietta is 100 miles N. N. E. of Cairo.

DAM'NIIFY, *v. a.*

DAM'NINGNESS, *n. s.*

Lat. *damno*; Old Fr. *dammer*; which Minshew derives from the Heb. דם, the shedding of blood in sacrifice or punishment. To condemn; and the state of being condemned, temporally or eternally. To curse; to disapprove; to explode. 'Indecently used,' also, as Johnson says, 'in a ludicrous (and trifling) sense.'

I answeride, that it is not custom to romayns, to dampne any man before that he that is accused haue his accuseris present. *Wicklif. Dedis. 25.*

And not as we ben blasfemed, and as sum men seyn, that we seyn, do we yuele things that goode thingis come, whos dampnacioun is just.

Id. Romayss, iii. 8.

For wel thou wost thy selven veraily

That thou and I be damned to prison

Perpetual; us gaineth no rainoun.

Chaucer. Cant. Tales.

When now he saw himself so freshly rear,

As if late fight had nought him damaged,

He was dismayed, and 'gan his fate to fear.

Faerie Queene.

Not in the legions

Of horrid hell can come a devil more damned

In evils to top Macbeth.

Shakspeare. Macbeth.

Let not the royal bed of Denmark be

A couch for luxury and damned incest. *Id. Hamlet.*

He's a creature unprepared, unmeet for death;

And to transport him in the mind he is

Were damnable.

Id. Measure for Measure.

It gives him occasion of labouring with greater earnestness elsewhere, to entangle unwary minds with the snares of his damnable opinion.

Hooker.

Whence damned vice is shrouded quite from shame,

And crowned with virtue's need, immortal name!

Infamy disposses of native due,

Ordnained of old on looser life to sue.

Bishop Hall. Prologue to Satires.

He that hath been alighted with the fears of hell, or remembers how often he hath been spared from an horrible damnation, will not be ready to strangle his brother for a trifle. *Taylor's Worthy Communicant.*

He may vow never to return to those sins which he hath had such experience of, for the emptiness and damningness of them, and so think himself a complete penitent.

Hammond.

Now mince the sin,
And mollify damnation with a phrase:
Say you consented not to Sancho's death,
But barely not forbade it. *Dryden.*

His own impartial thought
Will *damm*, and conscience will record the fault. *Id.*

We will propose the question, whether those who hold the fundamentals of faith may deny Christ *damnably*, in respect of those consequences that arise from them? *South's Sermons.*

He, who has suffered the damage, has a right to demand in his own name, and he alone can recruit, satisfaction: the *damified* person has the power of appropriating the goods or service of the offender, by right of self-preservation. *Loche.*

Dare not
To brand the spotless virtue of my prince
With falsehoods of most base and *damned* contrivance. *Rowe.*

As he does not reckon every schism of a *damnable* nature, so he is far from closing with the new opinion of those who make it no crime. *Swift.*

The more sweets they bestowed upon them, the more *damuably* they conserved stunk. *Dennis.*

You are so good a critick, that it is the greatest happiness of the modern poets that you do not hear their works; and, next, that you are not so arrant a critick as to *damm* them, like the rest, without bearing. *Pope.*

Clouds
Rise curling fast beneath me, white and sulphury,
Like foam from the roused ocean of deep Hell,
Whose every wave breaks on a living shore,
Heaped with the *damned* like pebbles.—I am giddy. *Byron.*

DAMNII, an ancient people of Britain, who inhabited the district situated between the territories of the Selgovæ on the south, and the Caledonii on the north, now called Clydesdale.

DAMOCLES, one of the flatterers of Dionysius the elder, of Sicily. He admired the tyrant's wealth, and pronounced him the happiest man on earth. Dionysius prevailed upon him to undertake, for a while, the charge of royalty, and be convinced of the happiness which a sovereign enjoyed. Damocles ascended the throne, and while he gazed upon the wealth and splendor which surrounded him, he perceived a sword hanging over his head by a single hair. This so terrified him, that all his imaginary felicity vanished at once, and thus represented to him the danger and misery of royal state.

DAMON AND PYTHIAS, two illustrious friends of antiquity, who have immortalised their names by the strength and sincerity of their friendship. Damon was a Pythagorean philosopher, who, having incurred the displeasure of Dionysius, tyrant of Syracuse, was condemned to death. He asked a short respite, till he should settle some domestic business, of the utmost importance to his family, but which required his personal presence at some distance from Syracuse. Dionysius agreed to grant his request, upon a condition, which he supposed impossible to be complied with, viz. that Damon should find some person who was willing to suffer death in his stead, provided he did not return at the time appointed. Pythias, to the surprise of the tyrant, cheerfully surrendered himself as a pledge for his friend Damian; who, after settling

his business, astonished the tyrant still more, by returning punctually at the hour fixed for his execution. Dionysius was so struck with the fidelity of these two friends, that he remitted the punishment, and entreated them to permit him to share their friendship, and enjoy their confidence.

DAMP, *v. a., n. s. & adj.* } Sax. and Belg.
DAMP'NESS, *n. s.* } damp; Teutonic,
DAMP'ISH, *adj.* } dampf. Serenius
DAMP'ISHNESS, *n. s.* } says from Scyth.
DAMP'Y, *adj.* } *dau*, vapor. To
wet, moisten, make humid; foggy, moist, or heavy air; and hence to depress, deject, make dull, discourage. Dampish, dampishness, and dampy are diminutives of the same signification.

It has been used by some with great success to make their walls thick; and to put a lay of chalk between the bricks, to take away all *dampishness*. *Bacon.*

A soft body *dampeth* the sound much more than a hard. *Id.*

Night; not now, as ere man fell,
Wholesome and cool, and mild; but with black air
Accompanied, with *damps* and dreadful gloom. *Milton.*

All these and more came flocking, but with looks
Downcast and *damp*: yet such wherein appeared
Obscure some glimpse of joy. *Id.*

Unless an age too late, or cold
Climate, or years, *damp* my inteaded wing
Depressed. *Id.*
The very loss of one pleasure is enough to *damp*
the relish of another. *L'Étrange.*

Nor need they fear the *dampness* of the sky
Should flag their wings, and hinder them to fly;
'Twas only water thrown on sails too dry. *Dryden.*

She said no more: the trembling Trojans hear,
O'erspread with a *damp* sweat and holy fear. *Id.*

This commendable resentment against me, strikes
a *damp* upon that spirit in all ranks and corporations
of men. *Swift.*

Even now, while thus I stand blest in thy presence,
A secret *damp* of grief comes o'er my thoughts. *Addison.*

An eternal state he knows and confesses that he
has made no provision for, that he is undone for ever:
a prospect enough to cast a *damp* over his sprightliest
hours. *Rogers.*

Dread of death hangs over the mere natural man,
and, like the hand-writing on the wall, *damps* all his
jollity. *Atterbury.*

The heat of the sun, in the hotter seasons, penetrating the exterior parts of the earth, excites those mineral exhalations in subterraneous caverns, which are called *damps*: these seldom happen but in the summer-time; when, the hotter the weather is, the more frequent are the *damps*. *Woodward.*

The lords did dispel *dampy* thoughts, which the
remembrance of his uncl might raise, by applying
him with exercises and disports. *Hayward.*

Cypress and ivy, weed and wall-flower grown
Matted and massed together, hillocks heaped
On what were chambers, arch crushed, column strown
In fragments, chok'd up vaults, and frescos steeped
In subterranean *damps*, where the owl peeped,
Deeming it midnight. *Byron.*

DAMPS, in natural history, from the Saxon word *damp*, signifying vapour, are certain noxi-

ous exhalations issuing from some parts of the earth, chiefly observed in mines and coal-pits: though vapors of the same kind often issue from old lavas of burning mountains, in those countries where volcanoes are common. In mines and coal-pits they are chiefly of two kinds, called by the miners and colliers the choke and fire-damps. The choke-damp is very much of the nature of fixed air; and usually infests those places which have been formerly worked, but long neglected, and are known to the miners by the name of wastes. The choke-damp suffocates the miners suddenly, with all the appearances found in those suffocated by fixed air. Being heavy, it descends towards the lowest parts of the workings, and thus is dangerous to the miners, who can scarcely avoid breathing it. The fire-damp, which seems chiefly to be composed of inflammable air, rises to the roof of the workings, as being specifically lighter than the common atmosphere; and hence, though it will suffocate as well as the other, it seldom proves so dangerous in this way as by its inflammable property, by which it often takes fire at the candles, and explodes with extreme violence. See COAL-MINES.

Of the formation of these damps we have as yet no certain theory; nor, though the experiments of aerologists are able to show the composition and manner of forming these noxious airs artificially, have they yet thrown much light on the method by which nature prepares them on a large scale. There are two general ways in which we may suppose this to be done; one by the stagnation of atmospherical air in old waste places of mines and coal-pits, and its conversion into these mephitic exhalations; the other by their original formation from the phlogistic or other materials found in the earth, without any interference of the atmosphere. See GAS and CARBURETTED HYDROGEN.

DAMPYER (William), a famous navigator, descended from a respectable family in Somersetshire, and born in 1652. Losing his father when very young, he went to sea, where he soon distinguished himself. His Voyage round the World, &c. are well known, and have gone through many editions. He appears afterwards to have engaged in an expedition concerted by the merchants of Bristol to the South Sea, commanded by captain Woods Rogers; who sailed in August 1708, and returned in September 1711: but no further particulars of his life or death are recorded.

DAMSEL, *n. s.* Goth. *damoisell*; Ital. and Span. *donzella*; i. e. a female don, from Lat. *dominus*. 'A gentlewoman, unmarried, being not a lady,' says Minshew; and 'quasi parvus dominus, a little lord or master.' Johnson notices its having formerly been applied to both sexes, but gives no instance of it in the masculine. It is now only used in verse.

He seide go ye away for the *damysel* is not deed but slepeth, and thei scorneden him.

Wiclif. *Matthew* 9.

At last she has

A *damzel* spyde slow-footing her before,
That on her shoulders sad a pot of water bore.

Spenser. *Faerie Queene*.

With her train of *damzels* sho was gone
In shady walks, the scorching heat to shun.

Dryden.

Kneeling, I my servant's smiles implore,
And one mad *damzel* dares dispute my power.
Prior.

DAM'SON, *n. s.* Corruptly from *damascene*
A small black plum. See DAMASCENE.

My wife desired some *damsons*,
And made me climb with danger of my life.
Shakspeare.

DAN, *n. s.* From *dominus*, as now *don* in Spain, and Ital. *doma*, from *domina*. The old term of honor for men, as we now say master. 'I know not,' says Dr. Johnson, 'that it was ever used in prose, and imagine it to have been rather of ludicrous import.' But Spenser uses it in serious praise of Chaucer, below.

Old *dan* Geoffrey, in whose gentle spright
The pure well-head of poetry did dwell—
He whilst he lived was the sovereign head
Of shepherds all.
Spenser.

This whimpled, whining, purblind, wayward boy,
This signor Junio's giant dwarf, *dan* Cupid.
Shakspeare.

Dick, if this story pleaseth thee,
Pray thank *dan* Pope, who told it me.
Prior's Alma.

DAN, דָּן Heb. i. e. judgment, one of the twelve patriarchs, the fifth son of Jacob. Of his history nothing is recorded, except that he had but one son, named Hushim; though his posterity was afterwards very numerous.

DAN, or the DANITES, one of the twelve tribes of Israel, descended from the patriarch Dan. Their number, at the emigration from Egypt, amounted to 62,700, and they increased in the wilderness. After their settlement in Canaan, a party of them, who went to take Laish, in their way robbed Micah the Ephraimite of his idol, which they continued to worship till they were carried captive by Tiglath Pileser. Samson, the heroic judge of Israel, was of this tribe; and 28,600 of them attended at David's coronation. The Danites appear to have been early acquainted with commerce, for they had ships in the time of Jabin, king of the Canaanites. See Judges v. 17. Their territory extended west of Judah, and was terminated by Azotus and Dora on the Mediterranean.

DAN, in scripture geography, a city of the Danites, situated on the east side of the springs of Jordan, on the south of Mount Lebanon. It was named Laish or Leshem. Here Jeroboam established idolatry by setting up his golden calves. This city and Beersheba were the two extremities of the kingdom of Israel. Dan was taken and pillaged by Benhadad king of Syria; notwithstanding which it made some figure after the captivity. Some authors say, that it was rebuilt by Philip the tetrarch of Galilee, in our Saviour's time, and named by him Casarea Philippi. It lay east of Sidon and west of Damascus. It is thought by some to be the Lasha of Gen. x. 19.

DAN, in modern geography, a considerable river of the United States in North Carolina, which has been rendered navigable for boats a great way up. It unites with the Staunton in Virginia, and forms the Roanoke.

DANAE, in antiquity, a coin somewhat more than an obolus, used to be put into the mouths of the dead, to pay their passage over the river Styx.

DANÆ, in fabulous history, the daughter of Acrisius, king of Argos, by Eurydice. She was confined in a brazen tower by her father, who had been told by an oracle that his daughter's son would put him to death. But Jupiter, who was enamoured of Danae, introduced himself to her bed by changing himself into a shower of gold. From his embraces Danae had a son, with whom she was exposed on the sea by her father. The wind drove the bark which carried her to the coasts of the island of Seriphus; where she was saved by some fishermen, and carried to Polydeutes king of the place, whose brother, Dictys, educated the child, named Perseus, and tenderly treated the mother. Polydeutes fell in love with her; but, being afraid of her son, he sent him to conquer the Gorgons, pretending that he wished Medusa's head to adorn his nuptials with Hippodamia the daughter of Enomaus. When Perseus had victoriously finished his expedition, he retired to Argos with Danae to the house of Acrisius, whom he inadvertently killed. Virgil says that Danae after this came to Italy, and founded the city of Ardea. Some suppose that it was Prætus, the brother of Acrisius, who introduced himself to Danae in the brazen tower; but, whoever was her seducer, the fable of the golden shower plainly implies that the keepers of the tower were bribed. Against such showers, indeed, towers of brass and bars of iron are no defence.

DANAIDES, in fabulous history, the fifty daughters of Danaus king of Argos. When their uncle Egyptus came from Egypt with his fifty sons, they were promised in marriage to their cousins; but before the celebration of their nuptials, Danaus, who had been informed by an oracle that he was to be killed by the hands of one of his sons-in-law, made his daughters solemnly promise that they would destroy their husbands. They were provided with daggers, and all except Hypermnestra proved but too obedient to their father's bloody injunctions, as a proof of which they presented him with the heads of their murdered husbands, on the morning after their nuptials. Hypermnestra was summoned to appear and answer for her disobedience in suffering her husband Lynceus to escape; but the unanimous voice of the people declared her innocent, and she dedicated a temple to the goddess of Persuasion. The forty-nine sisters were condemned, in hell, to fill with water a vessel full of holes, so that their labor was infinite and their punishment eternal.

DANAUS, in fabulous history, a son of Belus and Anchinoë, who, after his father's death, reigned conjointly with his brother Egyptus on the throne of Egypt. Some time after a difference arose between the brothers, and Danaus set sail with his fifty daughters in quest of a settlement. He visited Rhodes, where he consecrated a statue to Minerva, and arrived safe on the coast of Peloponnesus, where he was hospitably received by Gelanor king of Argos. Gelanor had lately ascended the throne, and the first years

of his reign were marked by dissensions with his subjects. Danaus took advantage of his unpopularity, and obliged him to resign the crown. The success of Danaus led the fifty sons of Egyptus to embark for Greece. They were received with hypocritical kindness by their uncle; and soon after all murdered, except Lynceus. See **DANAIDES**. Danaus at first persecuted Lynceus with unremitted fury; but he was afterwards reconciled to him, and acknowledged him for his son-in-law and successor after a reign of fifty years. He began his reign about A. A. C. 1586; and after death was honored with a splendid monument in Argos, which existed in the age of Pausanias.

DANBURY, a town of the United States of America, in Connecticut, fifty-five miles N. N. E. of New York, and 116 south-west of Boston. This town was settled in 1687, and, with a great quantity of military stores, was burnt by the British on the 26th of April, 1777, but has been rebuilt since the peace. It lies thirty-three miles north-west by west of New Haven.

DANCE, *v. a., v. n. & n. s.* } Goth. & Belg.
DANCER, } *dans*; Fr. *danse*;
DANCING, } Ital. *danza*, from
DANCING-MASTER, } the Heb. *דָּנָה*, to
DANCING-SCHOOL, } leap, says Minshew. To step, or move in measure; to dandle; a motion of one or more musically regulated: one who practises such motions is a dancer; he who teaches them a dancing-master; and a dancing-school the place where they are professedly taught. Dancing is also used for any concerted and regular motion or attendance.

But in the day of erodis birthe, the daughter of erodias *dawnside* in the myddil and pleside eroude.

Wiclif. Matt. xiv.

Now his elder son was in the field, and, as he came and drew nigh to the house, he heard music and *dancing*.

Luke xv.

In olde dayes of the king Artour,—

The Elf quene with hire joly compaignie
Danced ful ofte in many a greit meede.

This was the old opinion as I rede.

Chaucer. Cant. Tales

In pestilences, the malignity of the infecting vapour *danceth* the principal spirits.

Bacon.

The honourablest part of talk is to give the occasion, and again to moderate and pass to somewhat else; for then a man leads the *dance*.

Id.

What say you to young Mr. Fenton? He capers, he *dances*, he has eyes of youth, he writes verses.

Shakspeare.

Thy grandsire loved thee well,

Many a time he *danced* thee on his knee.

Id.

He at Philippi kept

His sword e'en like a *dancer*, while I strook

The lean and wrinkled Cassius.

Id.

They bid us to the English *dancing-schools*,
 And teach lavoltas high, and swift courantos;
 Saying our grace is only in our heels.

Id.

Musicians and *dancers*! take some truce
 With these your pleasing labours; for great use
 As much weariness as perfection brings.

Donne.

Men are sooner weary to *dance* attendance at the gates of foreign lords, than to tarry the good leisure of their own magistrates.

Ruleigh's Essays.

A certain Egyptian king endowed a *dancing-school* for the instruction of apes of quality. *L'Estrange.*

The apes were taught their apes' tricks by a *dancing-master.* *Id.*

How I loved,
Witness ye days and nights, and all ye hours,
That danced away with down upon your feet,
As all your business were to count my passion.
Dryden.

It upbraids you,
To let your father's friend, for three long months,
Thus dance attendance for a word of audience.
Id.

The legs of a *dancing-master*, and the fingers of a musician, fall, as it were, naturally, without thought or pains, into regular and admirable motions.

Locke on Understanding.

Nature, I thought, performed too mean a part,
Forming her movements to the rules of art;
And, vexed, I found that the musician's hand
Had o'er the dancer's mind too great command.

Prior.

Midnight shout, and revelry,
Tipsy dance, and jollity.
Byron.

Nor short nor slight the sufferance, when the weight

Of frequent Sin provokes un pitying Fate;
But for brief mutiny, in fets begun,
And half forgotten e'er the dance is done,
Wild wanderings, more of fancy than of heart,
As light the treason, light the venging smart.

Dr. T. Brown.

DANCES, ANCIENT. There is no account of the origin of dancing among mankind. It is found to exist among the most barbarous and uncivilised nations, and is too intimately connected with the mechanism of the human body to be originally derivable from art. The Greeks were the first people, however, who reduced it to a system. At Athens, it is said, that the dance of the Eumenides, or Furies, on the theatre had so expressive a character as to strike the spectators with irresistible terror; and people imagined they saw in earnest the personified deities commissioned with the vengeance of heaven to pursue and punish their crimes. They had also martial dances, to keep up the warlike spirit of their youth. Plato reduces the dances of the ancients to three classes, viz.

1. *Domestic Dances.* Of these, some were but simply gambols, or sportive exercises, which had no character of imitation, and of which the greater part exist to this day. The others were more complex, more agreeable, figured, and were always accompanied with singing. Among the first or simple ones was the *ascolasmus*; which consisted in jumping, with one foot only, on bladders filled with air or with wine, and rubbed on the outside with oil. The *kybastes* was what is called in this country the *Somerset*. Of the second kind was that called the *wine-press*, of which there is a description in Longinus, and the *Ionian dances*.

2. *Mediatorial Dances.* These were used in expiations and sacrifices. Among the ancients there were no festivals nor religious assemblies but what were accompanied with songs and dances. They were looked upon to be so essential in these kinds of ceremonies, that to express

the crime of such as were guilty of revealing the sacred mysteries, they employed the word *kheistæ*, 'to be out of the dance.' The most ancient of these religious dances is the *Bacchic*; which was not only consecrated to Bacchus, but to all the deities whose festival was celebrated with a kind of enthusiasm. The most grave and majestic was the *hyporchæmatic*; it was executed to the lyre, and accompanied with the voice.—At his return from Crete, Theseus instituted a dance at which he himself assisted, at the head of a numerous and splendid band of youth, round the altar of Apollo. The dance was composed of three parts, the *strophe*, the *antistrophe*, and the *stationary*. In the *strophe* the movements were from the right to the left; in the *antistrophe* from the left to the right. In the *stationary* they danced before the altar; so that the *stationary* did not mean absolute pause or rest, but only a more slow or grave movement. Plutarch is persuaded that in this dance there is a profound mystery. He thinks that by the *strophe* is indicated the motion of the world from east to west; by the *antistrophe* the motion of the planets from west to east; and, by the *stationary*, the stability of the earth. To this dance Theseus gave the name of *geranos*, or 'the crane;' because the figures which characterised it bore a resemblance to those described by cranes in their flight.

3. *Military Dances*, which tended to make the body robust, active, and well disposed for all the exercises of war. Of these there were two sorts; viz. the *gymnopedic*, and the *pyrrhic*. 1. The *gymnopedic* dance, or the dance of children, was invented by the Spartans for an early excitation of courage in their children, and to lead them on insensibly to the exercise of the armed dance. This dance used to be executed in the public place. It was composed of two choirs; the one of grown men, the other of children; whence, being chiefly designed for the latter, it took its name. They were both in a state of nudity. The choir of the children regulated their motions by those of the men, and all danced at the same time, singing the poems of Thales, Alcman, and Dionysodotus.

The *Pyrrhic*, or *Enoplian* dance, was performed by young men armed cap-a-pee, who executed, to the sound of the flute, all the proper movements either for attack or for defence. It was composed of four parts: 1. The *podism* or *footing*, which consisted in a quick shifting motion of the feet, such as was necessary for overtaking a flying enemy, or for getting away from him when an overmatch: 2. The *xiphism* was a kind of mock fight, in which the dancers imitated all the motions of combatants; aiming a stroke, darting a javelin, or dexterously dodging, parrying, or avoiding a blow or thrust. 3. The *komos* consisted in very high leaps or vaultings, which the dancers frequently repeated, for the better using themselves occasionally to leap over a ditch, or spring over a wall. 4. The *tetracomos* was the last part; this was a square figure, executed by slow and majestic movements, but it is uncertain whether it was every where executed in the same manner. Of all the Greeks, the Spartans most cultivated the *Pyrrhic* dance.

Athenæus relates that they had a law by which they were obliged to exercise their children at it from the age of five years. This warlike people constantly retained the custom of accompanying their dances with hymns and songs. The following was sung for the dance called trichoria, said to be instituted by Lycurgus, and which had its name from its being composed of three choirs, one of children, another of young men, and the third of old. The old men opened the dance, saying, 'In time past we were valiant.' The young men answered, 'We are so at present.' 'We shall be still more so when our time comes,' replied the chorus of children. The Spartans never danced but with real arms. In process of time, however, other nations came to use only weapons of wood on such occasions. Nay, it was only so late as the days of Athenæus, who lived in the second century, that the dancers of the Pyrrhic, instead of arms, carried only flasks, thyrsuses or reeds. But, even in Aristotle's days, they had begun to use thyrsuses instead of pikes, and lighted torches in lieu of javelins and swords. With these torches they executed a dance which was called the conflagration of the world.

Religious dances were not confined to the pagan world. They have been practised both by Jews and Christians. Among the ancient Jews, it appears to have made a part of religious worship on some occasions, as we learn from passages in the Psalms, though we do not find it enjoined as a divine precept. In the Christian churches mentioned in the New Testament, there is no account of dancing being introduced as an act of worship, though it is certain that it was used as such in after ages.

Theatrical or stage dances. The Greeks were the first who united the dance to their tragedies and comedies; not indeed as making part of those spectacles, but merely as an accessory. The Romans copied after the Greeks; but in the reign of Augustus they left their instructors far behind them. Two remarkable men made their appearance at that time, who invented a new species of entertainment, and carried it to a great degree of perfection. These were Pylades and Bathylus, who first introduced among the Romans what the French call the ballet d'action, wherein the performer is both actor and dancer. Pylades undertook the task of representing, with the assistance of the dance alone, strong and pathetic situations. He succeeded perhaps beyond his own expectation, and may be called the father of that style of dancing which is known to us by the name of grave or serious pantomime. Bathylus, an Alexandrian, and a freedman of Mæcenas, took upon himself to represent such subjects as required a certain liveliness and agility. He was handsome in his person; and the two great scourges of Roman follies, Persius and Juvenal, speak of him as the gallant of every woman in Rome. After their death the art gradually sunk into obscurity, and became even entirely forgotten on the accession of Trajan to the empire. Thus buried with the other arts in oblivion, dancing remained uncultivated till about the fifteenth century, when ballets were revived in Italy at a magnificent entertainment

given by a nobleman of Lombardy at Tortona on account of the marriage between Galeas duke of Milan and Isabella of Arragon. At first the women had no share in the public or theatrical dance; but, in 1681, we find the then dauphiness, the princess of Conti, and some other ladies of the first distinction in the court of Louis XIV. performed a ballet with the opera called *Le Triomphe de l'Amour*. This union of the two sexes served to enliven and render the spectacle more pleasing and far more brilliant. It was received with so much applause, that in the May of that year, when the same opera was acted in Paris at the theatre of the Palais Royal, it was thought indispensable for the success of that kind of entertainment to introduce female dancers, and they have continued ever since to be the principal support of the opera. Thus, what was at first introduced as a mere accessory to the musical performance, became in process of time its only support; and this circumstance excited the emulation of several ballet masters.

Modern dancing is so much the creature of change and fashion, that we feel it impossible to detail its ever-varying steps in a work of science. We must refer our younger readers to the professors of the art; observing, only, that it seems in itself a natural and most innocent mode of exercise and graceful motion; while, on the other hand, in crowded assemblies, among the suffocating vapors of innumerable lights and breaths, the blood becomes often unnaturally propelled to the breast and head; perspiration is dangerously checked; the lungs are expanded, and the foundation is too often laid of that fatal disease, consumption.

DANCER (Daniel), an extraordinary miser, born near Harrow, in Middlesex, in 1716, of a family who possessed a considerable estate in that county. He succeeded to the family estate in 1736. For upwards of fifty years he led the life of a hermit, having no dealings with mankind but what the sale of his hay necessarily occasioned; and was seldom seen, except when he was out gathering logs from the common, or old iron, or sheep's dung under the hedges. His house was at one time robbed, to prevent which, he fastened up the door, and, by means of a ladder, went in at an upper window, drawing the ladder carefully up after him. He had a sister who lived with him for a number of years, and who left him a considerable increase to his store, at her death; on which occasion, to put himself in decent mourning, he purchased a pair of second-hand worsted stockings. Even this was an article of luxury, for he commonly wore bands of hay around his legs. He died in 1794, and left his estates to lady Tempest, who had been very charitable to the poor man and his sister.

DANCETTE, in heraldry, an epithet applied to the bordure or ordinary, when very deeply indented, so as to make generally but three points in the breadth of the shield, as fig. 1. a fesse dancette sable, fig. 2, azure two bars indented or. Name James. Double dancette, fig. 3, is an epithet belonging peculiarly to the bend, as argent a bend double dancette, azure, name Hericson.

DAN'DELION, *n. s.* Fr. *dent de lion*. A plant of the syngenesia class. See LEONTODON.

For cowslips sweet let dandelions spread,
For Blouzelinda, blithsome maid, is dead.

Gay.

DANDINI (Cæsar), an historical painter, was born at Florence, and successively studied with Cavalier, Curradi, Passignano, and Christopher Allori, from whom he acquired a very pleasing manner of designing and coloring. He was extremely correct in his drawing, and finished his pictures highly. Several noble altar-pieces in the churches of Florence are of his hand; and one, which is in the chapel l'Annonciata, is particularly admired.

DANDINI (Peter), an eminent painter, born at Florence in 1646. He received his first instructions from Valerio Spada, who excelled in small drawings with a pen. He afterwards travelled through most of the cities of Italy, studying the works of those who were most distinguished; and resided long at Venice, where he copied the paintings of Titian, Tintoretto, Paul Veronese, and Correggio. When he returned to Florence the grand duke Cosmo III. kept him perpetually employed, in painting fresco, as well as in oil; his subjects being taken not only from sacred and fabulous history, but from his own fancy, which frequently furnished him with whimsical caricatures. He died in 1712.

DANDIPRAT, *n. s.*, or DODKIN, says Minshew, 'as little among other money, as a dandiprat or dwarf among other men.' For according to Camden, Henry VII. stamped a small coin of this name. Dr. Johnson says, 'a fool.'

— A very dandiprat and exceedingly deformed.
World of Wonders, 1608.

DANDLE, *v. a.* } Fr. *dandiner*; Teut. *tan-*
Dan'bler, *n. s.* } *dle*; Belg. *danden*, to trifle.
To fondle a child; to lull it, or dance it lightly up and down. Also to trifle away time; to delay.

And ye shall suck at the breast,
Ye shall be carried at the side,
And on the knees shall ye be dandled.
Isaiah lxxvi. Bishop Louth's Translation.

Captains do so dandle their doings, and dally in the service, as if they would not have the enemy subdued.
Spenser.

Courts are but superficial schools
To dandle fools. *Bacon.*
Their child shall be advanced,
And be received for the emperor's heir,
And let the emperor dandle him for his own. *Shakspeare.*

Sporting the lion ramped, and in his paw
Dandled the kid. *Milton.*
Motion occasions sleep, as we find by the common use of rocking forward children in cradles, or dandling them in their nurses' arms. *Tillotson.*

They have put me in a silk gown, and a gaudy fool's cap; I am ashamed to be dandled thus, and cannot look in the glass without blushing, to see myself turned into such a little pretty master.

Addison's Guardian.

DANDOLO (Henry), doge of Venice, was born in 1108, and chosen to that office in 1192. He was nearly blind at the period of his election, but neither that circumstance, nor his age, impaired the vigor of his mind, and the events of his government became the principal causes of the greatness of his country. Dandolo induced the senate to join in the fourth crusade, but directed the first efforts of the armament to recover Zara, which had revolted from its allegiance to the republic. He accompanied the expedition to Constantinople, and, on the storming of the city, was the first who leaped on shore. After the various changes with respect to the imperial throne, which succeeded the second siege, Dandolo was nominated emperor, but in consequence of his age, and his pressing ties to Venice, the choice ultimately fell on Baldwin. But Venice, in the sharing of the imperial dominions, obtained a full moiety, and Dandolo was solemnly invested as prince of Romania. He ended his extraordinary life at Constantinople, at the age of ninety-seven.

DANDOLO (Andrew), a learned doge and historian of Venice, was born about 1310. He rose first to the office of procurator of St. Mark, and then to that of doge in 1343. Making war against the Turks with considerable success, he greatly extended Venetian commerce, and opened her trade with Egypt. Genoa becoming jealous of this trade, a powerful Genoese fleet arrived in the gulf of Venice, and caused so much anxiety to the doge, that it brought on an illness which terminated his life, September 1354. Andrew Dandolo was a correspondent of Petrarch, and to him is ascribed the compilation of the sixth book of the Venetian Laws, and a Chronicle of Venice, written in Latin, and comprehending the History of the Republic from its commencement to 1342. It was first published by Muratori in his collection of original Italian Historians.

DANEGELT, an ancient annual tax of the Anglo-Saxons, first of 1s. afterwards of 2s. for every hide of land through the realm, and for maintaining such a number of forces as were thought sufficient to clear the British seas of Danish pirates, who then greatly annoyed our coasts. The danegelt was first imposed as a standing yearly tax on the whole nation, under king Ethelred, A. D. 991. King Stephen, on his coronation day, abrogated it for ever. No church, or church-land paid the danegelt; because, as it is said in an ancient Saxon law, the people of England placed more confidence in the prayers of the church than any military defence they could make!

DANG'ER, *v. a.*, & *n. s.* } Goth. *danger*; *DANG'EROUS*, *adj.* } Fr. *danger*; from *DANG'EROUSLY*, *adv.* } Latin, *danniger*, *DANG'ERLESS*, *adj.* } bringing or causing injury; or, says Minshew, from *danoc*, death; but this seems far-fetched. To put to risk, hazard, or peril; a state

of risk or hazard. It has been used in an obsolete sense for custody, as in the old French *dangerier*. See the first example.

In *danger* had he at his owen gise
The yonge girles of the dioceise,
And knew hir counseil and was of hir rede
A garland hadde he sette upon his hede.

Chaucer. *Prolog. to Cant. Tales.*

Fareth every knight thus with his wif as ye?
Is this the lawe of king Artoure's hous?
Is every knight of his thus *dangerous*?

Id. *Cant. Tales.*

Our craft is in *danger* to be set at nought.

Acts x. 27.

Pompey's son stands up
For the main soldier; whose quality going on,
The sides o' th' world may *danger*. Shakspeare.

He hath writ this to feel my affection to your honour,
and to no other pretence of *danger*. Id.

A sort of naughty persons
Have practised *dangerously* against your state,
Dealing with witches and with conjurors. Id.

Wyser Raymundus, in his closet pent,
Laughs at such *danger* and adventurment;
When halfe his lands are spent in golden smoke,
And now his second hopeful glasse is broke.

Bishop Hall's *Satires*. iv. 3.

It is just with God to permit those, which think
they stand so surely, to fall most *dangerously*.

Hammond on *Fundamentals*.

More *danger* now from man alone we find,
Than from the rocks, the billows, and the wind.
Waller.

I shall not need to mind you of judging of the
dangerousness of diseases, by the mildness of the part
affected. Boyle.

Already we have conquered half the war,
And the less *dangerous* part is left behind. Dryden.

He showed no less magnanimity in *dangerless* de-
sisting, than others in *dangerous* affecting, the multi-
plying of kingdoms. Sidney.

It is *dangerous* self-flattery to give soft and smooth-
ing names to sins in order to disguise. Mason.

Wealth heaped on wealth, nor truth nor safety buys,
The *dangers* gather as the treasures rise.

Johnson. *Vanity of Human Wishes.*

Deep in wide caves below the *dangerous* soil
Blue sulphurs flame, imprisoned waters boil. Darwin.

To me, Almighty, in thy mercy shining,
Life's dark and *dangerous* portals thou didst ope;
And softly on my mother's lap reclining,
Breathed through my breast the lively soul of hope.

K. White.

Thy days of health, and nights of sleep; thy toils,
By *danger* dignified, yet guiltless; hopes
Of cheerful old age and a quiet grave,
With cross and garland over its green turf,
And thy grand-children's love for epitaph;
This do I see—and then I look within— Byron.

DANGER, ISLES OF, three islands in the Pacific
Ocean, seen by commodore Byron, in June
1765; and which he supposed to be the same
with those seen by Quiros, in the beginning of
the seventeenth century, and named Solomon's
Islands. They were very populous, but so sur-
rounded with rocks on all sides, that it was not
safe to attempt to land. The islands themselves
had a more fertile and beautiful appearance than

any we had seen before,' says this navigator,
'and like the rest, swarmed with people, whose
habitations we saw standing in clusters all along
the coast. We saw also a large vessel under
sail at a little distance from the shore; but to
our unspeakable regret we were obliged to leave
the place without further examination, for it was
surrounded in every direction by rocks and
breakers, which rendered the hazard more than
equivalent to every advantage we might procure.'
Long. 169° 28' W., lat. 10° 15' S.

DA'NGLE, *v. n.* } Swed. *dingla* or *dangla*,

DA'NGLER, *n. s.* } seems, as Mr. Todd sug-

DA'NGLING, *adj.* } gests, the most probable ety-
mology; but Skinner derives it from Saxon *dune*,
dun, and *hangan*, hanging. To hang loose; to
hang on and downwards; to follow. A dangler
is a follower.

Go, bind thou up yon *dangling* apricocks.

Shakspeare.

He'd rather on a gibbet *dangle*,
Than miss his dear delight to wrangle. Hudibras.

Codrus had but one bed; so short, to boot,
That his short wife's short legs hung *dangling* out.

Dryden.

But have you not with thought beheld
The sword hang *dangling* o'er the shield? Prior.

The presbyterians, and other fanaticks that *dangle*
after them, are well inclined to pull down the present
establishment. Swift.

A *dangler* is of neither sex. Ralph.

In faithful memory she records the crimes
Or real, or fictitious, of the times;
Laughs at the reputations she has torn,
And holds them *dangling* at arm's length on scorn.

Cowper. *Task*.

DANIEL; דניאל, Heb. i. e. my judge is
God; the fourth of the greater prophets, was
born in Judea, of the tribe of Judah, about the
thirteenth year of the reign of Josiah, A. M.
3376. He was led captive to Babylon, with
other young Hebrews, after the taking of Jeru-
salem by Nebuchadnezzar. That prince gave
them masters to instruct them in the language
and sciences of the Chaldeans, and ordered them
to be fed with the most delicate viands; but they
desired the king's officers to allow them only
pulse. The wisdom and conduct of Daniel
pleasing Nebuchadnezzar, that monarch gave
him several posts of honor. We need not par-
ticularise them, or the few events of his life: they
are contained in the prophecies universally attri-
buted to him. It is believed that Daniel died in
Chaldea, and did not take advantage of the per-
mission granted by Cyrus to the Jews of return-
ing to their own country. St. Epiphanius says
he died at Babylon. The prophecies of Daniel
concerning the coming of the Messiah, and the
other great events of after times, are so clear and
explicit, that, as St. Jerome tells us, Porphyry
insisted that those which related to the kings of
Syria and Egypt, chap. xi., must have been
written after the times of Antiochus Epiphanes;
whereas this prophecy was translated into Greek
100 years before his time, and was in the hands
of the Egyptians, who had no particular kind-
ness for the Jews or their religion. Josephus
says the prophecies foretelling the successes of
Alexander, chap. viii. 5, xi. 3, were shown to him

by the Jews, in consequence of which they obtained several privileges from him. *Antiq. lib. xi. c. 8.* The style of Daniel is not so lofty and figurative as that of the other prophets; but it is more clear and concise, and his narrations and descriptions are simple and natural; in short, he writes more like a historian than a prophet. Part of his book, viz. from the fourth verse of chapter ii. to the end of chapter vii. was originally written in Chaldee, all the rest of the book is in Hebrew. The first six chapters are a history of the kings of Babylon, and what befel the Jews under their government. In the last six he is altogether prophetic, foretelling not only what should happen to his own church and nation, but events in which foreign princes and kingdoms were concerned; and some of which appear to be even yet unfulfilled.

DANIEL (Gabriel), a celebrated Jesuit, and one of the best French historians, was born at Rouen in 1619. He taught polite literature, philosophy, and divinity, among the Jesuits; and was superior of their house at Paris, where he died in 1728. There are a great number of his works published in French, of which the principal are: 1. A History of France, of which he also wrote an abridgment, in 9 vols. 12mo. 2. A History of the French Militia, in 2 vols. 4to. 3. An Answer to the Provincial Letters. 4. A Voyage to the World of Descartes. 5. Letters on the Doctrines of the Theorists, and on Probability. 6. New Difficulties relating to the Knowledge of Brutes; and, 7. A Theological Treatise on the Efficacy of Grace.

DANIEL (Samuel), an eminent poet and historian, born near Taunton in Somersetshire, in 1562, and educated at Oxford; but, leaving that University without a degree, he applied himself to English history and poetry under the patronage of the earl of Pembroke. He was afterwards tutor to the lady Ann Clifford; and, upon the death of Spencer, was created poet laureat to queen Elizabeth. In king James's reign he was appointed gentleman extraordinary, and afterwards one of the grooms of the privy chamber to the queen consort. He wrote a History of England, several dramatic pieces, and some poems, and died in 1619.

DANK, *n. s. & adj.* } Swed. *dunk*; Germ. *Da'nkisch*. } *tunk*. Skinner says, from the kindred German word *tunken*. Damp, moist, humid; or inclining to that state. Milton uses *dank* as a substantive.

He her the maiden sleeping found,
On the *dank* and dirty ground. *Shakspeare.*

They bound me, bore me thence,
And in a dark and *dankish* vault at home
There left me. *Id.*

Yet oft they quit
The *dank*, and rising on stiff pinions tour
The mid aerial sky. *Milton.*

Through each thicket *dank* or dry,
Like a black mist, low creeping, he held on
His midnight search. *Id.*
To wash the skins of beasts and fowls herewith,
would keep them from growing *dank* in moist weather.
Grew.

Each *dank* steam the reeking marsh exhales,
Contagious vapours, and volcanic gales. *Darwin.*

Along the leaguered wall and bristling bank,
Of the armed river, while with straggling light
The stars peep through the vapours dim and *dank*.

Byron.

DANMONII, an ancient British nation, supposed to have inhabited the tract of country now called Cornwall and Devonshire, bounded on the south by the British Ocean, on the west by St. George's Channel, on the north by the Severn Sea, and on the east by the country of the Durotriges. Some other British tribes were also seated within these limits: as the Cossini and Ogidamni, which were probably particular clans of the Danmonii. Ptolemy names a few places, both on the sea-coasts and in the inland parts of their country, which were known to the Romans. The most considerable of these are the famous promontories of Bolerium and Ocrinium, now the Landsend and the Lizard; and the towns of Isca Danmoniorum and Tamare, now Exeter and Saltash. After the departure of the Romans kindly government was immediately revived amongst the Danmonii in the person of Vortigern.

DANTE (Aligheri), a most distinguished poet of Italy, was born at Florence in 1265, of an ancient and honorable family. Boccaccio, who lived in the same period, has left a very curious and entertaining treatise, on the life, studies, and manners of this extraordinary man; whom he regarded as his master, and for whose memory he professed the highest veneration. He relates that Dante, before he was ten years old, conceived a passion for the lady whom he has immortalised in his poems. Her age was near his own; and her name was Beatrice, the daughter of Folco Portinari, a noble citizen of Florence. The passion of Dante, however, seems to have been of the platonic kind; but on the death of his mistress, at the age of twenty-four, he fell into a deep melancholy, from which his friends endeavoured to raise him, by persuading him to marriage. He followed their advice, but unfortunately made choice of a Xantippe. The poet, not possessing the patience of Socrates, separated from her, and never afterwards admitted her to his presence. In the early part of his life he gained some credit in a military character; distinguishing himself by his bravery in an action where the Florentines obtained a signal victory over the citizens of Arezzo. He became still more eminent by the acquisition of civil honors; and at the age of thirty-five rose to be one of the chief magistrates of Florence, being elected by the suffrages of the people. Italy was at that time distracted by the contending factions of the Gibellines and the Guelphs: the latter, among whom Dante took an active part, were again divided into the Blacks and the Whites. Dante, says Gravina, exerted all his influence to unite these inferior parties; but his efforts were ineffectual, and he had the misfortune to be unjustly persecuted by those of his own faction. A powerful citizen of Florence, named Corso Donati, had taken measures to terminate these intestine broils, by introducing Charles of Valois, brother to Philip the Fair, king of France. Dante, with great vehemence, opposed this disgraceful project, and obtained the banishment of

Donati and his partizans. The exiles applied to pope Boniface VIII., and by his assistance succeeded in their design. Charles of Valois entered Florence in triumph, and those who had opposed his admission were banished in their turn. Dante took refuge at Signa, and afterwards at Arezzo, where many of his party were assembled. An attempt was made to surprise the city of Florence, by a small army which Dante is supposed to have attended; but the design miscarried, and our poet wandered to various parts of Italy, till he found a patron in the great Candella Scala, prince of Verona, whom he has celebrated. The high spirit of Dante was ill suited to courtly dependence; and he is said to have lost the favor of his Veronese patron by the rough frankness of his behaviour. From Verona he retired to France, according to Manetti; and Boccaccio affirms that he disputed in the theological schools of Paris with great reputation. The election of Henry count of Luxemburg to the empire, in November, 1308, afforded Dante a prospect of being restored to his native city, as he attached himself to the interest of the new emperor, in whose service he is supposed to have written his Latin treatise *De Monarchiâ*, in which he asserted the rights of the empire against the encroachments of the papacy. In 1311 he instigated Henry to lay siege to Florence; in which enterprise, however, he did not appear in person. The emperor was repulsed by the Florentines; and his death, in 1312, deprived Dante of all hope of re-establishment in Florence. After this he passed some years in Italy, in a state of poverty and distress, till he found an establishment at Ravenna, under the protection of Guido Novello da Polenta, the lord of that city, who received this illustrious exile with the most endearing liberality, continued to protect him through the few remaining years of his life, and extended his munificence to his ashes. Eloquence was one of the many talents which Dante eminently possessed, and on this account he was employed on fourteen different embassies. Guido sent him to negotiate a peace with the Venetians, who were preparing to attack Ravenna. Manetti asserts that he was unable to procure a public audience at Venice, and returned to Ravenna by land, from his apprehensions of the Venetian fleet; when the fatigue of his journey, and the mortification of failing in the attempt to preserve his patron from the impending danger, threw him into a fever, which terminated in death on the 14th of September, 1321. He died in the palace of his friend; and the affectionate Guido paid the most tender regard to his memory. He commanded the body to be adorned with ornaments, and after being carried on a bier through the streets of Ravenna, by the most illustrious citizens, to be deposited in a marble coffin. He himself pronounced the funeral oration, and expressed his design of erecting a splendid monument in honor of the deceased: a design which his subsequent misfortunes rendered him unable to accomplish. This was afterwards done by Bernard Bembo, the father of the cardinal of that name. Boccaccio asserts that Dante began his *Inferno*, the work which has immortalised his name, and finished seven cantos of it before his exile; that in the plunder of

his house, on that event, the beginning of his poem was fortunately preserved, but remained for some time neglected, till its merit being accidentally discovered by an intelligent poet named Dino, it was sent to the marquis Malespina, an Italian nobleman, by whom Dante was then protected. The marquis restored these papers to the poet, and intreated him to proceed in the work. To this incident we are probably indebted for this celebrated poem, which Dante must have continued under all the disadvantages of an unfortunate and agitated life. It does not appear at what time he completed it; perhaps before he quitted Verona, as he dedicated the *Paradise* to his Veronese patron. The very high estimation in which this production was held by his countrymen, appears from a singular institution in the republic of Florence; which, in 1373, assigned a public stipend to a person appointed to read lectures on it. The critical dissertations that have been written on Dante are almost as numerous as those to which Homer has given birth; the Italian, like the Grecian bard, having been the subject of the highest panegyric, and of the grossest invective. Voltaire has spoken of him with that precipitate vivacity which so frequently led him to insult the reputation of the best writers. But more temperate and candid critics have sufficiently vindicated his claims as an original and most captivating poet. There are many valuable editions of his works, among which it will be sufficient to specify those of Conte Zapato, Venice, 1767, 3 vols. 4to.; and Parma, Bodoni, 1796, 3 vols. folio. There is an English translation of his *Comedia* by the Rev. H. Boyd; and another and much better by the Rev. H. F. Carey of Chiswick.

DANTON (George James), a celebrated French politician, who took an active part, during the French revolution, in erecting those bloody tribunals, and establishing that despotic power, to which he himself fell a victim. He was born at Arcis sur l'Aube, in 1760; was bred to the law, and became an advocate: with regard to religious opinions, he openly avowed himself an atheist; and, in politics, he was a decided republican: but having differed with Robespierre he was accused of monarchical opinions, and, being condemned by the revolutionary tribunal, was guillotined with eight other deputies at Paris on the 5th of April, 1794, in the thirty-fourth year of his age.

DANTZIC, or DANTZIG, the capital of West Prussia, is seated on a branch of the Vistula, about five miles above its embouchure into the Baltic. This city is famous in history on several accounts, particularly as having been formerly at the head of the Hanse towns. It is large, beautiful, populous, and rich; its houses being generally five stories high, and many of its streets planted. It is traversed by two branches of the Vistula, and consists properly of three towns: the Vorstadt, or Fore-town; the Altstadt, or Old-town; and the Reichstadt. The suburbs, called Old and New Scotland, are the best built parts of the place; and the Scotch have considerable privileges here, in consequence, as they tell us, of their gallant defence of the town under one of the family of Douglas, when it was besieged by the

Poles. In the time of king Charles II. there were about 43,000 of that nation in the neighbourhood, and Sir John Denham and Mr. Killigrew were sent to tax them by the poll, with the king of Poland's licence; which having obtained, they brought home £10,000 sterling, besides their charges in the journey.

Dantzic has a noble harbour; and is still an eminent commercial city, although it seems to have past its meridian: which it enjoyed probably about the time that the president De Thou wrote his *Historia sui Temporis*, in which he speaks so highly of its commerce and grandeur. It was then a republic, claiming a small adjacent territory, about forty miles round, under the protection of the king and republic of Poland. Its magistracy and the majority of its inhabitants are Lutherans; although other religious professions are tolerated. It has twenty-six parishes, with many convents and hospitals; and contains four dock-yards for building merchantmen. It has an annual fair, called the fair of St. Dominic, which begins on the 5th of August. Accounts are kept in florins, the value of which is much less than that of Holland or Germany, being not quite equal to 9½d. sterling. The chief public buildings are the cathedral, the church of St. Catherine, the Jesuits' college, the town-house, the arsenal, and the court of the nobles. The inhabitants were once computed to amount to 200,000; but later computations, and its memorable connexion with the late continental wars, have reduced them to little above 40,000 or 45,000.

The road, or gulf of Dantzic consists of an arm of the sea, sheltered from north winds by a tongue of land on which stands the small town of Helig. Its own shipping is numerous, but the foreign ships constantly resorting to it are more so: of these the British are the most in number, particularly when our corn laws admit of the importation of that commodity; Poland being the greatest magazine for corn in all Europe, and Dantzic the principal port for its exportation. Besides which, Dantzic exports considerable quantities of naval stores, potash, linen, and amber. The value of these, and still more that of corn, is of course fluctuating, but £1,500,000 sterling is considered a fair average of the annual value of its exports. See our article *CORN LAWS*. It imports, from various parts of Europe, wine, oil, groceries, woollens, silk, iron, copper, lead, skins, and furs.

Dr. Busching affirms that, as early as the year 997, Dantzic was a considerable commercial city. The inhabitants have often changed their masters, and have been under the protection of the English, Dutch, French, and Prussians in succession. The city is surrounded with ramparts which mount upwards of 100 brass cannon; and although it could not, through its situation, stand a long siege, by the facility it possesses of inundating the neighbourhood it has offered, as in 1807, an effectual resistance to assailants. In 1734 the inhabitants discovered a remarkable attachment and fidelity towards Stanislaus, king of Poland, not only when his enemies the Russians were at their gates, but even in possession of the city. This city was exempted by Frede-

rick the Great, king of Prussia, from those claims which he made on the neighbouring countries; notwithstanding which, Frederick William II., his successor, seized its territories, under pretence of their having been formerly part of Polish Prussia, and possessed himself of the port-duties. In 1784 it was blockaded by his troops, on various pretences; but by the interposition of the empress of Russia, and the king of Poland, they were withdrawn; and, a compromise having taken place, the city was restored to its former immunities. In 1793 the king of Prussia seized on the city itself with the remainder of the province, which he added to his dominions. Its internal government, however, was undisturbed; and thus it remained until 1807, when the French entered it after a long siege, and held it until the peace of 1814, when it returned to Prussia. It was blockaded for a great length of time previously, and ably, though not very humanely, defended by general Rapp. The German is the language in common use here. Dantzic is sixty-eight miles W.S.W. of Königsberg, thirty south-east of Marienburg, and 235 north-east of Berlin.

DANUBE, the largest and most considerable river in Europe, rising in the Black Forest, near Zünberg, and running north-east through Suabia, by Ulm the capital of that country, then running east through Austria, it passes by Ratisbon, Passau, Ens, and Vienna. It then enters Hungary, and runs south-east from Presburg to Buda, and so on to Belgrade; after which it divides Bulgaria from Morlachia and Moldavia, discharging itself by several channels into the Black Sea, in the province of Bessarabia. Towards the mouth it was called, by the ancients, the Ister; and it is now said that four of the mouths are clogged up with sand, and that there are only two remaining. It receives sixty rivers, great and small, in its course; and runs near to, or washes the following cities and towns:—Eschingen, Ulm (where it begins to be navigable), Donawert, Neuburg, Ingoldstadt, Passau, Linz, Ips, Stein, Vienna, Presburg, Raab or Javarin, Comorn, Waitzen, Pest, Buda, Belgrade, &c. &c. It is so deep between Buda and Belgrade, that both the Turks and Christians have had men of war upon it; and yet it is not navigable to the Black Sea, on account of the cataracts. The Danube was generally supposed to be the northern boundary of the Roman empire in Europe. It was worshipped as a deity by the Scythians. It abounds in fish, and particularly in a large kind of sturgeon.

DANUBE, CIRCLE OF THE UPPER, one of the chief divisions of the kingdom of Bavaria. It has on its frontiers the circles of the Rezat, the Regen, and the Iser; Tyrol, the lake of Constance, and Wirtemberg. It contains 4350 square miles, and 470,000 inhabitants, mostly Catholics. The capital is Eichstadt, and the other chief towns are, Neuburg, Nordlingen, Dillingen, Gunzburg, Hochstadt, Pappenheim, Donauwerth, and Ingoldstadt. The surface is in general hilly, diversified with forests and lakes, particularly in the direction of the Suabian Alps: and, besides the Danube, it is watered by the Iller and the Lech. In the low country, corn, hemp, and flax abound,

but the majority of the peasantry rear cattle. Iron, coal, and copper, are the mineral productions, and in the towns the manufacture of paper and linen is carried on.

DANUBE, CIRCLE OF THE LOWER, another circle of Bavaria, consists of the greater part of Lower Bavaria Proper, and the principality of Passau. It borders on Bohemia, Upper Austria, and the circles of the Iser and Regen. Its area is 4335 square miles, and its inhabitants amount to 396,150. The surface is an alternate succession of mountains, valleys, and plains. It is also traversed by the Inn, the Ilz, and the Iser. The climate is mild except in the north-west; and the tracts on the south side of the Danube are so fertile in corn as to be accounted the granary of Bavaria: they have besides an excellent breed of horses. The chief productions are corn, flax, and hemp. In the larger towns there are manufactures of linen and other cloths, which, together with the natural productions, produce a brisk trade in the Danube, the Iser, and the Inn. The capital is Passau.

DANVERS, a township of Massachusetts, in Essex county, adjoining Salem on the north-west, in which it was formerly comprehended by the name of Salem village. It consists of two parishes, and was incorporated in 1757.

DANVILLE, a post town of the United States, in Kentucky, situated in a large fertile plain on Dick's River. It consists of about eighty houses. Thirty-five miles S.S.W. of Lexington, and 830 from Philadelphia.—Also a township in Vermont.

DAP, or DAPÉ, *v. n.*, probably the same with DAB, which see. Dr. Johnson says it is a corruption of dip.

I have taught him how to catch a chub by dapping with a grasshopper. *Walton.*

DAPATICAL, *adj.* Lat. *dapiteus*, sumptuous. *Bailey.*

DAPHNE, in ancient geography, a small district on the lake Samachonites, in the Higher Galilee, very pleasant, and plentifully watered with springs, which feed the Lesser Jordan, whence its name seems to arise, probably in imitation of that near Antioch.

DAPHNE, in botany, spurge laurel; a genus of the monogynia order and octandria class of plants; natural order thirty-first, vepreculæ: CAL none: COR. quadrifid and marcescent, enclosing the stamina: FRUIT a monospermous berry. Species thirty, of which the following are the most remarkable:—

1. *D. gnidium*, the flax-leaved daphne, is a low deciduous shrub: native of Italy, Spain, and about Montpellier. This species seldom grows higher than three feet. The branches are very slender, and ornamented with narrow, spear-shaped, pointed leaves, much like those of the common flax. The flowers are produced in panicles at the ends of the branches: they are small, come out in June, but are rarely succeeded by seeds in England.

2. *D. laureola*, the spurge laurel or evergreen daphne; a low evergreen shrub, common in some parts of this kingdom, also in Switzerland and France. This shrub seldom grows more than a yard or four feet high: it sends out many

branches from the bottom, and these are covered with a smooth light-brown bark that is very thick. The leaves sit close to the branches, and are produced in such plenty, that they have the appearance, at a small distance, of clusters at the end of the branches. They are spear-shaped, shining, smooth, and thick; their edges are entire. These leaves, when growing under the drip of trees, spread open, and exhibit their green color, pure, and untarnished: when planted singly, in exposed places, they naturally turn back with a kind of twist, and the natural green of the leaf is often alloyed with a brown tinge. This shrub is also valuable on account of the fragrance of its flowers; it blows the beginning of January, and will continue until the middle or latter end of April before the flower falls off. They make but little show; being small, and of a greenish yellow. They are succeeded by oval berries, which are first green, and afterwards black when ripe.

3. *D. mezereum*, the mezereon, or spurge olive, is a low deciduous shrub. It is a native of Germany, and has also been discovered in some woods near Andover in Hampshire. Of this elegant plant there are four varieties: 1. The white; 2. The pale red; 3. The crimson; and 4. The purple flowering. They are of low growth, seldom arising to more than three or four feet in height, and, therefore, are proper even for the smallest gardens. They will be in bloom in February, nay, sometimes in January, when few trees, especially of the shrubby tribe, present their honors. Each twig has the appearance of a spike of flowers of the most consummate lustre; and, whether beheld near or at a distance, it has a most enchanting appearance, and the air is perfumed with their odors to a considerable distance. Besides the beauty of the leaves, which come out after the flowers are fallen, and which are of a pleasant green color and an oblong figure, it will be full of red berries in June, which continue growing till the autumn. The root of the mezereon was long used in the Lisbon diet-drink, a remedy said to be good for several complaints, particularly nodes and other symptoms resisting the use of mercury. The composition of this diet-drink is described in the Edinburgh Physical Essays, by Dr. Donald Monro. On chewing the root it proves very pungent, and its acrimony is accumulated about the fauces, and is very durable. It is employed chiefly under the form of decoction; and enters the decoctum sarsaparillæ composition of the London college; but it has also been used in powder combined with some inactive one, as that of liquorice root. It is often usefully combined with mercury. The bark of the root, which is the most acrimonious part, is recommended, in the Pharmacopœia Chirurgica, to be steeped in vinegar, and applied to promote the discharge of issues. Mezereon has also been of use in tumors and cutaneous eruptions. The whole plant is very corrosive; and six of the berries, it is said, will kill a wolf. A woman gave twelve grains of the berries to her daughter who had a quartan, ague; she vomited blood, and died immediately.

4. *D. villosa*, the hairy-leaved daphne, a low deciduous shrub; native of Spain and Portugal.

The stalks are ligneous, about two feet high, and send forth branches alternately from the sides. The leaves are spear-shaped, plane, hairy on both sides, and grow on very short foot-stalks. The flowers have very narrow tubes, are small, and make no great show; they come out in June, and are not succeeded by ripe seeds in England. This shrub, in some situations, retains its leaves all winter in such beauty as to cause it to be ranked among the low-growing evergreens; but in others it is sometimes shattered with the first black winds.

DAPHNE, in the Pagan mythology, daughter of the river Peneus by the goddess Terra, of whom Apollo became enamoured. This passion had been raised by Cupid; with whom Apollo, proud of his late conquest of the serpent Python, had disputed the power of his darts. Daphne heard with horror his addresses, and endeavoured to avoid his importunity by flight. Apollo pursued her, and Daphne intreated the assistance of the gods, who changed her into a laurel. Apollo crowned his head with the leaves of the laurel, and ordered that that tree should be for ever sacred to his divinity.

DAPHNE, a daughter of Tiresias, priestess in the temple of Delphi. She was consecrated to the service of Apollo by the Epigoni, or according to others by the goddess Tellus. She was called Sibyl on account of the wildness of her looks and expressions when she delivered oracles. Her oracles were generally in verse; and Homer, according to some, has introduced much of her poetry in his compositions.

DAPHNEPHORIA, a festival in honor of Apollo, celebrated every ninth year by the Bœotians. It was then usual to adorn an olive bough with garlands of laurel and other flowers, and place on the top a brazen globe, on which were suspended smaller ones. In the middle were placed a number of crowns and a globe of inferior size, and the bottom was adorned with a saffron-colored garment. The globe on the top represented the sun or Apollo. That in the middle was an emblem of the moon, and the other of the stars. The crowns, which were 365 in number, represented the sun's annual revolution. This bough was carried in solemn procession by a beautiful youth of an illustrious family, and whose parents were both living. He was called *δαφνηφορος*, daphnephorus, laurel-bearer; and at the time executed the office of priest of Apollo. Behind him followed a train of virgins with branches in their hands. In this order the procession advanced as far as the temple of Apollo Ismenius, where supplicatory hymns were sung to the gods.

DAPHNIN, in chemistry, the bitter principle of the laurel, first discovered by M. Vauquelin. From the alcoholic infusion of this bark the resin was separated by its concentration. On diluting the tincture with water, filtering, and adding acetate of lead, a yellow daphnate of lead fell, from which sulphureted hydrogen separated the lead, and left the daphnin in small transparent crystals. They are hard, of a grayish color, a bitter taste when heated, evaporate in acrid acid vapors, sparingly but moderately in boiling water.

Vol. VII.

DAPIFER, *n. s.* Lat. and Old Fr. *dapifer*; a dish carrier: formerly an officer of considerable rank at our coronations, and those of the kings of France. See **CORONATION**.

In France the barons and great men gave in like manner their attendance at the king's court. Such were the *dapifer*, butler, chamberlain, constable, chancellor, and others. *Madox's Hist. of the Ercheq.*

DAPPER, *adj.* } Belg. *dapper*; Teut.

DAP'FERLING, *n. s.* } *tappir*; which signify brave, valiant; and therefore Dr. Johnson thinks this word is generally applied in contempt. But Minsheu suggests its possible derivation from *dapifer* (see above), and well defines it, neat; spruce; dainty. *Dapperling* is a diminutive of *dapper*.

The *dapper* ditties that I won't devise

To please youths' fancy.

Spenser. Shepherd's Calendar.

And on the tawny sands and shelves,

Trip the pert fairies and the *dapper* elves. *Milton.*

A pert *dapper* spark of a magpie fancied the birds would never be governed till himself should sit at the helm. *L'Estrange.*

DAPPLE, *v. a. & adj.*, from apple, as *pommelé* in the French. To variegate; to streak with different colors: that which is so streaked or variegated.

Horses that are *dappled* turn white; and old squirrels turn grisly. *Bacon.*

But under him a grey steed did he wield,
Whose sides with *dappled* circles were endight.

Spenser.

The gentle day

Dapples the drowsy east with spots of grey.

Shakspeare.

Come, shall we go and kill us venison!

And yet it irks me the poor *dappled* fools,
Being native burghers of this desert city,
Should, in their own confines, with forked heads,
Have their round haunches gored. *Id.*

The lark begins his flight,

From his watch-tower in the skies,
Till the *dappled* dawn doth rise. *Milton.*

The *dappled* pink, and blushing rose,

Deck my charming Chloe's hair. *Prior*

The gods, to curse Pamela with her prayers,
Gave the gilt coach and *dappled* Flanders mares.

Pope.

DAR, **DART**, or **DACE**, *n. s.*, a fish. See **DACE**.

DARABJIRB, or **DARAB-GUIERO**, a town of Persia, in the province of Kerman, surrounded by groves of lemon and orange trees, yielding such abundance of fruit that the juice is exported to every part of Persia. It is watered by a copious stream. A considerable portion of the town is in ruins, but it contains a population of 10,000 or 15,000, and was formerly very celebrated, being supposed to have been founded by the Darius Nothus of ancient historians. It was invested by Loof Ali Khan, in the year 1794, but he was compelled to relinquish the siege. Distant 150 miles north-east of Schiras.

DARAH, or **DRAS**, a country of Northern Africa, bounded on the north by Morocco, Gezula, and Tafiler, on the east and the south by the Great Desert, and on the west by Suz. It takes its name from the river Darah, or Dras, which

F

passes through it, and is absorbed in the desert. The principal produce is indigo and dates. The inhabitants are Arabians and Mahomedans, and some of the districts of the country are dependencies of Morocco. It contains a superior breed of goats. Copper and antimony are found in the mountains, and in the southern part, at Atta and Takka, are places of rendezvous for the great caravan which passes to Timbuctoo from Morocco.

DARANTASIA, in ancient geography, a town of the Centrones, in Gallia Narbonensis, between Lemincum and Augusta Prietoria, called Forum Claudii by the Romans. It is now called Moutiers.

DARAPTI, among logicians, one of the modes of syllogisms of the third figure, whose premises are universal affirmatives, and the conclusion is a particular affirmative: thus,

DAR Every body is divisible;

AP- Every body is a substance;

TI. Therefore, some substance is divisible.

DARCET (John), a French physician and chemist, was born in 1725, at Douazit in Guienne. Being discarded by his father, who was a magistrate, for preferring the study of medicine to the profession of the law, he was obliged, while pursuing his studies, to teach Latin for his support, at Bourdeaux. Here he became acquainted with Montesquieu, with whom he went to Paris in 1742; remaining with him as a literary assistant till his death. He afterwards went with the duke de Launaguais into Germany, and had an opportunity of critically examining the Hartz mines, in Hanover. At the peace he applied himself to technical chemistry, and the improvement of the porcelain manufacture, respecting which he drew up several memoirs presented to the Academy of Sciences in 1766 and 1768. He also demonstrated, about this time, the combustibility of the diamond; on which subject he addressed the academy in 1770. In 1762 he was made regent of the Faculty of Medicine at Paris; in 1771 he married the daughter of the chemist Rouelle; and in 1774 travelled over the Pyrenees, to study the geology of those mountains. He succeeded Macquer as a member of the Academy of Sciences, and director of the manufactory of Sevres, and became afterwards inspector-general of the assay of coins, and of the gobelin manufactory. His valuable life was preserved during the reign of terror, by Fourcroy, who procured the obliteration of his name from Robespierre's list; and he died in 1801, a member of the Institute, and of the conservative Senate.

DARDANELLES, two ancient and strong castles of Turkey, one of which is in Romania, and the other in Natolia, on each side of the ancient Hellespont, now the strait of Gallipoli, which opens a communication between the Archipelago, and the Propontis, or sea of Marmora. The mouth of the canal is four and a half miles over; and the castles which were built in 1659, to secure the Turkish fleet from the insults of the Venetians, are defended on each side by fourteen brass guns with chambers like mortars, to receive granite balls. They are twenty-two feet long, from twenty-five to twenty-eight inches

diameter in the bore, and lie on a paved terrace near the level of the water. They are called the Old Dardanelles, to distinguish them from two others built at the entrance of the strait, about ten miles to the south-west, one of which stands in like manner in Asia, and the other in Europe, and called the New Dardanelles. The ships that come from Constantinople are searched at the castle on the side of Natolia. The passage betwixt both these pairs of castles was forced by a British fleet under admiral Duckworth, in February, 1807.

DARDANIA, in ancient geography, 1. A district of Mæsia Superior on the south, now the south part of Servia, towards the confines of Macedonia and Illyricum. 2. A small district of Troas, along the Hellespont. 3. The ancient name of Samothracia; from Dardanus, who removed thither.

DARDANUS, a son of Jupiter and Electra, who, after the death of his brother Jason, left Samothrace, his native country, and passed into Asia Minor, where he married Batia, the daughter of Teucer king of Teucra. After the death of his father-in-law, he reigned sixty-two years. He built the city of Dardania, and was reckoned the founder of the kingdom of Troy. He was succeeded by Erichthonius. According to some, Corybas, his nephew, accompanied him to Teucra, where he introduced the worship of Cybele. Dardanus taught his subjects to worship Minerva, and he gave them two statues of the goddess, one of which is well known by the name of Palladium. According to Virgil, Dardanus was originally an Italian.

DARE, *v. a., v. n. & n. s.*

DAREFUL, *adj.*

DARING, *adj. & n. s.*

DARINGLY, *adv.*

DARINGNESS, *n. s.*

Sax. *dearren*, Belg. and Teut. *durren*; Lat. *audere*; probably from the Greek *ἄσπερον*, to adventure. To be confident; to be prepared or bold for any purpose; to challenge; to defy. In Shakspeare only do we find dare used as a substantive. In Beaumont and Fletcher's *Maid Tragedy*, it is used for affrighting or amazing; and this seems to be the meaning in the phrase, to dare a lark or bird.

Dur any of ghoul that hath a cause aghens a nothur he demed at wicked men, and not at hooli men?

Wiclif. 1 Cor. vi.

She was so propre, and swete, and likerous,
I dare well sain if she had ben a mous
And he a cat he wolde hire hente anon

Chaucer. Cant. Tales.

'Ah! dame,' quoth he, 'thou tempest me in
vaine
To dare the thing which daily yet I rew;
And the old cause of my continued paine
With like attempt to like end to renew.'

Spenser. Faerie Queene.

I dare do all that may become a man;
Who dares do more, is none.

Shakspeare.

Sextus Pompeius

Hath given the dare to Cæsar, and commands
The empire of the sea.

Id.

We might have met them *dareful*, beard to beard,
And beat them backward home

Id.

Shrimps are dipped up in shallow water with little round nets, not much unlike that which is used for *daring* jarks. *Carew.*

Dare to be true! Nothing can need a lie,—
The fault that needs it must grow two thereby.

Herbert.

He had many days come half seas over; and sometimes passing further, came and lay at the mouth of the harbour, *daring* them to fight. *Knolles.*

Time! I *dare* thee to discover

Such a youth, and such a lover. *Dryden.*

As larks lie *dared* to shun the hobby's flight. *Id.*

Masters of the arts of policy thought that they might even defy and *dare* Providence to the face.

South.

The song too *daring*, and the theme too great.

Prior.

The last Georgick has many metaphors, but not so *daring* as this: for human passions may be more naturally ascribed to a bee than to an inanimate plant.

Addison.

Some of the great principles of religion are every day openly and *daringly* attacked from the press.

Atterbury.

Your brother, fired with his success,

Too *daringly* upon the foe did press. *Halifax.*

Grieve not, O *daring* prince, that noble heart.

Pope.

He turned not—spoke not—sunk not—fixed his look,

And set the anxious frame that lately shook:

He gazed—how long we gaze despite of pain,

And know, but *dare* not own, we gaze in vain!

Byron.

But with the breath which fills

Their mountain-pipe, so fill the mountaineers

With the fierce native *daring* which instils

The stirring memory of a thousand years,

And Evan's, Donald's fame rings in each clansman's ears!

Id.

On that warm sod, uncrossed by wanderer's path,

Some youthful blushing sweetness *dares* the bath;

Half bold, half trembling, her last vesture thrown,

Safe from all eyes, yet shrinking from her own.

Dr. T. Browne.

DARES, a Phrygian, who lived during the Trojan war, in which he was engaged, and of which he wrote the history in Greek. This history was extant in the time of Elian; the Latin translation, now extant, is universally believed to be spurious, though it is attributed by some to Cornelius Nepos. This translation first made its appearance A. D. 1477, at Milan. Homer mentions Dares, *Iliad*, lib. v., ver. 19, & 27.

DARFUR, DARROON, or FUR, a large kingdom of Central Africa, between Abyssinia and Bornou. We are indebted for all our knowledge of it to Mr. Browne, who resided here from 1793 to 1796. According to this writer it is bounded on the east by Kordofan, and the country of the Shilluks, which separates it from Sennaar and Abyssinia; on the west by Bergoo, which divides it from Begherme and Bornou; while the regions to the south are occupied by barbarous nations, extending to, and inhabiting the Mountains of the Moon, and the rise of the Bahr-el-Abiad. It does not seem to contain any great river or lake; during the dry season, therefore, all nature wears a parched and barren appearance; but the rainy season begins in June

and continues till September. This is the sowing season, and the king, with his attendants, goes out into the fields, and makes, with his own hand, the first holes in the ground. Water and vegetation are now most abundant. In the south the tamarind, plane, and sycamore are found. The heglig and the nebbek, having very hard wood, are two species peculiar to Darfur. A kind of bean and pea, used not for food but for being strung in beads, seems also indigenous here. Other plants largely produced are the mimosa nilotica, yielding a gum which is carried into Egypt; the water melon, the gourd, Cayenne pepper, hemp, and tobacco. But a small quantity of wheat is raised; the principal grains are the dokn, a species of millet, and another species of larger size, called the kassob. The harvest is conducted by women and slaves, who break off the ears with their hands, and carry it away in baskets; while the straw is left standing. The grain being threshed, is buried in the earth to preserve it. It is ground and boiled for food, and eaten either with milk or the juice of a particular kind of herb, which has a bitter and slightly acid taste.

The wild animals are the lion, hyena, leopard, wild buffalo, wolf, and jackall: herds of the jackall and hyena are said to enter the villages at night. Here are also found the rhinoceros, the elephant, the camelopardalis, the hippopotamus, and the crocodile; and still more abundantly the invaluable camel. The horses, asses, and sheep are inferior, but goats and horned cattle are numerous, and their flesh very good.

Gold is plentiful both to the east and west, and very fine copper is brought from the south. The rocks consist chiefly of gray granite; containing alabaster, various kinds of marble, sulphur, and fossil salt.

The houses are built of clay, with a coating of plaster; the roofs being flat, and formed of light beams of wood, with a clay covering. A house containing two dongas, the apartment for the stowage of property, two knournaes and two sukteias, both sleeping and sitting rooms, is considered fit for the accommodation of persons of supreme rank.

Mr. Browne did not conceive that the population could be more than 200,000 souls. Cobbe, the capital, contains about 6000; our traveller heard only of eight other considerable places, Sweini, Kourma, Cubcabia, Ril, Cours, Shoba, Gidid, and Gelle; although a native of the country named to Dr. Seetzen more than fifty. The capital is wholly occupied by foreign merchants, from Egypt and the eastern countries of Dongola, Kordofan, and Sennaar. Other great towns abound also with Arabs and other foreigners.

On the death of the monarch, the crown, which is perfectly despotic, descends to the eldest son; or is seized by any stronger or more popular member of the royal family. The military have, in this case, the chief influence, and are always much courted. The usual residence of the sultan is at a village near Cobbe, called El Fasher. Mr. Browne, being admitted to an audience of state, found the monarch seated on his throne, under a lofty canopy, composed

of various stuffs of Syrian and Indian fabric, hung loosely on a light frame of wood, and spread with small Turkey carpets. The ministers, or meleks, were seated at some distance on the right and left, and behind them was a line of guards, bearing a spear and target, with caps, in which a black ostrich feather was stuck. The ground in front was filled with spectators and petitioners, to the number of 1500. On the monarch's left hand stood a person whose employment was to sound his praises, and who vociferated continually, 'See the buffalo, the offspring of a buffalo, a bull of bulls, the elephant of superior strength, the powerful sultan Abul-el-rach-man-el-rashid.' His revenue is derived from various sources, and often collected by troops who march through the territory, and seize the cattle until it is paid. The king is also an extensive merchant, exporting and importing every year a large quantity of goods on his own account.

The religion of Mahomet is professed universally and zealously. But the people are cheerful in their dispositions; and the females not imured, nor, unless in the case of the great, are their faces veiled. A fermented liquor called *merise*, the same with the *bouza* of the negroes, is universally indulged in, however, and by both sexes. The men sometimes sit whole days over it. The intercourse of the sexes is extremely licentious, and polygamy has no bounds. The *Furians* are also considered as by no means conspicuous for honor or even honesty. No property is found to be safe out of the sight of the owner.

The grand intercourse of Darfur is with Egypt, and is carried on entirely by caravans, whose motions from Fur are, however, extremely uncertain, and sometimes two or even three years elapse without one. The caravan going to Egypt is much larger than the one returning, and often consists of 2000 camels. The water is carried in goat-skins or ox-hides, artificially covered to prevent evaporation, and every tenth camel is loaded with straw and beans. Among the articles sent to Egypt, the most important are slaves, taken in the negro countries of the south; ivory, the horns, teeth, and hide of the rhinoceros, the hippopotamus, and the camel. The imports comprise beads of all sorts, toys, glass, arms, light cloths, Barbary caps, carpets, silks, shoes, and writing-paper in large quantities. Commerce is transacted entirely by barter. There is also a considerable intercourse with Mecca, which takes the route by Suakem and Jidda, as much shorter than that by Egypt.

DARIC, in antiquity, a famous gold coin, first struck by Darius the Mede, about A. A. C. 538; probably during his stay at Babylon. From thence the darics were dispersed over the east, and into Greece; where they were also called *staters*, and were the gold coins best known in Athens in ancient times. According to Dr. Bernard, the daric weighed two grains more than our guinea. Plutarch says, they bore on one side an archer clothed in a long robe, and crowned with a spiked crown, holding a bow in his left hand, and an arrow in his right; and on the other side the effigies of Darius. There were afterwards half darics.

DARIEN, or TERRA FIRMA PROPER, once the northern division of Terra Firma, or Castile del Oro, is now a province of Colombia, and is bounded on the north by the Spanish Main, or Caribbean Sea; on the east by Carthagena; on the west by Panama; and on the south by the Pacific Ocean, and the province of Choco. Darien is one of the largest provinces of Tierra Firme: It is about 200 miles long, and eighty broad.

The Gulf of Darien, which is the mouth of the Rio Atrato, or rather a large arm of the Atlantic, is the most important part of the northern coast, and contains several islands of considerable size. The rivers are very large, but few of them navigable, owing to the shoals, bars, and rapids, in which they abound; most of them, however, yield grains of gold.

The province of Darien is thinly inhabited, and almost wholly by native tribes, who amount, perhaps to 30,000; the unhealthiness of the climate and the impenetrable forests preventing the formation of European settlements. The valleys are so marshy, from the overflowing of the rivers, that the natives generally build their habitations in the branches of high trees.

The chief products are cotton and tobacco. The mouth of the Atrato, though wide, has many shoals; yet it serves to export much of the internal produce of the neighbouring provinces, and is a noted smuggling station, where European goods are exchanged for the gold of Choco. A small fort which protects the gold mines of Cana is the principal station on the frontiers of Choco: its garrison is sent monthly from Panama.

Santa Cruz de Cana is the capital, and formerly a considerable place. There were also at one time nine other towns or missions, and several hamlets; but most of them have been abandoned. In this province the Scotch attempted a settlement in 1699; and for this project a fund was subscribed, amounting to about £900,000 sterling. The plan, however, completely failed, partly, it is said, through the jealousy of the English, but chiefly from the unhealthiness of the climate. Of 1200 individuals who embarked for the colony, not above thirty survived.

DARLEN, a town of the United States, in Liberty county, Georgia, on the banks of the North Channel of the river Altamaha, ten miles below Fort Barrington.

DARII, in logic, one of the modes of syllogism of the first figure, wherein the major proposition is an universal affirmative, and the minor and conclusion particular affirmatives: thus,

DA- Every thing that is moved is moved by another;

RI- Some body is moved;

I, Therefore, some body is moved by another.

DARIUS THE MEDE. See CYAXARES II.

DARK, *v. a., n. s. & adj.* } Saxon, *deorck*

DARK'EN, *v. a. & n. s.* } Irish *dorch*. By

DARK'ENER, *n. s.* } antiphrasis, from

DARK'ISH, *adj.* } *δέκω*, to see, says

DARK'LING, *part.* } Minsheu. To de-

DARK'LY, *adv.* } prive of light (one

DARK'NESS, *n. s.* } of our oldest verbs,

DARK'SOME, *adj.* } as Mr. Todd re-

DARK'-WORKING, *adj.* } marks): the state

of beings so deprived : not light ; opaque ; obscure ; blind. Hence gloomy, not cheerful ; not of a showy or vivid color. To darken is to make, as well as to grow, or gradually become, dark. Darkish is dusky ; that which is approaching a black or dark color. Darkling is a poetical participle to express the state of being without light. The meaning of the other derivatives seems sufficiently obvious.

And the sunne was *derked* and the air, of the smoke of the pitt. *Wiclif. Apoc. 9.*

Then the priest shall look : and, behold, if the bright spots in the skin of their flesh be *darkish* white. *Bible. Lev. 14.*

Who hath delivered us from the power of *darkness*, and translated us into the kingdom of his dear Son. *Colossians.*

Ther saw I first the *derke* imagining
Of felonie and alle the compassing ;
The cruel ire, red as any glede,
The pikepurse, and eke the pale drede.
Chaucer. Cant. Tales.

Fair when that cloud of pride, which oft doth *dark*
Her goodly light, with smiles she drives away. *Spenser.*

For light she hated as the deadly bale,
Ay wont in desert *darkness* to remaine,
Where plain none might her face see, nor she see any
laine. *Spenser. Faerie Queene.*

What may seem *dark* at the first, will afterwards
be found more plain. *Hooker.*

Such was his wisdom, that his confidence did sel-
dom *darken* his foresight, especially in things near at
hand. *Bacon.*

You must not look to have an image in any thing
lightsome ; for even a face in iron, red-hot, will not be
seen, the light confounding the small differences of
lightsome and *darksome*, which shew the figure. *Id.*

Come, thick night,
And pall thee in the dunnest smoke of hell,
That my keen knife see not the wound it makes ;
Nor heaven peep through the blanket of the *dark*,
To cry, hold ! hold ! *Shakespeare. Macbeth.*

Fleance, his son, who keeps him company,
Must embrace the fate of that *dark* hour. *Shakespeare.*

Meantime we shall express our *darker* purpose. *Id.*

The instruments of *darkness* tell us truths ;
Win us with honest trifles, to betray us
In deepest consequence. *Id.*

Darkling stands
The varying shore o' the world *Id.*

Cloud and ever-during *dark*
Surrounds me ! from the cheerful ways of men
Cut off. *Milton.*

He, here with us to be,
Forsook the courts of everlasting day,
And chose with us a *darksome* house of mortal clay. *Id.*

The wakeful bird
Sings *darkling*, and, in shadiest covert hid,
Tunes her nocturnal note. *Id.*

The age, wherein he lived, was *dark* ; but he
Could not want sight, who taught the world to see. *Denham.*

The lusts and passions of men do sully and *darken*
their minds, even by a natural influence. *Tillotson.*

Thou wretched daughter of a *dark* old man,
Conduct my weary steps. *Dryden and Lee's Edipus.*

For well you know, and can record alone,
What fame to future times conveys but *dark*. *Dryden.*

Mistaken blessing, which old age they call,
'Tis a long, nasty, *darksome* hospital. *Id.*

All the light truth has, or can have, is from the
clearness and validity of those proofs upon which it is
received ; to talk of any other light in the under-
standing, is to put ourselves in the *dark* ; or in the
power of the prince of *darkness*. *Locke.*

Whether the *darkened* room to muse invite,
Or whitened wall provoke the skewer to write. *Pope.*

All men of *dark* tempers, according to their degree
of melancholy or enthusiasm, may find convents fitted
to their humours. *Addison on Italy.*

Foul ministers, *dark-working* by the force
Of secret, sapping gold. *Thomson.*

Must helpless man, in ignorance sedate,
Roll *darkling* down the torrent of his fate ?
Must no dislike alarm, no wishes rise,
No cries invoke the mercies of the skies ?
Johnson. Vanity of Human Wishes.

Their quickness is owing to their presumption and
rashness, and not to any hidden irradiation that in a
moment dispels all *darkness* from their minds. *Burke.*

Dark will thy doom be, *darker* still
Thine immortality of ill. *Byron. Siege of Corinth.*

So do the *dark* in soul expire,
Or live like Scorpion girt by fire
So writhes the mind Remorse hath riven,
Unfit for earth, undoomed for heaven,
Darkness above, despair beneath
Around it flame, within it death ! *Byron.*

DARLING, *adj. & n. s.* Sax. *deorling*, the
diminutive of *dear*. Favorite ; beloved. One
much beloved.

Lo my child whom I have chosen ; my *dearlyng* in
whom it hath wel plesid to my soul, I schal putte my
Spirit on hym : and he schal telle doom to hethene
men. *Wiclif. Matt. 12.*

Young Ferdinand they suppose is drowned,
And his and my loved *darling*. *Shakespeare.*

In Thames, the ocean's *darling*, England's pride,
The pleasing emblem of his reign does glide. *Halifax.*

She became the *darling* of the princess. *Addison.*

Have a care lest some beloved notion, or some *dar-
ling* science, too far prevail over your mind. *Watts.*

And to find out our most beloved sin, let us con-
sider what are those worldly objects or amusements
which give us the highest delight ; this, it is proba-
ble, will lead us directly to some one of our *darling*
iniquities. *Mason.*

The text, that sorts not with his *darling* whim,
Though plain to others, is obscure to him. *Cowper. Progress of Error.*

Save me, oh ! save me, from the sword dividing ;
Give me my *darling* from the jaws of death ;
Thee will I praise, and, in thy name contending,
Proclaim thy mercies with my latest breath. *K. White.*

DARLINGTON, a county of the United
States, in Cheraws district, South Carolina,
bounded on the south and south-west by Lynch's

Creek. It is thirty five miles long, and twenty-four broad.

DARLINGTON, a town of Durham, situated on a flat on the river Skerne. It stands on the great road from London to Edinburgh. It has a weekly market, and, excepting January and February, a fair once a fortnight through the year. This town carries on linen and woollen manufactures. A curious water machine for grinding optical glasses, and spinning linen yarn, has been erected here; the invention of a native of the town. It is nineteen miles south of Durham, and 247 north by west of London.

DARMSTADT, a neat town of Germany, the capital of the grand duchy of Hesse. It was fortified by a wall in 1330. The town contains a regency, a court of appeals, a consistory, and criminal court. The prince of Hesse Darmstadt entered into the late confederation of the states of the Rhine, and, by the treaty of alliance, received the title of grand duke, and royal highness. The palace of the landgrave Louis VII., and the modern residence of the grand duke, with its beautiful gardens, are principal objects: to which may be added, the town church with the tombs of the landgraves; the state house; the pedagogium, or academy; the public library; the library of the grand duke; the cabinet of natural history (containing a number of curious fossils); the military school; and the building appropriated to military exercises, an edifice 300 feet by 150, and capable of containing 3000 men. It is situated on a river of the same name, thirty miles north-west of Heidelberg, and contains 13,000 inhabitants.

DARN, or **DEARNE**, *v. a. & adj.* Ang.-Sax. *deorn*, secret, or concealed; Arm. and Wel. *durne*, a patch. To sew up, or conceal holes or rents by imitating the original texture: solitary; secret.

By many a *dearne* and painful perch,
Of Pericles the careful search
Is made. *Shakespeare. Pericles.*

He spent every day ten hours in his closet, in *darning* his stockings, which he performed to admiration. *Swift.*

Will she thy linen wash, thy hosen *darn*? *Gay.*

DARNEL, Sax. *derren*, hurtful. A grass of the temulentum species, hurtful to corn.

But while people were asleep, his enemy came, and sowed *darnel* among the wheat.

Matt. xiii. 25. Campbell's Translation.

He was met even now
Crowned with rank fumiter and furrow-weeds,
Darnel, and all the idle weeds that grow
In our sustaining corn. *Shakespeare.*

No fruitful crop the sickly fields return;
But oats and *darnel* choke the rising corn. *Dryden.*

DARNLEY'S ISLAND, a beautiful island in the Eastern seas, in Torres Strait, between New Holland and New Guinea. It is about fifteen miles in circumference, and varied with hills and plains covered with vegetation. The inhabitants are stout, and exceed the ordinary size. The men go perfectly naked, and the women nearly so. They dwell in conical huts, disposed in villages, and adorned with

skulls, and several strings of hands, five or six on a string. Their arms are bows and arrows, lances, and long clubs; and they have handsome canoes from fifty to seventy feet in length. They are apparently a treacherous race. Long. 142° 59' 15" E., lat. 9° 39' 30" S.

DARRAIN, *v. a.* Old Fr. *desreuer*. By Junius referred to dare. 'It seems to me,' says Dr. Johnson, 'more probably deducible from *arranger la bataille*.' To prepare, or range troops for battle; to commence single combat.

And on the morwe, or it were day light,
Ful prively two harnais hath he dight,
Both suffisant and mete to *darreine*
The bataille in the field betwix him tweine.
Chaucer. Cant. Tales.

Therewith they 'gan to hurlen greedily,
Redoubted battle ready to *darraine*. *Spenser.*
Comes Warwick, backing of the duke of York;
Darrain your battle; for they are at hand. *Shakespeare.*

The town-boys parted in twain, the one side calling themselves Pompeians, the other Cæsarians; and then *darraining* a kind of battle, but without arms, the Cæsarians got the over hand.

Carew's Survey of Cornwall.

DART, *v. a., v. n. & n. s.* Fr., Teut. and Arm. *dard*; Swed. *dart*; Ital. *darido*; from Gr. *dopv*. To throw a missile, or short lance; to project any thing offensive; to emit; to fly as a dart; to let fly. As a substantive, it is the weapon thrown or darted.

In alle thingis take ghe scheelde of feith in which
ghe moun quenche all the fyre *dartis* of the worste.
Wiclif. Effesies vi.

Now, *darting* Parthia, art thou struck. *Shakespeare.*

He wets his tusks, and turns, and dares the war;
The invaders *dart* their javelins from afar. *Dryden.*
O'erwhelmed with *darts*, which from afar they
fling, *Id.*

Pan came, and asked what magick caused my smart;
Or what ill eyes malignant glances *dart*. *Pope.*

See, prompt to ill, the insidious foe
Now couched in secret bend the bow,
Now to the string adjust the *dart*
That thirsts to wound the guiltless heart. *Merrick's Psalms.*

Glad zephyr leads the van, and waves above
The barbed *darts*, and blazing torch of love;
Reverts his smiling face, and pausing flings
Soft showers of roses from aurelian wings. *Darwin.*

And that sarcastic levity of tongue,
The stinging of a heart the world hath stung,
That *darts* in seeming playfulness around,
And makes those feel that will not own the wound;
All these seemed his. *Byron.*

DARTFORD, a market town of Kent, in the road from London to Canterbury. Here was a celebrated nunnery, which Henry VIII. converted into a royal palace, and which is now a gentleman's seat. The river Darent will admit boats to bring up goods to the town. The first paper-mill in England was erected on this river by Sir John Spilman, to whom king Charles I. granted a patent with £200 a-year to encourage the manufactory. On this river also was the first

mill for slitting iron bars to make wire. The town was the first that engaged in the rebellion of Wat Tyler and Jack Straw: the market on Saturday is well supplied with provisions. It is seven miles west of Gravesend, fifteen east by south of London.

DARTMOOR, an extensive moor and forest in Devonshire, reaching from Brent to Oakhampton, twenty miles from south to north, and between five and fifteen miles broad from east to west. It contains about 80,000 acres, and is watered by the river Dart. Many sheep are bred here, but of a small kind, and subject to the rot. The chief riches of the inhabitants of the villages are their black cattle, which thrive well on the coarse herbage. Some thousands of acres of land have lately been cleared, and plantations formed; much barren ground has also been converted into tillage, under the direction of colonel Tyrwhit, by order of his late majesty, when prince of Wales. The French prison, formerly on this moor, is converted into an agricultural settlement for the poor.

DARTMOUTH, a sea-port town in Devonshire, seated on the river Dart, near its fall into the sea: said to have been formerly called Clifton. It is an ancient corporation, and a borough town, sending one member to parliament. The town is large, well built, and populous; but the streets are narrow, though well paved. The harbour is large and safe, capable of containing 500 ships; and the inhabitants have a considerable trade to the south of Europe, and to Newfoundland. Dartmouth is esteemed a great nursery for seamen, the fishery employing nearly 3000, a certain number of which the owners are obliged by act of parliament to select from land men. It has a weekly market on Friday for corn and provisions, and one almost every day for fish. It was burnt in the reign of Richard I. by the French, and again in the reign of Henry VI. They attempted it afterwards, but were repulsed, chiefly by the bravery of the women. Beside a great slaughter which was made, they took M. Castel the French general, three lords, and thirty-two knights, prisoners. It lies thirty miles S.S.W. of Exeter, and 204 west by south of London.

DARTMOUTH, a thriving sea-port town of the United States, in Bristol county, Massachusetts, situated on the west side of the Acensinet, seventy miles south of Boston. It was incorporated in 1664.

DARTMOUTH, a town of the United States, in Elbert county, Georgia, situated on the peninsula formed by the confluence of Broad and Savannah rivers, two miles from Fort James Dartmouth.—Also a town of the United States, in Grafton county, New Hampshire, north-west of the foot of the White Mountains: thirty-three miles north-east of Haverhill, and eighty-seven north-west of Portsmouth.

DARWAR, also called Nasserabad, a town and fortress of the province of Bejapore, Hindostan. Although not regularly fortified, it is by nature very strong, and the ditches are good. The town is situated to the south of the fort, and is surrounded by a wall and ditch. In the year 1685 it was taken from the king of Bejapore by

Aurangzebe, and, soon after the decease of that monarch, fell into the hands of the Mahrattas, from whom it was taken by Tippoo in 1784, and retained by him till the year 1791, when it was retaken by the Mahrattas, assisted by the British, after a tedious siege of twenty-nine weeks. It has been lately ceded to the British.

DARWIN (Erasmus), an English physician and poet, was born in December, 1731, at Elston, near Newark. After receiving the early part of his education at Chesterfield, he was sent to 'St. John's College, Cambridge, where he studied medicine, and took his bachelor's degree in 1755. He was elected to one of Lord Chesterfield's scholarships, worth about £16 per annum. On leaving Cambridge, he attended the lectures of Dr. Hunter in London, and afterwards completed his medical studies at Edinburgh, where he took the degree of M. D. He first settled at Nottingham, as a physician; but, not meeting with the practice he hoped for, he went to Litchfield, where his knowledge and acquirements were justly appreciated. In 1757 he married the daughter of Charles Howard Esq., who died in 1770, leaving him three sons. Not long after the death of his wife, Dr. Darwin commenced his laborious work, the *Zoonomia*, but which he declined publishing for above twenty-five years. He next wrote his *Botanic Garden*, and *The Loves of the Plants*. About 1780 Dr. Darwin married the widow of colonel Pole, of Radbourne-hall, near Derby, who brought him a large fortune; and he removed, in consequence of this connexion, to Radbourne, with a view of settling in Derby. He continued in this neighbourhood till February 1802, when he removed to Broadwall Priory, about three miles distant, a commodious retirement for his age and infirmities, and at this place he died in his seventy-first year. The literary fame of Dr. Darwin rests on the *Botanic Garden*, with philosophical notes, in two parts; 1. *The Economy of Vegetation*; 2. *The Loves of the Plants*, 2 vols. 8vo.: *Zoonomia*, or the *Laws of Organic Life*, 4 vols. 8vo.: *Phytologia*, or the *Philosophy of Agriculture and Gardening*, 1 vol. 4to.: works which display not only the poet, but the botanist and the philosopher; though there is frequently too much sacrificed to imagination; and the author evinces a contempt for all religion. Dr. Darwin was also the author of several medical and philosophical papers in the *Philosophical Transactions*, a *Treatise on Female Education*, and a poem published since his death, entitled *The Temple of Fame*. He had likewise a principal share in the translation of Linnæus's *Systema Vegetabilium*, published in the name of the Botanical Society of Litchfield.

DASH, *v. a. v. n. n. s. & adv.* Goth. and Swed. *daska*; Scot. *dusch*. Serenius refers to the first as the etymology of our word, which Dr. Johnson considers in all its senses 'very doubtful.' Minshew derives it from the Gr. *δύσσω*, *δύσω*, and defines it 'to bedash, dabble, bemire with dust.' This is at any rate not improvable. It is a word variously applied. It signifies to throw; to strike; to break to pieces by collision; to besprinkle; to agitate; to mingle fluids; to strike off in haste; to blot; to confound; to strike down. As a neuter verb, to fly

off; to rush through, so as to scatter; to strike, as a ship upon a rock. As a noun, it expresses collision; infusion; a stroke made with the pen; a sudden blow, or striking appearance. Dryden uses it adverbially to express the sound of falling water.

Happy shall he be, that taketh and *dasheth* thy little ones against the stones. *Ps. cxxxvii. 9.*

If you *dash* a stone against a stone in the bottom of the water, it maketh a sound. *Bacon.*

They that stand high have many blasts to shake them;
And, if they fall, they *dash* themselves to pieces. *Shakspeare.*

This tempest,
Dashing the garment of this peace, aboded
The sudden breach on't. *Id. Henry VIII.*

David's throne shall then be like a tree,
Spreading and overshadowing all the earth;
Or as a stone, that shall to pieces *dash*
All monarchies besides throughout the world. *Milton.*

His tongue
Dropped manna, and could make the worse appear
The better reason, to perplex and *dash*
Maturest councils. *Id.*

If a woman once *dash* upon the rock of reproach,
she hardly ever recruits her credit. *Bp. Taylor.*

Whacum, bred to *dash* and draw,
Not wine, but more unwholesome law. *Hulibras.*

Nothing *dashed* the confidence of the mule like the
braying of the ass, while he was dilating upon his
genealogy. *L'Estrange.*

A man that cuts himself, and tears his own flesh,
and *dashes* his head against the stones, does not act
so unreasonably as the wicked man. *Tillotson.*

At once the blushing oars and brazen prow
Dash up the sandy waves, and ope the depths below. *Dryden.*

Doeg, though without knowing how or why,
Spurred boldly on, and *dashed* thro' thick and thin;
Thro' sense and nonsense, never out or in. *Id.*

To *dash* this caviel, read but the practice of Chris-
tian emperors. *South.*

Some stronger power eludes our sickly will;
Dashes our rising hope with certain ill. *Prior.*

Never was *dashed* out, at one lucky hit,
A fool so just a copy of a wit. *Pope.*

To *dash* over this with a line, will deface the whole
copy extremely, and to a degree that, I fear, may dis-
please you. *Id.*

There is nothing which one regards so much with
an eye of mirth and pity, as innocence, when it has
in it a *dash* of folly. *Addison.*

Middling his head, and prone to earth his view,
With ears and chest that *dash* the morning dew. *Tickel.*

Torrents that from yon promontory's head
Dashed furious down in desperate cascade
Heard from afar amid the lonely night,
That oft have led the wanderer right,
Are silent at the noise. *Beattie.*

— Here Time's huge fingers grasp his giant mace,
And *dash* proud Superstition from her base. *Darwin.*

I should be so,

Had I a knife even; but it matters not—
Death hath a thousand gates; and on the marble,
Even at the altar foot, whence I look down
Upon destruction, shall my head be *dashed*,
Ere thou ascend it. *Byron.*

DASTARD, *v. a., n. s. & adj.* } From Sax.
DAS'TARDISE, *v. a.* } abap'pigan, to
DAS'TARDLY, *adj. & adv.* } terrify. To
affright; make faint-hearted; a coward; pol-
tron.

The cruelty and envy of the people,
Permitted by our *dastard* nobles,
Have suffered me by the voice of slaves to be
Whooped out of Rome. *Shakspeare.*

Dastard and drunkard, mean and insolent
Tongue-valiant hero, vaunter of thy might,
In threats the foremost, but the last in fight. *Dryden.*

He had such things to urge against our marriage,
As, now declared, would blunt my sword in battle,
And *dastardise* my courage. *Id.*

Brawl and clamour is so arrant a mark of a *das-
tardly* wretch, that he does as good as call himself so
that uses it. *L'Estrange.*

Bug-bear thoughts, in the minds of children, make
them *dastards*, and afraid of the shadow of darkness
ever after. *Locke.*

Curse on their *dastard* souls, they stand astonished!
Addison.

DASYPUS, the armadillo, or tatou, in
zoology; a genus of quadrupeds, belonging to
the order of bruta. The dasyppus has neither
fore-teeth nor dog-teeth; it is covered with a hard
bony shell, intersected with distinct moveable
zones or belts: this shell covers the head, the
neck, the back, the flanks, and extends even to
the extremity of the tail; the only parts to which
it does not extend, are the throat, the breast, and
the belly, which are covered with a whitish skin
of a coarse grain, resembling that of a hen after
the feathers are pulled off. The shell does not
consist of one entire piece, like that of the tor-
toise; but is divided into separate belts, connected
with each other by membranes, which enable the
animal to move it, and even to roll itself up like
a hedgehog. All the species of this animal are
originally natives of the western continent, and
are endowed with the faculty of extending and
contracting their bodies, and of rolling themselves
up like a ball, like the hedgehog, though not
into so complete a sphere. They are very in-
offensive, excepting when they get into gardens,
where they devour the melons, potatoes, and
other roots. They walk quickly; but can hardly
be said to run or leap, so that they seldom escape
the pursuit either of men or dogs. But they dig
deep holes in the earth, and seldom go very far
from their subterraneous habitations; or, when at
a great distance, require but a few moments to
make one. When taken, they roll themselves up,
and will not extend their bodies unless they are
held near a fire. There is no other method of
making them come out from deep holes, but by
forcing in smoke or water. The female gene-
rally brings forth four young ones every month;
which is the reason why the species are so nume-
rous, notwithstanding they are much sought after

on account of the sweetness of their flesh. The Indians likewise make baskets, boxes, &c., of the shells which cover their heads. Linnæus enumerates six species of dasypus, principally distinguished by the number of their moveable belts. Mr. Kerr, who prefers the arrangement of Buffon to that of Linnæus, enumerates ten species of this genus.

DATA, among mathematicians, a term for such things or quantities, as are given, or known, in order to find other things thereby that are unknown. Euclid uses the word data (on which he has a particular tract) for such spaces, lines, and angles as are given in magnitude, or to which we can assign others equal. From the use of this word in mathematics, it has been transplanted into other arts, as philosophy, medicine, &c.; where it expresses any quantity which, for the sake of a present calculation, is taken for granted to be such, without requiring an immediate proof for its certainty; called also the given quantity, number, or power.

DATCHET, a town in Buckinghamshire, near Windsor, with a bridge over the Thames, built in the reign of queen Anne, and noted for its frequent horse-races. It is situated in a valley surrounded on every side with steep hills.

DATE, *v. a. & n. s.* } *Fr. date, from Ital.*
DATELESS, *adj.* } *dato; Lat. datum.* To note a particular time; a time noted or appointed; the time and place at which a letter is written.

Of later date of wives hath he redde,
That som han slain hir husbondes in his bedde.
Chaucer. Cant. Tales.

His days and times are past,
And my reliance on his fracted dates
Has suint my credit. *Shakspeare. Timon.*

Then raise,
From the conflagrant mass, purged and refined,
New heavens, new earth, ages of endless date,
Founded in righteousness. *Milton.*

Could the declining of this fate, O friend,
Our date to immortality extend? *Denham.*

My father's promise ties me not to time;
And bonds without a date, they say, are void.
Dryden.

What time would spare, from steel receives its date;
And monuments, like men, submit to fate. *Pope.*

The accession of Elizabeth, from which we date the golden age of our language.
Johnson. Plan of Dictionary.

DATE, is derived from the Latin datum, given, and implies the place from whence, as well as the time when. Our ancient deeds had no dates, but only the month and year, to signify that they were not made in haste, or in the space of a day, but upon longer and more mature deliberation. The king's grants began with these words, *presentibus et futuris*, &c.; but the grants of private persons, with *omnibus presentes literas inspecturis*, &c.

DATE, *n. s.* } *Lat. dactylus.* A species
DATE-TREE, *n. s.* } of palm.
Hold, take these keys, and fetch more spices, nurse,
—They call for dates and quinces in the pastry.
Shakspeare.

DATE, in botany. See PHENIX

DATE, in law. A deed is good, though it mentions no date or has a false, or even an impossible date, as the 30th of February; provided the real day of its being dated or given, that is, delivered, can be proved. *Blackstone's Commentary*, vol. ii. p. 304.

DATI (Carlo), professor of polite learning at Florence, his native country, and the private friend of the poet Milton. The chief work to which Dati applied himself, was *Della Pittura Antica*, of which he published an essay in 1667. He died in 1675.

DATISCA, in botany, a genus of the dodecandria order, and diœcia class of plants; natural order thirty-fourth, *miscellanæ*. Male, *CAL.* pentaphyllous: *COR.* none: the antheræ are sessile, long, and fifteen in number. Female, *CAL.* bidentate: the *STYLES* three: *CAP.* triangular, three-horned, unilocular, pervious, polyspermous, inferior. Species two: 1. *D. Cannabina*, a native of Canada with a smooth stem; 2. *D. hirta*, a native of Pennsylvania with a rough hairy stem.

DATISI, in logic, a mode of syllogisms in the third figure, wherein the major is a universal affirmative, and the minor and conclusion particular affirmative propositions. Thus,

DA- All who serve God are kings;
TI- Some who serve God are poor;
SI- Therefore, some who are poor are kings.

The DATIVE, in Latin and Greek grammar, is the third case, and is used to express the state or relation of a person or thing to whose advantage or disadvantage some other thing is referred. In the English language, which has no dative, this relation is expressed by the prepositions *to* or *for*. In the Greek language, which has no ablative, the dative is used instead of it. See ABLATIVE.

DATUM, or DATUS, in ancient geography, a town of Thrace, situated between Neapolis and the river Nessus, built by a colony of Thracians, according to Eustathius; who places it on the sea-coast, near the Strymon, in a rich and fruitful soil, famous for ship-building and mines of gold; hence the proverb *δαρος Ἀγαθων*, denoting prosperity and plenty. It was taken by Philip of Macedon, who changed its name to Philippi. It was afterwards famous for the defeat of Brutus and Cassius by Augustus and Antony.

DATURA, the thorn apple, in botany, a genus of the monogynia order, and pentandria class of plants; natural order twenty-eighth, *luridæ*: *COR.* funnel-shaped, and plaited: *CAL.* tubular, angulated, and deciduous; *CAPS.* quadrivalved. There are seven species. *D. stramonium*, the common thorn-apple, rises about a yard high, with an erect, strong, round, hollow, green stalk, branching luxuriantly on every side; large, oval, irregularly angulated, dark green leaves; and from the divisions of the branches, large white flowers singly succeeded by oval, prickly capsules, growing erect, commonly called thorn apples. At night the upper leaves rise up and enclose the flowers. The blossoms have sometimes a tinge of purple or violet. The flowers consist of one large, funnel-shaped petal, having a long tube, and spreading pentagonal limb, succeeded by large roundish capsules of the size

of middling apples, closely beset with sharp spines. An ointment prepared from the leaves gives ease in external inflammations, and in the hæmorrhoids. Cows, horses, sheep, and goats, refuse this plant.

DAVAL (Peter Esq.) F.R.S., an eminent English mathematician. He was bred a barrister at law; was afterwards master in chancery; and at last accountant general of that court. He translated the Memoirs of the Cardinal de Retz, printed in 12mo. 1723. In the dispute concerning elliptical arches, when Blackfriars bridge was built, his opinion was applied for by the committee. His answer may be seen in the London Magazine for March 1760. He died January 8th, 1763.

DAVALIA, in botany, a genus of the cryptogamia class, and order filices. Fructification in roundish distinct dots near the margin: INVOLUCRUM membranaceous, from the surface half-hooded, distinct, somewhat truncate, opening towards the margin. Species nineteen.

DAVANGIRI, a town of the south of India, province of Mysore, district of Chittledroog. It consists of 500 houses, with a small fort in the centre, and has an extensive manufacture of blankets. It carries on a good trade with the Carnatic and its vicinity.

DAUB, *v. a. v. n. & n. s.* Fr. *dauber*; Belg. *dabben*; Irish *diob*, (mortar). To smear; cover with something adhesive, and gross, as mortar. Hence, to paint coarsely and vilely; to cover with gaudy or showy ornaments; to flatter. As a neuter verb, to play the hypocrite. Daubery and daubing are both used in the sense of the substantive daub; and dauby is an adjective, signifying viscous, adhesive.

She took for him an ark of bulrushes, and *daubed* it with slime and with pitch. *Exodus.*

When the wall is fallen, shall it not be said unto you, Where is the *daubing* wherewith ye have *daubed* it? *Ezekiel xiii.*

Since princes will have such things, it is better they should be graced with elegancy, than *daubed* with cost. *Bacon.*

So smooth he *daubed* his vice with shew of virtue, He lived from all attainder of suspect. *Shakspeare.*

I cannot *daub* it further; *Id.*

And yet I must. *Id.*

She works by charms, by spells; and such *daubry* as this is beyond our element. *Id.*

They snatched out of his hands a lame imperfect piece, rudely *daubed* over with too little reflection. *Dryden.*

Let him be *daubed* with lace, live high, and whore; Sometimes be lousy, but he never poor. *Id.*

A sign-post *dauber* would disdain to paint The one-eyed hero on his elephant. *Id.*

Not in vain the industrious kind With *dauby* wax and flowers the chinks have lined. *Id.*

Let every one, therefore, attend the sentence of his conscience; for, he may be sure, it will not *daub* nor flatter. *South.*

Hasty *daubing* will but spoil the picture, and make it so unnatural as must want false light to set it off. *O'way.*

The treacherous tapster, Thomas,
Hangs a new angel two doors from us,
As fine as *daubers* hands can make it. *Swift.*

And did you step in to look at the grand picture in your way back?—'Tis a melancholy *daub*! my lord; not one principle of the pyramid in any one group! *Sterne.*

If a picture is *daubed* with many bright and glaring colours, the vulgar admire it as an excellent piece. *Watts.*

DAUBENTON (Louis-Jean Marie), an eminent French anatomist and naturalist, born at Montbar in Burgundy, on the 29th of May, 1716. His father designed him for the church; but on his death, in 1736, Daubenton relinquished that pursuit for the study of physic and natural history; and in three years after took his degree at Rheims; after which he returned to his own country with the design of following the practice of medicine. But the celebrated Buffon, who was also a native of Montbar, having shortly before succeeded Dufay in the superintendence of the botanic garden, selected Daubenton to assist him in his improvements and arrangements. In 1742 Buffon procured for him the place of demonstrator of the cabinet of natural history, with a salary of only 500 francs, which was afterwards raised to 2000. The cabinet of natural history, which was of immense service, was arranged and in a great measure collected by his means. The appearance of the History of Quadrupeds, wherein he gave the dissection and description of 182 species, gained him a very high reputation, but raised the jealousy of Reaumur, who then considered himself at the head of natural history. About this time Buffon was persuaded to separate himself from Daubenton; but their intimacy afterwards revived, and continued till Buffon's death. Daubenton was admitted a member of the Academy of Sciences in 1744; and contributed many valuable dissertations on natural history to its memoirs. But his service to science was not confined to his pen and the press: from 1775 he gave lectures on natural history in the college of medicine; and in 1783 on rural economy. In 1784 he published his Instructions to Shepherds, a work of great excellence. In 1794, when France was ruled by a lawless rabble, it became a matter of necessity with Daubenton to make application to the section of Sans-culottes for a certificate of civism, to enable him to hold his place in the garden of plants. His request was made under the title of Shepherd Daubenton; and it was granted to him under that name with the greatest facility. At the garden of plants the Convention appointed him professor of mineralogy; and he gave lectures during the ephemeral existence of the Normal School. He was also the author of a Methodical View of Minerals, and a contributor to both the French encyclopædias. In 1799 he was elected a member of the conservative senate; but the first meeting he attended he fell from his seat in an apoplectic fit. Speedy assistance being procured, he was restored to his senses, and calmly pointed out, in different parts of his body, the progress of the paralysis, which terminated his life on the 1st of January 1800, in his eighty-third year.

DAUCUS, the carrot, in botany: a genus of the digynia order, and pentandria class of plants; natural order forty-fifth, umbellatæ: cor. a little radiated, hermaphrodite. The fruit bristly with short hairs. There are six species; but the one which chiefly merits attention is the *D. carota*, or common carrot. There are several varieties, as the white, the orange, and the purple carrot; but of these the orange is the most esteemed. Carrots are propagated by seeds, sown at different seasons of the year, to afford a supply for the table at all times. The season for sowing for the earliest crop is soon after Christmas. The situation should be open, and in a warm sandy light soil, well dug to a good depth, that the roots may meet with no obstruction in running down, so as to make them forked. The next crop should be sown in February, and the third in July for autumn; and lastly in the end of August, for those which are to stand the winter. These last will be fit for use in March, before any of the spring ones; but they are seldom so tender or well tasted. Carrots were first introduced into England by the Flemings, in the reign of queen Elizabeth.

DAVENANT (Charles), LL.D., an eminent author and civilian, eldest son of Sir William Davenant, was born in 1656, and educated in Cambridge. He wrote several political tracts, and some plays. He was in 1685 empowered, with the master of the revels, to inspect the plays designed for the stage, that no immoralities might be presented; and was also inspector general of exports and imports. His *Essays on Trade* were reprinted in 5 vols. 8vo in 1771. He died in 1714.

DAVENANT (John), bishop of Salisbury, the son of an eminent merchant in London, where he was born in 1570. He took his degree of A.M. in Queen's College, Cambridge, in 1587, and that of D.D. in 1609, when he was elected professor of divinity, and is chiefly known as having been sent by James I. to the synod of Dort, in 1618.

DAVENANT (Sir William), an eminent poet, born at Oxford in 1606. After some stay at the university, he entered into the service of Frances first duchess of Richmond, and afterwards of Fulke Greville, lord Brooke. Upon the death of Ben Jonson he was created poet laureat. He wrote his poem *Gondibert* at Paris, where he formed a design for carrying over a considerable number of artificers, especially weavers, to Virginia; but he and his company were seized by some parliament ships, and he was carried prisoner first to the Isle of Wight, and then to the Tower of London, where, by the mediation of Milton, he was allowed to be a prisoner at large. At this time tragedies and comedies being prohibited, he set up an opera, to be performed by declamation and music. This Italian opera began in Rutland-house in Charter-house yard, 1656; but was afterwards removed to the cockpit in Drury-Lane, and was much frequented for many years. His *Madagascar*, and other poems, were printed in 1648. He died in 1668.

DAVENTRY, an incorporate town of Northamptonshire, situated near the sources of the Avon and Nen, which flow into opposite seas.

It is seventy-two miles N.N.W. from London, and ten from Northampton. The manor formerly belonged to John of Gaunt who had a castle here. The ancient priory is in ruins, but parts of it are inhabited by the poor. On a hill in the neighbourhood are some strong entrenchments occupied by Charles I. before the battle of Naseby. The ground formerly was used as a race course. The town is very narrow and badly paved, and the church but a poor piece of architecture. The affairs of the corporation are managed by thirteen burgesses, one of whom is annually chosen bailiff, a recorder, town clerk, two head wardens, and twenty common councilmen. The bailiff acts as justice of the peace and coroner of the inquest, and the bailiff and ex-bailiff, with the recorder, constitute a quorum of the corporation, and can attach for debts under £100, or, in criminal cases, commit the accused to the county-gaol. Daventry has a considerable manufacture of whips, and a good market for provisions on Wednesday.

DAUGHTER, *n. s.* } Sax. *dohter*; Goth. *DAUGHTERLY*, *adj.* } *dauhtar*; Runick *dotter*; Germ. *dohter*; Dut. *dochter*. A female child; the wife of a son; in the plural, the females of a country. A female taken into the relation of a child, or addressed tenderly. Any female deity or imaginary personage. Daughtery is like, or behaving with the duty of, a daughter.

Jacob went out to see the *daughters* of the land.

Genesis.

Daughter, be of good comfort, thy faith hath made thee whole. *Matt. ix. 22.*

A *daughter* hadden they betwix hem two
Of twenty yere, withouten any mo,
Saving a child that was of half yere ago
In cradle it lay and was a propre page.

Chaucer. Cant. Tales.

Your wives, your *daughters*,
Your matrons, and your maids, could not fill up
The cistern of my lust. *Shakspeare.*

Are you at leisure, holy father, now,
Or shall I come to you at evening mass?—
—My leisure serves me, pensive *daughter*, now *Id.*

Sir Thomas liked her natural and *daughtery* affection for him. *Cavendish's Life of More.*

Now Aurora, *daughter* of the dawn,
With rosy lustre purpled o'er the lawn. *Pope.*

Commerce, however we may please ourselves with the contrary opinion, is one of the *daughters* of fortune, inconstant and deceitful as her mother.

Johnson. Thoughts on Agriculture.

Is thy face like thy mother's, my fair child!
Ada! sole *daughter* of my house and heart?
When last I saw thy young blue eyes they smiled,
And then we parted,—not as now we part,
But with a hope. *Byron.*

DAVID, דָּוִד, Heb. i. e. beloved, king of Israel, and Hebrew poet, was born at Bethlehem A.A.C. 1085, and died A.A.C. 1015, after having reigned seven years and a half in Hebron, and thirty-three in Jerusalem. We have a complete and faithful portrait of this great prince and poet of the Jews in Scripture; and while in this portrait no friend of revelation will pretend that he can exhibit a faultless character, the infidel Bayle allows him to have been a great and justly distin-

guished monarch and poet; and we may refer to his *Historical and Critical Dictionary*, for a full and tolerably impartial disquisition on the subject.

DAVID (—), a celebrated modern French painter, was born about the middle of the last century, and became the pupil of Vien, an artist of considerable eminence. He was painter to the unfortunate Louis XVI. and in September, 1790, presented to the legislative body a picture, representing his entrance into the national assembly. He was afterwards a deputy from Paris to the national convention, where he voted for his royal master's death. With perfect consistency he became a member of the committee of Public Safety during the reign of terror, and closely connected himself with Robespierre. In January, 1794, he was president of the convention. On the fall of Robespierre, he contrived to elude the danger for some time; but at length, in May, 1795, he was committed to the Luxembourg. His professional friends, however, procured his liberation; but during the following winter he joined a new society of terrorists, assembled near the pantheon, and became their first president; and in 1799 attempted to re-establish the jacobin club. About this time he was made a member of the National Institute for the class of painting; and Buonaparte, in 1800, appointed him painter to the government. During the imperial domination, David enjoyed his highest reputation as a painter, and exercised considerable influence over the measures adopted by the government for the cultivation of the fine arts. On the restoration of the Bourbons he was exiled to Brussels, where he continued to employ his talents till the time of his death, which took place December the 29th, 1825. His best paintings are—*The Rape of the Sabinæ*; *The Oath of the Horatii*; *The Death of Socrates*; *Napoleon presenting the Imperial Eagles to his Troops*; *Mars Disarmed by Venus and the Graces*, a work executed at Brussels; and *The Coronation of Napoleon*, exhibited in London in 1822, and said to be the largest painting ever made on canvass. David was clearly of a most cruel and sanguinary disposition in the height of his political career, and it seems to have infected at one time the efforts of his genius. The deputy Reboul found him, in 1792, in the prison of La Force, calmly sketching the prisoners who were going to execution: 'What are you about,' said Reboul, 'I am catching the last impulses of nature in these rascals,' replied David. He will be thought by some of our readers a characteristic painter of Napoleon presenting the Imperial Eagles.

DAVID I., king of Scots, succeeded his brother Alexander I., A. D. 1124, and died at Carlisle, A. D. 1153. See *SCOTLAND*.

DAVID II., king of Scots, succeeded his father Robert Bruce, A. D. 1320, when only seven years of age. His nonage proved disastrous to Scotland, and afforded Edward Baliol the opportunity of usurping the crown, by the aid of the English.

DAVID'S (St.), an episcopal town of South Wales, in Pembrokeshire, seated in a barren soil on the river Ilen, not a mile from the sea. It

was once a considerable place, and had walls, which are now demolished. The cathedral is a fine structure. The see has a bishop, precentor, chancellor, treasurer, four arch-deacons, nineteen prebendaries, eight vicars choral, &c.: near the church formerly stood a college. St. Nun's Well, near this place, is occasionally resorted to on account of its medicinal virtues. From the cape, near it, there is a prospect into Ireland. It is twenty-four miles north-west of Pembroke, and 266 west by north of London.

DAVIDSON, a county of the United States, in Mero district, in Tennessee, bounded on the north by the state of Kentucky, on the east by Sumner, and on the south by the Indian territory. Its chief town, Nashville, lies on the great bend of Cumberland River.

DAVIES (Sir John), a distinguished statesman, and poet, born at Tisbury, in Wiltshire, in 1570, received his academical education at Queen's College, Oxford, and removed thence to the Middle Temple to study the law; but, after being called to the bar, was expelled from that society, for an insult which he publicly offered to the recorder of London. He now retired to Oxford, where he wrote his celebrated *Nosce Teipsum*, a poem, and courted the patronage of queen Elizabeth by writing, under the title of *Hymns of Astrea*, twenty-six acrostics in her praise. In 1601 he was restored to the Temple, and in the same year was chosen member of parliament for Corfe Castle, and took a distinguished part in the suppression of monopolies. He was sent to Ireland as solicitor-general, on the accession of James I., and became successively attorney-general, and justice of the assize; was made a sergeant of law, and knighted. In 1607 he accompanied the chief justice of Ireland on a progress through the counties of Monaghan, Fermanagh, and Cavan, and drew up an account of the circuit. He soon after visited England, to lay before the king an account of that country, in which he seems to have exercised his judicial function with great impartiality and public spirit; and on his return assiduously recommenced his labors. In 1612 he published *A Discovery of the true Causes why Ireland has never been entirely subdued and brought under Obedience to the Crown of England, until the Beginning of His Majesty's happy Reign*. During this year the first parliament was convoked for Ireland, formed by a general representation of Catholics and Protestants, and Sir John was chosen speaker of the house of commons. He published, in 1614, *A Declaration concerning the title of Prince of Wales*; and the year following his Reports of Cases adjudged in the King's Courts in Ireland. Soon after, returning to England, he went several circuits as a judge, and was elected member for Newcastle-under-Lyne. He was subsequently raised to the office of chief justice of England, but almost immediately cut off by a fit of apoplexy, in December, 1626. His poems were reprinted in 1773, 8vo., and form a part of various modern collections. His prose works were collected in one vol. 8vo. 1786, under the title of *Historical Tracts*, by Sir John Davies. This acute lawyer and politician married a daughter of lord Audley, but was most

unhappy in his family, his son proving an idiot, and one of his daughters of a remarkably flighty disposition. His second daughter married lord Hastings.

DAVILA (Henry Catherine), a celebrated historian, the youngest son of Antonio Davila, grand constable of Cyprus. He was born in 1576, at an ancient castle in Padua, but was brought early into France. At the age of eighteen he signalized himself in the military scenes of that country; and at the siege of Amiens, where he fought under Henry IV., received a wound in the knee. After peace was established in France, he withdrew into Italy, and entered into the service of the Venetians. While at Venice, he wrote his admirable History of the Civil Wars of France, from the death of Henry II. in 1559, to the peace of Vervins in 1598. He continued to serve the republic of Venice with great reputation, till he was murdered, in 1631, by a brutal Veronese, called Il Turco, who entered the room of an hotel where he and his family were at supper, and, being reprimanded for his intrusion by Davila, discharged a pistol at the historian, and shot him dead in an instant. His eldest son Antonio, a youth of eighteen, revenged the death of his father by killing the murderer on the spot.

DAVIS (John), a famous navigator in the sixteenth century, was born at Sandridge, near Dartmouth in Devonshire; and distinguished himself by making three voyages to the northern parts of America, in order to find out a north-west passage to the East Indies; in which he discovered the Straits which bear his name. He afterwards performed five voyages to the East Indies; in the last of which he was slain in a desperate encounter with some Japanese, near the coast of Malacca, on the 27th of December, 1605. He wrote an account of a second voyage for the discovery of the north-west passage; a voyage to the East Indies; and other tracts.

DAVIS'S STRAIT, a narrow sea, lying between the north main of America, and the western coast of Greenland; running north-west from Cape Farewell. Lat. 60° N. to Baffin's Bay in 80°. It extends to long. 75° W. communicating with Baffin's Bay, which lies to the north of this strait, and of the North Main, or James's Island.

DAVISON (William), a statesman of Scottish origin, who became secretary of state to queen Elizabeth. His early life is little known, but in 1575 he was employed on a mission to Brabant and Flanders; and commissioned, in a similar way, in 1579, to the states of Holland. In 1583 he was employed confidentially in Scotland; and, acquiring considerable fame as a diplomatist, was made clerk of the council. On his return from a second embassy into the Low Countries, he was made secretary of state. Camden supposes that he was raised to this office in order to involve him in the mysterious transaction which now proved his ruin. When the commission was opened to bring Mary queen of Scots to trial, the name of secretary Davison was inserted in it, but it does not seem that he was present when it was opened, or ever assisted at Fotheringay Castle. The unhappy princess's death being resolved upon, it only remained to decide upon the manner of it, and here Davison

differed with Walsingham, being of opinion that it should be open; upon which the latter pretended sickness, which threw the business of drawing up the warrant and bringing it to the queen for signature, on Davison. If Davison's apology, indeed, may be believed, he acted throughout under dictation; but he was tried in the Star Chamber for revealing the secrets of the queen's council, fined 10,000 marks, and sentenced to imprisonment during her majesty's pleasure; a copy of the proceedings being sent to king James to account for the death of his mother. The fine was rigorously levied; but he was assisted from time to time with small sums of money, and recommended to king James by the friendship of the earl of Essex. His final fortunes and time of death are not known.

DAVIT, in a ship, a long beam of timber, used as a crane whereby to hoist the flukes of the anchor to the top of the bow, without injuring the sides of the ship as it ascends; an operation which, by mariners, is called fishing the anchor. The anchors being situated on both the bows, the davit may be occasionally shifted, so as to project over either side of the ship, according to the position of that anchor on which it is employed. The inner end of the davit is secured by being fixed in the fore channels *b*, and upon the outer end is hung a large block *c*, through which a strong rope traverses, called the *sh* pendent *d*; to the foremost end of which is fitted a large iron hook *e*, and to the after end a tackle or complication of pulleys *f*; the former of which is called the fish-hook, and the latter the fish tackle. The anchor being previously raised to the cat head, the fish-hook is fastened upon its flukes; and the effort of the tackle being transmitted to the hook, by means of the fish-pendent, draws up that part of the anchor sufficiently high upon the bow to fasten it. There is also a davit of a smaller kind occasionally fixed in the long-boat, and employed to weigh the anchor therein.

DAULE, a large navigable river of Quito, in the province of Guayaquil, which, after a course of sixty miles, falls into the Guayaquil, in lat. 2° 8' S., on the west side. Its shores are covered with estates and gardens belonging to the inhabitants of Guayaquil, and abound in delicious fruits. It gives name to a small district.

DAUNT, *v. a.* } Fr. *domter*; Lat. *domiter*;
DAUNTLESS, *adj.* } but perhaps more imme-
DAUNTLESSNESS. } diately derived to our language from Goth. and Swed. *dana*, signifying to make faint, amazed. To affright, discourage, intimidate. A dauntless man is he who cannot readily be intimidated.

Metellius, the foule cherle, the swine
That with a staf becraft his wif hire lif,
For she drank wine, though I had ben his wif,
Ne shuld he nat have daunted me fra drink.

Chaucer. Cant. Tales.

DAUPHIN, a title given by the court of France to the presumptive heir of the crown, on account of the province of Dauphiné, which in 1349 was given to Philip VI. on this condition, by Hubert II. dauphin of Viennois. He is styled the eldest son of France. His crown is a circle of gold set round with eight fleur-de-lis, closed at the top with four dolphins, whose tails conjoin under a fleur-de-lis.

DAUPHIN, in geography, a county of Pennsylvania, formerly contained in that of Lancaster. Its form is triangular; and it is surrounded by the counties of Mifflin, Cumberland, York, Berks, and Northumberland.

DAUPHINÉ, an extensive south-east province of France, containing the three departments of

	<i>Population.</i>	<i>Chief Towns.</i>
Iseré,	471,660,	Grenoble.
Drôme,	253,372,	Valence.
Upper Alps,	124,763,	Gap.

849,795.

Its entire area is about 6700 square miles, the surface being very mountainous, and the lower division intersected by a ridge of the Alps. The pasture is universally good, except where the hills are covered with forests. They contain mines of copper, iron, and lead. The principal rivers are the Iseré, the Durance, and the Drome, which rise in the Alps, and terminate in the Rhone. In the higher mountains it is cold and sharp, but on the banks of the Rhone the climate is warm. The valleys produce corn, flax, and olives; and the sides of the hills are covered with vines. The culture of silk is also prosecuted with success, particularly in Valence, Romans, Pierrelatte, and Montelimart. Cheese is a principal article of export. The ecclesiastical dignitaries are one archbishop (of Vienne), and three bishops (Grenoble, Valence, and Gap).

DAVY (sir Humphrey, bart.), one of the most distinguished chemists of the age, was born at Penzance, in Cornwall, December 17th, 1779. After having received the rudiments of a classical education, he was placed with a surgeon and apothecary, who pronounced him an 'idle and incorrigible boy.' He had, however, already distinguished himself at school, and a taste for chemistry, which he displayed in some experiments on the air contained in sea-weed, attracted the attention of Mr. Gilbert, afterwards president of the royal society, and of Dr. Beddoes. The latter, who had just established a pneumatical institution at Bristol, offered him the place of assistant in his laboratory. Here Davy discovered the respirability and exhilarating effect of the nitrous oxide. He published the results of his experiments, under the title of *Chemical and Philosophical Researches, &c.*, London, 1800. This work immediately obtained him the place of professor of chemistry in the royal institution at the age of twenty-two. In 1803 he was chosen a member of the Royal Society. His lectures at the Royal Institution were attended by crowded and brilliant audiences, attracted by the novelty and variety of his experi-

ments, the eloquence of his manner, and the clearness of his exposition. His discoveries with the galvanic battery, his decomposition of the earths and alkalis, and ascertaining their metallic bases, his demonstration of the simple nature of the oxymuriatic acid (to which he gave the name of chlorine), &c., obtained him an extensive reputation; and, in 1810, he received the prize of the French Institute. In 1814 he was elected a corresponding member of that body. Having been elected professor of chemistry to the board of agriculture, he delivered lectures on agricultural chemistry during ten successive years, and, in 1813, published his valuable *Elements of Agricultural Chemistry*. His next discovery was of no less importance to humanity than his former researches had been valuable to science. The numerous accidents arising from fire-damp in mines led him to enter upon a series of experiments on the nature of the explosive gas, the result of which was the invention of his safety-lamp. In 1818 and 1819 he visited Italy, and made some unsuccessful attempts to unroll the *Herculaneum* manuscripts. In 1820 he succeeded sir Joseph Banks, as president of the royal society. In 1824 he visited Norway for the purpose of making some scientific investigations. On this voyage he proved the efficacy of his plan for preserving the copper of ships, by covering it in part with a certain quantity of iron. At the same time the trigonometrical measurements of Denmark and Hanover were connected, under his direction, by chronometrical observations, with the measurements in England. This distinguished philosopher died May 29, 1829, at Geneva, whither he had gone for the benefit of his health. Besides the works already mentioned, the most important are *Electro-Chemical Researches*; *Elements of Chemical Philosophy*, vol. i. 1802; *Bakerian Lectures*, 1807—1811; *Researches on the Oxymuriatic Acid*, 1810; on the *Fire-Damp*, 1816. He also contributed some valuable papers to the *Philosophical Transactions*, and the journals of Nicholson and Tilloch.

DAVY (William), a clergyman, who was educated at Balliol College, Oxford, where he took the degree of B.D. was curate of Lustleigh, in Devonshire, and the editor, printer, and publisher of a work entitled, '*A System of Divinity*, in a course of Sermons on the first Institutes of Religion; on some of the most important articles of the Christian Religion in connexion; and on the several Virtues and Vices of Mankind; with occasional Discourses: being a compilation from the best sentiments of the polite writers and eminent sound divines, both ancient and modern, on the same subjects, properly connected, with improvements; particularly adapted for the use of chiefs of families and students in divinity, for churches, and for the benefit of mankind in general,' 26 vols. 8vo. 1785-1807. The singular history of this production is said to be this:—Mr. Davy, having completed his preliminary arrangements, issued proposals for publishing his work by subscription; but, being unpatronised and unknown, he had no success. Undaunted by his disappointment, he determined to become his own

printer. With a press which he constructed himself, and as many worn and cast-off types (purchased from a country printing-office) as sufficed to set up two pages, he fell to work. Performing every operation with the assistance of his female domestic only, and working off a page at a time, he finished forty copies of the first 300 pages. Twenty-six copies he distributed among the universities, the bishops, the royal society, and the reviews, expecting to derive from some quarter or other that patronage and assistance to which he fancied himself entitled. A second time disappointed, he would not abandon his project, but contracted his views, resolving in future to spare his expenses in paper. He had reserved only fourteen copies, and to that number he limited the impression of his entire work. After years of unremitting toil, he saw it completed in 26 volumes. Disdaining to get assistance, for which he could ill afford to pay, he put the books in boards with his own hands, and then took a journey to London for the express purpose of depositing a copy in each of the principal public libraries of the metropolis.' *Quarterly Review*.

DAW, *n. s.* Supposed by Skinner so named from its note; by Junius to be corrupted from *dawl*, the Germ. *tul*, and *dol* in the Bavarian dialect, having the same signification. The name of a bird.

DAWES (Richard), a learned critic of the last century, was born in 1708, in Leicestershire. He was educated at Market Bosworth, and admitted a sizer of Emanuel College, Cambridge, of which he became a fellow in 1731, and in 1733 took the degree of M.A. He distinguished himself by his violent aspecity towards Bentley, and in 1736 published a proposal for printing by subscription a translation into Greek verse of Milton's *Paradise Lost*; but the plan did not proceed. In 1738 he was appointed master of the free grammar-school at Newcastle-upon-Tyne. In 1745 he published his *Miscellanea Critica*, intended as a specimen of an intended emendatory edition of all the Attic poets. But neither was this design ever completed; the *Miscellanea*, however, gained the author great reputation, and a second edition of it, with additions, was published in 1781, by Dr. Burgess, bishop of Salisbury. He resigned his schools in 1749, and retired to Heworth, where he died in 1766.

DAWK, *v. a. & n. s.* Scot. *dulk*. To mark with an incision. A word among workmen for a hollow, rupture, or incision, in their stuff.

DAWN, *v. n. & n. s.* } The past participle, according to Mr. Tooke (*Diversions of Purley*, v. ii.), of Anglo-Saxon, *daxian*, to grow light. To become day; to grow luminous. Hence to glimmer; to appear obscurely; to commence. The dawn, or dawning is used for the time between the first appearance of the sun's light and sun-rise.

As it began to dawn towards the first day of the week, came Mary Magdalene to see the sepulchre.

Matthew.

All night I slept, oblivious of my pain;
Aurora dawned, and Phœbus shined in vain. *Pope.*
These tender circumstances diffuse a dawn of serenity over the soul. *Id.*

In such an enterprise to die is rather
The dawn of an eternal day, than death. *Byron.*

DAX, an old town of France, in Gascony, situated on a plain on the left bank of the Adour, a bridge across which unites it to the suburb, Sablar. It has a wall flanked with towers, and a castle. The place has been long celebrated for its mineral waters. In the middle of the town is a large and deep spring which throws out warm water in large quantities. The surrounding country is flat and sandy, but productive. To the north-west is an immense forest. Population 4400. It is twenty-five miles north-east of Bayonne, and eighty-five south by west of Bourdeaux.

Ang.-Sax. *dæg*; Goth.

Swed. and Belg. *dag*; Teut.

tag; Icel. *dagur*; Lat. *dies*;

all probably from Gr. *dan*;

light. Minshew says from

Heb. *נמך*, to fly; or from

the Belg. *dacht*, i. e. *de acht*

(of aught, or some value),

as Belg. *nacht*, night, is

from *nie acht*, no value.

The last conjecture is cu-

rious, and the coincidence

remarkable. We leave the

decision of these conflict-

ing etymologies with the

learned reader. The time

between sun-rise and sun-

set; from noon to noon; from one evening to another; or from midnight to midnight; or between any two points marking an artificial division of time of this kind; light, sunshine; any specified or appointed time; particularly a time appointed to give judgment, and therefore that judgment given; the period of human life; any remarkable period; time in general. To-day appears simply to signify on this day. The meaning of the compounds is obvious, except perhaps that of daysman, which signifies an umpire or judge. Dr. Johnson says, 'a surety.' But the instances from Job ix. and Spenser seem to confirm the former meaning, which is what Ainsworth gives. Wiclif clearly uses it for 'judgment,' in 1 Cor. iv.

And to me it is for the leeste thing that I be deemed of ghou or of mannys dai, but neither I deme mysilf. *Wiclif. 1 Cor. iv.*

I worche a werk in ghoure daies, a werk that ghe schulen not bileuee if only man schal telle it ghou. *Id.*

And God called the light day, and the darkness he called night. And the evening and the morning were the first day. *Bible. Gen. i. 5.*

For he is not a man, as I am, that I should answer him, and we should come together in judgment. Neither is there any daysman betwixt us, that might lay his hand upon upon us both. *Id. Job. ix. 32, 33.*

To-day, if ye will hear his voice, harden not your hearts. *Psaln xcv. 7.*

Upon a day he got him more moniee

Than that the persone gat in monethes twice.

And thus with fained flattering and gapes,

He made the persone and the people his apes.

Chaucer. Prolog. to Cant. Tales.

After him reigned Guthline his heir,
The justest man and truest in his days.

Spenser. Faerie Queene.

By this the drooping daylight 'gan to fade,
And yield his room to sad succeeding night. *Id.*

For what art thou,

That makest thyself his daysman, to prolong
The vengeance prest? *Id.*

Bavaria hath been taught, that merit and service
doth oblige the Spaniard but *from day to day.*

Bacon.

In the *daytime* Fame sitteth in a watch-tower, and
flieth most by night; she minglcth things done with
things not done, and is a terror to great cities. *Id.*

How many hours bring about the *day*,
How many *days* will finish up the year.

Shakespeare.

Much are we bound to heaven
In *daily* thanks, that gave us such a prince. *Id.*

The noble Thanes do bravely in the war;
The *day* almost itself professes yours,
And little is to do. *Id. Macbeth.*

Calling my officers about me, in my branched
velvet gown; having come down from a *daybed*,
where I have left Olivia sleeping.

Id. Twelfth Night.

Thou shalt buy this dear,
If ever I thy face by *daylight* see.
Now go thy way. *Id.*

I meant to make her fair, and free, and wise,
Of greatest blood, and yet more good than great:
I meant the *daystar* should not brighter rise,
Nor lend like influence from his lucent seat.

Ben Jonson.

True labour in the vineyard of thy lord,
Ere prime thou hast the' imposed *daywork* done.

Fairfax.

Or objects new
Casual discourse draws on, which intermits
Our *day's* work. *Milton.*

Doth God exact *daylabour*, light denied,
I fondly ask? *Id.*

In one night, ere glimpse of morn,
His shadowy flail hath threshed the corn
That ten *daylabourers* could not end. *Id.*

The breath of heaven, fresh-blowing, pure and
sweet,
With *dayspring* born, here leave me to respire. *Id.*

Sunk though he be beneath the wat'ry floor;
So sinks the *day-star* in the ocean bed,
And yet anon repairs his drooping head. *Id.*

I saw you every *day*, and all the *day*;
And every *day* was still but as the first:
So eager was I still to see you more. *Dryden.*
Would you the' advantage of the fight delay,
If, striking first, you were to win the *day*? *Id.*

Or if my debtors do not keep their *day*,
Deny their hands, and then refuse to pay,
I must with patience all the terms attend. *Id.*

I watched the early glories of her eyes,
As men for *daybreak* watch the Eastern skies. *Id.*
Daylabour was but an hard and a dry kind of live-
lihood to a man that could get an estate with two or
three strokes of his pen. *South.*

We have, at this time of *day*, better and more
certain means of information than they had.

Woodward.

Yet are we able only to survey
Dawnings of beams, and promises of *day*.

Prior.

Cease, man of woman born! to hope relief
From *daily* trouble, and continued grief. *Id.*

I think, in these *days*, one honest man is obliged
to acquaint another who are his friends. *Pope.*

If bodies be illuminated by the ordinary prisma-
tick colours, they will appear neither of their own
daylight colours, nor of the colour of the light cast on
them, but of some middle colour between both.

Newton's Opticks.

Of night impatient, we demand the *day*;

The *day* arrives, then for the night we pray.

The night and *day* successive come and go,
Our lasting pains no interruption know.

Blackmore.

My ants never brought out their corn but in the
night when the moon did shine, and kept it under-
ground in the *daytime*. *Addison.*

Thy *daily* labours of the bee

Awake my soul to industry;
Who can observe the careful art
And not provide for future want? *Gay.*

The past is all by death possest,
And frugal fate, that guards the rest,

By giving, bids us live *to-day*. *Fenton.*

Are these the questions that raise a flame in the
minds of men at this *day*? If ever the church and
the constitution of England should fall in these islands
(and they will fall together), it is not presbyterian or
popish hierarchy that will rise upon their ruins.

Burke.

Thus Genius rose and set at ordered times,
And shot a *day-spring* into distant climes,
Ennobling every region that he chose;
He sunk in Greece, in Italy he rose.

Cowper's Table Talk.

Parting *day*

Dies like the dolphin, whom each pang imbues
With a new colour as it gasps away,
The last still loveliest, till—'tis gone—and all is gray.

Byron.

DAY, CIVIL. See CHRONOLOGY.

DAY, NATURAL. See CHRONOLOGY.

DAY, SIDEREAL; DAY, SOLAR. See ASTRO-
NOMY.

DAYS OF GRACE, in commerce, are a cus-
tomary number of days allowed for the payment
of a bill of exchange, &c., after the same be-
comes due. Three days of grace are allowed in
Britain; ten in France and Dantzic; eight at
Naples; six at Venice, Amsterdam, Rotterdam,
and Antwerp; four at Francfort; five in Leipzig;
twelve at Hamburg, &c. In Britain the days of
grace are given and taken as a matter of course,
the bill being only paid on the last day: but in
other countries, where the time is much longer,
it would be thought dishonorable for a merchant
to take advantage of it; bills are therefore paid
on the very day they fall due.

DAYS OF GRACE, in law, are those granted
by the court at the prayer of the defendant or
plaintiff.

DAY (Thomas), a benevolent English writer,
born in the metropolis, in 1748. While an in-
fant, he was left heir to a fortune of £1200 a
year by the death of his father, who was a col-
lector of the customs. He received the first
part of his education at the Charter-house, and
was afterwards sent to Corpus Christi College,
Oxford. Leaving Oxford he entered of the Middle
Temple, and, having been disappointed in an

early affection, took two foandling girls, with the intention of modelling their minds and manners. The former he placed with a milliner, but the latter he took under his own instruction, till, finding his scheme fruitless, he gave it up, and sent her to a school. He is principally known as the author of the History of Sandford and Merton, a tale for youth, bearing no small similarity to Rousseau's Emilius. Mr. Day's opinions were more theoretical and sentimental than adapted to the world as he found it: an instance of which occasioned his death. Having a foal which he wished to ride, he would not suffer it to be previously broke in, by those usually employed in the task, but, undertaking the management of it himself, was thrown from its back, and received a severe kick on the head, of which he died, September 8th, 1789.

DAY-COAL, in natural history, a name given by the miners of England, and the people who live in coal countries, to that seam or stratum of the coal which lies uppermost in the earth. See COAL.

DAZE, *v. a.* } Sax. *dægian*, to shine.
 DAZZLE, *v. a. & v. n.* } MæS.-Goth. *dagsian*;
 DAZZLEMENT, *n. s.* } Goth. and Swed. *dasa*.

To overpower with light, so as to confuse or stupify: for both daze and dazzle may be regarded as the same active verb. Hence to dazzle is also to strike with surprise; to astonish; and 'a dazed person,' in the North of England, is one of a vacant, staring countenance. As a neuter verb, to dazzle, is to be overpowered with light; to become blind.

Proud of such glory and advancement vayne,
 While flashing beames do daze his feeble eyen.
 He leaves the welkin way most beaten playne;
 And, wrapt with whirling wheelies, inflames the skyers
 With fire not made to burne, but fayrely for to shyne.
Spenser. Faerie Queene.

The crystall glass, which lent mine eyes their light,
 Doth now waxe dyin, and dazeld all with dread;
 My senses all, wyll now forsake me quite,
 And hope of healt' abandoneth my head.

Guoigne.

Fears use to be represented in such an imaginary fashion, as they rather dazzle men's eyes than open them.
Bacon.

An overlight maketh the eyes dazzle, insomuch as perpetual looking against the sun would cause blindness.
Id.

Dazzle mine eyes? or do I see three suns?
Shakspeare.

Mysteries
 Are like the sun, dazelling, yet plain to all eyes.
Donne. Satires.

They smote the glistening armies, as they stand,
 With quivering beams, which dazed the wond'ring eye.
Fairfax.

Those heavenly shapes
 Will dazzle now this earthly with their blaze
 Insufferably bright.
Milton.

Poor human kind, all dazed in open day,
 Err after bliss, and blindly miss their way.
Dryden.

Ah, friend! to dazzle let the vain design;
 To raise the thought, or touch the heart, be thine.
Pope.

It is with books as with women, where a certain plainness of manner and of dress, is more engaging
 VOL. VII.

than that glare of paint and airs and apparel, which may dazzle the eye, but reaches not the affections.

Hume.

We gaze and turn away, and know not where,
 Dazeld and drunk with beauty, till the heart
 Reels with its fulness; there—for ever there—
 Chained to the chariot of triumphal Art,
 We stand as captives, and would not depart.

Byron.

DAZE, in natural history, a name given by our miners to a glittering sort of stone, which often occurs in their works; and, as it is an unprofitable substance, is one of those things they call weeds. The word is applied by them to every stone that is hard and glittering; and therefore comprehends the whole genus of the telangia, or stony nodules, which have the flakes of talc in their substance.

DEACON, *n. s.* } Gr. *διακονος*. A minis-
 DEACONESS, } ter or official servant of the
 DEACONRY, } church, from *δια*, empha-
 DEACONSHIP. } tic; and *κονω*, to serve.

See the following article. Deaconry is both the office of a deacon, and a sort of hospital or religious house at Rome.

Also (it bihoueth) dekenes to be chaast, not double tunded.
Wiclif. 1 Tym. iii.

Likewise must the deacons be grave, &c.

Bible. 1 Tim. iii.

When a contemptuous bold deacon had abused his bishop, he complained to S. Cyprian, who was an arch-bishop, and indeed S. Cyprian tells him he did honour him in the business that he would complain to him.
Bp. Taylor.

Timothy was to prefer those who formerly had been employed by the church as deaconesses, and had discharged that office with faithfulness and propriety.

Macknight on 1 Tim. v. 10.

There were fourteen of these deaconries or hospitals, at Rome, which were reserved to the cardinals. Du Cange gives in their names.
Chambers.

DEACON, in civil polity, the præses of a corporation, in the royal boroughs of Scotland.

DEACON, in ecclesiastical polity, *διακονος*, a servant, one whose business is to baptize, read in the church, and assist at the celebrations of the eucharist. Seven deacons were instituted by the apostles, Acts vi., which number was retained a long time in several churches. Their office was to serve in the Agapæ, and to distribute the bread and wine to the communicants. Another part of their office was to be a sort of directors to the people in the exercise of their public devotions in the church; for which purpose they used certain forms of words, to give notice when each part of the service began. Whence they are sometimes called eirokerukes, or holy criers of the church. Deacons had, by license from the bishop, a power to preach, to reconcile penitents, to grant absolution, and to represent their bishops in general councils. Their office out of the church was to take care of orphans, widows, prisoners, and all the poor and sick who had any title to be maintained out of the revenues of the church; to enquire into the morals of the people, and to make their report to the bishop. Whence, on account of the variety of business, it was usual to have several deacons in the same church. In the Romish church, it is the deacon's office to

incense the officiating priest or prelate; to lay the corporal on the altar; to receive the patera or cup from the subdeacon, and present it to the person officiating; to incense the choir; to receive the pax from the officiating prelate, and carry it to the subdeacon; and at the pontifical mass, when the bishop gives the blessing, to put the mitre on his head, and to take off the archbishop's pall and lay it on the altar. In England, the form of ordaining deacons, declares that it is their office to assist the priest in the distribution of the holy communion; in which, agreeably to the practice of the ancient church, they are confined to the administering wine to the communicants. A deacon in the Church of England is not capable of any ecclesiastical promotion; yet he may be a chaplain to a family, curate to a beneficed clergyman, or lecturer to a parish church. He may be ordained at twenty-three years of age, but it is expressly provided, that the bishop shall not ordain the same person a priest and deacon in the same day. The qualifications of a deacon in the primitive church are mentioned by the apostle Paul, 1 Tim. iii. 8—13.

DEACONESS, an order of women who had their distinct offices and services in the primitive church. This office appears as ancient as the apostolical age; for St. Paul calls Phebe, *διακονος*, a servant of the church of Cenchrea. Tertullian calls them, viduar, widows, because they were commonly chosen out of the widows of the church; and Epiphanius, and the council of Laodicea, call them *πρεσβυτιδας*, elderly women, because none but such were ordinarily taken into this office. For, by some ancient laws, these four qualifications were required in every one that was to be admitted into this order:—1. That she should be a widow. 2. That she should be a widow that had borne children. 3. A widow that has been but once married. 4. One of a considerable age, forty, fifty, or sixty years old: though all these rules admitted of exceptions. One part of their office was to assist the minister at the baptizing of women. Another part was to be private catechists to the female catechumens who were preparing for baptism. They were likewise to attend the women that were sick and in distress; to minister to martyrs and confessors in prison; to attend the women's gate in the church; and, lastly, to assign all women their places in the church, regulate their behaviour, and preside over the rest of the widows, whence in some canons they are styled *προκατασκευαται*, governesses. This order, which since the tenth or twelfth century has been wholly laid aside, was not abolished at once, but continued in the Greek church longer than in the Latin, and in some of the Latin churches longer than in others.

DEACONRY, *diaconia*, is a name given to the chapels and oratories in Rome, under the direction of the several deacons, in their respective regions or quarters. To the deaconries were annexed a sort of hospitals or boards for the distribution of alms governed by the regionary deacons, called cardinal deacons, of whom there were seven answering to the seven regions, their chief being called the archdeacon. The hospital adjoining to the church of the deaconry had an

administrator for the temporal concerns, called the father of the deaconry, who was sometimes a priest and sometimes a layman

DEAD, *v. a. v. n. n. s. & adj.* } Sax. *deab*;
DEADEN, *v. a.* } Goth. and Icel.
DEADLY, *adj. & adv.* } *daud*; Teut.
DEADLINESS, *n. s.* } *tod*; See
DEADNESS, *n. s.* } DEATH. As
DEAD-BORN, *adj.* } active verbs,
DEAD-DOING, *part. adj.* } to dead and to
DEAD-LIFT, *n. s.* } deaden, both

DEAD-RECKONING, *n. s.* } J signify to cause death, as well as to deprive of power or force; to make vapid or spiritless; but are nearly obsolete. Lord Bacon uses *dead* as a neuter verb. *Dead*, the adjective, is, deprived of life; senseless; without motion; inactive; empty; void; dull; useless; unadorned; flat in taste; vapid. As a noun, it signifies those who have suffered death, and, figuratively, a still or quiet season. *Deadly* is, mortal, or like death. *Dead-doing* is, that which is destructive, having the power or design to kill. *Deadliness* is that state or condition which threatens death; a *dead-lift* is 'hopeless exigence,' says Dr. Johnson; that is, figuratively, for the original idea is the heavy mass or 'dead weight' which a lifeless body becomes. See the example from Locke. *Dead-reckoning* is a sea phrase, meaning the reckoning that is kept without observation of the heavenly bodies.

How seyn summen among hou that the aghen-
risynge of *deede* men is not? and if the aghen-
risynge of *deede* men is not, neither crist roos aghen fro *deeth*.
Wiclif. 1 Cor. 15.

There was not a house where there was not one
dead. *Exod*. xii. 30.

At thy rebuke, O God of Jacob, both the chariot
and horse are cast into a *dead* sleep. *Psalms*.

I will break Pharaoh's arms, and he shall groan
before him with the groanings of a *deadly* wounded
man. *Ex*. xxx. 24.

Therewith the fire of jalousie up sterte
Within his brest, and hent him by the herte
Soo woodyly, that he like was to behold
The box-tree, or the ashen *ded* an cold.

Chaucer. Cant. Tales.

Hold, O dear lord, your *dead-doing* hand,
Then loud he cried, I am your humble thrall.

Spenser.

Loth was that other, and did faint though feare
To taste the untried dint of *deadly* steele;
But yet his lady did so well him cheare,
That hope of new good hap he gan to feel.

Id. Faerie Queene.

That the sound may be extinguished or *dead*ed by
discharging the pent air, before it cometh to the
mouth of the piece, and to the open air, is not prob-
able. *Bacon*.

The beer and the wine, as well within water as
above, have not been palled or *dead*ed at all. *Id*.

Anointing of the forehead, neck, feet, and back-
bone, we know is used for procuring *deep* sleeps. *Id*.

Iron, as soon as it is out of the fire, *deadeth* strait-
ways. *Id. Natural History*.

She then on *Romen* calls—As if that name,
Shot from the *deadly* level of a gun,
Did murder her. *Shakespeare.*

Like dumb statues, or unbreathing stones,
Stared each on other, and looked *deadly* pale.

Shakespeare.

The queen, my lord, is *dead* :

— She should have died hereafter.

Id. Macbeth.

The tin sold sometimes higher, and sometimes
lower, according to the quick vent and abundance, or
the *dead* sale and scarcity.

Carew.

But why doth Balbus his *decade-doing* quill
Parch in his rusty scabbard?

Bishop Hall. Satires. vi. 1.

Their flight was only deferred until they might
cover their disorders by the *dead* darkness of the
night.

Hayward.

Travelling over Amanus, then covered with deep
snow, they came in the *dead* winter to Aleppo.

Knolles.

And have no power at all, nor shift
To help itself at a *dead-lift*.

Hudibras.

They never care how many others
They kill, without regard of mothers,
Or wives, or children, so they can
Make up some fierce *dead-doing* man.

Id.

In the *dead* of the night, when the men and their
dogs were all fast asleep.

L'Estrange.

When it (the cavity) was closed up, the bell
seemed to sound more *dead* than it did when just be-
fore it sounded in the open air.

Boyle.

She either from her hopeless lover fled
Or with disdainful glances shot him *dead*.

Dryden.

Jove saw from high, with just disdain,
The *dead* inspired with vital life again.

Id.

Nought but a blank remains, a *dead* void space,
A step of life, that promised such a race

Id.

At a second sitting, though I alter not the draught,
I must touch the same features over again, and
change the *dead* colouring of the whole.

Id.

Young Arcite heard, and up he ran with haste,
And asked him why he looked *deadly* wan?

Id.

Your gloomy eyes betray a *deadness*,
And inward languishing.

Dryden and Lee's Œdipus.

Mettled schoolboys, set to cuff,

Will not confess that they have done enough,
Though *deadly* weary.

Ortery.

After this life, to hope for the favours of mercy
then, is to expect an harvest in the *dead* of winter.

South.

They cannot bear the *dead* weight of unemployed
time lying upon their hands, nor the uneasiness it is
to do nothing at all.

Locke.

That the *dead* shall rise and live again, is beyond
the discovery of reason, and is purely a matter of
faith.

Id.

This motion would be quickly *deadened* by counter-
motions.

Glanville's Scepis Scientifica.

All, all but truth, drops *dead-born* from the press,
Like the last gazette, or like the last address.

Pope.

How cold and *dead* does a prayer appear, that is
composed in the most elegant forms of speech, when
it is not heightened by solemnity of phrase from the
sacred writings.

Addison.

Our dreams are great instances of that activity
which is natural to the human soul, and which is not
in the power of sleep to *deaden* or abate.

Spectator.

Somewhat is left under *dead* walls and dry ditches.

Arbuthnot.

Anodynes are such things as relax the tension of
the affected nervous fibres, or destroy the particular
acrimony which occasions the pain; or what *deadens*
the sensation of the brain, by procuring sleep.

Id. on Diet.

A little rill of scanty stream and bed—

A name of blood from that day's sanguine rain :

And Sanguinetto tells ye where the *dead*

Made the earth wet, and turned the unwilling waters
red.

Byron.

But, hark!—that heavy sound breaks in once
more,

As if the clouds its echo would repeat,

And nearer, clearer, *deadlier* than before!

Arm! arm!—it is—it is—the cannon's opening roar!

Id.

DEAD-EYE, in maritime affairs, a sort of round
flattish wooden block, usually encircled with a
rope, or with an iron band, *g*, and
pierced with three holes through the
flat part, in order to receive a rope
called the lanyard *h*, which, corres-
ponding with three holes in another
dead-eye *i*, creates a purchase employed
for various uses, but chiefly to extend
the standing rigging. In order to form
this purchase, one of the dead-eyes is
fastened in the upper link of each
chain on the ship's side, which is made
round to receive and encompass the
hollowed outer edge of the dead-eye.
After this the lanyard is passed alter-
nately through the holes in the upper
and lower dead-eyes, till it becomes
six-fold; and is then drawn tight by
the application of mechanical powers.

DEAD-LIGHTS, certain wooden ports, which are
made to fasten into the cabin windows, to prevent
the waves from gushing into the ship in a high
sea; and, as they are made exactly to fit windows,
and are strong enough to resist the waves, they
are always fixed in on the approach of a storm,
and the glass lights taken out, which must other-
wise be shattered to pieces by the surges, and
suffer great quantities of water to enter the
vessel.

DEADLY FEUD, in English law-books, a pro-
fession of irreconcilable enmity, till a person is
revenged by the death of his enemy. See FEUD.
Such enmity and revenge were allowed by law in
the time of the Saxons. If any man was killed,
and a pecuniary satisfaction was not made to the
kindred, it was lawful for them to take up arms
and revenge themselves on the murderer: this
was called deadly feud; and probably was the
original of an appeal.

DEAD SEA, in geography, a lake of Judea, into
which the river Jordan discharges itself. See
ASPHALTITES.

DEAD WATER, at sea, the eddy water just
astern of a ship; so called because it does not pass
away so swift as the water running by her sides
does. They say that a ship makes much dead-
water when she has a great eddy following her
stern.

DEAF, *v. a. & adv.*

DEAFEN, *v. a.*

DEAFLY, *adv.*

DEAFNESS, *n. s.*

weak: and this seems confirmed by an

Sax. *ædeafian*, *deaf*;
Goth. *deif*; Dan. *doer*.
Minsheu says, Teut.
daub, from Heb. דָּאָב,

meaning of the word in our language, i.e. sterile, unprofitable. To deprive of hearing; to stun: wanting the sense of hearing, totally or partially; dull; determined against a request or solicitation: applied also to sounds heard imperfectly, i. e. weakly. It requires to before the thing or sound that ought to be heard.

And by so myche more thei wondriden and seiden,
he dide wel alle thingis and he made *deefe* men to
here and doumbe men to speke. *Wiclif. Mark 7.*

A good wif was ther of beside Bathe,
But she was some del *deft*, and that was scathe.
Chaucer. Prolog. to Cunt. Tales.

Come on my right hand, for this ear is *deaf*.
Shakspeare.

I will be *deaf* to pleading and excuses;
Nor tears nor prayers shall purchase out abuses. *Id.*

Hearing hath *deafed* our sailors; and if they
Know how to hear, there's none know what to say.
Donne.

I found such a *deafness* that no declaration from
the bishops could take place. *King Charles.*

A swarm of their aerial shapes appears,
And fluttering round his temples, *deaf*s his ears.
Dryden.

But Salius enters: and, exclaiming loud
For justice, *deafens* and disturbs the crowd. *Id.*

Nor silence is within, nor voice express,
But a *deaf* noise of sounds that never cease;
Confused and chiding like the hollow roar
Of tides receding from the insulted shore. *Id.*

Those who are deaf and dumb, are dumb by conse-
quence from their *deafness*. *Holder.*

Whilst virtue courts them; but, alas, in vain!
Fly from her kind embracing arms,
Deaf to her fondest call, blind to her greatest charms.
Roscommon.

If any sins afflict our life
With that prime ill, a talking wife,
Till death shall bring the kind relief,
We must be patient, or be *deaf*. *Prior.*

Thus you may still be young to me,
While I can better hear than see:
Oh ne'er may fortune shew her spite,
To make me *deaf*, and mend my sight. *Swift.*

Hope, too long with vain delusion fed,
Deaf to the rumour of fallacious fame,
Gives to the roll of death his glorious name.
Pope.

The Dunciad had never been writ, but at his re-
quest, and for his *deafness*; for, had he been able to
converse with me, do you think I had amused my
time so ill? *Id.*

From shouting men, and horns, and dogs, he flies,
Deafened and stunned with their promiscuous cries.
Addison.

Wheel in wide circle, form in hollow square,
And now they front, and now they fly the war,
Pierce the *deaf* tempest with lamenting cries,
Press their parched lips, and close their blood-shot
eyes. *Darwin.*

DEAFNESS arises commonly either from an obstruction or a compression of the auditory nerve; from some collection of matter in the cavities of the inner ear; from the auditory passage being stopped up by some hardened excrement; or lastly, from some excrescence, a swelling of the glands, or some foreign body introduced within it.

There are also diseases of the internal ear that admit of no distinct classification, and sometimes such defects of the auditory nerves, either as a whole or in part, as to occasion this unhappy peculiarity. The sensibility of these nerves, like that of the rest of the body, becomes also weakened by age and various diseases, so as to occasion what is properly called a loss of hearing.

Our object in this paper is to consider deafness distinctly, and as a disease. Its unhappy consequence, in those who are born deaf, DUMBNESS, is an entirely different topic: at least in a nosological point of view. We shall first treat of both distinctly, and then, in the latter article, give some account of the modern efforts to ameliorate the situation of those in whom these disorders are hopeless. And,

1. Of *deafness from deficiency in the auditory organs*.—We are said to possess more accurate and detailed descriptions of the anatomy of the ear than of any other part of the body: in our articles ANATOMY and PHYSIOLOGY we shall be seen to avail ourselves of them. But it is remarkable that the profession of an aurist is almost new to the medical world, and that many diseases and deficiencies of the organs of the ear are yet to be explained. We have perhaps, therefore, less of the just application of knowledge to its diseases than to those of any other part. See ACCOUSTICS.

The office of individual portions of this complicated organ, for instance, has been but very imperfectly ascertained. Numerous observations seem to indicate that considerable injuries and deficiencies of the membrana tympani may take place without producing much effect upon the faculty of hearing. Persons who, by driving smoke taken in at the mouth, in large volumes through the ears, indicate a deficiency of this kind, are often found acute in the perception of sounds; and Sir Astley Cooper mentions an instance in which the membrana tympani of one ear being totally destroyed, and that of the other nearly so, by disease, it appeared that the deafness was inconsiderable, and that sound was most readily perceived by the ear in which no trace of the membrane could be discovered. In the same case, the ear was nicely susceptible of musical tones, the individual played well on the flute, and sang perfectly in tune. The power of accommodating the ear to differing intensity of sound was, indeed, lost for some time after the destruction of the membrane: it, however, gradually returned; and at the period of examination there was no distress arising from that deficiency.

Where deafness has followed the accidental destruction or continued disease of this membrane, it would appear to arise more directly, therefore, from its effect on neighbouring organs, as on the membranes of the fenestra, and the fluid of the labyrinth, which seem to be essential to the distinct conveyance of sound. The tympanum is, in fact, only one of the outward portals of this mysterious temple, though the last of them at which the sound arrives.

Its functions seem to be analogous with those of the pinna, or outward ear, i.e. to regulate

and direct, only in a more perfect degree, the waves and impressions of sound. In the case above quoted, after this membrane had been so materially injured, the muscles of the external ear seemed to acquire a new power of moving upward, and backwards, which was regularly exerted in the effort to catch an indistinct sound. The whole of the pinna, we need hardly observe, has been frequently removed without any abiding injury to the hearing. And in cases where the auricle has never been formed, the functions of the inner ear have been found perfect. Scarpi considers the fenestra rotunda as a species of second tympanum. So long, therefore, as the internal ear is sound and healthy, all the essential operations of this organ will proceed.

One practical remark may be permitted us here, on a very common practice. Sir Hans Sloane has observed, 'that among the many people in England who had applied to him on account of deafness, the far greater part were thrown into their complaints by too often picking their ears, and thereby bringing humors, or ulcerous dispositions, on them.'—*Phil. Trans.* No. 246, p. 406.

2. *Of diseases of the meatus auditorius, or external passage of the ear.*—In this passage, and its secretions, arise the most common impediments to hearing. The exact, healthy quantum of cerumen, or wax, which should be here secreted, has never been ascertained. But in a diseased state of this part of the ear the cerumen has been found completely stopping up the passage, and sometimes forming a false tympanum. The cerumen hardened and permanently lodged on the tympanum is a frequent and uniform cause of deafness. The common application of warm water for this accumulation has never been improved upon. This passage is also subject to ulceration, which produces a great thickening of the integuments, and consequent obstruction. The ichor, exuding from the ulcerated surface, inspissates in the passage, and is accompanied with much fetor. This disease generally yields to the application of solutions of the metallic salts, as of muriated mercury in lime-water; or of vitriolated zinc; or to the use of the unguentum hydrargiri nitratum; calomel, or other alteratives being taken at the same time. (Saunders). Polypous excrescences and other extraneous substances sometimes require to be removed by mechanical means from this passage.

3. *Of diseases or obstructions of the Eustachian tube.*—This forms, in fact, the body of the drum, if we may be allowed the phrase, of which the ear so largely consists. Communicating with the back of the palate, it admits a portion of air to counterbalance that in the meatus, and assists materially, during the vibrations of the tympanum, in perfecting the distinct sensation of sounds. Inveterate deafness is therefore often produced by the disease or obstruction of this organ and its cavity. When air is no longer found here, the tympanum is unduly forced and stretched inward, and thus cannot vibrate as in its perpendicular state.

Obstructions of this tube arise frequently from syphilitic ulcers in the throat, or sloughing in the cynanche maligna. The deafness ensues on

the healing of the ulcers, that is, when the obstruction is complete. The descent of a nasal polypus into the pharynx, and enlarged tonsils, have also been known to close the tube. Sometimes the cavity has been found filled with mucus.

The only symptom to which medical men can advert in this case is, that when the patient blows, with his nose and mouth stopped, he does not experience that peculiar sensation, which arises from the inflation of the tympanum. He speaks only of the loss of sense, and complains of no particular symptom. In this respect the deafness differs from all other species.

Sir Astley Cooper has, however, introduced a method of relieving this previously incurable disease of the ear, by puncturing the tympanum. The effect is said to be an instantaneous restorative to the faculty of hearing. But there is some difficulty in keeping open the puncture, which is, in point of fact, to become, in this case, an artificial Eustachian tube. A large hole diminishes the perfection of the returning tension sense, and a small one is perpetually closing. If the membrane also be much lacerated or detached at its circumference, the tension will be lessened; yet even, in these cases, the patient receives an evident benefit.

The instrument, in this operation, is passed through the meatus and the anterior or inferior part of the tympanum. The position of the manubrium of the malleus demanding this precaution: a little crack will immediately be heard like that which is occasioned in pricking a common drum, particularly if the tube be entirely closed, as the sound will then be more acute, from the rapid entrance of the air. The instrument must not penetrate far into the tympanum, lest it should pierce its vascular lining; and the escape of blood injure the operation.

4. We come now to the more numerous and important diseases of the internal ear.—It is evident that deafness often exists when no apparent cause or morbid affection appears; and that it arises from a nervous insensibility, in some cases, which no surgical aid can remove. The tympanum will appear perfect, and exercise, apparently, its usual functions; and the secretions of the meatus seem healthy. In some cases, complaint is made of great noises in the head, and, as they often correspond with the beating of the pulse, this has been traced to a peculiar perception of the pulsation of the arteries. The organic causes of some of these diseases are even traceable to the brain. Where the deafness has been preceded by local inflammation in the head, evacuations, particularly local ones, are generally prescribed; such as the application of leeches and blisters to the neck and behind the ears; and the general antiphlogistic plan should be pursued more or less, according to the nature of the plethoric symptoms.

Imperfect circulation, on the other hand, and general debility, will sometimes be the cause of deafness; when the usual stimulants of electricity and galvanism have been found effectual, and stimulating liquids may be cautiously dropped into the ear. In the swelling, or enlargement of neighbouring parts of the head or

neck, through scrophulous or syphilitic affections, these disorders, of course, must be attended to, as the root of the disorganisation.

Mr. Saunders has described, at some length, one of the most common and important diseases, connected both with the external and internal ear; and, at the same time, one of the most common causes of deafness that occur. We mean the puriform discharge, or 'running,' as it is popularly called, from the tympanum. He considers it under three states or stages: 1. A simple puriform discharge. 2. A puriform discharge, complicated with fungi and polypi. 3. A puriform discharge, with a caries of the tympanum. The time of transition from one of these stages to another is quite uncertain. In some instances, years do not affect it; and, in others, it seems to advance, almost at once, to a carious state of the bone.

This puriform discharge from the tympanum, he insists, is a local disease, and does not depend on any disordered state of the constitution: general remedies are, therefore, inefficacious. But, as a bad state of health is unfavorable to the healing of any parts, so, in this particular complaint, any disordered condition of the habit should be corrected. The chief dependence is to be placed on direct applications to the parts affected. Injections of vitriolated zinc, acetate of lead, &c., are very efficacious in suppressing the discharge; and their effects may be aided by the external employment of blisters and setons. The fungous and polypous excrescences must be removed or destroyed by mechanical means; they are only incidental occurrences, and their removal reduces the disease to the first stage.

The deafness during the continuance of this discharge is sometimes very considerable, when the real injury which the organ has sustained is trivial. In the first stage, the mere thickening of parts, or the collection of the discharge, must impede the action of the intervening machinery between the external and internal parts of the ear; and, in the second, the mechanical obstruction of the fungous or polypi excludes the pulses of sound. On this account there is often a remarkable increase of the power of hearing, when the discharge is suppressed in the first and second stages. But as the parts are invisible, it is difficult, if not impracticable, to decide *a priori*, how far the power of hearing can be restored. This, however, is no valid objection to attempting the cure. The sense will not be rendered worse by a failure; and if the discharge should be stopped, the disease which caused it is removed, the organ safe from farther injury, and the patient freed from an offensive malady. In the last stage, the sense is almost, if not totally, destroyed; and although the discharge be stopped, the patient's hearing will be very little, if at all, improved.

When this disease is cured, the tympanum is exposed to the free ingress and egress of the air, and the mucilaginous discharge inspissates, as the mucus of the nose, by the exhalation of its watery parts. By this accident the patient's deafness increases at intervals, for which he often seeks relief. The practitioner, on sounding the ear, perceives this hardened matter; and con-

ceiving, as is really the case, that it produces the augmentation of deafness, is tempted to remove it. But nothing stimulative, nor any rude attempts, can be safe, for there is great danger of reproducing the discharge. Having learned that a discharge has pre-existed, it will be expedient to leave it to spontaneous separation. *Saunders's Anatomy and Diseases of the Ear.*

This is frequently the disorder of the ear, attended with violent inflammations of the tympanum, and even with delirium; remarkably resembling, in its fluctuations, the tooth-ache, and often popularly but most improperly treated with similar stimulating applications. Parents and individuals who have the care of children cannot be too observant of the nature of frequent discharges from the ear, and should apply early for a good medical opinion as to their cause.

DEAL, *v. a., v. n. & n. s.* } Sax. *dæl*; Goth.
DEAL'ER, *n. s.* } *dail*; Teut. *deil*;
DEAL'ING, *n. s.* } Belg. *dalen*, from

Gr. *δαιλέω*, says Minshew, to distribute or divide. These are clearly the leading ideas of the word in all its various applications. To separate and distribute in portions; to dispose of in parts; to scatter; to give to different persons. As a neuter verb, to trade; to transact business; and hence, to negotiate and mediate an intercourse between different parties; taking various prepositions, as to deal *by*, deal *in*, and deal *with*. As a substantive, it expresses the part or quantity divided or distributed; the act or practice of apportioning out a pack of cards; a plank of fir, divided, split, or sawn out from the tree. A dealer is a trader, or distributor of various commodities for profit. Dealing, the practise of trading, and hence any kind of business, transaction, or intercourse.

Deal thy bread to the hungry, and bring the poor that are cast out to thy house. *Isaiah lvi. 7.*

And with the one lamb, a tenth deal of flour mingled with the fourth part of an hin of beaten oil. *Exod. xxix. 40.*

The treacherous dealer dealeth treacherously, and the spoiler spoileth. *Isaiah xxi. 2.*

He kept his patient a ful great del
In houres by his magike naturel.
Chaucer. Prolog. to Cant. Tales.

Neither can the Irish, nor yet the English lords, think themselves wronged, nor hardly dealt with, to have that which is none of their own given to them. *Spenser's Ireland.*

When men's affections do frame their opinions, they are in defence of error more earnest, a great deal, than, for the most part, sound believers in the maintenance of truth. *Hooker.*

Concerning the dealings of men who administer government, and unto whom the execution of that law belongeth, they have their judge, who sitteth in heaven. *Id.*

But this was neither one pope's fault, nor one prince's destiny: he must write a story of the empire, that means to tell of all their dealings in this kind. *Raleigh.*

Sometimes he that deals between man and man, raiseth his own credit with both, by pretending greater interest than he hath in either. *Bacon.*

It is generally better to *deal* by speech than by letter ; and by a man himself, than by the mediation of a third. *Id.*

To weep with them that weep, doth ease some *deal* ;
But sorrow flouted at is double death. *Shakespeare.*

Two deep enemies,
Foes to my rest, and my sweet sleep's disturbers,
Are they that I would have thee *deal* upon. *Id.*

What these are !

Whose own hard *dealings* teach them to suspect
The thoughts of others. *Id.*

What a *deal* of cold business doth a man mispend
the better part of life in ! In scattering compliments,
and tendering visits. *Ben Jonson.*

If she hated me, I should know what passion to
deal with. *Sidney.*

Still in the night she weeps, and her tears fall
Down her cheeks along, and none of all
Her lovers comfort her. Perfidiously
Her friends have *dealt*, and now are enemy.

Donne. On the Lamentat. of Jeremy.

Gentlemen were commanded to remain in the
country, to govern the people, easy to be *dealt* with
whilst they stand in fear. *Hayward.*

God's gracious *dealings* with men, are the aids and
auxiliaries necessary to us in the pursuit of piety.

Hammond.

Who then shall guide

His people ? Who defend ? Will they not *deal*
Worse with his followers, than with him they *dealt* ?

Milton.

I have also found, that a piece of *deal*, far thicker
than one would easily imagine, being purposely inter-
posed betwixt my eye, placed in a room, and the
clearer daylight, was not only somewhat transparent,
but appeared quite through a lovely red.

Boyle on Colours.

God did not only exercise this providence towards
his own people, but he *dealt* thus also with other
nations. *Tillotson.*

They buy and sell, they *deal* and traffic. *South.*

Possibly some never so much as doubted of the
safety of their spiritual estate ; and, if so, they have
so much the more reason, a great *deal*, to doubt of it.

Id.

One with a broken truncheon *deals* his blows.

Dryden.

But I will *deal* the more civilly with his two poems,
because nothing ill is to be spoken of the dead. *Id.*

Keep me from the vengeance of thy darts,
Which Niche's devoted issue felt,

When hissing through the skies the feathered deaths
were *dealt*. *Id.*

Such an one *deals* not fairly by his own mind, nor
conducts his own understanding aright. *Locke.*

With the fond maids in palmistry he *deals*,

They tell the secret which he first reveals. *Prior.*

Reflect on the merits of the cause, as well as of the
men who have been thus *dealt* with by their country.

Swift.

How can the muse her aid impart,

Unskilled in all the terms of art ?

Or in harmonious numbers put

The *deal*, the shuffle, and the cut ? *Id.*

I find it common with these small *dealers* in wit and
learning, to give themselves a title from their first
adventure. *Id.*

The Scripture forbids even the countenancing a
poor man in his cause ; which is a popular way of
preventing justice, that some men have *dealt* in,
though without that success which they proposed to
themselves. *Atterbury.*

Wherever I find a great *deal* of gratitude in a poor
man, I take it for granted there would be as much
generosity if he were a rich man. *Pope.*

You wrote to me with the freedom of a friend,
dealing plainly with me in the matter of my own
trifles. *Id.*

Among authors, none draw upon themselves more
displeasure than those who *deal* in political matters.

Addison.

The business of mankind, in this life, being rather
to act than to know, their portion of knowledge is
dealt them accordingly. *Id.*

True logic is not that noisy thing that *deals* all in
dispute, to which the former ages had debased it.

Watts's Logic.

How Spain prepares her banners to unfold,
And Rome *deals* out her blessings and her gold.

Tickell.

The nightly mallet *deals* resounding blows.

Gay.

Nature seldom forms an universal genius ; but
deals out her favours in the present state with a pa-
simonious hand. *Mason.*

I do readily admit that a great *deal* of the wars,
seditions, and troubles of the world did formerly
turn upon the contention between interests that went
by the names of protestant and catholic. *Burke.*

The Goth, the Christian, Time, War, Flood, and
Fire

Have *dealt* upon the seven-hilled city's pride ;
She saw her glories star by star expire,
And up the steep barbarian monarchs ride,
Where the car climbed the capitol.

Byron.

DEAL, in carpentry, a thin kind of fir plank,
formed by sawing the trunk of a tree into a great
many longitudinal divisions, of greater or less
thickness according to the purposes it is in-
tended to serve. A good method of seasoning
planks for deal, is to throw them into salt water
as soon as they are sawed, and keep them there
three or four days, frequently turning them. In
this case they will be rendered much harder, by
drying afterwards in the air and sun ; but neither
this, nor any other method yet known, will pre-
serve them from shrinking. Rods of deal expand
laterally, or cross the grain, in moist weather, and
contract again in dry.

DEAL, in geography, a market town and sea-
port of Kent, between Dover and Sandwich, and
supposed to be the Dola of Ptolemy, and situa-
ted on a flat and level coast. The town of Deal,
except it may be the sea's shrinking a little from
it, is in much the same condition in which it
ever was, even from the earliest accounts. Dr.
Halley has proved, in his *Miscellanea Curiosa*,
that Julius Cæsar landed here, August 26th,
A. A. C. 55. The great conveniency of landing
has been of infinite service to the place ; so that
it is large and populous, divided into the upper
and lower towns, adorned with many buildings,
and is in effect the principal place on the Downs.
To the south of the town is a castle, surrounded
by a ditch ; it consists chiefly of a round tower,
containing apartments for the captain and other
officers, and a battery. The batteries and mar-
tello towers, constructed during the late war,
command from the eminences, every access to the
shore. Anchors, cables, &c., are always ready to

supply ships that may need them. It has a very commodious market held on Tuesday and Wednesday, which is well supplied with every kind of provision, &c. It lies seven miles south by east of Sandwich, and seventy-four east by south of London.

DEALBATION, *n. s.* Lat. *dealbatio*. The act of bleaching or making white.

All seed is white in viviparous animals, and such as have preparing vessels, wherein it receives a manifold dealbation. *Brothne's Vulgar Errors.*

DEAMBULATION, *n. s.* } Lat. *deambula-*
DEAMBULATORY, *adj.* } *tio*. The act, or relating to the practice, of walking abroad. See **AMBULATION**.

DEAMENA, in the mythology, the goddess who was supposed to preside over women during their menses.

DEAN, *n. s.* } Fr. *doyen*; Lat. *decanus*.
DEAN'ERY, *n. s.* } 'From the Greek word *deka*,' says Ayliffe, 'in English, ten, because he was anciently set over ten canons or prebendaries at least in some cathedral church.'

The *dean* and canons, or prebends, of cathedral churches, were of great use in the church; they were not only to be of counsel with the bishop for his revenue, but chiefly for government in causes ecclesiastical. Use your best means to prefer such to those places who are fit for that purpose. *Bacon.*

Take her by the hand, away with her to the *deanery*, and dispatch it quickly. *Shakespeare.*

He could no longer keep the *deanery* of the chapel-royal. *Clarendon.*

Put both deans in one; or, if that's too much trouble,

Instead of the deans make the *deanery* double.

Swift.

DEAN. As there are two foundations of cathedral churches in England, the old and the new (the new are those which Henry VIII., upon suppression of abbeys, transformed from abbot or prior, and convent, to dean and chapter), so there are two means of creating deans; those of the old foundation are appointed to their dignity, much like bishops, the king first issuing his *congé d'elire* to the chapter, the chapter then choosing, and the bishop confirming, and giving his mandate to install them. Those of the new foundation are, by a shorter course, installed by virtue of the king's letters patent, without election or confirmation. This word is also applied to the chief officers of certain peculiar churches or chapels; as the dean of the king's chapel, the dean of the arches, the dean of St. George's chapel at Windsor, and the dean of Bocking in Essex. The dean and chapter are the council of the bishop, to assist him with their advice in affairs of religion, as well as in the temporal concerns of his see. When the rest of the clergy were settled in the several parishes of each diocese, these were reserved for the celebration of divine service in the bishop's own cathedral; and the chief of them, who presided over the rest, obtained the name of *decanus*, or dean, being, probably, at first appointed to superintend ten canons or prebendaries. The chapter, consisting of canons or prebendaries, are sometimes appointed by the king, sometimes by the bishop, and sometimes

elected by each other. The dean and chapter are the nominal electors of a bishop. The bishop is their ordinary and immediate superior; and has, generally speaking, the power of visiting them, and correcting their excesses and enormities. They had also a check on the bishop at common law; for, till the stat. 32, Hen. VIII. cap. 28, his grant, or lease, would not have bound his successors, unless confirmed by the dean and chapter.

DEAN, in geography, a forest of England, in Gloucestershire, between the Severn and the county of Monmouth. The forest once contained 30,000 acres of land, in which were twenty-three parishes, and four market towns, with great abundance of fine timber. It was reckoned the chief support of the English navy; and the Spanish armada, it is said, was expressly commissioned to destroy it. The iron forges have lessened the quantity of wood, but not consumed it, as care is said to be taken in cutting it. The hills abound in iron ore.

DEAN, **GREAT DEAN**, or **MICHAEL DEAN**, a town in the above forest, with an elegant church and handsome spire. Cloth and pins are its chief manufactures. It has a market on Monday, and fairs Easter Monday and October 10th. It lies twelve miles west of Gloucester, fifteen of Monmouth, and 120 south-west of London.

DEAN OF GUILD, in Scottish law, the chief judge of a guild-court. The dean of guild in Edinburgh, and most of the royal boroughs of Scotland, is a member of, and elected by, the town-council; ranks next to the bailies, and continues two years in office.

DEAR, *n. s. & adj.* } Sax. *deop*; Belg. *dier*;
DEAR'BOUGHT, *adj.* } Swed. *dyr*; Isl. *dar*; Goth.
DEAR'LING, *n. s.* } *cher*; from Lat. *carus*, *ca-*
DEAR'LY, *adv.* } *reo*, to want, as Minshew
DEAR'NESS, *n. s.* } conjectures. One much valued or beloved; valuable; beloved; costly; scarce.

They do feed on nectar, heavenly wise,
With Hercules and Hebe, and the rest
Of Venus' *dearlings*, through her bounty blest.

Spenser.

The whole senate dedicated an altar to Friendship, as to a goddess, in respect of the great *deariness* of friendship between them two. *Bacon.*

It is rarely bought, and then also bought *dearly* enough with such a fine. *Id.*

Your brother Glo'ster hates you.

—Oh, no, he loves me, and he holds me *dear*.

Shakespeare.

My brother holds you well, and in *deariness* of heart hath help to effect your ensuing marriage. *Id.*

That kiss

I carried from thee, *dear*; and my true lip

Hath virgin'd it e'er since. *Id. Coriolanus.*

Where life is *deare*, who cares for coyned dross? That, spent, is counted gain; and spared, loss.

Bp. Hall. Satires ii. 5.

O fleeting joys

Of Paradise, *dear-bought* with lasting woe. *Milton.*

He who hates his neighbour mortally, and wisely too, must profess all the *deariness* of friendship, with readiness to serve him. *South*

See, my dear,
How lavish nature has adorned the year.

Dryden.

Turnus shall dearly pay for faith forsown;
And corps, and swords, and shields, on Tyber born.
Id.

Such *dearbought* blessings happen every day,
Because we know not for what things to pray. *Id.*

These are the pleasing moments, in absense my
dearest blessing, either to read something from you,
or be writing something to you; yet I never do it but
I am touched with a sensible regret, that I cannot pour
out in words what my heart is so big with, which is
much more just to your *dear* self (in a passionate re-
turn of love and gratitude) than I can tell you.

Lady Russel's Letters.

Landlords prohibit tenants from plowing, which is
seen in the *dearfulness* of corn. *Swift.*

What made directors cheat the South-sea year?
To feed on ven'son when it sold so *dear*. *Pope.*
And the last joy was *dearer* than the rest. *Id.*

The *dear*, *dear* name, she bathes in flowing tears,
Hangs o'er the tomb. *Addison's Ovid.*

I was, at the time this compliment was paid me,
and am still, much gratified by it. The approbation of
such men ever has been, and ever will be, *dearer* to
me than the most dignified and lucrative stations in
the church. *Bishop Watson.*

How did I hope to vex a thousand eyes!
Oh glorious malice, *dearer* than the prize!
Dr. T. Brown.

DEAR, *adj.* Sax. *dene*, from *deþnan*, to injure.
See DARE. Bitter; hateful; grievous. An obso-
lete word, but frequently used in this sense by
Shakspeare.

Three yere in this wise his lif he ledde,
And bare him so in pees and eke in werre,
Ther n' as no man that Theseus hath *derre*.
Chaucer. Cant. Tales.

What foolish boldness brought thee to their mercies,
Whom thou in terms so bloody, and so *dear*,
Hast made thine enemies?
Shakspeare. Twelfth Night.

Let us return,
And strain what other means is left unto us
In our *dear* peril. *Id. Timon.*

Some *dear* cause
Will in concealment wrap me up a-while:
When I am known aright, you shall not grieve
Lending me this acquaintance. *Id. King Lear.*

Would I had met my *dearest* foe in heaven,
Or ever I had seen that day. *Id. Hamlet.*

The other banished son, with his *dear* sight
Struck pale and bloodless. *Id. Titus Andronicus.*

DEARLY, *adv.* Sax. *dearn*. Secret, or
deep. See DARN. Here applied to deep and
bitter mourning.

At last, as chanced them by a forest side
To pass, for succour from the scorching ray,
They heard a rueful voice, that *dearly* cried
With piercing shrieks. *Spenser.*

DEARTH, *n. s.* The third person, according
to Mr. Tooke, of *deþnan*, to injure. Minshieu
says from Belg. *dier*, dear, and *tiit*, time: a dear
time. 'Dyrtid, as used with the Goths,' says
Mr. Thomson, 'a time of dearness.' It is meta-
phorically applied to the mind.

In times of *dearth*, it drained much coin out of the
kingdom, to furnish us with corn from foreign parts.
Bacon.

Pity the *dearth* that I have pined in,
By longing for that food so long a time. *Shakspeare.*

Of every tree that in the garden grows,
Eat freely with glad heart; fear here no *dearth*.
Milton.

The French have brought on themselves that *dearth*
of plot, and narrowness of imagination, which may be
observed in all their plays. *Dryden.*

There have been terrible years *dearths* of corn, and
every place is strewn with beggars; but *dearths* are
common in better climates, and our evils here lie much
deeper. *Swift.*

DEATH, <i>n. s.</i>	} Sax. <i>deað</i> ; Belg. <i>dood</i> ; Teut. <i>tod</i> , <i>todt</i> , <i>thot</i> ; from Gr. <i>θανάτος</i> , says Minshieu or the Heb. <i>מות</i> , <i>doth</i> . The cessation or extinction of life; the state of the dead; the immediate cause or causer of death; the final perdition of wicked
DEATH-BED,	
DEATHFUL, <i>adj.</i>	
DEATHLESS, <i>adj.</i>	
DEATH-LIKE,	
DEATH'S-DOOR,	
DEATH'S-HEAD,	
DEATH'S-MAN,	
DEATH-WATCH.	

men. A death's man is a public executioner:
death's door, a near approach to death. A death-
watch is an insect making a ticking noise, like a
watch, and supposed to presage death. The
other compounds seem to require no explana-
tion.

For the sorrowe that is aftr God worchith penaunce
into stidefast heeltche, but sorrow of the worlde worchith
deeth. *Wiclif. 2 Cor. vii.*

They cried out, and said, O thou man of God, there
is *death* in the pot. *2 Kings iv. 40.*

He is the mediator of the New Testament, that by
means of *death*, for the redemption of the transgres-
sions, they which are called might receive the promise
of eternal inheritance. *Heb. ix. 15.*

Thou shalt die the *death* of them that are slain in
the midst of the seas. *Ezekiel xxviii. 8.*

We pray that God will keep us from all sin and
wickedness, from our ghostly enemy, and from ever-
lasting *death*. *Church Catechism.*

They were adradde of him as of the *deth*.
His wanning was ful fayre upon an *heth*.
Chaucer. Prol. to Cant. Tales.

He answered naught, but in a traunce still lay,
And on those guileful dazed eyes of his
The cloude of *death* did sit. *Spenser. Faerie Queene.*

As in manifesting the sweet influence of his mercy,
on the severe stroke of his justice; so in this, not to
suffer a man of *death* to live. *Bacon.*

Time itself, under the *deathful* shade of whose
wings all things wither, hath wasted that lively virtue
of nature in man, and beasts, and plants. *Ruleigh.*

In swinish sleep
Their drenched natures lie, as in a *death*.
Shakspeare.

I had rather be married to a *death's head*, with a
bone in his mouth, than to either of these. *Id.*

He's dead; I'm only sorry
He had no other *deathsmen*. *Id.*

Death, a necessary end,
Will come when it will come.
Id. Julius Caesar.

Sweet soul, take heed, take heed of perjury;
Thou art on thy *death-bed*. *Id. Othello.*

Life, by this *death* abled, shall controll
Death, whom thy *death* slew; nor shall to me
Fear of first or last *death* bring miserie,
If in thy life's book my name thou enroll.

Donne. Divine Poems.

There was a poor young woman, that had brought
herself even to *death's door* with grief for her sick
husband. *L' Estrange.*

No blacks, nor soul-bells, nor *death's-heads* on our
rings, nor funeral sermons, nor tombs, nor epitaphs,
can fix our hearts enough upon our frail and miserable
condition. *Bishop Hall. Sermon 30.*

On seas, on earth, and all that in them dwell,
A *deathlike* quiet and deep silence fell. *Waller.*

Blood, death, and *deathful* deeds, are in that noise,
Ruin, destruction at the utmost point. *Milton.*

A *deathlike* sleep!

A gentle wafting to immortal life! *Id.*

God hath only immortality, though angels and hu-
man souls be *deathless*. *Boyle.*

I myself knew a person of great sanctity, who was
afflicted to *death's-door* with a vomiting.

Taylor's Worthy Communicant.

These are such things as a man shall remember
with joy upon his *death-bed*; such as shall cheer and
warm his heart, even in that last and bitter agony.

South's Sermons.

He must his acts reveal,
From the first moment of his vital breath,
To his last hour of unrepenting *death*. *Dryden.*

Then round our *death-bed* every friend should run,
And joy us of our conquest early won. *Id. Fables.*

Your cruelty was such, as you would spare his life
for many *deathful* torments. *Sidney.*

Faith and hope themselves shall die,
While *deathless* charity remains. *Prior.*

A *death-bed* repentance ought not indeed to be ne-
glected, because it is the last thing that we can do.
Atterbury.

Oft, as in airy rings they skim the heath,
The clam'rous lapwings feel the leaden *death*. *Pope.*
Black Melancholy sits, and round her throws
A *death-like* slumber, and a dread repose. *Id.*

These eyes behold

The *deathful* scene; princes on princes rolled. *Id.*

Misers are muckworms, silkworms beaus,
And *deathwatches* physicians. *Id.*

He caught his *death* the last county-sessions, where
he would go to see justice done to a poor widow-woman.
Addison.

The solemn *deathwatch* clicked the hour she died.
Gay.

We learn to presage approaching death in a family
by ravens, and little worms, which we therefore call
a *deathwatch*. *Watts.*

Death opens the gate of fame, and shuts the gate
of envy after it,—it unlooses the chain of the captive,
and puts the bondsman's task into another man's
hands. *Sterne.*

Heavens! on my sight what sanguine colours
blaze!

Spain's *deathless* shame! the crimes of modern days!
When avarice, shrouded in religion's robe,
Sailed to the west, and slaughtered half the globe.

Darwin.

Ever since the passing of the acts, which punish
with *death*, the stealing in shops, or houses, or on
board ships, property of certain stated values, juries
have, from motives of humanity, been in the habit of

frequently finding by their verdicts, that the things
stolen were worth much less than had been clearly
proved. *Sir S. Romilly.*

Horribly beautiful! but on the verge,
From side to side, beneath the glittering morn,
An Iris sits, amidst the infernal surge,
Like Hope upon a *death-bed*, and, unworn
Its steady dyes, while all around is torn
By the distracted waters. *Byron.*

DEATH is generally considered as the separa-
tion of the soul from the body; in which sense
it stands opposed to life, which consists in their
union. Physicians have defined death by a
total stoppage of the circulation of the blood,
and a cessation of the animal and vital functions
consequent thereon, as respiration, sensation,
&c. The signs of death are in many cases very
uncertain. If we consult what Winslow or
Bruchier have said on this subject, we shall be
convinced, that between life and death the shade
is so very undistinguishable, that all the powers
of art can scarcely determine where the one ends
and the other begins. The color of the visage,
the warmth of the body, and the suppleness of
the joints, are but uncertain signs of life still
subsisting; while, on the contrary, the paleness
of the complexion, the coldness of the body, the
stiffness of the extremities, the cessation of all
motion, and the total insensibility of the parts,
are but uncertain marks of death begun. In the
same manner also, with regard to the pulse and
breathing; these motions are often so small, that
it is impossible to perceive them. This ought
to be a caution against hasty burials, especially
in cases of sudden death, drowning, &c. See
DROWNING.

DEATH, in law. The law makes a distinction
between natural and civil death. 1. Civil death
takes place, where a person is not actually dead,
but adjudged so by law. Thus, if any person,
for whose life an estate is granted, remains be-
yond sea, or is otherwise absent, seven years,
and no proof of his being alive, he shall be ac-
counted naturally dead. 2. Natural death
means a person actually dead.

DEATH-WATCH, in natural history, a species
of ferme, so called on account of an old tradi-
tion, that its beating or ticking in a sick room,
is a sure sign of death. See FERMES.

DEAURATE, *v. a. & part. pass.* } Lat. *deau-*
DEAURATION, *n. s.* } *ro.* To gild;
gilded.

And while the twilight and the rowis rede
Of Phœbus' light were *deaurat* alike.

Chaucer. Comp. of Black Knight.

DEBACCHATION, *n. s.* Lat. *debacchatio*.
A raging; a madness.

DEBAR, *v. a.* From *de* and *bar*. See BAR.
To exclude; to preclude; to shut out from any
thing; to hinder.

The same boats and the same buildings are found
in countries *debarred* from all commerce by unpassable
mountains, lakes, and deserts. *Raleigh's Essays.*

Not so strictly hath our Lord imposed
Labour, as to *debar* us when we need
Refreshment, whether food, or talk between,
Food of the mind. *Milton.*

The thread-bare client's poverty
Debarres the attorney of his wonted fee ?

Bishop Hall's Satires, v. 3.

Civility, intended to make us easy, is employed in jaying chains and fetters upon us, in *debarring* us of our wishes, and in crossing our most reasonable desires.

Swift.

DEBARR, *v. a.* Lat. from *de* and *barba*. To deprive of his beard.

DEBARK, *v. a. & n.* Fr. *debarquer*. To disembark. See EMBARK. Also to strip a tree of its bark.

From hence it appears that the branches of *debarbed* oak-trees produce fewer leaf-buds, and more flower-buds, which last circumstance I suppose must depend on their being sooner or later *debarbed* in the vernal months.

Darwin.

DEBASE', *v. a.* Old Fr. *debas*, from *de* and *bas*. See BASE. To

DEBASEMENT. reduce, degrade, adulterate, lessen in strength.

It is a kind of taking God's name in vain, to *debase* religion with such frivolous disputes.

Hooker.

Words so *debased* and hard, no stone was hard enough to touch them on.

Hudibras.

He reformed the coin, which was much adulterated and *debased* in the times and troubles of king Stephen.

Hale.

Homer intended to teach, that pleasure and sensuality *debase* men into beasts.

Broomo on the Odyssey.

It is a wretched *debasing* of that sprightly faculty, the tongue, thus to be made the interpreter to a goat or boar.

Government of the Tongue.

A man of large possessions has not leisure to consider of every slight expense, and will not *debase* himself to the management of every trifle.

Dryden.

Restraining others, yet himself not free; Made impotent by power, *debased* by dignity.

Id.

As much as you raise silver, you *debase* gold; for they are in the condition of two things put in opposite scales; as much as the one rises, the other falls.

Loche.

He ought to be careful of not letting his subjects *debase* his style, and betray him into a meanness of expression.

Addison.

DEBATE', *v. a., v. n. & n. s.* Fr. *debattre*; DEBATE'ABLE, *adj.* Ital. *debatire*,

DEBATER, } from Lat. *ba-*
 DEBATEFUL, } *two* to beat.

DEBATEMENT. To controvert,

dispute, contend for: as a neuter verb to deliberate (taking on or upon); to dispute. Debateable is disputable; liable or likely to be contended for: a debate, a formal and personal dispute, or controversy.

But God temper the hodi ghyuyng more worships to it to whom it faillide, that *debate* be not in the hodi.

Wiclif. 1 Cor 12.

Debate thy cause with thy neighbour himself, and discover not a secret to another.

Proverbs xxv. 9.

The spake our Hoste, A, Sire, ye shuld ben hende And curteis, as a man of your estat, In compaignie we will have no *debat*.

Chaucer. Cant. Tales.

Your several suits

Have been considered and *debated* on.

Shakspeare.

Now, lords, if heaven doth give successful end

To this *debate* that bleedeth at our doors,
 We will our youth lead on to higher fields,
 And draw no swords but what are sanctified.

Id.

Without *debatement* further, more or less,
 He should the bearers put to sudden death.

Id.

Have I not vowed for slunning such *debate*,
 (Pardon ye Satyres), to degenerate?

And, wading low in this plebeian lake,
 That no salt wave shall froath upon my backe.

Bp. Hall. Satires, iv. 4.

The French requested, that the *debatable* ground, and the Scottish hostages, might be restored to the Scots.

Hayward.

He could not *debate* any thing without some commotion, even when the argument was not of moment.

Clarendon.

'Tis thine to ruin realms, o'erturn a state;

Between the dearest friends to raise *debate*.

Dryden.

A way that men ordinarily use, to force others to submit to their judgments, and receive their opinion in *debate*, is to require the adversary to admit what they alledge as a proof, or to assign a better.

Locke.

He presents that great soul *debating* upon the subject of life and death with his intimate friends.

Tatler.

It is to diffuse a light over the understanding, in our enquiries after truth, and not to furnish the tongue with *debate* and controversy.

Watts's Logic.

It is knowledge and experience that make a *debater*.

Chesterfield.

DEBAUCH', *v. a. & n. s.* Fr. *desbaucher*;

DEBAUCHEE', *n. s.* } from Lat. *debauc-*

DEBAUCH'ER, } *chor*, to offer sa-

DEBAUCH'ERY, } crifice to Bacchus:

DEBAUCH'MENT. } anciently written

in our language *deboise* and *deboish*. To corrupt; to violate; to vitiate, whether by lewdness or intemperance: a fit or habit of intemperance or lewdness. Debauchery, the constant practice of them. A *debauchee* is one who is himself devoted to lewdness or excess; a *debaucher*, one who corrupts others, or seduces them into vice.

Here do you keep a hundred knights and squires Men so disordered, so *debauched*, and bold,

That this our court, infected with their manners,

Shews like a riotous inn.

Shakspeare. King Lear.

Reason once *debauched*, is worse than brutishness.

Bp. Hall. Contemplations.

They told them ancient stories of the ravishment of chaste maidens, or the *debauchment* of nations, or the extreme poverty of learned persons.

Taylor's Rule of Holy Living.

This it is to counsel things that are unjust; first, to *debauch* a king to break his laws, and then to seek protection.

Dryden's Spanish Friar.

The first physicians by *debauch* were made;

Excess began, and sloth sustains, the trade.

Dryden.

A man must have got his conscience thoroughly *debauched* and hardened, before he can arrive to the height of sin.

South.

Could we but prevail with the greatest *debauchees* among us to change their lives, we should find it no very hard matter to change their judgments.

Id.

Oppose vices by their contrary virtues; hypocrisy by sober piety, and *debauchery* by temperance.

Spratt.

He will for some time contain himself within the bounds of sobriety; till within a little while he recovers his former *debauch*, and is well again, and then his appetite returns.

Calamy.

No man's reason did ever dictate to him, that it is reasonable for him to *debauch* himself by intemperance and brutish sensuality.

Tillotson.

Debauched from nature, how can we relish her genuine productions? As well might a man distinguish objects through the medium of a prism, that presents nothing but a variety of colours to the eye, or a maid pining in the green sickness prefer a biscuit to a cinder. Smollet.

DEBE'L, v. a. } Lat. *debello*. To conquer; to overcome in
DEBE'LLATE, v. a. } war. Obsolete.
DEBELLA'TION, n. s. }

It doth notably set forth the consent of all nations and ages, in the approbation of the extirpating and *debelling* of giants, monsters, and foreign tyrants, not only as lawful, but as meritorious even of divine honour. *Bacon's Holy War.*

Him long of old

Thou didst *debel*, and down from heaven cast
With all his army. Milton.

DEBENTURE, n. s. } Lat. *debentur*, of
DEBENTURED, part. } *debeo*, to owe. A note of debt, generally now used respecting goods entitled to an allowance at the custom-house.

You modern wits, should each man bring his claim,
Have desperate *debentures* on your fame;
And little would be left you, I'm afraid,
If all your debts to Greece and Rome were paid. Swift.

DERENTURE is used at the custom-house for a kind of certificate, signed by the officers of the customs, which entitles a merchant, exporting goods, to the receipt of a bounty or draw back. The forms of *debentures* vary according to the merchandise exported.

DEBILITATE, v. a. } Lat. *debilito*, of *de*
DEBIL'LE, adj. } and *habilis*, fit, pro-
DEBILITA'TION, n. s. } per. To weaken; make
DEBIL'ITY, n. s. } unfit for exertion; to en-
emasculate. *Debile* is weak, enfeebled. The substantives express a confirmed or habitual state of weakness.

I have not washed my nose that bled,
Or foiled some *debile* wretch, which without note
'There's many else have done. Shakspeare.

Methods I am partaker of thy passion,
And in thy case do glass mine own *debility*. Sidney.

The weakness cannot return any thing of strength, honour, or safety to the head, but a *debilitation* and ruin. King Charles.

The spirits being rendered languid, are incapable of purifying the blood, and *debilitated* in attracting nutriment. Harvey on Consumptions.

In the lust of the eye, the lust of the flesh, and the pride of life, they seemed as weakly to fail as their *debilitated* posterity ever after. Brown's Vulgar Errors.

Aliment too vaporous or perspirable will subject it to the inconveniencies of too strong a perspiration, which are *debility*, faintness, and sometimes sudden death. Arbuthnot.

Thus Conscience pleads her cause within the breast,
Though long rebelled against, not yet suppressed,
And calls a creature formed for God alone,
For Heaven's high purposes, and not his own,
Calls him away from selfish ends and aims,
From what *debilitates* and what inflames. Cowper. Retirement.

DEBIR, in ancient geography, a sacerdotal city of Palestine, in the southern part of the tribe of Judah, not far from Hebron. It is also called Kirjath-sepher, and Kirjath-sannah. See Josh. xv. 15, 49.

DE-BOIS-BLANC, an island of the United States, belonging to the north-western territory, which was a voluntary gift of the Chippeway Indians, at the treaty of peace, concluded by general Wayne, at Greenville, in 1795.

DERONAIR, adj. } Fr. *debomair*, pro-
DERONAIR'LY, adv. } bably from *de bon air*. Civil; gentle; courteous; well-bred; gay.

He, in the first flowre of my freshest age,
Betrothed me unto the only haire
Of a most mighty king, most rich and sage;
Was never prince so faithful and so faire,
Was never urince so meek and *debonnaire*. Spenser. Faerie Queene.

Crying, let be that lady *debonair*. Id.

Zephyr met her once a-maying;
Filled her with thee, a daughter fair,
So buxom, blithe, and *debonair*. Milton.

The nature of the one is *debonair* and accostable; of the other, retired and supercilious; the one quick and sprightly, the other slow and saturnine. Howell's Vocal Forest.

And she that was not only passing fair,
But was withal discreet and *debonair*,
Resolved the passive doctrine to fulfil. Dryden.

DEBORAH, רבקה, Heb.; i.e. a bee; the nurse of Rebecca, whom she accompanied from Padanaram, and survived. She lived in Jacob's family to an advanced age, and died near Bethel, where she was buried under an oak. Gen. xxiv. 59. xxxv. 8.

DEBORAH, a prophetess, poetess, and judge of Israel, who excited Barak to deliver his country from the oppressions of Jabin. See BARAK. Her message to Barak, her reproof for his cowardice, and her song upon the victory, are recorded in Judges iv. & v. She flourished about A. M. 2651.

DEBRUISED, in heraldry, a term peculiar to the English, by which is intimated the restraint of any animal, debarred of its natural freedom, by any of the ordinaries being laid over it. *Argent*, a lion rampant; or *debruised* by a fesse; *gules*, name Charleston.

DEBT, n. s. } Old Fr. *debte*; Lat. *de-*
DEBT'ED, part. } *bitum*, of *debeo*, to owe.
DEBT'OR, n. s. & adj. } That which is owed or
DEBT-ROLL, n. s. } due to another; obligation. Debted is used by Shakspeare for our modern word indebted. A debtor is he who owes money or any other obligation.

I am *debtor* both to the Greks and to the Barbarians, both to the wise and to the unwise. Rom. i. 14.

This worthy man ful wel his wit besette;
Ther wiste no wight that he was in *dette*,
So stedfastly dide he his governance
With his bargeines and with his cheersance. Chaucer. Prof. Cant. Tale.

There was one that died greatly in *debt*: Well, says one, if he be gone, then he hath carried five hundred ducats of mine with him into the other world.

Bacon's Apothegms.

Your son, my lord, has paid a soldier's *debt*; He only lived but till he was a man,
But like a man he died. *Shakespeare. Macbeth.*

Which do amount to three odd ducats more
Than I stand *debted* to this gentleman. *Shakespeare.*

I'll bring your latter hazard back again,
And thankfully rest *debtor* for the first. *Id.*

Like to a merchant's *debt-rolle* new defac't,
When some cracked manour crost his books at last.
Bp. Hall's Satires, iv. 1.

To this great loss a sea of tears is due;
But the whole *debt* not to be paid by you.
Waller.

The fashion of imperial grandeur is imitated by all inferior and subordinate sorts of it, as if it were a point of honour. They must be cheated of a third part of their estates; two other thirds they must expend in vanity; so that they remain *debtors* for all the necessary provisions of life, and have no way to satisfy those *debts*, but out of the succours and supplies of rapine. *Cowley.*

Swift, a thousand pounds in *debt*,
Takes horse, and in a mighty fret
Rides day and night. *Swift.*

An atheist is but a mad ridiculous derider of piety; but a hypocrite makes a sober jest of God and religion; he finds it easier to be upon his knees than to rise to a good action: like an impudent *debtor*, who goes every day to talk familiarly to his creditor, without ever paying what he owes. *Pope.*

When I look upon the *debtor* side, I find such innumerable articles, that I want arithmetick to cast them up: but when I look upon the creditor side, I find little more than blank paper. *Addison.*

If he his ample palm
Could haply on ill-fated shoulder lay
Of *debtor*, strait his body, to the touch
Obsequious, as whilom knights were wont,
To some enchanted castle is conveyed. *Philips.*

Let him who sleeps too much, borrow the pillow of a *debtor*. *A Spanish Proverb, quoted by Johnson.*

DEBT, NATIONAL. See FUNDS, and NATIONAL DEBT.

DEBULLITION, *n. s.* Lat. *debullitio*. A bubbling or seething over.

DECACUMINATED, *adj.* Lat. *decacuminatus*. Having the top cut off.

DECADE, *n. s.* } Gr. *deka*; Lat. *decas*.

DECAGON. *n. s.* } The sum of ten; a number containing ten. A decagon (adding γωνία, a corner), is a figure in plane geometry, containing ten sides and angles.

Men were not only out in the number of some days, the latitude of a few years, but might be wide by whole olympiads, and divers *decades* of years.

Broune's Vulgar Errors.

We make cycles and periods of years; as, *decades* centuries, and chiliads, chiefly for the use of computations in history, chronology, and astronomy.

Holder on Time.

All ranked by ten; whole *decades*, when they dine,
Must want a Trojan slave to pour the wine. *Pope.*

DECADENCY, *n. s.* Fr. *decadence*. Decay; fall. See DECAY.

DECAGYNIA, from δέκα, ten, and γυνή, a woman, an order in the class decandria, consisting of plants, whose flowers are furnished with ten stamina, and the same number of styles. See BOTANY.

DE'CALOGUE, *n. s.* Gr. δέκαλογος. The ten commandments given by God to Moses.

The commands of God are clearly revealed both in the *decalogue* and other parts of sacred writ.

Hammond.

DECALOGUE, in theology, the ten commandments, which were engraved by God on two tables of stone. The Jews, by way of eminence, call these commandments, after Deut. x. 4, the ten words, from whence they had afterwards the name of decalogue. The church of Rome has, in some catechisms, united the second commandment, in an abridged form, with the first; and, to make their number complete, has divided the tenth into two. The reason is obvious. See Stillingfleet's Works, vol. vi. It should, in fairness, however, be added, that Jews, as well as Christians, have divided the commandments differently.

DECA'MP, *v. n.* } Fr. *decamper*. To shift
DECA'MPMENT, *n. s.* } the camp; to move off.
The act of shifting the camp.

The king of Portugal would *decamp* on the twenty-fourth in order to march upon the enemy. *Tutler.*

DECANT, *v. a.* } Fr. *decanter*; Lat. *de-*
DECA'NTER, *n. s.* } *canto*. To pour off gently
DECANTA'TION. } by inclination. A decanter is a vessel made for receiving wine perfectly clear.

Take aqua fortis and dissolve it in ordinary coined silver, and pour the coloured solution into twelve times as much fair water, and then *decant* or filtrate the mixture, that it may be very clear. *Boyle.*

They attend him daily as their chief,
Decant his wine, and carve his beef. *Swift.*

DECANUS, in Roman antiquity, an officer who presided over the ten officers, and was head of the contubernium, or serjeant of a file of soldiers.

DECAPITATE, *v. a.* } Lat. *decapito*. To
DECAPITATION. *n. s.* } behead. A beheading, or DECOLLATION, which see.

DECAPOLIS, in ancient geography, a district beyond Jordan, almost wholly belonging to the half tribe of Manasseh; before the captivity, called Bethsan; but after, occupied by heathens. It comprises, as the name denotes, ten principal cities on the other side of the Jordan, except Scythopolis, which stood on this side, but its territory lay on the other.

DECAPROTI, DECEMPRIMI, in Roman antiquity, officers for gathering the taxes. The decaproti were also obliged to pay for the dead, or to answer to the emperor, for the quota parts of such as died out of their own estates.

DECASPERMUM, in botany, a genus of the monogynia order and icosandria class of plants: CAL. perianth turbinated, quinquefid at the apex: COR. five roundish petals. The stamina are many filiform filaments, a little shorter than the corolla: PERICARP. is a dry, globular, decemlocular berry, with solitary egg-shaped seeds.

DECASTYLE, in the ancient architecture, a building, with an ordinance of ten columns in front, as the temple of Jupiter Olympius was.

DECA'Y, *v. a., & n. & n. s.* } Fr. *decheoir* ;
 DECA'YER, *n. s.* } from Lat. *de*
and cado. To impair; to make less in value; to
 decline; to lose excellence; to be impaired.

And if thy brother be waxen poor, and fallen in
decay with thee, then thou shalt relieve him.

Levit. xxv. 35.

Cut off a stock of a tree, and lay that which you
 cut off to putrefy, to see whether it will *decay* the rest
 of the stock. *Bacon.*

Infirmity, that *decays* the wise, doth ever make
 better the fool. *Shakspeare.*

I am the very man

That, from your first of difference and *decay*,

Have followed your sad steps. *Id. King Lear.*

Your water is a *sore decayer* of your whorson dead
 body. *Id. Hamlet.*

She has been a fine lady, and paints and hides
 Her *decays* very well. *Ben Jonson.*

And those *decays*, to speak the naked truth,

Through the defects of age, were crimes of youth.
Denham.

He was of a very small and *decayed* fortune, and
 of no good education. *Clarendon.*

In Spain our springs, like old men's children, be
Decayed and withered from their infancy. *Dryden.*

The monarch oak,

Three centuries he grows, and three he stays

Supreme in state, and in three more *decays*.
Dryden.

By reason of the tenacity of fluids, and attrition of
 their parts, and the weakness of elasticity in solids,
 motion is much more apt to be lost than got, and is
 always upon the *decay*. *Newton.*

Each may feel increases and *decays*,
 And see now clearer and now darker days. *Pope.*

Now kindred merit fills the sable bier,
 Now lacerated friendship claims a tear;
 Year chases year, *decay* pursues *decay*,
 Still drops some joy from withering life away.
Johnson. Vanity of Human Wishes.

Alas! the lofty city! and alas!
 The trebly hundred triumphs! and the day
 When Brutus made the dagger's edge surpass
 The conqueror's sword in bearing fame away!
 Alas, for Tully's voice, and Virgil's lay,
 And Livy's pictured page!—but these shall be
 Her resurrection; all beside—*decay*. *Byron.*

DECCAN, or the Country of the South, an
 extensive region of Hindostan, bounded on the
 north by the Narbuddah, and on the south by the
 Krishna, or Kistnah river, extending across the
 peninsula from sea to sea. It was possessed,
 in former times, by the rajah of Telingana, and
 the Hindoo princes, and first invaded by the
 Mahomedans in 1293. They plundered the
 city of Deoghir, now called Dowlatabad, and the
 Tagara of Ptolemy. In the year 1306 the city
 and fortress were taken, and the rajah, Ram Deo,
 carried to Delhi. In 1323, Warunkul, the ca-
 pital of Telingana, was also taken by the Ma-
 hommedans, and the Hindoo dynasty overthrown.
 For some time the Deccan remained subject to
 Delhi, till the governor having rebelled, laid the
 foundation of an independent state, under the
 title of the Bhamenee sultans, whose capital was
 Kalberga; this was in 1347. The Bhamenee
 dynasty, consisting of fourteen persons, continu-
 ed till the year 1518. On the dissolution of
 this empire, the Deccan was subdivided into the
 five following states: the Adil Shahy, or Beja-

pore kingdom; the Kootub Shahy, or Golconda;
 the Nizam Shahy, or Ahmednagur; the Um-
 maud Shahy, or Berar; the Beered Shahy, or
 Beeder.

During the reign of Aurungzebe, all these
 states were reduced, and the Deccan again an-
 nexed to the kingdom of Delhi. It was then
 divided into six governments, viz. Khandesh,
 Ahmednagur, Beeder, Golconda, Bejapore, and
 Berar. In subsequent reigns, these governments
 came under the superintendence of the Nizam,
 who, taking advantage of the weak state of the
 court of Delhi, after the Persian invasion in
 1739, threw off his allegiance, became independ-
 ent, and fixed his court at Hyderabad. The
 Mahrattas, however, were now rising into power,
 and the nizam was obliged to cede to them the
 territories now constituting the dominions of
 the peishwa. See HINDOSTAN.

DECEASE, *v. n. & n. s.* Lat. *decedo, decessus*,
 from *de* and *cado*, to fall. To die; to quit life:
 death.

He tells us Arthur is *deceased* to-night.

Shakspeare.

Lands are by human law, in some places, after the
 owner's *decease*, divided unto all his children; in
 some, all descendeth to the eldest son. *Hooker.*

You shall die

Twice now, where others, that mortality
 In her fair arms holds, shall but once *decease*.
Chapman.

His latest victories still thickest came,
 As, near the centre, motion doth increase;
 Till he, pressed down by his own weighty name,
 Did, like the vestal, under spoils *decease*. *Dryden.*

DECEIT, *n. s.* } Old Fr. *decepte*; Lat.
 DECEIT'FUL, *adj.* } *deceptus*; of *de* and
 DECEIT'FULLY, *adv.* } *capio, captus*, to take.
 DECEIT'FULNESS, *n. s.* } A taking by fraud; a
 fallacy; a cheat: deceitful is, fraudulent in any
 degree: deceitfulness, tendency to deceive.

My lips shall not speak wickedness, nor my tongue
 utter *deceit*. *Job xxvii. 4.*

The care of this world, and the *deceitfulness* of
 riches, choke the word, and he becometh unfruitful.
Matt. xii. 22.

His demand

Springs not from Edward's well-meant honest love,
 But from *deceit*, bred by necessity. *Shakspeare.*

I grant him bloody,

Luxurious, avaricious, false, *deceitful*. *Id.*

Exercise of form may be *deceitfully* dispatched of
 course. *Wotton.*

Those, which are plain-hearted in themselves, are
 the bitterest enemies to *deceit* in others.

Bp. Hall's Contemplations.

Outward appearances are *deceitful* guides to our
 judgment, or affections. *Id.*

The lovely young Lavinia once had friends,

And fortune smiled, *deceitfull* on her birth.
Thomson.

Human nature is the same now as it was then: the
 heart as *deceitful*: and the necessity of watching,
 knowing, and keeping it, the same. *Mason.*

He, who still expects *deceit*,

Only teaches how to cheat. *Johnson's Poems.*

A true artist should put a generous *deceit* on the
 spectators, and effect the noblest designs by easy meth-
 ods. *Burke.*

DECEIVE', *v. a.*

DECEIV'ABLE, *adj.*

DECEIV'ABLENESS, *n. s.*

DECEIV'ER,

DECEIV'ING, *part.*

by fraud; hence to mislead, guide into error, whether by design or otherwise. Deceivable is used both for fraudulent, and for being liable or particularly exposed to fraud. Deceivableness also expresses both artfulness, and a liability to be deceived.

For synne through occasioun taken bi the commaundement *disseyuyde* me, and bi that it slough me.

Wiclif. Romayns vii.

Be not borun aboute with ech wynd of techyng in the weiwardnesse of men in sutil witt to the *disseyuyng* of errowr.

Id. Effesies 4.

With all *deceivableness* of unrighteousness

2 Tim. ii. 10.

Sporting themselves with their own *deceivings*, while they feast with you.

2 Pet. ii. 13.

It is no wonder thing though it be so ;

A lousy jogelour can *deceiven* thee,

And parde yet can I more craft than he.

Chaucer. Cant. Tales.

Wine is to be forborne in consumptions, for that the spirits of the wine prey upon the viscid juice of the body intercommunion with the spirits of the body, and so *deceive* and rob them of their nourishment.

Bacon.

It is good to consider of deformity, not as a sign, which is more *deceivable*, but as a cause which seldom faileth of the effect.

Id.

As for Perkin's dismissal out of France, they interpreted it not as if he were detected for a counterfeit *deceiver*.

Id.

Sigh no more, ladies, sigh no more ;

Men were *deceivers* ever :

One foot in sea, and one on shore ;

To one thing constant never. *Shakspeare.*

They are worthy to be *deceived* that value things as they seem.

Bishop Hall. Contemplations.

He received nothing but fair promises, which proved *deceivable*.

Hayward.

O ever failing trust

In mortal strength ! and oh, what not in man *Deceivable* and vain ?

Milton.

Man was not only *deceivable* in his integrity, but the angels of light in all their clarity.

Broune's Vulgar Errors.

How happy he that loves not, lives !

if him neither hope nor fear *deceives*

To fortune who no hostage gives.

Denham.

They raised a feeble cry with trembling notes, But the weak voice *deceived* their gasping throats.

Dryden.

Those voices, actions, or gestures, which men have not by any compact agreed to make the instruments of conveying their thoughts one to another, are not the proper instruments of *deceiving*, so as to denominate the person using them a liar or *deceiver*.

South.

Some have been *deceived* into an opinion, that there was a divine right of primogeniture to both estate and power.

Locke.

Adieu the heart-expanding bowl,

And all the kind *deceivers* of the soul.

Pope.

He that has a great patron, has the advantage of his negligence and *deceivableness*.

Government of the Tongue.

By thus disguising our motives, we may impose upon men but at the same time we impose upon ourselves and, whilst we are *deceiving* others, our own

French, *decevoir* ;
Lat. *decipio*, from
de and *capio*. See

DECEIT. To de-

lude, cheat, deprive

hearts *deceive* us : and, of all impostures, *self-deception* is the most dangerous, because least suspected.

Mason.

I have not loved the world, nor the world me ;

But let us part fair foes : I do believe,

Though I have found them not, that there may be

Words which are things,—hopes which will not *de-*
ceive,

And virtues which are merciful, nor weave

Snares for the failing.

Byron.

DECEMBER, *n. s.* Lat. *december*. The last month of the year, named *december*, or the *tenth* month, when the year began in March.

What should we speak of

When we are old as you ? When we shall hear

The rain and wind beat dark *December*. *Shakspeare.*

Men are April when they woo, and *December* when they wed.

Id. As You Like It.

DECEMBER is the month wherein the sun enters the tropic of Capricorn, and makes the winter solstice. Among the ancient Romans, December was under the protection of Vesta. Romulus assigned it thirty days, Numa reduced it to twenty-nine, which Julius Cæsar increased to thirty-one. In the reign of Commodus this month was called, by way of flattery, Amazonius, in honor of a courtesan, whom that prince passionately loved, and had painted like an Amazon ; but this name died with that tyrant. At the end of December they had the juveniles ludi ; and the country people kept the feast of the goddess Vacuna in the fields, having then gathered in their fruits, and sown their corn ; whence seems to be derived our popular festival called harvest-home.

DECEMPEDA, *δικοπους*, from *decem*, ten, and *pes*, a foot ; ten-feet rod, an instrument used by the ancients in measuring. It was a rule, or rod, divided into ten feet ; the foot was subdivided into twelve inches, and each inch into ten digits. The *decempeda* was used both in measuring land, like the chain among us ; and by architects, to give the proper dimensions and proportions to the parts of their buildings, which use it still retains.

DECEMPEDAL, *adj.* Lat. *decempeda* ; from Gr. *δκαγ*. Ten feet in length.

DECEMVIRI, ten magistrates of absolute authority among the Romans. The privileges of the patricians raised dissatisfaction among the plebeians ; who, though freed from the power of the Tarquins, still saw that the administration of justice depended upon the will and caprice of their superiors ; and it was at length agreed, that ten new magistrates, called *decemviri*, should be elected from the senate, to put the project into execution. Their power was absolute, all other offices ceased after their election, and they presided over the city with regal authority. They were invested with the badges of the consul, in the enjoyment of which they succeeded by turns ; and only one was preceded by the fasces, and had the power of assembling the senate, and confirming decrees. The first *decemviri* were, Appius Claudius, T. Genutius, P. Sextus, Sp. Veturius, C. Julius, A. Manlius, Ser. Sulpitius, Pluratiatus, T. Romulus, and Sp. Posthumius ; A.U.C. 302. Under them the

laws, which had been exposed to public view, were publicly approved of as constitutional, and ratified by the priests and augurs, in the most solemn manner. They were ten in number, and were engraved on tables of brass; two were afterwards added, whence they were called the laws of the twelve tables, *leges XII tabularum*, and *leges decemvirales*. The decemviral power, which was at first beheld by all ranks of people with the greatest satisfaction, was continued; but in the third year after their creation, the decemviri became odious on account of their tyranny; and the attempt of Ap. Claudius to ravish Virginia totally abolished the office. Consuls were again appointed, and tranquillity re-established in the state. There were other officers in Rome called decemviri, who were originally appointed in the absence of the prætor, to administer justice. Their appointment became afterwards necessary, and they generally assisted at sales, called *subhastationes*, because a spear, *hasta*, was fixed at the door of the place where the goods were exposed to sale. They were called decemviri *litibus judicandis*. The officers, whom Tarquin appointed to guard the Sybilline books, were also called decemviri. They were originally two in number, called *duumviri*, till A.U.C. 388, when their number was increased to ten, five of whom were chosen from the plebeians and five from the patricians. Sylla increased their number to fifteen, hence called *quindecimviri*.

DECENCE, or } Fr. *decence*; Lat. *de-*
DECENCY, *n. s.* } *cel*, it becometh. Pro-
DECENT, *adj.* } priety of form or man-
DECENTLY, *adv.* } ner, principally the lat-
ter; modesty. Decent is, becoming fit; suitable; and hence sometimes applied to that which is grave or formal.

Come, pensive nun, devout and pure,
Sober, steadfast, and demure,
All in a robe of darkest grain
Flowing with majestic train,
And sable stole of Cyprus lawn
O'er the decent shoulders drawn.

Milton.

Those thousand *decencies* that daily flow
From all her words and actions.

Id.

They could not *decently* refuse assistance to a person, who had punished those who had insulted their relation.

Broome.

And must I own, she said, my secret smart,
What with more *decence* were in silence kept?

Dryden.

Since there must be ornaments both in painting and poetry, if they are not necessary, they must at least be *decent*; that is, in their due place, and but moderately used.

Id.

Past hope of safety, 'twas his latest care,
Like falling Cæsar, *decently* to die.

Id.

The consideration immediately subsequent to the being of a thing, is what agrees or disagrees with that thing; what is suitable or unsuitable to it; and from this springs the notion of *decency* of indecency, that which becomes or misbecomes.

South.

In good works there may be goodness in the general: but *decence* and gracefulness can be only in the particulars in doing the good.

Sprat.

Immodest words admit of no defence;
For want of *decency* is want of sense.

Roscommon.

Performed what friendship, justice, truth require,
What could he more, but *decently* retire? *Swift.*

Were the offices of religion stript of all the external *decencies* of worship, they would not make a due impression on the minds of those who assist at them.

Atterbury.

She speaks, behaves, and acts just as she ought;
But never, never reached one generous thought;
Virtue she finds too painful an endeavour,
Content to dwell in *decencies* for ever.

Pope.

Sentiments which raise laughter, can very seldom be admitted with any *decency* into an heroic poem.

Addison.

Give every bishop income enough, not for display of wordly pomp and fashionable luxury, but to enable him to maintain works of charity, and to make a decent provision for his family.

Bishop Watson.

DECENNIAL, *adj.* From Lat. *decennium*. Continuing for the space of ten years.

DECENNALIA, ancient Roman festivals, celebrated by the emperors every tenth year of their reign, with sacrifices, games, and largesses for the people. Augustus first instituted these solemnities, in which he was imitated by his successors.

DECENNOVAL, *adj.* } Lat. *decem* and
DECENNOVARY } *novem*. Relating
to the number nineteen.

Meton, of old, in the time of the Peloponnesian war, constituted a *decennoval* circle, or of nineteen years; the same which we now call the golden number.

Holder.

Seven months are retrenched in this whole *decennovary* progress of the epochs, to reduce the accounts of her motion and place to those of the sun.

Id.

DECEPTION, *n. s.* From Lat. *deceptio*.
DECEPTIBILITY, See DECEIT. Fraud;
DECEPTIBLE, *adj.* { the act or means of
DECEPTIOUS, } fraud. Deceptibility,
DECEPTIVE, } and deceptible, ex-
DECEPTORY. } press a liability to
imposture; deceptions and deceptive, the power or design of deceiving. Deceptory, says Dr. Johnson, is, containing means of deceit.

Yet there is a credence in my heart,
That doth invert the' attest of eyes and ears;
As if those organs had *deceptions* functions,
Created only to calumniate.

Shakespeare.

Reason, not impossibly, may meet
Some spacious object by the foe suborned,
And fall into *deception* unaware.

Milton.

The first and father cause of common error, is the common infirmity of human nature; of whose *deceptible* condition, perhaps, there should not need any other evicition, than the frequent errors we shall ourselves commit.

Broune.

Being thus divided from truth in themselves, they are yet farther removed by adventitious *deception*.

Id.

All *deception* is a misapplying of those signs, which, by compact or institution, were made the means of men's signifying or conveying their thoughts.

South.

Some errors are so fleshed in us, that they maintain their interest upon the *deceptibility* of our decayed natures.

Glennville.

DECEPT, *adj.* } Lat. *deceptus*. Crop-
DECEPTIBLE, *adj.* } ped; taken off. That
DECEPTION, *n. s.* } which may be, or is
taken off; the act of taking off.

If our souls are *deceptions* of our parents, then I must have been guilty of all the sins that ever were committed by my progenitors ever since Adam.

Glanville.

DECERTATION, *n. s.* Lat. *decertatio*. A contention; a striving; a dispute.

DECESSION, *n. s.* Lat. *decessio*. A departure; a going away.

DECHARM, *v. a.* Fr. *decharmer*. To counteract a charm; to disenchant.

Notwithstanding the help of physick, he was suddenly cured by *decharming* the witchcraft. *Harvey.*

DECIDE, *v. a. & v. n.* Fr. *decider*; Ital.

DECIDEDLY, *adv.* *decidere*; Lat. *decido*, from *de* and *cædo*, or *scindo*. To cut

DECIDER, *n. s.* short a controversy,

DECISION, says Minsheu. To

DECISIVE, *adj.* fix an event or issue;

DECISIVELY, *adv.* sue; to determine.

DECISIVENESS, *n. s.*

DECISORY.

A decider is a judge of controverted matters. Decision, the act or habit of determining, and sometimes of determining promptly. Decisory, able to determine.

The time approaches,

That will with due *decision* make us know

What we shall say we have, and what we owe.

Shakspeare.

Pleasure and revenge

Have ears more deaf than adders to the voice

Of any true *decision*. *Id.*

The day approached, when fortune should *decide*

The important enterprise, and give the bride.

Dryden.

Their arms are to the last *decision* bent,

And fortune labours with the vast event. *Id.*

In council's oft, and oft in battle tried,

Betwixt thy master and the world *decide*.

Glanville.

The man is no ill *decider* in common cases of property, where party is out of the question. *Swift.*

Such a reflection, though it carries nothing perfectly *decisive* in it, yet creates a mighty confidence in his breast, and strengthens him much in his opinion.

Atterbury.

War is a direct appeal to God for the *decision* of some dispute, which can by no other means be determined. *Id.*

Who shall *decide*, when doctors disagree

And soundest casuists doubt?

Pope

I cannot think that a jester, a monkey, a droll or a puppet, can be proper judges or *deciders* of controversy.

Watts.

For on the event,

Decisive of this bloody day, depends

The fate of kingdoms.

Philips.

I never troubled myself with answering any arguments which the opponents in the divinity-schools brought against the articles of the church, nor ever admitted their authority as *decisive* of a difficulty; but I used on such occasions to say to them, holding the New Testament in my hand, 'En sacrum codicem!'

Bp. Watson.

DECIDENCE, *n. s.* Lat. *decidentia*. The quality of being shed, or of falling away: the act of falling away.

Men observing the *decidence* of their horn, do fall upon the conceit that it annually rotteth away, and successively reneweth again.

Browne's Vulgar Errors.

DECIDUOUS, *adj.* Lat. *deciduus*. Falling; not perennial; not lasting through the year.

In botany, the perianthium, or calyx, is *deciduous*, with the flower. *Quincy.*

DECIL, in astronomy, an aspect or position of two planets, when they are distant from each other a tenth part of the zodiac.

DECIMAL, *adj.* Lat. *decimus*. Numbered or multiplied by ten.

In the way we take now to name numbers by millions of millions of millions, it is hard to go beyond eighteen, or, at most, four-and-twenty *decimal* progressions, without confusion. *Locke.*

DECIMAL ARITHMETIC, the art of computing by decimal fractions. See **ARITHMETIC**, Index.

DECIMATE, *v. a.* Lat. *decimus*. To **DECIMATE**, *n. s.* tithe; to take the tenth; a tithing; a selection by lot of every tenth soldier, in a general mutiny, for punishment.

By *decimation* and a tithed death,

Take thou the destined tenth. *Shakspeare.*

A *decimation* I will strictly make

Of all who my Charinus did forsake;

And of each legion each centurion shall die.

Dryden.

DECIMATION was a punishment inflicted by the ancient Romans, on such soldiers as quitted their posts, or behaved themselves cowardly in the field. The names of the guilty were put into an urn, or helmet, and as many were drawn out as made the tenth part of the whole number, and those were put to the sword, and the others saved. The ancient Roman militia, to punish whole legions when they had failed in their duty, made the soldiers draw lots, and put every tenth man to death for an example. The Romans had also the *vicesimatio*, and even *centisimatio*, when only the twentieth or hundredth man suffered by lot.

DECIPHER, *v. a.* Fr. *dechiffre*, from *de* and *cipher*. See **CIPHER**. To explain that which is written in ciphers; hence to unfold; to explain; to write out.

Zelmae, that had the same character in her heart, could easily *decipher* it. *Sidney.*

Assurance is writ in a private character, not to be read, nor understood, but by the conscience, to which the Spirit of God has vouchsafed to *decipher* it.

South.

Could I give you a lively representation of guilt and horror on this hand, and point out eternal wrath and *decipher* eternal vengeance on the other, then might I shew you the condition of a sinner hearing himself denied by Christ. *Id.*

Then were laws of necessity invented, that so every particular subject might find his principal pleasure *deciphered* unto him, in the tables of his laws.

Locke.

DECIPHERING, the art of reading or explaining ciphers. See **CIPHER**.

DECIUS (Cn. Metius), a native of Pannonia, sent by the emperor Philip, to appease a sedition in Mæsia. Instead of obeying his master's command, he assumed the imperial purple, and soon after marched against him, and, at his death, became the only emperor. He signalled himself against the Persians; but when he marched against the Goths, he pushed his horse

into a deep marsh, from which he could not extricate himself, and perished; with all his army, by the darts of the barbarians, A. D. 251, after a reign of two years.

DECIVS MUS, the name of three patriotic Romans, viz. 1. a celebrated consul, who, after many glorious exploits, devoted himself to the gods manes, for the safety of his country, in a battle against the Latins, about 340 years before the Augustan age. 2. His son, Decius Mus, imitated his example, and devoted himself, in like manner, in his fourth consulship, when fighting against the Gauls and Samnites. 3. His grandson also did the same in the war against Pyrrhus and the Tarentines.

DECK, *v. a. & n. s.* } Sax. *decan, decan* ;
DECKER, *n. s.* } Bel. *decken*, from Lat.
tego, tectum. To cover; to adorn; ornament;
dress. A deck is the covering of a ship's hold.

His goodly image, living eucnemore
In the divine resemblance of your face,
Which with your virtues ye embellish more,
And native beauty deck with heavenly grace.

Spenser. Sonnets.
We have also raised our second decks, and given
more vent thereby to our ordnance, trying on our
nether overloop. *Raleigh.*

Sweet ornament! that decks a thing divine.
Shakspeare.
Long may'st thou live to wait thy children's loss,
And see another, as I see thee now,
Decked in thy rights, as thou art stalled in mine. *Id.*

Her keel plows hell,
And deck knocks heaven. *Ben Jonson.*
The ruder Satyre should go ragged and bare,
And show his rougher and his hairy hide,
Tho' mine be smooth, and deckt in careless pride.
Bp. Hall. Defence to Eury.

Ye mists and exhalations, that now rise
From hill or steaming lake, dusky or grey,
Till the sun paint your fleecy skirts with gold;
In honour to the world's great Author, rise!
Whether to deck with clouds the uncoloured sky,
Or wet the thirsty earth with falling showers,
Rising or falling, still advance his praise. *Milton.*
Now the dew with spangles decked the ground,
A sweeter spot of earth was never found. *Dryden.*

At sun-set to their ship they make return,
And snore secure on decks till rosy morn.
Id. Æneid.
If any, born and bred under deck, had no other in-
formation but what sense affords, he would be of opi-
nion that the ship was as stable as a house.
Glanville.

Besides gems, many other sorts of stones are regu-
larly figured: the amianthus, of parallel threads,
as in the pile of velvet; and the selenites, of parallel
plates, as in a deck of cards. *Grew.*
It was intended by the means of these precepts, not
to deck the mind with ornaments, but to protect it
from nakedness; not to enrich it with affluence, but
to supply it with necessities.

Johnson. Preface to Preceptor.

Deck, the planked floors of a ship, which
connect the sides together, and serve as different
platforms to support the artillery and lodge the
men; as also to preserve the cargo from the sea,
in merchant-vessels. As all ships are broader
at the lower deck than on the next above it, and
as the cannon thereof are always heaviest, it is

necessary that the frame of it should be much
stronger than that of the others; and, for the
same reason, the second, or middle-deck, ought
to be stronger than the upper-deck or fore-castle.
Ships of the first and second rates are furnished
with three whole decks, reaching from the stem
to the stern, besides a fore-castle and a quarter-
deck, which extends from the stern to the main-
mast; between which and the fore-castle, a va-
cancy is left in the middle, opening to the upper
deck, and forming what is called the waist. The
inferior ships of the line-of-battle are equipped
with two decks and a-half; and frigates, sloops,
&c. with one gun-deck and a-half, with a spar-
deck below to lodge the crew. The decks are
formed and sustained by the beams, the clamps,
the water-ways, the carlings, the ledges, the knees,
and two rows of small pillars, called stanchions,
&c. See SHIP-BUILDING.

DECK, FLUSH, implies a continued floor laid
from stem to stern, upon one line, without any
steps or intervals.

DECK, HALF, a space under the quarter-deck
of a ship of war, contained between the fore-
most bulk-head of the steerage and the forepart
of the quarter-deck. In the colliers of North-
umberland, the steerage itself is called the half-
deck, and is usually the habitation of the crew.

DECKENDORF, a town of Bavaria, near
the Danube. In the year 1633 it was taken by
the troops of the duke of Saxe-Weimar, and re-
taken by the Swedes in 1641. It is twenty-eight
miles north-west of Passau, and thirty-eight
E.S.E. of Ratisbon. Long. 12° 55' E., lat.
46° 50' N.

DECLAIM, *v. a. & n.* } Fr. *declamer*; Ital.
DECLAIMER, *n. s.* } *declamatore*; of Lat.
DECLAIMING, *n. s.* } *declamo*, from *de* and
DECLAMATION, } *clamo*, to call aloud.
DECLAMATORY, *adj.* } —To harangue; to
speak with formality or vehemence; to address
the passions rather than the judgment. Some-
times a college theme or composition is termed
particularly, a declamation.

The cause why declamations prevail so greatly, is,
for that men suffer themselves to be deluded.

Hooker.
What are his mischiefs, consul? You declaim
Against his manners, and corrupt your own.

Ben Jonson.
This a while suspended his interment, and became
a declamatory theme amongst the religious men of that
age. *Wotton.*

Thou mayest forgive his anger, while thou makest
use of the plainness of his declamation. *Taylor.*

He has run himself into his own declamatory way,
and almost forgotten that he was now setting up for
a moral poet. *Dryden.*

The splendid declaimings of novices and men of heat.
South.

It is usual for masters to make their boys declaim on
both sides of an argument. *Swift.*

Your salamander is a perpetual declaimer against
jealousy. *Addison.*

Who could, I say, hear this generous declamator,
without being fired at his noble zeal? *Tatler.*

Dress up all the virtues in the beauties of ora-
tory, and declaim aloud on the praise of goodness.
Watts.

I every week imposed upon myself a task of composing a theme or a *declamation* in Latin or English. I had great pleasure in lately finding among my papers two of these *declamations*; there is nothing excellent in either of them, yet I cannot help valuing them, &c. *Bishop Watson.*

DECLAMATION may be defined a speech made in public, in the tone and manner of an oration, uniting the expression of action to the propriety of pronounciation, in order to give the sentiment its full impression upon the mind. See **ORATORY**. The word is now principally used in a derogatory sense.

DECLARE, *v. a. & v. n.* } Fr. *declarer*; Span. **DECLARABLE**, *adj.* and Port. *declarar*;
DECLARATION, *n. s.* Lat. *declaro*, of *de* and *clarus*, clear.
DECLARATIVE, *adj.* and *clarus*, clear.
DECLARATORY, *adj.* To make clear, plain,
DECLARATORILY, *adv.* } or well known. As
DECLAREDLY, *adv.* a neuter verb, with
DECLAREMENT, *n. s.* } for or against, to publish an opinion or resolution. That is declarable which is capable of proof: declaration and declamation, the instrument or act of making a thing clear or known: declarative is explanatory: declaratorily, in the form of a declaration: declaratory, affirmative, or that which openly expresses a doubtful, obscure sense, or law: declaredly, avowedly. Declaring, as a substantive, is synonymous with declaration.

Declare his glory among the heathen.

1 Chron. xvi. 24.

Which things, the most part of our old martyrs rather than they would doe, or once kneel or offer up one crumbe of incence before an image, suffered most cruel and terrible deaths, as the histories of them at large do declare.

Homilies. Sermon against Perill of Idolatry.

And bi three sabotis he *declaride* to hem of scrip-turis, and openyde and schewide, that it bihofte crist to suffer, and rise aghen fro deeth.

Wiclif. Dedi. 17.

Nought may the woful spirit in myn herte
Declare o' point of all my sorwes smerte
To you my lady, that I love most,
But I bequethe the service of my gost.

Chaucer. Cant. Tales.

They on humble knee

Making obeysaunce, did the cause *declare*
Why they were come her roiall state to see,
To prove the wide report of her great maiestee.

Spenser. Faerie Queene.

His promises are nothing else but *declarations* what God will do for the good of men. *Hooker.*

In Caesar's army somewhat the soldiers would have had, yet they would not *declare* themselves in it, but only demanded a discharge. *Bacon.*

This is *declarable* from, the best writers. *Browne.*

Crystal will calsky into electricity; that is, into a power to attract straws, or light bodies; and convert the needle freely placed, which is a *declatement* of very different parts. *Id.*

Andreas Alciatus the civilian, and Francisus de Cordua, have both *declamatorily* confirmed the same. *Id. Vulgar Errors.*

To *declare* this a little, we must assume that the surfaces of such bodies are exactly smooth. *Boyle.*

The internal faculties of will and understanding *declaring* and *declaring* against them. *Taylor.*

These blessings are not only *declaratory* of the good pleasure and intention of God towards them, but likewise of the natural tendency of the thing. *Tillotson.*

There are no where so plain and full *declarations* of mercy and love to the sons of men, as are made in the gospel. *Id.*

The sun by certain signs *declares*,
Both when the south projects a stormy day,
And when the clearing north will puff the cloud away.
Dryden's Virgil.

God is said not to have left himself without witness in the world; there being something fixed in the nature of men, that will be sure to testify and *declare* for him. *South's Sermons.*

Though wit and learning are certain and habitual perfections of the mind, yet the *declaration* of them, which alone brings the repute, is subject to a thousand hazards. *South.*

To this we may add the vox populi, so *declarative* on the same side. *Swift.*

A *declared* gout is the distemper of a gentleman; whereas, the rheumatism is the distemper of a hackney-coachman or chairman, who are obliged to be out at all weathers, and in all hours. *Chatterfield.*

I have had and used the opportunities of conversing with men of the greatest wisdom and fullest experience in those matters, and I do *declare* to you most solemnly and most truly, that on the result of this reading, thinking, experience, and communication, I am not able to come to an immediate resolution in favour of a change of the groundwork of our constitution. *Burke.*

My *declared* opposition to the increased and increasing influence of the Crown had made a great impression on His Majesty's mind; for on the day I did homage, he asked the Duke of Rutland if his friend the Bishop of Landaff was not a great enemy to the influence of the Crown. *Bishop Watson.*

DECLINE, *v. a., v. n. & n. s.* } Fr. *decli-*
DECLIN'SION, *n. s.* } *ner*; Span. *declinar*;
DECLINABLE, *adj.* } and Port. *de-*
DECLINATION, *n. s.* } *clinar*; Ital. *declinare*;
DECLINATOR, } *Lat. declino*,
DECLINATORY. }

from *deorsum*, downwards, and *clino*, to bind; (Gr. *κλινω*).—*Minsheu*. To bend downwards; to bring down; to shun; avoid; sink: as a neuter verb, to lean or incline downward; to deviate; to sink; decay. Decline, as well as declension, signifies also the state of decrease, or alteration for the worse; a tendency to a less degree of excellence; descent. Declinable is principally a term of grammar, and expresses that quality of words whereby they can be traced to their roots. Declination, and declinator, are also scientific terms, for which see the articles following:

Neither shalt thou speak in a cause to *decline* after many, to wrest judgment. *Exodus xxiii. 2.*

And now fair Phœbus 'gan *decline* in haste
His weary waggon to the western vale. *Spenser.*

The queen, hearing of the *declination* of a monarchy, took it so ill, as she would never after hear of his suit. *Bacon.*

They'll be by the fire, and presume to know
What's don i' th' capitol; who's like to rise,
Who thrives, and who *declines*. *Shakspeare.*

Sons at perfect age, and fathers *declining*, the father should be as a ward to the son. *Id.*

A beauty-waining and distressed widow,
Even in the afternoon of her best days,
Seduced the pitch and height of all his thoughts,
To base declension. *Id. Richard III.*

Since the muses do invoke my power,
I shall no more decline that sacred bower,
Where Gloriana, their great mistress, lies. *Waller.*

Hope waits upon the flow'ry prime;
And summer, though it be less gay,
Yet is not looked on as a time

Of declination or decay. *Id.*

Sometimes nations will decline so low
From virtue, which is reason, that no wrong,
But justice, and some fatal curse annexed,
Deprives them of their outward liberty. *Milton.*

And nature, which all acts of life designs,
Not like ill poets, in the last declines. *Denham.*

He had wisely declined that argument, though in
their common sermons they gave it. *Clarendon.*

If it should be said that minute bodies are indis-
soluble, because it is their nature to be so, that would
not be to render a reason of the thing proposed, but,
in effect, to decline rendering any. *Boyle.*

That a precent creature should disapprove and re-
pent of every declination and violation of the rules of
just and honest, this right reason, discoursing upon
the stock of its own principles, could not but infer.

South's Sermons.

Thus then my loved Euryalus appears;
He looks the prop of my declining years! *Dryden.*

Autumnal warmth declines;

Ere heat is quite decayed, or cold begun. *Id.*

There is no declination of latitude, nor variation of
the elevation of the pole, notwithstanding what some
have asserted. *Woodward.*

Thy rise of fortune did I only weel,
From its decline determined to recede. *Prior.*

We may reasonably allow as much for the declen-
sion of the land from that place to the sea, as for the
immediate height of the mountain. *Barnet's Theory.*

Those fathers lived in the decline of literature. *Swift.*

Faith and morality are declined among us. *Id.*

God, in his wisdom, hath been pleased to load our
declining years with many sufferings, with diseases,
and decays of nature. *Id.*

Whatever they judged to be most agreeable or dis-
agreeable, they would pursue or decline. *Atterbury.*

Supposing there were a declination of atoms, yet will
it not effect what they intend; for then they do all
decline, and so there will be no more concurrence than
if they did perpendicularly descend. *Ray.*

You decline musa, and construe Latin, by the help
of a tutor, or with some English translation. *Watts.*

There are several ways to know the several planes;
but the readiest is by an instrument called a declina-
tory, used to the variation of your place. *Moron.*

Declension is only the variation or change of the
termination of a noun, whilst it continues to signify
the same thing. *Clarke's Latin Grammar.*

And leaves the semblance of a lover, fixt

In melancholy deep, with head declined,
And love-dejected eyes. *Thomson.*

The surest way to conquer, is sometimes to decline
a battle; to weary out the enemy, by keeping him at
bay. *Mason.*

But, though the felon on his back could dare
The dreadful leap, more rational, his steed
Declined the death, and wheeling swiftly round,
Or e'er his hoof had pressed the crumbling verge.

Cowper.

This praise, O Cheronian sage, is thine!
Why should this praise to thee alone belong?
All else from Nature's moral path decline,
Lured by the toys that captivate the throng.

Beattie.

Statues of glass—all shivered—the long file
Of her dead Doges are declined to dust;
But where they dwell, the vast and sumptuous pile
Bespeaks the pageant of their splendid trust.

Byron.

DECLINATION, in astronomy, is either north
or south, and either true or apparent, accord-
ing as the real or apparent place of the object is
considered. See ASTRONOMY.

DECLIVITY, *n. s.* } Old Fr. *declivité*;
DECLIVORS, *adj.* } from the Lat. *declivus*,
declino. See DECLINE. Descend; obliquity;
downwards; gradual descent, opposed to ac-
clivity.

Rivers will not flow unless upon declivity, and their
sources be raised above the earth's ordinary surface,
so that they may run upon a descent. *Woodward.*

I found myself within my depth; and the decli-
vity was so small, that I walked near a mile before I
got to the shore. *Gulliver's Travels.*

And on thy happy shore a temple still,
Of small and delicate proportion, keeps,
Upon a mild declivity of hill,
Its memory of thee; beneath it sleeps
Thy current's calmness. *Byron.*

DECOCT, *v. a.* } Fr. *decoction*; Ital. *de-*
DECOCTION, *n. s.* } *coctione*; Span. *decoccion*;
DECOCTIBLE, *adj.* } from Lat. *decoctus*, of *de*
DECOCTER, *n. s.* } and *coquo*, to seethe. To
extract the virtues of any thing by boiling, or
heat. Shakspeare uses it, barbarously enough,
for strengthening by boiling; decoction is the
act of boiling to extract the virtue, or the pre-
paration decocted; and the latter seems the
meaning also of decocture.

Sena loath its windiness by decocting; and subtle
or windy spirits are taken off by incusion or evapo-
ration. *Baron.*

In infusion, the longer it is, the greater is the part
of the gross body that goeth into the liquor; but in
decoction, though more goeth forth, yet it either
pergeth at the top, or setteth at the bottom. *Bacon.*

Can sodden water, their barley broth,
Decoet their cold blood to such valiant heat?

Shakspeare.

They distil their husbands' land
In decoctions; and are manned
With ten empirics, in their chamber
Lying for the spirit of amber. *Ben Jonson.*

There she decoets, and doth the food prepare;
There she distributes it to every vein;
There she expels what she may fity spare. *Darvis.*

The lineaments of a white lily will remain after
the strongest decoction. *Arnolmet.*

DECOLLATE, *v. a.* } Fr. *decoller*. From
DECOLLATION, *n. s.* } Lat. *decollatio*, *de* and
collum, the neck. To behead; a beheading, or
decapitation. Applied also metaphorically

A fine piece (a painting) of a decollated head of
St. John the Baptist was shewn to a Turkish Empe-
ror; he praised many things, but he observed that

the skin did not shrink from the wounded part of the neck.
Burke on the Sublime.

He by a decollation of all hope, annihilated his mercy; this, by an immoderancy thereof, destroyed his justice.
Brown.

DECOMPOSE, *v. a.* } *Fr. decomposer* ;
DECOMPOSITE, *adj.* } *Lat. decompono*,
DECOMPOSITION, *n. s.* } *decompositus*, of
DECOMPOUND, *v. a. & adj.* } *de* and *compono*,
composui, to COMPOSE, which see. To compound a second time, to dissolve (chemically), seem alike the meaning of both verbs. Decomposite and decompound, as adjectives, mean compounded a second time. Decomposition, the act or practice of so compounding, or a resolution of the parts of things chemically.

Decomposites of three metals, or more, are too long to enquire of, except there be some compositions of them already observed.
Bacon.

The pretended salts and sulphur are so far from being elementary parts extracted out of the body of mercury, that they are rather, to borrow a term of the grammarians, *decompound* bodies, made up of the whole metal and the menstruum, or other additaments employed to disguise it.
Boyle.

We consider what happens in the compositions and *decompositions* of saline particles.
Id.

No body should use any compound or *decompound* of the substantial verbs.
Arbuthnot and Pope.

When a word stands for a very complex idea, that is compounded and *decompounded*, it is not easy for men to form and retain that idea.
Locke.

If the violet, blue, and green be intercepted, the orange, and red will compound upon the paper an orange; and then if the intercepted colours be let pass, they will fall upon this compounded orange, and, together with it, *decompound* a white.
Newton.

Bees' wax becomes bleached by exposure to the sun and dews in a similar manner as metals become calcined or rusty, viz., by the water on their surface being *decomposed*; and hence the inflammable material which caused the colour becomes united with vital air forming a new acid, and is washed away.
Darwin.

In preparing the salt from the brine, there is a refuse part, which is formed by the separation and *decomposition* of the grosser particles from the pure salt.
Sir T. Barnard.

DECOMPOSITION, in chemistry, usually signifies the disunion or separation of the constituent parts of bodies. It differs from mere mechanical division, in that, when a body is chemically decomposed, the parts into which it is resolved are essentially different from the body itself; but though a mechanical force is applied to it ever so long, or if with ever so much violence, the minutest particles into which the body may be reduced, still retain their original nature. Thus, let nitre be reduced to ever so fine a powder, each particle retains the nature of nitre as much as the compounded mass; but, if oil of nitriol is applied, a decomposition takes place, and one of the largest component parts of the nitre rises in the form of a smoking acid spirit, which never could have been suspected to lie hid in the neutral salt. See **CHEMISTRY**.

DECORATE, *a. a.* } *Fr. decorer* ; *Ital. decorare* ; from *Lat. decoratus*, *n. s.* } *corature* ; from *Lat. decoratus*, *n. s.* } *coro*, of *decus*, honor. To **DECORATE**, *n. s.* } adorn, beautify, dress, embellish. Decorament seems synonymous with decoration.

The ensigns of virtues contribute to the ornament of figures; such as the *decorations* belonging to the liberal arts, and to war.
Dryden.

After all, to inherit is not to acquire, to *decorate* is not to make.
Johnson.

DECOROUS, *adj.* } *Lat. decorus, decet*,
DECORUM, *n. s.* } it becometh. See **DECORATE**. Befitting, becoming, proper, suitable to character or station; therefore decorum is becoming gravity and seemliness of behaviour.

If your master
Would have a queen his beggar, you must tell him
That majesty, to keep decorum, must
No less beg than a kingdom.
Shakspeare

I am far from suspecting simplicity, which is held to trespass in points of decorum.
Wotton.

Every one is a virtuoso, of a higher or lower degree: every one pursues a Grace, and courts a Venus of one kind or another. The venustums, the hourstums, the decorum of things, will force its way.
Shaftesbury.

Beyond the fixed and settled rule
Of vice and virtue in the schools,
The better sort shall set before 'em
A grace, a manner, a decorum.
Prior.

Gentlemen of the army should be, at least, obliged to external decorum: a prodigal life and character should not be a means of advancement.
Swift.

It is not so decorous, in respect of God, that he should immediately do all the meanest and triflingest things himself, without any inferior or subordinate minister.
Roy.

If the prudence of reserve and decorum dictates silence in some circumstances, in others prudence of a higher order may justify us in speaking our thoughts.
Burke.

No hand of friends or heirs be there,
To weep, or wish, the coming blow;
No maiden, with dishevelled hair,
To feel, or feign, decorous woe.
Beattie.

DECORTICATE, *v. a.* } *Lat. decortico*.—
DECORTICATION, *n. s.* } To divest of the bark or husk; to husk; to peel; to strip.

Take great barley, dried and *decorticated*, after it is well washed, and boil it in water.
Arbuthnot.

DECOY, *v. a. & n. s.* } From *Goth. duck* and
DECOY-DUCK, *n. s.* } *kui*, or *Dut. kock*, a cage. To entrap ducks into a net, or otherwise; and hence to entrap or ensnare generally. The decoy-duck is the instrument of lure. See below.

A fowler had taken a partridge, who offered to *decoy* her companions into the snare.
L'Estrange.

These exuberant productions of the earth became a continual *decoy* and snare: they only excited and fermented lusts.
Woodward.

The Devil could never have had such numbers, had he not used some as *decoys* to ensnare others.

Government of the Tongue.
An old dramdrinker is the Devil's *decoy*. *Berkley.*

There is a sort of ducks, called *decoy-ducks*, that will bring whole flights of fowl to their retirements, where are conveniences made for catching them.

Mortimer.

Decoyed by the fantastic blaze,
Now lost, and now renewed, he sinks absorpt,
Rider and horse.

Thomson.

A stifled smile of stern vindictive joy
Brightened one moment Edwin's starting tear,
But why should gold man's feeble mind *decoy*
And innocence thus die by doom severe? *Beattie.*

DECOY, among fowlers, a place made for catching wild fowl. A decoy is generally made where there is a large sheet of water surrounded with wood, and beyond that a marshy and uncultivated country. As soon as the evening sets in, the decoy rises, as they term it, and the wild fowl feed during the night. The decoy-ducks are fed with hemp-seed, which is thrown over the skreens in small quantities, to bring them forwards into the pipes or canals, and to allure the wild fowl to follow, as this seed floats. There are several pipes, as they are called, which lead up a narrow ditch that closes at last with a funnel net. Over these pipes, which grow narrower from their first entrance, is a continued arch of netting suspended on hoops. It is necessary to have a pipe or ditch for almost every wind that can blow, as upon this circumstance it depends which pipe the fowl will take to; and the decoy-man always keeps on the leeward side of the ducks, to prevent his effluvia reaching their sagacious nostrils. All along each pipe, at certain intervals, are placed skreens made of reeds, so situated, that it is impossible the wild-fowl should see the decoy-man, before they have passed on towards the end of the pipe, where the purse-net is placed. The inducement of the wild-fowl to go up one of these pipes is, because the decoy-ducks trained to this lead the way, either after hearing the whistle of the decoy-man, or enticed by the hemp-seed: the latter will dive under water, whilst the wild-fowl fly on, and are taken in the purse net. It often happens, however, that the wild-fowl are in such a state of sleepiness and dozing, that they will not follow the decoy-duck. Use is then generally made of a dog, who is taught his lesson; he passes backwards and forwards between the reed-screens, in which are little holes, both for the decoy-man to see, and the dog to pass through; this attracts the eye of the wild-fowl, who, not choosing to be interrupted, advance towards the small and contemptible animal, that they may drive him away. The dog all the time, by the direction of the decoy-man, plays among the screens of reeds, nearer and nearer the purse-net; till at last the man appears behind a screen, and the wild-fowl not daring to pass by him in return, nor being able to escape upwards, on account of the net covering, rush on into the net. Sometimes the dog will not attract their attention, if a red handkerchief, or something very singular, is not put about him. The general season for catching fowls in decoy, is from the end of October till February. Decoys are commonly let at a certain annual rent, and yield large quantities of ducks, wigeons, and teal; but they have been diminished

in number by the recent drainage of many of the fenny parts of England.

DECREASE, *v. a. & n. s.*

DECREMENT, *n. s.*

DECRESCENT, *adj.*

Lat. *decreasco*, from *de*, and *cresco*, to increase. To make less; diminish: as a neuter verb, to grow less; be diminished. The state or act of growing less: decrement is the quantity lost in decrease; and decrescens, growing less.

From the moon is the sign of feasts, a light that *decreaseth* in her perfection. *Eccles. xliii. 7.*

He did dishonourable find

Those articles, which did our state *decrease*.

Daniel.

See in what time the seeds, set in the increase of the moon, come to a certain height, and how they differ from those that are set in the *decrease* of the moon.

Bacon.

Unto fifty years, as they said, the heart annually increaseth the weight of one drachm; after which, in the same proportion, it *decreaseth*.

Browne's Vulgar Errors.

Upon the tropick, and first descension from our solstice, we are scarce sensible of declination; but declining farther, our *decrement* accelerates: we set apace, and in our last days precipitate into our graves.

Id.

Rocks, mountains, and the other elevations of the earth, suffer a continual *decrement*, and grow lower and lower.

Woodward.

By weakening toil and hoary age o'ercome,
See thy *decrease*, and hasten to thy tomb.

Prior.

Heat increases the fluidity of tenacious liquids, as of oil, balsam, and honey; and thereby *decreases* their resistance.

Newton.

When the sun comes to his tropicks, days increase and *decrease* but a very little for a great while together.

Id.

They who are now, like the Baptist, burning and shining lights, must like him gradually *decrease*, while others are increasing about them.

Doddridge's Expositor.

DECRETE, *v. a. v. n. & n. s.*

DECRETAL,

DECRETIST,

DECRETORY,

Fr. *decret*, and *decreter*; Span. *Ital.* and Port. *decreto*; from Lat. *decretum*; qu. Gr. *κρῖνω*, to judge. To doom or decide formally or publicly; to make an edict; to establish by law; resolve. A decree is the edict, law, rule, or decision. Decretal, a book of decrees or laws, and particularly of the popes: decretist, he who professedly studies or is skilled in the decretals: decretory, judicial, decisive, final.

When he made a *decree* for the rain, and a way for the lightning of the thunder. *Job xxviii. 26.*

There went a *decree* from Cesar Augustus, that all the world should be taxed. *Luke ii. 1.*

They shall see the end of the wise, and shall not understand what God in his counsel hath *decreed* of him. *Wisdom iv.*

The second room, whose walls

Were painted fair with memorable gests

Of magistrates, of courts, of tribunals,

Of laws, of judgments, and of *decretals*. *Spenser.*

If you deny me, lie upon your law!

There is no force in the *decrees* of Venice.

Shakspeare.

Traditions and *decretals* were made of equal force, and as authential as the sacred charter itself.

Hamel's Vocal Forest.

Father eternal ; thine is to decree ;
Mine, both in heaven and earth, to do thy will.

Milton.

The motions of the moon, supposed to be measured
by sevens, and the critical or decretory days depend
on that number.

Browne's *Vulgar Errors*.

The folly of man, and not the decree of heaven, is
the cause of human calamity.

Broome.

There are lenitives that friendship will apply, be-
fore it will be brought to the decretory rigours of a
condemning sentence.

South's *Sermons*.

Had heaven decreed that I should life enjoy,
Heaven had decreed to save unhappy Troy.

Dryden.

Are we condemn'd by fate's unjust decree,
No more our houses and our homes to see ?

Id.

The king their father,
On just and weighty reasons, has decreed
His sceptre to the younger.

Rowe.

A decretal epistle is that which the pope decrees
either by himself, or else by the advice of his cardi-
nals ; and this must be on his being consulted by some
particular person or persons thereon.

Ayliffe's *Parergon*.

The decretists had their rise and beginning under
the reign of the emperor Frederick Barbarossa.

Id.

Whether it be decreed by the authority of reason,
or the tyranny of ignorance, that, of all the candidates
for literary praise, the unhappy lexicographer holds
the lowest place, neither vanity nor interest incited me
to inquire.

Johnson. *Plan of Dictionary*.

Here are the ancient editions of the Papal decretals,
and the commentators on the civil law, the edicts of
Spain, and the statutes of Venice.

Id. *On the Harleian Library*.

DECREP'ID, or

DECREP'IT, *adj.*

DECREP'ITATE, *v. a.*

DECREPITA'TION, *n. s.*

DECREP'ITNESS,

DECREP'ITUDE.

Fr. *decrepite* ; Ital.

and Span. *decrepito* ;

Lat. *decrepitus*, crack-

ling ; from the crack-

ling of a candle or

lamp when nearly

out, says Minshew, after Scaliger. Wasted ; old ;
weak ; in extreme decay. To decrepitate is
used by Browne for the calcining of salt until
it ceases to crackle. Decrepitness and decre-
pitude are man's ' last stage of all.'

Of men's lives, in this decrepit age of the world,
many exceed fourscore, and some an hundred years.

Raleigh.

This pope is decrepit, and the bell goeth for him :
take order that there be chosen a pope of fresh years.

Baron.

Decrepit miser ! base, ignoble wretch.

Shakspeare.

If favours out-live one age, they prove decrepit
and heartless.

Bishop Hall. *Contemplations*.

And from the north to call

Decrepit Winter.

Milton.

So will it come to pass in a pot of salt, although
decrepitated.

Browne's *Vulgar Errors*.

If true succession from our isle should fail,
And crowds profane with impious hands prevail,
Not thou, nor those thy factious arts engage
Shall reap that harvest of rebellious rage,
With which thou flatterest thy decrepit age.

Dryden.

Propped on his staff, and stooping as he goes,
A painted mitre shades his furrowed brows ;
The god, in this decrepit form arrayed,
The gardens entered, and the fruits surveyed.

Pope.

Mother earth, in this her barrenness and decrepit-
ness of age, can procreate such swarms of curious
engines.

Bentley.

The charge of witchcraft inspires people with a
malevolence towards those poor decrepit parts of our
species, in whom human nature is defaced by infir-
mity and dotage.

Addison.

Time in advance behind him hides his wings,
And seems to creep decrepid with his age.

Young.

The emaciated and decrepid appearance, with the
ridiculous and idiotic gestures, of the opium-eaters in
Constantinople, is well described in the Memoirs of
Baron de Tott.

Darwin.

DECREPITATION, in chemistry, the crackling
noise which several salts make when suddenly
heated, accompanied by a violent exfoliation
of their particles. This phenomenon has been
ascribed to the ' sudden conversion of the water
which they contain into steam.' But absolutely
dry sulphate of barytes decrepitates furiously
without any possible formation of steam, or any
loss of weight. The same holds with respect to
common salt, calcareous spars, and sulphate of
potash, which contain no water. In fact, it is the
salts which are anhydrous, or destitute of water,
which decrepitate most powerfully ; those that
contain water generally enter into tranquil lique-
faction on being heated. Salts decrepitate, for
the same reason that glass, quartz, and cast-iron
crack, with an explosive force, when very sud-
denly heated ; namely, from the unequal expan-
sion of the laminae which compose them, in
consequence of their being imperfect conductors
of heat.

DECRESCENT, in heraldry, a term signify-
ing a representation of the moon when declining
from the full to the last quarter, her horns being
turned to the sinister side of the shield.

The DECRETALS compose the second part of
the canon law. The first, acknowledged by all
the learned as genuine, is a letter of Pope Siri-
cius, written A. D. 385, to Himerus, bishop of
Tarragona, in Spain, concerning some disorders
which had crept into the churches of Spain.
Gratian published a collection of decretals, con-
taining all the ordinances made by the popes till
A. D. 1150. Gregory IX. in 1227, following the
example of Theodosius and Justinian, formed a
constitution of his own, collecting into one body
all the decisions and all the causes which served
to advance the papal power ; which collection of
decretals was called the pentateuch, because it
contained five books.

DECRY', *v. a.* Fr. *decrier*, *de* and *cry*. See
CRY. To censure ; to blame clamorously, or
vehemently.

Malice in criticks reigns so high,

That for small errors they whole plays decry.

Dryden.

Quacks and imposters are still cautioning us to
beware of counterfeits, and decry others' cheats only
to make more way for their own.

Swift.

Those measures, which are extolled by one half of
the kingdom, are naturally decry'd by the other

Addison.

Then prompt no more the follies you decry,
As tyrants doom their tools of guilt to die.

Johnson.

DECUMANA, in ancient history and geography, the name of a nation of the Marse or Marcomanni. See **DECUMATES AGRI**.

DECUMARIA, in botany: a genus of the monogynia order, and dodecandria class of plants: CAL. decaphyllous, superior; petals ten; CAPS. eight or nine cells and polyspermous. Species two, both natives of Carolina.

DECUMATES AGRI, fields granted on a tithe, as appears from Tacitus, to the Gauls who succeeded the Marcomanni, that had till then proved a check to the Roman conquests, on the Rhine; and hence, probably, their name, people living on the marches or limits of the empire.

DECUMBENCE, *n. s.* } Lat. *decumbo*.
DECUMBENCY, } The act of lying
DECUMBITURE, } down; the posture
 of lying down.

This must come to pass, if we hold opinion they lie not down, and enjoy no *decumbence* at all; for station is properly no rest, but one kind of motion.

Browne's Vulgar Errours.

Not considering the ancient manner of *decumbency*, he imputed this gesture of the beloved disciple unto rusticity, or an act of incivility. *Id.*

If but a mile she travel out of town,
 The planetary hour must first be known,
 And lucky moment: if her eye but akes,
 Or itches, its *decumbiture* she takes. *Dryden.*

DECUPLE, *adj.* Lat. *decuplus*, tenfold. The same number ten times repeated.

Man's length, that is, a perpendicular from the vertex unto the sole of the foot, is decuple unto his profundity; that is, a direct line between the breast and the spine. *Browne's Vulgar Errours.*

Supposing there be a thousand sorts of insects in this island, if the same proportion holds between the insects of England and of the world, as between plants domestick and exotick, that is, near a *decuple*, the species of insects will amount to ten thousand. *Ray.*

DECURIA, or **DECURY**, among the ancient Romans, ten men under one leader, called the decurio. The decuria was the third part of a turma, or the thirtieth of a legion of horse, which consisted of 300 men. The Roman cavalry was divided into decurie, which were subdivisions of a century, each century containing ten decuries.

DECURIO, a subaltern officer in the Roman armies, who commanded a decuria.

DECURION, *n. s.* Lat. *decurio*. A commander over ten; an officer subordinate to the centurion.

He instituted *decurions* through both these colonies, that is, one over every ten families. *Temple.*

DECURIONES MUNICIPALES, magistrates in the Roman provinces, who formed a body to represent the Roman senates in free and corporate towns. They consisted of ten, whence the name; and their duty was to watch over the interests of their fellow citizens, and to increase the revenues of the commonwealth. Their court was called *curio decurionum* and *minor senatus*; and their decrees, called *decreta decurionum*, were marked D.D. at the top. They generally styled themselves *patrum patres curiales*, and *honorati municipiorum senatores*. They were elected with the same ceremonies as the Roman

senators; they were to be at least twenty-five years of age, and to be possessed of ten talents.

DECURSION, *n. s.* Lat. *decurcus*, from *de* and *cursus*. The act of running down.

What is decayed by that *decurcion* of waters, is supplied by the terrene feces which water brings. *Hale.*

DECUSSATE, *v. a.* } Lat. *decusso*. To in-
DECUSSATION, *n. s.* } tersect at acute angles.
 The act of crossing, or state of being crossed at unequal angles. See **OPTICS**.

The crucigerous ensign carried this figure not transversely or rectangularly intersected, but in a *decussation*, after the form of an Andrian or Burgundian cross, which answereth this description. *Browne.*

This it performs by the action of a notable muscle on each side, having the form of the letter X, made up of many fibres, *decussating* one another longways. *Ray.*

Though there be *decussation* of the rays in the pupil of the eye, and so the image of the object in the retina, or bottom of the eye, be inverted; yet doth not the object appear inverted, but in its right or natural posture. *Id.*

DECUSSORIUM, an instrument used by surgeons, which, by pressing gently on the dura mater, causes an evacuation of the pus collected between it and the cranium, through the perforation made by the trepan.

DEDDINGTON, a market-town of Oxfordshire, formerly a corporation and borough. The Birmingham and Oxford canal passes near this place, and is of considerable advantage to it. In the neighbourhood are two medicinal springs, one of which is highly impregnated with vitriolic salt. It has a weekly market on Saturday. It is seated on an eminence, seventeen miles north of Oxford, and sixty-nine N.N.W. of London.

DEDECORATE, *v. a.* } Lat. *dedecoro*. To
DEDECORATION, *n. s.* } disgrace; to bring a
DEDECOROUS, *adj.* } reproach upon. The
 act of disgracing; disgrace. Disgraceful.

DEDENTITION, *n. s.* Lat. *de* and *dentitio*. Shedding of teeth. The loss or shedding of the teeth.

Solon divided life into ten septenaries, because in every one thereof a man received some sensible mutation; in the first is *dedentition*, or falling of teeth.

Browne's Vulgar Errours.

DEDHAM, a town and parish of England, in the county of Essex, situated on the river Stour, over which is a bridge. It is six miles N.N.E. of Colchester, and its church is noted for a fine Gothic steeple. Population about 2200.

DEDHAM, a township of Massachusetts, incorporated in 1637.

DEDHAM, a town in the above township, the capital of Norfolk county, called by the Indians Tiot. It lies on the south side of Charles River, eleven miles south-west of Boston, and 320 from Philadelphia.

DEDICATE, *v. a. & adj.* } French, *dedier*;
DEDICATION, *n. s.* } Port. and Ital. *dicare*;
DEDICATOR. } *dicare*; Teut. *diciren*; Lat. *dicare*, from *Deo*, *dicare*, to consecrate to God. To devote to some deity, or to some pious or religious service; to resign, appropriate, or inscribe, to a particular person or service. *Dedication*

is also the act, form, or inscription, used in dedicating. A dedicator, says Johnson, with more temper than accuracy, is one who inscribes his work to a patron, with compliment and servility.

The princes offered for *dedicating* the altar, in the day that it was anointed. *Numb. vii. 10.*

A pleasant grove,
Was shot up high, full of the stately tree,
That *dedicated* is to Olympick Jove,
And to his son Alcides. *Spenser.*

Ladies, a general welcome from his grace
Salutes you all: this night he *dedicates*
To fair content and you. *Shakspeare.*

Prayers from preserved souls,
From fasting maids, whose names are *dedicate*
To nothing temporal. *Id.*

It cannot be laid to many men's charge, that they have been so curious as to trouble bishops with placing the first stone in the churches; or so scrupulous as, after the erection of them, to make any great ado for their *dedication*. *Hooker.*

This tenth part, or tithe, being thus assigned unto him, becometh as a thing *dedicate* and appropriate unto God. *Spreman.*

He compiled ten elegant books, and *dedicated* them to the lord Burghley. *Peacham.*

He went to leave the profession of a soldier, to which he had *dedicated* himself. *Clarendon.*

Bid her instant wed,
And quiet *dedicate* her remnant life,
To the just duties of an humble wife. *Prior.*

He that would make a real progress in knowledge must *dedicate* his age as well as youth, the latter growth, as well as the first fruits, at the altar of truth. *Berkeley.*

Thus I should begin my epistle if it were a *dedicatory* one; but it is a friendly letter. *Pope.*

Proud as Apollo on his forked hill,
Sat full-blown Bufo, puffed by every quill;
Fed by soft *dedication* all day long,
Horace and he went hand in hand in song. *Id.*

Leave dangerous truths to unsuccessful satires;
And flattery to fulsome *dedicators*. *Id.*

Among publick solemnities there is none so glorious as that under the reign of king Solomon, at the *dedication* of the temple. *Addison.*

For growing names the weekly scribbler lies,
To growing wealth the *dedicator* flies.
Johnson. Vanity of Human Wishes.

DEDICATION, the act of consecrating a temple, altar, statue, palace, &c. to the honor of some deity. The use of dedications is very ancient both among the worshippers of the true God and among the heathens: the Hebrews call it חֲנֻכָּה *hhanuchah*, 'initiation;' which the Greek translators render *Εγκαίνια*, and *Εγκαίνισμος*, 'renewing.' In the Scripture we meet with dedications of the tabernacle, of altars, of the first and second temple, and even of the houses of private persons. One of the most solemn on record is that of the first temple by Solomon, 1 Kings viii., 2 Chron. vi. There were also dedications of vessels, and of the garments of the priests and Levites, as well as of persons themselves. The heathens had also dedications of temples, altars, and images of their gods, &c. Nebuchadnezzar held a solemn dedication of his statue, Dan. iii. 2. Tacitus, Hist. lib. iv. ch. 53, mentions the dedication of the capitol, upon rebuilding it by Vespasian, &c. In modern

times dedication is only applied to a church; and is properly the consecration of it performed by a bishop, with a number of ceremonies prescribed by the church. See CONSECRATION.

DEDITION, *n. s.* Lat. *deditio*. The act of yielding up any thing; surrendry.

It was not a complete conquest, but rather a *dedition* upon terms and capitulations agreed between the conqueror and the conquered. *Hale.*

DEDUCE, *v. a.* Fr. *deduire*; Span. *deduzer*; Ital. *didurre*;
DEDUCIBLE, *adj.* Lat. *deduco, deducere*, of
DEDUCIVE, Lat. *deduco, deducere*, of
DEDUCEMENT, *n. s.* { *de* and *duco*. To lead or
DEDUCT, *v. a.* draw. To draw or de-
DEDUCTION, *n. s.* rive a conclusion in
DEDUCTIVE, *adj.* argument; to trace a
DEDUCTIVELY, *adv.* series of events, or con-

catenatious circumstances; to subtract or take off; hence to separate, divide. Deducible, and deductive, mean consequential, evident to reason. Deductive, performing, or drawing a conclusion. Deductively, consequentially. Deduction, the result of a series of argumentation; a consequence, as well as a sum or thing subtracted.

Having yet, in his *deducted* spright,
Some sparks remaining of that heavenly fire.

Spenser.
Out of scripture such duties may be deduced, by some kind of consequence; as by long circuit of *deduction* it may be that even all truth, out of any truth may be concluded. *Hooker.*

I will *deduce* him from his cradle, through the deep and lubric waves of state and court, till he was swallowed in the gulph of fatality. *Wotton Buck.*

The condition, although *deducible* from many grounds, yet shall we evidence it but from few. *Browne's Vulgar Errors.*

There is scarce a popular errorr passant in our days, which is not either directly expressed, or *deductively* contained in this work. *Id.*

You have laid the experiments together in such a way, and made such *deductions* from them, as I have not hitherto met with. *Boyle.*

All cross and distasteful humours are either expressly, or by clear consequence and *deduction*, forbidden in the New Testament. *Tillotson.*

So far, therefore, as conscience reports any thing agreeable to or *deducible* from these, it is to be hearkened to. *South.*

Praise and prayer are his due worship, and the rest of those *deducements* which I am confident are the remote effects of revelation. *Dryden.*

The general character of the new earth is paradisaical; and the particular character, that it hath no sea: and both are apparently *deducible* from its formation. *Burnet.*

Reason is nothing but the faculty of *deducing* unknown truths from principles already known. *Locke.*

All properties of a triangle depend on, and are *deducible* from, the complex idea of three lines, including a space. *Id.*

We *deduct* from the computation of our years that part of our time which is spent in incogitancy of infancy. *Norris.*

All knowledge of causes is *deductive*; for we know none by simple intuition, but through the meditation of their effects. *Glanville.*

That by diversity of motions we should spell out things not resembled by them, we must attribute to some

secret *deduction*; but what this *deduction* should be, or by what mediums this knowledge is advanced, is as dark as ignorance. *Id.*

O goddess, say, shall I *deduce* my rhimes
From the dire nation in its early times? *Pope.*

Bring then these blessings to a strict account;
Make fair *deductions*; see to what they mount. *Id.*

A reflection so obvious, that natural instinct seems to have suggested it even to those who never much attended to the *deductions* of reason. *Rogers.*

Lend me your song, ye nightingales! oh pour
The mazy-running soul of melody
Into my varied verse! while I *deduce*,
From the first note the hollow cuckoo sings,
The symphony of spring. *Thomson.*

Set before you the moral law of God, with such *deductions* from it as our Saviour hath drawn, or our own reason, well informed, can make. *Duppa.*

DEE, a river of England and Wales, which rises at the foot of the lofty mountain Arun, in the north-west angle of Merionethshire, from which it runs through a fine valley in a north-east direction to Denbighshire; visits the north-west border of Cheshire, to which it serves as a boundary; then crossing over to Chester, it flows thence to the sea, forming a broad sandy estuary, which separates Cheshire from Flintshire. This river is navigable from Elsmere, in Shropshire, to Chester; but at this city the navigation is interrupted by a ledge of rocks running across the bed of it, and causing a cascade. The Dee falls into the Irish Sea, fifteen miles below Chester.

DEE, a river of Scotland, in Aberdeenshire, which rises from the hill Breirach, and after running through the parishes of Braemar, Crathy, and many others, with vast rapidity, falls into the German Ocean at Aberdeen, 140 miles from its source. It produces, in great plenty, trout, pikes, eels, &c., and affords one of the greatest salmon-fisheries in Scotland. In passing through Braemar, the Dee has a fine cascade, with the additional singularity, that for sixty yards it is confined between two rocks, within so narrow a space, that some persons have ventured to step over it.

DEE (John), a famous mathematician and astrologer, born in London, July 1527. In 1542 he was sent to St. John's College, Cambridge. After five years close application to the mathematics and astronomy, he went to Holland; and, on his return to Cambridge, was elected a fellow of Trinity College, then first erected by king Henry VIII. In 1548 he took the degree of M.A. and left England a second time on account of the suspicion attached to his character as an astrologer. Upon leaving England, he went to the University of Louvain, where he took the degree of LL.D. In 1551 he returned to England, and obtained the rectory of Upton-upon-Severn; but soon after the accession of queen Mary, he was accused of practising against her life by enchantment. He suffered a tedious confinement on this account, and was several times examined; till, in 1555, he obtained his liberty by an order of council. In 1564 he made another voyage to the continent, to present a book he had dedicated to the emperor Maximilian. He returned to England; but, in 1571,

we find him at Lorrain; where, being dangerously ill, the queen sent over two physicians to his relief. Having once more returned to his native country, he settled at Mortlake in Surry, where he continued his studies with unremitting ardor, and collected a considerable library of curious books and MSS. with a variety of instruments, most of which were afterwards destroyed by the mob. In 1579 queen Elizabeth, being desirous of information concerning the recent discoveries of her subjects in America, commanded Mr. Dee to furnish her with proper geographical descriptions. Accordingly he presented her, in three weeks after, with two large rolls, on which the new countries were geographically described and historically illustrated: these rolls are preserved in the Cottonian library. In 1581 Dee became acquainted with one Edward Kelly, by whose assistance he performed various incantations, and affected, it is said, to maintain a frequent intercourse with the spiritual world. In 1583 they were both introduced to a Polish nobleman, then in England, named Albert Laski, palatine of Siradia, who persuaded them to accompany him to his native country; and they visited, successively, Poland, the court of the emperor Rodolph II., and Bohemia. In 1595 they returned to England, and Dee was once more graciously received by the queen; who made him Warden of Manchester College. In 1604 he returned to his house at Mortlake, where he died in 1608. Queen Elizabeth seems to have made use of Dee, occasionally, as a political agent: he was evidently a mathematician of considerable genius; but his pretensions to astrological and alchemical knowledge disgrace his memory. Dr. M. Casaubon published, in 1659, 'A true and faithful Relation of what passed between Dr. John Dee and some Spirits.'
DEED, *n. s.* } Sax. *dæð*; Belg. *daed*;
DEED'LESS. } Goth. *dad*; Lat. from *do*, *dedi*, says Minsheu; and this from Gr. *δεδοται*; to give (effect). An action: any thing done or fully performed; a completed legal instrument or act; fact; reality. Deedless is, inactive; wordy, without performance of pledges or professions.

And manye men bileueyden, and camen knowlechinge and tellynge her *dedis*. *Wiclif. Dedis*, xix.

The same had not consented to the counsel and *deed*. *Luke.*

They desire, with strange absurdity, that to the same senate it should belong to give full judgment in matter of excommunication, and to absolve whom it pleased them, clean contrary to their own former *deeds* and oaths. *Hooker.*

The solicitor gave an evidence for a *deed*, which was impeached to be fraudulent. *Bacon.*

From lowest place when virtuous things proceed,
The place is dignified by the doer's *deed*. *Shakespeare.*

Speaking in deeds, and *deedless* in his tongue. *Id.*

Nor knew I not
To be with will and *deed* created free. *Milton.*

I, on the other side,
Used no ambition to commend my *deeds*;
The *deeds* themselves, tho' mute, spoke loud the doer *Id.*

The monster nought replied ; for words were vain,
And *deeds* could only *deeds* unjust maintain.

Dryden.

We are not secluded from the expectation of reward for our charitable *deeds*. *Smalridge's Sermons.*

Instant, he cried, your female discord end,
Ye *deedless* boasters ! and the song attend. *Pope.*
'T was where in early youth he wont retire
To woo sweet Solitude, and taste her charms
Ere that his bosom caught the martial fire ;
Ere that his name was great in *deeds* of arms.

Gay.

Roll on, thou deep and dark blue Ocean—roll !
Ten thousand fleets sweep over thee in vain ;
Man marks the earth with ruin—his control
Stops with the shore ;—upon the watery plain
The wrecks are all thy *deed*.

Byron.

DEEG, a celebrated town and fortress of Hindostan, in the province of Agra. It was taken from the Jauts in the year 1776, by the nabob Nujuff Khan, after a siege of twelve months, but soon afterwards restored. Here in 1805 lord Lake defeated the Mahratta army, commanded by Holkar, and, took this supposed impregnable town by storm. At the peace it was restored to the raja Runjeet Sing.

DEEM, *v. a., v. n. & n. s.* Sax. *deinan* ; Goth. and Swed. *doma* ; Teut. *doeman* ; Gr. of *thug*, justice. To judge ; to determine ; to conclude on consideration : also, as a neuter verb, to judge, determine, or imagine. Shakespeare uses the substantive for judgment or opinion.

Nyle ye *deem* that ghe be not *demed*. For, in what doom ye *demen*, ye schulen be *demed* ; and, in what mesure ye *meten*, it schal be *meten* agen to you.

Wiclif. Matt. 7.

But they that skill not of so heavenly matter,
All that they know not, envy, or admire,
Rather than envy, let them wonder at her,
But not to *deem* of her desert aspire. *Spenser.*

Here eke that famous golden apple grew,
For which the Idcan ladies disagreed,
Till partial Paris *dempt* it Venus' due. *Id.*

So natural is the union of religion with justice, that we may boldly *deem* there is neither, where both are not.

Hooker.

Hear me, my love, be thou but true of heart,
—I true ! how now ? what wicked *deem* is this ?
Shakespeare.

He who to be *deemed*
A god, leaped fondly into Etna's flames. *Milton.*
These blessings, friend, a deity bestowed ;
For never can I *deem* him less than god. *Dryden.*

Nature, disturbed,
Is *deemed* vindictive to have changed her course.
Thomson.

They are gone,
And others come : so flows the wave on wave
Of what these creatures call eternity,
Deeming themselves the breakers of the ocean,
While they are but its bubbles, ignorant
That foam is their foundation. *Byron.*

How happier she, who in Love's tranquil bower,
Clasps the sweet prize of conquest, not the power ;
Who while one gaze her charms to all prefers,
And one warm heart returns the warmth of hers,
Heeds not tho' crowds to half her beauty chill,
Should *deem* some flirt of fashion fairer still.

Dr. T. Brown.

DEEMSTERS, or DEMSTERS. All controversies in the Isle of Man are decided without process, writings, or any charges, by certain judges chosen yearly from among themselves, called deemsters, there being two for each division of the island : they sit judges in all courts, either for life or property ; and, with the advice of twenty-four keys, declare what is law in uncommon emergencies.

DEEP, *adj. & n. s.* } Sax. *deep* ; Goth. and
DEEP'EN, *v. a. & n.* } Swed. *diup* ; Belg. *diep* ;
DEEP'ENING, *n. s.* } old Goth. *dy*, to which
DEEP'LY, *adv.* } Serenius traces this word.
DEEP'-MOUTHED, } Mr. Tooke says, 'it is
DEEP'-MUSING, } merely the past participle of *dippan*, to dip, or
DEEP'NESS, *n. s.* } dive.' Profound ; having length downwards ; depressed ; sunk ; and, because that which is deep in the earth is dark, remote, and undisturbed, gloomy ; dark-colored ; a dark or strong shade of any color ; voluminous in sound ; quiet ; still. Also, in a metaphorical sense, gloomy ; remote in meaning ; sagacious ; far-penetrating. Deep, as a substantive, expresses the still and quiet part of night ; an abyss ; and, more particularly, the sea. To deepen is, as an active verb, to make deep ; to sink low or lower ; to darken ; becloud ; make gloomy : as a neuter verb, to descend slowly, or by degrees. The adverb, and other substantives, follow these meanings.

And I saigh an aungel comynge down fro heuene, hauynge the keye of *depnesse* and a great chayne in his hond. *Wiclif. Apoc. 20.*
And the Lord God caused a *deep* sleep to fall upon Adam. *Genesis ii. 21.*
Deep calleth unto *deep* at the noise of thy waterspouts : all thy waves and thy billows are gone over me. *Psaln xlii. 7.*
Some fell upon stony places, and they withered, because they had no *deepness* of earth. *Mat. xiii. 5.*

Hee was close and secrete, a *deep* dissimuler, lowlye of counteynaunce, arrogant of heart, outwardly coumpinable where he inwardly hated, not letting to kisse whom he thought to kyl. *Sir T. Moore.*

Yet we did lift up our hearts and voices to God above, who sheweth his wonders in the *deep*. *Bacon.*

To keep his promise with him, he had *deeply* offended both his nobles and people. *Id. Henry VII.*

He's meditating with two *deep* divines. *Shakespeare.*

There want not many that do fear,
In *deep* of night, to walk by this Herne's oak. *Id.*
This avarice
Strikes *deeper*, grows with more pernicious root. *Id.*

Behold the English beach
Pales in the flood with men, with wives and boys,
Whose shouts and claps outvoice that *deep-mouthed* sea. *Id.*

When I have most need to employ a friend,
Deep, hollow, treacherous, and full of guile,
He be to me. *Id. Richard III.*

Klockings so *deeply* hath sworn ne'er more to come
In bawdy-house, that he dares not go home. *Donne.*

If we go down to the great *deep*, the womb of moisture, the well of fountains, the great pond of the world, we know not whether to wonder at the element itself, or the guests which it contains.

Bishop Hall's Contemplations.

He in my ear
Vented much policy and projects *deep*
Of enemies, of aids, battles, and leagues,
Plausible to the world, to me worth nought.

Milton.

And in the lowest *deep*, a lower *deep*,
Still threatening to devour me opens wide,
To which the hell I suffer seems a heaven.

Milton's Paradise Lost.

For, even in that season of the year, the ways in that vale were very *deep*.

Clarendon.

Fear is a passion that is most *deeply* rooted in our natures, and flows immediately from the principle of self-preservation.

Tillotson.

You must *deepen* your colours so, that the ornament may be the highest.

Peachment.

What earth in her dark bowels could not keep
From greedy man, lies safer in the *deep*.

Waller.

Having taken of the *deeply* red juice of buckthorn berries, I let it drop upon white paper.

Boyle.

The gaping gulph low to the centre lies,
And twice as *deep* as earth is distant from the skies.

Dryden.

Thou hast not strength such labours to sustain :
Drink hellebore, my boy! drink *deep*, and scour thy brain.

Id.

With *deeper* brown the grove was overspread. *Id.*
Then toils for beasts, and lime for birds were found,
And *deep-mouthed* dogs did forest walks surround.

Id.

If the matter be knotty, and the sense lies *deep*, the mind must stop and buckle to it, and stick upon it with labour and thought, and close contemplation.

Locke.

Her gloomy presence saddens all the scene,
Shades every flower, and darkens every green,
Deepens the murmurs of the falling floods,
And breathes a browner horror on the woods.

Pope.

But the *deep-musing* o'er the mountains strayed,
Through many thickets of the woodland shade.

Id.

The city of Rome would receive a great advantage from the undertaking, as it would raise the banks and *deepen* the bed of the Tiber.

Addison.

Virgin face divine

Attracts the hapless youth through storms and waves,
Alone in *deep* of night.

Philips.

Hills, dales, and forests far behind remain,
While the warm scent draws on the *deep-mouthed* train.

Gay.

While at the bow the watch Arion keeps,
To shun what cruisers wander o'er the *deep*s.

Falconer.

We have to supply means of occupation and subsistence for those, to whom not only England, but Europe is so *deeply* indebted.

Sir T. Bernard.

Cosmetic succour won a vermeil hue,
All soft she spreads, and lo! the rouge is blue!
In vain she wipes and washes, frets and scrubs,
The horrid azure *deepens* as she rubs.

Dr. T. Brown.

Such writings, though they may be lightly passed over by many readers, yet if they make a *deep* impression on one active mind in a hundred, the effects may be considerable.

Franklin.

Her hollow womb,
Conceiving thunders, through a thousand *deep*s
And fiery caverns, roars beneath his foot.
The hills move lightly, and the mountains smoke,
For he has touched them.

Cowper.

Me they revile, with many ills molested,
They bid me seek from thee, my Lord, redress;
On God, they say, his hope and trust he rested,
Let God relieve him in his *deep* distress.

Kirke White.

The sweetness of the violet's *deep* blue eyes,
Kissed by the breath of heaven, seems coloured by its skies.

Byron.

The Convent bells are ringing,
But mournfully and slow;
In the gray square turret swinging.
With a *deep* sound, to and fro.

Id.

Vain

The struggle; vain, against the coiling strain
And gripe, and *deepening* of the dragon's grasp,
The old man's clench; the long envenomed chain
Rivets the living links,—the enormous asp
Enforces pang on pang, and stifles gasp on gasp.

Id.

DEER, *n. s.* Sax. *deop*; Goth. *dȳr*; Belg. *dier*; Teut. *their*; from Gr. *θηρ*; *Æolic* *φῆρ*, and thence probably from Heb. *אֵיִל*, wild deer. Originally signifying any wild animal, though now confined to the cervine species.

You have beaten my men, killed my deer, and broke open my lodge.

Shakespeare.

The pale that held my lovely deer.

Waller.

I was a stricken deer that left the herd
Long since, with many an arrow *deep* infixed :
My panting side was charged, when I withdrew
To seek a tranquil death in distant shades.

Cowper. Task.

DEER, in zoology. See CERVUS. Of this useful animal there are three principal species in this country, viz. the stag, *C. elaphus*; the roe, *C. capreolus*; and *C. dama* the fallow deer. By castrating the males when newly dropped, says Mr. Loudon, which is not in the least dangerous, it affords the means of having good venison until Christmas, without any other sort of food than the common grass; they also fatten more quickly; the operation must, however, be performed while they are quite young. By stat. 16 Geo. III. cap. 30., if any person shall hunt or take in a snare, or kill or wound any red or fallow deer in any forest, chase, &c., whether enclosed or not; or in any closed park, paddock, &c., without the consent of the owner, or be aiding in such offence, they shall forfeit £20 for the first offence; and also £30 for each deer wounded, killed, or taken. A game-keeper offending, to forfeit double. For a second offence offenders shall be transported for seven years. By stat. 28 Geo. II. cap. 19, destroying goss, furze, and fern, in forests and chases, being the covert for deer, subjects the offenders to a penalty from £5 to 40s. or to three months' imprisonment.

DEER, GREAT, an island of the East Indian sea, near the west coast of the island of Celebes. Long. 119° 35' E., lat. 5° 12' S.

DEER, LITTLE, a rocky islet in the Eastern Seas, near the west coast of the island of Celebes. Long. 119° 35' E., lat. 5° 5' S.

DEER ISLAND, or MULDONICH, a small island of the Hebrides, near that of Barry.

DEER ISLAND, a small island of Ireland, in the bay of Galway. Long. 9° W., lat. 53° 9' N.—Also an island on the coast of North America, in Penobscot Bay, about eighteen miles in circumfer-

ence. It is 170 miles north-east of Boston. Long. 68° 30' W., lat. 41° 10' N..

REFACE, *v. a.* } Fr. *effacer*; Lat. *defu-*
DEFA'CEER, } cio, of *de* & *facies*, a face.
DEFA'CEMENT. } To mar, disfigure, ruin,
destroy. Defacement is the injury done. De-
facer, he who performs or accomplishes it.

But whanne ye fasten nyle be ye maad as ypo-
crites sorrowful, for thei *defasen* hem silf to seme fas-
tyng to men, treuly I seye to you thei han resseyved
her meede. *Wiclif. Matt. 6.*

But what is this image, and how is it defaced? the
poor men of Lyons will tell you, that the image of
God is purity, and the *defacement* sin. *Bacon.*

Give me leave to speak as earnestly in truly com-
mending it, as you have done in untruly and unkindly
defacing and slandering it. *Whitgifte.*

Pay him six thousand, and *deface* the bond.

Shakespeare.

That foul *defacer* of God's handy work
Thy womb let loose to chace us to our graves. *Id.*

Fatal this marriage,
Defacing monuments of conquered France,
Undoing all. *Id.*

As man was the image of God, so was that earthly
paradise an image of heaven; both the images are
defaced, both the first patterns are eternal.

Bishop Hall. Centemplant.

Whose statues, freizes, columns broken lie,
And, though *defaced*, the wonder of the eye. *Dryden*

One nobler wretch can only rise,
'Tis he whose fury shall *deface*
The stoick's image in this piece. *Prior.*

Thy weed's are beautiful, thy waste
More rich than other climes' fertility;
Thy wreck a glory, and thy ruin grace'd
W h an immaculate charm which cannot be *defaced*.
Byron.

DE FACTO, something actually in fact, or
existing; in contradiction to *de jure*, where a
thing is only so in justice: as, a king *de facto*
is a person who is actually in possession of a
crown; and a king *de jure* is the person who has
a just right to the crown. It was a distinction
much in use at the period of the Revolution.

DEFAILLANCE, *n. s.* Fr. *defaillance*. Fail-
ure; miscarriage. Obsolete.

The affections were the authors of that unhappy
defaillance. *Glanville.*

DEFAULCATE, *v. a.* } Fr. *defulquer*; from
DEFAULC'ATION, *n. s.* } *falx, fulcis* a sickle.
To cut off; to lop; to take away part of an al-
lowance.

The tea-table is set forth with its accustomed bill of
fare, and without any *defalcation*. *Addison.*

DEFAULK, *v. a.* See DEFAULCATE. To cut
off; to lop away.

What he *defalks* from some insipid sin, is but to
make some other more gustful. *Decay of Piety.*

DEFAME, *v. a. & n. s.* } Fr. *defamer*; It.
DEFAMER, *n. s.* } *diffamare*; Span.
DEFFAMING, *n. s.* } and Port. *defamar*;
DEFAMATION, } Latin, *defamare*,
DEFAMATORY, *adj.* } from Greek, *φῆμη*,
fame, and *de*, privative. To slander, make infamous,
calumniate, deprive of good fame or honor by
words or deeds. Defamatory, is libellous; tend-
ing to defame. The substantives are obvious

in their meaning. In Wiclif's translation of the
New Testament, this word is used in the sense of
spreading fame or a report; the *de* being only an
expletive.

And the yghen of hem wearen opened, and Jhe-
sus thretenyde hem and seide se ye that no man
wite. But thei gheden out and *defameden* him
thorough al that lond. *Wiclif. Matt. 9.*

I heard the *defaming* of many. *Jer. xx. 10.*

Many doughty knights he in his days
Had done to death,
And hung their conquered arms for more *defume*
On gallowtrees. *Spenser.*

My guilt thy growing virtues did *defame*;
My blackness blotted thy unblemished name.

Dryden.

Be silent, and beware, if such you see;
'Tis *defamation* but to say, that's he. *Id.*

Augustus, conscious to himself of many crimes,
made an edict against lampoons and satires, and *defa-*
matory writings. *Id.*

Defamation is the uttering of contumelious language
of any one, with an intent of raising an ill fame of
the party; and this extends to writing, as by *defama-*
tory libels; and to deeds, as reproachful postures,
signs, and gestures. *Ayliffe.*

It may be a useful trial of the patience of the *de-*
famed, yet the *defamer* has not the less crime.
Government of the Tongue.

The most eminent sin is the spreading of *defamatory*
reports. *Id.*

They live as if they professed Christianity merely
in spite, to *defame* it. *Decay of Piety.*

Many dark and intricate motives there are to de-
traction and *defamation*; and many malicious spies are
searching into the actions of a great man. *Addison.*

DEFAMATION is punishable according to the
nature of the offence, either by action upon the
case at common law, or by statute in the eccle-
siastical court.

DEFATIGATE, *v. a.* } Lat. *defutigo*. To
DEFATIGA'TION, *n. s.* } weary; to tire.

The power of these men's industries, never *defati-*
gated, hath been great. *Dr. Maine.*

DEFAULT, *v. a. & n. s.* } Old Fr. *default*;
DEFAULTER, *n. s.* } Ital. *diffulta*; Lat.
defectus, *de*, privative, and *facio*, to do. To fail in
performance. A default is failure of that which
ought to be done legally or morally. Defect;
want

But what man wolde him selfe auise
His conscience, and nought misuse,
He maie well at the first excuse
His God, whiche euer stant in one,
In him there is *defaute* none. *Gower.*

But sith thou mayst not so, give leave a while
To baser wit, his power therein to spend,
Whose grosse *defaults* thy daintie pen may silo
And unadvised ouer sights amend. *Spenser. Sonnets.*

Sundrye victorias hadde hee, and sometime ouer-
throwes, but neuer in *defaute* as for his owne par-
sone, either of hardnesse or polityke order. *Sir T. More.*

We, that know what it is to fast and pray,
Are penitent for your *default* to-day.

Shakspeare.

In *default* of the king's pay, the forces were laid
upon the subject. *Davies.*

Let me not rashly call in doubt
Divine prediction : what if all foretold
Had been fulfilled, but through mine own *default*,
Whom have I to complain of but myself? *Milton.*

Partial judges we are of our own excellencies, and
other men's *defaults*. *Swift.*

Cooks could make artificial birds and fishes, in *de-*
fault of the real ones. *Arbutnot on Coins.*

DEFEASANCE. } Fr. *defaisance*; Ital.
DEFEASIBLE. } *defucimento*; Law Lat.
defeisantia. The act of annulling or abrogating
any contract or stipulation.

That hoary king, with all his train, *
Being arrived where that champion stout,
After his foe's *defeasance*, did remain,
Him goodly greets, and fair does entertain.

Spenser.

He came to the crown by a *defeasible* title, so was
never settled. *Darwin.*

Defeasance is a condition annexed to an act; as to
an obligation, a recognizance, or statute, which per-
formed by the obligee, or the cognizee, the act is dis-
abled and made void, as if it had never been done.
Cowell.

DEFEASANCE, or DEFEISANCE. The difference
between a common condition and a *defeasance*
is, that the condition is annexed to, or inserted
in, the deed; and the *defeasance* is a deed by it-
self, concluded and agreed on between the parties,
and having relation to another deed.

DEFEAT, *v. a. & n. s.* } Old Fr. *desfaite*,
DEFEATURE, *n. s.* } from Lat. *de*, priva-
tive, and *facere*, to complete an action. To over-
throw; to frustrate; undo; mar. Shakspeare
says, 'defeat thy favor,' meaning disguise thy
face; and defeatures of the face mean disfigura-
tions of it.

They invaded Ireland, and were *defeated* by the
lord Mountjoy. *Bacon.*

To his accusations
He pleaded still not guilty, and alledged
Many sharp reasons to *defeat* the law. *Shakspeare.*

Defeat thy favour with usurped beard.
Ye gods, ye make the weak most strong. *Id.*

Grief hath changed me,
And careful hours, with time's deformed hand,
Hath written strange *defeasures* in my face. *Id.*

Death,
Then due by sentence when thou didst transgress,
Defeated of his seizure many days,
Given thee of grace. *Milton.*

He finds himself naturally to dread a superior
Being, that can *defeat* all his designs, and disappoint
all his hopes. *Tillotson.*

End Marlborough's work, and finish the *defeat*.
Addison.

Oh, more than all!—untired by time :
Which, nor *defeated* hope, nor baffled will,
Could render sullen were she ne'er to smile,
Nor rage could fire, nor sickness fret to vent
On her one murmur of his discontent. *Byron.*

DEFECATION. *n. s.* } Lat. *defacco*. From
DEFECATE, *v. a. & adj.* } *de* and *facis*, *facis*,
filth. To purge or make clear from lees; to pu-
rify.

This liquor was very *defecate*, and of a pleasing
golden colour. *Boyle.*

The blood is not sufficiently *defecated* or clarified,
but remains muddy, *Harvey.*

We *defecate* the notion from materiality, and ab-
stract quantity, place, and all kind of corporeity from
it. *Glanville.*

Provide a brazen tube
Inflex; self-taught and voluntary flies
The *defecated* liquor, through the vent
Ascending; then, by downward tract conveyed,
Spouts into subject vessels lovely clear. *Philips.*

DEFECT, *n. s. & v. n.* } Fr. *défaut*; Ital.
DEFECTION, *n. s.* } *defetto*; Span. *de-*
DEFECTIVE, *adj.* } *fecto*; Lat. *defec-*
DEFECTIVELY, *adv.* } *tus*, from *de* priva-
DEFECTIVENESS, *n. s.* } tive and *facio*, *fac-*
DEFECTIBLE, *adj.* } *tus*, to do. As a
DEFECTIBILITY, } neuter verb, to be

deficient; to fall short of; to fail. Defect, as a
substantive, is want; insufficiency; failure of
that which is proper to a person or thing; and
hence injury; mistake; error. Defection is a fall-
ing away; an act or course of apostasy; an
abandonment: defectible, imperfect; wanting:
defectibility, a state of deficiency, or imperfection.

This *defection* and falling away from God was first
found in angels, and afterwards in men. *Raleigh.*

We had rather follow the perfections of them
whom we like not, than in *defects* resemble them
whom we love. *Hooker.*

Neither can this be meant of evil governours or
tyrants, but of some perverseness and *defection* in the
very nation itself. *Bacon.*

Of't 'tis seen
Our mean secures us, and our mere *defects*
Prove our commodities. *Shakspeare.*

You praise yourself,
By laying *defects* of judgment to me. *Id.*
Errors have been corrected, and *defects* supplied.
Davies.

He was diverted and drawn from hence by the
general *defection* of the whole realm. *Id.*

Some lost themselves in attempts above humanity;
yet the enquiries of most *defected* by the way, and
tired within the sober circumference of knowledge.

Bronne's Vulgar Errors.

Nor will polished amber, although it send forth a
gross and corporeal exhalation, be found a long
time *defective* upon the exactest scales. *Id.*

The extraordinary persons, thus highly favoured,
were for a great part of their lives in a *defect-*
ible condition. *Hale.*

The corruption of things corruptible depends upon
the intrinsic *defectibility* of the connection or union
of the parts of things corporal. *Id. Origin of Mankind.*

Men, through some *defect* in the organs, want
words, yet fail not to express their universal ideas by
signs. *Locke.*

It will very little help to cure my ignorance, that
this is the best of four or five hypotheses proposed,
which are all *defective*. *Id.*

If we fall away after tasting of the good word of
God, how criminal must such a *defection* be!
Atterbury.

'Trust not yourself; but, your *defects* to know,
Make use of ev'ry friend—and ev'ry foe. *Pope.*

Had this strange energy been less,
Defect had been as fatal as excess. *Blacknorr.*

If it renders us perfect in one accomplishment, it
generally leaves us *defective* in another. *Addison.*

The lowness often opens the building in breadth, or
the *defectiveness* of some other particular makes any
single part appear in perfection. *Id.*

There is more evil owing to our original *defection* from God, and the foolish and evil dispositions that are found in fallen man. *Watts.*

And if youth has less of that prudence which is necessary to manage a family, yet the parents and elder friends of young married persons are generally at hand to afford their advice, which amply supplies that *defect*. *Franklin.*

But once achieved—though barbarous wreck o'er-throw
The sacred fane, and lay its glories low;
Yet shall the sculptured ruin rise to day,
Graced by *defect*, and worshipped in decay. *Sheridan.*

DEFEND, *v. a.*

DEFENCE, *v. a. & n. s.*

DEFENCELESS, *adj.*

DEFENDABLE, *of*

DEFENDIBLE,

DEFENDANT, *n. s. & adj.*

DEFENDER,

DEFENSATIVE, *n. s.*

DEFENSIBLE, *adj.*

DEFENSIVE, *adj. & n. s.*

DEFENSIVELY, *adv.*

DEFENST, *past part.*

Fr. *défendre* ;

Span. *defender* ;

Ital. *difendere* ;

Lat. *defendere*,

defensus, from

σφενδονω, 'to

fight with a

sling,' as Min-

sheu suggests.

To protect ;

shield ; sup-

port ; make se-

cure ; vindicate. Hence to repel ; keep off, from the Latin verb ; and therefore to forbid or beat off ; to prohibit, from the French. See the examples from Chaucer and Milton. To defence, though obsolete, is used as an active verb in the received translation of the Bible. Defenceless is, without protection : defendible, that which may be defended, as is also defensible : and hence the latter likewise signifies justifiable ; right : defendant is used as an adjective by Shakspeare. It and defender seem, in a general sense, synonymous ; but, legally, the defendant is the party to a suit, who is sued or accused. A defensative is a guard, or, in surgery, a protecting bandage ; a plaster. A defensive is also that which serves to defend. The adjective means proper for defence, or protection, as distinguished from assault. The adverb and participle explain themselves.

Lo this same thing that ghe ben sorowful aftr god,
hou mych bisynesse it worchith in ghoul, but *defend-*
ing, but yndignacioun, but drede, but desier, but loue,
but remeance. *Wiclif. 2 Cor. vii.*

My *defence* to hem that axen me, that is whether we
han not power to ete and drynke ? *Id. 1 Cor. 9.*

Deliver me from mine enemies, O my God : *de-*
fend me from them that rise up against me. *Psaln lix. 1.*

Rehoboam dwelt in Jerusalem, and built cities for
defence in Judah. *2 Chron. ii. 5.*

O Thomas, jeo vous dis, Thomas, Thomas !
This maketh the fend, this muste ben amended,
Ire is a thing that high God hath *defended*.
Chaucer. Cant. Tales.

Wars preventive, upon just fears, are true *defen-*
sives, as well as on actual invasions. *Bacon.*

They must make themselves *defensible* both against
the natives and against strangers. *Id.*

Heaven *defend* your souls, that you think
I will your serious and great business scant. *Shakspeare.*

Banish your *defenders*, till at length

Your ignorance deliver you,

As most abated captives, to some nation

That won you without blows. *Id.*

A field,

Which nothing but the sound of Hotspur's name
Did seem to make *defensible*. *Id.*

Line and new repair our towns of war
With men of courage, and with means *defendant*. *Id.*

This is the day appointed for the combat,
And ready are the' appellant and *defendant*. *Id.*
Stout men of arms, and with their guide of power,
Like Troy's old town *defendst* with Ilion's tower. *Fairfax.*

My unpreparedness for war testifies for me that
I am set on the *defensive* part. *King Charles.*

O sons ! like one of us man is become,
To know both good and evil, since his taste
Of that *defended* fruit. *Milton.*

My sister is not so *defenceless* left
As you imagine : she has a hidden strength
Which you remember not. *Id.*

A village near it was *defended* by the river.

His majesty, not at all dismayed, resolved to stand
upon the *defensive* only. *Clarendon.*

So lawyers, lest the Bear *defendant*,
And plaintiff Dog, should make an end on't ;
Do stave and tail with writs of error,
Reverse of judgment, and demurrer. *Hudibras.*

A very unsafe *defensative* it is against the fury of
the lion, and surely no better than virginity, or blood
royal, which Pliny doth place in cock-broth.

Browne's Vulgar Errors.

Severe *defences* may be made against wearing any
linen under a certain breadth. *Temple.*

The use of wine is little practised, and in some
places *defended* by customs or laws. *Id.*

Undoubtedly there is no way so effectual to betray
the truth, as to procure it a weak *defender*. *South.*

If the bishop has no other *defensatives* but excom-
munication, no other power but that of the keys, he
may surrender up his pastoral staff. *Id.*

And here the' access a gloomy grove *defends*
And here the' unnavigable lake extends. *Dryden.*

Do'st thou not mourn our power employed in vain,
And the *defenders* of our city slain ? *Id.*

He would not be persuaded by danger to offer any
offence, but only to stand upon the best *defensive*
guard he could. *Sidney.*

Let me be foremost to *defend* the throne,
And guard my father's glories and my own. *Pope.*

Having often heard Venice represented as one of
the most *defensible* cities in the world, I informed
myself in what its strength consists. *Addison.*

There is nothing so bad which will not admit of
something to be said in its *defence*. *Sterne.*

Those high towers, out of which the Romans might
more conveniently fight with the *defendants* on the
wall, those also were broken by Archimedes' engines.
Wilkins's Math. Magic.

I conceive it very *defensible* to disarm an adversary,
and disable him from doing mischief. *Collier.*

If I could not avoid his company, why did I not
arm myself ? Why did I venture *defenceless* into so
much danger. *Mason.*

The car of victory, the plume, the wreath,
Defend not from the bolt of fate, the brave. *Begatie.*

DEFENDER OF THE FAITH. Fidei defensor, a
peculiar title belonging to the king of England ;
as Catholicus to the king of Spain, and Christian-

issimus to the king of France, &c. These titles were originally given by the popes. That of *Fidei defensor* was first conferred by Leo X. on king Henry VIII. for his memorable book against Martin Luther; and the bull for it bears date quinto idus Octob. 1521. It was afterwards confirmed by Clement VII. Chamberlayne says, the title belonged to the kings of England before that time; and for proof hereof appeals to several charters granted to the university of Oxford: so that pope Leo's bull was only a renovation of the ancient right.

DEFER, *v. a. & v. n.* [Fr. *différer*; Span. *différer*; Ital. *differrire*; Lat. *differre*, from *de* and *fero*, to bear away. To put away for a time; to put off; delay; withhold. It is also used for refer, and thus becomes the parent of the substantive deference.

The commissioners *deferred* the matter unto the earl of Northumberland, who was the principal man of authority in those parts *Bacon*.

He will not long *defer*

To vindicate the glory of his name

Against all competition, nor will long

Endure it. *Milton*.

Neither is this a matter to be *deferred* till a more convenient time of peace and leisure. *Swift*.

Inure thyself betimes to the love and practice of good deeds; for the longer thou *deferrest* to be acquainted with them, the less every day thou wilt find thyself disposed to them. *Atterbury*.

Defer the promised boon the goddess cries.

Pope.

Be wise to-day; 'tis madness to *defer*;

Next day the fatal precedent will plead;

Thus on, till wisdom is pushed out of life.

Young.

DEFERENCE, *n. s.* Fr. *deference*. Regard; respect. See **DEER**.

Virgil could have excelled Varius in tragedy, and Horace in lyric poetry, but out of *deference* to his friends he attempted neither. *Dryden*.

A natural roughness makes a man uncomplaisant to others; so that he has no *deference* for their inclinations, tempers, or conditions. *Locke*.

He may be convinced that he is in an error, by observing those persons, for whose wisdom and goodness he has the greatest *deference*, to be of a contrary sentiment. *Swift*.

Deference is the most complicate, the most indirect, and the most elegant of all compliments.

Shenstone.

Most of our fellow-subjects are guided either by the prejudice of education, or by a *deference* to the judgment of those who, perhaps, in their own hearts, disapprove the opinions which they industriously spread among the multitude. *Addison*.

We ought to show the regard, *deference*, and honour, which belong to superiors; and the candour, integrity, and benevolence, we owe to all. *Madon*.

DEFERENT, *adj. & n. s.* From Lat. *deferens*, of *defero*. See **DEFER**. That which carries or conveys. That carries up and down.

The figures of pipes or concaves, through which sounds pass, or of other bodies *deferent*, conduce to the variety and alteration of the sound. *Bacon*.

It is certain, however, it crosses the received opinion, that sounds may be created without air, though air be the most favourable *deferent* of sounds. *Id.*

DEFFAND (Marie du), a French lady, distinguished both for her talents and extensive acquaintance with the literati of the last century, was born in 1696, and was the daughter of Gaspar de Vichy, comte de Champ-Rond. She received an excellent education, but no care seems to have been taken to regulate her temper and moral habits, which displayed throughout her life a disgusting portion of selfishness. In 1718 she married J. B. J. du Deffand, marquis de la Lande, whose ancestors had signalised themselves by their attachment to the dukes of Burgundy. Madame du Deffand left no monument of her abilities except her Correspondence, which has been highly praised by D'Alembert, as affording a model of epistolary style. She died in 1780, having, during the last thirty years of her life, been afflicted with blindness. In 1810 appeared *Correspondance inedite de Madame du Deffand avec D'Alembert, Montesquieu, le president Henault, la Duchesse du Maine; Mesdames de Choiseul, de Stael; le Marquis d'Argens, le Chevalier d'Aydie, &c.*, 3 vols. 8vo. Her Letters to Horace Walpole have also been printed.

DEFIANCE. See **DEFY**.

DEFICIENCY, or

DEFICIENCY, *n. s.*

DEFICIENT, *adj.*

Lat. *deficio*; *de* pri-
vative, and *facio*, to
make. Want, imper-
fection, defect. Deficient; defective, imperfect.

See **DEFECT**.

Figures are either simple or mixed: the simple be either circular or angular; and of circular, either complete, as circles, or *deficient*, as ovals. *Wotton*.

O woman! best of all things as the will

Of God ordained them: his creating hand

Nothing imperfect or *deficient* left. *Milton*.

Thou in thyself art perfect, and in thee

Is no *deficiency* found. *Id.*

Scaliger finding a defect in the reason of Aristotle, introduceth one of no less *deficiency* himself.

Brown's Vulgar Errors.

Neither Virgil nor Homer were *deficient* in any of the former beauties. *Dryden*.

The characters of comedy and tragedy are never to be made perfect, but always to be drawn with some specks of frailty and *deficiency*, such as they have been described to us in history. *Id.*

Several thoughts of the mind, for which we have either none or very *deficient* names, are diligently to be studied. *Locke*.

What great *deficiency* is it if we come short of others? *Sprat*.

There is no burden laid upon our posterity, nor any *deficiency* to be hereafter made up by ourselves, which has been our case in so many other subsidies.

Addison.

DEFILLE, *v. a. & n. s.*

DEFILER, *n. s.*

DEFILEMENT.

Compounded of

de and foul. Sax.

afyllan. Goth. *fylla*;

Belg. *vuyt*; from the Gr. *φῶλος*, vile, unclean.—Minsheu. To make foul, or unclean; to pollute, violate, corrupt, taint; and hence to calumniate.

That which dieth of itself he shall not eat to *defile* himself therewith. *Lev. xxii. 8.*

Forgetfulness of good turns, *defiling* of souls, adultery, and shameless uncleanness. *Wisd. xiv. 26.*

There is a thing, Harry, known to many in our land by the name of pitch; this pitch, as ancient writers do report, doth *defile*. *Shakspeare.*

Lust,

By unchaste looks, loose gestures, and foul talk, Lets in *defilement* to the inward parts. *Milton.*

God requires rather that we should die, than *defile* ourselves with impieties. *Stillingsfleet.*

Every object his offence reviled; The husband murdered, and the wife *defiled*. *Prior.*

He is justly reckoned among the greatest prelates of this age, however his character may be *defiled* by mean and dirty hands. *Swift.*

Let not any instances of sin *defile* your requests. *Wake.*

The unchaste are provoked to see their vice exposed, and the chaste cannot rake into such filth without danger of *defilement*. *Spectator.*

At the last tremendous day, I shall hold forth in my arms my much wronged child, and call aloud for vengeance on her *defiler*. *Addison.*

Thus when Cambyzes led his barbarous hosts From Persia's rocks to Egypt's trembling coasts, *Defiled* each hallowed fane, and sacred wood, And, drunk with fury, swelled the Nile with blood. *Darwin.*

DEF'ILE, *v. n. & n. s.* Fr. *defile*, from file, a line of soldiers, itself derived from Lat. *filum*, a thread. To pass off in files; a narrow passage; a long narrow pass; a lane.

There is in Oxford a narrow *defile*, to use the military term, where the partisans used to encounter. *Addison.*

It has been mentioned by a writer of military manœuvres, that *defiling* should be performed with rapidity, &c. *James.*

DEF'ILE, in war, a narrow lane or passage, through which a company of horse or foot can pass only in file, by making a small front; so that the enemy may take an opportunity to stop their march, and to charge them with so much the more advantage, as those in front and rear cannot reciprocally come to the relief of one another.

DEF'INE, *v. a. & v. n.* } Fr. and Port. *definir*; Spanish, *definir*; Italian, *definire*; Lat. *definire*. From *do* and *finem*, to give a limit. To set a limit by words or actions; to mark a bound. As a neuter verb, to decide, determine. Definable is, capable of being defined. Definer, he who defines; and hence he who explains or describes a thing. Definite is, precise; exact; determined; and sometimes it is used as a substantive. Definiteness is, certainty; limitedness. Definition, the act or form of defining; the concise description of a thing. Definitive is, determinate; express; final. Definitiveness, decisiveness.

The unjust judge is the capital remover of landmarks, when he *defineth* amiss of lands and properties. *Bacon.*

Idiot in this case of favour, Would be wisely *definite*. *Shakspeare.*

VOL. VII.

Definitively thus I answer you: Your love deserves my thanks; but my desert, Unmeritable, shuns your high request. *Id.*

Bellarmino saith, because we think that the body of Christ may be in many places at once, locally and visibly; therefore we may say and hold, that the same body may be circumspectively and *definitively* in more places at once. *Hall.*

Other authors write often dubiously, even in matters wherein is expected a strict and *definitive* truth. *Browne's Vulgar Errors.*

Definitions do not tell an sit, but quid sit; the first is to be supposed before any *definition* is to be inquired after. *Bishop Taylor.*

The Supreme Nature we cannot otherwise define, than by saying it is infinite; as if infinite were *definable*, or infinity a subject for our narrow understanding. *Dryden.*

I drew my *definition* of poetical wit from my particular consideration of him; for propriety of thoughts and words is only to be found in him. *Id.*

Though *defining* be thought the proper way to make known the proper signification, yet there are some words that will not be *defined*. *Locke.*

Whose loss can'st thou mean, That dost so well their miseries *define*? *Sidney.*

Hither to your arbour divers times he repaired, and here, by your means, had the sight of the goddess, who, in a *definite* compass, can set forth infinite beauty. *Id.*

Concerning the time of the end of the world the question is, whether that time be *definable* or *Burnet's Theory.*

So universally does repetition contribute to our pleasure in the fine arts, that beauty itself has been *defined* by some writers to consist in a due combination of uniformity and variety. *Darwin.*

Your God, forsooth, is found Incomprehensible and infinite; But is he therefore found? Vain searcher. no: Let your imperfect *definition* show, That nothing you, the weak *definer*, know. *Prior.*

When the rings appeared only black and white, they were very distinct and well *defined*, and the blackness seemed as intense as that of the central spot. *Newton.*

What is man? Not a reasonable animal merely; for that is not an adequate and distinguishing *definition*. *Bentley.*

Special bastardy is nothing else but the *definition* of the general; and the general, again, is nothing else but a *definite* of the special. *Ayliffe.*

DEFINITE, in grammar, is applied to an article that has a precise determinate signification; such as the article *the* in English, *le* and *la* in French, &c., which fix and ascertain the noun to which they belong; whereas *a*, *an*, *un*, or *une*, mark nothing particular, and are therefore called indefinite. See ARTICLE.

DEFLA'GRABLE, *adj.* } From Lat. *deflagro*. Combustible. DEFLAGRA'TION, *n. s.* } DEFLAGRAB'ILITY, *n. s.* } lity; the quality of taking fire, and burning totally away.

The true reason why paper is not burned by the flame that plays about it, seems to be, that the aqueous part of the spirit of wine, being imbibed by the paper, keeps it so moist, that the flame of the sulphureous parts of the same spirit cannot fasten on it; 1

and therefore, when the *deflagration* is over, you shall always find the paper moist. *Boyle.*

Our chymical oils, supposing that they were exactly pure, yet they would be, as the best spirit of wine is, but the more inflammable and *deflagrable*. *Id.*

We have spent more time than the opinion of the ready *deflagrability*, if I may so speak, of salt petre did permit us to imagine. *Id.*

DEFLECT, *v. u.* } From Lat. *de* and *flect*.
DEFLECTION, *n. s.* } *to*, to turn. To turn
DEFLEXURE, *n. s.* } aside; to deviate.

At some parts of the Azores the needle *deflecteth* not, but *lieth* in the true meridian: on the otherside of the Azores, and this side of the equator, the north point of the needle wheel^{eth} to the west.

Broune's Vulgar Errors.

Needles incline to the south on the other side of the equator; and at the very line, or middle circle, stand without *deflection*. *Id.*

For, did not ~~come~~ from a straight course *deflect*, They could not meet, they could no world erect.

Blackmore.

As by the cultivation of various sciences, a language is amplified, it will be more furnished with words *deflected* from their original sense.

Johnson. Preface to Dictionary.

DEFLECTION OF THE RAYS OF LIGHT, a property which Dr. Hook observed in 1675, and read an account of before the Royal Society, March 18th, the same year. He says he found it different both from reflection and refraction, and that it was made towards the surface of the opaque body, perpendicularly. This property Sir Isaac Newton calls inflection.

DEFLOUR, *v. a.* } Fr. *deflorer*; Span. *des-*
DEFLOURER, *n. s.* } *florar*; Lat. *deflorare*;
DEFLORATION, *n. s.* } from *de* privative and
floreo, *flos*, *floris*, a flower. To violate a virgin; hence to mar or deface any thing that is beautiful; to select the most valuable of a number of things. The meaning of the substantives is obvious.

How on a sudden lost,
Defaced, *defloured*, and now to death devote!

Milton.

The laws of Normandy are, in a great measure, the *defloration* of the English laws, and a transcript of them. *Hale.*

If he died young, he died innocent, and before the sweetness of his soul was *defloured* and ravished from him by the flames and follies of a froward age.

Taylor.

I have often wondered, that those *deflourers* of innocence, though dead to all the sentiments of virtue and honour, are not restrained by humanity.

Addison.

DEFLUX, *n. s.* } Lat. *defluxio*, from *de*,
DEFLUOUS, *adj.* } and *fluo*, to flow. The
DEFLUXION, *n. s.* } flow of humors down-
wards.

Both bodies are clammy, and bridle the *deflux* of humours, without penning them in too much.

Bacon.

We see that taking cold moveth looseness by contraction of the skin and outward parts; and so doth cold, likewise, cause rheums and *defluxions* from the head. *Id.*

DEFLY, *adv.* From DEFT, which see. *Dexterously*; skillfully. Obsolete. Properly *defly*.

Lo, how finely the graces can it foot

To the instrument;

They dauncen *defly*, and singen soote,

In their merriment. *Spenser.*

DE FOE (Daniel), a celebrated miscellaneous writer of the last and preceding century. When king William, to allay the dissent of the people, was obliged to dismiss his Dutch guards, De Foe ridiculed the enemies of government in a well-known poem, called the True-Born Englishman. He next wrote a tract, called the Shortest Way with the Dissenters, a satire on those who now, having the power, wished to retaliate on the Romanists and dissenters those persecutions they had loudly complained of when inflicted on themselves. For this he was sentenced to the pillory, which so little intimidated him, that, in defiance of this usage, he wrote a Hymn to the Pillory. It is unnecessary to enumerate all his publications: the following are the principal. The History of the Plague in 1665; a novel, entitled The History of Colonel Jack; a New Voyage Round the World by a Company of Merchants, printed for Bettesworth, 1725; The History of Roxana; Memoirs of a Cavalier; The History of Moll Flanders; a religious romance, entitled Religious Courtship; and The Life and Adventures of Robinson Crusoe, a well-known tale, of which there have been editions without number. The basis of this popular story was afforded by the real history of a Scottish sailor, Alexander Selkirk, who had been left ashore on the island of Juan Fernandez. Selkirk used to relate his adventures at a coffee-house in London, where money was frequently given him by the company, and where De Foe so often heard them, that out of them he formed the above mentioned history. De Foe's malignant enemies have misrepresented this to his disadvantage. He died at Islington in 1731.

DEFECATION, *n. s.* Lat. from *defecus*, of *de* and *fecus*, foul. The act of making filthy; pollution. This is not an English word; at least, to make it English, it should be written *defecation*, says Dr. Johnson.

What native unextinguishable beauty must be impressed and instincted through the whole, which the *defecation* of so many parts by a bad printer, and worse editor, could not hinder from shining forth.

Bentley.

DEFORCEMENT, *n. s.* from force. A withholding of lands and tenements by force from the right owner. 'It may be grounded,' says Blackstone, 'on the disability of the party deforced.'

DEFORM, *v. a. & adj.* } Fr. *deformer*; Ital.
DEFORMED, *part. adj.* } *disformare*; Span.
DEFORMATION, *n. s.* } *desformar*; Lat. *de-*
DEFORMEDLY, *adv.* } *formare*; i. e. *demere*
DEFORMEDNESS, *n. s.* } *formam*, to take away
DEFORMITY, } beauty. To disfigure; to mar the form of any thing; to dishonor, disgrace. Deformation is a defacing, disfiguring. Deformity is ugliness, irregularity of form; hence inordinateness, ridiculousness.

I did proclaim,
That whoso killed that monster most deform,
Should have mine only daughter to his dame.

Spenser.

I that am curtailed of all fair proportion,
Cheated of feature by dissembling nature,
Deformed, unfinished, sent before my time
Into this breathing world, scarce half made up.

Shakespeare.

Where sits deformity to mock my body,
To shape my legs of an unequal size,
To disproportion me in every part.

Id.

No glory is more to be envied than that of due re-
forming either church or state, when deformities are
such, that the perturbation and novelty are not like to
exceed the benefit of reforming.

King Charles.

Why should not man,
Retaining still divine similitude
In part, from such deformities be free,
And for his Maker's image sake, exempt?

Milton.

So spake the grisly terror; and in shape,
So speaking and so threatening, grew tenfold
More dreadful and deform.

Id.

Old men with dust deformed their hoary hair.

Dryden.

It is well known what strange work there has been
in the world, under the name and pretence of reforma-
tion; how often it has turned out to be, in reality,
deformation; or, at best, a tinkering sort of business,
where, while one hole has been mended, two have
been made.

Bishop Horne.

Affliction is certain deformity; by forming them-
selves on fantastic models, the young begin with being
ridiculous, and often end in being vicious.

Blair.

Had no Power presented me
The possibility of change, I would
Have done the best which Spirit may, to make
Its way, with all Deformity's dull, deadly,
Discouraging, weight upon me, like a mountain.

Byron.

DEFORMITY may be defined, in general, the
want of uniformity; though it certainly does not,
as some have supposed, include the want of that
perfect degree of uniformity that is necessary to
constitute beauty. Many are the objects in na-
ture that cannot be said to be beautiful, and yet
are by no means deformed. Deformity is either
natural or moral. These are both referred by
Mr. Hutcheson to an internal sense; and our
perceptions of them, as he supposes, arise from
an original arbitrary structure of our own minds,
by which certain objects, when observed, are
rendered the occasions of certain sensations and
affections. See BEAUTY.

DEFRAUD, *v. a.* } Fr. *defrauder*; Span.

DEFRAUDATION, *n. s.* } *defraudar*; Lat. *defrau-*

DEFRAUDER. } *dare*, from *de* and *fraus*,

fraudis, deceit. To cheat; deceive; beguile of
something: always taking of before the thing
gained. Defraudation is privation by deceit or
guile. Defrauder, he who cheats another of his
property.

My son, defraud not the poor of his living and
make not the needy eyes to wait long.

Ecc. iv. 1.

Churches seem injured and defrauded of their rights,
when places, not sanctified as they are, prevent them
unnecessarily in that pre-eminence and honour.

Hooker.

Their imposture are worse than any other, de-
luding not only into pecuniary defraudations, but the
irreparable deceit of death. *Brown's Vulgar Errors.*

There they, who brothers better claim disown,
Expel their parents, and usurp the throne;
Defraud their clients, and, to lucre sold,
Sit brooding on unprofitable gold.

Dryden.

There is a portion of our lives which every wise man
may justly reserve for his own particular use, without
defrauding his native country.

Id.

But now he seized Briseis' heavenly charms,
And of my valour's prize defrauds my arms.

Pope.

The profligate in morals grows severe,
Defrauders just, and sycophants sincere.

Blackmore.

DEFRA'Y, *v. a.*

DEFRA'YER, *n. s.*

Fr. *defrayer*, accord-
ing to Minsheu, from
DEFRA'YMENT, *n. s.* } the old Fr. *firedum*, a
fine. Rather, from *de*, and *fra s.* Fr. expense. It
may, however, be nothing more than a com-
pound of the English verb, free. To pay expenses;
to discharge a charge made; and *fra s.* Fr. expense, is, com-
pensation; satisfaction. Defrayer, he who pays
or discharges an account.

He would, out of his own revenue, defray the
charges belonging to the sacrifices. 2 Mac. ix. 16.

It is easy to lay a charge upon any town; but to
foresee how the same may be answered and defrayed,
is the chief part of good advisement.

Spenser's State of Ireland.

It is long since any stranger arrived in this part,
and therefore take ye no care; the state will defray
you all the time you stay; neither shall you stay one
day the less for that.

Bacon.

DEFT, *adj.* Sax. *dæft*. Obsolete. Neat;
handsome; spruce; fitting.

You go not the way to examine; you must call the
watch that are their accusers.—

— Yea, marry, that's the deffest way.

Shakespeare.

Come, high or low,

Thyself and office deffly show. Id. *Macbeth*.

Loud fits of laughter seized the guests, to see
The limping god so deff at his new ministry.

Dryden.

The wanton calf may skip with many a bound,
And my cur, Tray, play deffest feats around. Gay.

Young Colin Clout, a lad of peerless meed,
Full well could dance, and deffly tune the reed. Id.

DEFUNCT, *n. s. & adj.*

DEFUNCTION, *n. s.*

Lat. *defunctus*,
of *de* and *fungor*,
to finish. In a state of death; dead.

Nature doth abhor to make his couch

With the defunct, or sleep upon the dead.

Shakespeare.

I therefore beg it not

To please the palate of my appetite;

Nor to comply with heat, the young effects

In me defunct, and proper satisfaction.

Id.

Here entity and quiddity,

The souls of defunct bodies, fly. Hudibras.

In many cases, the searchers are able to report the
opinion of the physician who was with the patient, as
they receive the same from the friends of the defunct.

Graunt.

DEFY, *v. a. & n. s.*

DEFY'ER, *n. s.*

DEFFANCE.

Sax. and Teut. *figan*;
Goth. *figa*; Fr. *desfer*;
Span. *desafiar*; Ital. *dis-*
sidere, from Lat. *dissidere*, to differ; because,

says Minshew, we differ with those whom we defy. To dare; to challenge; to call to combat; to despise; to disdain; to deny. Defy is used as a substantive by Dryden, but not commonly. Defiance is the instrument or mode of challenge; any expression of enmity, abhorrence, or contempt.

I knowe her eke a false dissimulour,
For finally fortune I do *defie*.

Chaucer. Prol. to Cant. Tales.

As many fools that stand in better place,
Garnished like him, that for a tricky word
Defy the matter. *Shakespeare.*

The fiery Tybalt, with his sword prepared,
Which, as he breathed *defiance* to my ears,
He swung about his head. *Id.*

I once again

Defy thee to the trial of mortal fight. *Milton.*

How many of us can bid *defiance* to death, and suggest answers to absent temptations, which when they come home to us, we fly off, and change our note.

Bp. Hall's Contemplations.

Nor shall it e'er be said that wight
With gantlet blue and bases white,
And round blunt truncheon by his side
So great a man at arms *defyed*. *Hudibras.*

Is it not then high time that the laws should provide, by the most prudent and effectual means, to curb those bold and insolent *defiers* of heaven?

Tillotson.

At this the challenger, with fierce *defy*,
His trumpet sounds; the challenged makes reply:
With clangour rings the field, resounds the vaulted sky.

Dryden.

Nor is it just to bring

A war without a just *defiance* made. *Id.*

Nobody will so openly bid *defiance* to common sense, as to alien visible and direct contradictions. *Locke.*

Here let the pippin, fretted o'er with gold,
In fostering straw *defy* the winter's cold;
The hardier russet here will safely keep,
And dusky rennet, with its crimson check.

Sheridan.

And one enormous shout of "Allah!" rose
In the same moment, loud as even the roar
Of war's most mortal engines, to their foes
Hurling *defiance*.

Byron.

DEGENERATE, *v. n. & adj.* } Fr. *dégénérer*;
DEGENERACY, *n. s.* } Span. *degenerar*;
DEGENERATENESS, } Ital. *dé-*
DEGENERATIVE, } *generare*; Lat.
DEGENEROUS, *adj.* } *tin, degenero*;
DEGENEROUSLY, *adv.* } from *de* and

genere errare, to wander from its kind. To fall off from the virtue or fame of one's ancestors; to decline in station, in kind, or in class: as an adjective, unlike or unequal to ancestry; unworthy; base. Degeneracy, degenerateness, and degeneration are synonymous, and signify a state or act that exhibits degradation from the excellence or honor of ancestors; an apostasy or declining from that which is good. Degenerous is synonymous with degenerated.

Most of those fruits that used to be grafted, if they be set of kernels or stones, *degenerate*.

Bacon.

Thou art like enough

To fight against me under Pirrey's pay;

To cog his heels, and curtsy at his frowns,

To show how much thou art *degenerate*.

Shakespeare.

Let not the tumultuary violence of some men's immoderate demands ever betray me to that *degenerous* and unmanly slavery, which should make me strengthen them by my consent. *King Charles.*

In plants, these transplantations are obvious; as barley into oats, of wheat into darnell; and those grains which generally arise among corn, as cockle, aracus, ergilops, and other *degenerations*.

Broune's Vulgar Errors.

So all shall turn *degenerate*, all depraved;
Justice and temperance, truth and faith, forgot!
One man except. *Milton.*

When wit transgresseth decency, it *degenerates* into insolence and imperty.

Tillotson.

'Tis true, we have contracted a great deal of weakness and impotency by our wilful *degeneracy* from goodness; but that grace, which the gospel offers to us for our assistance, is sufficient for us. *Id.*

Fair, tall, his limbs with due proportion joined;
But of a heavy dull *degenerate* mind,
His soul belied the features of his face;
Beauty was there, but beauty in disgrace. *Dryden.*

Degenerous passion, and for man too *base*,
It seats its empire in the female race;
There rages, and, to make its blow secure,
Puts flattery on, until the aim be sure. *Id.*

When a man so far becomes *degenerate* as to quit the principles of human nature, and to be a noxious creature, there is commonly an injury done some person or other. *Locke.*

Degenerate from their ancient brood,
Since first the court allowed them food.

Swift.

The ruin of a state is generally preceded by an universal *degeneracy* of manners, and contempt of religion, which is entirely our case at present. *Id.*

How wounding a spectacle is it to see heroes, like Hercules at the distaff, thus *degenerously* employed!

Decay of Piety.

There is a kind of sluggish resignation, as well as poorness and *degeneracy* of spirit, in a state of slavery.

Addison.

When we think of the infinite purity of God, who cannot behold iniquity; and consider the corrupted and *d.enerate* state of human nature; this is apt to make us more apprehensive than is reasonable, of the difficulty of our duty.

Clarke's Sermons.

Tongues, like governments, have a natural tendency, let us make some struggles for our language.

Johnson. Preface to Dictionary.

DEGLUTITION, *n. s.* Lat. *deglutitio*, of *de* and *glutio*, from Gr. *γλῶττω*, to swallow.—Ainsworth. The act or power of swallowing.

When the *deglutition* is totally abolished, the patient may be nourished by clysters. *Arbuthnot on Diet.*

DEGLUTITION, in the animal economy, is performed in the first place by means of the tongue, driving the aliment into the œsophagus or gullet, and then, by the contraction of the sphincter, and the fleshy fibres of the œsophagus, which, lessening its aperture, protrude the contents downward into the stomach. In its course, by pressing the glands, the food itself increases the mucus required for lubrication, and thus easily passes without irritation.

DEGRADE, *v. a.* } Fr. *dégrader*; Span.
DEGRADATION, *n. s.* } *dégradár*; Ital. *disgr-*
dare; from Lat. *de* privative, and *gradus* a step.

To deprive of rank or degree; to reduce from a higher to a lower rank or value. Degradation is the state of deprivation so effected; dismissal from trust or office.

He should
Be quite *degraded*, like a hedgeborn swain,
That doth presume to boast of gentle blood.
Shakespeare.
Nor shalt thou, by descending to assume
Man's nature, lessen or *degrade* thine own.

All higher knowledge in her presence falls
Degraded. *Milton.* *Id.*

So deplorable is the *degradation* of our nature, that whereas before we bore the image of God, we now retain only the image of men. *South.*

The word *degradation* is commonly used to denote a deprivation and removing of a man from his degree. *Ayliffe.*

Time hath not yet the features fixed,
But brighter traits with evil mixed;
And there are hues not always faded,
Which speak a mind not all *degraded*
Even by the crimes through which it waded.

Byron. The Giaour.

DEGRADATION from political rank or station was, and is, performed in a different manner in the cases of a peer, a priest, a knight, a gentleman, an officer, &c. In the time of Francis I. M. Eangel, a French officer, having, in a cowardly manner, given up Fontarabia, whereof he was governor, was publicly degraded. On this occasion twenty or thirty cavaliers were assembled, before whom this gentleman was accused of treason and breach of faith by a king at arms. Two scaffolds were erected, the one for the judges, heralds, and pursuivants, and the other for the guilty cavalier, who was armed at all points, and his shield placed on a stake before him, with the point reversed. On one side assisted twelve priests, in surplices, who sung the vigils of the dead. At the close of each psalm they made a pause, during which the officers of arms stripped the condemned of some piece of his armour, beginning with his helmet, and proceeding thus till he was quite disarmed; which done, they broke the shield in three pieces with a hammer. Then the king at arms emptied a basin of hot water on the criminal's head; and the judges, putting on mourning habits, went to the church. The degraded was then drawn from off the scaffold with a rope tied under his armpits, laid on a bier, and covered with mortuary clothes; the priests singing some of the prayers for the dead; and then he was delivered to the civil judge and the executioner of justice. Sir Andrew Marcla, earl of Carlisle, being convicted of treason, 18 Edward II. coram rege: after judgment was pronounced, his sword was broken over his head, and his spurs hewn off his heels; Sir Anthony Lucy, the judge, saying to him: 'Andrew, now thou art no knight, but a knave.' It has been maintained that the king may degrade a peer; but it appears from later authorities, that he cannot be degraded but by act of parliament. We have an instance of ecclesiastical degradation, before condemnation to death, in the eighth century, at Constantinople, in the person of the patriarch Constantine, whom Con-

stantine Copronymus caused to be executed. He was made to ascend the ambo; and the patriarch Nicetas sent some of his bishops to strip him of the pallium, and anathematised him: then they made him go out of the church backwards. When Cranmer, archbishop of Canterbury, was degraded by order of queen Mary, they dressed him in episcopal robes, made only of canvas, put the mitre on his head, and the pastoral staff in his hand; and in this attire showed him to the people. They then stripped him piece by piece. Pope Boniface pronounced that six bishops were required to degrade a priest; but the difficulty of assembling so many bishops, rendered the punishment frequently impracticable.

DEGRADED, in heraldry, the name of a cross when it has steps at each end, as *argent*, a cross, degraded *sable*. Name Wentworth.

DEGREE, *n. s.* Fr. *degré*; Port. *grao*; Span. and Ital. *grado*, from Lat. *gradus*, a step. See DEGRADE. Rank; quality; order; place of relative merit or precedence; measure; proportion. Various applied in the sciences: see the following articles. By degrees is, gradually; by steps, or graduated progress.

Surely men of low *degree* are vanity, and men of high *degree* are a lye: to be laid in the balance, they are altogether lighter than vanity. *Psalms lxi. 9.*

Methinkith it accordant to reason,
To tell you alle the condition
Of ech of them, so as it semid me,
And which they werin, and of what *degree*,
And eke in what array that they wer in;
And at a knight then wold I first begin.

Chaucer. Prolog. to Cant. Tales.

It was my fortune, common to that age,
To love a lady fair, of great *degree*,
The which was born of noble parentage,
And set in highest seat of dignity. *Spenser.*

I embrace willingly the ancient received course and conveniency of that discipline, which teacheth inferior *degrees* and orders in the church of God.

Hooker.

The book of Wiscom noteth *degrees* of idolatry, making that of worshipping petty and vile idols more gross than simply the worshipping of the creature.

Bacon.

Degree being vizarded,
The unworthiest shews as fairly in the mask.
Shakespeare.

How vainly do we hope to be perfect at once! it is well for us, if through many *degrees* we can rise to our consummation. *Bishop Hall. Contemplations.*

A strange harmonious inclination
Of all *degrees* to reformation. *Hudibras.*
In minds and manners, twins opposed we see;
In the same sign, almost the same *degree*. *Dryden.*

If all the parts are equally heard as loud as one another, they will stun you to that *degree*, that you will fancy your ears were torn in pieces. *Id.*

As if there were *degrees* in infinite,
And Heaven itself had rather want perfection
Than punish to excess. *Id.*

Farmers in *degree*,
He a good husband, a good housewife she. *Id.*

The several *degrees* of angels may probably have larger views, and be endowed with capacities able to set before them, as in one picture, all their past knowledge at once.

Locke.

Poesy

Admits of no *degrees*; but must be still
Sublimely good, or despicably ill.

Roscommon.

But is no rank, no station, no *degree*,
From this contagious taint of sorrow free?

Prior.

Exulting in triumph now swell the bold notes;
In broken air, trembling, the wild musick floats

Till by *degrees* remote and small,

The strains decay,

And melt away,

In a dying, dying fall.

Pope.

The unusual extension of my muscles on this occasion, made my face ache on both sides to such a *degree*, that nothing but an invincible resolution and perseverance could have prevented me from falling back to my monosyllables.

Spectator.

A person who is addicted to play or gaming, though he took but little delight in it at first, by *degrees* contracts a strong inclination towards it.

Id. No. 447.

Men's prejudices, I was sensible, could only be lessened by *degrees*; and I was firmly of opinion that no change ought ever to be made in quiet times, till the utility of the change was generally acknowledged.

Bishop Watson.

Without hinting the abolition of the order, [I] strongly insisted on the propriety of obliging them to keep exercises in the schools, as the other candidates for *degrees* did.

Id.

How numerous were the instances in which juries found a compassionate verdict, in direct contradiction to the plain facts clearly established before them, we do not know; but that these evils must all have existed to a considerable *degree*, no man can doubt.

Sir Samuel Romilly.

DEGREE, in universities, denotes a quality conferred on the students or members thereof, as a testimony of their proficiency in the arts or sciences, and entitling them to certain privileges.

DEGREE OF LATITUDE. See LATITUDE.

DEGREE OF LONGITUDE. See LONGITUDE.

DEHORT, *v. a.* Lat. *dehortor*; of *de* and *hortor*; Gr. *opw, opwau*, to incite. To dissuade.

One severely *dehorted* all his followers from prostituting mathematical principles unto common apprehension or practice.

Wilkins.

The apostles vehemently *dehort* us from unbelief.

Ward.

The author of this epistle, and the rest of the apostles, do every where vehemently and earnestly *dehort* from unbelief: did they never read these *dehortations*?

Id. on Infidelity.

DEJANIRA, in fabulous history, daughter of Oeneus, king of Aetolia, and wife of Hercules. The centaur Nessus, endeavouring to ravish her, was slain by Hercules with a poisoned arrow. Nessus, when dying, gave his bloody shirt to Dejanira; assuring her that it was a sovereign remedy to cure her husband, if he proved unfaithful. Some time after, Dejanira, suspecting his fidelity, sent him the shirt, which he put on, and was seized with the most excruciating torments. Being unable to support his pains, he retired to Mount Oeta, and erecting a pile of wood set fire

to it, and threw himself into the flames; upon which Dejanira killed herself in despair.

DEICIDE, *n. s.* From Lat. *deus* and *caedo*. A barbarism of Prior's, meant, we suppose to express the death of Christ as being both God and man. Fully believing that such he was, we cannot think that a sober theology will warrant his term.

Explaining how Perfection suffered pain,
Almighty languished, and Eternal died;
How by her patient victor Death was slain,
And earth profaned, yet blessed with *deicide*! Prior.

DEJECT, *v. a. & adj.* Old Fr. *déjecter*; Lat. *dejectedly*, *adv.* } Old Fr. *déjecter*; Lat. *dejectere*, from *de*, and *deject'edness*, *n. s.* } *jacio*, to cast. To cast
DEJECT'ION, } or throw down; de-
DEJECT'URE. } press; debase: hence

to afflict in any way; to mar with grief. The adjective signifies cast down; depressed; low in spirits and manner: *dejecture*, that which is thrown down in a particular way.

No man in that passion doth look strongly, but *dejectedly*: and that repulsion from the eyes diverteth the spirits, and gives heat more to the ears, and the parts by them.

Bacon.

I am of ladies most *deject* and wretched,
That sucked the honey of his music vows,

Shakespeare.

The lowest, most *dejecten* thing of fortune,
Stands still in esperance; lives not in fear!

Id.

What besides

Of sorrow, and *dejection*, and despair,
Our frailty can sustain, thy tidings bring.

Milton.

The liver should continually separate the choler from the blood, and empty it into the intestines; where there is good use for it, not only to provoke *dejection*, but also to attenuate the chyle.

Ray on the Creation.

Oh! If I did but steadfastly believe, I could not be *dejected*; for I will not injure myself to say, I offer my mind any inferior consolation to supply this loss.

Lady Russell's Letters.

Eneas here beheld, of form divine,
A godlike youth in glittering armour shine,
With great Marcellus keeping equal pace,
But gloomy were his eyes, *dejected* was his face.

Dryden.

Nor think to die *dejects* my lofty mind;
All that I dread is leaving you behind!

Pope.

The effects of an alkaliescent state, in any great *degree*, are thirst and a *dejection* of appetite, which putrid things occasion more than any other.

Arbutnot on Aliments.

A disease opposite to spissitude is too great fluidity, the symptoms of which are excess of animal secretions; as of perspiration, sweat, urine, liquid *dejectures*, leanness, weakness, and thirst

Id.

Deserted and astonished, he sinks into utter *dejection*; and even hope itself is swallowed up in despair.

Rogers.

She was *dejected*; she learned an humbler language, and seemed, if she did not trust in God, at least to have renounced her confidence in herself.

Cooper. Private Correspondence.

Or fondly gay, with unambitious guile,
Attempt no prize but favouring Beauty's smile;
Or hear *dejected* to the lonely grove
The soft despair of unrevailing love.

Sheridan

DEJERATION, *n. s.* From Lat. *dejero*. A taking of a solemn oath.

DEIFORM, *adj.* From Lat. *deus* and *forma*. Of a godlike form.

DEIFY, *v. a.* Fr. *deifier*; Lat. *deus*, and *fio* to be made. To make like God; to treat as a deity; to praise excessively.

He did again so extol and *deify* the pope, as made all that he had said in praise of his master and mistress seem temperate and passable. *Bacon.*

Persuade the covetous man not to *deify* his money, and the proud man not to adore himself. *South.*

Daphnis, the fields' delight, the shepherds' love, Renowned on earth, and *deified* above. *Dryden.*

The seals of Julius Cæsar, which we know to be antique, have the star of Venus over them, though they were all graven after his death, as a note that he was *deified*. *Id.*

Half of thee *Is deified* before thy death. *Prior.*

Thus by degrees, self-cheated of their sound And sober judgment, that he is but man, They demi-*deify* and fume him so, That in due season he forgets it too.

Cowper's Tusk.

One noble stroke with a whole life may glow, Or *deify* the canvass till it shine With beauty so surpassing all below, That they who kneel to idols so divine Break no commandment, for high Heaven is there Transfused, transfigured. *Byron.*

DEIGN, *v. a. & n.* Fr. *daigner*; Lat. *dignor*. As a verb active, to vouchsafe; to think worthy (with some condescension). To grant; allow; permit.

Now Sweno, Norway's king, craves composition; Nor would we *deign* him burial of his men, Till he disbursed ten thousand dollars. *Shakspeare.*

Deign to descend now lower, and relate What may no less perhaps avail us known.

Milton.

O *deign* to visit our forsaken seats, The mossy fountains, and the green retreats.

Pope.

Yet nature's care, to all her children just, With richer treasures and an ampler state Endows at large whatever happy man Will *deign* to use.

Akenside.

News have I none that I can *deign* to write, Save that it rained prodigiously last night.

Cowper. Private Correspondence.

DEINTEGRATE, *v. a.* Lat. from *de* and *integrò*. To take from the whole; to spoil; to diminish.

DEIPHON, in fabulous history, a brother of Triptolemus, and son of Celeus and Metanira. When Ceres travelled over the world, she stopped at his father's court, and undertook to nurse him and bring him up. To reward the hospitality of Celeus, the goddess, to make his son immortal, every evening placed him on burning coals, to purify him from his mortal particles. The uncommon growth of Deiphon astonished Metanira, who wished to see what Ceres did to make him so vigorous. She was frightened to see her son on burning coals; and her shrieks disturbing the mysterious operations of the goddess, Deiphon perished in the flames.

DEISCAL, or **DEISHEAL**, in the ancient British customs, a ceremony originally used in the druidical worship. The temples of the ancient Britons were all circular; and the druids in performing the public offices of their religion, never neglected to make three turns round the altar, from east to west, accompanied by all the worshippers. This was called the *deischal*, from *deas*, the right hand, and *sul*, the sun.

DEISM, *n. s.* } Fr. *deisme*; from Lat. *deus*, God. See **DEITY**.
DE'IST, *n. s.* }
DEIST'ICAL, *adj.* } Strictly, a belief in God, or one God; but generally applied to those who, professing such a belief, reject Revelation. See the following article.

In the second epistle of St. Peter, certain *deists*, as they seem to have been, have laughed at the prophecy of the day of judgment. *Burnet.*

Deism, or the principles of natural worship, are only the faint remnants or dying flames of revealed religion in the posterity of Noah. *Dryden.*

Weakness does not fall only to the share of Christian writers, but to some who have taken the pen in hand to support the *deistical* or anti-christian scheme of our days. *Watts.*

DEISM may properly be used to denote natural religion, as comprehending those truths which have a real foundation in reason and nature; and in this sense it is so far from being opposite to Christianity, that it is one great design of the gospel to illustrate and enforce it. In this sense some of the *deistical* writers have affected to use it. But *deism* popularly signifies that system of religion and morals which is supposed to be derived, by the mere force of reason, from the contemplation of the works of nature, and which rejects revelation. In the article **REVELATION**, we shall present the reader with a complete view of the entire argument on this momentous subject.

DEITY, *n. s.* Fr. *deité*; Span. and Port. *dictad*; Arm. *dei*, from Lat. *deitas*, *deus*; Gr. *Διός*, God. Applied also to fabulous gods, and the supposed qualities of a divinity.

DE JURE. See **DE FACTO**.

DELACAPEDE (Bernard Germain Stephen Laville, count), a French naturalist, of noble family, was born at Agen, December 16th, 1756. He was originally destined for the army, and entered while a youth into the Bavarian service. But his love of science soon procured him the post of keeper of the cabinets in the Jardin du Roi at Paris, for which he abandoned the army, and which he held to the period of the revolution. He composed, as a continuation of the great work of Buffon, the Natural History of Oviparous Quadrupeds and Serpents. He much improved the royal cabinet; and in 1798 published the Natural History of Fishes, 5 vols. 4to. But the events of the revolution now distracted his attention. He became a member of the department of Paris, and in 1791 one of the deputies of that city. He was successively secretary and president of the National Assembly; and was one of the very few conspicuous men who steered in safety through the public storms. He was chosen one of the first members of the National Institute, and on the 20th of

January, 1796, carried up an address from a deputation of that body to the council of five hundred, declaring its hatred of royalty. Buonaparte nominated him in 1799 a member of the Conservative Senate; in 1801 he was president of that body, in 1803 grand chancellor of the legion of honor, and in 1804 senator of Paris. He had frequent intercourse with the emperor, to whom he manifested much attachment; but in January, 1814, when the power of his master was tottering, he assumed a new tone, and at the head of the senate recommended peace. At the restoration of the Bourbons he returned to his studies. His lectures at the Garden of Plants were numerous attended. He published several tracts, and contributed to the *Annales du Muséum d'Histoire Naturelle*, and other periodical works. His *History of Cetaceous Animals*, which appeared in 1804, was his last work of importance. He died of the small-pox, October 6th, 1825, and his funeral was attended by several peers of France, members of the Institute, &c.

DELACERATION, *n. s.* From Lat. *delacero*. A tearing in pieces.

DELACRYMATION, *n. s.* Lat. *delacrymatio*. A falling down of the humors; the waterishness of the eyes, or a weeping much.

DELACTATION, *n. s.* Lat. *delactatio*. A weaning from the breast.

DELABRE, one of the most distinguished astronomers of our time, born at Amiens in 1749, studied under the abbé Delille, who always remained his friend. He first applied himself to the languages, particularly most of the living ones, and made himself one of the best Hellenists in France. His studies were not directed to astronomy until his thirty-sixth year. He enriched the writings of Lalande with a commentary, and became the friend and pupil of the author, who proudly called him his best work. In 1790, eight years after the discovery of Herschel, Delambre published the tables of that planet, although in that period it had performed but a small part of its eighty years' course. He also constructed tables of Jupiter and Saturn, and of the satellites of Jupiter, which, with several treatises, procured him a reception into the National Institute. He was engaged with Méchain, from 1792 till 1799, in measuring an arc of the meridian from Barcelona to Dunkirk for the verification of which he measured two bases of 6000 toises, one near Melun, the other near Perpignan. See his *Base du Système Métrique décimal, ou Mesure de l'Arc du Méridien compris entre les Parallèles de Dunkerque et Barcelonne*, Paris, 3 vols. 4to.; and *Recueil d'Observat. Géodésiques faisant Suite au 3me vol. de la Base du Syst. Métr. rédigé par Biot et Arago*. He was made member of the bureau des longitudes. In 1802 Napoleon appointed him inspecteur-général des études, which post he resigned when chosen perpetual secretary of the class of mathematical sciences in 1803. His first tables of the sun were published in 1792; in 1806 appeared his new ones. In 1807 he succeeded Lalande in the collège de France, and wrote his *Traité d'Astronomie théorique et pratique*, 3 vols. 4to. 1814; *Histoire de l'Astronomie*

du moyen âge, 1819; *Hist. de l'Astron. modérée*, 1821, 2 vols.; and *Hist. de l'Astron. du 18me. Siècle*, 2 vols.; a collection of works such as no other nation can show. Delambre also distinguished himself, as perpetual secretary of the institute, by the justice and elegance of his éloges. He died in 1822.

DELAMERE FOREST, a forest of England, in Cheshire, north of Chester, near the Weaver; abounding with wood on its hills, fine pasture in its valleys, and fish in its waters.

DELANY (Patrick), a learned divine, and ingenious author, was born in Ireland about 1686. He received his education at Trinity College, Dublin, which he entered in the character of a sizer, and afterwards became a fellow. Under the patronage of lord Carteret he obtained preferment in the church; and in 1732 published in London a work entitled *Revelation Examined with Candor*. In 1738 he published his *Reflections upon Polygamy*; and, not long after, the *Life of David, king of Israel*, a work displaying much ingenuity and labor. In 1743 he married a second wife, the widow of a Cornish gentleman, and the following year obtained the deanery of Downe. In 1754 he published *Observations on Lord Orrery's Remarks on the Life and Writings of Swift*, in which there are many curious anecdotes of the latter. Dr. Delany continued writing for the public till a short time before his death; and his *Sermons on Social Duties* are still in estimation. He died at Bath in 1768.

DELA'PSED, *adj.* Lat. *delapsus*, with physicians. Bearing or falling down. It is used in speaking of the womb, and the like.

DEULATE, *v. a.* } Lat. *delutus, defero*. To
DELA'TION, *n. s.* } carry, convey, or spread.
DELA'TOR, *n. s.* } Applied both literally, and
 to the carrying intelligence, or an accusation.
 A delator is an accuser; an informer.

DELATIN, a market town of Austrian Galicia, in the circle of Stanislawow. Near this town are extensive quarries of alum slate. It is twenty-four miles from Stanislawow.

DELAVAL (Edward Hussey), a chemist and natural philosopher, F. R. S. of London and Gottingen, was a brother of lord Delaval, and died at his house in Parliament-place, Westminster, August 14th, 1814, aged eighty-five. He particularly directed his studies to the chemistry of optics, on which he published many excellent papers in the *Philosophical Transactions*. He was the author of an *Experimental Enquiry into the Cause of the Changes of Colors Opaque and Colored Bodies*, with an Historical Preface relative to the Parts of Philosophy therein examined, and to the several Arts and Manufactures dependent on them, 1777, 4to.; a work which was translated into French and Italian.

DELAWARE, a town of Virginia, in King William's county, situated on the peninsula formed by the confluence of the Pamunky and Mattapony. Twenty miles north by west of Williamsburg.

DELAWARE, one of the United States of North America, situated between 38° 29' 30", and 39° 54' N. lat., and between 75° and 75° 48'

W. long. being in length ninety miles, and in breadth twenty-five, contains 1700 square miles, or 1,088,000 acres. It is bounded on the north by Pennsylvania, on the south and west by Maryland, and on the east by Delaware Bay and the Atlantic Ocean. It is divided into three counties, Newcastle, Kent, and Sussex; of which the chief towns are Wilmington, Dover, and Georgetown. The state of Delaware, the upper parts of the county of Newcastle excepted, is generally low and level. Large quantities of stagnant water, at particular seasons of the year, overspreading a great portion of the land, render it equally unfit for the purposes of agriculture, and injurious to health. The spine, or highest ridge of the peninsula, runs through the state of Delaware, inclining to the eastern, or Delaware side. In Sussex, Kent, and part of the county of Newcastle, there is a remarkable chain of swamps, from which the waters descend on each side, passing on the east to the Delaware, and on the west to the Chesapeake. Many of the shrubs and plants, growing in these swamps, are similar to those found on the highest mountains. Delaware is chiefly an agricultural state. It includes a very fertile tract of country; and scarcely any part of the United States is better adapted to the different purposes of agriculture, or in which a greater variety of the most useful productions can be conveniently and plentifully reared. The soil along the Delaware River, and from eight to ten miles into the interior country, is generally a rich clay, producing large timber. From thence to the swamps above-mentioned, the soil is light, sandy, and of an inferior quality. The surface of the country is very favorable for cultivation. The heights of Christiana are lofty and commanding; some of the hills of Brandywine are rough and stony; but descending from these, and a few others, the lower country is so little diversified as almost to form one extended plain. In the county of Newcastle the soil consists of a strong clay; in Kent there is a considerable mixture of sand; and in Sussex the quantity of sand altogether predominates. Wheat is the staple of this state. It grows here in such perfection, as not only to be particularly sought by the manufacturers of flour throughout the Union, but also to be distinguished and preferred, for its superior qualities, in foreign markets. It possesses an uncommon softness and whiteness, very favorable to the manufacturers of superfine flour, and in other respects far exceeds the hard and flinty grains raised in general on the higher lands. This state also produces plentiful crops of Indian corn, barley, rye, oats, flax, buck-wheat, and potatoes. It abounds too in natural and artificial meadows. Hemp, cotton, and silk, if properly attended to, thrive well.

The county of Essex exports very large quantities of lumber, obtained from a swamp, called the Indian River, or Cypress Swamp, lying partly within this state, and partly in the state of Maryland. This morass extends six miles from east to west, and nearly twelve from north to south, including an area of nearly 50,000 acres of land. The whole is a high and level basin, very wet, though undoubtedly the highest

land between the sea and the bay, whence the Pocomoke descends on the one side, and Indian River and St. Martin's on the other. It contains a great variety of plants, trees, wild beasts, birds, and reptiles.

Few minerals are found in this state, except iron; but large quantities of bog iron ore, fit for casting, are obtained in Sussex county, among the branches of Nanticoke River.

The coast of this state is indented with a large number of creeks, or small rivers, which generally have a short course, soft banks, and numerous shoals; and are skirted with very extensive marshes. In the southern and western parts spring the head waters of Pocomoke, Wicomico, Nanticoke, Choptank, Chester, Sassafra, and Bohemia rivers, all falling into the Chesapeake; some of them are navigable twenty or thirty miles into the country, for vessels of fifty or sixty tons.

In the beginning of the seventeenth century, the Dutch, under the pretended purchase made by Henry Hudson, took possession of the lands on both sides the river Delaware, and as early as 1623 built a fort at a place since called Gloucester. In 1627, by the influence of William Useling, a respectable merchant in Sweden, a colony of Swedes and Finns came over, furnished with all the necessaries for beginning a new settlement, and landed at Cape Henlopen; at which time the Dutch had wholly quitted the country. The latter however returned in 1630, and built a fort at Lewistown, called by them Hoarkill. The year following, the Swedes built a fort near Wilmington, which they called Christian, or Christiana. Here also they laid out a small town, which was afterwards demolished by the Dutch. The same year they erected a fort higher up the river, upon Tenecum Island, which they called New Gottenburgh, and about the same time built forts at Chester, Elsingburgh, and other places. In 1655 the Dutch, under the command of Peter Stuyvesant, arrived in Delaware River, from New York, then called New Amsterdam, in seven vessels, with 600 or 700 men. They dispossessed the Swedes of their forts on the river, and sent the officers and principal inhabitants prisoners to Holland. The rest submitted to the conquerors, and remained in the country. On the 1st of October, 1664, Sir Robert Carr obtained the submission of the Swedes on the Delaware. Four years after, colonel Nicholls, governor of New York, with his council, on the 21st of April, appointed six persons to assist captain Carr in the government of the country. In 1672 the town of Newcastle was incorporated by the state of New York, to be governed by a bailiff and six assistants. They were to have a free trade, without being obliged to make entry at New York, as had formerly been the practice. Wampum was at this time the principal currency of the country. In 1674 Charles II., by a second patent, dated 29th of June, granted to his brother, the duke of York, all that country called by the Dutch New Netherlands, of which the three counties of Newcastle, Kent, and Sussex were a part. In 1683 the duke of York sold to William Penn the town of Newcastle, with the whole of the

territory which, till the revolution, was called the Three Lower Counties. These three counties were considered as a part of Pennsylvania in matters of government. The same governor presided over both: but the assembly and courts of judicature were different, as to their constituent members, though in form nearly the same. At the revolution they became a distinct territory, called the Delaware State. See AMERICA, NORTH.

The population of the three counties of Delaware, subdivided into hundreds, was thus returned, under the last census:—

1. NEWCASTLE COUNTY.

	Population in 1820
Brandywine hundred . . .	2796
Borough of Wilmington . . .	5268
Christiana hundred . . .	3087
Newcastle hundred . . .	2671
Mill Creek hundred . . .	3046
White Clay Creek hundred . . .	1904
Red Lion hundred . . .	929
Pencader hundred . . .	1876
St. George's hundred . . .	2934
Appoquinimink hundred . . .	3388
Total of Newcastle county	27,899

II. KENT COUNTY.

	Population in 1820
Duck Creek hundred . . .	3951
St. Jones hundred . . .	1590
Little Creek hundred . . .	1963
Murderhill hundred . . .	7558
Mispillion hundred . . .	5731
Total of Kent county	20,793

III. SUSSEX COUNTY.

Cedar Creek hundred . . .	2280
Broad Kiln hundred . . .	2731
Lewes and Rehoboth hundred . . .	1657
Indian River hundred . . .	1887
Nanticoke hundred . . .	2335
North-west Fork hundred . . .	3456
Baltimore hundred . . .	2057
Dagsborough hundred . . .	2204
Broad Creek hundred . . .	2599
Little Creek hundred . . .	2851
Total of Sussex county	24,057

Grand total 72,749

The following table shows the population of Delaware, at each of the four national enumerations:—

	1790.	1800.	1810.	1820.	Increase in 30 years.	Rate of Increase.
Whites † . . .	46,308	49,852	55,361	55,282	8,974	19 per cent.
Slaves . . .	8,887	6,143	4,177	4,509		
Free blacks . . .	3,899	8,278	13,136	12,958	9,059	232 per cent.
Total . . .	59,094	64,273	72,674	72,749	13,645	23 per cent.

DELAWARE, a river of the United States, which rises at two principal heads in the state of New York. It runs towards the south, and in its course forms the boundary line between Pennsylvania, New York, and Jersey; a few miles below Philadelphia it separates the state of Delaware from Jersey, and afterwards loses itself in Delaware Bay. The bay and river are navigable for 155 miles from the sea, up to the great or lower falls at Trenton. A seventy-four gun ship may ascend to Philadelphia; and sloops thirty-five miles further.

DELAWARE BAY, a large bay or arm of the sea, between the Delaware and New Jersey states, and formed by the mouth of the Delaware river, and several other small ones. The bay is about sixty miles long, and thirty miles across in the centre. It opens into the Atlantic north-west and south-east, between Cape Henlopen on the right and Cape May on the left, and its mouth is twenty-one miles broad.

DELAWARE COUNTY, in Pennsylvania, is south-west of Philadelphia county, on Delaware River. It is about twenty-one miles in length, and fifteen in breadth, containing 115,200 acres, and subdivided into nineteen townships; the chief of which is Chester. The number of inhabitants is 9,483. The lands bordering on the Delaware are low, and afford excellent meadows and pas-

turage; and are guarded from inundations by mounds of earth or dykes. Great numbers of cattle are brought here from the western parts of Virginia and North Carolina, to be fattened for supplying the Philadelphia market.

DELAWARE COUNTY, a county in the state of New York, on the head waters of Delaware River, taken from Otsego county. It is bounded on the north by Otsego county, east by Schoharie and Green counties, south by Ulster and Sullivan counties, and west by the state of Pennsylvania, by Broome county, and a small part of Chenango county. Its greatest length is fifty-four miles, its greatest breadth thirty-five; the area 1425 square miles, or 912,000 acres; between 41° 51' and 42° 1' north lat. It is of a broken and diversified surface, containing rugged and lofty mountains, with low plains and rich valleys. It sends two members to the house of assembly.

DELAWARES, a nation of North American Indians, formerly numerous and powerful, and who possessed part of Pennsylvania, New Jersey, and New York. This name was given them by the Europeans; for they call themselves Lenni-lenape, that is, Indian men; or Woapanachky which signifies a people living towards the rising sun. They are now, however, much reduced in number.

DELAY', *v. a., v. n & n. s.* Fr. *delayer*; **DELAY'ER**, *n. s.* Span. and Port. *dilatár*; Ital. *dilatare*; Lat. *delatio, differre*, from *de* and *fero*, to put off. To procrastinate; defer; and hence to hinder, frustrate, as well as allay; temper; qualify: as a neuter verb, to stop; cease from action. As a substantive, inactivity; stoppage; stay. A *delayer* is an habitual procrastinator.

And when the people saw that Moses *delayed* to come down out of the mount, the people gathered themselves together unto Aaron. *Erod. xxxii. 1.*

I have learned that fearful commenting
Is leaden servitor to dull *delay*;
Delay leads impotent and snail-paced beggary.

Shakespeare. Richard III.

That misery which must be is mitigated with speed,
and aggravated with *delay*.

Bp. Hall. Contemplations.

Delayed thankfulness is not worthy of acceptance.

Id.

Thyrsis, whose artful strains have oft *delayed*
The huddling brook to hear his madrigal. *Milton.*
She flies the town, and mixing with the throng
Of madding matrons, bears the bride along:
Wandering through woods and wilds, and devious
ways,
And with these arts the Trojan match *delays*.

Dryden.

Cyrus he found, on him his force essayed;
For Hector was to the tenth year *delayed*. *Id.*

There seem to be certain bounds to the quickness
and slowness of the succession of those ideas one to
another in our minds, beyond which they can neither
delay nor hasten. *Locke.*

Sullen and a *delayer* of Justice.

Swift. Char. of Henry VII.

Be mindful goddess, of thy promise made!
Must sad Ulysses ever be *delayed*? *Pope.*

At thirty man suspects himself a fool;
Knows it at forty and reforms his plan;
At fifty chides his infamous *delay*;
—In all the magnanimity of thought
Resolves, and re-resolves, then dies the same.
Young.

DELECTABLE, *adj.* } Fr. Span. and
DELECTABLENESS, *n. s.* } Portug. *delectable*;
DELECTABLY, *adv.* } Ital. *dilettabile*; Lat.
DELECTATION, *n. s.* } *delectabilis*; from
delecto, (*de* and *lacto*, to suckle) to delight. De-
lightful; pleasing; state of being pleasing or
delightful.

Out break the tears for joy and *delectation*.

Sir T. More.

Evening now approached:

For we have also our evening and our morn:
We ours for change *delectable*, not need. *Milton.*

He brought thee into this delicious grove,
This garden planted with the trees of God;
Delectable both to behold and taste. *Id.*

Some of his attributes, and the manifestations
thereof, are not only highly *delectable* to the intellec-
tive faculty, but are suitably and easily conceivable
by us, because apparent in his works; as his good-
ness, beneficence, wisdom, and power. *Hale.*

The apple's outward form,

Delectable, the witless swain beguiles;
Till that with writhen mouth, and spattering noise,
He tastes the bitter morsel. *Philips.*

DELEGATE, *v. a., n. s. & adj.* } Span. and
DELEGATION. } Portug. *dele-*

gar; Fr. *deleguer*; Lat. *deligo*; *de* and *lego*; Gr.
λεγω; Heb. *קלף*; to choose. To appoint ano-
ther one's representative; to entrust with power.
A *delegate* is the party so commissioned; a
vicar. The court of delegates is defined by
Ayliffe as a court wherein all causes of appeal,
by way of devolution from either of the arch-
bishops, are decided.

If after her

Any shall live, which dare true good prefer,
Every such person is her *delegate*,
To' accomplish that which should have been her fate.
Donne.

As God hath imprinted his authority in several
parts upon several estates of men, as princes, parents,
spiritual guides; so he hath also *delegated* and com-
mitted part of his care and providence unto them.

Taylor.

Princes in judgment, and their *delegate* judges,
must judge the causes of all persons uprightly and im-
partially. *Id.*

When bishops divided parishes, and fixt the pre-
bysiters upon a cure, so many parishes as they distin-
guished, so many *delegations* they made.

Bp. Taylor.

Why does he wake the correspondent moon
And fill her willing lamp with liquid light;
Commanding her, with *delegated* powers,
To beautify the world, and bless the night?

Prior.

Let the young Austrian then her terrors bear,
Great as he is, her *delegate* in war. *Id.*

Elect by Jove, his *delegate* of sway,
With joyous pride the summons I'd obey.

Pope.

As God is the universal monarch, so we have all
the relation of fellow-subjects to him; and can pre-
tend no farther jurisdiction over each other, than
what he has *delegated* to us. *Decay of Piety.*

The goddess ceased,—the *delegated* throng,
O'er the wide plains delighted rush along;
In dusky squadrons, and in shining groups,
Hosts follow hosts, and troops succeed to troops.

Darwin.

DELEGATES, COURT OF, is the great court of
appeal in all ecclesiastical causes. These dele-
gates are appointed by the king's commission
under his great seal, and issuing out of chancery,
to represent his royal person, and hear all appeals
to him made by virtue of the statute 25 Henry
VIII. cap. 19. The commission is usually filled
with lords, spiritual and temporal, judges of the
courts at Westminster, and doctors of the civil
law.

DELENTICAL, *adj.* Lat. *delemtificus*.
Having virtue to assuage or ease pain.

DELETE, *v. a.* } Lat. *deletus*, from *deleo*,
DELETERIOUS, *adj.* } *de*, privative, and *lino* to
DELETERY, } paint. To blot out; to ob-
DELETION, *n. s.* } literate: deleterious and
deleterious signify, destructive; poisonous; deletion
is razing out or destroying.

Many things, neither *deleterious* by substance or
quality, are yet destructive by figure, or some occa-
sional activity. *Prauna.*

Indeed, if there be a total *deletion* of every person of the opposing party or country, then the victory is complete, because none remains to call it in question.

Hale.

Composed of two *deleterious* materials, chlorine and sodium, the united substance is more beneficial and salubrious, than it is in the power of our limited understanding to comprehend.

Sir T. Bernard.

Nor doctor epidemick,
Though stored with *deleterij* medicines,
Which whosoever took is dead since,
E'er sent so vast a colony
To both the under worlds as he.

Hudibras.

'Tis pity wine should be so *deleterious*,
For tea and coffee leave us much more serious.

Byron.

DELFT, *n. s.* } From Sax. *delpan*, to dig. A
DELFFE. { mine; a quarry; a pit dug.
Also a particular kind of earthenware. See below.

Yet could not such mines, without great pains and charges, if at all, be wrought: the *delfs* would be so flown with waters, that no gins or machines could suffice to lay and keep them dry.

Ray.

DELFT WARE is a kind of pottery of a baked earth, covered with an enamel or white glazing, which gives it the appearance and neatness of porcelain. Some kinds of it differ much from others, either in sustaining sudden heat without breaking, or in the beauty and regularity of their forms, of their enamel, and of the painting with which they are ornamented. In general, the fine and beautiful enamelled potteries, which approach the nearest to porcelain in external appearance, are least able to resist a brisk fire. Those which best sustain a sudden heat are coarse, and resemble common pottery. The basis of this pottery is clay, which is to be mixed, when too fat, with such a quantity of sand, that the earth shall preserve enough of its ductility to be worked, moulded, and turned easily: and yet that its fatness shall be sufficiently taken from it, that it may not crack or shrink too much in drying or in baking. Vessels formed of this earth must be dried very gently to avoid cracking. They are then to be placed in a furnace to receive a slight baking, which is only meant to give them a certain consistence of hardness. And, lastly, they are to be covered with an enamel or glazing; which is done by putting upon the vessels thus prepared, the enamel, which has been ground very fine, and diluted with water. As vessels on which the enamel is applied are but slightly baked, they readily imbibe the water in which the enamel is suspended, and a layer of this enamel adheres to their surface: these vessels may then be painted with colors composed of metallic calces, mixed and ground with a fusible glass. When they are become perfectly dry, they are to be placed in the furnace, included in cases of baked earth called seggars, and exposed to a heat capable of fusing uniformly the enamel which covers them. This heat, given to fuse the enamel, being much stronger than that which was applied at first to give some consistence to the ware, is also the heat necessary to complete the baking of it. The furnace, and the colors used for painting this ware, are the same as those

employed for porcelain, which, in Holland, was once exclusively famous for delft ware, but its sale has lately been greatly rivalled by the potteries of England and Germany.

DELFT, a fine old town of South Holland, once the capital of Delftland, is situated on a canal called the *Shie*, which, after traversing the city, joins the Meuse at Schiedam and Delfts-haven. Its figure is a parallelogram, about two miles in circuit; the streets are clean, neat, and well built, having many handsome houses and magnificent edifices, particularly the stadthouse. The city holds a third rank in the country; its magistracy is composed of four burgo-masters, and seven eschevins, jointly with the *vroedschap* or common council, who name the escout for three years, and continue him if they judge proper. It has an arsenal generally well furnished; and the country around it is agreeable, but so low, that, if great care were not taken to keep the dykes and sluices in good repair, it would soon be overwhelmed. The building of this city was begun in 1075, by Godfrey le Bossu, after he had conquered Holland; since which it has often experienced the calamities of war, as well as those of fire. In the fourteenth century, Albert de Bavaria, count of Holland, took it after a siege of six weeks, dismantled and ruined the castle, and obliged the city to pay 10,000 crowns. In 1536, it was reduced to ashes by a dreadful fire, during which a stork, not being able to save her young, was observed to precipitate herself into the flames. The city was soon after rebuilt with greater magnificence; but in 1654 it was again greatly damaged by fire, which destroyed a magazine of gun-powder, and above 500 houses; since which the powder-magazine is built at some distance from the town. Before the Reformation, Delft had ten religious houses, besides hospitals and chapels. In one of the present churches is the tomb of William I. prince of Orange, who was assassinated in a house near, which is still standing; and in another that of admiral Tromp. The celebrated Hugo Grotius was a native of this place. The Doelen inn was the scene of many of the councils and preparations of the Dutch patriots in their struggles against Spain. Delft was formerly much celebrated for beer, of which it exported large quantities; and also for a peculiar kind of glazed earthenware, called delft ware. Here are now made several kinds of fine cloth, and carpets. Butter and tobacco pipes also are made here in considerable quantities. It is nine miles north-west of Rotterdam, and thirty south-west of Amsterdam.

DELIH, or DELLI, an extensive province of Hindostan, bound on the north by Lahore, and several districts in Northern Hindostan, as Besseer, Dewarcote, and Serinagur; to the south by Agra and Ajmeer; to the east it has Oude, and various ridges of high hills, which separate it from Northern Hindostan; and to the west Ajmeer and Lahore. In length it may be estimated at 240 miles, by 180 the average breadth. The greater part of this province is in the most wretched state of barrenness, having been the seat of continued war for many years; and being naturally very sterile, though formerly well planted

with mangoe trees, scarcely one is now to be seen. The Cauggar River overflows part of the Hurri-ch, during the rainy season, after which the pasturage is excellent, and the country tolerably healthy until the desert to the west becomes heated; and, between the Jumna and Sattulege, the soil produces wheat, barley, grain, and other grains; but it is but little cultivated. Irrigation is necessary to insure any crop, and water is found at ten or twelve cubits from the surface of the earth; yet wells are seen only near towns and villages. This province is, at present, occupied in the following manner. The whole district to the east of the Jumna and round the city of Delhi, with a considerable portion of the north-eastern quarter, are possessed by the British, and governed by a regular civil establishment. The south-west is occupied by the Machery rajah of Alvar, the rajah of Bhurtpoor, and other native chiefs, who are in alliance with, or under the influence of the British. The country to the north-west of the Jumna and south of the Suttulege is occupied by a number of petty Seik chiefs, and other native princes, in dependence on the British, who form a barrier to their territories in this quarter. The western frontier has a natural protection, from the immense extent of desert and sterile territory by which it is bounded.

Except in the country possessed by the British, the inhabitants still continue to carry on internal warfare; to which they have been so long accustomed, that they are extremely expert in the use of arms, particularly the lance, sabre, and match-lock. The principal towns are Delhi, Sirhind, Saharunpore, Buriely, Anoopshcher, Merat, Hisar, Seerdhuna, Pattecalah, and Budavoon.

DELHI, a celebrated city, for many years the capital of the foregoing province of Hindostan, is situated on the banks of the Jumna; and during the era of its prosperity, is said to have covered a space of twenty miles in length. Its ancient name was Indraput, or Inderprest. It was taken by the Mahommedans in the year 1193, under Cuttubaddeen Khan, who fixed his residence here, and made it his capital. Several succeeding emperors increased and improved it till the beginning of the sixteenth century, when the Afghan monarch, Sekunder Lody, made Agra the seat of empire, and Delhi was neglected until the return of Homayon from Persia in the year 1554, when he rebuilt the old fort of Inderprest, and named it Deenpunnah, or the asylum of religion. During the reigns of Akbar and Jehangire, Delhi was again deserted; but the emperor Shan Jehan restored it to its former splendor, and expended immense sums of money on the present fortress, the cathedral, mosque, &c. Superb palaces, mosques, and colleges, in different parts of the city, were raised by his court and followers. The walls which environ the town were put into repair, and its seven gates erected or beautified. Its noble gardens were also now laid out, and the tombs of the saints and deceased sovereigns thoroughly repaired. The canal was lengthened and deepened, and Delhi was rendered the glory of Hindostan. One garden alone is said to have cost a million sterling. The modern city, apportioned into thirty-six divisions, each named after some ancient noble family, con-

tains many good brick houses. The streets are narrow, with the exception of two; the first leading from the palace to the Delhi Gate, which is broad and spacious, and had formerly an aqueduct along its whole extent; the second from the palace to the Lahore Gate. The bazaars appear in a dilapidated state; but in the Chandeny Choke, or Silver Square, is a number of well-furnished shops. The population has considerably increased under the British management, and every species of property is yearly rising in value. The English resident and other gentlemen live in the town, while the troops have a distinct cantonment. Precious stones of a good quality are to be had at Delhi, particularly the large red and black cornelian and peerozas; beedree hookah bottoms are also manufactured here. The cultivation in the neighbourhood is principally on the banks of the Jumna, where corn, rice, millet, and indigo, are raised. It stands in long. 77° 19' E., lat. 28° 43' N.

DELIA, in antiquity, a festival celebrated every fifth year in the island of Delos, in honor of Apollo. It was first instituted by Theseus; who, at his return from Crete, placed a statue there, which he had received from Ariadne. At the celebration they crowned the statue of the goddess with garlands, appointed a choir of music, and exhibited horse-races. They afterwards led a dance, in which they imitated, by their motions, the various windings of the Cretan labyrinth, from which Theseus had extricated himself by Ariadne's assistance.—There was another festival of the same name yearly celebrated by the Athenians in Delos. It also was instituted by Theseus, who, in going to Crete, made a vow, that he would yearly visit the temple of Delos. The persons employed in this annual procession were called Deliastræ and Theori. The ship, the same which carried Theseus, and had been carefully preserved by the Athenians, was called Theoria and Delias. When the ship was ready for the voyage, the priest of Apollo solemnly adorned the stern with garlands, and a universal lustration was made all over the city. The Theori were crowned with laurels, and before them proceeded men armed with axes, in commemoration of Theseus, who had cleared the way from Troezen to Athens, and delivered the country from robbers. When the ship arrived at Delos, they offered solemn sacrifices to the god of the island, and celebrated a festival to his honor. After this they retired to their ship and sailed back to Athens, where all the people of the city ran in crowds to meet them. Every appearance of festivity prevailed at their approach, and the citizens opened their doors and prostrated themselves before the Deliastræ as they walked in procession. During this festival it was unlawful to put to death any malefactor, and on that account the life of Socrates was prolonged for thirty days.

DELIACUS, among the ancients, denoted a poulterer, or a person who sold fowls, fattened capons, eggs, &c., because the people of Delos first practised this occupation. Cicero, in his Academic Questions, lib. iv., Pliny, lib. x. cap. 30, and Columella, lib. viii. cap. 8, mention the Deliaci.

DELIBATION, *n. s.* Lat. *delibatio*. An essay; a taste.

DELIBERATE, *v. a. & n.*

DELIBERATELY, *adv. & adj.*

DELIBERATENESS, *n. s.*

DELIBERATION,

DELIBERATIVE,

DELIBERATIVENESS.

Commonly it is for virtuous considerations, that wisdom so far prevaileth with men as to make them desirous of slow and *deliberate* death, against the stream of their sensual inclination.

Hooker.

Echoes are some more sudden, and chop again as soon as the voice is delivered; others are more *deliberate*, that is, give more space between the voice and the echo, which is caused by the local nearness or distance.

Bacon.

In *deliberatives*, the point is, what is evil; and, of good, what is greater; and of evil, what is less. *Id.*

Most Grave-belly was *deliberate*, Not rash, like his accusers. *Shakspeare. Coriolanus.*

They would not stay the fair production of acts, in the order, gravity, and *deliberateness* befitting a parliament.

King Charles.

How should we *deliberate* in our actions, which are so subject to imperfection! since it pleased thine infinite perfection, not out of need, to take leisure.

Bishop Hall. Contemplations.

If mankind had no power to avoid ill or choose good by free deliberation, it should never be guilty of any thing that was done.

Hammond's Fundamentals.

He judges to a hair of little indecencies; knows better than any man what is not to be written; and never hazards himself so far as to fall, but plods on *deliberately*; and, as a grave man ought, is sure to put his staff before him.

Dryden.

When love once pleads admission to our heart,

In spite of all the virtue we can boast,

The woman that *deliberates* is lost.

Addison.

Where men are the most sure and arrogant, they are commonly the most mistaken, and have there given reins to passion, without that proper *deliberation* and suspense, which can alone secure them from the grossest absurdities.

Hume.

DELIBERANDI ANGES, in the Scottish law, a year allowed to an heir, to deliberate whether he will enter as heir or not.

DELIBERATIVE VOICE, a right to give advice and to vote in an assembly. In councils, the bishops have deliberative voices; those beneath them have only consultative voices.

DELICATE, *adj. & n. s.*

DELICACY, *n. s.*

DELICATENESS,

DELICATELY,

DELICIES, *n. s. & pl.*

agreeable to the taste, or the senses generally; nice; of small constituent parts; felicitous in construction; elegant; and, as agreeableness, 'sweet, attractive grace,' is peculiarly feminine: a delicate is an effeminate, though not an agreeable man; and expresses also inability to bear hardships. A delicate is used by the Tatler for a nice man: but the plural substantive, deli-

Fr. *deliberer*;

Span. and Por. *deliberar*;

Ital. *deliberare*;

and Lat. *deliberare*;

from *de*,

and *libra*, a balance.

cates, expresses, like the old word *delices*, the same as delicacies, i. e. dainties, agreeable viands.

And kingis of the erthe and marchauntis of the erthe diden fornyecioun with hir, and thei ben maad riche of the vertue of *delices* of hir.

Wiclif. Apoc. 18.

The delicate woman among you would not adventure to set the sole of her foot upon the ground, for delicateness and tenderness.

Deut. xxviii. 56.

Yet was I late promised otherwyso,

This yere to lue in welth and *delice*.

Sir T. More.

And now he has poured out his idle mind

In dainty *delices* and lavish joys,

Having his warlike weapons cast behind,

And flowers in pleasures and vain pleasing toys.

Spenser.

Tender and delicate persons must needs be oft angry, they have so many things to trouble them, which more robust natures have little sense of.

Bacon.

Witness this army, of such mass and charge, Led by a delicate and tender prince.

Shakspeare.

Where they most breed and haunt, I have observed,

The air is delicate.

Id.

The shepherd's homely curds,

His cold thin drink out of his leather bottle,

All which secure and sweetly he enjoys,

Are far beyond a prince's *delicates*.

Id.

These *delicacies*

I mean of taste, sight, smell, herbs, fruits, and flowers,

Walks, and the melody of birds.

Milton.

Eat not *delicately*, or nicely; that is, be not troublesome to thyself or others in the choice of thy meats, or the *delicacy* of thy sauces.

Taylor.

Persons born of families noble and rich, derive a weakness of constitution from the ease and luxury of their ancestors, and the *delicacy* of their own education.

Temple.

A man of goodly presence, in whom strong making took not away *delicacy*, nor beauty fierceness.

Sidney.

Van Dyck has even excelled him in the *delicacy* of his colouring, and in his cabinet pieces.

Dryden.

That which will distinguish his style from all other poets, is the elegance of his words, and the numerosness of his verse: there is nothing so *delicately* turned in all the Roman language.

Id.

They their appetites not only feed,

With *delicates* of leaves and marshy weed,

But with thy sickle reap the rankest land.

Id.

Any zealous for promoting the interest of his country, must conquer all that tenderness and *delicacy*, which may make him afraid of being spoken ill of.

Addison.

You may see into the spirits of them all, and form your pen from these general notions and *delicacy* of thought and happy words.

Felton.

And such, I exclaimed, is the pitiless part

Some act by the delicate mind,

Regardless of wringing and breaking a heart

Already to sorrow resigned.

Cowper.

But in his delicate form—a dream of Love,

Shaped by some solitary nymph, whose breast

Longed for a deathless lover from above,

And maddened in that vision!

Byron.

DELICIOUS, *adj.* } Fr. *delicieux*; Lat. *deliciosus*, *adv.* } *delicia*, delights. —
DELICIOUSNESS, *n. s.* } Sweet; agreeable; delicate; charming; grateful to the sense or mind.

How much she hath glorified herself, and lived deliciously, so much torment and sorrow give her.

Rev. xviii. 7.

The sweetest honey
 Is loathsome in its own *deliciousness*,
 And in the taste confounds the appetite.

Shakespeare.

Let no man judge of himself, or of the blessings and efficacy of the sacrament itself, by any sensible relish, by the gust and *deliciousness*, which he sometimes perceives, and at other times does not perceive.

Taylor.

And if some nice and likourous appetite
 Desired more daintie dish of rare delite,
 They scaled the storid crab with clasped knee,
 Till they had sated their *delicious* eie.

Bp. Hall. *Satires* iii. 1.

It is highly probable, that upon Adam's disobedience Almighty God chased him out of Paradise, the fairest and most *delicious* part of the earth, into some other the most barren and unpleasant.

Woodward.

Still on that breast enamoured let me lie,
 Still drink *delicious* poison from thy eye.

Pope.

But since, to make use of your own allusion, the cherries began now to crowd the market, and their season was almost over, we consulted our future enjoyments, and endeavoured to make the exquisite pleasure that *delicious* fruit gave our taste as lasting as we could.

Spectator.

In his last hours his easy wit display:
 Like the rich fruit he sings, *delicious* in decay.

Smith.

DELIGHT, *v. a. v. n. & n. s.* } Fr. *delect-*
DELIGHTFUL, *adj.* } *ter*; Span. *de-*
DELIGHTFULLY, *adv.* } and Port. *de-*
DELIGHTFULNESS, *n. s.* } *leytar*; It. *di-*
DELIGHTSOME, } *lettare*, from
DELIGHTSOMELY, } Lat. *delectare*,
DELIGHTSOMENESS, } *deligo*. See

DELEGATE. To please in a high degree; to have pleasure, followed by *in*. Delightsome and delightful are synonymous, as are delightsomely and delightfully. Delight is either the satisfaction and pleasure felt or the object that affords them.

Doth my lord, the king, *delight* in this thing?

2 Sam. xxiv.

Blessed is the man that feareth the Lord, that *delighteth* greatly in his commandments.

Psal. cxii. 1.

For I *deleyte* togidre to the law of God aftir the yuner man, but I see a nother law in my membris aghen fightyng the law of my soule.

Wiclif. *Romayns* 7.

To liven in *delit* was ever his wone,
 For he was Epicures owen sone
 That held opinion that plein *delits*
 Was veraily felicit parfitte.

Chaucer. *Prolog. to Cant. Tales*.

And though he lyst to see his ladies grace full sore,
 Such pleasures as *deleyght* his eye, do not his helth restore.

Surrey.

The words themselves being so ancient, the knitting of them so short and intricate, and the whole periods and compass of his speech so *delightsome* for the roundness, and so grave for the strangeness.

Spenser.

To thee, that art the sommer's nightingale,
 The soueraine goddesses most deare *delight*,
 Why do I send this rustic madrigale,
 That may thy tunefull care unseason quite.

Id. *Fueries Queenes*.

Come, sisters, cheer we up his sprights,
 And shew the best of our *delights*:
 We'll charm the air to give a sound,
 While you perform your antic round.

Shakespeare.

O voice! once heard
Delightfully, increase and multiply;
 Now death to hear.

Milton.

If happiness had consisted in doing nothing, man had not been employed; all his *delights* could not have made him happy in an idle life.

Bp. Hall. *Contemplations*.

The princes *delighting* their conceits with confirming their knowledge, seeing wherein the sea-discipline differed from the land service, had pleasing entertainment.

Sidney.

This indeed shews the excellency of the object, but doth not altogether take away the *delightfulness* of the knowledge.

Tillotson.

She was his care, his hope, and his *delight*,
 Most in his thought, and ever in his sight.

Dryden.

Poor insects, whereof some are bees, *delighted* with flowers, and their sweetness; others beetles, *delighted* with other kinds of viands.

Locke.

He heard, he took, and pouring down his throat,
Delighted, swilled the large luxurious draught.

Pope.

No spring, nor summer, on the mountain seen,
 Smiles with gay fruits or with *delightful* green.

Addison.

God has furnished every one with the same means of exchanging hunger and thirst for *delightsome* vigour.

Grew.

We love

The king, who loves the law, respects his bounds,
 And reigns content within them: him we serve
 Freely and with *delight*, who leaves us free.

Cowper's *Task*.

But you will say, it is reasonable to conclude that as all your predecessors, in this vale of misery and horror, have found themselves *delightfully* disappointed at last, so will you.

Id. *Private Correspondence*.

When the soft lute in sweet impassioned strains,
 Of cruel nymphs or broken vows complains,
 As on the breeze the fine vibration floats,
 We drink *delighted* the melodious notes.

Darwin.

Yes, woman, yes! Though in his pompous school
 Man proud may learn to think and talk by rule,
 There is the native eloquence, whose grace
 Flows true to every hour and every place—
 That with a swain familiar can recal
 Scenes, persons, things, and spread *delight* on all.

Dr. T. Brown.

DELIMA, in botany, a genus of the monogynia order, and polyandria class of plants: cor. none: cal. five-leaved with a two-seeded berry. Species one only, a native of South America.

DELINEATE, *v. a.* } Lat. *delineo*; of *dc*,
DELINEATION, *n. s.* } *delinea*, a line; to
DELINEAMENT, *n. s.* } make lines. To sketch, or make an outline; hence to paint, and to describe: delineation and delineament both express the painting or drawing made; the representation.

The sun's a type of that eternal light
Which we call God, a fair *delineament*.

More's Song of the Soul.

It followeth, to *delineate* the region in which God
first planted his delightful garden. *Raleigh.*

The *licentia pictoria* is very large : with the same
reason they may *delineate* old Nestor like Adonis,
Hecuba with Helen's face, and Time with Absalom's
head. *Browne.*

I have not here time to *delineate* to you the glories
of God's heavenly kingdom ; nor, indeed, could I
tell you, if I had, what the happiness of that place
and portion is. *Wake.*

In the orthographical schemes, there should, be
a true *delineation*, and the just dimensions. *Mortimer.*

DELIN'QUENT, *n. s.* } Fr. *delinquent* ; Span.

DELIN'QUENCY. } and Port. *delinquento* ;

Lat. *delinquens*, from *de*, and *linguo* to leave one's
duty. On *delinquency*, neglectful of duty : neg-
lect ; failure of duty.

All ruined, not by war, or any other disaster, but
by justice and sentence, as *delinquents* and criminals.

Bacon.

The next news we heard was, the House of Com-
mons had drawn up a bill against us, wherein they
declared us to be *delinquents* of a very high nature.

Bp. Hall's Hard Measure.

Such an envious state,
That sooner will accuse the magistrate
Than the *delinquent* ; and will rather grieve
The treason is not acted, than believe.

Ben Jonson.

They never punish the greatest and most intolerable
delinquency of the tumults, and their excitements.

King Charles.

He had, upon frivolous surmises, been sent for as
a *delinquent*, and been brought upon his knees.

Dryden.

Can

Thy years determine like the age of man,
That thou should'st my *delinquencies* enquire,
And with variety of tortures tire ?

Sandy's Paraphrase of Job.

A *delinquent* ought to be cited in the place or juris-
diction where the *delinquency* was committed by him.

Ayliffe.

Does law, so jealous in the cause of man,
Denounce no doom on the *delinquent* ? None.

Cowper's Task.

DELIQUATE, *v. n. & a.* } Lat. *deliquo* ; from

DELIQUATION, *n. s.* } *de* and *linguo* (*lir*,

DELIQUUM, *n. s.* } liquid) to melt. As

a verb active, to dissolve into liquid : deligation
and deliquium both signify a dissolving chemi-
cally ; and hence fainting or swooning.

It will be resolved into a liquor very analogous to
that which the chymists make of salt of tartar, left in
moist cellars to *deliquate*. *Boyle.*

Their conscience was not stark dead, but under a
kind of spiritual *deliquium*. *Leath.*

When salt of tartar flows per *deliquium*, it is visible
that the particles of water are moved towards the
particles of salt. *Bp. Berkeley.*

Such an ebullition as we see made by the mixture of
some chymical liquors, as oil of vitriol and deliquated
salt of tartar. *Cudworth.*

DELIQUESCENT, in chemistry, the pro-
perty which certain bodies have of attracting
moisture from the air, and thereby becoming
liquic. This property is never found but in
saline substances, or matters containing them.

It is caused by the great affinity which these
substances have with water. The more simple
they are, according to Mr. Macquer, the more
they incline to deliquescence. Hence, acids,
and certain alkalis, which are the most simple,
are also the most deliquescent salts. Many
neutral salts are deliquescent, chiefly those
whose bases are not saline substances. Though
the immediate cause of deliquescence is the at-
traction of the moisture of the air, yet it remains
to be discovered, why some salts attract this
moisture powerfully, and others, though seem-
ingly equally simple, do not attract it. The
vegetable alkali, for instance, attracts moisture
powerfully ; the mineral alkali, though to ap-
pearance equally simple, does not attract it at
all. The acid of tartar by itself does not at-
tract the moisture of the air ; but if mixed with
borax, which has a little attraction for moisture
the mixture is extremely deliquescent. See
CHEMISTRY.

DEL'RATE, *v. n.*

DELIRA'TION, *n. s.*

DELI'RAMENT,

DELI'RIOUS, *adj.*

DELI'RIOUSNESS, *n. s.*

DELI'RIUM.

Lat. *deliro* (from
de, and *lira* a ridge
or furrow) ; to be
mad, because a mad
person passes the
bounds of reason.—

Ainsworth. To dote ; talk wildly or idly : de-
liration is the same with delirium, and the latter
a more common word, signifying alienation of
mind ; a state of dotage : delirious is light-headed ;
partaking of delirium.

The people about him said he had been for some
hours *delirious* ; but when I saw him he had his un-
derstanding as well as ever I knew. *Swift.*

On bed

Delirious flung, sleep from his pillow flies.

Thomson.

Too great alacrity and promptness in answering,
especially in persons naturally of another temper, is
a sign of an approaching *delirium* ; and in a feverish
delirium there is a small inflammation of the brain.

Arbuthnot on Diet.

On the 6th, he was all day *delirious*, which he
mentioned four days afterwards as a sufficient humi-
liation of the vanity of man. At the intermission of
his *deliriousness*, he was always saying something kind
either of his present or his absent friends.

Johnson's Life of Pope.

How profound

The gulf ! and how the giant element
From rock to rock leaps with *delirious* bound,
Crushing the cliffs, which, downward worn and rent
With his fierce footsteps, yield in chasms a fearful vent.
Byron.

DELIRIUM. When the ideas excited in the
mind do not correspond to the external objects,
but are produced by the change induced on the
common sensorium, the patient is said to be in
a delirium. See MEDICINE.

DELITIGATION, *n. s.* Lat. *delitigo* ; *de*
and *litigo* (*lites ago*, to raise strife), to quar-
rel. A striving or contending. See LITIGATION.

DELIV'ER, *v. a. & n.* } Fr. *delivrer* ; Span.

DELIV'ERANCE, *n. s.* } *librar* ; Ital. *liberare* ;

DELIV'ERER, } from Lat. *libero* (*à*

DELIV'ERY, } *liber*, free). To make

or set free ; to disburden ; to rescue ; to give up ;
hence to offer ; present ; exert one's self ; utter
by speech : delivering *over* and delivering *up*
are only forms of delivering, and mean resigning

to. Deliverance and delivery are the act of delivering; utterance; activity; and the latter has a particular application to childbirth.

Thanne he *delyvered* to hem Barabas, but he took to hem *Jhesus*, scourgid to be crucified.

Wiclif. Matt. xxvii.

Thou shalt *deliver* Pharaoh's cup into his hand, after the former manner, when thou wast his butler.

Gen. xl. 13.

Deliver me not *over* unto the will of mine enemies, for false witnesses are risen up against me, and such as breathe out cruelty. *Psalms xxvii. 12.*

Like as a woman with child, that draweth near the time of her *delivery*, is in pain, and crieth out.

Isaiah xxvi. 7.

He hath sent me to heal the broken-hearted, to preach *deliverance* to the captives, and recovering of sight to the blind, to set at liberty those that are bound.

Luke iv. 18.

He that spared not his own son, but *delivered* him up for us all, how shall he not, with him also, freely give us all things? *Rom. viii. 32.*

We allege what the Scriptures themselves do usually speak, for the saving force of the word of God; not with restraint to any certain kind of *delivery*, but howsoever the same shall chance to be made known. *Hooker.*

People have a superstitious belief, that in the labour of women it helpeth to the easy *deliverance*.

Bacon.

A mirth-moving jest,
Which his fair tongue, conceit's expositor,
Delivers in such apt and gracious words,
That aged ears play truant at his tales.

Shakespeare.

Are the cities, that I got with wounds,
Delivered up again with peaceful words? *Id.*

The constables have *delivered* her *over* to me, and she shall have whipping enough, I warrant her. *Id.*

He swore, with sobs,

That he would labour my *delivery*. *Id.*

On her fright and fears,

She is something before her time *delivered*. *Id.*

DELL, *n. s. Goth. dale; Belg. del.* See DALE.

DELLILE (Jacques), a celebrated French poet, born in 1738, at Clermont in Auvergne, and educated at the university of Paris. He was early distinguished for the brilliancy of his talents, and the extent of his acquirements; but the first work by which he made known his name to the public, and laid the foundation of his poetical fame, was a translation of Virgil's *Georgics*. This procured him a seat in the Academy. His next performance was an original work, entitled *Les Jardins*, which added considerably to his reputation. About this time, M. Le Comte de Choiseul Gouffier, who had formerly visited and described the interesting shores of Greece, was appointed ambassador to Constantinople, and Dellile was persuaded to accompany him to that city. Thence he went to Greece, where he remained for several months, and finally passed over to Asia Minor, where he was first attacked with a distemper in his eyes, that after his return deprived him entirely of sight. At Constantinople he wrote a considerable portion of his poem on *Imagination*, and on his return published a translation of the *Aeneid*. He continued also to read lectures at Paris, till the revolution obliged him to emigrate into Switzerland. He afterwards visited

Germany and England. Here, in misfortune and banishment, 'muses of melancholy inspiration,' he composed his poem, *Le Malheur et la Pitié*, to give vent to his oppressed feelings. While he remained in England he also translated the *Paradise Lost*. After France had become settled under Napoleon, he returned to his native land, where he died in the summer of 1813. His other works are *L'Homme des Champs*; ou, *les Georgiques Françaises*, 1808; *Les Trois Regnes de la Nature*, 1809; and *La Conversation*, 1812, a playful satire.

DELOLME (John Louis), born at Geneva, 1740 (according to some in 1745), was a lawyer in his native city, and the part which he took in its internal commotions by a work entitled *Examen des trois Points de Droit*, obliged him to repair to England, where he passed some years in great indigence. He wrote for journals, frequented low taverns, was devoted to gaming and pleasure, and lived in such obscurity, that, when he became known by his work on the English Constitution, and some people of distinction were desirous of relieving him, it was impossible to discover his place of residence. His pride was gratified by this kind of low independence, and he rejected all assistance, excepting some aid from the literary fund, to enable him to return to his country. This was probably in 1775, since, from that time, he calls himself member of the council of the two hundred in Geneva. Among his peculiarities was this, that, although principally occupied with political law, he was never present at a session of parliament. At the time of his arrival in England, aristocratical arrogance and turbulence had reached its highest pitch in Sweden and Poland, and it was feared, not without reason, in England, that the same evils threatened that country. Delolme entered into an investigation of this subject. Hence originated his famous work, *Constitution de l'Angleterre, ou Etat du Gouvernement Anglais comparé avec la Forme républicaine et avec les autres Monarchies de l'Europe* (Amsterdam, 1771); and a work in English, called *A Parallel between the English Government and the former Government of Sweden* (London, 1772). In both, his principal object was to illustrate the excellence and stability of the English constitution. Its character of a spirited eulogium is undoubtedly the reason that the first politicians of England, lord Chatham, the marquis of Camden, and the author of the celebrated *Letters of Junius*, spoke so highly of this work of a foreigner. It contains much ingenious reflection on the English constitution, on the energy arising from a happy union of royal power with popular liberty, and particularly on the value of an independent judiciary and the freedom of the press, subjected to penal laws, but not to a censorship. This work, translated by the author himself into English, in 1772 (fourth English edition, 1784, with observations by doctor Charles Coote), is still considered, in England, one of the most ingenious works on the English constitution. Delolme also published, in English, his *History of the Flagellants, or Memorials of Human Superstition* (1783, 4to.); *An Essay on the Union*

with Scotland (London, 1796, 4to.) On the occasion of the will of Mr. Thelluson, he wrote his *Observations on the Power of Individuals to prescribe, by testamentary Dispositions, the particular future Uses to be made of their Property* (London, 1798, 4to.) He died in July, 1806, at a village in Switzerland.

DELOS, an island of the Archipelago, very famous in ancient history. Originally it is reported to have been a floating island, but afterwards it became fixed. It was fabled to have been the birth-place of Apollo and Diana. It was governed by its own kings. Virgil mentions Anius a king of Delos, in the time of the Trojan war, who was afterwards high priest of Apollo, and entertained Æneas with great kindness. The Persians allowed the Delians to enjoy their ancient liberties, after they had reduced the rest of the Grecian islands. In after ages, the Athenians made themselves masters of it; and held it till they were driven out by Mithridates, who granted the inhabitants many privileges, and exempted them from all sorts of taxes. Strabo and Callimachus tell us that Delos was watered by the river Inapus: but Pliny calls it only a spring; and adds, that its waters swelled and abated at the same time with those of the Nile. At present there is no river in the island, but one of the noblest springs in the world, twelve paces in diameter, and enclosed partly by rocks, and partly by a wall. So sacred was the island of Delos held by the ancients, that hostilities were suspended by nations at war, when they happened to meet in this place. Livy tells us, that some Roman deputies being obliged to put in at Delos, in their voyage to Syria and Egypt, found the galleys of Perseus king of Macedon, and those of Eumenes king of Pergamus, anchored in the same harbour, though these two princes were then at war.—Hence this island was a general asylum, and protection was extended to all living creatures, dogs excepted; for this reason it abounded with hares, no dogs being suffered to enter it. No dead body was suffered to be buried in it, nor child to be born there; all dying persons, and women ready to be delivered, were carried over to the neighbouring island of Rhenea. It is now called Sdili.

DELOS, an extensive city in the above island, which occupies a spacious plain, reaching from the one coast to the other. It was well peopled, and, after the destruction of Corinth, the richest city in the Archipelago; merchants flocking thither from all parts, both on account of the immunity they enjoyed, and of its convenient situation between Europe and Asia. It contained many stately buildings; as the temple of Apollo, Diana, and Latona; an oval basin, made at an immense expense, for the representation of sea-fights; and a most magnificent theatre. The temple of Apollo was, according to Plutarch, begun by Erichthon, the son of Cecrops; but afterwards enlarged and embellished at the common charge of all the states of Greece. It contained an altar built with horns of various animals, so artificially adapted to one another, that they hung together without cement. This altar is said to have been a cube; and the doubling it was a famous mathematical problem

among the ancients. This went under the name of *Problema Deliacum*, and is said to have been proposed by the oracle, to free the country from a plague. The trunk of the famous statue of Apollo, mentioned by Strabo and Pliny, is still an object of great admiration to travellers. It is without head, feet, arms, or legs; but from the parts that yet remain it plainly appears, that the ancients did not exaggerate when they commended it as a wonder of art. It was of a gigantic size, though cut out of a single block of marble; the shoulders being six feet broad, and the thighs nine feet round. Plutarch tells us, in his *Life of Nicias*, that he caused to be set up, near the temple of Delos, a huge palm-tree of brass, which he consecrated to Apollo; and adds, that a violent storm of wind threw down this tree on a Colossean statue raised by the inhabitants of Naxos. Round the temple were magnificent porticoes built at the charge of various princes, as appears from inscriptions which are still very plain.

DELPHI, in ancient geography, a town of Phocis situated on the south-west extremity of mount Parnassus, famous for a temple and oracle of Apollo. A number of goats that were feeding on mount Parnassus, approached a place which had a deep and long perforation. The steam which issued from the hole seemed to inspire the goats, and they played and frisked about in such an uncommon manner, that the goatherd was tempted to lean on the hole, and see what mysteries the place contained. He was immediately seized with a fit of enthusiasm, and his expressions were so wild and extravagant, that they passed for prophecies. This circumstance was soon known, and many experienced the same enthusiastic inspiration. The place was revered; a temple erected to Apollo; and a city built, which became the most illustrious in Phocis. The influence of its oracle controlled the councils of states, directed the course of armies, and decided the fate of kingdoms.

The temple of Apollo was at first a kind of cottage covered with boughs of laurel. An edifice of stone was next erected by Trophonius and Agamedes, which subsisted about 700 years, and was burnt in the year 636 after the destruction of Troy, and A.A.C. 548. It is mentioned in the hymn to Apollo ascribed to Homer. An opulent and illustrious Athenian family, called Alcmaeonidae, which had fled from the tyrant Hippias, raised a new temple, the front of which was of Parian marble. The pediments were adorned with Diana, Latona, Apollo, Bacchus, the setting of the sun, the Muses, and the Thyades. The architraves were decorated with golden armour; bucklers suspended by the Athenians after the battle of Marathon; and shields taken from the Gauls under Brennus. In the portico were inscribed the celebrated maxims of the seven sages of Greece. There was an image of Homer, and in the cell was an altar of Neptune, with statues of the Fates, and of Jupiter and Apollo. Near the hearth before the altar, stood the iron chair of Pindar. In the sanctuary was an image of Apollo gilded. The enclosure was of great extent, and filled with treasures (in which many cities had con-

separated tenths of spoils taken in war), and with the public donations of renowned states in various ages.

The oracles were delivered by a priestess called Pythia, who received the prophetic influence in the following manner. A lofty tripod, decked with laurel, was placed over the aperture, whence the sacred vapor issued. The priestess, after washing her body, and especially her hair, in the cold water of Castalia, mounted on it, to receive the divine effluvia. She wore a crown of laurel, and shook a sacred tree which grew close by. Having mounted the tripod, she was seized with the most violent paroxysms of frenzy, and in that situation delivered her oracular responses; and if she declined acting, they dragged her by force to the tripod. The habit of her order was that of virgins. The season of enquiry was in the spring, during the month called Busius; after which Apollo was supposed to visit the altars of the Hyperboreans.

The city of Delphi arose in the form of a theatre, upon the winding declivity of Parnassus, whose fantastic tops overwhelmed it like a canopy on the north, while two immense rocks rendered it inaccessible on the east and west, and the rugged and shapeless mount Cirphis defended it on the south. The foot of Cirphis was washed by the rapid Plistus, whose waters fell into the sea a few leagues from the city. This inaccessible and romantic situation from which the place derived the name of Delphi, or solitary, was rendered still more striking by the innumerable echoes which multiplied every sound, and increased the ignorant veneration of visitants for the god of the oracle. The principal inhabitants of Delphi, claiming an immediate relation to Apollo, were entitled to officiate in the rites of his sanctuary; and even the inferior ranks were continually employed in dances, festivals, processions, and all the gay pageantry of an elegant superstition. Delphi, lying in the centre of Greece, and, as was then imagined, of the universe, was conveniently situated for the conflux of votaries. It was customary for those who consulted the oracle to make rich presents to the god: his servants and priests feasted on the numerous victims which were sacrificed to him; and the rich magnificence of his temple had become proverbial even in the age of Homer. In aftertimes Cræsus, the wealthiest of monarchs, was particularly munificent in his donations. The sacred repository was, therefore, often the object of plunder. Neoptolemus the son of Achilles was slain, while sacrificing, by a priest, on suspicion of a design of that kind. Xerxes divided his army at Panopeus, and proceeded with the main body through Bœotia into Attica, while a part, keeping Parnassus on the right, advanced along Schiste to Delphi; but they were seized with a panic when near Ilium, and fled. The divine hoard was seized by the Phocians under Philomelus, and dissipated in a long war with the Amphictyons. The Gauls experienced a reception like that of the Persians, and manifested similar dismay and superstition. Sylla, more wise, wanting money to pay his army, sent to borrow from the holy treasury; and when his

messenger would have frightened him, by reporting that the sound of a harp had been heard from within the sanctuary, he replied, it was a sign that the god was happy to oblige him. But the temple, in the time of Strabo, was reduced to extreme poverty; and Apollo was silent. Nero attempted to drive him, as it were by violence, from the cavern; killing men at the mouth, and polluting it with blood. An oracle of Apollo at another place informed the consultants, that he should no more recover the power of utterance at Delphi, but enjoined the continuance of the accustomed offerings.

Yet the store appeared inexhaustible; and the robbery of Nero, who removed 500 brazen images, was rather regretted than perceived. The holy treasures, though empty, served as memorials of the piety and glory of the cities which erected them. The Athenian portico preserved the beaks of ships and the brazen shields, trophies won in the Peloponnesian war; and a multitude of curiosities remained untouched. Constantine the Great, however, proved a more fatal enemy to Apollo and Delphi, than either Sylla or Nero. He removed the sacred tripods to adorn the Hippodrome of his new city; where these, with the Apollo, the statues of the Heli-conian muses, and the celebrated Pan, dedicated by the Greek cities after the war with the Medes, were extant when Sozomen wrote his history. Afterwards Julian sent Oribasius to restore the temple; but he was admonished by an oracle to represent to the emperor the deplorable condition of the place. 'Tell him,' said the oracle, 'that the well-built court is fallen to the ground. Phœbus has not a cottage, nor the prophetic laurel, nor the speaking fountain, Cassotis; and even the beautiful water is extinct.'

DELPHINIA, a new alkali, procured by the action of dilute sulphuric acid, on the bruised unshelled seeds of the larkspur. The solution of sulphate, thus formed, is precipitated by subcarbonate of potassa. Alcohol separates from this precipitate the vegetable alkali in an impure state.

Pure delphinia is crystalline while wet, but becomes opaque on exposure to air. Its taste is bitter and acrid. When heated it melts; and on cooling becomes hard and brittle like resin. If more highly heated, it blackens and is decomposed. Water dissolves a very small portion of it. Alcohol and æther dissolve it very readily. The alcoholic solution renders syrup of violets green, and restores the blue tint of litmus reddened by an acid. It forms soluble neutral salts with acids. Alkalies precipitate the delphinia in a white gelatinous state like alumina.

DELPHINIC ACID. The name of an acid, extracted from the oil of the dolphin. It resembles a volatile oil; has a light lemon color, and a strong aromatic odor, analogous to that of rancid butter. Its taste is pungent, and its vapor has a sweetened taste of æther. It is slightly soluble in water, and very soluble in alcohol. The latter solution strongly reddens litmus. 100 parts of delphinic acid neutralise a quantity of base, which contains 9 of oxygen, whence its prime equivalent appears to be 11.11.

DELPHINIUM, dolphin flower, or larkspur:

in botany, a genus of the trigynia order, and polyandria class of plants; natural order twenty-sixth, multisiliquæ: CAL. none; petals five; nectarium bifid, and horned behind; siliquæ three or one. Species fourteen; two of which are perennial. They are herbaceous plants of upright growth, rising from eighteen inches to four feet in height, garnished with finely divided leaves, and terminated by long spikes of pentapetalous flowers of blue, red, white, or violet colors. One species, viz. *D. consolida*, is found wild in several parts of Britain, and grows in corn fields. The seeds are acrid and poisonous. When cultivated, the blossoms often become double. Sheep and goats eat this plant; horses are not fond of it; cows and swine refuse it. The annual larkspur makes a very fine appearance in gardens, and is easily propagated by seeds, being so hardly that it thrives in any soil or situation.

DELPHINUS, the dolphin, in zoology, a genus of fishes belonging to the order of cete. There are five species, viz. 1. *D. delphis*, the dolphin. This fish was consecrated to the gods, and, celebrated in the earliest time for its fondness of the human race, was honored with the title of the sacred fish. Arion the musician, when flung into the ocean by the pirates, was said to be received and saved by this benevolent fish. Its natural shape is almost straight, the back being very slightly incurved, and the body slender; the nose long, narrow, and pointed, not much unlike the beak of some birds, for which reason the French call it *l'oye de mer*. It has forty teeth; twenty-one in the upper jaw and nineteen in the lower; a little above an inch long, conic at their upper end, sharp-pointed, bending a little in. They are placed at small distances from each other; so that when the mouth is shut, the teeth of both jaws lock into one another. The spout-hole is placed in the middle of the head; the tail is semilunar; the skin smooth, the color of the back and sides dusky, the belly whitish: it swims with great swiftness; and its prey is fish. It was formerly reckoned a great delicacy. This species of dolphin must not be confounded with that to which seamen give the name; the latter being quite another kind of fish, viz. the *coryphæna hippuris* of Linnaeus, and the dorado of the Portuguese. 2. *D. leucas*, a species called by the Germans *wit-fisch*, and by the Russians *beluga*; both signifying white fish: but to this the latter add *morskaiâ*, 'of the sea,' to distinguish it from a species of sturgeon so named. They are numerous in the gulf of St. Lawrence, and go with the tide as high as Quebec. 3. *D. orca*, the grampus, is found from the length of fifteen feet to that of twenty-five. It is remarkably thick in proportion to its length, one of eighteen feet being in the thickest part ten feet diameter. With reason then did Pliny call this 'an immense heap of flesh armed with dreadful teeth.' It is extremely voracious; and will not even spare the porpoise, a congenerous fish. It is said to be a great enemy to the whale. 4. *D. orca ensidorsatus*, the sword fish. The nose is truncated; the teeth, of which there are forty in both jaws, are sharp-pointed; and on the back is a very long sword-like spine, or bony fin. It inhabits the European seas, the Atlantic, towards

the Antarctic Pole, and Davis's Straits. It is the largest species of the genus, being twenty-four or twenty-five feet long, and from ten to thirteen feet in diameter where thickest; the lower jaw is much larger than the upper: the spout-hole is on the top of the head, and has two orifices. The spine on the back is often six feet long. It is broadest at the base, and resembles a scimitar or bent sword; being, however, covered with the common skin of the back. It is a bitter enemy to the whale, and carries on a constant war with the seals. It also feeds on flounders. 5. *D. phocæna*, the porpoise. This species is found in vast multitudes in all parts of the British seas; but in greatest numbers at the time when fish of passage appear, such as mackerel, herrings, and salmon, which they pursue up the bays.

DELPHOS, now called Castri, a town, or rather village, of Turkey in Asia, in Livadia; occupying part of the site of the ancient Delphi. Some vestiges of temples are visible; and above them, in the mountain side, are sepulchres, niches with horizontal cavities for the body, some of which are covered with slabs. A monastery is erected on the site of the Gymnasium. Strong terrace walls and other traces of a large edifice remain. The village is at a distance. Castalia is on the right hand in ascending to it, the water coming from on high and crossing the road; a steep precipice, above which the mountain still rises immensely, continuing on in that direction. The village consists of a few cottages covering the site of the temple and oracle.

DELTA, a part of Lower Egypt, which occupies a considerable space of ground between the branches of the Nile and the Mediterranean Sea: the ancients call it Delta, because it is in the form of a triangle, like the Greek Δ . It is about 130 miles along the coast from Damietta to Alexandria, and seventy on the sides from the place where the Nile begins to divide itself. It is the most fertile country in all Egypt, and it rains more there than in other parts, but the fertility is chiefly owing to the inundation of the Nile. The principal towns on the coast are Damietta, Rosetta, and Alexandria; but, within land, Menousia, and Maala or Elmala. See EGYPT.

DELTOIDE, *adj.* from delta, the fourth letter of the Greek alphabet; so called by reason of its resembling this letter. An epithet applied to a triangular muscle arising from the clavicle and from the process of the same, whose action is to raise the arm upward.

Cut still more of the *deltoide* muscle, and carry the arm backward. *Sharp's Surgery.*

DELU'DE, *v. a.* } Ital. and Lat. *deludere*,
DELU'DER, *n. s.* } from *de*, and *ludo* to de-
DELU'DABLE, *adj.* } ceive. To cheat; deceive; impose upon: deludable is, easily imposed upon.

O, give me leave, I have *deluded* you;
 'Twas neither Charles, nor yet the duke.

Shakspeare. Henry VI.

Not well understanding omniscience, he is not so ready to deceive himself, as to falsify unto him whose cogitation is no ways *deludable*.

Browne's Vulgar Errors.

Let not the Trojans, with a feigned pretence
 Of proffered peace, *delude* the Latian prince.

Dryden.

And thus the sweet *deluders* tune their song.

Pope.

For when our poor *deluded* people at home, and foreigners abroad, read the poisonous and inflammatory libels that are daily published with impunity — they act accordingly.

Junius.

Where wavering man, betrayed by venturous pride
To chase the dreary paths without a guide,
As treacherous phantoms in the mist *debude*,
Shuns fancied ills, or chases airy good.

Johnson. Vanity of Human Wishes.

DELVE, *v. a. & n. s.* } Sax. *delfan*; Teut.
DELVER, *n. s.* } *delben*; Belgic *delven*;
Goth. *dalf*, a subterranean place. Srenius refers to this last as the origin of the Saxon *bedelfan*, to bury; and Wiclif confirms this etymology by using *dalf* for *delve*. See below. To dig, and, figuratively, to endeavour to fathom the mind. It is used as a substantive by Spenser and Jonson, for the pit or place dug: a *delver* is a digger.

But he that hadde taken oon ghede forthe and *dalf* into the earthe: and hidde the money of his Lord.

Wiclif. Matt. xxv.

When Adam *delved*, and Eve span,
Who was then the Gentleman? *Old Ballad.*

He by and by
His feeble feet directed to the cry;
Which to that shady *delve* him brought at last,
Where Mammon erst did sun his treasury.

Spenser.

It shall go hard,
But I will *delve* one yard below the mines,
And blow them at the moon. *Shakspeare.*

What's his name and birth?
—I cannot *delve* him to the root: his father
Was called Sicilius. *Id.*

Such a light and mettled dance
Saw you never yet in France;
And by leadmen, for the nonce,
That turn round like grindle-stones,
Which they dig out fro' the *delves*,
For their bairns' bread, wives, and selves.

Ben Jonson.

Delve of convenient depth your thrashing floor,
With tempered clay, then fill and face it o'er.

Dryden.

The filthy swine with *delveing* snout
The rooted forest undermine. *Philips.*

DELVINO, one of the principal towns of Lower Albania, between Joannina and Butrinto. It stands on the side of a mountain, on the site of the ancient Eleus, between the Paria, or ancient Xanthus, and Pistrini; and is well defended by a castle. Population 8000. It is fifty miles E. N. E. of Larissa.

DELUGE, *n. s.* Fr. *deluge*; Span. Ital. and Portug. *diluvio*; Lat. *diluvium*, from *diluo*, *de* and *lao*; Gr. *λῶα*, to wash.

If there had not been so deep a *deluge* of sin, there had been none of the waters.

Bishop Hall Contemplations.

But if with dais and dams they strive to force
His channel to a new or narrow course,
No longer then within his banks he dwells,
First to a torrent, then a *deluge*, swells. *Denham.*

The apostle doth plainly intimate, that the old world was subject to perish by a *deluge*, as this is subject to perish by conflagration. *Burnet's Theory.*

At length corruption, like a general flood,
Shall deluge all. *Pope.*

Still the battering waves rush in
Implacable, till *deluged* by the foam,
The ship sinks, foundering in the vast abyss. *Philips.*

The restless flood the land would overflow,
By which the *deluged* earth would useless grow. *Blackmore.*

DELUGE. Several deluges are recorded in history; as that of Ogyges, which overflowed almost all Attica; and that of Deucalion, which drowned all Thessaly in Greece: the most memorable however was the universal deluge or Noah's flood, which overflowed and destroyed the whole earth; and from which only Noah, and those with him in the ark, escaped. See ANTENUVIAN, an article in which we have entered into this subject at some length, and particularly its epoch. See also CHRONOLOGY.

But the deluge is a topic of great interest both to science and religion. It has given birth, therefore, to various theories and controversies on every point connected with it; and, while we cannot devote much space to the review of them in this work, some of the principal considerations that have been offered respecting its causes and effects may be acceptable to the reader. The great points in question may be reduced to three: 1. Was the deluge universal, as is commonly supposed, or partial? 2. Was it from natural agency only, and if so what natural agency effected this mighty convulsion? 3. What were the principal effects and changes resulting?

1. Isaac Vossius and bishop Stillingfleet are amongst the most respectable supporters of an opinion that the deluge was but *partial*. But the reasoning of the former upon this subject is a little involved in our second question, respecting the agency employed; for it rests partly upon the difficulty there must have been in effecting a universal deluge. 'Many miracles,' he says, 'must have concurred; but God works no miracles in vain. What need was there to drown those lands where no men lived, or are yet to be found? Although we should believe that part of the earth only to have been overflowed by the waters which we have mentioned, and which is not the hundredth part of the terrestrial globe, the deluge will nevertheless be universal (recumenical), since the destruction was universal, and overwhelmed the whole habitable world.' Bishop Stillingfleet adopted the same opinion, from a persuasion that the earth was by no means fully peopled, and therefore there was no necessity for the deluge being universal. 'I cannot,' says he, 'see any urgent necessity from the Scripture to assert that the flood did spread itself all over the surface of the earth. That all mankind, those in the ark excepted, were destroyed by it, is most certain according to Scripture. When the Lord said that he would destroy man from the face of the earth, it could not be any particular deluge of so small a country as Palestine, as some have ridiculously imagined; for we find a universal

corruption in the earth mentioned as the cause; a universal threatening upon all men for this cause; and afterwards a universal destruction expressed as the effect of this flood. So then it is evident that the flood was universal with regard to mankind; but from thence follows no necessity at all of asserting the universality of it as to the globe of the earth, unless it be sufficiently proved; and what reason can there be to extend the flood beyond the occasion of it, which was the corruption of mankind? The only probability of asserting the universality of the flood, as to the globe of the earth, is from the destruction of all living creatures, together with man. Now though men might not have spread themselves over the whole surface of the earth, yet beasts and creeping things might, which were destroyed with the flood; for it is said that 'all flesh died that moved upon the earth, and every man.' To what end should there be not only a note of universality added, but such a particular enumeration of the several kinds of beasts, creeping things, and fowls, if they were not all destroyed? To this I answer; I grant that, as far as the flood extended, all these were destroyed; but see no reason to extend the destruction of these beyond that compass and space of the earth where men inhabited, because the punishment upon the beasts was occasioned by, and could not be concomitant with the destruction of man; but (the occasion of the deluge being the sin of man, who was punished in the beasts that were destroyed for his sake, as well as in himself) where the occasion was not, as where there were animals and no men, there seems no necessity of extending the flood thither.

The bishop, therefore, thinks it probable that this visitation of divine judgment extended only to the continent of Asia, and those animals only which were immediately connected with mankind; and he thinks the latter a sufficient reason for Noah's preserving the pairs of animals which he was commanded to take with him into the ark. But it is shown, under the article *ANTIDILUVIAN*, that, according to the most moderate computations, the world was probably more full of inhabitants than at present; the expression of Scripture is strong, 'that the earth was filled with violence;' and if it were admitted that 'the earth' means only continental Asia, the supposition of a partial deluge involves almost all the difficulties, with regard to the agency employed, that are supposed to be connected with that of a universal one. If the tops of the highest mountains, in a very considerable part of the earth, were covered, the laws of gravity would carry the water that must have been thus elevated over all the ordinary habitations of men, or it would require a miracle to suspend their operation. We shall see that nothing strictly miraculous is supposed on our hypothesis of a universal deluge.

Mr. Bryant, in his *Ancient Mythology*, adverts at great length to the traditional traces of the fact of a universal deluge in all the early fables and histories of the heathen world. He even contends that this fact furnished the principal, if not the only foundation of ancient idolatry; that the first of all the heathen deities was Noah;

that all the ancient nations regarded him as their founder; and that he, his sons, and the first patriarchs, are alluded to, in most if not all the religious ceremonies. The Egyptian Osiris (he says) was the same with Ham the son of Noah; though the name was sometimes bestowed on Noah himself. Osiris, according to Diodorus Siculus, was wonderfully preserved in an ark, and taught the use of the vine; to build, plant, &c. 'We may reasonably suppose,' says Mr. Bryant, 'that the particulars of this extraordinary event would be gratefully commemorated by the patriarch himself, and transmitted to every branch of his family; that they were made the subject of domestic converse, where the history was often renewed, and ever attended with a reverential awe and horror, especially in those who had been witnesses to the calamity, and had experienced the hand of Providence in their favor. When there was a falling off from the truth, we might farther expect, that a person of so high a character as Noah, so particularly distinguished by the Deity, could not fail of being revered by his posterity; and, when idolatry prevailed, that he would be one of the first among the sons of men to whom divine honors would be paid. Lastly, we might conclude, that these memorials would be interwoven in the mythology of the Gentile world; and that there would be continual allusions to these ancient occurrences, in the rites and mysteries as they were practised by the nations of the earth. In conformity to these suppositions, I shall endeavor to show that these things did happen; that the history of the deluge was religiously preserved in the first ages; that every circumstance of it is to be met with among the historians and mythologists of different countries, and traces of it are to be found particularly in the sacred rites of Egypt and of Greece.'

If the success of this author, in this great undertaking, was not complete; if his theories involve many doubtful points of history, and some altogether conjectural assumptions; he embodies on the other hand many unquestionably interesting and important facts, connected with this subject, and which the reader who is desirous of a complete review of it should not overlook. Of Noah, he says, they styled him Prometheus, Deucalion, Atlas, Theuth, Zuth, Xuthus, Inachus, Osiris. When there began to be a tendency towards idolatry, and the adoration of the sun was introduced by the posterity of Ham, the title of Helius, among others, was conferred upon him. Noah was the original Zeus and Dios. He was the planter of the vine, and inventor of fermented liquors: whence he was denominated Zeuth, which signifies ferment, rendered Zeus by the Greeks. He was also called Dionusus, interpreted by the Latins Bacchus, but very improperly. Bacchus was Chus the grandson of Noah; as Ammon may be esteemed Ham, so much revered by the Egyptians. Among the people of the east, the true name of the patriarch was preserved; they called him Noas, Naus, and sometimes contractad Nous; and many places of sanctity, as well as rivers, were denominated from him. Anaxagoras of Clazomenæ had obtained some knowledge of him in Egypt.

By him the patriarch was denominated Noas or Nous ; and both he and his disciples were sensible that this was a foreign appellation ; notwithstanding which he has acted as if it had been a term of the Greek language. Eusebius informs us, that the disciples of Anaxagoras say, ' that Nous is by interpretation, of the deity Dis or Dios ; and they likewise esteem Nous the same as Prometheus, because he was the renewer of mankind, and was said to have fashioned them again,' after they had been in a manner extinct. Suidas has preserved, from some ancient author, a curious memorial of this wonderful personage, whom he affects to distinguish from Deucalion, and styles Nannacus. According to him, this Nannacus was a person of great antiquity, and prior to the time of Deucalion. He is said to have been a king, who, foreseeing the approaching deluge, collected every body together, and led them to a temple, where he offered up his prayers for them, accompanied with many tears.' Other well known traditions, mentioned by Stephenson, speak of the flood of Deucalion in which all mankind were destroyed. Afterwards, when the surface of the earth began to be again dry, Zeus ordered Prometheus and Minerva to make images of clay in the form of men ; and, when they were finished, he called the winds, and made them breathe into each, and rendered them vital.' From these accounts, Mr. Bryant concludes : ' However the story may have been varied, the principal outlines plainly point out the person who is alluded to in these histories. It is, I think, manifest, that Annacus, and Nannacus, and even Inachus, relate to Noachus or Noah. And not only these, but the histories of Deucalion and Prometheus have a like reference to the patriarch : in the 600th year, and not the 300th, of whose life the waters prevailed upon the earth. He was the father of mankind, who were renewed in him. Hence he is represented by another author, under the character of Prometheus, as a great artist, by whom men were formed anew, and were instructed in all that was good. He seems in the east to have been called Noas, Noasis, Nasus, and Nus ; and by the Greeks his name was compounded Dionusus. The Amonians, wherever they came, founded cities to his honor ; hence places called Nusa often occur, and many of them are mentioned by ancient authors. These, though widely distant, being situated in countries far removed, yet retained the same original histories ; and were generally famous for the plantation of the vine. Misled by this similarity of traditions, people in after times imagined that Dionusus must necessarily have been where his history occurred ; and as it was the turn of the Greeks to place every thing to the account of conquest, they made him a great conqueror, who went over the face of the whole earth, and taught mankind the plantation of the vine. Though the patriarch is represented under various titles, and even these not always uniformly appropriated ; yet there continually occur such peculiar circumstances of his history, as plainly point out the person referred to. The person preserved is always mentioned as preserved in an ark. He is described as being in a state of darkness, which is repre-

sented allegorically as a state of death. He then obtains a new life, which is called a second birth ; and is said to have his youth renewed. He is, on this account, looked upon as the first born of mankind ; and both his antediluvian and postdiluvian states are commemorated, and sometimes the intermediate state is also spoken of. Diodorus calls him Deucalion ; but describes the deluge as almost universal.' We have noticed the corresponding Chaldean tradition, &c. mentioned by Berosus in the article ANTEDILUVIANS. While we consider the further range of these traditional accounts of the flood over the continent of India, and as far as China, has also its weight in establishing the Mosaic accounts, we shall shortly advert to the present and permanent effects of such a visitation, now remaining, as another proof both of the fact of a deluge, and of its universality. At present we enquire :

2. *What was the nature of the agency employed on this occasion ?* Dr. Thomas Burnet, in his *Telluris Theoria Sacra*, endeavours to show, that all the waters in the ocean are not sufficient to cover the earth to the depth assigned by Moses. Supposing the sea drained quite dry, and all the clouds of the atmosphere dissolved into rain, we should still want the greatest part of the water of a deluge. According to the Dr. no less than eight oceans would have been requisite. To get clear of this difficulty, he and others have adopted Descartes's theory. That philosopher will have the antediluvian world to have been perfectly round and equal, without mountains or valleys. He accounts for its formation on mechanical principles, by supposing it at first in the condition of a thick turbid fluid replete with divers heterogeneous matters ; which, subsiding by slow degrees, formed themselves into different concentric strata, or beds, by the laws of gravity. Dr. Burnet improves on this theory, by supposing the primitive earth to have been no more than a crust investing the water contained in the ocean, and in the central abyss, which he and others suppose to exist in the bowels of the earth. See *ANYSS*. At the time of the flood, this outward crust broke in a thousand places ; and sunk down among the water, which thus spouted up in vast cataracts, and overflowed the whole surface. He supposes also, that before the flood there was a perfect coincidence of the equator with the ecliptic, and consequently that the antediluvian world enjoyed a perpetual spring ; but that the violence of the shock, by which the outer crust was broken, shifted also the position of the earth, and produced the present obliquity of the ecliptic. This theory is not only equally arbitrary with the former, but directly contrary to the words of Moses, who assures us, that all the high hills were covered ; while Burnet affirms that there were no hills then in being. Dr. Hook conjectured that the shell of earth was subjected at the deluge to a compression into a prolate spheroid, thereby pressing out the water of an abyss under the earth. Dr. Halley ascribes the deluge to the shock of a comet, whereby the polar and diurnal rotation of the globe was changed ; and the ingenious Whiston so far adopted and improved upon this hypothesis, that he published a tract

on the subject entitled, *The Cause of the Deluge demonstrated*.

The theories above enumerated, though sanctioned by those names which entitled them to our notice, are, we conceive, one and all, destitute of any thing amounting to proof. The following, which endeavours to account for this most remarkable event, without doing any violence to the established laws of nature, is the hypothesis, we believe, of a Mr. James Tytler, a chemist of Edinburgh, who contributed largely to the *Encyclopædia Britannica*, from which work we make the extract.

1. 'If we consider the quantity of water requisite for the purpose of the deluge, it will not appear so very extraordinary as has been commonly represented. The height of the highest hills is thought not to be quite four miles. It will therefore be deemed a sufficient allowance, when we suppose the waters of the deluge to have been four miles deep on the surface of the ground. Now it is certain, that water, or any other matter, when spread out at large upon the ground, seems to occupy an immense space in comparison of what it does when contained in a cubical vessel, or when packed together in a cubical form. Suppose we wanted to overflow a room sixteen feet every way, or containing 258 square feet, with water, to the height of one foot, it may be nearly done by a cubical vessel of six feet filled with water. A cube of eight feet will cover it two feet deep, and a cube of ten feet will very nearly cover it four feet deep. It makes not the least difference whether we suppose feet or miles to be covered. A cube of ten miles of water would very nearly overflow 256 square miles of plain ground to the height of four miles. But if we take into our account the vast number of eminences with which the surface of the earth abounds, the above-mentioned quantity of water would do a great deal more. If, therefore, we attempt to calculate the quantity of water sufficient to deluge the earth, we must make a very considerable allowance for the bulk of all the hills on its surface. To consider this matter, however, in its utmost latitude: the surface of the earth is supposed, by the latest computations, to contain 199,512,595 square miles. To overflow this surface to the height of four miles, is required a parallelepiped of water sixteen miles deep, and containing 49,878,148 square miles of surface. Now, considering the immense thickness of the globe of the earth, it can by no means be improbable, that this whole quantity of water may be contained in its bowels, without the necessity of any remarkable abyss or huge collection of water, such as most of our theorists suppose to exist in the centre. It is certain, that as far as the earth has been dug, it has been found not dry, but moist; nor have we the least reason to imagine that it is not, at least, equally moist all the way down to the centre. How moist it really is cannot be known, nor the quantity of water requisite to impart to it the degree of moisture it has; but we are sure it must be immense. The earth is computed to be nearly 8000 miles in diameter. The ocean is of an unfathomable depth; but there is no reason for supposing it more than a few miles. To

make all reasonable allowances, however, we shall suppose the whole solid matter in the globe to be only equal to a cube of 5000 miles; and even on this supposition we shall find, that all the waters of the deluge would not be half sufficient to moisten it. The above-mentioned parallelepiped of water would indeed contain 798,050,368 cubic miles of that fluid; but the cube of earth containing no less than 125,000 millions of cubic miles, it is evident that the quantity assigned for the deluge would be scarcely known to moisten it. It could have indeed no more effect this way, than a single pound of water could have upon 150 times its bulk of dry earth. We are persuaded, therefore, that any person who will try by experiment how much water a given quantity of earth contains, and from that experiment will make calculations with regard to the whole quantity of water contained in the bowels of the earth, must be abundantly satisfied, that though all the water of the deluge had been thence derived, the diminution of the general store would, comparatively speaking, have been next to nothing. 2. It was not from the bowels of the earth only that the waters were discharged, but also from the air; for we are assured by Moses, that it rained forty days and forty nights. This source of the diluvian waters has been considered as of small consequence by almost every one who has treated on the subject. We shall transcribe the general opinion from the *Universal History*, Vol. I. where it is very fully expressed. 'According to the observations made of the quantity of water that falls in rain, the rains could not afford one ocean, nor half an ocean, and would be a very inconsiderable part of what was necessary for a deluge. If it rained forty days and forty nights throughout the whole earth at once, it might be sufficient to lay all the lower grounds under water, but it would signify very little as to the overflowing of the mountains; so that it has been said, that if the deluge had been made by rains only, there would have needed not forty days, but forty years, to have brought it to pass. And if we suppose the whole atmosphere condensed into water, it would not all have been sufficient for this effect; for it is certain, that it could not have risen above thirty-two feet, the height to which water can be raised by the pressure of the atmosphere; for the weight of the whole air, when condensed into water, can be no more than equal to its weight in its natural state, and must become no less than 800 times denser; for that is the difference between the weight of the heaviest air and that of water.' On this subject we must observe, that there is a very general mistake with regard to the air, similar to the above-mentioned one regarding the earth. Because the earth below our feet appears to our senses firm and compact, therefore the vast quantity of water, contained even in the most solid parts of it, and which will readily appear on proper experiment, is overlooked, and treated as a non-entity. In like manner, because the air does not always deluge with excessive rains, it is also imagined that it contains but very little water. Because the pressure of the air is able to raise only, thirty-two feet of water on the surface of the earth, it is therefore supposed we

may know to what depth the atmosphere could deluge the earth, if it was to let fall the whole water contained in it. But daily observations show, that the pressure of the atmosphere has not the least connexion with the quantity of water it contains. Nay, if there is any connexion, the air seems to be lightest when it contains most water. In the course of a long summer's drought, for instance, the mercury in the barometer will stand at thirty inches, or little more. If it does so at the beginning of the drought, it ought to ascend continually during the time the dry weather continues; because the air all the while is absorbing water in great quantity from the surface of the earth and sea. This, however, is known to be contrary to fact. At such times the mercury does not ascend, but remains stationary; and what is still more extraordinary, when the drought is about to have an end, the air, while it yet contains the whole quantity of water it absorbed, and has not discharged one single drop, becomes suddenly lighter, and the mercury will perhaps sink an inch before any rain falls. The most surprising phenomenon, however, is yet to come. After the atmosphere has been discharging for a number of days successively a quantity of matter 800 times heavier than itself, instead of being lightened by the discharge, it becomes heavier, nay, specifically heavier than it was before. It is also certain, that very dry air, provided that it is not at the same time very hot, is always heaviest; and the driest air which we are acquainted with, namely, Dr. Priestley's dephlogisticated air, is considerably heavier than the air we commonly breathe. For these reasons we think the quantity of water contained in the whole atmosphere ought to be considered as indefinite, especially as we know that by whatever agent it is suspended, that agent must counteract the force of gravity, otherwise the water would immediately descend; and while the force of gravity in any substance is counteracted, that substance cannot appear to us to gravitate at all. 3. The above considerations render it probable, at least, that there is in nature a quantity of water sufficient to deluge the world, provided it was applied to the purpose. We must next consider whether there is any natural agent powerful enough to effect this purpose. We shall take the phrases used by Moses in their most obvious sense. The breaking up of the fountains of the deep we may reasonably suppose to have been the opening of all the passages, whether small or great, through which the subterraneous waters possibly could discharge themselves on the surface of the earth. The opening of the windows of heaven we may also suppose to be the pouring out the water contained in the atmosphere through those invisible passages by which it enters in such a manner as totally to elude every one of our senses, as when water is absorbed by the air in evaporation. As both these are said to have been opened at the same time, it seems from thence probable, that one natural agent was employed to do both. Now it is certain, that the industry of modern enquirers has discovered an agent unknown to the former ages, and whose influence is so great, that with regard to this world it may be said to have a

kind of omnipotence. The agent we mean is electricity. It is certain, that, by means of it, immense quantities of water can be raised to a great height in the air. This is proved by the phenomena of water-spouts. Mr. Forster relates, that he happened to see one break very near him, and observed a flash of lightning proceed from it at the moment of its breaking. The conclusion from this is obvious. When the electric matter was discharged from the water, it could no longer be supported by the atmosphere but immediately fell down. Though water-spouts do not often appear in this country, yet every one must have made an observation somewhat similar to Mr. Forster's. In a violent storm of thunder and rain after every flash of lightning, or discharge of electricity from the clouds, the rain pours down with increased violence; thus showing that the cloud, having parted with so much of its electricity, cannot longer be supported in the form of vapor, but must descend in rain. It is not, indeed, yet discovered that electricity is the cause of the suspension of water in the atmosphere; but it is certain that evaporation is promoted by electrifying the fluid to be evaporated. It may therefore be admitted, as a possibility, that the electric fluid contained in the air is the agent by which it is enabled to suspend the water which rises in vapor. If, therefore, the air is deprived of the due proportion of this fluid, it is evident that rain must fall in prodigious quantities. Again: we are assured from the most undeniable observations, that electricity is able to swell up water on the surface of the earth. This we can make it do even in our trifling experiments; and much more must the whole force of the fluid be supposed capable of doing it, if applied to the waters of the ocean, or any others. The agitation of the sea in earthquakes is a sufficient proof of this. It is certain, that at these times there is a discharge of a vast quantity of electric matter from the earth into the air; and, as soon as this happens, all becomes quiet on the surface of the earth. From a multitude of observations it also appears, that there is at all times a passage of electric matter from the atmosphere into the earth, and vice versa from the earth into the atmosphere. There is, therefore, no absurdity in supposing the Deity to have influenced the action of the natural powers in such a manner that for forty days and nights the electric matter contained in the atmosphere should descend into the bowels of the earth; if, indeed, there is occasion for supposing any such immediate influence at all, since it is not impossible that there might have been, from some natural cause, a descent of this matter from the atmosphere for that time. But by whatever cause the descent was occasioned, the consequence would be, the breaking up of the fountains of the deep, and the opening of the windows of heaven. The water contained in the atmosphere being left without support, would descend in impetuous rains; while the waters of the ocean, those from which fountains originate, and those contained in the solid earth itself, would rise from the very centre, and meet the waters which descended from above. Thus the breaking up of the fountains of the deep, and

the opening the windows of heaven, would accompany each other, as Moses tells us they actually did; for, according to him, both happened on the same day. In this manner the flood would come on quietly and gradually, without that violence to the globe which Burnet, Whiston, and other theorists, are obliged to suppose. The abatement of the waters would ensue on the ascent of the electric fluid to where it was before. The atmosphere would then absorb the water as formerly: that which had ascended through the earth would again subside; and thus every thing would return to its pristine state.'

3. We conclude by noticing some of the alterations and effects which are supposed to have taken place in consequence of the deluge. One of these is the much greater quantity of water in the present than in the old world. Dr. Keill has, indeed, endeavoured to prove, that the present extent of the surface of the waters is necessary to raise such a quantity of vapors as may supply the surface of the earth with rain and with springs. In answer to this it is said, that it may justly be questioned whether all springs are derived from the vapors raised by the sun's heat? and, secondly, Whether the primitive earth stood in need of such a quantity of rain to render it fertile as the present? Dr. Woodward supposes the antediluvian seas to have been nearly of the same extent with those at present, because 'the spoils of the sea, the shells and other marine bodies, are left in such prodigious numbers in the earth, that they could not have been left in such quantities, had not the seas occupied much the same space as they do now.' This argument, however, is thought by Mr. Cockburn to be inconclusive; and that the seas in the present earth are vastly more extended, and consequently the dry land so much less in proportion, may be inferred, he thinks, from the great multitude of islands that lie near the shores of the greater continents, &c. To all this it may be replied, that the Mosaic account says nothing of the extent of the seas either before or after the flood; but simply tells us, that the waters were poured out upon the surface of the earth from the windows of heaven and the fountains of the deep, and that as the flood decreased the waters returned from off the face of the earth. That the fish, as well as land animals, were more numerous in the antediluvian world than now when such quantities are destroyed by mankind, is also probable, as we see they abound to this day in uninhabited places. This may account for the astonishing quantities of exuvie to be met with in many different parts of the earth; but from the formation of islands nothing can be concluded concerning the antediluvian world. The late discoveries have shown that many islands have a volcanic origin; that others are formed by the growth of coral; and some by an accumulation of sea-weeds and other matters floating on the surface of the ocean, and detained upon sand-banks and sunk rocks; while not a few of those near the great continent owe their origin to the quantities of mud brought down by the great rivers which fall into the ocean. The inferior fertility of the earth after the deluge is much insisted upon by the same author.

There has been a valuable addition to the spe-

culations we have noticed above, in a modern work of the Rev. Mr. Townsend, entitled, *The Character of Moses established for Veracity as an Historian, recording Events from the Creation to the Deluge*. It might be said on opening this volume, Is it necessary again to take up arms in defence of Moses? is not the phalanx of wise and good men who have already stood forth in his behalf sufficient to secure him from any new attack? It is true, indeed, that the ægis of celestial wisdom has often darted its benumbing rays on the impious cavillers, but they rise ever with new courage from the ruin which had overwhelmed them, and rush with blind rage on the bulwarks whence they have been so often repelled. They have begun, of late, to try the effect of new methods of assault, and to exult in the advantageous display of their resources. It was no small triumph over Revelation to have proved that the earth was never created, but was originally a splinter struck off from the sun by a heavy body which happened to impinge upon it. But a great Epicurean philosopher recently defunct, has proceeded much further, and has finally developed the theory of the animal creation. It seems that the primitive world was one vast pool, in which all creatures sported in the shape of tadpoles, until some of them longing to walk on dry land, legs fitted for that purpose spontaneously sprang forth from the hinder quarters. Some affected hoofs, and gradually became horses; while others, of a more ambitious character, forced their humbler brethren to carry them on their backs. A great metaphysician, the pride of Scotland, proved, in defiance of Moses, that the primitive men wore tails, and that it was owing to the friction of tight clothing that their posterity have lost so ornamental an appendage. We have not heard, indeed, that the Sansculotte philosophers have recovered this badge, though they are well rid of all other symptoms of humanity; but it is impossible to say how far their perfectibility may reach, and to what new heights of dignity and honor they may be destined to ascend. It is surprising that the old-fashioned tradition has not been rooted out by so many improvements in science; but, as Moses has stood his ground so long, there seems a fair chance of his holding out to the last. Still it is impossible to say what new stratagems may be played off; and, as the enemy seems to be flushed with victory, we are not displeased to hail a new auxiliary. We therefore enter upon some of the facts and reasonings of the work before us with considerable satisfaction.

The design of Mr. Townsend is, to compare the present state of our knowledge of the history of man and of the earth with the relations contained in the early part of Genesis, and by this comparison to establish the character of the historian as a faithful recorder of events. The first part of his work contains a disquisition on the similar traditions which were handed down among many nations from the most ancient times; but the larger portion of the volume consists of a geological essay on the proofs that our globe has undergone a universal deluge. He shows that the creation of the world, and its emerging from a state of primitive chaos and

from a universal ocean, are not only contained in the works of the Grecian poets and philosophers, but are traced among several more ancient nations. In a curious extract from one of the Paranas are the following details:—‘Of all objects in the created world, water existed first. The universe was dark. In this primeval water did Bhagavat, in a masculine form, repose for the space of a thousand ages; after which, the intention of creating other beings, for his own wise purposes, became predominant in the mind of the Supreme. In the first place, by his will, was produced one flower of the lotus; then the form of Brahma, who, emerging from the cup of the lotus, looked round and beheld, from the eyes of his four heads, an immeasurable expanse of water. In this flower he passed 300 years in wonder, perplexity, and prayer; after which he produced the four elements, and the genii which preside over them. From his right side there issued, by the omnipotence of God, a man of perfect beauty, Swayambhuva Menu, that is, son of the Self-existent; and from his left side a woman, named Satarupa.’ (P. 43, 44.) To the same purpose is a passage in the ancient Edda of Sæmund, published by Resenius.

On the subject of the deluge, which occupies the principal part of this work, he prefers dwelling on arguments which are in a great measure new, and refers us to other writers for the historical testimony. This we approve, while we think that the historical part of the question is far from being exhausted. The Pralayas or periodical inundations of the Hindoos, as related in the Bhagavat—the successive destructions and renovations of the world, of which a corresponding account is given by Sæmund in the Runic Voluspa, and by Seneca from the representations of the Stoics—and the similar ceremonies practised in celebration of this event in Egypt and in Mexico, are facts which deserve a careful elucidation.

The proofs which Mr. Townsend brings forward of this universal catastrophe are diffused through a geological disquisition which occupies the larger portion of the volume. He takes a general survey of the surface of the earth, and the constitution and order of its strata, as far as they have been explored; in the course of which he unfolds to us in a very interesting manner the fruits of a diligent investigation, continued, as he informs us, during fifty years, and pursued in various parts of Europe. We may safely say that his volume contains far more information than any other work on the same subject.

In order to lay a foundation for the development of the more general phenomena to which he adverts, this author gives a brief view first of the geological formation of our own island. We regret that we cannot follow him through their details: they well prepare the reader to contemplate with interest the succession of formations in other countries. Under this head our author has given us brief notices afforded by travellers in almost every part of the world which has been explored by Europeans. They are very general, yet sufficient to justify the conclusion which Mr. Townsend has drawn from them. ‘Whether we examine,’ he observes, ‘Europe, Asia, Africa, or

America, the same arrangement may be traced; with this exception, that both in our island, and over the surface of the globe, in some places, the superior strata are deficient, and may be supposed to have been carried off, after they had been deposited in the bosom of the ocean. This arrangement, as already stated, includes granite, gneiss, slate, and argillaceous schist, mountain lime-stone, coal, schist, calcareous rocks, with clay, sand, chalk, and its integument of sand and clay.’

The geological theory adopted by Mr. Townsend is highly favorable to this part of the Scriptural History. If, with him, we can trace the actual operation of agents sufficiently powerful to elevate the continent of South America, (which this author conceives to have been those now operating in her abundant volcanoes), and other such extensive regions from the depths of the ocean, it is no longer difficult to conceive, that the waters may have covered the highest mountains, and that great tracts of habitable land may have been submerged.

But absolute and distinct proofs of this event are to be found in the dislocations of strata, and in the phenomena connected with alluvial depositions. There is no part of the earth in which the violent dislocations of the regular strata are not to be found; and they are chiefly abundant in mountainous tracts, of which no other proof need be cited than the vertical position which the strata forming high mountains now hold, while we are assured that these very strata were originally horizontal. But even in the most level countries we need not go far for evidences of these convulsions. Every river, every brook which breaks out under our feet, and every valley which diversifies the surface, owes its existence to the disruption of strata. All the rock formations were at first unbroken and continuous; wherever a valley occurs there is now an interruption of this continuity. That these hollows were not the mere effect of rivers which have worn out courses for their waters may be proved by a variety of geological facts which we have not room to introduce here; but it is put in sufficiently strong light by Mr. Townsend’s observations on springs, which are in a great measure new, and of very general interest. Every stratum of rock, before it becomes broken up, carries with it in its course under the surface a stratum of water, which percolates its stony beds, and is confined between impervious layers of clay. It is only where these subterranean courses are disturbed, and the strata are torn asunder by some extraneous force, that fountains and rivers burst forth. These dislocations and disturbances of strata can only be attributed to the agency of vast torrents every where flowing over and disorganising the surface of the earth, and such torrents can only be furnished by the incursions of the ocean. Land floods and rivers are the effects of the previous disruption of the strata, and therefore cannot be considered the efficient causes.

The production of these phenomena by the waters of a deluge is further proved by *alluvial deposit*. The vast extent of alluvions, independently of all other proof, declares that the

ocean gave them birth. One great accumulation of debris fills nearly the whole of Flanders and Holland; it reaches across the channel, and covers the southern and eastern counties of England, concealing under it, at a great depth, the regular strata of these districts. Another alluvion forms Lower Saxony and Holstein. Similar appearances occur in all level countries, and valleys are generally filled with these accumulations, through the midst of which the feeble streams of the present rivers have opened for themselves diminutive channels. That these accumulations were affected at once by vast oceanic torrents, and not by the gradual influence of rain and land floods, appears, Mr. T. observes, from the alluvial strata not being mixed or blended together, but frequently disposed according to their specific gravity. The vast fragments of rock which are found scattered over plains and mountains, in so many parts of the earth, at great distances from their native mountains, lead us forcibly to the same inference.

One of the most important observations which relates to these deposits is the following:—‘In all the alluvial districts here particularly noticed, it appears that only one bed of vegetable earth is to be seen. Consequently these strata have not been produced by land floods, at different and at distant periods. They direct our attention to one epoch, and most distinctly give us a measure, by which to estimate the time which has elapsed since either the elevation of our present continents, or the depression of the surrounding seas.’

We are assured, that the incursions of the ocean over the habitable surface of the earth took place at a time since it was actually inhabited by land animals, by the organic remains which the alluvions contain; and this remark leads us to our author's disquisition on the interesting subject of extraneous fossils, with which we shall close our observations. Mr. Townsend is the first who has given us any extensive account of the organic remains, in connexion with the strata to which they belong; and in this respect he has rendered great service to the public. The oldest class of rocks contain no vestiges of organised beings, and this fact is sufficient to silence the assertion of Hutton, that the world exhibits no traces of a beginning. Lithophytes and shells occur in the oldest secondary rocks, and more complicated beings gradually make their appearance. All these, however, and indeed all the organic remains occurring in strata which have never been disturbed and disintegrated, may be termed indigenous. It is plain, that the creatures of which they are the spoils lived and died on the places where they are here traced. The shells are found deposited according to families, and confined in a great measure each to its own stratum; and a similar remark applies to other animal remains of this department. It is not so with those of alluvial ground. These are assembled from all parts of the earth, and are thrown together in promiscuous heaps. In the same beds are found shells and corals only known in the Pacific Ocean, and the bones of elephants and rhinoceroses. ‘They seem,’ says Mr. Townsend, ‘to have been transported from

distant climates, and to have been deposited in a tumultuous manner by some grand convulsion, which blended and buried terrene and submarine productions, ancient and recent, in one common grave. The direction in which they have been conveyed, appears to have been from south-east to north-west. Hence, where we have an opportunity of making distinctions respecting their natural habitations, as in the Asiatic and African elephants, it is remarkable that the former, and not the latter, are to be found fossil in the north of Europe. Should the latter have been transported from their native seats by the same convulsion, it is probable that their relics have been deposited in the Atlantic Ocean.’

On the whole, though the arrangement of the author's materials might have been improved in this work, he has added considerably both to the stores of natural history, and to the elucidation and confirmation of the details of the sacred volume on this subject.

DELUSION, *n. s.* } Lat. *delusio*. See DE-
DELUSIVE, *adj.* } LUDE. A cheat, a false-
DELUSORY. } hood; the act of cheating

or deluding: the adjectives alike mean apt to deceive.

Yea, they have chosen their own ways, and their soul delighteth in their abominations. I also will chuse their delusions. Bible. Isaiah lxvi.

Who therefore seeks in these

True wisdom, finds her not, or by *delusion*.

Milton.

This confidence is founded on no better foundation than a *delusory* prejudice. Glanville.

Phænomena so *delusory* that it is very hard to escape imposition and mistake. Woodward.

I waking, viewed with grief the rising sun,
And fondly mourned the dear *delusion* gone.

Prior.

While the base and grovelling multitude were listening to the *delusive* deities, those of a more erect aspect and exalted spirit separated themselves from the rest. Tatler. No. 81.

Why will any man be so impertinently officious as to tell me all prospect of a future state is only fancy and *delusion*? Is there any merit in being the messenger of ill news? If it is a dream, let me enjoy it, since it makes me both the happier and better man.

Adison.

Unnumbered suppliants crowd preferment's gate,
Athirst for wealth, and burning to be great;
Delusive fortune hears the incessant call,
They mount, they shine, evaporate, and fall.
Johnson. *Vanity of Human Wishes*.

Can we persist to bid your sorrows flow
For fabled sufferers, and *delusive* woe? Sheridan.

DEMAGOGUE, *n. s.* Gr. *δημαγωγος*. A ringleader of the rabble; a popular and factious orator.

Who were the chief *demagogues* and patrons of tumults, to send for them, to flatter and embolden them? King Charles.

A plausible, insignificant word, in the mouth of an expert *demagogue*, is a dangerous and dreadful weapon. South.

Demosthenes and Cicero, though each of them a leader, or, as the Greeks called it, a *demagogue*, in a popular state, yet seem to differ in their practice.

Swift.

DEMAIN, *n. s.* } Old Fr. *demesne*; Fr. *do-*
 DEME'AN. } *maine*; both probably from
 DEMESNE. } Lat. *dominus*. That land
 which a man holds originally of himself, called
 dominium by the civilians, and opposed to
 feodum or fee, which signifies those that are held
 of a superior lord. It is sometimes used also
 for a distinction between those lands that the
 lord of the manor has in his own hands, or in
 the hands of his lessee, demised or let upon a
 rent for a term of years or life, and such other
 lands appertaining to the said manor as belong
 to free or copyholders. Estate in land, or land
 adjoining a mansion, in which sense demesne
 has been thought to come from old Fr. *mesne*,
 and Lat. *mansio*.

Having now provided
 A gentleman of noble parentage,
 Of fair *demesnes*, youthful, and nobly allied.

Shakspeare.

That earldom indeed had a royal jurisdiction and
 seignior, though the lands of that county in *demesne*
 were possessed for the most part by the ancient in-
 heritors.

Darics.

Those acts for planting forest trees have hitherto
 been wholly ineffectual, except about the *demesnes* of
 a few gentlemen; and even there, in general, very
 unskillfully made.

Swift.

DEMAND, *v. a. & n. s.* } Fr. *demand*;
 DEMANDABLE, *adj.* } Span. and Portug.
 DEMANDANT, *n. s.* } *demandár*; Ital. *de-*
 DEMANDER. } *mandare*; Lat. *de-*

mando, from *de* and *mando* (*manu do*, to give
 with the hand). To claim; ask for as one's own
 previously, or with authority; hence to question,
 interrogate. As a substantive it is the claim
 made; the amount of it in money; an application
 made for any thing at its price: demandable,
 that which is due: demandant and demander,
 he who requires his alleged due by law or other-
 wise.

And when Uriah was come unto him, David de-
 manded of him how Joab did, and how the people did,
 and how the war prospered.

2 Sam. xi. 7.

This matter is by the decree of the watchers, and
 the demand by the word of the holy ones.

Dan. iv. 17.

All sums demandable, for licence of alienation to be
 made of lands holden in chief, have been stayed in the
 way to the hanaper.

Bacon.

The pound of flesh which I demand of him,
 Is dearly bought; 'tis mine, and I will have it.

Shakspeare.

Young one,
 Inform us of thy fortunes; for, it seems,
 They crave to be demanded.

Id.

They grow very fast and fat, which also bettereth
 their taste, and delivereth them to the demander's ready
 use at all seasons.

Carver.

The oracle of Apollo being demanded, when the
 war and misery of Greece should have an end, re-
 plied, When they would double the altar in Delos,
 which was of a cubick form.

Peacham on Geometry.

Giving vent, gives life and strength to our appe-
 tites; and he that has the confidence to turn his
 wishes into demands, will be but a little way from
 thinking he ought to obtain them.

Locke.

My bookseller tells me, the demand for those my
 papers increases daily.

Addison.

One of the witnesses deposed, that dining on a
 Sunday with the *demandant*, whose wife had sat be-
 low the squire's lady at church, she the said wife
 dropped some expressions, as if she thought her hus-
 band ought to be knighted.

Spectator.

There are two manners of demands, the one of deed,
 the other in law: in deed, as in every præcipe, there
 is express demand; in law, as every entry in land dis-
 tress for rent, taking or seizing of goods, and such
 like acts, which may be done without any words, are
 demands in law.

Blount.

But the misery of it is, men will not think; will
 not employ their thoughts, in good earnest, about the
 things which most of all deserve and demand them.

Mason.

Every man has frequent occasion to state a con-
 tract, or demand a debt, or make a narrative of minute
 incidents of common life.

Johnson.

Thus for short sins short hours of penance flow,
 But heavier guilt demands more lasting woe.

Dr. T. Brown.

DEMBEA, a large lake of Abyssinia, is in
 the heart of the country, and supposed to be
 about 450 miles in circumference. It contains
 many islands, particularly one of great size,
 which is made a place of confinement. The
 great river Bahr-el-Azrek, so often supposed to be
 the true Nile, falls into it on the west, and issues
 from it on the south-west: it is said that the
 stream may be distinguished through the whole
 of its passage. Various small streams also fall
 into it.

DEMBEA, a province of Abyssinia, surrounding
 the great lake of that name. On the north it
 comprehends that fertile tract of which Gondar
 is the capital. On the east it includes Foggora,
 Dara, and Alata; and, on the west, the lands
 about Waindaga and Dingleber. The whole re-
 gion is fruitful, and finely varied by mountains
 and plains. It is particularly described by Bruce.

DEMEAN, *v. a. & n. s.* } Fr. *mener*; Ital.
 DEMEANOUR. } *menare*; Norm. Fr.
demesner; whence, thinks Mr. Todd, our word
 manage, i. e. conduct, carriage, demeanour: per-
 haps the whole, we might add, from Lat. *manus*,
 the hand. To behave; generally to carry one's
 self in a particular way. There seems to be no
 good authority for using it for debase. Dr. John-
 son's instance from Shakspeare, and Mr. Todd's
 from Doddridge, are equivocal; but the reader
 will judge.

At his feet with sorrowful *demean*,
 And deadly hue, an armed corse did lie.

Spenser.

Now, out of doubt, Antipholus is mad,
 Else he would never so *demean* himself.

Shakspeare.

Angels best like us, when we are most like unto them,
 in all parts of decent *demeanour*.

Hooker.

His gestures fierce
 He marked, and mad *demeanour*, then alone,
 As he supposed, all unobserved, unseen.

Milton.

He was of a courage not to be daunted, which was
 manifested in all his actions, especially in his whole
demeanour at Rhee, both at the landing and upon the
 retreat.

Clarendon.

Those plain and legible lines of duty requiring us
 to *demean* ourselves to God humbly and devoutly, to
 our governors obediently, and to our neighbours justly,
 and to ourselves soberly and temperately.

South.

Of so insupportable a pride he was, that where his deeds might well stir envy, his *demeanour* did rather breed disdain.

Sidney.

A man cannot doubt but that there is a God; and that, according as he *demeans* himself towards him, he will make him happy or miserable for ever.

Tillotson.

Strephon had long perplexed his brains,
How with so high a nymph he might
Demean himself the wedding night.

Swift.

That brow in furrowed lines had fixed at last,
And spake of passions, but of passions past;
The pride, but not the fire, of early days,
Coldness of mean, and carelessness of praise;
A high *demeanour*, and a glance that took
Their thoughts from others by a single look.

Byron.

Peter was so affected at his condescending to perform such a mean office, that he says to him, It is a thousand times fitter that I should wash thine, nor can I bear to see thee thus *demean* thyself.

Doddridge's Expositor.

DEMENTATE, *v. a.* } Lat. *demento*, of *de*
DEMENTATION, *n. s.* } and *mens*, the mind. To make mad. Making mad, or frantic.

DEMERRA, or DEMERARA AND ESSEQUIBO, a colony of Great Britain, in the north-eastern part of South America. It is composed of two governments, named as above, both which, having been finally confirmed to Great Britain by the peace of 1814, are now one united colony. They form a part of what was originally Dutch Guienne; but the king of the Netherlands only retains, in this part of the world, the colony of Surinam. The general features and natural history of this country have been described already in our article AMERICA, SOUTH, par. 206—220. Demerara is bounded on the north by the Atlantic Ocean, on the east by a line drawn from the mouth of Albany Creek, in a south-east direction, dividing it from the British colony of Berbice, on the west by the river Pomaron, which divides it from Spanish Guiana; its southern boundary is undetermined. Staebroek, the only considerable town, and the seat of government, is in lat. 6° 46' N., and long. 57° 45' W. from London.

The whole country is low and swampy: on the coast the tides rise to the height of from sixteen to twenty-four feet. The rivers are the Essequibo, Demerara, and Canji or Cayonny, the last being supposed to communicate with the Oronoco. The Demerara River has a bar across its mouth, which prevents ships of large burden passing it; but vessels drawing fourteen feet may be loaded at Staebroek. Here are convenient wharfs: no large vessels, however, can lie near them, on account of the declivity of the bank, but are compelled to load and unload their cargoes in the middle of a rapid stream. The Essequibo is easily entered by the largest ships, but they must also be loaded and unloaded in the stream, as the same causes prevent their lying near shore.

We have also noticed the political history of these settlements. It is only necessary to add, that while, under the British government, the general internal policy is improved, and the roads, drains, &c., have assumed a very different aspect to that which they bore in former times, the

curse of an extensive dependence on slave-cultivation is no where more evident. Coffee, sugar, and cotton, are the staple articles of produce, and no where on earth is a finer soil presented to the hand of man. It has been transported to other of our western possessions as manure, and has been known to produce thirty crops of ratoon canes in succession, without replanting. Sometimes it has been cropped two or three years with plantains, to reduce its excessive richness, and afterwards with sugar canes; but the first, second, and sometimes even the third crop, has been so luxuriant as to be only fit to make rum. Each estate is intersected with dikes and trenches, communicating with the river, by means of which, in small flat-bottomed boats, the whole conveyance of the produce is effected from one part of the estate to another. Thus they carry the canes from the field to the sugar-mill and the still-house. The earth removed to form these ditches is thrown on beds, which contain the cotton-trees planted in rows six feet asunder. The coffee-trees are planted in rows from nine to twelve feet apart, and the intermediate spaces are filled either by plantain-trees, or the bois immortel, growing to the height of twelve or fourteen feet, and affording a welcome shade to the coffee plants.

In the colony are from 60,000 to 65,000 slaves kept in awe with difficulty, and in no small degree by the strong aversion that subsists between them and the aboriginal Indians of the interior, who readily bring back all stragglers to their masters, and often assist in suppressing insubordination. The colony is governed by the Dutch laws. The free inhabitants do not exceed 3000.

DEMERIT, *n. s.* Fr. *demerite*; from *demeritus*, Lat. of *demereor*. See MERIT. Blame.

They should not be able once to stir, or to murmur, but it should be known, and they shortened according to their *demerits*.

Spenser on Ireland.

I fetch my life and being

From men of royal siege; and my *demerits*

May speak, unbosnetting, to as proud a fortune

As this that I have reached. *Shakspeare. Othello.*

Thou livest by me, to me thy breath resign;

Mine is the merit; the *demerit* thine. *Dryden.*

Whatever they acquire by their industry or ingenuity, should be secure, unless forfeited by any *demerit* or offence against the custom of the family.

Temple.

I considered the possession of it [a bishopric] as a frequent occasion of personal *demerit*; for I saw the generality of the bishops bartering their independence and the dignity of their order for the chance of a translation, and polluting gospel-humility by the pride of prelacy.

Bp. Watson.

DEMERSED, *part.* } From *demersus*, or *de-*
DEMERSTON, *n. s.* } *mergo*, Lat. Plunged; drowned. A drowning. In chemistry, the putting any medicine in a dissolving liquor.

DEMERSENE. See DEMAINE.

DEMETRIUS I., surnamed Poliorcetes, destroyer of towns, was the son of Antigonus. At the age of twenty-two he was sent by his father against Ptolemy, who invaded Syria. He was defeated near Gaza, but soon repaired his loss by

a victory over one of the generals of the enemy. He afterwards sailed with a fleet of 250 ships to Athens, and restored the Athenians to liberty, by freeing them from the power of Cassander and Ptolemy, and expelling the garrison, which was stationed there under Demetrius Phalereus. After this successful expedition, he besieged and took Munychia, and defeated Cassander at Thermopylæ. His reception at Athens after these victories was attended with the most servile flattery; and the Athenians were not ashamed to raise altars to him as to a god, and consult his oracles. This raised the jealousy of the successors of Alexander; and Seleucus, Cassander, and Lysimachus united to destroy Antigonus and his son. Their hostile armies met at Ipsus, A. A. C. 301: Antigonus was killed in the battle; and Demetrius, after a severe loss, retired to Ephesus. The Athenians, who had lately adored him as a god, refused to admit him into their city; but he soon after ravaged the territory of Lysimachus, and reconciled himself to Seleucus, to whom he gave his daughter Stratonice in marriage. Athens now labored under tyranny, and Demetrius relieved it a second time, and pardoned the inhabitants. The loss of his possessions in Asia recalled him from Greece, and he established himself on the throne of Macedonia. Here he was continually at war with the neighbouring states, and the superior power of his adversaries obliged him to leave his kingdom, after he had sat on the throne for seven years. He passed into Asia, and attacked some of the provinces of Lysimachus with various success; but famine and pestilence having destroyed the greatest part of his army, he applied to Seleucus for assistance. He, at first, met with a kind reception, but hostilities were again soon begun; and, though he gained some advantages over his son-in-law, he was at last forsaken by his troops, and taken prisoner. Though Seleucus kept him in confinement, he maintained him like a prince, and he passed his time in hunting, and in other laborious exercises. His son Antigonus offered Seleucus all his possessions, and even his person, to procure his father's liberty, but in vain, and Demetrius died in the fifty-fourth year of his age, after a confinement of three years, A. A. C. 286. His remains were given to Antigonus, and honored with a splendid funeral at Corinth, and thence conveyed to Demetrias.

DEMETRIUS I., king of Syria, surnamed Soter, or Saviour, was son of Seleucus Philopater. Being a hostage at Rome, when his father died, his uncle, Antiochus Epiphanes, usurped the kingdom, and was succeeded by his son Antiochus Eupator. Demetrius at last procured his liberty on pretence of going to hunt, and fled to Syria, where the troops received him as their lawful sovereign. He put to death Eupator and Lysias, but, endeavouring to establish himself on his throne by cruelty and oppression, Alexander Bala, the pretended son of Antiochus Epiphanes, claimed the crown, and defeated Demetrius in a battle, A. A. C. 150.

DEMETRIUS, the disciple of Apollonius Tyaneus, a cynic philosopher of the age of Caligula. The emperor wished to gain him to his interest by a large present; but Demetrius refused it with indignation, and said, If Caligula wishes to bribe

me, let him send me his crown. Vespasian was displeased with his insolence, and banished him to an island. The cynic derided the punishment, and satirised the emperor. He died in an extreme old age; and Seneca observes, that 'nature had brought him forth to show mankind, that an exalted genius can live securely without being corrupted by the vices of the surrounding world.'

DEMETRIUS PHALEREUS, a celebrated orator and peripatetic philosopher, was the scholar of Theophrastus. He acquired so much authority, at Athens, that he governed the city for ten years; and he ruled with so much wisdom and virtue, that thirty-six statues were erected in honor of him. Being obnoxious, however, to the aristocratical party, they procured an order for his death; but, he escaped into Egypt, and was protected by Ptolemy Lagus. On the death of that prince he was banished by his successor. None of the works of this celebrated philosopher are extant, except his *Rhetoric*, which is usually printed among the *Rhetores Selecti*.

DEMETRIUS, czar of Russia, commonly called the false Demetrius, was, according to most authors, a native of Jaroslaw, and a novice in a monastery, where he was instructed by an old monk to personate Demetrius, son of the czar John Basilovitz, who had been murdered by Boris Gudenov, in 1597. The youth, according to his instructions, went under the name of Demetrius, and pretended to have escaped from his murderers into Lithuania, where he was taken into the service of a nobleman named Wicnovitski, to whom he told his story, and who espoused his cause. When Boris heard of this rival, he sent assassins to despatch him; but his patron being warned of it conveyed him to Mniieski, palatine of Sandomir, who promised to assist him in his design on the Russian throne, provided he would embrace the Roman Catholic religion, which he readily consented to, and was married to the palatine's daughter. Assisted by the Poles, Demetrius, in 1604, marched into Russia, at the head of a small army, and was soon joined by a number of Russians and Cossacs. He defeated an army sent against him, and an insurrection took place in his favor. On the death of Boris, the people strangled his son, and placed Demetrius on the throne; but his partiality to the Poles and contempt of the Greek religion occasioned an insurrection, and he was murdered in 1606, after a short reign of about eleven months. Mr. Archdeacon Coxe, contrary to the generality of writers, considers him to have been the true prince Demetrius.

DEMI-ARTIC, in ancient history, boroughs or large villages of Attica. The Athenian tribes were distributed into Demi. Homer, in his catalogue, distinguishes the Athenians by the appellation Demos. And when Theseus prevailed on them to quit the country of Attica, and settle at Athens, they still continued to frequent the Demi, and to perform their religious ceremonies there.

DEMI-CANNON, *n. s.* From demi, half, and cannon. An ancient piece of artillery, carrying a thirty-six pound ball.

What! this a sleeve, 'tis like a *demi-cannon*.

Shakespeare.

Ten engines, that shall be of equal force either to a cannon or *demi-cannon*, culverin or *demi-culverin*, may be framed at the same price that one of these will amount to.

Wilkins.

DEMI-CULVERIN. An old piece of ordnance carrying a thirteen pound ball.

They continue a perpetual volley of *demi-culverins*.

Raleigh.

The army left two *demi-culverins*, and two other good guns.

Clarendon.

DEMI-DEVIL. From demi and devil. Partaking of infernal nature; half a devil.

Will you, I pray, demand that *demi-devil*,

Why he hath thus ensnared my soul and body?

Shakespeare. Othello.

DEMI-GOD, n. s. From demi and god. Partaking of a divine nature; half a god; a hero produced by the cohabitation of divinities with mortals. See **HERO**.

He took his leave of them, whose eyes bade him farewell with tears, making temples to him as to a *demi-god*.

Sidney.

Be gods, or angels, *demi-gods*.

Milton.

Transported *demi-gods* stood round,

And men grew heroes at the sound,

Inflamed with glory's charms.

Pope.

Nay, half in heaven, except (what's mighty odd)

A fit of vapours clouds this *demi-god*.

Id.

Who is this?

Who truly looketh like a *demi-god*,

Blooming and bright, with golden hair, and stature,
If not more high than mortal, yet immortal.

Byron.

DEMI-GORGE, in fortification, is that part of the polygon which remains after the flank is raised, and goes from the curtain to the angle of the polygon. It is half of the vacant space or entrance into a bastion.

DEMI-LANCE, n. s. From demi and lance. A light lance; a short spear; a half pike.

On their steeled heads their *demi-lances* wore

Small pennons, which their ladies colours bore.

Dryden.

Light *demi-lances* from afar they throw,

Fastened with leathern thongs, to gall the foe.

Id.

DEMI-MAN, n. s. From demi and man. Half a man; a term of reproach.

We must adventure this battle, lest we perish by the complaints of this barking *demi-man*.

Knolles.

DEMISE, v. a. & n. s. Fr. *demis*; Lat. *demitto*, *demisi*, to hand down. (*de* and *mitto*, Gr. *μεθηναι*). Applied to handing down by legacy or death: and, as a substantive, to death itself, by which the crown of a monarchy is generally transmitted.

Inexorable vigour is worse than a lasche *demission* of sovereign authority.

L'Estrange.

About a month before the *demise* of queen Anne, the author retired.

Swift.

My executors shall not have power to *demise* my lands to be purchased.

Swift's Last Will.

DEMISE, in law, is applied to an estate either in fee simple, fee-tail, or for a term of life or years; and so it is commonly taken in many writs.

DEMISE, and **RE-DEMISE**, denote a conveyance where there are mutual leases made from one to another of the same land, or something out of it.

DEMI-SEMI-QUAVER, in music, the shortest note, two of them being equal to a semi-quaver.

DEMIT, v. a. Lat. *demitto*. See **DEMISE**. To depress; to hang down; to let fall.

When they are in their pride, that is, advancing their train, if they decline their neck to the ground, they presently *demit* and let fall the same.

Browne's Vulgar Errors.

DEMI-WOLF, n. s. From demi and wolf. Half a wolf; a mongrel dog between a dog and wolf.

Spaniels, curs,

Showgas, water-rugs, and *demi-wolves*, are 'cleped

All by the name of dogs. *Shakespeare. Macbeth.*

DEMOCRACY, n. s. Fr. *democratic*;

DEMOCRAT, } Spanish *democracia*;

DEMOCRATIC, n. s. } from Gr. *δημοκρατία*

(*δημος* the people, and *κρατεω* to govern). A government by the people at large. A democrat is an advocate or partizan of democracy. The old word *democratic* is only more agreeable to the etymology.

Thence to the famous orators repair,

Those ancient, whose restless eloquence

Wielded at will that fierce *democratic*,

Shook the arsenal and fulminated over Greece.

Milton.

They are still within the line of vulgarity, and are *democratical* enemies to truth.

Browne's Vulgar Errors.

While many of the servants, by industry and virtue, arrive at riches and esteem, then the nature of the government inclines to a *democracy*.

Temple.

The majority, having the whole power of the community, may employ all that power in making laws, and executing those laws; and there the form of the government is a perfect *democracy*.

Locke.

As the government of England has a mixture of *democratical* in it, so the right is partly in the people.

Arbutnot.

DEMOCRITUS, one of the greatest philosophers of antiquity, was born in Abdera, in Thrace, about the 80th Olympiad, or A.A.C. 466. His father, says Valerius Maximus, was able to entertain the army of Xerxes; and Diogenes Laertius adds, that the king, in return, presented him with some Magi and Chaldeans. From these he received the first part of his education; and, whilst yet a boy, learned theology and astronomy. He next applied to Leucippus, and learned from him the systems of atoms and a vacuum. His father dying, he and his two brothers divided the estate. Democritus made choice of that part which consisted of money, as being, though the least share, the most convenient for travelling; and it is said, that his portion amounted to 100 talents, which is nearly £20,000 sterling. He now went to visit the priests of Egypt, from whom he learned geometry: and it is said, that he penetrated even into India and Ethiopia, to confer with the Gymnosophists. In these travels he wasted his substance, so that on his return he was maintained by his brother; notwithstanding which, he procured the highest honors of his country,

which he governed with unlimited sway and consummate wisdom. The magistrates of Aberdeen made him a present of 500 talents, and erected statues to him, even in his lifetime; but, being naturally more inclined to contemplation than delighted with public honors and employments, he withdrew into solitude and retirement. He incessantly laughed at human life, as a continued farce, which made the inhabitants of Aberdeen think he was mad, on which they sent for Hippocrates to cure him; but that celebrated physician told the Abderians, that those who esteemed themselves the most healthy were the most distempered. Democritus died, according to Diogenes Laertius, aged 100, A.A.C. 361. He was the author of many books, which are lost; and from these Epicurus borrowed his philosophy.

DEMOIVRE (Abraham), an eminent French mathematician, F.R.S. London, was a native of Vitry, in Champagne, and driven from his native country, as a Protestant, by the revocation of the edict of Nantes. He settled in London as a teacher of mathematics, and was particularly celebrated for his skill and accuracy as a calculator, for which he is referred to by Pope:

Sure as Demoisire, without rule or line.

He died in 1754, at the age of eighty-six. His works are, *Miscellanea Analytica*, 4to.; *The Doctrine of Chances*, or *A Method of Calculating the Probabilities of Events at Play*, 4to.; and *a work on Annuities*; besides papers in the *Transactions of the Royal Society*.

DEMOLISH, *v. a.* } Fr. *demolir*; from
DEMOLISHER, *n. s.* } Lat. *demolari*, i. e. *de*
DEMOLITION. } and *molior* (*moles*, a mass). To destroy a building; hence to destroy generally.

Notwithstanding which, it is now *demolished*, and all this glory lyeth in the dust, buried in its own ruins; there being nothing standing but a few broken walls, which seem to mourn their own approaching funerals.

Fuller. *Worthies of Devon.*

I expected the fabrick of my book would long since have been *demolished*, and laid even with the ground.

Tillotson.

Red lightning played along the firmament,
And their *demolished* works to pieces rent.

Dryden.

Two gentlemen should have the direction in the *demolition* of Dunkirk.

Swift.

The damsel led him thro' a spacious hall,
Where ivy hung the half-*demolished* wall.

Gay

The first care of the builder of a new system is to *demolish* the fabrics which are standing.

Johnson.

The professor of divinity had been nick-named *Malleus Hæreticorum*; it was thought to be his duty to *demolish* every opinion which militated against what is called the orthodoxy of the Church of England.

Bp. Watson.

DEMON, *n. s.*

DEMONIAC, *n. s. & adj.*

DEMONIACAL, *adj.*

DEMONIAN, *adj.*

inferior deity; a devil; generally used in a bad sense.

Fr. *démon*; Ital. *demon*; from Lat. *dæmon*; *δαίμων*, *δαίμων*, knowing. An

Demonian spirits now, from the element
Each of his fire allotted, rightlier called
Powers of fire, air, water.

Milton.

Demoniac phrensy, moping melancholy. *Id*

I felt him strike, and now I see him fly:

Cursed demon! O for ever broken lie

Those fatal shafts, by which I inward bleed!

Prior.

Those lunatics and *demoniacs* that were restored to their right mind, were such as sought after him, and believed in him.

Bentley.

But ah! those dreadful yells what soul can hear,
That owns a carcase, and not quake for fear?

Dæmons produce them doubtless, brazen-clawed,

And fanged with brass the *dæmons* are abroad.

Cowper.

I said not

You were the *demon*, but that your approach

Was like one.

Byron.

DEMONA, *VAR.*, a province of Sicily, which occupies the north-east portion of the island, extending from the strait of Messina to Catania, and having the Val de Mazzara to the west, and Val de Noto to the south. Its greatest width is sixty-five miles, the length 112. To it belong the Lipari and other islands. The population is about 521,000. It is mountainous and woody, being fertile only on the banks of the rivers. The chief productions are silk, hemp, flax, olives, lemons, oranges, figs, and currants; but sulphur abounds in the neighbourhood of Mount Ætna. The atmosphere is here cool and humid. The capital is Messina; the other chief towns are Melazzo, Cefalu, and Taormina.

DEMONOCRACY, *n. s.* *Δαίμων* and *κρατία*. The power of the devil.

DEMONOLATRY, *n. s.* *Δαίμων* and *λατρεία*. The worship of the devil.

DEMONOLOGY, *n. s.* *Δαίμων* and *λόγος*. Discourse of the nature of devils. Thus king James entitled his book concerning witches.

DEMONSTRATE, *v. a.* } Fr. *démonstrer*;
DEMONSTRABLE, *adj.* } Span. *demonstrar*,
DEMONSTRABLY, *adv.* } *dimostrare*; from
DEMONSTRATION, *n. s.* } Lat. *demonstrare*,
DEMONSTRATIVE, *adj.* } *de*, and *monstro*,
DEMONSTRATIVELY, *adv.* } to show. To
DEMONSTRATOR, *n. s.* } prove with cer-
DEMONSTRATORY, *adj.* } tainty; to exhibit

facts: demonstrable is that which may be proved or exhibited: demonstration, the highest degree of proof; indubitable evidence: demonstrative, having the power of indubitable proof, or of clear expression. Demonstratory, having a tendency to demonstrate. The other derivatives seem plain.

An argument necessary and *demonstrative*, is such as, being proposed unto any man, and understood, the man cannot choose but inwardly yield.

Hooker.

What appeareth to be true by strong and invincible *demonstration*, such as wherein it is not by any way possible to be deceived, thereunto the mind doth necessarily yield.

Id.

Where is a probability on one side, and no appearance of reason to the contrary; that probability does the work of a *demonstration*.

Bishop Taylor.

He should have compelled his ministers to execute the law, in cases that *demonstrably* concerned the public peace.

Clarendon.

Demonstratively understanding the simplicity of perfection, it was not in the power of earth to work them from it.

Browne.

We cannot *demonstrate* these things so as to shew that the contrary often involves a contradiction.

Tillotson.

Painting is necessary to all other arts, because of the need which they have of *demonstrative* figures, which often give more light to the understanding than the clearest discourses.

Dryden.

No man, in matters of this life, requires an assurance either of the good which he designs, or of the evil which he avoids, from arguments *demonstratively* certain.

South.

Where the agreement or disagreement of any thing is plainly and clearly perceived, it is called *demonstration*.

Locke.

The grand articles of our belief are as *demonstrable* as geometry.

Glanville.

First, I *demonstratively* prove,
That feet were only made to move.

Prior.

As for business, the world yet knows nothing of his (the Duke of Grafton) talents or resolution; unless a wayward, wavering inconsistency be a mark of genius, and caprice a *demonstration* of spirit. *Junius's Letters*.

DEMONSTRATION. See LOGIC.

DEMOSTHENES, the famous Athenian orator, was born at Athens, A.A.C. 381. He lost his father at seven years of age, and was placed under the conduct of guardians, who plundered his property and neglected his education. Demosthenes soon repaired this loss by his extraordinary abilities. He became the disciple of Isæus and Plato, and studied the orations of Isocrates. At the age of seventeen he gave a proof of his eloquence and abilities against his guardians, from whom he recovered the greatest part of his estate. His rising talents were, however, impeded by various natural defects, but which he overcame by dint of resolution and unwearied attention. He declaimed by the seashore, that he might be used to the noise of a tumultuous assembly, and with pebbles in his mouth, that he might correct a defect in his speech. He confined himself in a subterraneous cave, to devote himself more closely to study; and, to check all inclination to appear in public, he shaved one half of his head. In this solitary retirement, by the help of a glimmering lamp, he composed the greatest part of those orations which have since been the admiration of all ages, though his contemporaries and rivals inveighed against them, and observed that they smelt of oil. His abilities, as an orator, raised him to consequence at Athens, and he soon influenced all the decisions of the government. In this capacity he roused his countrymen from their indolence, and animated them against the encroachments of Philip of Macedon. In the battle of Cheronæa, his eloquence, however, could not supply the want of courage, and he saved his life by flight. After the death of Philip, he declared himself warmly against his son Alexander. When the Macedonians demanded of the Athenians their orators, Demosthenes reminded his countrymen of the fable of the sheep which delivered up their dogs to the wolves. By the prevalence of party, however, he was forced to retire to Trœzene and Ægina, where, it is said, he lived effeminately. When Antipater made war against Greece, after the

death of Alexander, Demosthenes was publicly recalled from his exile, and a galley was sent to fetch him from Ægina. His return was attended with much splendor, and all the citizens crowded at the Piræus to see him land. But his triumph and popularity were short. Antipater and Craterus were near Athens, and demanded all the orators to be delivered up into their hands. Demosthenes fled to the temple of Neptune, in Calauria; and when he saw no hopes of safety, he took a dose of poison, which he always carried in a quill, and expired on the day that the Thesmophoria were celebrated, A.A.C. 322. The Athenians raised a brazen statue to his honor, with an inscription, of which the following is a translation:

Si tibi par menti robur, vir magne, fuisset,
Græcia non Macedæ succubisset hero.

Demosthenes has been deservedly called the prince of orators, and has often been compared with Cicero, whose magnificent eloquence has scarcely the effect of the powerful simplicity of his master, as he was accustomed to style him. Indeed, no orator had ever a finer field than Demosthenes, in his Olynthiacs and Philippics, which are his capital orations. For to the greatness of the subject, and to that integrity and public spirit which breathe in them, they owe the largest portion of their merit.

DEMOTICA, or DIMOTUC, a town of European Turkey, in the province of Romania; situated near the Maritsch, where a Greek archbishop resides, and the Christians have two churches. This town was the abode of Charles II. for some years. It is twelve miles south of Adrianople.

DEMPSTER OF COURT, the name formerly given, in Scotland, to the common executioner, or hangman.

DEMULCENT, *adj.* Lat. *demulceo*, from *de*, and *mulceo* to soften. Softening; mollifying; assuasive.

Pease, being deprived of any aromatick parts, are mild and *demulcent* in the highest degree; but, being full of aerial particles, are flatulent, when dissolved by digestion.

Arbuthnot.

DEMULCENTS, among physicians, medicines good against acrimonious humors. Such are the roots of marshmallows, white lilies, liquorice, and viper-grass, the five emollient herbs, &c.

DEMU'R, *v. a. & n. s.* } Fr. *demurer*;
DEMUR'RER, } Lat. *demorari*;
DEMUR'RAGE, } from *de*, and *mo-
ra*, delay. To doubt of: as a neuter verb, to delay a process; to pause; to doubt. A demurrer is defined in the extract from Burns. Demurrage is an allowance to masters of ships for delaying them in port.

Upon this rub the English ambassadors thought fit to *demur*, and so sent into England to receive directions from the lords of the council.

Hayward.

The latter I *demur*; for in their looks
Much reason, and in their actions, oft appears.

Milton.

O progeny of heaven, empyreal thrones!
With reason hath deep silence and *demur*
Seized us, though undismayed.

Id.

How can I e'er expect to have her,
Having *demurred* unto her favour?

Hudibras.

Running into demands, they expect from us a sudden resolution in things wherein the devil of Delphos would demure. *Broune's Vulgar Errors.*

To this plea the plaintiff demurred.

Walton's Angler.

Certainly the highest and dearest concerns of a temporal life are infinitely less valuable than those of an eternal; and consequently ought, without any demur at all, to be sacrificed to them, whensoever they come in competition with them. *South.*

There she kept her word:

But with rejoinders and replies,
Long bills, and answers stuffed with lies,
Demur, inparlance, and essoign,
The parties ne'er could issue join. *Swift.*

There is something in our composition that thinks and apprehends, and reflects and deliberates, determines and doubts, consents and denies; that wills and demurs, and resolves, and chuses, and rejects. *Bentley.*

All my demurs but double his attacks;
At last he whispers, Do, and we go snacks. *Pope.*

In criminal cases, not capital, if the defendant demur to an indictment, &c., whether in abatement or otherwise, the court will not give judgment against him to answer over, but final judgment. *Burn's Justice.*

A demurrer signifies an abiding in point of law, upon which the defendant joins issue, allowing the fact to be true as laid in the indictment. *Id.*

DEMURE, *adj. & v. n.* } Fr. *de bons mœurs*;
DEMURELY, *adv.* } from Lat. *mores*,
DEMURENESS, *n. s.* } manners. Of good manners. All these words have been used in a good sense; but now commonly mean affected modesty or gravity. See the admirable illustration from Dryden. Shakspeare uses demure as a neuter verb, and demurely for solemnly.

Lo! two most lovely virgins came in place,
With countenance demure, and modest grace. *Spenser.*

There be many wise men, that have secret hearts and transparent countenances; yet this would be done with a demure abasing of your eye sometimes. *Bacon.*

Esop's damsel, turned from a cat to a woman, sat very demurely at the board's end, till a mouse ran before her. *Id.*

After a demure travel of regard, I tell them I know my place, as I would they should do theirs. *Shakspeare.*

Put on a sober habit,
Talk with respect, and swear but now and then,
Wear prayer-books in my pocket, look demurely. *Id.*
Hark, how the drums demurely wake the sleepers! *Id.*

Your wife Octavia, with her modest eyes,
And still conclusion, shall acquire no honour,
Demuring upon me. *Id.*

Come, pensive nun, devout and pure,
Sober, stedfast, and demure. *Milton.*

Next stood Hypocrisy with holy leer,
Soft smiling, and demurely looking down;
But hid the dagger underneath the gown. *Dryden.*

A cat lay and looked so demure as if there had been neither life nor soul in her. *L'Estrange.*

Her eyes having in them such a cheerfulness, as nature seemed to smile in them; though her mouth

and cheeks obeyed to that pretty demureness, which the more one marked, the more one would judge the poor soul apt to believe. *Sidney.*

Silent when glad; affectionate though shy;
And now his look was most demurely sad;
And now he laughed aloud, yet none knew why. *Beattie.*

DEMY, in heraldry, an epithet for any charge borne half, as on a demy-lion rampant; gules, name Mallory.

DEN. Sax. *den*; Belg. *denne*; Teut. *den*; Ital. *tanna*. A cavern; a low place. As the termination of a local name, says Gibson's Camden, it may signify either a valley or a woody place; for the Saxon *den* imports both.

And Jhesus seide to him, foxis han *dennes*, and briddis of hevene han nestis: but manne sone hath not where he schal reste his hed. *Wiclif. Matt. 1.*

This is the wandering wood, this Error's den,
A monster vile whom God and man does hate;
Therefore I read beware. *Spenser. Faerie Queene.*

They here dispersed, some in the air, some on the earth, some in the waters, some amongst the minerals, *dens*, and caves under the earth. *Hooker.*

What, shall they seek the lion in his den,
And fright him there? *Shakspeare*

Whose attempt
At first against mankind so well had thrived
In Adam's overthrow; and led their march
From hell's deep-vaulted den to dwell in light. *Milton.*

'Tis then the shapeless bear his den forsakes;
In woods and fields a wide destruction makes. *Dryden.*

Then one vast fire, air, earth, and stream embraced,

Which as 'twere beneath the mighty noises;
While the whole rampart blazed like *Ætna*, when
The restless Titan hiccups in his den. *Byron.*

DENARIUS, in antiquity, the chief silver coin among the Romans, worth, in our money, about 7½d. at 5s. 2d. per ounce, or 8½d. when bullion is high-priced. It was about the size of a six-pence, but much thicker, and had the emperor's head on the one side; the figures on the reverse were various. In our translation of the New Testament, the denarius is called a penny. See Matt. xxii. 19.

DENAY, *n. s.* A word formed between deny and nay. Denial; refusal.

To her in haste, give her this jewel: say,
My love can give no place, bide no deny. *Shakspeare.*

DENBIGH or DENBIGHSHIRE, a maritime county of North-Wales, bounded on the north by the Irish Sea, on the east by Flintshire, Cheshire, and Salop, on the south by Merionethshire and Montgomery, on the west by Carnarvon. Its extreme length is forty miles, and its breadth about twenty-three miles. It contains about 410,000 acres of land, almost the whole of which is in cultivation. It is divided into the six hundreds of Bromfield, Chirk, Isaled, Isdulas, Ruthin, and Yale; containing one borough town, Denbigh; three market-towns, Ruthin, Wrexham, and Llanrwst; and fifty-seven parishes. *J. 2.*

The total amount of the sum assessed to the property-tax in 1815, was £243,876. Its principal rivers are the Clwyd, Conway, Dee, and Elwy; the first traversing the vale of that name; the Conway is the boundary between this county and Carnarvonshire. The Ellesmere canal passes through the southern part of the county. The vale of Clwyd, stretches about twenty miles towards the sea, and exhibits a number of gentlemen's seats, villages, and imposing objects. The western part of the county is mountainous, interspersed with some small lakes and vales. The northern part, towards the sea, is more level. In the central parts of the hundred of Isaled are many bleak and barren hills. Yale is a hilly region, covered with heath, and an excellent cover for grouse. Though the air is sharp on the hills, the climate of Denbighshire is considered salubrious, and the inhabitants are remarkable for a brightness of complexion, and cheerful healthy countenances. Veins of lead and iron ore have been found in this county, and coal mines have been opened. Slate is also met with in the southern parts, and limestone is abundant. The chief agricultural products are grain, cattle, and cheese. Its manufactures are coarse cloth, flannel, and cotton twist.

The improvements of its agriculture of late years have been very decided, and have been in no small degree connected with the munificent patronage bestowed on that important pursuit by Sir Watkins William Wynne, who distributes annual prizes for superior cattle and sheep at his elegant modern seat of Wynnstay. The sheep are of the light-horned breed, yielding the wool manufactured here; and the goats are no where finer in their hair. The cattle are of a low, black breed. Ruthin derives its name from a castle called Rhyddin, or Red Fortress, from the color of the stone, and which was probably erected by Edward I. During the civil wars it was garrisoned by the royalists, till about the middle of April 1646, when it was compelled to surrender, after sustaining a siege of two months. After this it was demolished by order of parliament, and a few fragments of walls only remain to denote its site, and its large dimensions. Wrexham Church, once collegiate, is amongst the chief ornaments of the principality, and was erected about the year 1472; but the tower does not appear to have been finished till 1506. It exhibits a beautiful specimen of the chaste decorations of Henry VII.'s age. There are the remains of a castle at Chirk, on the line of Offa's dike, and another at Holt, built in the reign of Edward I. by earl Warren.

The inhabitants retain their full portion of the manners and superstitions of ancient Wales: they have bidders to invite the neighbours to a wedding, and several interesting modes of expressing their affection for their deceased friends. The corpse is brought out of the house, and placed amidst the surrounding relations on a bier, while the nearest relation distributes bread, cheese, and beer to poor persons of the same sex and age as the deceased. All now kneel down, and the minister repeats the Lord's Prayer. They stop at every cross-way to the grave, and repeat the same ceremony. The graves are every where planted with evergreens and flowers.

DENBIGH, the county town of Denbighshire, stands at the foot of a craggy hill, near the middle of the vale of Clwyd. It was called by the Britons *Cledfryn yn Rhos*, i. e. the craggy hill in Rhos, and has at present so far diverged from its ancient site, that the parish church and burial-ground are full a mile from the bottom of the vale: the inhabitants, therefore, use the chapel of St. Hilary, near the castle, as a place of worship. The town was formerly surrounded with a strong wall. On the summit of a high rock, above the town, are the ruins of a castle, sometimes said to be built by Lacy, earl of Lincoln, and by other writers to be of British foundation. It was delivered up to the parliamentary army, in 1646, and demolished at the Restoration. The prospect along the Clwyd, from this elevation, is delightful. Denbigh is a borough, governed by two aldermen, a recorder, two bailiffs acting as sheriffs, and a common council of twenty-five capital burgesses. It joins with Ruthin and Holt in sending one member to parliament, the number of voters here being about 500, and the bailiffs the returning officers. At the lower end of the town, in the parish of Henllan, stood a priory of white friars or Carmelites, once a very picturesque object; but little remains that is now to be seen. It was founded in 1201. Market on Wednesday. 205 miles north-west from London.

DENDERA, a town of Egypt, on the west side of the Nile, at the edge of a small, but fertile plain, about half a mile from the river. Near the town are remarkably magnificent ruins, supposed of an ancient temple of Serapis, or Venus. The portico contains twenty-four columns, in three rows, each above twenty-two feet in circumference, thirty-two feet high, and covered with hieroglyphics. The great peculiarity consists in the square capitals, with a front face of Isis on each side, the effect of which, though singular, is by no means displeasing. All the walls and ceilings of the interior are covered with sculptures, which display the highest perfection of Egyptian art. They have originally been covered with paint, the brilliant colors of which partially remain. The subjects are various; religious ceremonies, priests, offerings, deities, and human sacrifices. Isis, with Osiris behind her, forms the grand theme of representation. There are also numerous astronomical figures on the ceilings; of these two zodiacs have, in a particular degree, attracted the attention of the learned, who have been much divided as to the date when they were formed. De la Lande would fix their period at 3000 years ago, or 1200 before the Christian era; but Mr. Hamilton is disposed to consider them as much more modern, and as probably formed in the reign of Tiberius. By the side of the great temple is a smaller one, supposed to have been dedicated to Typhon, whose figure is displayed on the capitals; but the chief object of adoration seems to be an infant figure, in which may be distinguished the attitude and character of the young Harpocrates. Mr. Hamilton is of opinion, that several of those structures may have been raised in the time of the Ptolemies; and the names of Tiberius and other Roman emperors, which he found in the inscrip-

ons, prove that repairs were made at that period. The whole of these edifices, with the exception of one propylon, is contained within a square of 1000 feet, surrounded by a brick wall. Within the enclosure, a great number of modern buildings have been erected, so as often to hide them entirely from view.

Dr. Richardson, one of our latest travellers in the east, thus describes this spot: 'The scene of ruins is nearly a mile square, and consists of houses of unburnt brick, that have been repeatedly overturned, and at every restoration, the new houses have been built on the top. The first thing that attracts the eye of the traveller, on the edge of this black field of ruins, is a small square stone building, with four columns; it has an unfinished appearance, and is without hieroglyphics. It is difficult to say for what purpose this edifice was intended; it looks like a porter's lodge, or habitation for the guardian of the precincts of the temple: and I should not have mentioned it at all, had it not been constructed of the same species of sand-stone with the temple itself; and as these must have been brought thither from a great distance, and at a great expense, it is probable that this insignificant fabric was connected with it for religious purposes. Advancing from this, for several hundred yards among the brick ruins, we came to an elegant gateway, or propylon, which is also of sand-stone, well hewn, and completely covered with sculpture and hieroglyphics, remarkably well cut. Immediately over the centre of the doorway is the beautiful Egyptian ornament, usually called the globe, with serpent and wings, emblematic of the glorious sun poised in the airy firmament of heaven, supported and directed in his course by the eternal wisdom of the Deity. The sublime phraseology of Scripture, 'the sun of righteousness shall arise with healing in his wings,' could not be more accurately, or more emphatically represented to the human eye, than by this elegant device. To this succeed representations of Osiris, Isis, and their son Horus, with processions of priests and people advancing to pay their homage, and presenting their offerings on their knees. Passing under the gateway, we find the principal devices on each side of the passage to be the sceptre of Osiris alternating with a figure, representing the letter T, suspended by a handle; or, to speak more correctly, with a handle attached to it $\frac{1}{2}$; it has been called the handled cross, the key of the Nile, and is honored with other designations.' Vol. i. 185—187.

Dr. Richardson considers this as the sign, or letter Thau, mentioned in the Vulgate Latin version of Ezekiel ix. 4; and there intimated as being the sign of life and salvation to those who received it. Some of the female figures are admirably executed, and exhibit a remarkable mildness of feature and expression. The remains of three temples still exist. The largest of these is in a state of fine preservation, and is emphatically termed the temple of Dendera. It is minutely described by Dr. Richardson, whose account, as well as his disquisition on Egyptian deities, will not easily admit of abridgment. We

only remark, that he controverts the commonly received opinion, that the splendid sculptures in the pro-naos, which have lately arrived at Paris, are a zodiac; and in this opinion he is supported by some eminent French literati. He had an opportunity of comparing the original with part of the great French work on Egypt; to the elegant execution of which he gives the just tribute of praise, but he announces it to be extremely incorrect in every part. It is 242 miles south of Cairo, and forty-eight S. S. E. of Girge.

• DENDERMONDE, a handsome town of the Netherlands, with a strong citadel. It is surrounded by marshes and fine meadows, which the inhabitants can lay under water when they please, and seated at the conflux of the Dender and Scheldt, fourteen miles east of Ghent, and nineteen south-west of Antwerp. Inhabitants 5000. In 1667 the town was besieged by Louis XIV. with an army of 50,000 men, but he was obliged to retreat with precipitation, the inhabitants having opened the sluices. The vicinity is very fertile.

DENDRACHATES, in natural history, from *δένδρον*, a tree, and *αχάτης*, an agate; the name used by the ancients for an extremely elegant and beautiful species of agate, the ground of which is whitish, variegated with veins of a brighter white. These veins are beautifully disposed in a number of various figures; but generally in many concentric irregular circles, drawn round one or more points. It is common also, in various parts of this stone, to find very beautiful delineations of trees, mosses, sea plants, and the like, so elegantly expressed, that many have erroneously taken them for real plants included in the substance of the stone; whence the name.

DENDROLOGY, *n. s.* *Δένδρῶν* and *λογος*. The natural history of trees.

DENDROMETER, from *δένδρον*, a tree, and *μετρεω*, to measure; an instrument so called from its use in measuring trees. This instrument

consists of a semicircle A, divided into two quadrants, and graduated from the middle; upon the diameter B there hangs a plummet I, for fixing the instrument in a vertical position; there is also a chord D parallel to the diameter, and a radius E, passing at right angles through the diameter and chord. From a point on the radius hangs an altimeter C, between the chord and diameter, to which is fixed a small semicircle G, and a screw, to confine it in any position. The altimeter, which is contrived to form the same angle with the radius of the instrument as the tree forms with the horizon, is divided from its centre both ways into forty equal parts; and these parts are again subdivided into halves and quarters. Upon the small semicircle G, on which is accounted the quantity of the angle made by the altimeter and radius, are expressed degrees, and the radius is numbered with the same scale of divisions. There is also a nonius to the small semicircle, which shows the quantity of an angle to every five minutes. There is also a groove in the radius, that slides across the axis, by means of a screw I, working between the chord and semicircle of the instrument; and this screw is turned by the key O. The principal use of this instrument is for measuring the length and diameter of any tree, perpendicular or oblique, to an horizontal plane, or in any situation of the plane on which it rests, or of any figure, whether regular or irregular, and also the length and diameter of the boughs, by mere inspection.

DENDROPHORI, from *δένδρον*, a tree, and *φέρω*, to bear; tree-bearers. In antiquity, priests who marched in procession, carrying branches of trees in their hands, in honor of some god, as Bacchus, Cybele, Sylvanus, &c. The college of the dendrophori is often mentioned in ancient marbles; and we frequently see, in basso relievos, the bacchanals, represented as men, carrying little shrubs or branches of trees.

DENHAM (Sir John), an eminent English poet, was born in Dublin in 1615; but he received his education in England. In 1641 he published a tragedy, called *The Sophy*, which was much admired; and, in 1643, wrote his famous poem called *Cooper's Hill*, which, according to Dryden, will ever be a standard of good writing. Denham was sent ambassador from Charles II. to the king of Poland; and at the Restoration was made surveyor-general of his buildings, and created knight of the Bath. On obtaining this post, he is said to have renounced his poetry for more important studies; though he afterwards wrote a copy of verses on the death of Cowley. He died at his office, in Whitehall, in 1668.

DENHAM (Dixon, lieutenant-colonel), eminent by his expedition to central Africa, was born at London in the year 1786, and, after completing his studies at school, was placed with a solicitor; but, in 1811, he entered the army as a volunteer, and served in the peninsular wars. After the general peace he was reduced to half pay, and, in 1819, was admitted to the senior department of the Royal Military College at Farnham. In 1823-4 he was engaged, in company with captain Clapperton and doctor Oudney, in exploring the central regions of Af-

rica. See **CLAPPERTON**. His courage, address, firmness, perseverance and moderation, his frank energetic disposition, and his conciliating manners, peculiarly fitted him for such an undertaking. The narrative of the discoveries of these travellers was drawn up by Denham. In 1826 he proceeded to Sierra Leone, as superintendant of the liberated Africans, and, in 1828, was appointed lieutenant-governor of the colony; but on the ninth of June, in the same year, he was attacked by a fever, and died after an illness of a few days.

DENIAL, **DENIER**. See **DENY**.

DENIER, *n. s.* Lat. *denarius*. It is pronounced as *denier*, in two syllables. A small denomination of French money; the twelfth part of a sou.

You will not pay for the glasses you have burst?
—No, not a *denier*. *Shakespeare.*

DENIER is a small French copper coin, of which twelve make a sol. There are two kinds of deniers, the one Tournois, the other Parisois, the latter of which is worth a fourth part more than the former. Denier is also the name of a small weight, used in assaying silver. Like the carat, used in trying and expressing the fineness of gold, it is rather imaginary than real, as the whole mass of silver, whatever be its weight, is supposed to be divided into twelve deniers; and as many twelfth parts, as it contains of pure silver, it is called silver of so many deniers fine. Thus sterling silver, of eleven deniers fine, is a mixture, of which eleven parts are pure silver and one part copper. Each denier is supposed to be divided into twenty-four grains; and thus, estimating pure silver at 6s. per oz., an ounce of sterling silver is worth 5s. 6d.; and the fineness of any quantity of silver can be calculated with the utmost exactness to half a grain in purity, or half a farthing in value per oz. The deniers and grains, used by the assaymasters for this purpose, are real weights, made with the most scrupulous exactness in the above proportions to each other.

DE'NIGRATE, *v. a.* } Lat. *denigro*, from
DENIGRATION, *n. s.* } *de* and *nigro*. To
blacken; to make black.

DENIZEN, or } Either, says Minsheu,
DENIZON, *v. a.* & *n. s.* } from old Fr. *donaisson*,
DENIZATION, *n. s.* } giving (liberty); or from
Dane's son, the son of a Dane, according to Dr. Johnson, from the Danes being made free by Alfred. A freeman; a stranger made free; (the Welsh is *dinasddyn*, a man of the city; and *dincsydd*, free of the city). To make free.

Denizen is a British law term, which the Saxons and Angles found here and retained. *Davies.*

That the mere Irish were reputed aliens, appears by the charters of *denization*, which in all ages were purchased by them. *Id.*

Pride, lust, covetize, being several
To these three places, yet all are in all;
Mingled thus, their issue is incestuous;
Falschood is *denizen'd*, virtue is barbarous.

Donne.

DENIZEN, in law, an alien made a subject by the king's letters patent; otherwise called *donaisson*, because 'his legitimation proceeds ex

donatione regis, from the king's gift.' A denizen is in a kind of middle state between an alien and a natural-born subject, and partakes of both of them. He may take lands by purchase or devise, which an alien may not; but cannot take by inheritance: for his parent, through whom he must claim, being an alien, had no inheritable blood; and, therefore, could convey none to the son: and, upon a like defect of blood, the issue of a denizen, born before denization, cannot inhere to him; but his issue, born after, may. A denizen is not excused from paying the alien's duty, and some other mercantile burdens. And no denizen can be of the privy council, or either house of parliament, or have any office of trust, civil or military, or be capable of any grant of lands, &c. from the crown.

DENMAN (Dr. Thomas), an eminent physician and medical writer, was born at Bakewell, in Derbyshire, in 1733, where his father was a respectable apothecary; on whose death, he was, for some time, an assistant to his elder brother. He afterwards came to London, and attended at St. George's Hospital: he then entered the navy, as surgeon's mate, and in 1757, was made surgeon of a ship. In 1763 he quitted the navy, after having served in the expedition against Belleisle. His first publication was in London, *An Essay on Puerperal Fever*, which was well received; but his professional prospects were so little satisfactory, that he was happy to obtain the situation of surgeon to one of the royal yachts, which brought him in a salary of £70 a-year, without interrupting his practice. He was shortly after (1770) chosen joint-physician and man-midwife to the Middlesex Hospital, and gave lectures on the latter branch of practice. He thus slowly emerged from obscurity into the most extensive practice: was appointed licentiate in midwifery of the College of Physicians in 1783, and, six years after, an honorary fellow of the Royal Society of Edinburgh. After the death of Dr. William Hunter, he was considered as the most eminent obstetrical practitioner in the metropolis. His great work, is *The Introduction to the Practice of Midwifery*, which, with his *Aphorisms for the Use of Junior Practitioners*, claims a place in every medical library. In the decline of life, Dr. Denman relinquished the more laborious part of his practice to his son-in-law, Sir Richard Croft, and became a consulting physician. His death, which was sudden, took place November 26th, 1815.

DENMARK, one of the most ancient monarchies in Europe, comprehends the peninsula of Jutland, Sleswick, Holstein, and Lauenburg, on the continent; and the islands of Zealand, Funen, Langeland, Falster, Laaland, Bornholm, Moen, and several others in the Baltic. Denmark Proper is that part of Scandinavia which formerly went by the name of Cimbrica Chersonesus. It is every where bounded by the sea, except on its southern frontier in Holstein, and stretches northward from about 53° 30' to 57° 30' of lat., i. e. from the right bank of the Elbe, to the extreme point of Jutland. This main-land tract is divided into three divisions, of which Holstein forms the southern, Sleswick the central, and Jutland the northern province, each

being governed by laws and institutions, occasionally very dissimilar; and contains, together with the adjacent islands, a territory of about 22,000 square miles, and a population of about 1,635,000 inhabitants, thus distributed:

Jutland contains	400,000
Zealand (including Copenhagen), Funen, and other islands,	550,000
Sleswick	300,000
Holstein	350,000
Lauenburgh	35,000
	1,635,000

Iceland, the Faroe Islands, and the settlements of Denmark in the East and West Indies and Africa, are supposed to add about 155,000 more to the population in the following proportions:

Iceland	50,000
Faroe Isles	5,500
East and West Indies and Africa	100,000
	155,500

The dismemberment of Norway from Denmark, which took place in 1814, abstracted full one-third of her population and strength, that ancient possession of the Danish crown being estimated to contain at that period 900,000 inhabitants. Denmark received from Sweden, in exchange, Swedish Pomerania, which she again parted with to Prussia for the duchy of Lauenburgh, and a sum of money.

Her remaining territory is, however, compact, and well situated for commerce. The aspect of the continental part is flat and undiversified, containing neither mountains nor rivers of any magnitude, but it is in an excellent general state of cultivation; and, in the character of its climate and rich pasturage, very much resembling our own country.

It is largely indented by the sea, and possesses numerous creeks and bays, as well as internal lakes, but only one canal of importance, that of Kiel. This will admit vessels of 120 tons burden, and extends from the Baltic to the Eyder at Rendsburg, where the river becomes navigable, thus opening a communication between the two seas, or through 105 miles of territory. Its length is twenty-two English miles. Its breadth at top 100 feet, at bottom fifty-four, and depth ten feet. It was begun in 1777, and completed in 1785, at an expense of £800,000 sterling. During the late war between 3000 and 4000 vessels annually passed through it, but in time of peace the number is diminished. It has much improved the internal trade of Sleswick and Holstein.

The revenue of Denmark fluctuates between £1,700,000 and £2,000,000, about £120,000 of which arises from the dues of the Sound: the national debt is nominally £15,000,000. The military force somewhat exceeds 20,000 men; the naval force is only 4000 men in service, but capable of being increased with great facility, as there are between 14,000 and 15,000 registered seamen. The seafaring people of the kingdom are altogether little short of 50,000.

There are no mineral productions in Denmark of any commercial importance; salt is made in considerable quantities from the lime springs of Oldesloe; and a little coal is found; but turf is the great article of fuel. Both timber and salt are imported largely. The agricultural produce consists of wheat, in small quantity, barley, oats, beans, peas, and potatoes; the last very largely. Excellent madder also abounds, and hops, flax, hemp, and tobacco, are partially cultivated. Gardens are seldom seen except in Arak, the great kitchen garden of the capital. The horned cattle and horses are very superior; in Holstein are some of the best working breeds of both, that are known: the exportation of horses is said to amount to 1200 or 1500 annually, valued at from £160,000 to £200,000 sterling. Milch cattle are also well managed here: butter and cheese abound: the sheep, though recently improved by the introduction of merino, and other breeds, are still inferior. 'There are now better meadows, and more hedges and walls in Denmark,' says Mr. Louden, 'than in any country of Germany of the same extent.' Here was founded, in 1686, the first veterinary school in Germany. 'Artificial grasses and herbage plants enter into most rotations, and rye-grass is perhaps more sown in Holstein than any where, excepting in England. In a word, considering the disadvantages of climate, the agriculture of Denmark is in a more advanced state than that of any other kingdom of Germany.' Fishing in the bays and creeks is conducted on a large scale; the most important branch is the herring fishery; beds of oysters and muscles are not uncommon: and fresh water fish abound in several arms of the Baltic, so little is that sea impregnated with salt.

Denmark has pursued a studiously pacific policy for more than half a century, and the consequence, until nearly the close of the late wars of the French revolution, were the uninterrupted improvement and extension of her commerce. In 1800 she possessed above 2000 merchant men, 20,000 seamen, and 250,000 tons of shipping. During our second war with France these were in a state of rapid increase, but the seizure of her navy in 1807 by Great Britain, and the consequent breach between the two countries, permitted her no longer to carry on a neutral trade, and she has scarcely to the present time recovered the blow. The chief intercourse of the Danes is with the adjacent coasts of the Baltic, with England, Holland, France, and the Mediterranean.

They have found the benefit of a general carrying trade so considerable, that they have pushed it with success, both in the Mediterranean (where their flag is respected by the Barbary states, equally with that of stronger powers), and to the most distant parts of the globe. The whale fishery, likewise, employs a considerable portion of their seamen, and in the West India trade they have about seventy sail of merchantmen. Their connexion with the Guinea and Gold coasts has been in a great measure discontinued since their honorable abolition of the slave trade in 1803.

The principal exports from Denmark to Eng-

land are skins, raw hides, and, when our corn laws permit, oats. Until lately the most extensive part of the trade between the two countries was timber from Norway. The imports from England are manufactured articles, and colonial produce. The duties on the importation of foreign commodities into Denmark are high, but all kinds of merchandise, with the exception of the following articles, are allowed to be imported; viz. sugar, either raw or refined, coming from European ports, porcelain, colored delf, wool-cards, roasted coffee, printed calicoes, and some kinds of woollen cloth.

In 1797 the government laid open the trade to the East Indies (previously monopolised by a Danish East India Company), to all private merchants. Similar liberal regulations have been made with regard to intercourse with their West Indian possessions. The Icelandic trade was laid open by an ordinance from the king towards the close of 1816. The exports of Denmark to this distant part of her dominions are grain, wine, brandy, tobacco, and spices, together with linen and woollen cloths, timber, and hardware. The vessels generally sail thither in May and June, and return with salt fish, whale oil, coarse cloth, woollen stockings, gloves, hides, skins, feathers, and Eider-down. All the necessary supplies for the Greenland colonies are transmitted from the parent country; and oil, whalebone, seal-skins, and other articles, furnished by the fisheries in the adjacent seas, are taken in return. The manufactures of Denmark are confined to the supply of her own most common wants: and it is necessary to import hardware, printed cottons, and linen. The porcelain manufacture is carried on by the government. A late return of the sugar refineries in Denmark makes their number forty-six; that of paper mills twenty-two; iron foundries four.

The constitution of Denmark was of a free Gothic original. The covention of the estates, even including the representatives of the boors or peasants, elected the king, having still a regard to the sor of their late monarch, whom, however, they made no scruple of setting aside, if they deemed him unworthy of the royal dignity. The convention enacted laws; conferred the great offices of state; debated all affairs relating to commerce, peace, war, and alliances; and occasionally gave their consent to the imposition of necessary taxes. The king was only the chief magistrate of the people. His business was to see justice administered impartially; to command the army in time of war; to encourage industry, religion, arts, and sciences; and to watch over the interests of his subjects. But, by the revolution, in 1660, the constitution was new-modelled, and it was declared that 'the hereditary kings of Denmark and Norway should be in effect, and ought to be esteemed by their subjects, the only supreme head upon earth; they shall be above all human laws, and shall acknowledge, in all ecclesiastical and civil affairs, no higher power but God alone. The king shall enjoy the right of making and interpreting the laws; of abrogating, adding to, and dispensing with them. He may also annul all the laws which either he or his predecessors

shall have made, excepting this royal law, which must remain irrevocable, and be considered as the fundamental law of the state. He has the power of declaring war, making peace, imposing taxes, and levying contributions of all sorts, &c. &c. It is finally added, 'If there is any thing further which has not been expressly specified, all shall be comprised in the following words:—The king of Denmark and Norway shall be the hereditary monarch, and endued with the highest authority; insomuch that all that *can be said and written to the advantage of a Christian, hereditary, and absolute king, shall be extended under the most favorable interpretation to the hereditary king or queen of Denmark and Norway,*' &c. To this singular step the representatives of the people were urged at that time by the tyranny of the nobles. They found a hundred tyrants, as a late political bishop said, a hundred times worse than one. The nobility were obliged to make a similar surrender of their peculiar privileges.

The established religion is the Lutheran and Episcopal. The reformation was introduced in 1536, the crown taking possession at that period of the revenues of the church, and depriving the bishops of their temporal power: they have at present full spiritual jurisdiction, but no votes in the legislature; and there exists a complete toleration of dissenters. There is a university at Copenhagen on a large scale, and another of smaller funds at Kiel. There is also a college with four professors at Odensee in Funen; and Danish literature, though not of general pretensions, has yielded in modern times some distinguished names. We need only mention those of Niebuhr and Le Brun.

Saxo Grammaticus, the most ancient and best of the Danish historians, derives the name of Denmark from Dan the son of Humble, the first king, and Mark, a word signifying a country, in several dialects of the Teutonic; according to which etymology, the word Denmark signifies the country of Dan. He is said to have flourished about A. A. C. 1038 or 1050. Almost all historians agree that he was the son of Humble, a native of Zealand. His possessions and influence were very considerable, not only in Zealand, but in the islands of Langeland and Mona. It was his courage, however, and skill in the art of war, that induced the inhabitants of Denmark to choose him for their king. He was called to the assistance of the Jutlanders upon an irruption of the Saxons into their territories, and promised the sovereignty of the country if he drove out the enemy. On this he raised an army, gained a complete victory over the Saxons, and obliged them to leave the country; and he was accordingly elected king. The history of Denmark, for several ages after Dan, is filled with fabulous exploits of heroes, encounters with giants, dragons, &c. One of their kings named Frotho, who reigned about A. A. C. 761, is said to have conquered Britain, Sleswick, Russia, Pomerania, Holstein, &c. an assertion which cannot easily be credited, considering the difficulty which succeeding warriors, even the greatest in the world, found to subdue the inhabitants of those countries. It is certain, how-

ever, that anciently the kingdom of Denmark made a much more conspicuous figure than it does at present. The Danes appear to have had a very considerable naval force almost from the foundation of their empire; and the conquests they undoubtedly made in our island are certain proofs of their valor. Their chief enemies were the Swedes, Norwegians, and Saxons; especially the first. With one or other of these nations almost perpetual war was carried on. The kingdom was also often rent by civil dissensions, which the neighbouring monarchs did not fail to take advantage of, in order to reduce the kingdom of Denmark under their subjection. As in general, however, neither party came off with much advantage, the history of these wars affords nothing interesting.

One of the most illustrious of the kings of Denmark was Canute II., the son of Sueno I., surnamed the Great, from his wisdom as well as his conquests. He was at once king of Denmark, Norway, and England. See CANUTE and ENGLAND. He also conquered a great part of Sweden. Alstedius ranks him as the sixty-seventh monarch of Denmark. Between his son Canute III. and Sueno III. there was a succession of ten kings of whom little important is recorded. One of the greatest of the Danish monarchs, after Canute the Great, was Valdemar I. who obtained the throne in 1157; having defeated and killed the usurper Sueno III. after a civil war of ten years. He maintained a long war with the Vandals, whose power he at last entirely broke, and reduced under his subjection the island of Rugen. He also proved victorious over the Norwegians, so that their king and queen came in person to submit to him. In 1165, he laid the foundations of the city of Dantzic; which, though it has since become a place of very great consequence, consisted at first only of a few poor fishermen's huts; but the privileges and immunities conferred upon it by this monarch, soon proved the means of its becoming a flourishing city. In 1169, he entirely subdued the Courlanders; and, soon after, was invested with the duchy of Holstein by the emperor Frederic Barbarossa. He is said to have been poisoned by a quack medicine, given with a design to recover him from a distemper with which he was seized in 1182, after reigning twenty-eight years. In 1195, Canute VI., Valdemar's son and successor, caused a muster to be made of all the men fit to bear arms in his dominions; and ordered each province to fit out its proportion of shipping, every way equipped, and ready for action. The whole force of Denmark, at that time, consisted of 670 ships of war, besides the squadrons supplied by vassals, tributary states, and allies. The number of the land forces is not mentioned. In the reign of this prince, the Danish dominions were enlarged by the conquest of Stromar, and the districts of Lubec and Hamburg, formerly Nordalbingia, but now included under the general name of Holstein. He died in 1203, and was succeeded by Valdemar II. who proved a very warlike prince. In 1211 he founded the city of Stralsund. He built the castle of Droningholm in memory of his queen, that name importing the Queen's Island; and

gained in 1218 a victory over the Livonians near the fortress of Valdemar, which was thus named from him. The flourishing state in which Denmark was at this time, appears from an estimate of the revenues of the tributary provinces, which is still extant. He kept for constant service 1400 great and small ships, each of which at a medium carried 121 soldiers; making the whole of the standing forces, besides garrisons, consist of 169,400 fighting men. In 1223, however, Henry Palatine, earl of Swerin, a German prince, having been deprived of part of his dominions by Valdemar, surprised and carried off the king himself, and kept him close prisoner for three years. The conditions on which he at last obtained his liberty were,—that he should pay a large sum of money; relinquish Holstein, Swerin, Hamburgh, and all his possessions on the other side of the Elbe; and solemnly swear that he would never take any measures to punish Henry or his associates. This treaty was signed on the 25th of March 1226. Besides these territories, which Valdemar was obliged to cede by treaty, many tributary princes took the opportunity of his captivity to recover their liberty; and among the rest the inhabitants of Lubec revolted, and entered into alliance with Albert, duke of Saxony, against him. Valdemar, however was not of a disposition to submit tamely to such treatment. He obtained a dispensation from the pope to break his engagements with Henry, and immediately entered Holstein at the head of a numerous army. Here he was met by several German princes; and a desperate engagement ensued. Valdemar at first had the advantage; but, being wounded in the eye, his troops were at last defeated with great slaughter. It does not appear that he was ever able to revenge himself, or to recover the dominions he had lost. Instead of this he was obliged, in 1228, to cede Lauenburg to the duke of Saxony, who had already seized on Ratzburg and Molna. Soon after his eldest son, Valdemar, was accidentally killed as he was hunting, and his two other sons married the daughters of his two greatest enemies. Abel, the third son, married the daughter of Adolphus duke of Holstein; and Eric, the second, the duke of Saxony's daughter. These misfortunes are supposed to have hastened his death, which happened in April, 1242; and on this the kingdom was divided between the two young princes, a war commencing the very next year between them. A peace was concluded the year following, and war renewed the year after. In 1250 Eric paid a visit to his brother Abel, entreating his mediation between him and the princes of Holstein, with whom he was then at war. Abel received him, in appearance, with great kindness, but in the mean time laid a plan for murdering him at sea: this was effected, and Abel became master of the whole kingdom. But he did not long enjoy the sovereignty thus wickedly obtained. He was tormented by his own conscience, especially when he found, among his brother's papers, one by which he was left heir to the whole kingdom on the decease of Eric, and many kind expressions with regard to himself. He was at last killed in a battle with his own subjects in 1252.

From this time to 1333 the kingdom of Denmark gradually declined. Usurpers established themselves in different provinces; while the kings of Sweden did not fail to avail themselves of the distracted state of the Danish affairs. In 1333 died Christopher II., who possessed only the cities of Scanderberg in Jutland and Neoburg in Fionia, with some few other inconsiderable places, of all the hereditary dominions of Denmark. Halland, Holbeck, Calemberg, and Samsøe, were held by Canute Persius; Schonen, Lystre, and Bleking, by the king of Sweden, to whom they had been lately sold: John earl of Wagnia had the jurisdictions of Zealand, Falstre, Laaland, and Femerin: Gerhard, those of Jutland and Fionia; and Lawrence Jonca those of Lange-land and Arras. After the death of Christopher an interregnum of seven years, or according to Marcel of fifteen, ensued. The first attempt for the sovereignty was made by Otho, second son to the late king, who tried to drive Gerhard out of Jutland, but was taken prisoner, and closely confined by Gerhard. The king of Sweden next wrote to pope Benedict XIII., beseeching his Holiness to confirm to him the provinces of Schonen, &c., which he possessed; and to allow him to subdue the rest of the kingdom, which was now usurped and rendered miserable by a set of petty princes, who knew not how to govern. To influence the pope he promised to hold this kingdom of him, and to pay him the usual tax collected by the church. This request, however, was refused. Valdemar of Sleswic, nephew to Gerhard, had formerly been elected king; but, on account of the superior influence of Christopher, had never enjoyed the sovereignty. He now, at the instigation of his uncle, resumed his ambitious views. Several of the nobility also cast their eyes on young Valdemar, Christopher's son. But, while these two princes were laying schemes to aggrandise themselves, the unhappy Danes were distressed by exorbitant taxes, famine, and pestilence, which destroyed more than half of the inhabitants. In the midst of these calamities Gerhard, sovereign of Jutland, proposed to his nephew Valdemar an exchange of territories, which he believed would prove favorable to the designs of the latter on the crown. A treaty for this purpose was actually drawn up and signed; but the inhabitants, notwithstanding their distressed situation, so highly resented their being disposed of like cattle, from one master to another, that they refused to pay the taxes. Gerhard resolved to compel them, and therefore led 10,000 men, whom he had levied in Germany, into the heart of the province. Providence, however, now raised up an enemy to this tyrant. One Nicholas Norevi, a man greatly esteemed for his courage, public spirit, and prudence, beheld with sorrow the condition to which Denmark was reduced. He had long meditated various projects for its relief. Young Valdemar, Christopher's son, had a number of adherents in the kingdom, his most dangerous enemy was Gerhard; and, if he could be removed, the Jutlanders would at least be free from an oppressor, and might choose Valdemar, or any other they thought proper, for their sovereign. Collecting, therefore, a body of chosen horse he marched in the night to Rander-

shusen, where Gerhard had fixed his head-quarters; and, having forced open the tyrant's apartment, immediately put him to death. He then fled with the utmost expedition, and, though overtaken by a party of the enemy's horse, forced his way through them and escaped. Gerhard's sons, hearing of their father's death, retired into Holstein, leaving the army, composed chiefly of Holsteiners, to be cut to pieces by the enraged peasants, who fell upon them from every quarter. Still, however, the Holsteiners kept possession of the citadels and fortified places, from which Nicholas resolved to dislodge them. He accordingly attacked and took Landen, a castle situated on the river Scherne: After which he laid siege to Albeg; but the garrison making an obstinate defence, he turned the siege into a blockade, by which they were soon reduced to great extremity. The governor sent an express to Gerhard's sons, acquainting them with the impossibility of his holding out more than a few days, without being relieved. They marched to his relief, and came up with Nicholas just as the governor was ready to surrender, but were defeated; though Nicholas was unfortunately killed in the engagement. Jutland having thus regained its liberty, the rest of the kingdom followed its example. Zealand first openly declared itself. Here Henry, Gerhard's son, maintained several garrisons; and resolved to defend his possessions in spite of all the power of the inhabitants. For this purpose he drew together an army; but in the mean time a tumult arose among the peasants, on account of a Danish nobleman slain by the Holsteiners. By this the people were so irritated that, falling upon the Holsteiners, they killed 300 of them, and the rest out of the island, and chose Valdemar III. Christopher's son, for their sovereign. The Danes now resumed their courage; the lands were cultivated, the famine and pestilence ceased, and the kingdom began to flourish as formerly. Matters continued prosperous till 1373, when Valdemar III. died, and was succeeded by his daughter Margaret. Marcel ranks his grandson Olaus V. as his immediate successor; but he, being an infant, can hardly be said to have reigned, and therefore Alstedius ranks his mother, who governed during his infancy, as the successor of Valdemar.

Margaret raised the kingdom of Denmark to its highest pitch of glory. She defeated and deposed Albert king of Sweden, in 1487; and partly by her address, partly by hereditary right, she formed the union of Calmar, by which she was acknowledged sovereign of Sweden, Denmark, and Norway. She held her dignity with such firmness and courage, that she was justly styled the Semiramis of the North. Her only son, Olaus V. dying at seven years of age, in 1388, she adopted her sister's son, Eric duke of Pomerania, as her successor, and died in 1412, after a glorious reign of thirty-seven years. Eric IX., her successor, being destitute of her great qualifications, the union of Calmar fell to nothing: but Norway still continued annexed to Denmark. Some say he was deposed, but Alstedius states that he resigned the crown in 1438, and retired to Pomerania, where he died in 1469. Upon his resignation his nephew, Christopher III. duke of Bavaria, and count

palatine of the Rhine, was elected. After an illustrious reign of ten years, during which Sweden was separated from Denmark, he died in 1448, and made way for a new royal race, which still continues to reign in Denmark, by the election of Christian, count of Oldenburg. Christian I. was crowned king of Denmark in 1448, of Norway in 1450, and of Sweden upon the deposition of Charles VIII. in 1457, who, however, was restored by the Swedes in 1464; Christian not having adhered to the terms he had made with them. He died in 1481, and was succeeded by his son John, who had frequent wars with the brave Swedish governors, Steno and Sweno Sture. John, dying in 1513, was succeeded by Christian II. who recovered Sweden for a short time on the death of Steno Sture; but was expelled for his cruelties, by the illustrious Gustavus Vasa, who threw off the Danish yoke, and restored the independence of his country in 1520. See SWEDEN.

Christian died in 1559, but was previously deposed, and Frederick I. duke of Holstein elected king in 1523. He reigned only ten years; dying in 1533, when he was succeeded by his son Christian III. a wise and politic prince, by whom, in 1536, the protestant religion was established in Denmark. He was succeeded in 1559 by his son Frederick II. who, after reigning about twenty-nine years, left the kingdom to his son Christian IV. who, however, was not crowned till 1596. This monarch twice visited England, in compliment to his son-in-law king James I.; in July 1606 and 1614. In 1629, he was chosen head of the Protestant league formed against the house of Austria; but, though personally brave, he was in danger of losing his dominions; when he was succeeded in that command by the famous Gustavus Adolphus king of Sweden. The Dutch having obliged Christian, who died in 1648, to lower the duties of the Sound, his son Frederic III. consented to accept of an annuity of 150,000 florins for the whole. The Dutch after this persuaded him to declare war against Charles X. king of Sweden, which had almost cost him his crown in 1657. Charles stormed the fortress of Fredericstadt; and, in the succeeding winter, he marched his army over the ice to the island of Funen, where he surprised the Danish troops, took Odensee and Nyburg, and marched over the Great Belt to besiege Copenhagen itself. Oliver Cromwell interposed; and Frederic defended his capital with great magnanimity till the peace of Roschild; by which he ceded the provinces of Halland, Bleking, and Sconia, the island of Bornholm, Bahus, and Drontheim, in Norway, to the Swedes. Frederic sought to elude these severe terms; but Charles took Cronenburg, and once more besieged Copenhagen by sea and land. The steady intrepid conduct of Frederic under these misfortunes endeared him to his subjects; and the citizens of Copenhagen made an admirable defence, till a Dutch fleet arrived in the Baltic, and beat the Swedish fleet. The fortune of war was now entirely changed in favor of Frederic, who showed on every occasion great abilities both civil and military: and, having forced Charles to raise the siege of Copenhagen, might have carried the war into Sweden, had not the English fleet under Montague appeared in the Baltic.

This enabled Charles to besiege Copenhagen a third time: but, France and England offering their mediation, a peace was concluded in that capital: by which the island of Bornholm returned to the Danes; but the island of Rugen, Bleking, Halland, and Schonen, remained with the Swedes.

The year 1660, as we have already intimated, affords an instance of a revolution in Denmark, unparalleled in the annals of history, viz. that of a free people resigning their liberty into the hands of their sovereign of their own accord, and without the least compulsion rendering him despotic. This was in part occasioned by the great character which Frederic had acquired by his late prudent and valiant conduct. At that time he had also taken care to ingratiate himself with the commonalty, by obliging the nobility to allow them some immunities which they did not enjoy before, and permitting them by a special edict to possess lands. After the conclusion of the treaty with Sweden, a diet was summoned at Copenhagen, to take into consideration the state of the kingdom, which was now very much exhausted, by the calamities of war. This distressed state of affairs was, by the commons, attributed to the nobility; who, on the other hand, took no care to conciliate the affections of the inferior classes: but rather increased their discontents by their arrogance. They had even the imprudence to remonstrate against the immunities above mentioned, which had been granted by the king during the siege of Copenhagen. In consequence of this, the deputies of the commons and clergy united against them; and, being joined by the citizens of the capital, formed a very considerable party. On bringing forward in the assembly the sums necessary for the national exigencies, a general excise was proposed by the nobles on every article of consumption; and they professed themselves willing to submit to it, though, by an express law, their order was to be exempted from taxes. This offer, however, was accompanied with a remonstrance to the king; in which they endeavoured to reclaim many obsolete privileges, and to add fresh immunities, tending to diminish the royal prerogative, and check the rising influence of the commons and clergy. This proposal occasioned great disputes in the diet; and the two inferior orders insisted, that they would not admit of any tax which should not be levied equally upon all ranks. The nobles not only refused to comply with this proposal, but even to be subject to the present tax for more than three years; pretending that all taxes whatever were infringements on their privileges. By way of compensation, however, they proposed new duties upon leather and stamped paper, and at last offered to pay a poll tax for their peasants. This at first seemed to be agreeable to the two inferior estates; but they suddenly changed their minds, and demanded that the fiefs and domains, which the nobles had hitherto possessed exclusively, and at a very moderate rent, should be let to the highest bidder. In the heat of the dispute, one of the chief senators having imprudently thrown out some reproachful expressions against the commons, a general ferment ensued, and the assembly was broken up in confusion. This gave occasion

to the interposition of the king's friends; and the idea of rendering the crown hereditary, and enlarging the royal prerogative, began to be suggested as the proper method of humbling the nobility. This was first proposed by the bishop of Zealand; an act for rendering the crown hereditary was drawn up; and the best method of publicly producing it taken into consideration. All this time the king seemed quite inactive, nor could he be prevailed upon to take any part in an affair which so nearly concerned him. But this indolence was abundantly compensated by the alertness and diligence of his queen. On the morning of the 8th of October, therefore, the bishop of Zealand having obtained the consent and signatures of the ecclesiastical deputies to the new proposal, delivered it to Nausen, burgo-master of Copenhagen and speaker of the commons, whose speech in favor of it had such an effect upon the assembly, that they subscribed it unanimously; the nobles being all the while in perfect security, and entirely ignorant of the transaction. Next day it was presented to the king by the bishop and Nausen; and finally to the nobles; who, while they professed their general willingness to assent to the declaration, observed to the speaker of the commons that it required the most serious discussion. Nausen replied, that the other estates had already taken their resolution; that they would lose no time in debate; and that, if the nobles would not concur with them, they would immediately repair to the palace by themselves, where they had not the least doubt that the king would graciously accept their proffer. In the mean time the nobles had privately despatched a message to the king, intimating that they were willing to render the crown hereditary in the male line of his issue, provided it was done with the usual formalities. But his majesty stipulated for an equal right of succession in the female line. He added, however, that he by no means wished to prescribe rules for their conduct; they were to follow the dictates of their own judgment, and he would owe every thing to their free consent. In the interim, the other deputies arrived at the palace, and the bishop of Zealand addressed his majesty on the resolution taken by the clergy and commons, adding, that they were ready to sacrifice their lives in the defence of an establishment so salutary to the country. His majesty, while he assured them of his protection, and promised a redress of all grievances, mentioned the concurrence of the nobles as a necessary condition; and dismissed them with an exhortation to continue their sittings until they should have brought their design to a pacific conclusion. The nobles, breaking up without coming to any resolution, and preparing, it is said, to leave Copenhagen, the court and the popular party took the necessary measures to force them to a concurrence. Orders were given to shut the gates of the capital, when a message arrived that they were ready to concur with the commons, and subscribe to all the conditions of the royal pleasure. Nothing now remained but to ratify the transaction with proper solemnity. Accordingly, on the 16th of October, the estates annulled in the most solemn manner, the capitulation or charter signed by the king on his accession to the throne; absolved him

from all his engagements, and cancelled all the limitations imposed upon his sovereignty! The whole was concluded by the ceremony of doing homage, taking the new oath with great ceremony; after which a new form of government was promulgated under the title of *The Royal Law of Denmark*.

Frederic III. was succeeded, in 1670, by his son Christian V., who obliged the duke of Holstein Gottorp to renounce the advantages he had gained by the treaty of Roschild. He then recovered a number of places in Schonen; but his army was defeated in the bloody battle of Lundén by Charles XI. of Sweden. This defeat did not put an end to the war, which Christian obstinately continued till he was defeated entirely at the battle of Landskron; and, having exhausted his dominions in his military operations, he was in a manner abandoned by all his allies, and forced to sign a treaty on the terms prescribed by France, in 1679. Christian, however, did not desist from his military attempts; and at last became the ally and subsidiary of Louis XIV. He died in 1699, and was succeeded by Frederic IV., who, like his predecessors, maintained his pretensions upon Holstein; and, probably, would have become master of that duchy, had not the English and Dutch fleets raised the siege of Tonningen; while the young king of Sweden, Charles XII., then only sixteen years of age, landed within eight miles of Copenhagen, to assist his brother-in-law the duke of Holstein. Charles probably would have made himself master of Copenhagen, had not his Danish majesty agreed to the peace of Travendahl, which was entirely in the duke's favor. By another treaty concluded with the States General, Frederic obliged himself to furnish a body of troops who were to be paid by the confederates; and who afterwards did great service against the French. Notwithstanding this peace, Frederic was perpetually engaged in wars with the Swedes. While Charles was an exile at Bender, he marched through Holstein into Swedish Pomerania, and in 1712 into Bremen, and took the city of Stade. His troops, however, were totally defeated by the Swedes at Gadesbusch, who laid his favorite city of Altona in ashes. Frederic revenged himself by seizing great part of the ducal Holstein, and forcing the Swedish general, count Steinbock, to surrender himself prisoner, with all his troops. In 1716 the success of Frederic was so great, in taking Tonningen and Stralsund, driving the Swedes out of Norway, and in reducing Wismar and Pomerania, that his allies began to suspect he was aiming at the sovereignty of all Scandinavia. Upon the return of Charles of Sweden from his exile, he renewed the war against Denmark with a most embittered spirit; but upon his death at the siege of Fredericshal, Frederic durst not refuse the offer of his Britannic majesty's mediation between him and the crown of Sweden; in consequence of which a peace was concluded at Stockholm, which left him in possession of the duchy of Sleswick. Frederic died in 1730, after having seen his capital reduced to ashes by an accidental fire, in 1728. His son and successor Christian VI. made no other use of his power,

and the advantages with which he mounted the throne, than to cultivate peace with all his neighbours, and to promote the happiness of his subjects, whom he eased of many oppressive taxes. In 1734, after guaranteeing the Pragmatic Sanction, he sent 6000 men to the assistance of the emperor, during the dispute about the succession to the crown of Poland. Though he was pacific, yet he was jealous of his rights, especially over Hamburg. He obliged the Hamburgers, in 1736, to call in the mediation of Prussia, to abolish their bank, to admit the coin of Denmark as current, and to pay him a million of silver marks. He had, in 1738, a dispute with king George II. about the little lordship of Steinhorst, which had been mortgaged to the latter by the duke of Holstein Lauenburg, and which Christian said belonged to him. Some blood was spilt during the contest; in which Christian, it is thought, never was in earnest. It brought on, however, a treaty, in which he availed himself of his Britannic majesty's predilection for his German dominions; for he agreed to pay Christian a subsidy of £70,000 sterling a year on condition of keeping in readiness 7000 troops for the protection of Hanover: which was a gainful bargain for Denmark. And two years after he seized some Dutch ships for trading without his leave to Iceland: but the difference was made up by the mediation of Sweden. Christian had so great a party in that kingdom, that it was generally thought he would revive the union of Calmar, by procuring his son to be declared successor to his then Swedish majesty. Some steps for that purpose were certainly taken: but whatever Christian's views might have been, the design was frustrated by the jealousy of other powers. Christian died in 1746, with the character of being an excellent monarch. His son and successor, Frederic V., had, in 1743, married the princess Louisa, daughter to king George II. He improved upon his father's plans for the happiness of his people; but took no concern, except that of a mediator, in the German war. For it was by his intervention that the treaty of Closterveren was concluded between the duke of Cumberland and the French general Richelieu. Upon the death of queen Louisa, mother to the late king, he married a daughter of the duke of Brunswick Wolfenbuttel; and died in 1766.

He was succeeded by his son Christian VII. who married the princess Carolina Matilda of England, an alliance which proved unfortunate, as is generally stated through the intrigues of the queen dowager. The king had displaced several of her friends who had for some time had a share in the administration; and the two new favorites, Brandt and Struensee, who had now appeared, paid great court to the queen. The dowager on this took occasion to insinuate, that the queen had condescended to an intrigue with Struensee. The result is familiar to most of our readers. When the plan of removing the existing administration was brought to maturity, it was resolved to surprise the king in the middle of the night, and force him instantly to sign an order for committing the ministers to separate prisons; to accuse them of high treason in general, and particularly with a design to dethrone or poison

the king. If this could not be properly authenticated, it was determined to suborn witnesses to confirm the report of a criminal correspondence between the queen and Struensee. This design was executed on the night of the 16th of January, 1772, when a masked ball was given at the court. The queen, after having danced most part of the evening with count Struensee, retired to her chamber about two in the morning. About four the same morning prince Frederic rose, and went with the queen dowager to the king's bed-chamber, accompanied by general Eichstedt and count Rantzau. Having ordered his valet de chambre to awake the king, they informed him that the queen, with Struensee, his brother, and Brandt, were at that moment busy in drawing up an act of renunciation of the crown, which they would immediately after compel him to sign; and there was therefore a necessity for him to give an order for their arrest. Christian is said to have hesitated for some time, and to have been inclined to refuse this scandalous requisition; but at length, through importunity, and, according to some accounts, being even threatened into compliance, he consented to what they required. Count Rantzau was despatched, at an untimely hour, into the queen's apartments, and immediately executed the orders of the king. This unfortunate lady, together with an infant princess, was conveyed in one of the king's coaches to the castle of Cronenburgh, escorted by a party of dragoons. Struensee and Brandt were seized in their beds and imprisoned, as well as other members of the administration to the number of eighteen. The queen dowager and her adherents assumed the government, and a total change took place in all departments of the state. The prince royal, son of queen Carolina Matilda, then in the fifth year of his age, was put under the care of a lady of quality, who was appointed governess, under the superintendency of the queen dowager. Struensee and Brandt were put in irons, and underwent long and frequent examinations. Struensee at last confessed that he had conducted a criminal intrigue with the queen. These ministers were both beheaded on the 28th of April; but many of their partisans were set at liberty. Such is one mode of accounting for the revolution of 1772. The confession of Struensee is by many supposed to have been extorted by fear of the torture, and to have no foundation in truth; but, as no means were used by the court of Great Britain to clear up the queen's character, the affair undoubtedly wears a suspicious aspect. At last, however, his Britannic majesty interfered so far as to send a small squadron of ships to convey the unhappy princess to Germany. The city of Zell was appointed for her residence; and in this place she died of a fever on the 10th May, 1775, aged twenty-three years and ten months.

Of Struensee as a minister, 'it must not be forgotten,' says an able writer in the *Edinburgh Review*, September 1826, 'that he was the first minister of an absolute monarchy who abolished the torture, and that he patronised those excellent plans for the emancipation of the enslaved husbandmen, which were first conceived by Reverdil a Swiss, and of which the adoption by the second Bernstorff has justly immortalised that

statesman. He will be honored by after ages for what offended the Lutheran clergy: the free exercise of religious worship granted to Calvinists, to Moravians, and even to Catholics; for the Danish clergy were ambitious of retaining the right to persecute, not only long after it was impossible to exercise it, but even after they had lost the disposition to do so; at first to overawe, afterwards to degrade non-conformists; in both stages, as a badge of the privileges and honor of an established church.'

The same writer, in a *Review* of general Falkenskiöld's *Memoirs of the Revolution of 1772*, observes, that the evidence against the queen consisted in a number of circumstances (none of them incapable of an innocent explanation) sworn to by her attendants, who were employed as spies on her conduct. She owned that she was guilty of much imprudence; but in her dying moments she declared to M. Roques, pastor of the French church at Zell, that she never had been unfaithful to her husband. (Communicated by M. Roques to M. Secretan, the editor of Falkenskiöld, on the 7th of March 1780. Falk. 234.) It is true that her own signature affixed to a confession was alleged against her. But if general Falkenskiöld was rightly informed (for he has every mark of honest intention), that signature proves nothing but the malice and cruelty of her enemies. Schack, the counsellor sent to interrogate her at Cronenburgh, was received by her with indignation when he spoke to her of her connexion with Struensee. When he showed Struensee's confession to her, he artfully intimated that the fallen minister would be subjected to a very cruel death if he was found to have falsely criminated the queen. 'What!' she exclaimed, 'do you believe that if I was to confirm this declaration, I should save the life of that unfortunate man?' Schack answered with a profound bow. The queen took a pen, wrote the first syllable of her name, and fainted away. Schack completed the signature, and carried away the fatal document in triumph. Struensee himself, however, had confessed his intercourse to the commissioners. It is said that his confession was obtained by threats of torture, facilitated by some hope of life, and influenced by a knowledge that the proceeding against the queen could not be carried beyond divorce. But his repeated and deliberate avowals to Dr. Munter do not (it must be owned) allow of such an explanation. Scarcely any supposition favorable to this unhappy princess remains, unless it should be thought likely, that as Dr. Munter's narrative was published under the eye of her oppressors, they might have caused the confessions of Struensee to be inserted in it, by their own agents, without the consent, perhaps without the knowledge of Munter, whose subsequent life is so little known, that we cannot determine whether he ever had the means of exposing the falsification. It must be confessed, however, it is added, that internal evidence does not favor this hypothesis; for the passages of the narrative, which contain the avowals of Struensee, have a striking appearance of genuineness.

Their treatment of Matilda did not long prove advantageous to the queen dowager and her party.—Another revolution took place in April

1784, when the queen dowager's friends were removed, and a new council was formed under the sole auspices of the prince royal. After that period the king, who from the beginning of his reign showed a great degree of incapacity, was entirely detached from the government; and the prince, who finally succeeded to the throne in 1808, conducted with great circumspection and ability the whole of the public affairs. The Danes took part with the late empress of Russia in her war with the Turks, the immediate opponent of Denmark being Sweden, and, in 1801, acceded to the confederacy formed by the northern powers against the naval superiority of Great Britain, under the title of a Convention of Neutrality. But this league was quickly dissolved by the appearance of Lord Nelson in the Baltic, who, in the battle of the 2d April of that year, forced the line of defence formed by the Danish fleet before Copenhagen, and compelled the Danes to agree to a cessation of arms, in order to preserve their capital. In this short war they lost their islands in the West Indies, and the settlement of Tranquebar, on the coast of Coromandel. But the dispute between England and the northern powers being soon after amicably adjusted by a treaty, their foreign possessions were restored to them. We have noticed a second rupture between Denmark and Great Britain in 1807, and its fatal consequence to the commerce of the former. In fact it led also to the still more humiliating result of the dismemberment of Norway. For in the united efforts of the allies to crush the power of Buonaparte, this country and Russia both came into that arrangement with the crown prince of Sweden, which terminated in his taking possession of this old appendage of Denmark.

The language of Denmark is a dialect of the Teutonic, and bears a strong affinity to that of Norway: it is disagreeable to strangers on account of the drawing tone with which it is pronounced. Many words have been borrowed from the German, and the Dutch is often used in common discourse. French also is well understood, and frequently spoken by all classes.

DENNIS (John), once a critic of celebrity, the son of a tradesman in London, was born in 1657. He received the rudiments of his education at Harrow, and took his degree of A. B. at Caius College, Cambridge, after which he made the tour of Europe. On his return he became acquainted with Dryden, Wycherley, Congreve, and Southern; whose conversation inspiring him with a passion for poetry, and the belles lettres, diverted him from the exercise of any profession. His zeal, however, for the protestant succession recommended him to the duke of Marlborough, who procured him a place in the customs worth £120 per annum; which he enjoyed for some years, till, by want of economy, he was obliged to dispose of it to satisfy some pressing demands. In 1704 came out his favorite tragedy, *Liberty Asserted*; in which were so many strokes on the French nation, that he had worked himself into a persuasion, that the king of France would insist on his being delivered up, before he would consent to a peace; and when the congress was held at Utrecht, he is said

to have waited on his patron, the duke of Marlborough, to desire that no such article might be stipulated. The duke told him he really had no interest with the ministry; but had made no such provision for his own security, though he could not help thinking he had done the French as much injury as Mr. Dennis. Dennis, partly through a natural petulance of temper, and partly to procure the means of subsistence, was continually engaged in paper wars with his contemporaries. His attacks on distinguished authors were numerous, among whom were Addison, Steele, and Pope. In the close of his days a play was acted for his benefit, at the little theatre in the Hay-market; when Pope, notwithstanding his previous gross abuse of him, even wrote a prologue to the play. He died on the 6th of January, 1733. As a dramatic author, it was justly said of him by a wit, that he was the most complete instructor for a dramatic poet, since he could teach him to distinguish good plays by his precepts, and bad ones by his examples.

DENOMINATE, *v. a.* } Fr. *denominer* ;
DENOMINABLE, *adj.* } Span. *denominar* ;
DENOMINATION, *n. s.* } Ital. and Lat. *deno-*
DENOMINATIVE, *adj.* } *minare*; from *de-*
DENOMINATOR, *n. s.* } and *nomino*, *nomen*,
a name. To give name to. Denominable signifies, that may be named; denomination the name given: denominative, that which gives a name; characteristic: denominator, the giver of a name, or a particular number in the doctrine of fractions. See FRACTIONS.

DENON, Dominique Vivant, baron de, was born Feb. 4, 1747, at Chalons-sur-Saône, of a noble family. He was destined to study law at Paris, where he was favorably received in society; and his talent and inclination led him to devote himself to the arts. A comedy which he wrote, called the Good Father, gained him the favor of the ladies. His amiable manners made him a favorite of Louis XV., who appointed him *gentilhomme ordinaire* about his person. He was afterwards attached to an embassy at St. Petersburg, where Catherine, however, observed him with a jealous eye. Subsequently he was intrusted with a diplomatic mission to Switzerland. On this occasion, he drew Voltaire's likeness (engraved by St. Aubin), and the well known picture *Le Dejeûner de Ferney*. He then occupied, during seven years, a place in the French embassy at Naples. His residence in this city, and repeated visits to Sicily and Malta, gave him an opportunity of exercising his talent for drawing and engraving. Denon had the principal direction of the artists engaged in preparing the abbé St. Non's *Voyage Pittoresque de Naples et de Sicile*, and the text was chiefly taken from his journal. This elegant work appeared at Paris in 1788. The remainder of Denon's journal, relating to Sicily and Malta, appeared separately, in 1788. His career at Naples was interrupted by the death of the minister Vergennes, his patron, or, according to some, by the displeasure of the queen, Maria Caroline. But still his love for the study of the great masters detained him in Italy. He resided at Venice during several years, where he shone in the

circles of the countess Albrizzi, who was distinguished for her amiable and intelligent character, and loved to be surrounded by men of talent. Denon was not forgotten in her *Ritratti*, where she bestows the greatest praise on his character, his passion for the arts, his cheerfulness, and amiable disposition, and excuses the raillery with which he attacked the foibles of others. The observation and restraint, to which the revolution subjected Frenchmen in foreign countries, compelled him to leave Venice. After a short stay in Florence and Switzerland, he was obliged to return to France during the reign of terror; but he made himself agreeable to Robespierre, and was, in consequence, subsequently accused of devotion, at that time, to Jacobin principles. During this period he exercised himself in engraving. At last, he became acquainted with Buonaparte, and immediately united himself with him. He accompanied the general in his campaigns to Italy and Egypt, and Desaix to Upper Egypt. The work which was the result of this journey, was an addition to Denon's fame, particularly the engravings which ornament it (Paris, 1802, 2 vols. fol., and 3 vols. 12mo., without engravings). Denon, in this, has shown himself a very able artist. Nature, animate and inanimate, the monuments of centuries, and the Arabian flying through the desert, are represented with great fidelity. When he returned to Paris with Buonaparte, he was appointed general director of the museums, and all the works of art executed in honor of the French successes—monuments, coins, the erection of the triumphal pillar in the place de Vendôme, &c. He accompanied Napoleon in all his campaigns, and employed himself in drawing, and in selecting those masterpieces in the conquered countries, which were taken to Paris as trophies. In 1815, he was compelled to witness the restoration of the spoils. After the abdication of the emperor, he retained his office, but was deprived of it in 1815, in consequence of having joined Napoleon on his return from Elba. He retained, however, his place in the institute. From that time he lived retired, and the preparation of engravings and lithographs of his splendid collection of works of art, formed the occupation of his last years. He died at Paris, April 28, 1825. His mind was active to the last. Denon much resembled Voltaire in his old age. In 1826 appeared at Paris the *Description des Objets d'Art composant le Cabinet de feu M. le Bar. V. Denon*, in 3 vols. (Monuments antiques, tableaux et estampes). The cabinet was sold by auction.

DENOTE, *v. a.* } Lat. *denoto*, to mark;
DENOTATION, *n. s.* } to be a sign of; to be-
 token; to show by signs: the act of denoting; a
 symptom

DENOUNCE, *v. a.* } Fr. *denoncer*; Span.
DENOUNCER, *n. s.* } *denunciar*; Ital. *denon-*
DENOUNCEMENT. } *ciare*; Lat. *denunciare*,
 from *de* against, and *nuncio*, to carry orders. To
 threaten or impugn by public or open proclama-
 tion. Denouncement is the proclamation made.

DENSE, *adj.* } Lat. *densus*, close; com-
DENSITY, *n. s.* } pact; approaching to so-
 lidity.

DENSITY, denotes vicinity or closeness of particles; but in mechanical science, it is used as a term of comparison, expressing the proportion of the number of equal molecule, or the quantity of matter in one body to the number of equal molecule in the same bulk of another body. Density, therefore, is directly as the quantity of matter and inversely as the magnitude of the body. Since it may be shown experimentally, that the quantities of matter, or the masses in different bodies, are proportional to their weights; of consequence the density of any body is directly as its weight, and inversely as its magnitude; or, the inverse ratio of the magnitudes of two bodies, having equal weights, in the same place, constitutes the ratio of their densities.

DENSHIRE, *v. a.* A barbarous term of husbandry.

DENTAL, *adj. & n. s.* } From Lat. *dentalis*,
DENTICULATION, *n. s.* } *dens, dentis*, a tooth.
DENTICULATED, *adj.* } Dental is, relating
DENTIFRICE, *n. s.* } to the teeth, and the
DENTISE, *v. a.* } name of a small
DENTIST, *n. s.* } shell-fish: denticu-
DENTITION. } lated, being set with
 teeth, like a saw: dentifrice, a tooth powder:
 dentise, to renew the teeth; dentition being the
 corresponding substantive: and dentist, a modern
 word for the profession of healing, preserving,
 and drawing teeth.

DENTALIUM, in natural history, a shell-fish belonging to the order of *vermes testacea*. The shell consists of one tubulous straight valve, open at both ends, and not divided into chambers. There are twelve species, distinguished by the angles, striae, &c., of their shells.

DENTARIA, tooth-wort, or tooth-violet, in botany, a genus of the *siliquosa* order, and *tetradynamia* class of plants; natural order, thirtieth, *siliquosæ*. The *siliqua* parts with a spring, and the *valvules* roll spirally backwards; the stigma is emarginated; the calyx closing longitudinally. There are five species, all of them hardy perennials; producing annual stalks twelve or eighteen inches high, adorned with many lobed leaves, and spikes of quadrupetalous cruciform flowers of a red or purple color. They delight in shady places, and are propagated either by seeds or parting the roots. The seeds may be sown in autumn or early in the spring, in a shady border of light earth; and when the plants are three inches high, they may be planted where they are to remain. The time for parting the roots is in October or November, or early in the spring.

DENTATUS (Curius), a renowned Roman general, whose virtues render him more memorable than his victories, flourished A. A. C. 272. He was thrice consul; conquered the Samnites, Sabines, and Lucanians; and gave each citizen forty acres of land, allowing himself no more. The ambassadors of the Samnites making him a visit, found him boiling turnips in a pipkin; upon which they offered him gold to come over to their interest: he told them his design was not to grow rich, but to command those who were so. He defeated Pyrrhus near Tarentum, and received the honour of a triumph.

DENTATUS (Sicinius), a hero of ancient Rome, of the plebeian order, who flourished about A. U. C. 300. When disputes ran high between the patricians and plebeians, concerning the Agrarian law, Dentatus addressed the people, and expatiated upon his achievements and his hardships. He had served his country in the wars forty years; he had been an officer thirty; first a centurion and then a tribune; he had fought in 120 battles, and by the force of his single arm had saved the lives of a multitude of his fellow citizens. He had gained fourteen civic, five mural, and eight golden crowns; besides eighty-three chains, sixty bracelets, eighteen gilt spears, and twenty-three horse-trappings, of which nine were for killing the enemy in single combat; and he had received forty-five wounds, all before, none behind. These were his honors; yet notwithstanding all this, he had never received any share of those lands which were won from the enemy, but continued to drag on a life of poverty and contempt, whilst others possessed those very territories which his valor had won, without any merit to deserve them, or ever having contributed to the conquest. The people unanimously demanded that the law might be passed, and that such high merit should not pass unrewarded. Some of the senators attempted to speak, but were overpowered by the cries of the people. At last a number of resolute young patricians rushing furiously amongst the crowd, broke the balloting urns, and dispersed the multitude. For this riot they were fined by the tribunes, but they gained their object for the time, by getting the Agrarian law postponed. Such was the justice of the Roman patricians, at one of the most virtuous periods of that celebrated republic.

DENTEELLA, in botany, a genus of the monogynia order, and pentandria class of plants: CAL. a five-parted perianth. with small subulated leaves; STAM. five short subulated filaments; ANTH. small; PERICARP. globular; CAPS. bilocular; SEED, egg shaped, and very numerous. Species one only, a native of New Caledonia.

DENTEELLI, *n. s.* Ital. Modillions.

The modillions, or *dentelli*, make a noble show by graceful projections. *Spectator*, No. 415.

DENTILES, or **DENTILS**, in architecture, an ornament in cornices bearing some resemblance to teeth, particularly used in the Ionic and Corinthian orders.

DENTISCALPRA, in surgery, an instrument for scouring yellow, livid, or black teeth; to which being applied, near the gums, it scrapes off the foul morbid crust.

DENTITION. See **ONTOLOGY**.

DENU'DE, *v. a.* } Lat. *denudo*, from *de*
DENU'DATE, *v. a.* } and *nudo* (*ne* and *duo*
DENU'ATION, *n. s.* } the root of *induo* to
(clothe). To strip; to make naked.

Till he has *denudated* himself of all incumbrances, he is unqualified. *Decay of Piety*.

Not a treaty can be obtained, unless we would *denude* ourselves of all force to defend us. *Clarendon*.

If in summer-time you *denude* a vine-branch of its leaves, the grapes will never come to maturity.

Ray on the Creation.

DENUNCIATION, *n. s.* } Lat. *denunciatio*.
DENUNCIA'TOR, *n. s.* } See **DENOUNCE**.
The act of denouncing; the proclamation of a threat; a public menacer.

In a *denunciation* or indiction of a war, the war is not confined to the place of the quarrel, but is left at large. *Bacon*.

Christ tells the Jews, that, if they believe not, they shall die in their sins; did they never read those *denunciations*? *Ward*.

Midst of these *denunciations*, and notwithstanding the warning before me, I commit myself to lasting *denunciations*. *Congreve*.

The *denunciator* does not make himself a party in judgment as the accuser does. *Ayliffe's Parerg*.

DENY, *v. a.* } Fr. *nier*; Span. *denegar*;
DENI'AL, *n. s.* } Ital. and Lat. *negare*; from
DENI'ER, } Lat. *ne* and *ago*, to refuse to
do. To refuse; contradict; and hence to disregard; denounce.

If wo *denyen* he schal *denye* us; if we hileeuen not he dwellith feithful he wai not *denye* himsilff.

Wiclif, 2 Tymo. 2.

It shall be therefore a witness unto you, lest you *deny* your God. *Joshua xxiv. 27*.

And therfor, though he had thus made a realme, holy Scripture *denyid* to cal hym a kyng. *Fortesque*.

The *denial* of landing, and hasty warning us away, troubled us much. *Bacon*.

My young boy

Hath an aspect of intercession, which

Great nature cries—*deny* not. *Shakespeare*.

Here comes your father; never make *denial*:

I must and will have Catherine to my wife. *Id.*

It may be I am esteemed by my *denier* sufficient of myself to discharge my duty to God as a priest, though not to men as a prince. *King Charles*.

How unworthy is he of life, who with the same breath that he receives, denies the Giver of it.

Bishop Hall. Contemplations.

The negative authority is also *deniable* by reason.

Browne.

Ah, charming fair, said I,

How long can you my bliss and yours *deny*?

Dryden.

We may *deny* God in all those acts that are capable of being morally good or evil: those are the proper scenes in which we act our confessions or *denials* of him. *South*.

The best sign and fruit of *denying* ourselves, is mercy to others. *Spratt*.

Our Saviour assures us, that if a tender mother cannot deny the son of her love any reasonable request, much less will God *deny* his Holy Spirit to them that ask him. *Clarke's Sermons*.

No man more impudent to *deny*, where proofs were not manifest; no man more ready to confess, with a repenting manner of aggravating his own evil, where *denial* would but make the fault fouler.

Sidney.

By the word *Virtue* the affirmer intends our whole duty to God and man, and the *denier* by the word *Virtue* means only courage, or, at most, our duty towards our neighbour, without including the idea of the duty which we owe to God. *Watts*.

If you had been contented to assist him indirectly, without a notorious *denial* of justice, or openly insulting the sense of the nation, you might have satisfied every duty of political friendship. *Junius*.

It has been asserted, that, if you alter her symbols, you alter the being of the church of England. This, for the sake of the liberty of that church, I must absolutely *deny*. *Burke*.

I have gnashed
My teeth in darkness till returning morn,
Then cursed myself till sun-set;—I have prayed
For madness as a blessing—'tis denied me. *Byron.*

DENYS (St.) a town of France, in the department of Paris, famous for a magnificent church, built by king Dagobert, in 632; in which were the tombs of many of the French kings, of the constable Guesclin, and of marshal Turenne. In the treasury, among other curiosities, were the swords of St. Lewis, and the Maid of Orleans, and the sceptre of Charlemagne. The abbey of the Benedictines, a magnificent piece of modern architecture, has more the appearance of a palace than a convent. In 1793 the republican populace broke into the royal tombs, and greatly dilapidated the buildings. In 1806 Bonaparte caused them to be repaired, selected the church as the burying-place for his own family, and founded a chapter here of ten canons, which the Bourbons have retained with some modifications. The late prince of Condé has been interred here since the return of Louis XVIII. St. Denys is seated on the river Crould, near the Seine, five miles north of Paris, and contains 6000 inhabitants.

DEOBSTRUCT, *v. a.* } From *de* privative,
DEOBSTRU'ENT, *adj.* } and **OBSTRUCT**,
which see. To clear away obstacles; deobstruent
is, having the power to remove obstructions.

It is a singular good wound-herb, useful for *deobstructing* the pores of the body.

More's Antidote against Atheism.

Such as carry off the fæces and mucus, *deobstruct* the mouth of the lacteals, so as the chyle may have a free passage into the blood. *Arbutnot on Diet.*

All sopes are attenuating and *deobstruent*, resolving viscid substances. *Id. on Aliments.*

DEODAND, *n. s.* Lat. *Deo dandum*. A thing given or forfeited to God.

Deodands are forfeitures which the ignorance and superstition of ancient times introduced and called by the name of *deodands*, from the application of them to pious uses. *Burn's Justice.*

D'EON (the Chevalier), born in 1728, at Tonnere, in Burgundy, of a respectable family, is principally distinguished for consenting to appear half his life as a woman. He received a liberal education; and, becoming an orphan, the Prince de Conti procured him a commission as a cornet of dragoons. He was employed in 1755 on a mission to Petersburg, after which he joined his regiment, and served with considerable credit in the campaign of 1762, as aid-de-camp to Marshal Broglie. The year following he was invested with the order of St. Louis, and accompanied the duke de Nivernois to England as secretary. On the duke's leaving England, D'Eon remained in the character of minister plenipotentiary, until he was superseded by the count de Guerchy, to whom he was appointed secretary. At this arrangement he was very indignant, and published in revenge an account of the negotiations in which he had been engaged; wherein he stigmatized the conduct of the count. He was prosecuted by de Guerchy for a libel in the Court of King's Bench, in July, 1764, and being found guilty absconded, and was outlawed.

In 1771 doubts were entertained concerning his sex, and bets were laid to a great amount that D'Eon was a woman. In one instance this produced an action at law, that ended in a nonsuit. The chevalier in the mean time returned to France, where he assumed (compulsorily it is said) the female dress, but for what reason exactly has never been ascertained; his conduct in this respect was certainly sanctioned by his court, which continued his pension, and suffered him to retain the cross of his order.

In 1785 D'Eon came to England, where, still appearing as a woman, he gave lessons in fencing; but when the Revolution deprived him of his pensions, he presented in June 1792 a petition to the National Assembly, in which he complained of being obliged to wear a cap and petticoats, and asked permission to resume his military uniform. His petition remained unnoticed. He now again sought an asylum in London, where he passed the latter part of his life in poor circumstances; and died in New Millman-street, May 21st, 1810. His confessor, father Elysée, discovering that the chevalier was of the male sex, after his decease invited some medical and other gentlemen to examine the corpse. He was interred in St. Pancras church-yard, where he is registered, 'Charles Genevieve Louise Auguste Andre Timothee D'Eon de Beaumont.' He is said to have been the author of *L'Espion Chinois*, 6 vols. 12mo.; *Loisirs*, 13 vols. 8vo.; *Lettres, Mémoires, et Negotiations particulières*.

DEOPIPLATE, *v. a.* Lat. *de* and *oppilo*. To clear a passage; to free from obstructions.

Though the grosser parts be excluded again, yet are the dissoluble parts extracted, whereby it becomes effectual in *deopiplations*. *Browne's Vulgar Errors.*

A physician prescribed him a *deopiplative* and purgative apozem. *Harvey.*

DEOSCUATION, *n. s.* Lat. from *de* and *osculum* (*os, oris*, the mouth). Kissing.

We have an enumeration of the several acts of worship required to be performed to images, viz. processions, genuflections, thurifications, and *deosculations*. *Stillingfleet.*

DEPAINT, *v. a.* or **DEPEINCT**, as Spenser also writes it. Fr. *depeint*; *de*, and **PAINT**, which see. To picture; to describe by colors; to show by resemblance.

He did unwilling worship to the saint,
That on his shield *depainted* he did see. *Spenser.*

The red rose meddled with the white y fere,
In either cheek *depeincten* lively here. *Id.*

Such ladies fair would I *depaint*.

In roundelay, or sonnet quaint. *Gay.*

DEPART, *v. a.* & *n. & n. s.* } Fr. *departir*;
DEPARTER, } Span. *partirse*;
DEPART'ING, *n. s.* } It. *partisi*; from
DEPART'MENT, } Lat. *pars, partis*;
DEPART'URE. } a part; Heb.

פָּרַט (to divide). To separate; to part. As a neuter verb, to quit a place, taking from after it; to desert; to fall away; to be lost; to die; hence to desist from a practice and to revolt. *Departing* and *departure* both express the act of going away, and abandoning, or death. *Department*

is principally a continental division of territory, but has also a general application.

And alle folkis schulen be gederid bfore him ; and he schal *departe* hem atwynne, as a *scheperde departith* schep fro kid. *Wiclif. Matt. 25.*

I N. take thee N. to my wedded wife, to love and to cherish, till death us *depart*.

Old Family Prayer Book, (1661).

As her soul was in *departing* ; for she died.

Gen. xxxv. 18.

They *departed* quickly from the sepulchre, with fear and great joy, and did run to bring his disciples word. *Matt. xxviii.*

Lord, now lettest thou thy servant *depart* in peace, according to thy word. *Luke xxix.*

The chymists have a liquor called water of *de part*, *Bacon.*

He, which hath no stomach to this fight, Let him *depart* ; his passport shall be made.

Shakspeare.

As you wish Christian peace to souls *departed*, Stand these poor people's friend. *Id.*

When your brave father breathed his latest gasp, Tidings, as swiftly as the post could run, Were brought me of your loss and his *depart*.

Id. Henry VI.

You've had dispatch in private by the consul ; You are willed by him this evening To *depart* Rome. *Ben Jonson.*

What besides

Of sorrow, and dejection, and despair, Our frailty can sustain, thy tidings bring ; *Departure* from this happy place. *Milton.*

His majesty prevailed not with any of them to *depart* from the most unreasonable of all their demands. *Clarendon.*

The fear of the Lord, and *departure* from evil, are phases of like importance. *Tillotson.*

And couldst thou leave me, cruel, thus alone ; Not one kind kiss from a *departing* son ! No look, no last adieu ! *Dryden.*

Happy was their good prince in his timely *departure*, which barred him from the knowledge of his son's miseries. *Sidney.*

The Roman fleets, during their command at sea, had their several stations and *departments* ; the most considerable was the Alexandrian fleet, and the second was the African. *Arbuthnot.*

The gentlemen, his particular friends, in various *departments* of ministry, &c.

Burke. Character of Lord Chatham.

For a *departing* being's soul

The death-hymn peals, and the hollow bells knoll. *Byron.*

DEPARTMENT. This word was adopted by the national assembly of France instead of province, when the ancient provinces of that kingdom were divided into departments, of which, including Corsica, there were eighty-three. These departments were much more equal in point of extent than the provinces ; some of the old extensive provinces being divided into four or five departments, whilst some of the smaller ones constitute exactly one, and in some instances two provinces are included in one department. Each department has been subdivided into districts, and each district again into cantons.

DEPARTURE, in navigation, is the easting or westing of a ship in respect of the meridian :

departed or sailed from ; or it is the difference of longitude, either east or west, between the present meridian the ship is under, and that where the last reckoning or observation was made. This *departure*, any where but under the equator, must be counted according to the number of miles in a degree proper to the parallel the ship is under. The *departure*, in plane and Mercator's sailing, is always represented by the base of a right-angled plane triangle, where the course is the angle opposite to it, and the distance sailed is the hypotenuse ; the perpendicular or other leg being the difference of latitude. And then the theorem for finding it is always this : as radius to the sine of the course ; so is the distance sailed, to the *departure* sought.

DEPASTURE, *v. a.* Lat. *depascor* ; *de* and *pasco*, from Gr. *paō*. To feed ; to eat up.

They keep their cattle, and live themselves, in bodies pasturing upon the mountains, and removing still to fresh land, as they have *depastured* the former. *Spenser.*

DEPAUPERATE, *v. a.* Lat. *depaupero* ; *de* and *pauper*. To make poor ; to impoverish ; to consume.

To represent God in a carved stone, or a painted table, does *depauperate* our understanding of God, and dishonours him below the painter's art. *Bp. Taylor.*

Great evacuations, which carry off the nutritious humours, *depauperate* the blood. *Arbuthnot.*

DEPECTIBLE, *adj.* Lat. *depecto*. Tough ; clammy ; tenacious ; capable of being extended.

It may be also, that some bodies have a kind of lentor, and are of a more *depectible* nature than oil, as we see it evident in coloration ; for a small quantity of saffron will tint more than a very great quantity of brazil or wine. *Bacon.*

DEPEND', *v. a.*

DEPEND'ANCE, *n. s.*

DEPEND'ANT, *adj. & n. s.*

DEPEND'ENCE,

DEPEND'ENCY,

DEPEND'ENT, *adj. & n. s.*

down, or from ; hence, to be connected with, so as to be subject to the will of, or be supported by, another ; and to be in suspense, whether of interest or attention. Dependance and dependence, the one from the older French and the other from the Latin verb, are both used in the literal as well as figurative sense.

On God, as the most high, all inferior causes in the world are *dependent*. *Hooker.*

Never be without money, nor *depend* upon the courtesy of others, which may fail at a pinch. *Bacon.*

Never was there a prince bereaved of his *dependancies* by his council, except where there hath been either an over-greatness in one counsellor, or an over-strict combination in divers. *Id.*

By no means be you persuaded to interpose yourself in any cause *depending*, or like to be *depending*, in any court of justice. *Id.*

We work by wit and not by witchcraft ;

And wit *depends* on dilatory time. *Shakspeare.*

Her madness hath the oddest frame of *sense* ;

Such a *dependency* of thing on thing,

As ne'er I heard in madness. *Id.*

A great abatement of kindness appears as well in the general *dependants*, as in the duke himself also, and your daughter. *Shakespeare.*

What shalt thou expect,
To be *depend* on a thing that leans? *Id.*

How *dependant* and servile is the life of man, that cannot either want one element, or endure it corrupted. *Bishop Hall. Contemplations.*

For a six-clerk a person recommended a *dependant* upon him, who paid six thousand pounds ready money. *Clarendon.*

From the frozen beard
Long icicles *depend*, and crackling sounds are heard. *Dryden.*

They slept in peace by night,
Secure of bread, as of returning light;
And with such firm *dependance* on the day,
That need grew pampered, and forgot to pray. *Id.*

Every moment we feel our *dependance* upon God, and find that we can neither be happy without him, nor think ourselves so. *Tillotson.*

In all sorts of reasoning, the connexion and *dependance* of ideas should be followed, till the mind is brought to the source on which it bottoms. *Locke.*

We speak of the sublunary worlds, this earth, and its *dependencies*, which rose out of a chaos about six thousand years ago. *Burnet's Theory.*

The expectation of the performance of our desire, is that we call *dependance* upon him for help and assistance. *Stillingfleet.*

There is a chain let down from Jove,
So strong, that from the lower end,
They say, all human things *depend*. *Swift.*

The judge corrupt, the long *depending* cause,
And doubtful issue of misconstrued laws. *Prior.*

The direful monster was afar descried,
Two bleeding babes *depending* at her side. *Pope.*

But if you're rough, and use him like a dog,
Depend upon it—he'll remain incog. *Addison.*

We are indigent, defenceless beings; the creatures of his power, and the *dependents* of his providence. *Rogers.*

This is not like the tribute which earthly kings exact; who as much *depend* upon their subjects for the support of their power, as their subjects do upon them for the protection of their property. *Mason.*

Thus happiness *depends*, as nature shows,
Less on exterior things than most suppose. *Cowper.*

MAN. Think'st thou existence doth *depend* on time?
It doth; but actions are our epochs, *Byron.*

DEPERDITION, *n. s.* Lat. *deperdo*; *de* and *perdo*; Gr. *περδω*; to lose or waste. Loss; destruction.

It may be unjust to place all efficacy of gold in the non-omission of weights, or *deperdition* of any ponderous particles. *Browne.*

DEPHLEGGM, or } Low Lat. *de-*
DEPHLEG'MATE, *v. a.* } *phlegmo*. To clear
DEPHLEG'MEDNESS, *n. s.* } from phlegm, or
aqueous insipid matter.

We have sometimes taken spirit of salt, and carefully *dephlegmed* it. *Boyle.*

In divers cases it is not enough to separate the aqueous parts by *dephlegmation*; for some liquors contain also an unsuspected quantity of small corpuscles, of somewhat an earthy nature, which, being associated with the saline ones, do clog and blunt them, and thereby weaken their activity. *Id.*

The proportion betwixt the coralline solution and

the spirit of wine, depends much upon the strength of the former liquor, and the *dephlegmedness* of the latter. *Id.*

DEPHLOGISTICATED AIR. See OXY.

DEPICT; Lat. *depingo*, *depictus*, from *de* and *pingo*, *pictus*; to paint; describe.

The cowards of Lacedemon *depicted* upon their shields the most terrible beasts they could imagine.

Taylor.

When the distractions of a tumult are sensibly *depicted*, every object and every occurrence are so presented to your view, that, while you read, you seem indeed to see them. *Felton.*

In a cottage by night may I pass the soft time,

In the field and the meadows all day;
With the wife of my heart, whose charms, in their prime,

Depict her as blooming as May. *Brewerwood.*

DEPILATORY, *n. s.* } Lat. *de* privative
DEPIL'IOUS, *adj.* } and *pilus*, the hair.

That which takes off the hair. Without hair.

This animal is a kind of lizard, or quadruped, corticated and *depilous*; that is, without wool, fur, or hair. *Browne.*

DEPILATORY MEDICINES, those applied to take off the hair; such are lime, and other caustic substances, which ought to be used with great caution. Unless they destroy the skin, the roots of the hair remain unaffected, and it will grow again.

DEPLETION, *n. s.* Lat. *depleo*, *depletus*. The act of emptying.

DEPLORE', *v. a.* } Fr. *deplorer*; Sp. and
DEPLOR'ABLE, *adj.* } Port. *deplorar*; It. and
DEPLOR'ABLENESS, *n. s.* } Lat. *deplorare*, from
DEPLOR'ABLY, *adv.* } *de* and *ploro*, to weep.
DEPLOR'ATE, } To lament; mourn;
DEPLOR'ATION. } bemoan; deplorable,

and deplorate, lamentable; that which is to be bemoaned.

This was the *deplorable* condition to which the king was reduced. *Clarendon.*

The bill of all weapons gives the most ghastly and *deplorable* wounds. *Temple.*

But chaste Diana who his death *deplored*,
With Æsculapian herbs his life restored. *Dryden.*

The case is then most *deplorate* when reward goes over to the wrong side. *L'Estrange.*

Notwithstanding all their talk of reason and philosophy, God knows, they are *deplorably* strangers to them. *South.*

It will be considered in how *deplorable* a state learning lies in that kingdom. *Swift.*

A third's all pallid aspect offered more
The traits of sleeping sorrow, and betrayed,
Through the heaved breast, the dream of some far shore

Beloved and *deplored*. *Byron.*

DEPLUME', *v. a.* } Lat. *deplumatio*. To
DEPLUM'ATION, *n. s.* } pluck; offend. A
pluming, or plucking off the feathers: in surgery, a swelling of the eyelids, accompanied with the fall of the hairs from the eye-brows.

DEPONE', *v. a.* } Lat. *depono*, *de* and *pono*,

DEPO'NENT, *n. s.* } to lay down. To state on oath, in law. To pledge or adventure any thing on some scheme of success. A particular kind of verb. See the extract.

In chancery—such witness (who answers interrogatories), is called a *deponent*. Cowell.

On this I would *depose*

As much as any cause I've known. Hudibras.

Such verbs as have no active voice are called *deponents*, and generally signify action only; as *fateor*, I confess. Clarke's Latin Grammar.

DEPOPULATE, *v. a. & v. n.* } Fr. *dé-*
DEPOPULATOR, *n. s.* } *peupler*; It.

DEPOPULATION, } *dispopolare*,
from Lat. *depopulare* (*de* and *populo*), to ravage. To destroy the people of a country; to ravage. As a neuter verb, to become dispeopled. A depopulator is a destroyer or waster of inhabited countries.

He turned his arms upon unarmed and unprovided people, to spoil only and *depopulate*, contrary to the laws both of war and peace. Bacon.

Where is this viper,
That would *depopulate* the city, and
Be every man himself? Shakspeare.

How didst thou grieve then, Adam! to behold
The end of all thy offspring, and so sad
Depopulation! thee another flood,
Of tears and sorrow a flood, thee also drowned
And sunk thee as thy sons. Milton

A land exhausted to the last remains
Depopulated towns and driven plains. Dryden.

Grim death in different shapes
Depopulates the nations. Philips.

Remote thou hearest the dire effect of war,
Depopulation. Id.

This is not the place to enter into an enquiry
whether the country be *depopulating*. Goldsmith.

DEPORT, *v. a. & n. s.* } Fr. *deporter*, *de-*
DEPORTMENT, *n. s.* } *portement*; Ital. *de-*
portamento, from Lat. *portare*; Gr. *φορῶν*,
to carry one's self. To behave, demean; generally
used with a compound pronoun.

I will but sweep the way with a few notes, touching
the duke's own *deportment* in that island. Wotton.

She Delia's self
In gait surpassed and goddess-like *deport*. Milton.

The coldness of his temper, and the gravity of his
deportment, carried him safe through many difficulties,
and he lived and died in a great station. Swift.

Let the ambassador *deport* himself in the most
graceful manner before a prince. Pope.

What's a fine person, or a beauteous face,
Unless *deportment* gives them decent grace?
Blessed with all other requisites to please,
Some want the striking elegance of ease. Churchill.

DEPORTATION, Lat. *deportatio*, of *de* and
portare.

An abjuration, which is a *deportation* for ever into
a foreign land, was anciently with us a civil-death. Ayliffe.

DEPOSE, *v. a.* } Fr. *deposer*; Ital. *deporre*;
DEPOSING, *n. s.* } Span. *deponer*; Lat. *depo-*
DEPOSITION, } *ponere*, *deponitus*, from *de* and
pono, to place. Hence, to swear, because by so
doing a man deposits or pledges his faith to the
truth of his declaration. To lay down, lodge;
to degrade, deprive of; and generally, to lay
aside, lay up.

First, of the king; what shall or him become?
The duke yet lives that Henry shall *depose*. Shakspeare.

There shouldst thou find one heinous article,
Containing the *deposing* of a king. Id.

According to our law,
Depose him in the justice of his cause. Id.

Love straight stood up and *deposed*, a lie could not
come from the mouth of Zelmane. Sidney.

Its shores are neither advanced one jot farther into
the sea, nor its surface raised by additional mud *de-*
posed upon it by the yearly inundations of the Nile. Woodward.

If you will examine the veracity of the fathers by
those circumstances usually considered in *depositions*,
you will find them strong on their side. Sir K. Digby.

A witness is obliged to swear, otherwise his *deposition*
is not valid. Ayliffe.

His [James II.] conduct and the passage of Charles
the Second's reign, might rankle still at the hearts of
some men, but could not be set to account among the
causes of his *deposition*. Bolingbroke.

DEPOSITE, *v. a. & n. s.* } For etymon,
DEPOSITARY, } see DEPOSE. To
DEPOSITORY, } lay up. The
place of deposit is a depository; and a person in
trust is a depository.

I gave you all.

—Made you my guardians, my *depositaries*,
But kept a reservation to be followed
With such a number. Shakspeare.

The Jews themselves are the *depositories* of all the
prophecies which tend to their own confusion. Addison.

They had since Marsellies, and fairly left it: they
had the other day the Valtoline, and now have put it
in *deposit*. Bacon.

God commands us to return as to him, to the poor,
his gift, out of mere duty and thankfulness: not to
deposit them with him, in hopes of meriting by them. Sprat.

The eagle got leave here to *deposit* her eggs. L'Estrange.

The difficulty will be to persuade the *depositing* of
those lusts, which have, by I know not what fascina-
tion, so endeared themselves. Decay of Piety.

DEPOSITION. The proof in the high court of
chancery is by the depositions of witnesses; and
the copies of such regularly taken and published,
are read as evidence at the hearing. For the
purpose of taking deposition in or near London,
there is an examiner's office appointed; but for
such as live in the country, a commission to
examine witnesses is usually granted to four
commissioners, two named on each side, or any
three or two of them to take the depositions
there. And if the witnesses reside beyond sea,
a commission may be had to examine them there
upon their own oaths; and if foreigners, upon the
oaths of two skillful interpreters. The commis-
sioners are sworn to take the examinations truly,
and without partiality, and not to divulge them
till published in the court of chancery; and
their clerks are also sworn to secrecy. The wit-
nesses may be compelled, by a process of sub-
pœna, as in courts of common law, to appear
and submit to examination; and when their de-
positions are taken, they are transmitted to the

court with the same care that the answer of a defendant is sent. 3 *Black.* 455.

DEPOT denotes any particular place in which military stores are deposited for the use of the army. In a more extensive sense it signifies several magazines collected together for that purpose. It is likewise applied to any particular fort or place, appropriated for the reception of recruits to detached parties, belonging to different regiments. In England, the barracks near Maidstone are depôts for the British cavalry, and Chatham is allotted to the infantry. In the time of war the greatest attention should be given to preserve the several depôts which belong to the fighting army. Hence the line of operation should invariably be connected with them; or rather no advance should be made upon that line, without the strictest regard being had to the one of communication.

DEPÔT is again used to denote a particular place at the tail of the trenches, out of the reach of the cannon of the place attacked; where the troops generally assemble, when a sally from the besieged is suspected.

DEPÔT also means a temporary magazine for forage, for fascines, gabions, tools for mining, &c., with such other articles necessary for the support of an army, or for carrying on a siege.

DEPRAVE, *v. a.* } Fr. *depraver*; Span.
DEPRAYER, *n. s.* } and Portug. *depravar*;
DEPRAVATION, } Ital. and Lat. *deprava-*
DEPRAVEDNESS, *n. s.* } *vurr*, from *de* and *prava-*
DEPRAVEMENT, } *rus*, crooked. To corrupt,
DEPRAVITY. } vitiate, calumni-

ate: he who corrupts is a depraver; depravement, depravation, depravedness, and depravity a corrupt, vitiated state; depravation is used by Shakspeare for calumny.

We admire the providence of God in the continuance of scripture, notwithstanding the endeavours of infidels to abolish, and the fraudulence of heretics to deprave, the same. *Hooker.*

Who lives that's not depraved, or depraves?
Shakspeare.

Stubborn critics are apt, without a theme
For depravation, to square all the sex. *Id.*

What sins do you mean? Our original depravedness, and proneness of our eternal part to all evil.

Hammond.

But from me what can proceed
But all corrupt, both mind and will depraved?
Milton.

He maketh men believe, that apparitions are either deceptions of sight, or melancholy depravements of fancy. *Browne.*

A taste which plenty does deprave,
Loaths lawful good, and lawless ill does crave.
Dryden.

We have a catalogue of the blackest sins that human nature, in its highest depravation, is capable of committing. *South.*

This will be equivalent to the proposal made by Boileau to the academicians, that they should review all their polite writers, and correct such impurities as might be found in them, that their authority might not contribute at any distant time to the depravation of the language. *Johnson. Plan of Dictionary.*

If this be so, there must be a cause or causes for such a depravity in our common people. *Franklin.*

DEPRECATE, *v. a.* } From Lat. *deprecari*,
DEPRECATION, *n. s.* } from *de* and *precor*,
DEPRECATIVE, *adj.* } to pray. To pray
DEPRECATORY, *adj.* } against: to beg off, or
DEPRECATOR, *n. s.* } from, apologetic.

Bishop Fox understanding that the Scottish king was still discontent, being troubled that the occasion of breaking off the truce should grow from his men, sent many humble and *deprecatory* letters to the Scottish king to appease him. *Bacon.*

I, with leave of speech implored,
And humble *deprecation*, thus replied. *Milton.*

Sternutation they generally conceived to be a good sign, or a bad one; and so, upon this motion, they commonly used a gratulation for the one, and a *deprecation* for the other. *Browne.*

In *deprecating* of evil, we make an humble acknowledgment of guilt, and of God's justice in chastising, as well as clemency in sparing, the guilty. *Grew.*

Poverty indeed, in all its degrees, men are easily persuaded to *deprecate* from themselves. *Rogers.*

The judgments which we would *deprecate* are not removed. *Smalridge.*

The Italian entered them in his prayer: amongst the three evils he petitioned to be delivered from, he might have *deprecat* greater evils.

Baker's Reflections on Learning.

DEPRECIATE, *v. a.* } Fr. *deprecier*, from
DEPRECIATION, *n. s.* } Lat *de* priv. and *pretium* (from Gr. *πρᾶν*, a seller) an equivalent given to the seller for his goods. To bring down in price or value; the act of lessening the value of, or underrating a thing.

They presumed upon that mercy, which, in all their conversations, they endeavour to *depreciate* and misrepresent. *Addison.*

As there are none more ambitious of fame, than those who are coiners in poetry, it is very natural for such as have not exceeded in it to *depreciate* the works of those who have. *Spectator.*

It has been held, indeed, by some of the judges (but certainly not by all of them, or at least not upon all occasions), that juries in favour of life, may fairly, in fixing the value of the property, take into their consideration the *depreciation* of money, which has taken place since the statutes passed.

Sir S. Romilly.

DEPREDATE, *v. a.* } Fr. *depred*, from
DEPREDATION, } Lat. *de* and *predor*, to
DEPREDATOR. } rob. To pillage, spoil; devour. The substantives plainly follow this.

It maketh the substance of the body more solid and compact, and so less apt to be consumed and *depredated* by the spirits. *Bacon.*

It is reported that the shrub called our Lady's Seal, which is a kind of briony, and coleworts, set near together, one or both will die: the cause is for that they be both great *depredators* of the earth, and one of them starveth the other. *Bacon.*

The land had never been before so free from robberies and *depredations* as through his reign. *Wotton.*

Were there not one who had said, Hitherto shalt thou come, and no farther; we might well expect such vicissitudes, such clashing in nature, and such *depredations* and changes of sea and land. *Woodward.*

DEPREHEND, v. a. } Lat. *deprehendo*,
DEPREHENSION. } from *de* and *prehendere*, to take. To catch; to take unawares; to take in the fact.

Who can believe men upon their own authority, that are once *deprehended* in so gross and impious an imposture? *More.*

That wretched creature, being *deprehended* in that impiety, was held in ward. *Hooker.*

The motions of the minute parts of bodies, which do so great effects, are invisible, and incur not to the eye; but yet they are to be *deprehended* by experience. *Bacon.*

DEPRESS, v. a. & n. s. } Fr. *deprimer*; It.
DEPRESS'ION, } and Lat. *deprimere*,
DEPRESS'OR, } from *de* and *corsum*, down-
DEPRIMENT. } wards, and *primere*,
 to press;—Minsheu. To press or push down; hence to let fall; to humble. Depressor and depriment, in anatomy, are terms applied to muscles whose action is to depress the parts to which they adhere.

Depression of the nobility may make a king more absolute, but less safe. *Bacon.*

Bricks of a rectangular form, if laid one by another in a level row between supporters sustaining the two ends, all the pieces between will necessarily sink by their own gravity; and much more, if they suffer any *depression* by other weight above them. *Wotton.*

The same thing I have tried by letting a globe rest, and raising or *depressing* the eye, or otherwise moving it, to make the angle of a just magnitude. *Newton.*

Others *depress* their own minds, despond at the first difficulty, and conclude that the making any progress in knowledge is above their capacities. *Locke.*

Passion can *depress* or raise

The heavenly, as the human mind. *Prior.*

This mournful truth is every where confessed, Slow rises worth, by poverty *depressed*. *Johnson.*

DEPRIVE, v. a. } Fr. *priver*; Span. and
DEPRIVATION, n. s. } Port. *privar*; Ital. and
DEPRIVABLE, adj. } Lat. *privare*; from *de*
 and *privo*. To bereave or depossess; taking off after it; hence to hinder, to debar from. Deprivation has certain formal and legal applications; see below. Deprivable is that which may, in justice, be taken away.

God hath *deprived* her of wisdom, neither hath he imparted to her understanding. *Job*, xxxix. 17.

Most happy he,
 Whose least delight sufficeth to *deprive*
 Remembrance of all pains which him oppress. *Spenser.*

They gather that enjoy them, (the church's grants) possess them wrongfully, and are *deprivable* at all hours. *Hooker.*

A minister, *deprived* for inconformity, said, that if they *deprived* him, it should cost an hundred men's lives. *Bacon.*

He lamented the loss of an excellent servant, and the horrid manner in which he had been *deprived* of him. *Clarendon.*

From his face I shall be hid, *deprived*
 His blessed countenance. *Milton.*

Fools whose end is destruction, and eternal *deprivation* of being. *Bentley.*

Now wretched Oedipus, *deprived* of sight,
 Led a long death in everlasting night. *Pope.*

I have no hope of a future existence except that which is grounded on the truth of christianity; I wish not to be *deprived* of this hope. *Bishop Watson.*

DEPRIVATION, ECCLESIASTICAL, is of two kinds, viz. à beneficio, when for some crime a minister is for ever deprived of his living; and ab officio, when a minister is for ever deprived of his order. It is the same with deposition and degradation. It is usually for some heinous crime deserving death, and is performed by the bishop in a solemn manner. See **DEGRADATION.**

DEPTFORD, a town situated on the Thames, in the county of Kent, and partly in Surrey. It derives its name from a deep ford over the Thames, formerly used, but now cleared. It was generally known in ancient records by the name of Deptford Strond. Deptford is now a large and populous town, though it has no market, and is divided into Upper and Lower Deptford. It contains about 3000 houses, many of which are neat and well built, two churches, several meeting-houses, and two charity schools. The greatest support and consequence of Deptford arises from its excellent docks. Here the royal navy was formerly built and repaired. The storehouses, which form a square, have, in the last war, had several additional buildings: the whole yard covers thirty-one acres of ground, containing two wet docks, one single, the other double, three slips, a basin, and two ponds for masts, with the various manufactories for anchors, cables, masts, blocks, &c., and apartments for the numerous officers employed. Here the royal yachts are generally kept. Besides the national docks, there are several others belonging to snip-builders for merchants' vessels. Near the dock formerly stood Says-Court, where Peter the Great resided for some time, and in this yard he completed his knowledge of the practical part of naval architecture. The Red-house, on the north-west side of the dock, is a large collection of warehouses and storehouses for navy provisions. At Deptford, in 1515, was first formed the society of the Trinity House, by Sir Thomas Spert. There are annually relieved by this company about 3000 poor seamen, their widows and orphans, at the expense of £6000. The governors are invested with the power of examining the mathematical classes of Christ's Hospital, and the masters of his Majesty's ships; and have the appointment of all pilots; erecting and maintaining lighthouses, buoys, beacons, &c. Their business was formerly carried on in a hall in the parish of Deptford Strond; but it is now conducted in a spacious building near the Tower, erected in 1787. This town is four miles east of London.

DEPTH, n. s. Belg. *diepte*; Tent. *tieff*. See **DEEP**. The measure of deepness; hence a deep place; the sea, an abyss, a quiet place, or season; and, figuratively, obscurity and sagacity. The plural, depths, is very frequent in the received translation of the Bible.

The depths have covered them: they sank into the bottom as a stone. *Eccod.* xv. 5.

As for men, they had buildings in many places higher than the depth of the water. *Bacon.*

Thou spirit, —
As thou art wont, my prompted song, else mute,
And bear through height or depth of Nature's bounds.

Milton.

And in the depth of winter, in the night,
You plough the raging seas to coasts unknown.

Denham.

The false tides skim o'er the covered sand,
And seamen with dissembled depths betray.

Dryden.

or tho', in nature, depth and height

Are equally held infinite;
In poetry the height we know,
'Tis only infinite below.

Swift.

There are greater depths and obscurities in an elaborate and well written piece of nonsense, than in the most abstruse tract of school divinity.

Addison's Whig Examiner.

It is certainly a sign of great self-ignorance, for a man to venture out of his depth, or attempt any thing he wants opportunity or capacity to accomplish.

Mason.

DEPULSION, *n. s.* } Lat. *depulsio*. A beat-
DEPULSORY, *adj.* } ing or thrusting away.

DEPURE', *v. a.* } Fr. *depurer*; from

DEPURATE, *v. a. & adj.* } Lat. *depurgo*; de

DEPURATION, *n. s.* } and *purgo*. To

cleanse, purify. The verbs are synonymous, and the meaning of the derivatives is plain.

It produced plants of such imperfection and harmful quality, as the waters of the general flood could not so wash out or depure, but that the same defection hath had continuance in the very generation and nature of mankind.

Raleigh.

Brimstone is either used crude, and called sulphur vive; or is of a sadder color, and, after depuration, such as we have in magdeleons, or rolls of a lighter yellow.

Broune's Vulgar Errors.

Chemistry enabling us to depurate bodies, and in some measure to analyse them, and take asunder their heterogeneous parts, in many chemical experiments we may, better than in others, know what manner of bodies we employ.

Boyle.

Neither can any boast a knowledge depurate from the defilement of a contrary, within this atmosphere of flesh.

Glanville.

DEPUTE', *v. a.* } Fr. *deputer*; Dut. *depu-*
DEPUTATION, } *teren*; Span. and Port. *de-*
DEPUTY. } *putar*; Ital. and Lat. *depu-*

ture; to judge or choose; hence *deputatus*, a person chosen. To send another; to empower another to transact one's business. A deputy is a person so sent, generally or specially.

And Absolom said unto him, See thy matters are good and right, but there is no man deputed of the king to hear.

2 Sam.

Presbyters, absent through infirmity from their churches, might be said to preach by those deputies, who, in their stead, did but read homilies.

Hooker.

A man hath a body, and that body is confined to a place; but where friendship is, all offices of life are, as it were, granted to him and his deputy; for he may exercise them by his friend.

Bacon.

Cut me off the heads

Of all the favorites that the absent king

In deputation left behind him here,

When he was personal in the Irish war.

Shakspeare.

He looks not below the moon, but hath designed the regiment of sublunary affairs into sublunary deputies.

Broun.

He exerciseth dominion over them as the vicergerent and deputy of Almighty God.

Hale's Origin of Mankind.

The authority of conscience stands founded upon its vicegerency and deputation under God.

South's

And Linus thus, deputed by the rest,

The heroes welcome and their thanks expressed.

Roscommon.

A bishop, by deputing a priest or chaplain to administer the sacraments, may remove him.

Ayliffe's Parergon.

DEQUANTITATE, *v. a.* from Lat. *de* and *quantitas*. To diminish the quantity of.

This we affirm of pure gold; for that which is current, and passeth in stamp amongst us, by reason of its alloy, which is a proportion of silver or copper mixed therewith, is actually dequantitated by fire, and possibly by frequent extinction.

Broune's Vulgar Errors.

DERACINATE, *v. a.* Fr. *deraciner*, from *de* and *racine*, a root, from Lat. *radix*, *radicis*. To tear up by the roots.

Her fallow lees

The darnel, hemlock, and rank fumitory

Doth root upon; while that the culter rusts

That should deracinate such savagery.

Shakspeare.

DERAIGN', *v. a.* } See ARRAIGN. But
DERAIGN'MENT, or } Minshew says from either
DERAINMENT, *n. s.* } Fr. *desarroyer* or *des-*
ranger, to disorder, or Norman *defrene*, 'a
proofe of the deniall of a man's owne fact.' To
prove, or justify.

When the parson of any church is disturbed to demand tythes in the next parish by a writ of indicavit the patron shall have a writ to demand the advowson of the tythes being in demand: and when it is deraigned, then shall the plea pass in the court christian, as far forth as it is deraigned in the king's court.

Blount.

DERANGE', *v. a.* } Fr. *desranger*, to dis-
DERANGEMENT, *n. s.* } order. The quotation from Blount includes a curious explanation of this word. It is of modern introduction, as to its general, but now very common, application both to disordered minds and things.

In some places the substantive *deraignment* is used in the very literal signification which the French *disrayer*, or *desranger*; that is, turning out of course, displacing or setting out of order; as, *deraignment* or departure out of religion, and *deraignment* or discharge of their profession, which is spoken of those religious men who forsook their orders and professions.

Blount.

Most nations have adopted peculiar expressions, to signify the form or degree of *derangement* of intellect. The term *derangement*, which we have taken immediately from the French, and which means out of rank, or order, is metaphorically applied to the mind, to denote that its ideas are out of the rank, or order, generally preserved by intelligent beings.

Dr. Rees.

DERAY', *n. s.* Fr. *desrayer*. To turn out of the right way; 'tumult; disorder; noise; merriment;' and even 'solemnity,' says Dr. Johnson, adding, truly, 'not in use.'

DERBEND, or DERBENT, a town of Persia, said to have been founded by Alexander the Great, and once the residence of the celebrated caliph Haroun-al-Raschid. The Russians took it in the year 1722, and retained possession until

1735, when it was restored to the Persians. Afterwards it was subdued and possessed by Feth Ali. In the year 1796, the empress of Russia having declared war against the Persians, count Subow entered Daghestan, at the head of an army; having reconnoitred Derbend, he ordered an assault, but the town surrendered. The highest part of the town is crowned by a fort or citadel of a triangular figure. Many of the stones used are cubes of six feet, but the ramparts are so narrow that cannon are mounted only on the towers. The entrance to the town is through an ancient iron gate. There is a tradition in the neighbourhood that the empire of the Mahomedans is to be overthrown by a yellow infidel army, which shall enter by this gate. No stranger is, therefore, permitted to enter the fortress, and a tax is taken of all strangers at the gate before mentioned. The streets of Derbend are irregular, but the town is well supplied with water from a fine, but almost ruined, aqueduct. The inhabitants consist of various eastern tribes and Jews, and amount altogether to about 4000. It is a place of little trade, but a great quantity of saffron is cultivated in the neighbourhood, and the gardens are fine. To the north-east there are some graves covered with flag-stones above the natural size of man; and many curious tombs in the vicinity. One of these, some years ago, was found to contain undecayed bones of the natural dimensions, a battle-axe, shield, and spear. The walls are built with stones as hard as marble; and near it are the remains of a wall which reached from the Caspian to the Black Sea. It is seated near the Caspian Sea, at the foot of Mount Caucasus, in long $48^{\circ} 60' E.$, lat. $42^{\circ} 8' N.$, and is now the capital of the principality or khanship of Derbend. See below. It extends, on a declivity to the margin of the shore, full three miles, and is about half a mile wide. To the west is a passage leading into the mountains, which are possessed by barbarous independent tribes. Derbend is considered one of the gates of Persia, and its name signifies, in Persian, a locked door. It is surrounded by walls and towers of considerable strength.

DERBEND, a principality or khanship of Persia, bounded on the north by the river Derbak, or Kerebagh, on the south by the rivers Ker and Salian, on the east by the Caspian Sea, and on the west by the district of Talasseran. It extends about twenty miles in length by fifteen in breadth: it is mountainous and well watered. The soil is very fertile, wheat yielding twenty and rice forty fold. There are also fine grapes produced, but the wine is not good. Some silk and woollen manufactures are also carried on.

DERBEND, or DERBENT, a town of European Turkey, in the province of Romania, twenty miles north of Adrianople.

DERBY, or DERBYSHIRE, an inland county of England, situated nearly in the centre of the island, and at an almost equal distance from the eastern and western seas. It is bounded on the north by Yorkshire and part of Cheshire; on the east by Nottinghamshire; on the south by Leicestershire; and on the west by Staffordshire and Cheshire. Its form is extremely irregular; but probably the figure to which it approaches the

nearest is that of an inverted pyramid; this, however, is extremely arbitrary, owing to its uncommon indentations and projections. It is of considerable extent, being computed to be the twentieth in point of magnitude, and the nineteenth in point of population, of all the English counties. Its greatest length, in a direction S.S.E. to N.N.W. is about fifty-six miles and a half. Its greatest breadth, from E.N.E. to W.S.W., thirty-three miles. It contains about 972 square miles, or 622,080 statute acres. Here are six hundreds, one borough, eleven market towns, and 116 parishes. This county is in the diocese of Litchfield and Coventry, and the province of Canterbury, and is included in the midland circuit.

Prior to the Roman invasion, the site of the present county belonged to the Coritani. The Romans included it in the division named Flavia Cæsariensis; but during the time of the Anglo-Saxons it belonged to the kingdom of Mercia. The word Derby, from whence comes the name of the county, is of uncertain derivation. By the Saxons it was called Northworthig, and by the Danes Deoraby. The latter is obviously the source whence its modern name, and probably that of the river Derwent, is derived; but its precise meaning cannot now be ascertained.

The eastern and western districts, into which the Derwent naturally divides this county, are materially different, both in respect to the air, the face of the country, and the soil. The climate of the eastern division is healthy, temperate, and pleasant; but in the western district the air is much keener, and the state of the weather always more changeable. The face of the country presents, if not the most agreeable and pleasing, certainly the most varied and romantic scenery of any county in England. There is the most striking difference and contrast of features between the northern and southern parts; the former abounding with hill and dale. The country gradually rises until we come to the neighbourhood of Wirksworth, and then begins to assume that picturesque and sublime appearance which it continues to possess to its extremity. That chain of hills arises, which stretching northwards is continued in a greater or less breadth quite to the borders of Scotland, and forms a natural boundary between the east and west sides of the northern part of the kingdom. Its course in this county is inclined a little to the west. It spreads as it advances northerly, and at length fills up the whole of the north-west angle; also overflowing a little, as it were, towards the eastern parts. The hills are at first of small elevation; but, being in their progress piled one upon another, they form very elevated ground in the tract called the High Peak, though without any eminences which can rank among the loftiest mountains even of this island. The most considerable in height are the Axe-edge and the Kinder-scout mountains. Mr. Farey, in his admirable and comprehensive View of the Agriculture and Minerals of this county, has given an alphabetical list of the several mountains, hills, and eminences throughout Derbyshire, or in the borders of the adjoining counties, describing their situations, the strata on the top of each,

&c. These amount to upwards of 700 in number. This intelligent and truly scientific writer has also enumerated upwards of fifty of the principal narrow and rocky valleys or defiles with precipitous cliffs in and near to this county, describing their situations, the strata exhibited in their sides and bottoms, and the names of the most noted rocks, caverns, &c., in each. These lists are uncommonly curious and interesting. The High Peak is not, as many suppose, a high barren rock, but an extensive range of rather elevated ground, called the Peak Hundred. It is cultivated and populous.

The principal rivers of Derbyshire, beside the Derwent, are the Trent, the Dove, the Wye, the Errewash, and the Rother. The Derwent rises in the High Peak district, and leaves this county on the Leicestershire border near Wilne. The Trent enters the county from Staffordshire, a little south of Calton, and leaves it near Barton, on the confines of Leicestershire. The Dove rises a little south of Buxton, and, joining the Trent near Burton in Staffordshire, finally quits the county. The Wye, rising in the vicinity of Buxton, never leaves the county, but falls into the Derwent a few miles below Bakewell. The Errewash rises in the coal district near Alfreton, and falls into the Trent a few miles below its junction with the Derwent. The Rother rises near Chesterfield, and enters Yorkshire between Kilmarsh and Beighton. These rivers are well stocked with almost every kind of fresh-water fish. The Dove and the Trent have been long celebrated by Cotton, and still more by his invaluable friend, the pleasing and honest Isaac Walton, in his admirable book on angling. Nor has the Derwent received less honor from the pens of Darwin and Seward. This county is benefited by an extensive inland navigation. The principal canals are the following: the Grand Trunk from the Trent near Wilden-Ferry to the river Mersey near Runcorn-Gap. It was planned by the ingenious Mr. Brindley, and was begun on July 17th, 1766, and finished in May 1777. The Chesterfield Canal, another of Mr. Brindley's projects, extends from Chesterfield to the river Trent, at which it arrives a little below Gainsborough: its whole length being about forty-six miles. Langley Bridge, or Errewash Canal, extends from Langley Bridge to the Trent, opposite to the entrance of the Soar. Its length is about eleven miles. The Peak Forest Canal was completed in the year 1800. It extends about fifteen miles in length, besides a railway of six miles, from the Ashton-under-line Canal, near Duckensfield Bridge, to the basin and limekilns at Chapel-Milton. The railway, passing Chapel-en-le-Frith, leads to Loads-knowl limestone quarries in the Peak. Cromford Canal begins at Cromford, near Matlock, and joins the Errewash Canal at Langley Bridge: its length is about fourteen miles. Ashby-de-la-Zouch Canal, about fifty miles in length, joins the Coventry Canal at Marston Bridge, about two miles to the south of Nuneaton, and ends at Ashby-de-la-Zouch in Leicestershire. The Derby Canal commences in the Trent, at Swarkestone Bridge; and, crossing the Trent and Mersey Canal, terminates at Little Eaton, about three miles north

of Derby. The length of this branch is about eight miles and a half, with a rise of about twenty-nine feet. There is a railway branch of four miles and a half to the Smithy Houses and thence to the collieries near Derby. Another branch of this canal begins at Derby, and holds an easterly direction nearly parallel to the road leading to Nottingham, and finally joins the Errewash Canal between Long Eaton and Sandiacre: its length is eight miles and a half. This canal is forty-four feet wide at top, twenty-four at bottom, and five deep in the ebbest part.

There is an almost endless variety of soil in this county. In the northern parts very extensive peat-bogs exist. The soil in these districts consists chiefly of ligneous particles, being the roots of decayed vegetables mixed with argillaceous earth or sand, and a coaly substance derived from decayed vegetable matter. The surface presents nothing but the barren black moss, thinly covered with heath or ling. But in many parts of the Peak there is to be found what the inhabitants call a corn-loam, apparently consisting of a virgin earth impregnated with nitre. This soil is good; but the parts where it is found are counterbalanced by vast tracts of barren hills and mountains, whose sides present very little soil, being chiefly composed of rocks. In those parts of Derbyshire near the borders of Cheshire and Staffordshire these barren rocks are very high, bleak, and numerous. Indeed so uneven and rugged is almost all the road between Macclesfield in Cheshire and Buxton in this county, that it has been quaintly remarked to be—

Up hill to Buxton all the way,
And up hill all way back.

When the mountain is formed of the limestone, the soil, though scanty, is productive of the finer grasses, which form good pasturage for sheep. On that part which is called the East Moor, observes the Rev. D. P. Davies, a late elegant writer on the history, &c., of this county, there is scarcely any vegetation; not a dale or a glade which seems to have received the cultivating hand of man, or the fostering smile of nature. The most common soil in the southern parts is a reddish clay or marl. This soil is also found to prevail through the middle part of the extensive tract of limestone which lies on the north-west side of the county, and consists of much calcareous earth, which readily effervesces with acids. Some parts of the southern district are interspersed with small beds of sand or gravel. The large tract of country producing coal is covered with a clay of different colors; black, gray, brown, and especially yellow. This kind of soil is also found in some parts where the gritstone is met with; but there it is frequently of a black color and bituminous quality. That on the north side of the county, where the limestone prevails, is of a brown color and loose texture. The soil on the banks of the rivers and in the valleys is different from that of the adjacent parts, and has evidently been altered by the depositions from the frequent inundations. It is extremely difficult to compress the great mass of information which Mr. Farey and others have collected relative to the soils of this county. Mr. Farey's map, however, contains a delineation of the several

soils of this and the adjoining one. Those which belong to this are the following:—A very extensive tract, from Morley south, along the borders of Nottinghamshire, to the extreme boundaries of the county on the edge of Yorkshire north, consists of numerous strata of bind, clunch, shale, and other argillaceous strata, enclosing and separating seams of coal and coaly impressions of vegetables. These strata, on exposure to the air, rain, and frosts, perish and fall to different kinds of clay or loam.

The very extensive coal district, branching out of Derbyshire, north and south, into Yorkshire and a small part of Nottinghamshire, has been not unaptly denominated the Derbyshire and Yorkshire Coal Field. Mr. Farey, with his usual attention to interesting detail, has given an alphabetical list of about 500 collieries which are, or have been, worked in Derbyshire and in the bordering parts of the seven adjacent counties. Of these it appears nearly one-half are in Derbyshire.—The gravel of which these coal districts are chiefly composed, produces a clayey soil, which is indiscriminately strewn over the county, but chiefly in patches about Derby and parts bordering on Staffordshire. These patches of land are again intermixed with other patches of red marl strata, occupying the largest portion of the southern districts. The yellow limestone strata are to be found chiefly, if not entirely, in some few parts bordering on Nottinghamshire, a little above and below Bolsover, in this county. It occupies nearly 21,600 acres. The coal-measures, or strata, already mentioned, occupy altogether 190,000 acres. The gritstone and shale strata occupy, with the exceptions yet to be mentioned, a tract of land about 160,500 acres, extending rather diagonally from Duffield south to the borders of Lancashire north; and in breadth in the widest part, from about Chapel-en-le-Frith to near Dove on the borders of Yorkshire. The mineral limestone and toadstone strata occupy an unshapen mass of land, extending from Wirksworth to Castleton, being about 51,500 acres. Along the same tract of country, but more to the Staffordshire side, is also a limestone stratum, making a surface of about 40,500 acres. This limestone appears to have undergone an amazing degree of shrinking; and hence there are vast shake-holes and caverns, some of them of a tremendous and frightful depth, in various parts. These natural caverns are in number about twenty-seven. It will be proper to enumerate one or two of them in this place.

Bagshaw's Cavern, or the Crystallised Cavern, in Mule-Spinner Mine, is a little south-west of Bradwell, and is 400 yards in length. Elden Hole, surrounded with a stone wall, a little north of Peak Forest Town, is a very deep hole, connecting with a vast lateral cavern below. The opening or chasm in the rock is about five yards long and three broad. The top of it is somewhat higher than the surface of the earth, with a very jagged and uneven mouth, opening into a chasm, 'steep, black, and full of horror.' This chasm has more than once been descended. It was formerly represented as altogether unfathomable, and teeming, at a certain depth, with such

noxious air, that no animal could respire it without inevitable destruction. Cotton affirmed, more than a century ago, that he let down 884 yards of line, of which the last eighty yards were wet, without finding a bottom; and it has been confidently asserted, that a poor man, who was once lowered in a basket to the depth of 200 yards, on being drawn up died in a state of delirium. We cannot give a better description of the actual depth and dimensions of this singular cavern, than the following of Mr. Lloyd's, as contained in vol. xiii. of the Philosophical Transactions Abridged. Mr. Lloyd having seen several accounts of the unfathomable depth of Elden Hole, in Derbyshire, and being in that neighbourhood, he was inclined to make some enquiries about that noted place, of the adjoining inhabitants; who informed him that about fourteen or fifteen years before, the owner of the pasture in which this chasm is situated, having lost several cattle, had agreed with two men to fill it up; but finding no visible effects of their labor, after having spent some days in throwing down many loads of stones, they ventured to be let down into it, to see if their undertaking was practicable; when, on finding at the bottom a vast large cavern, they desisted from their work, as it would have been almost impossible to have procured a sufficient quantity of stones to have filled it up. On enquiry of one of these men whether there were any dams at the bottom, and being assured in the negative, Mr. L. procured two ropes of forty fathoms nearly in length, and eight men to let him down.

For the first twenty yards Mr. L. was let down, he could assist himself with his hands and feet, as it was a kind of confined slope; but after that the rock jetted out into large irregular pieces, on all the three sides next him; and on that account he met with some difficulty in passing, for about the space of ten yards more; at which depth the rope was moved at least five or six yards from the perpendicular. Thence down, the breadth was about three yards, and the length at least five or six, through craggy irregular slits of rock, which were rather dirty, and covered with a kind of moss, and pretty wet, till he came within about twelve or fourteen yards of the bottom, and then the rock opened on the east side, and he swung till he descended to the floor of the cave, where he perceived there was light enough came from the mouth of the pit, though at the distance of sixty-two perpendicular yards, to read any print. When at the bottom, he perceived that the cavern consisted of two parts; the first being a cave, in shape not much unlike that of an oven; and the latter, a vast dome of the form of the inside of a glass-house; with a small arched passage from the one to the other, through which a slope of loose stones, that have been thrown in from time to time, extends from the wall at the west side of the first dome, to almost the bottom of the second cave or dome, with such an angle, that the farther end of the cave is lower by twenty-five yards than the place where he first landed. The diameter of this cavern may be nearly fifty yards: the top he could not trace with the eye; but he had reason

to believe it extended to a vast height; for when nearly at the top of one of the incrustated rocks, at the height of about twenty yards, he could find no closure of the dome, though he then saw much farther than when he stood at the bottom.

The curiosities to be met with in the small cavern are not worth mentioning; indeed he did not meet there with any stalactitical incrustations whatever; but the wall consisted of rude and irregular fragments of rock. But among the singularities in the second cavern, he observed the following; climbing up a few loose stones on the south side, he descended again through a small slit into a little cave, four yards long and irregular, as to height not exceeding two yards; and the whole lined with a kind of sparkling stalactites, of a fine deep yellow color, with some small stalactitical drops hanging from the roof. Facing the first entrance is a most noble column, of the same kind of incrustation, above thirty yards high: and, proceeding on to the north, he came to a large stone, covered with the like matter; and under it was a hole two yards deep, lined with the same; whence sprung a rock consisting of vast solid round masses, like the former in color, though not in figure, on which he easily ascended to the height of twenty yards, and got some fine pieces of stalactites, pendent from the craggy sides which joined this rock.

After this, proceeding forward, he came to another pile of incrustations, different from the two former, and much rougher; and which was not tinged with such a yellow, but rather with a brown color; and at the top of this also is a small cavern, into which he went. The last thing he took notice of was the vast drops of stalactites, hanging like icicles from every part of the vault; some of which were as large as a man's body, and at least four or five feet long. The greatest part of the walls of the large cavern was lined with incrustations, and they were of three kinds: the first being the deep yellow stalactites; the second being a thin coating, like a kind of light stone-colored varnish on the surface of the limestone, and which glittered exceedingly by the light of the candles; and the third being a sort of rough efflorescence, every minute shoot resembling a kind of rose-flower. Having satisfied his curiosity with a view of this astonishing vault, he began to return. Fastening the rope to his body, he gave the signal to be drawn up; which he found to be a much more difficult and dangerous task than the descent, owing to his weight drawing the rope into clefts, between the fragments of the rock, which made it stick; and to his body jarring against the sides, which he could not possibly prevent with his hands. Another circumstance also increased the danger, which was, the rope loosening the stones over head, whose fall he every instant dreaded.

After writing the above, Mr. L. was informed there was formerly the mouth of a second shaft in the floor of the great cavern, somewhere under the great heap of stones; and that it was covered up by the miners, at the time when so many loads were thrown in from the top. It is reported to have gone down a vast depth farther, and to have had water at the bottom; but he did not perceive any remaining appearance of such

opening himself, nor did the miners, who went down with him, say any thing about it.

Golconda is also a very large cavern, near Hopton. Poole's Hole, about half a mile S.S.W. of Buxton, is a very long cavern. The entrance is extremely narrow; but at the end of about twenty or thirty yards a spacious and lofty cavern opens, from the roof and sides of which water, continually dropping, congeals into large pillars and masses on the floor. Further up the cavern is a large suspended icicle or stalactite, denominated The Flitch of Bacon. Beyond this the cavern again becomes contracted; but a little further on it again expands, into a greater height and width, and continues so till we reach what is called Mary Queen of Scots' Pillar, a name given to a large massy column of stalactites, on account of its having been visited by that much injured princess during her stay at Buxton, when she wrote on a pane of glass at the hall:

Buxton, whose fame thy baths shall ever tell,
Which I, perhaps, shall see no more, farewell!

The cavern extends beyond this pillar about 100 yards, and is, from its mouth to this place, about 669 yards. Peak's Hole, near Castleton, is also a remarkable cavern, in which are several lakes or springs of water. Besides these horrid caverns there are numerous water-shallows or holes in the rocks, into which streams of water fall and disappear: in all about twenty.

Both Mr. Lloyd and the traditions of this neighbourhood, mention the appearance of water at the bottom of the several shafts. It has been conjectured that this is the continuation of a subterranean river; indeed of that very stream which runs out of the mouth of the ocean at Castleton.

Among the wonders of the Peak is Tide's or Weeden's Well, constituting one of the class which ebb and flow like the sea. That it does ebb and flow is certain; but it is at very unequal periods, sometimes not in a day or two, and sometimes twice in an hour. The basin of the spring is about a yard deep, and the same in length and breadth. When it flows, the water rises with a bubbling noise, as if the air, which was pent up within the cavities of the rock, was forcing itself a passage, and driving the water before it. It is occasionally used as a restorative.

But the great medicinal wonder of Derbyshire is Buxton Wells, the waters of which, beside their medicinal use, have this singularity, that within five feet of one of the hot springs there arises a cold one; as, indeed, in several other places in England, and other countries. These springs possess a less degree of warmth than those at Bath. The water is sulphureous, with a small quantity of saline particles, but it is not in the least impregnated with a sulphureous acid, hence they are very palatable in comparison with other medicinal waters. See Buxton. Mr. Pennant observes, with his usual elegance:—
'With joy and gratitude I this moment reflect on the efficacious qualities of the waters; I recollect with rapture the return of spirits, the flight of pain, and the re-animation of my long, long crippled rheumatic limbs.' About twelve

miles south-east of Buxton, in one of the most romantic situations of the whole kingdom, is Matlock. Here too is a medicinal bath of great value, the warm springs of which were first discovered about the year 1698. Near this place there is a petrifying spring; and the whole surrounding country is uncommonly interesting and romantic. In many respects Matlock, as a watering-place, is preferable to Buxton. Here are less bustle, noise, and dissipation.

Having dwelt at some length on the soil, &c., of this county, there is less occasion and still less room to detail its other natural productions. These chiefly consist of lead, antimony, mill-stones, grind-stones, marble, alabaster, alum, pit-coal, and iron, which constitute, of course the great bases of its trade. In addition, there are silk and cotton mills at Derby and Ashbourne; respectable marble works at Ashford; and considerable woollen manufactories in various parts. Malt is also made in this county in considerable quantity. It sends to parliament two members for the county, and two for the town of Derby.

There is a singular custom in this county of strewing the churches on the anniversary of the dedication of the church, or on midsummer eve, with rushes. The ancient custom of hanging up garlands of roses in the churches, with a pair of gloves cut out of white paper, which had been carried before the corpses of unmarried women at their funerals, also prevails in the neighbourhood of the Peak; and the county wakes are generally observed on the Sunday following the day of the dedication of the church or chapel, or on the saint's day after whom it is named. Druidical circles, tumuli of earth and stones, rocking-stones, rock-basins, and rude military works, attest the ancient British customs. The principal Roman remains are, an altar preserved in Haddon-Hall; some inscribed pigs of lead lately transferred to the British Museum; and the silver plate found in Risley-Park. Several Roman roads passed through the county; and stations may be traced in several places.

Sir Richard Arkwright, Brindley, Samuel Richardson, Anthony Blackwall, Flamsteed the astronomer royal, and bishop Halifax, are among the 'worthies' it has produced. The gentlemen's seats, though not numerous, are nowhere exceeded in individual splendor and romantic situation. See CHATSWORTH.

DERBY, the county town of Derbyshire, is seated on the Derwent, over which it has a handsome stone bridge. A small brook runs through it under nine stone bridges. It is large, populous, and well built; containing five churches, of which All Saints is the chief, the tower of which is 178 feet in height, the upper part being richly ornamented. The interior is particularly light, elegant, and spacious. The roof is supported by five columns on each side; the windows are large and handsome, and the symmetry and proportions of the whole building have a very pleasing effect. In ancient writings this church is called All-Hallows, which name it still retains among the common people. It was originally a free collegiate chapel, and besides the master or rector, who was the dean of Lincoln, had seven prebendaries. The county hall, county gaol, infir-

mary, an elegant assembly room, and a theatre, are the other principal buildings. The county hall is a handsome stone building, erected in the year 1730. In 1734 a machine was erected here by Sir Thomas Lombe, for the manufacturing of silk, the model of which he brought from Italy at the risk of his life. It was the first of its kind erected in England; and its operations are to wind, double, and twist the silk, so as to render it fit for weaving. It has employed many hands in the town. When Sir Thomas's patent expired, in 1732, parliament was so sensible of the value and importance of the machine that they granted him a further recompense of £14,000, for the hazard and expense he had incurred in introducing and erecting it, upon condition that he should allow an exact model of it to be taken. This model is deposited in the Tower of London. Derby has a considerable manufactory of silk, cotton, and fine worsted stockings; and a fabric of porcelain equal, if not superior, in quality to any in the kingdom. Several hands are employed in the lapidary and jewellery branches; and the work of this kind, executed here, is in high estimation. Derbyshire spar and marble, as well as foreign marble, are also wrought here into various ornamental articles. The malting trade is extensively carried on in this town. It is governed by a mayor, nine aldermen, &c. The aldermen are appointed for life, unless removed for ill behaviour. The recorder is chosen by the corporation, who can remove him at pleasure. The common-clerk is coroner and clerk of the peace, and is likewise chosen by the corporation; but both these officers must be approved of by his majesty. This town sends two members to parliament, who are elected by the corporation, freemen, and sworn burgesses; the mayor is the returning officer. A court of record is held here every second Tuesday, besides the quarter sessions, and a half-yearly court-leet.

The Derby General Infirmary is an excellent institution, situated near the London road, in a healthful, airy, and dry situation, abounding with good water. The building is constructed of a beautiful hard white stone, of a handsome, yet simple elevation, of three stories, containing a light central hall, with a double stair-case. Here the iron dome, the wide stone gallery, and the very large stone stair-case resting upon the perforated floor of the hall, which covers part of the basement story, excite admiration from their well known strength and solidity. This infirmary possesses a degree of perfection unknown to similar establishments; for instance, in the construction of two light and spacious rooms, one for each sex, called day, or convalescent rooms, where persons recovering, instead of being confined to the same room day and night, as has been the usual practice, may eat their meals and pass the day. Here is also a fever house, where relief is administered, in case of infectious diseases. The entrance to this is directly opposite to the front, and has no internal connexion with the infirmary. Besides the convalescent rooms, and the fever house, superior accommodations are provided for patients laboring under acute diseases in general; these consist of four small wards, containing one, two, three, and four beds respectively, with a

water-closet, nurse's bed-room, and scullery. This arrangement enables the medical men to separate the diseases from each other, as may best suit their natures; and the wards being parted off from the body of the house by folding doors, silence is obtained, and too much light excluded (essential in some cases), rendering this part of the establishment more convenient, perhaps, on the whole than many private houses. Another contrivance is, that ventilation shall be copious, and the warmth regulated at pleasure: and with respect to water-closets, to prevent the draft from the house being reversed, a mode of construction has been invented which does away every objection. A small steam engine is used to pump water, wash, &c. A statue of Esculapius, indicating the object of this useful institution, is placed upon the centre of the dome. The building is calculated to hold upwards of 100 patients. Three physicians, four surgeons, and a house apothecary, have been appointed to the institution since it was opened for relief of in and out patients in June 1810.

The ordnance depot is situated near the infirmary, and was erected, according to a plan of Mr. Wyatt's, in 1805. It consists of an armory in the centre, calculated to contain 15,000 stand of arms. Above this is a room of the same proportions, containing accoutrements for the use of the army. On the north and south sides are two magazines, capable of containing 1200 barrels of ammunition. Four dwellings are situated in the angles of the exterior wall; two of which are barracks, and the other two are the residences of officers in the civil department.

Derby, as the centre of the literature of the county, and the scene of many of its improvements, has given birth to, and still boasts, many excellent literary institutions and libraries. The Derby Philosophical Society, the object of which is, the promotion of scientific knowledge by occasional meetings and conversation, and by the circulation of books, was founded by Dr. Darwin, who spent the last twenty years of his life in this neighbourhood. The first meeting, in the year 1738, was at Dr. Darwin's house; and he retained the chair of this society till his decease. It boasts a considerable number of members, and is in possession of an extensive and valuable library.

Another flourishing institution made its appearance here in the year 1808, under the title of the Derby Literary and Philosophical Society. The objects of this association are, 'the pursuit of literary and scientific enquiries, and the improvement of its members in the power of gaining and of communicating knowledge.' The means by which these objects are attempted to be accomplished are the production and discussion of papers, or essays, which may be written on any subject connected with literature or science, excluding only the practical departments of medicine and surgery, party politics and religion. It is a fundamental law of this society, that each member shall furnish an essay in his turn, and no instance has hitherto occurred in which this rule has been violated. The meetings are held monthly from September to April inclusively, one paper being read, and another

discussed, on each evening. These are the principal institutions, but there are eight or ten others in the town, and one exclusively devoted to the cultivation of French literature. Derby has a market on Wednesday and Friday. It is situated in a fine plain, opening as it advances southward into a beautiful and highly cultivated country. It is thirty-six miles north of Coventry, and 126 north-west by west of London.

DERBY, a town of the United States, in Orleans county, Vermont, on the north line of the state, and on the east shore of lake Memphremagog.

DERBY, a town of New Haven county, Connecticut, on the point of land formed by the confluence of Naugatuck and Housatonic rivers. This town was settled in 1665, under New Haven jurisdiction, and has an academy.

DERBY, a town of Pennsylvania, in Chester county, seven miles from Chester, and five from Philadelphia. It is situated on Derby Creek, which falls into Delaware River, near Chester.

DERBY, WEST, a township of England, in the county of Lancaster, four miles from Liverpool, and containing about 3000 inhabitants.

To DERE, *v. a.* Sax. *derjan*. To hurt. See DARE. Obsolete.

So from immortal race he does proceed,
That mortal hands may not withstand his might;
Dred for his derring doe, and bloody deed;
For all in blood and spoil is his delight.

Faerie Queene.

DEREHAM, or MARKET DEREHAM, a market town of Norfolk, sixteen miles north from Norwich, and 100½ N.N.E. from London. This is a clean and well paved place, and stands on a small rivulet which supplies it with water. The church is a very ancient structure, and the steeple is open to the body like that of a cathedral: it contains four chapels, one of which, St. Edmunds, contains an antique chest, taken out of the ruins of Beckenham Castle, in which are deposited the records of the church. The font, erected in 1468, is a fine specimen of ancient sculpture, being richly carved. In the churchyard stands a square tower containing a peal of bells. In this church the poet Cowper was buried in 1800. Here are also three respectable meeting-houses. This town has sustained considerable damage by fires; first in the year 1581, when nearly the whole town was destroyed; and again in 1679. The market is on Friday, well stocked with provisions, and the greatest pig market in the county.

DERELICT, *n. s. & adj.* } Lat. *derelictus*,
DERELICTION, *n. s.* } *de* and *relinquo*,
linguo, to leave. Terms first applied to property voluntarily relinquished or forsaken: hence to any other abandonment or forsaking; to emptiness; and figuratively to the mind.

There is no other thing to be looked for, but the effects of God's most just displeasure, the withdrawing of grace, *dereliction* in this world, and in the world to come confusion.

Hooker.

Derelict lands, suddenly left by the sea, belong to the king: but if the sea shrink back so slowly that the gain be by little and little, it shall go to the owner of the lands adjoining.

2 Comm. 261, quoted by Jacobs.

They easily prevailed, so as to seize upon the most vacant, unoccupied, and *derelict* minds of his [lord Chatham's] friends. *Burke.*

DERELICTS imply, also, such lands as the sea, by receding from them, leaves dry and fit for cultivation. If they are left by a gradual recess of the sea, they are adjudged to belong to the owner of the adjoining lands; but when an island is formed in the sea, or a large quantity of new land appears, such derelict lands belong to the king.

DERHAM (Dr. William), a celebrated English divine, born in 1657. In 1682 he was presented to the vicarage of Wargrave in Berkshire, and, in 1689, to the rectory of Upminster, Essex. Applying himself with great eagerness to natural and experimental philosophy, he soon became a distinguished member of the Royal Society, whose Philosophical Transactions contain a great variety of curious and valuable pieces, the fruits of his industry. In his younger years he published his Artificial Clock-maker, which has been often reprinted; and in 1711, 12, and 14, he delivered the Boyle's Lectures, which he afterwards digested under the well-known titles of Physico-Theology and Astro-Theology; or a Defence of the being of a God from a Survey of the Works of Creation and of the Heavens. He next published Christo-Theology, a demonstration of the divine authority of the Christian religion. He died at Upminster in 1735, and left a valuable collection of curiosities, particularly specimens of English birds and insects.

DERIDE, *v. a.* } Ital. and Lat. *deridere*,
DERID, *n. s.* } from *de* and *rideo*. To
DERISION, } laugh; to mock with laugh-
DERISIVE, *adj.* } ter; to scorn. Derisive
DERISORY. } and derisory seem syno-
nymous adjectives.

I am in *derision* daily; every one mocketh me.

Jer. xx. 7.

Upon the wilful violation of oaths, execrable blasphemies, and like contempts offered by *deriders* of religion, fearful tokens of divine revenge have been known to follow. *Hooker.*

The faith of the righteous cannot be so much *derided*, as their success is magnified.

Bishop Hall. Contemplations.

Ensnared, assaulted, overcome; led bound, Thy loc's *derision*, captive, poor, and blind, Into a dungeon thrust. *Milton.*

What shall be the portion of those who have *derided* God's word, and made a mock of every thing that is sacred and religious? *Tillotson.*

O'er all the dome they quaff, they feast;
Derisive taunts were spread from guest to guest,
And each in jovial mood his mate addressed. *Pope.*

Are we grieved with the scorn and *derision* of the profane? Thus was the blessed Jesus despised and rejected of men. *Rogers.*

Some, that adore Newton for his fluxions, *deride* him for his religion. *Berkley.*

I know that expectation, when her wings are once expanded, easily reaches heights which performance never will attain; and when she has mounted the summit of perfection, *derides* her follower, who dies in the pursuit. *Johnson. Plan of Dictionary.*

DERIVATIVE, *n. s. & adj.* } draw water, from
DERIVATIVELY, *adv.* } *de* and *rivus*; Heb.
DERIVER, *n. s.* }

נִיר, a stream, Hence to draw or trace from a source; and as a neuter verb to come from; to owe origin to. Derivable is traceable, to or from; hence deducible in argument. Derivation, literally, a drainage of water, and a drawing out, or displaying words or ideas from their original sources; the drawing out a peccant humor of the body; and the thing drawn out, or derived. Derivative is used as a substantive in this last sense.

Though not in word nor deed ill meriting,
Is from her knight divorced in despayre,
And her dew loves *deriv'd* to that vile witchers snayre. *Spenser. Faerie Queene.*

Christ having Adam's nature as we have, but incorrupt, *deriveth* not nature, but incorruption, and that immediately from his own person, unto all that belong unto him. *Hooker.*

I am, my lord, as well *derived* as he,
As well possess. *Shakespeare.*

For honour,
'Tis a *derivative* from me to mine,
And only that I stand for. *Id.*

The streams of the public justice were *derived* into every part of the kingdom. *Davies.*

By which I knew the time,
Now full, that I no more should live obscure;
But openly begin, as best becomes
The authority which I *derived* from Heaven. *Milton.*

As it is a *derivative* perfection, so it is a distinct kind of perfection from that which is in God. *Hule.*

They endeavour to *derive* the varieties of colors from the various proportion of the direct progress or motion of these globules to their circumvolution, or motion about their own centre. *Boyle.*

The word *Honestus* originally and strictly signifies no more than creditable, and is but a *derivative* from Honor, which signifies credit or honour. *South.*

Such a one makes a man not only a partaker of other men's sins, but also a *deriver* of the whole intire guilt of them to himself. *Id.*

Men *derive* their ideas of duration from their reflection on the train of ideas they observe to succeed one another in their own understandings. *Locke.*

Most of them are the genuine *derivations* of the hypothesis they claim to. *Glanville.*

Among other *derivatives* I have been careful to insert and elucidate the anomalous plurals of nouns and preterites of verbs.

Johnson. Preface to Dictionary.

Here is the fountain of truth, why do you follow the streams *derived* from it by the sophistry, or polluted by the passions of man? *Bishop Watson.*

The mind that is immortal—it *derives*
No colour from the fleeting things without;
But is absorbed in sufferance or in joy,
Born from the knowledge of its own desert. *Byron.*

DERNIER, *adj.* Last. Is a French word. used only in the following phrase.

In the Imperial Chamber, the term for the prosecution of an appeal is not circumscribed by the term of one or two years, as the law elsewhere requires in the empire; this being the *dernier* resort. *Ayliffe*.

The court of *dernier* resort is the poerao of England. *Franklin*.

DERMESTES, in zoology, a genus of insects belonging to the order of coleoptera. The antennæ are clavated, with three of the joints thicker than the rest; the breast is convex; and the head is inflected below the breast. Many varieties of this genus, as well as their larvæ, are to be met with in dried skins, bark of trees, wood, seeds, flowers, the carcases of dead animals, &c. There are eighty-seven species, of which the following are the most remarkable: *D. domesticus* varies greatly in size and color, some being found of a dark brown, others of a much lighter hue. The form of it is oblong, almost cylindrical. The elytra are striated, the thorax is thick and rather gibbous. This little animal, when touched, draws in its head under its thorax, and its feet beneath its abdomen, remaining so motionless that one would think it dead. This is the insect which makes in wooden furniture those little round holes that reduce it to powder. *D. ferrugineus* is the largest of the genus; its color is a rusty iron, having many oblong, velvet black spots upon the elytra, which give the insect a gloomy, yet elegant appearance. *D. lardarius*, of an oblong form and of a dim black color, easily distinguishable by a light brown stripe that occupies transversely almost the anterior half of the elytra. That color depends on small gray hairs situated on that part. The stripe is irregular at its edges, and intersected through the middle by a small transversal streak of black spots, three in number, on each of the elytra, the middlemost of which is somewhat lower than the rest, which gives the black streak a serpentine form. Its larva, which is oblong, somewhat hairy, and divided into segments alternately dark and light colored, gnaws and destroys preparations of animals preserved in collections, and even feeds upon the insects; it is also to be found in old bacon. This species may be destroyed by arsenic. *D. violaceus*, a beautiful little insect: its elytra are of a deep violet blue. The thorax is covered with greenish hairs, the legs are black. The whole animal's being of a glittering brilliancy renders it a pleasing object. The larva, as well as the perfect insect, inhabits the bodies of dead animals.

DERMODY (Thomas), an English poet, was born in the south of Ireland in 1775. His father was a schoolmaster at Ennis, and employed him, when only nine years old, in teaching the Latin and Greek languages. He, however, ran away from home at an early age, and enlisted as a common soldier. Having obtained the notice of the present marquis of Hastings, that nobleman procured him a commission; but his conduct was most dissipated, and rendered all efforts to serve him abortive. A volume of his poems appeared in 1800; and another was published in 1802, in which year he died, at Sydenham in Kent, of disease brought on by his vices. His pieces have since been collected and published by Mr. Raymond.

DEROGATE, *v. a., v. n. & adj.*

DEROGATELY, *adv.*

DEROGATION, *n. s.*

DEROGATIVE, *adj.*

DEROGATORY, *adj.*

DEROGATORILY, *adv.*

from *de* and *rogo*, to demand. To act so as to diminish the legal force of a prior act, law, or custom; hence to disparage generally: and, as a neuter verb, to detract; lessen reputation; degenerate. The adjective means degenerated; degraded. Derogative and derogatory mean detractive; dishonorable.

So surely he is a very brave man, neither is that any thing which I speak to his *derogation*; for in that I said he is a mingled people, it is no dispraise.

Spenser on Ireland.

We should be injurious to virtue itself, if we did *derogate* from them whom their industry hath made great.

Hooker.

Is there no *derogation* in it?

—You cannot *derogate*, my lord.

Shakespeare.

Into her womb convey sterility;
Dry up in her the organs of increase,
And from her *derogate* body never spring
A babe to honour her.

Id. King Lear.

The wisest princes need not think it any diminution to their greatness, or *derogation* to their sufficiency, to rely upon counsel.

Bacon.

By several contrary customs and stiles used here, many of those civil and canon laws are controuled and *derogated*.

Hale.

That spirits are corporeal, seems to me a conceit *derogative* to himself, and such as he should rather labour to overthrow; yet thereby he establisheth the doctrine of lustrations, amulets, and charms.

Browne's Vulgar Errors.

That which enjoins the deed is certainly God's law; and it is also certain, that the scripture, which allows of the will, is neither the *derogation* nor relaxation of that law.

South.

These deputed beings are *derogatory* from the wisdom and power of the Author of Nature, who doubtless can govern this machine he could create, by more direct and easy methods than employing these subservient divinities.

Cheyne.

None of these patriots will think it a *derogation* from their merit to have it said, that they received many lights and advantages from their intimacy with my lord Somers.

Addison.

DEROGATORY CLAUSE, in a testament, is a certain sentence, cipher, or secret character, which the testator inserts in his will, and of which he reserves the knowledge to himself alone, adding a condition, that no will he may make hereafter is to be reckoned valid, if this derogatory clause is not inserted expressly and word for word. It is a precaution invented by lawyers against latter wills extorted by violence or obtained by suggestion.

DERRY, a township of the United States, in Dauphin county, Pennsylvania, situated on the east side of Swatara Creek, two miles above its confluence with the Susquehannah, and celebrated for its curious cave. Its entrance is under a high bank, nearly twenty feet wide, and about eight or ten feet in height. It descends gradually nearly to a level with the creek. Its

apartments are numerous, of different sizes, and adorned with stalactites curiously diversified in size and color.

DERVIS, *n. s.* Fr. *dervis*, from Per. *dervish*. See the article below. A priest or monk among the Turks.

Even there, where Christ vouchsafed to teach,
Their dervises dare an impostor preach. *Sandys.*

The *dervis* at first made some scruple of violating his promise to the dying brachman; but told him, at last, that he could conceal nothing from so excellent a spectator.

DERVIS, or **DERVICH**, a name given to a sort of monks among the Turks, who lead a very austere life, and profess extreme poverty; though they are allowed to marry. The word originally signifies a beggar, or a person who has nothing; and because the religious, and particularly the followers of Mevelava, profess not to possess any thing, they call both the religious in general, and the Mevelavites in particular, dervises. There are in Egypt several kinds: those that are in convents are a kind of religious order and live retired; though there are of these some who travel and return again to their convents. Some take this character, and yet live with their families, and exercise their trades: of this kind are the dancing dervises at Damascus, who go once or twice a week to a little uninhabited convent, and perform their extraordinary exercises. There is a third sort of them who travel about the country, and beg, or rather oblige people to give, for whenever they sound their horn something must be given them. The people of these orders, in Egypt, wear an octagonal badge, of a greenish white alabaster, at their girdles, and a high stiff cap without any thing round it. The dervises in Persia, are called *abdals*, servants of God. See **ABDALS**. The dervises called Mevelavites are a Mahomedan order of religious; the chief or founder of which was one Mevelava. They are very numerous. Their chief monastery is that near Cogni in Natolia, where the general makes his residence, and where all the assemblies of the order are held; the other houses being all dependent on this, by a privilege granted to this monastery under Ottoman I. These dervises affect humility and clarity. They always go bare-legged and open-breasted, and frequently burn themselves with hot irons, to inure themselves to patience. They always fast on Wednesdays, eating nothing on those days till after sun-set. Tuesdays and Fridays they hold meetings, at which the superior presides. One of them plays all the while on a flute, and the rest dance, turning their bodies round and round with the greatest swiftness imaginable. This practice they observe with great strictness, in memory, it is said, of Mevelava their patriarch turning miraculously round for the space of four days, without any food or refreshment, his companion Hamsa playing on the flute; after which he fell into an ecstasy, and therein received revelations for the establishment of his order. They believe the flute an instrument consecrated by Jacob and the shepherds of the Old Testament, because they sang the praises of God upon it. They profess poverty, chastity, and obedi-

ence; but if they choose to go out and marry, they are always allowed. The generality of dervises are mountebanks: some apply themselves to legerdemain, postures, &c., to amuse the people; others pretend to sorcery and magic: but all of them, contrary to Mahomet's precept, are said to drink wine, brandy, and other strong liquors, to give them the degree of gaiety their order requires. The dervises are great travellers; and, under pretence of preaching, and propagating their faith, are continually passing from one place to another: on which account they have been frequently used as spies. See **MAHOMET** and **KORAN**.

DERWENT, a rapid river of the county of Cumberland, rising in Borrowdale, from whence it emerges to form a lake. It receives the Cocker at Cockermouth, after which it falls into the Irish sea at Workington.

DERWENT, a second river of England, which runs into the Ouse, five miles south-east of Selby, in the county of York. 3. A river of England, which rises in Northumberland, and flows into the Tyne, about three miles above Newcastle. 4. A river of England which rises in the northern part of the county of Derby, and is formed of several streams, one of which issues from the cavern of Castleton. It forms one of the principal ornaments of the magnificent seat of Chatsworth and afterwards falls into the Trent, eight miles E. S. E. of Derby.

DERWENT FELS; a chain of mountains in Cumberland, reckoned among the loftiest in England. One of them is celebrated for its mines of black lead, from which, for its superior quality, great part of Europe and America are supplied. In travelling through the valley of Borrowdale, amongst these mountains, they exhibit to the admirer of nature's romantic beauties, the representation of a stormy ocean; the numerous distant hills appearing like so many waves rising and undulating behind each other. The immense masses of rugged rocks, however, abruptly broken off here and there, occasionally start up to dispel the illusions of fancy; and, together with the trees, villages, farms, and cattle, which he discovers as he proceeds, serve to convince the traveller that he is still on terra firma.

DERWENT WATER, or the **LAKE OF KESWICK**, a beautiful lake of Cumberland, in the vale of Keswick, lying between the mountain of Skiddaw on the north and the craggy hills of Borrowdale on the south, whence it derives its chief supplies of water. See **CUMBERLAND**.

DESAGULIERS (John Theophilus), a Protestant divine, born at Rochelle in 1683. He was educated at Christ Church, Oxford; where he succeeded Dr. Keill in reading lectures on experimental philosophy at Hart Hall. The duke of Chandos made Dr. Desaguliers his chaplain, and presented him to the living of Edgware, near his seat at Cannons: he was afterwards chaplain to Frederic prince of Wales. He introduced the practice of reading public lectures on experimental philosophy, in London, and continued them with great success to the time of his death in 1749. He communicated many curious papers to the Philosophical Transactions; published a valuable Course of Experimental Philosophy, in 2 vols, 4to; and edited

an edition of Gregory's Elements of Catoptrics and Dioptrics, with an Appendix on Reflecting Telescopes, 8vo. He was also a member of several foreign academies.

DESAIX (Louis Charles Anthony), a celebrated French general, born near Riom, in 1768. At an early life he made choice of the military life, and before the revolution had risen to the rank of lieutenant. In the republican army he was first employed as aid-de-camp to general Custine. He displayed great bravery at the battle of Lauterbourg, where, though severely wounded, he kept the field, rallying the disordered batallions. Having been successively created general of brigade and of division, he contributed, very considerably, to the famous retreat of Moreau. At the battle of Rastadt he commanded the left wing of the French army, obliging the archduke Charles to fall back; and he afterwards heroically defended the bridge of Kehl, where he was severely wounded. He accompanied Buonaparte into Egypt, where he was appointed governor of the upper part of the country. Having signed the treaty of El Arish with the Turks and English, he returned to Leghorn, but was detained there as a prisoner of war by admiral lord Keith. Upon obtaining his parole he returned to France, and accompanied Buonaparte to Italy. He was killed at the battle of Marengo, June 14th, 1800.

DESAQUADERO, a river of South America, in Peru, over which the Ynca Huana Capac built a bridge of flags and rushes, to transport his army to the other side, and which remained a few years since.

DESART, or **DESERT**, a large extent of country entirely barren, and producing nothing. In this sense some are sandy desarts; as those of Lop, Xamo, Arabia, and several others in Asia; in Africa, those of Libya and Zara: others are stony, as the desert of Paran in Arabia Petræa. The Desart, peculiarly so called in Scripture geography, is that part of Arabia south of the Holy Land, where the children of Israel wandered forty years. See **DESERT**.

DESATIR is a lately discovered collection of sixteen sacred books, consisting of the fifteen old Persian prophets, together with a book of Zoroaster. This, at least, is what the book itself pretends to be. The collection is written in a language not spoken at present any where, and equally different from the Zend, the Pelvi, and modern Persian. The last of the fifteen prophets, Sasan, who lived at the time of the downfall of the Sassanides, when the Arabians conquered the country, literally translated the Desatir, and accompanied it with commentaries. This work was afterwards, until the 17th century, one of the chief sources of the ancient Persian religious doctrines, interwoven with astrology and demonology; and, after having been forgotten for about a century and a half, a learned Parsee discovered it at Ispahan. His son, Molla Firuz, was induced by the marquis of Hastings to publish an edition of the Desatir at Bombay, in 1820, to which Erskine added an English translation. Erskine, however, considers the collection as spurious; and Sylvester de Sacy (Journal des Savants, Feb., 1821) believes that the Desatir is the work of a Parsee in the 4th century

of the Hegira, who, as he thinks, invented the language, in order to give to the collection, which is itself an assemblage of old traditions and significant mysteries, an air of genuineness. Joseph von Hammer, on the contrary, is said to consider it as genuine. At all events, it is interesting to learn from this work, with greater accuracy, an old religious system of the East, in which are to be found, with pandæmonism and the metempsychosis, the elements of the worship of the stars, of astrology, the theurgy, the doctrine of amulets, as well as the elements of the Hindoo religion, particularly the system of castes, and many elements of the Christian religion. Yet no trace of any connexion with the Zendavesta and the magic of the Parsees has been found in the Desatir.

DESCANT, *v. n.*, & *n. s.* Span. and Ital. *dis-canto*, from Lat. *de* and *canto*, to sing. The verb seems formed in our language from the noun, which signifies a song or tune, in parts; a harmony for different voices or instruments: hence, a discourse consisting of various parts; and to sing in various parts. To discourse; declaim; generally used in the latter sense, contemptuously.

DESCANT, in music, signifies the art of composing in several parts. Descant is threefold, viz. double, figurative, and plain. Double descant is when the parts are so contrived, that the treble, or any high part, may be made the bass; and, on the contrary, the bass the treble. Figurative or florid descant is that part of an air of music wherein some discords are concerned, as well, though not so much, as concords. This may be termed the ornamental and rhetorical part of music, in regard that there are introduced all the varieties of points, syncopes, diversities of measure, and whatever is capable of adorning the composition. Plain descant is the ground-work and foundation of all musical compositions, consisting altogether in the orderly placing of many concords answering to simple counterpoint.

DESCARTES, René (Renatus Cartesius), an original thinker, and reformer of philosophy, with whom the modern or new philosophy is often considered as commencing, was born in 1596, at La Haye, in Touraine, and died at Stockholm, in 1650. While pursuing his education in the Jesuits' school at La Fleche, where he studied philology, mathematics, and astronomy, his superior intellect manifested itself. After having read much, without coming to any certain conclusions, he travelled. Both his birth and inclination led him to embrace the military profession, and he fought as a volunteer at the siege of Rochelle, and in Holland under prince Maurice. While he served in Holland, a mathematical problem in Dutch, pasted up in the streets of Breda, met his eye. Not being acquainted with the language, he asked a man who stood near him to translate the problem to him. This man happened to be professor Beccman, principal of the university of Dort, and himself a mathematician. He smiled at the question of the young officer, and was greatly surprised, the next morning, to find that he had solved it. From hence Descartes went to Germany, and

entered the Bavarian service. His situation, however, affording him little opportunity of pursuing his favorite studies, he left the army in 1621, and visited Moravia, Silesia, Poland, Pomerania, and the shores of the Baltic. In order to see West Friesland with advantage, he purchased a boat, and embarked with a single valet. The sailors, thinking him a foreign merchant, with much money in his baggage, resolved to kill him. Imagining him ignorant of their language, they conversed of their plan openly. Descartes, seeing his danger, drew his sword, addressed them in their own tongue, and threatened to stab the first man that should offer him violence. The sailors were overawed, and gave up their design. After a variety of travels, he remained in Holland, where he composed most of his writings, from 1629 to 1649, drew about him many scholars, and was engaged in many learned controversies, especially with theologians. His celebrated system abounds in singularities and originalities; but a spirit of independent thought prevails throughout it, and has contributed to excite the same spirit in others. It has done much to give to philosophical inquiries a new direction, and found many adherents, especially in England, France, and Germany. Descartes founds his belief of the existence of a thinking being on the consciousness of thought: "I think, therefore I exist" (*cogito, ergo sum*). He developed his system with much ingenuity, in opposition to the then empiric philosophy of the English, and the Aristotelian scholastics, and adopted the rigorous, systematic or mathematical method of reasoning. From his system originated the notion among the moderns, that the very existence and certainty of philosophy consists in definitions, arguments, and a methodical arrangement of them. The thinking being, says Descartes, or the soul, evidently differs from the body, whose existence consists in space or extension, by its simplicity and immateriality (whence, also, its immortality), and by the freedom that pertains to it. But every perception of the soul is not clear and distinct; it is in a great degree involved in doubt, and is so far an imperfect, finite being. This imperfection of its own leads it to the idea of an absolutely perfect being. (He, therefore, here makes use of the (so called) ontological proof of the existence of God, in a different manner from that in which Anselm of Canterbury had, somewhat earlier, employed the same; and hence the name of the "Cartesian proof.") He placed at the head of his system the idea of an absolutely perfect being, which he considers as an innate idea, and deduces from it all further knowledge of truth. The principal problems of metaphysics he conceived to be substantiality and causality. He contributed greatly to the advancement of mathematics and physics. He made use of the discoveries and observations of others, defining them accurately, and assigning them their place in his system. The higher departments of geometry (to which he successfully applied analysis), as well as optics, dioptrics, and mechanics, were greatly extended by him, their method simplified, and thereby the way prepared for the great discoveries made in the sciences by Newton and

Leibnitz; for instance, he contributed much to define and illustrate the true law of refraction. His system of the universe attracted great attention in his time, but has been long since exploded. It rests on the strange hypothesis of the heavenly vortices, immense currents of ethereal matter, with which space is filled, and by which he accounted for the motion of the planets. He labored much to extend the Copernican system of astronomy. Descartes loved independence; he nevertheless suffered himself to be persuaded to go to Stockholm, upon the invitation of queen Christina, who was very desirous of his society. He died at that place four months after his arrival. His body was carried to Paris in 1666, and interred anew in the church of St. Genevieve du Mont. Descartes was never married, but had one natural daughter, Francina, who died in his arms, in her fifth year, and whose loss he felt acutely. His works have at various times been published, singly and together; as, for instance, at Amsterdam, 1692, 9 vols. 4to. Baillet and Tarpelius have written his life. (See his letters; also the eulogies on him by Gaillard, Thomas, and Mercier, and Leibnitz's account of him in his letters.)

DESCEND', v. a. & v. n.	Fr. <i>descendre</i> ;
DESCEND'ANT, n. s.	Span. <i>descender</i> ;
DESCEND'ENT, adj.	Ital. <i>discendere</i> ;
DESCEND'IBLE,	Lat. <i>descendere</i> ,
DESCEN'SION, n. s.	from <i>de</i> privative,
DESCEN'SIONAL, adj.	and <i>scandere</i> , to
DESCENT', n. s.	clamber. To walk

downwards; or cling as to a rope, going downwards. As a neuter verb, to fall, or sink, or go downwards; hence, to be derived from, and to come in order of inheritance. A descendant is applied to offspring, near or remote: descendent, falling, sinking; derived from: descendible, that which may be descended, or may descend. Descension, figuratively, a degradation, or a declension.

DESCENT, in heraldry, is used to express the coming down of any thing from above; as, a lion en descent is a lion with his head towards the base points, and his heels towards one of the corners of the chief, as if he were leaping down from some high place.

DESCENT, or hereditary succession, in law, is the title whereby a man, on the death of his ancestor, acquires his estate by right of representation, as his heir at law. An heir, therefore, is he upon whom the law casts the estate immediately on the death of the ancestor; and an estate so descending to the heir is in law called the inheritance. See INHERITANCE. Descent is either lineal or collateral. Collateral descent is that springing out of the side of the line or blood; as from a man to his brother, nephew, or the like. See CONSANGUINITY. Lineal descent is that conveyed down in a right line from the grandfather to the father, from the father to the son, and from the son to the grandson, &c.

DESCENT OF DIGNITIES. A dignity differs from common inheritances, and goes not according to the rules of the common law: for it descends to the half blood: and there is no coparcenership in it, but the eldest takes the whole.

The dignity of peerage is personal; annexed to the blood; and so inseparable, that it cannot be transferred to any person, nor surrendered even to the crown: it can move neither forward nor backward, but only downward to posterity; and nothing but corruption of blood, as if the ancestor be attainted of treason or felony, can hinder the descent to the heir.

DESCRIBE, *v. a.* } Fr. *descrire*; Span. *describer*; Ital. *descrivere*; Lat. *describere*, *descriptio*, *n. s.* } *vere*; Lat. *describere*, *descriptive*, *adj.* } from *de*, concerning, and *scribere*, to write. To

delineate; trace out; distribute a thing or country into its parts: description is both the act and form of describing. Describe is used for describe by Surrey.

DESCRY, *v. a. & n. s.* } Fr. *descrier*. To *descrier*, *n. s.* } give notice of any thing suddenly discovered: hence to spy out; detect; discover.

How near 's the other army?
—Near, and on speedy foot, the main *desery*
Stands in the hourly thought. *Shakespeare.*

DESEADA, DESIRADA, or DESIDERADA, the first of the Caribbee Islands, discovered by Columbus in his second voyage, in 1494, when he gave it that name. It is ten miles long and five broad, and looks at a distance like a galley, with a low point at the north-west end. The soil is in some places black and good, in others sandy and unproductive. It lies twelve miles east of Guadeloupe.

DESEADA, or CAPE DESIRE, the south point of the Straits of Magellan, at the entrance of the South Sea. Long. 74° 18' W., lat. 53° 4' S.

DESECRATE, *v. a.* } Lat. *desacro*, from *DESECRATION*. } *de*, private, and *sacro*, to consecrate; although the Latin compound *desacro* also signifies to hallow. To apply to common or profane purposes, that which has been consecrated.

The founders of monasteries imprecated evil on those who should *desecrate* their nations.

Salmon's Survey.

DESERT, *v. a.* } & *adj.* } Fr. *deserter* *DESERT'ER*, } from Lat. *dese-* *DESERTION*, } *ro*, *desertum*. *DESERT'ICE*, *n.* } To leave, for-
sake, abandon. A desert is a solitary, forsaken place; hence, as an adjective, wild, unfrequented, uninhabited: a deserter, he who forsakes his post of duty; and Milton has afforded us a feminine substantive of this meaning.

And it is written in the book of salmvs, the ab-
stacioun of hem be maad *desert*, and be there noon
that dwelle in it, and anothir take his bishopriche.

Wiclif. Dedis. 1.

He found him in a *desert* land, and in the waste
howling wilderness. *Deuteronomy*, xxxii. 10.

For light she hated, as the deadly bale,
Ay wout in *desert* darkness to remaine,
Where plain none might her see, nor she see any
plaine. *Spenser. Faerie Queene.*

I have words
That would be howled out in the *desert* air,
Where hearing should not catch them.

Shakespeare.

He, looking round on every side, beheld
A pathless *desert*, dusk with horrid shades.

Milton.

[It is] as vain to go about to compel (the unhappy
pair) into one flesh as to weave a garment of sand.—
Cleave to a wife, but let her be a wife, not an adver-
sary, not a *desertrice*. *Id. Tetrachordon.*

Hosts of *deserters*, who your honour sold,
And basely broke your faith for bribes of gold.

Dryden.

Christ hears and sympathises with the spiritual
agonies of a soul under *desertion*, or the pressures of
some stinging affliction. *South.*

What is it that holds and keeps the orbs in fixed
stations and intervals, against an incessant and inhe-
rent tendency to *desert* them? *Bentley.*

The members of both houses, who at first withdrew
were counted *deserters*, and outed of their places in
parliament. *King Charles.*

Thou, false guardian of a charge too good,
Thou, mean *deserter* of thy brother's blood. *Pope.*

A *deserter*, who came out of the citadel, says the
garrison is brought to the utmost necessity.

Tatler. No. 59.

Deserted is my own good hall,

Its hearth is desolate;

Wild weeds are gathering on the wall;

My dog howls at the gate. *Byron.*

DESERTER. A deserter is, by the articles of
war, punishable by death; which, after con-
viction, is executed upon him at the head of the
regiment he formerly belonged to, with his crime
written on his breast. A reward of twenty
shillings is given to every person who apprehends
a deserter, and persons concealing, harboring, or
buying the clothes, arms, &c. of such person, are
liable to very heavy penalties. No non-com-
missioned officer or soldier shall enlist himself
in any other regiment, troop, or company, without
a regular discharge from the regiment, troop, or
company, in which he last served, on the penalty
of being reputed a deserter, and suffering ac-
cordingly: and in case any officer shall knowingly
receive and entertain such non-commissioned
officer or soldier, or shall not, after his being
discovered to be a deserter, immediately confine
him, and give notice thereof to the corps in
which he last served, he, the said officer so
offending, shall, by a court-martial, be cashiered.

DESERT, *n. s.* } Old Fr. *deserte*, or a
DESERTLESS, *adv.* } participial form of *De-*
serve, which see. Merit or demerit; title to
reward or punishment: desertless is used by
Dryden for without merit.

Being of necessity a thing common, it is, through-
the manifold persuasions, dispositions, and occasions
of men, with equal *desert* both of praise and dispraise,
shunned by some, by others desired. *Hooker.*

Use every man after his *desert*, and who shall
'scape whipping? *Shakespeare.*

She said she loved,
Loved me *desertless*; who with shame confest
Another flame had seized upon my breast. *Dryden.*

All *desert* imports an equality between the good
conferred, and the good deserved, or made due.

South.

I was determined to be advanced in my profession
by force of *desert*, or not at all. *Bishop Watson.*

DESER'VER, *n. s.* } *servire*, to be useful, from
DESER'VEDLY, } *de* and *servus*, to be a
DESER'VING, *n. s.* } slave. To be worthy of
good or ill: all the derivatives from this root
 are applied to both by respectable writers. But
 when used absolutely, to be deserving, &c.,
 it commonly expresses merit.

Those they honoured, as having power to work or
 cease, as men *deserved* of them. *Hooker.*

Their love is never linked to the *deserver*,
 Till his deserts are passed. *Shakespeare.*

All friends shall taste
 The wages of their virtue, and all foes
 The cup of their *deservings*. *Id.*

Heavy, with some high minds, is an overweight of
 obligation; or otherwise great *deservers* do, perchance,
 grow intolerable presumers. *Wotton.*

Yet well, if here would end
 The misery: I *deserved* it, and would bear
 My own *deservings*. *Milton.*

Ill *deserving* of others can be no excuse for our in-
 justice, for our uncharitableness.

Bp. Hall. Contemplations.

Courts are the places where best manners flourish,
 Where the *deserving* ought to rise. *Otway.*

A mother cannot give him death: though he
Deserves it, he *deserves* it not from me. *Dryden.*

Since my Orazia's death I have not seen
 A beauty so *deserving* to be queen. *Id.*

According to the rule of natural justice, one man
 may merit and *deserve* of another. *South.*

A man *deservedly* cuts himself off from the affec-
 tions of that community which he endeavours to sub-
 vert. *Addison.*

Annex to each bishoprick some portion of the royal
 ecclesiastical patronage, which is now prostituted by
 the Chancellor and the Minister of the day to the
 purpose of parliamentary corruption, that every Bi-
 shop may have means sufficient to reward all the *de-*
serving clergy of his diocese. *Bp. Watson.*

DESIC'CATE, *v. a. & n.* } Lat. *desicco*, *de*
DESIC'CANTS, *n. s.* } and *siccus*; Heb.
DESICCA'TION. } ציה *dry* (Min-
 sheu). To dry up; to exhaust; to grow dry;
 Desiccants are applications that dry up sores.

Where there is moisture enough, or superfluous,
 their wine helpeth to digest and *desiccate* the moisture.
Bacon's Natural History.

If the spirits issue out of the body, there followeth
desiccation, induration, and consumption. *Id.*

Seminal ferments were elevated from the sea, or
 some *desiccated* places thereof, by the heat of the sun.
Hale.

This, in the beginning, may be prevented by *desic-*
cants, and wasted. *Wiseman.*

If tea be a *desiccative*, according to Paulli, it can-
 not weaken the fibres, as our author imagines; if it
 be emetick, it must constrict the stomach, rather
 than relax it. *Johnson.*

DESIDERATE, *v. a.* Lat. *desidero*. To
DESIDERATUM, *n. s.* } want or desire in
 absence. A desideratum is that which is much,
 or has been long, desired.

Eclipses are of wonderful assistance toward the so-
 lution of this so desirable and so much *desiderated*
 problem. *Cheyne.*

DESIGN', *v. a. & n. s.*

DESIGN'ABLE, *adj.*

DESIGNATION, *n. s.*

DESIGN'EDLY, *adv.*

DESIGN'ER, *n. s.*

DESIGN'ING *part. adj.*

DESIGN'LESS, *adj.*

DESIGN'LESSLY, *adv.*

DESIGNMENT, *n. s.*

Fr. *desiner*; Span
desinar; Ital. *de-*
segnare; Lat. *desig-*
nare. To show a
 thing by signs or
 tokens; to purpose;
 to form or order
 with a particular
 purpose in view,
 taking for after it; to devote, taking to; to plan,
 project. As a substantive a design is the scheme
 or plan of an undertaking in the mind, or in any
 form of development: and designment is syno-
 nymous with design: designable is distinguish-
 able: designation, the act or form of pointing or
 marking out: designedly, purposely, with some
 proposed object in view: designing is generally
 used in an ill sense. Designless is without plan
 or scheme, purposeless; designlessly is inadver-
 tently.

Leave these sad *designs*

To him that hath more cause to be a mourner.

Shakespeare.

News, lords! our wars are done:

The desperate tempest hath so banged the Turks,
 That their *designment* halts. *Id.*

William the Conqueror forebore to use that claim
 in the beginning, but mixed it with a titular pre-
 tence, grounded upon the will and *designation* of
 Edward the Confessor. *Bacon.*

We are to observe whether the picture or outlines
 be well drawn, or, as more elegant artizans term it,
 well *designed*; then, whether it be well coloured; which
 be the two general heads. *Wotton.*

That Providence, which keeps the whole from
 destruction, will also keep all its necessary parts from
 corruption, lest the work of God become insufficient
 to the end of its *designation*. *Bishop Taylor.*

One of those places was *designed* by the old man
 to his son. *Clarendon.*

In this great concert of his whole creation, the
designlessly conspiring voices are as differing as the
 conditions of the respective singers. *Boyle.*

'Tis a greater credit to know the ways of captivating
 nature, and making her subserve our purposes and *de-*
signments, than to have learned all the intrigues of
 policy. *Glanville.*

Is he a prudent man, as to his temporal estate, that
 lays *designs* only for a day, without any prospect to
 the remaining part of his life? *Tillotson.*

The acts of religious worship were purposely *de-*
signed for the acknowledgment of a Being, whom the
 most excellent creatures are bound to adore as well as
 we. *Stillfleet.*

You are not for obscurity *designed*,

But, like the sun, must cheer all human kind.

Dryden.

He was born to the inheritance of a splendid for-
 tune; he was *designed* to the study of the law. *Id.*

A sedate settled *design* upon another man's life,
 puts him in a state of war with him against whom he
 has declared such an intention. *Locke.*

'Tis not enough to make a man a subject, to con-
 vince him that there is regal power in the world; but
 there must be ways of *designing* and knowing the per-
 son to whom this regal power of right belongs. *Id.*

The power of all natural agents is limited: the
 mover must be confined to observe these proportions,
 and cannot pass over all these infinite *designable* de-
 grees in an instant. *Digby.*

Uses made things; that is to say, some things were made *designedly*, and on purpose, for such an use as they serve to. *Ray on the Creation.*

There is a plain *designation* of the Duke of Marlborough: one kind of stuff used to fatten land is called marle, and every body knows that borough is a name for a town. *Swift.*

There is a great affinity between designing and poetry; for the Latin poets, and the *designers* of the Roman medals, lived very near one another, and were bred up to the same relish for wit and fancy. *Addison.*

The hand strikes out some new *design*,
Where life awakes and dawns at every line. *Pope.*

'Twould shew me poor, indebted, and compelled,
Designing, mercenary; and I know
You would not wish to think I could be bought. *Southern.*

It has therefore always been both the rule and practice for such *designers* to suborn the public interest, to countenance and cover their private. *Decay of Piety.*

Spectators only on this bustling stage,
We see what vain *designs* mankind engage. *Churchill.*

Would I describe a preacher, such as Paul,
Were he on earth, would hear, approve, and own,
Paul should himself direct one, I would trace
His master-strokes, and draw from his *design*. *Cowper.*

DESIGN, in manufactories, expresses the figures with which the workman enriches his stuff, or silk, and which he copies after some painter or eminent draughtsman, as in diaper, damask, and other flowered silk and tapestry, &c. In undertaking of such kinds of figured stuffs, it is necessary, says Mons. Savary, that before the first stroke of the shuttle, the whole design be represented on the threads of the warp; we do not mean in colors, but with an infinite number of little packthreads, which being disposed so as to raise the threads of the warp, let the workman see, from time to time, what kind of silk is to be put in the eye of the shuttle for woof. This method of preparing the work is called reading the design, and reading the figure, which is performed in the following manner: a paper is provided, considerably broader than the stuff, and of a length proportionate to what is intended to be represented thereon. This they divide lengthwise, by as many black lines as there are intended threads in the warp; and cross these lines by others drawn breadthwise, which, with the former, make little equal squares; on the paper thus squared, the draughtsman designs his figures, and heightens them with colors as he sees fit. When the design is finished, a workman reads it, while another lays it on the simblot. To read the design is to tell the person who manages the loom the number of squares or threads comprised in the space he is reading, intimating at the same time, whether it is ground or figure. To put what is read on the simblot is to fasten little strings to the several packthreads, which are to raise the threads named; and this they continue to do till the whole design is read. Every piece being composed of several repetitions of the same design, when the whole design is drawn, the drawer, to re-begin the design afresh, has nothing to do but to raise the

little strings, with slip-knots, to the top of the simblot, which he had laid down to the bottom: this he is to repeat as often as is necessary till the whole is manufactured. The ribbon weavers have likewise a design, but far more simple than that now described. It is drawn on paper with lines and squares, representing the threads of the warp and woof. But instead of lines, whereof the figures of the former consist, these are constituted of points only, or dots, placed in certain of the little squares formed by the intersection of the lines. These points mark the threads of the warp that are to be raised, and the spaces left blank denote the threads that are to keep their situation: the rest is managed as in the former.

DESIGN, in music, is defined by Rousseau to be the invention and the conduct of the subject, the disposition of every part, and the general order of the whole. See MUSIC.

DESIGN is particularly used, in painting, for the first idea of a large work, drawn roughly, with an intention to be executed and finished in large. In this sense it is the simple contour or outlines of the figures intended to be represented, or the lines that terminate and circumscribe them: such design is sometimes drawn in crayons on ink, without any shadows at all: sometimes it is hatched, that is, the shadows are expressed by sensible outlines, usually drawn across each other with the pen, crayon, or graver. Sometimes the shadows are made with the crayon rubbed so as that there do not appear any lines: at other times, the grains or stroke of the crayon appear, as not being rubbed; sometimes the design is washed, that is, the shadows are done with a pencil in Indian ink, or some other liquor; and sometimes the design is colored, that is, colors are laid on resembling those intended for the grand work.

DESIGNATION of an estate is made by the tenants, butments, and boundings. Among the Romans there were designations of the consuls and other magistrates, some time before their elections.

DESIGNATOR, a Roman officer, who assigned and marked each person his place and rank in public ceremonies, shows, processions, &c. He was a kind of master of the ceremonies, who regulated the seats, march, order, &c. There were designators at funeral solemnities, and at the games, theatres, and shows, who not only assigned every one his place, but also led him to it; as appears from the prologue to the *Pænulus* of Placetus.

DESIGNING, the art of delineating or drawing the appearance of natural objects, by lines, on a plane. To design, according to the rules of mathematics, makes the object of perspective. See PERSPECTIVE.

DESIRE, *v. a. & n. s.* Fr. *desirer*; Span. *desear*; Lat. *desiderare*, which Minsheu thinks derived from *de sideribus*, the stars having been the first objects of worship and admiration. To wish; to long for; treat of, or for; demand. As a noun it generally expresses

a strong or earnest wish. That is desirable which is wished with earnestness ; pleasant ; delightful. Desirous is full of desire.

And he seide to hem with *desier* I haue *desirid* to ete this pask with you bfore that I suffre.

Wiclif. *Luh.* 22.

Be not *desirous* of his dainties ; for they are deceitful food.

Prov. xxiii. 3.

For possible is, sin thou hast hir presence,
And art a knight, a worthy and an able,
That by some cas, sin Fortune is changeable,
Thou maicst to thy *desir* sometime atteine.

Chaucer. *Cant. Tales.*

A doleful case *desires* a doleful song,
Without vain art or curious compliments.

Spenser.

The same piety which maketh them that are in authority *desirous* to please and resemble God by justice, inflameth every way men of action with zeal to do good.

Hooker.

I will counterfeit the bewitchment of some popular man, and give it bountifully to the *desirers*.

Shakespeare.

Sir, I intreat you home with me to dinner,
—I humbly do *desire* your grace of pardon ;

I must away this night. *Id.*

Men are drowsy and *desirous* to sleep before the fit of an ague, and yawn and stretch.

Bacon.

Adam the while,
Waiting *desirous* her return, had wove
Of choicest flowers a garland.

Milton.

Jove beheld it with a *desiring* look.

Dryden.

Desire's the vast extent of human mind ;
It mounts above, and leaves poor hope behind.

Id.

Desire is the uneasiness a man finds in himself upon the absence of any thing, whose present enjoyment carries the idea of delight with it.

Locke.

She then let drop some expressions about an agate snuff-box : I immediately took the hint, and bought one ; being unwilling to omit any thing that might make me *desirable* in her eyes.

Addison.

This *desire* of knowledge, like other affections planted in our nature, will be very apt to lead us wrong, if it be not well regulated.

Mason.

Fiction raises the mind by accommodating the images of things to our *desires*, and not, like history and reason, subjecting the mind to things.

Byron.

DESIRE, PORT, a harbour on the eastern coast of South America, so called by Sir Thomas Cavendish, in 1586. On the south side of its entrance is a remarkably steep rock, which is an excellent sea-mark. The harbour was found, by commodore Byron, to be narrow for nearly four miles, with a tide running at the rate of eight miles an hour. There were also various rocks and shoals ; but they were all above water. Long. 64° 25' W., lat. 47° 7' S.

DESIST, *v. n.*

Fr. *desister* ; Span. *de-*

DESIST'ANCE, *n. s.*

Fr. *sister* ; Ital. and Lat. *desistere*, from *de* (from), and *sisto*, *sto* ; Gr. *στανω*, to stand. To stand off, or cease from any thing ; to stop. Desistance is cessation.

Desist, thou art discerned,

And toil'st in vain ; nor me in vain molest.

Milton.

Men usually give freeliest where they have not given before : and make it both the motive and excuse of their *desistance* from giving any more, that they have given already.

Boyle.

There are many who will not quit a project, though they find it pernicious or absurd ; but will readily *desist* from it, when they are convinced it is impracticable.

Addison.

DESITIVE, *adj.* Lat. *desitus*. Ending ; concludent ; final.

Inceptive and *desitive* propositions are of this sort ; the fogs vanish as the sun rises ; but the fogs have not yet begun to vanish, therefore the sun is not yet risen.

Watts.

DESK, *n. s.* Dut. *disch*, a table ; Teut. *tisch*. An inclining table for the use of writers or readers, made commonly with a box or repository connected with it.

Tell her in the *desk*,

That's covered o'er with Turkish tapestry,

There is a purse of ducats.

Shakespeare.

He is drawn leaning on a *desk*, with his bible before him.

Wilton's Angler.

I have been obliged to leave unfinished in my *desk* the heads of two essays.

Pope.

Sweet sleep enjoys the curate in his *desk*,

The tedious rector drawing o'er his head ;

And sweet the clerk below.

Cooper.

DESMOULINS (B. C.), one of the demagogues of the French revolution, was born at Guise, in Picardy, in 1762, and is said to have been a descendant of the celebrated Charles Desmoulin. Educated with Robespierre, for the bar, he became a counsellor of parliament, and commenced his career, as an advocate, by pleading against his father, on a charge for his board. From the commencement of the revolution he was connected with Robespierre, and became the editor of a journal, in which he styled himself attorney-general of the Lantern. He was the great director of the factious mob of Paris, but at one time was esteemed by La Fayette. In a denunciation against him to the Constituent Assembly, in 1790, for his virulent abuse of the king, Desmoulin was warmly defended by all the jacobins. After the unhappy flight of Louis XVI. to Varennes, he was one of the instigators of the meeting of the Champ de Mars ; and was conspicuous in the insurrection of the 20th of June, 1792, as well as in that of the 10th of August. He now became secretary to Danton, the minister of justice, and was chosen a deputy from Paris to the convention, in which, of course, he voted for the death of the king. Robespierre, however, was jealous of his connexion with Danton ; he was arrested March 31st, 1794, and on the 5th of April suffered by the guillotine. Beside a great number of political pamphlets, Desmoulin published *Les Révolutions de France et de Brabant* ; *Le Vieux Cordelier* ; *Histoires des Brissotins* ; *Satires* ; and *Opuscules de Camille Desmoulin*.

DESOLATE, *v. a. & adj.*

DESOLATELY, *adv.*

DESOLATION, *n. s.*

DESOLATER.

Fr. *desoler* ; Sp.

decsolar ; Italian

and Lat. *desolare*,

from *de* and *solus*.

To depopulate ; make desert ; solitary ; uninhabited. Desolation is the act or consummation of ruin or destruction ; desolater, he who accom-

plishes it. Wiclif makes a curious use of the verb for being removed from.

And britheren, we *desolat* fro ghon for a tyme bi mouth and in beholdyng but not in herte, han highed more plenteuousli to se ghoure face with greet desier.

Wiclif. 1 Tessal. ii.

How is Babylon become a *desolation* among the nations!

Jer. l. 23.

The lion would not leave her *desolate*,
But with her went along, as a strong gard
Of her chast person. Spenser. *Faerie Queene*.

What with your praises of the country, what with your discourse of the lamentable *desolation* thereof made by those Scots, you have filled me with a great compassion.

Spenser's *State of Ireland*.

Let us seek some *desolate* shade, and there
Weep our sad bosoms empty. Shakespeare.

Without her follows to myself and thee,
Herself, the land, and many a Christian soul,
Death, *desolation*, ruin, and decay. Id.

The island of Atlantis was not swallowed by an earthquake, but was *desolated* by a particular deluge.

Bacon.

Thick around

Thunders the sport of those, who with the gun,
And dog impatient bounding at the shot,
Worse than the season *desolate* the fields.

Thomson.

It is remarkable, that they never see any way to their projected good but by the road of some evil. Their imagination is not fatigued with the contemplation of human suffering, through the wild waste of centuries, added to centuries of miseries and *desolation*.

Burke.

He calls for famine, and the meagre fiend
Blows mildew from between his shrivelled lips,
And taints the golden ear. He springs his mines,
And *desolates* a nation at a blast. Cowper.

The *desolater* *desolate*!

The victor overthrown!

The arbiter of others' fate

A suppliant for his own! Byron.

DESPARD (Edward Marcus), was a native of Queen's county, in Ireland, where his family maintained considerable respectability. When but nineteen, he entered into the army as an ensign, and soon became distinguished for his skill as an engineer. About the close of the American war, he served in the West Indies, where his talents appeared particularly conspicuous in an expedition on the Spanish Main. He was promoted to the rank of lieutenant-colonel for his achievements on this occasion, and, in 1784, was appointed English superintendent in the Bay of Honduras; but his conduct proving offensive to the settlers, they complained to the government at home; in consequence of which he was suspended. He arrived in England in 1790, and made application to government for an investigation of his conduct, but his claims were rejected; upon which he became a violent democrat, and, in consequence of his inflammatory conduct, was apprehended, during the suspension of the Habeas Corpus Act, and sent to Cold Bath-fields prison; and finally to Tothill-fields bridewell. He was afterwards liberated on his own recognisance. Soured, apparently, by his disastrous fate, he now endeavoured to seduce and corrupt some of the lowest of the soldiery; and, having collected some few of similar senti-

ments, held secret meetings with them at different places, to which no persons were admitted without a treasonable oath. Various plans were agitated in this club for the murder of the king and other desperate undertakings; but, some of the conspirators having discovered the plot, the colonel, and several others, were apprehended, and brought to trial by a special commission, February 5th, 1803. Despard and nine others were found guilty, on the clearest proof, and executed on Monday, the 21st.

DESPAIR', *v. n. & n. s.* Fr. *desesperer*;

DESPAIR'ER, *n. s.* } Span. and Port.

DESPAIR'FUL, *adj.* } *desesperar*; Lat.

DESPAIR'INGLY, *adv.* } *desperare*; from *de*

(privative) and *spero* to hope; Heb. שָׁוֵר. To be hopeless; to despond, taking *of*, in modern usage, before the object. Despair is hopelessness; confirmed despondency; and sometimes expresses the cause of such a state of mind.

We are troubled on every side, yet not distressed; we are perplexed, but not in *despair*. 2 Cor. iv. 8.

Other cries among the Irish savor of the Scythian barbarism; as the lamentations of their burials, with *despairful* outcries. Spenser.

Strangely visited people,

All swollen and ulcerous, pitiful to the eye;
The mere *despair* of surgery, he cures;
Hanging a golden stamp about their necks,
Put on with holy prayers. Shakespeare.

We commend the wit of the Chinese, who *despair* of making of gold, but are mad upon making of silver.

Bacon.

He speaks severely and *despairingly* of our society.

Boyle.

That sweet but sour *despairful* care. Sidney.

Equal their flame, unequal was their care;
One loved with hope, one languished with *despair*.

Dryden.

He cheers the fearful, and commends the bold,
And makes *despairers* hope for good success. Id.

Despair is the thought of the unattainableness of any good, which works differently in men's minds; sometimes producing uneasiness or pain, sometimes rest and indolence. Locke.

Are not all or most evangelical virtues and graces in danger of extremes? As there is, God knows, too often a defect on the one side, so there may be an excess on the other: may not hope in God, or godly sorrow, be perverted into presumption or *despair*? Sprat.

Enlivening Hope, and fond Desire,
Resign the heart to Spleen and Care;
Scarce frightened Love maintains her fire,
And rapture saddens to *despair*.

Johnson. *Winter's Walk*.

DESPATCH', *v. a. & n. s.* } Fr. *despacher*;

DESPATCH'FUL, *adj.* } Span. *despachar*.

To send off or away in haste; hence to perform business quickly, and to assassinate. The substantive is used not only for prompt performance of business, but intelligence, or news, supposed to be sent with despatch; and in the plural for official or public intelligence or papers. Despatchful is, sent in haste. The *e* of the first syllable has become of late almost universal.

And the company shall stone them with stones, and *despatch* them with their swords. *Exch.* xxiii. 47.

What are the brothers parted?

—They have *despatched* with Pompey; he is gone. Shakespeare.

Edmund, I think, is gone,
In pity of his misery to *despatch*
His knighted life. *Shakspeare.*

Long and curious speeches are as fit for *despatch* as
a robe or mantle, with a long train, is for a race. *Bacon.*

So saying, with *despatchful* looks in haste
She turns, on hospitable thoughts intent. *Milton.*

Bushes are of so quick *despatch*, that the joy of the
wicked is compared to a fire of thorns. *Bacon.*

Bp. Hall. Contemplations.

Doctor Theodore Coleby, a sober man, I *despatched*
immediately to Utrecht, to bring the moxa, and learn
the exact method of using it. *Temple.*

Despatch me quickly, I may death forgive;
I shall grow tender else, and wish to live. *Dryden.*

No sooner is one action *despatched*, which, by such
a determination as the will, we are set upon, but an-
other uneasiness is ready to set us on work. *Locke.*

Let one *despatchful* bid some swain to lead,
A well-fed bullock from the grassy mead. *Pope.*

You'll see, could you her inward motions watch,
Feigning delay, she wishes for *despatch*;
Then to a woman's meaning would you look,
Then read her backward. *Granville.*

DESPERATE, *adj.* & *n. s.* } Lat. *despera-*
DESPERATELY, *adv.* } *tus.* See DES-
DESPERATENESS, *n. s.* } PAIR. Hope-
DESPERATION. } less; abandon-

ed to sorrow; without care of consequences;
irretrievable: hence rash; mad; and expressing
an extreme degree of any thing bad.

Were it not the part of a *desperate* physician to
wish his friend dead, rather than to apply the best
endeavours of his skill for his recovery?

Spenser's State of Ireland.

Since his exile she hath despised me most;
Forsworn my company, and rail'd at me,
That I am *desperate* of obtaining her. *Shakspeare.*

These debts may be well called *desperate* ones; for
a mad man owes them. *Id.*

The going on not only in terrors and amazement of
conscience, but also boldly, hopefully, confidently, in
wilful habits of sin, is called a *desperateness* also; and
the more bold thus, the more *desperate*. *Hammond.*

As long as we are guilty of any past sin, and have
no promise of remission, whatever our future care be,
this *desperation* of success chills all our industry, and
we sin on because we have sinned. *Id.*

Grace often resisted turns to *desperateness*.

Bishop Hall. Contemplations.

'Tis not amiss, ere ye're giv'n o'er,
To try one *desperate* medicine more;
For where your case can be no worse,
The *desperatest* is the wisest course! *Hudibras.*

In a part of Asia, the sick, when their case comes
to be thought *desperate*, are carried out and laid on the
earth, before they are dead, and left there. *Locke.*

She fell *desperately* in love with him, and took
a voyage into Sicily in pursuit of him. *Addison.*

Concluding all mere *desperate* sots and fools,
That durst depart from Aristotle's rules. *Pope.*

Beware of *desperate* steps, the darkest day,
Live till to-morrow will have passed away. *Cowper.*

I cannot find my hero; he is mixed
With the heroic crowd that now pursue
The fugitives, or battle with the *desperate*.
What have we here? *Byron.*

DESPICABLE, *adj.* } See DESPISE. Con-
DESPICABLENESS, *n. s.* } temptible; mean
DESPICABLY, *adv.* } low.

Our case were miserable, if that wherewith we most
endeavour to please God were in his sight so vile and
despicable as men's disdainful speech would make it. *Hooker.*

All the earth he gave thee to possess and rule,
No *despicable* gift. *Milton.*

Not less even in this *despicable* hero,
Than when my name shook Africk with affright,
And froze your hearts beneath your torrid zone. *Dryden.*

Here wanton Naples crowns the happy shore,
Nor vainly rich, nor *despicably* poor;
The town in soft solemnities delights,
And gentle poets to her arms invites. *Addison.*

We consider the great disproportion between the in-
finity of the reward and the *despicableness* of our
service. *Decay of Piety.*

There is, indeed, no employment, however *despica-*
ble, from which a man may not promise himself more
than competence, when he sees thousands and myriads
raised to dignity, by no other merit than that of con-
tributing to supply their neighbours with the means
of sucking smoke through a tube of clay, &c. *Adventurer.*

DESPISE, *v. a.* } Span. *despreciar*, from
DESPISABLE, *adj.* } Lat. *despicere*, from *de*,
DESPISER, *n. s.* } down and *specio*; (Gr.

σκεπω; Heb. *קשׁ*, to look or see. To look
upon with contempt, to scorn; abhor: *despisa-*
ble is contemptible.

God cheats the feeble things and *despicable* things
of the world to confound the stronger things. *Wiclif. 1 Cor. 1*

Behold ye *despisers*, and wonder, and perish.

Isaiah.

However yet they me *despise* and spight,
I feed on sweet contentment of my thought.

Spenser. The Tears of the Musca.

Let not your ears *despise* my tongue for ever,
Which shall possess them with the heaviest sound
That ever yet they heard. *Shakspeare.*

As the wicked have no peace with God, so the godly
have no peace with men; for if they prosper not they
are *despised*; if they prosper they are envied.

Bp. Hall. Contemplations.

All cold, but in her breast, I will *despise*;

And dare all heat but that in Celia's eyes,
Roscommon.

I am obliged to you for taking notice of a poor old
distressed courtier, commonly the most *despicable* thing
in the world. *Arbuthnot to Pope.*

Admire, exult—*despise*—laugh, weep,—for here
There is such matter of all feeling:—Man!
Thou pendulum betwixt a smile and tear,
Ages and realms are crowded in this span. *Byron.*

DESPITE, *v. a.* & *n. s.* } Fr. *dépit*; Dutch
DESPITEFUL, *adj.* } *spijt*; Ital. *despitto*,
DESPITEFULLY, *adv.* } from Lat. *despectus*,
DESPITEFULNESS, *n. s.* } *de* and *specio*, *spec-*
DESPITEOUS, *adj.* } tus. See DESPISE.
DESPITEOUSLY, *adv.* } To vex, to do a

malicious act to: malice; malignity; and hence
defiance. *Despightful* is malicious, mischievous,
splenetic. *Despitefulness*, synonymous with *des-*
pight; and *despiteous*, *despiteously*, with *despite-*

tul, despitefully. Wiclif uses despite for dishonor.

Wher a pottere of cley hath not power to make of the same gobet oo vessel into onour, a nothir into dyspyt ?
Wiclif. *Romayne* 9.

Pray for them that despitefully use you and persecute you.
Matthew v. 44.

But out the child he hent
Despiteously, and gan a chere to make,
As though he would have slain it or he went.
Chaucer. *Cant. Tales*.

Full many mischiefs follow cruell wrath;
— Bitter despite, with rancour's rusty knife;
And frotting griefe the enemy of life.

Spenser. *Fuerie Quene*.
The knight of the red-cross, when him he spied,
Spurring so hot with rage despiteous,
Can faine couch his speare. Id.

The mortal steel despiteously entailed
Deep in their flesh, quite through the iron walls,
That a large purple stream adown their giamboux falls.

Spenser.
The life thou gavest me first, was lost and done;
Till with thy warlike sword despite of fate,
To my determined time thou gavest new date.

Shakespeare. Id.
Turning despiteous daughter out of door.

Saturn, with his wife Rhea, fled by night; setting
the town on fire, to despite Bacchus. Raleigh.
Preserve us from the hands of our despiteful and
deadly enemies. King Charles.

His punishment, eternal misery,
It would be all his solace and revenge,
As a despite done against the Most High,
Thence once to gain companion of his woe. Milton.
Know I will serve the fair in thy despite.

Dryden.
With men these considerations are usually the
causes of despite, disdain, or aversion from others;
but with God they pass for reasons of our greater ten-
derness towards others. Sprat.

Say, would the tender creature, in despite
Of heat by day, and chilling dews by night,
Its life maintain ? Blackmore.

Venice! thy lot
Is shameful to the nations,—most of all,
Albion! to thee: the Ocean queen should not
Abandon Ocean's children; in the fall
Of Venice think of thine, despite thy watery wall.

Byron.

DESPOIL', v. a. } De and spoil. Fr. *de-*
DESPOILIA'TION, n. s. } *pouiller*, Ital. *despogliare*;
Lat. *despoliare*. See SPOIL. To rob; strip; di-
vest; deprive; taking of. Despoliation is the act
of stripping, or plundering.

A groom gan despoil
Of puissant arms, and laid in easy bed. Spenser.
You are nobly born,
Despoiled of your honour in your life. Shakespeare.

He waits, with hellish rancour imminent,
To intercept thy way, or send thee back
Despoiled of innocence, of faith, of bliss. Milton.

He, pale as death, despoiled of his array,
Into the queen's apartment takes his way. Dryden.

Even now thy aid,
Eugene, with regiments unequal prest,
Awaits: this day of all his honours gained
Despoils him, if thy succour opportune
Defends not the sad hour. Philips.

These formed stones, despoiled of their shells, and
exposed upon the surface of the ground, in time
moulder away. Woodward.

DESPOND', v. a. } Old Fr. *despender*;
DESPONDING, adj. } Lat. *despondeo*. To
DESPOND'ENCY, n. s. } despair; to lose hope;
to become hopeless or desperate.

It is every man's duty to labour in his calling, and
not to despond for any miscarriages or disappointments
that were not in his own power to prevent.

L'Estrange.

Physick is their bane:
The learned leeches in despair depart,
And shake their heads, depending of their art.

Dryden.

Others depress their own minds, despond at the
first difficulty; and conclude, that making any pro-
gress in knowledge, farther than serves their ordinary
business, is above their capacities. Locke.

It is well known, both from ancient and modern
experience, that the very boldest atheists, out of their
debauches and company, when they chance to be sur-
prised with solitude or sickness, are the most suspi-
cious, timorous, and despondent wretches in the world.

Bentley.

Aim at perfection in every thing, though in most
things it is unattainable; however, they who aim at
it, and persevere, will come much nearer to it, than
those whose laziness and despondency make them give
it up as unattainable. Chesterfield.

DESPO'NSATE, v. a. } Lat. *desponso*. To
DESPO'NSATION, n. s. } betroth; to affianc;
to unite by reciprocal promises of marriage;
the act of betrothing.

DESPOT, n. s. } Fr. *despot*, from
DESPOT'IC, adj. } Gr. *δεσποτης* (*δεος*
DESPOT'ICAL, adj. } fear and *ποιεω* to
DESPOT'ICALNESS, n. s. } make.) An abso-
DESPOTISM, } lute prince; a ty-
rant: despotic is, absolute in power; arbitrary:
despotism, despoticalness, the power of a despot.

God's universal law
Gave to the man despotic power
Over his female in due awe,
Nor from that right to part an hour,
Smile she or lowre. Milton.

In all its directions of the interior faculties, reason
conveyed its suggestions with clearness, and enjoined
them with power: it had the passions in perfect sub-
jection; though its command over them was but per-
suasive and political, yet it had the force of coercive,
and despotical. South.

We see in a neighbouring government the ill con-
sequences of having a despotic prince. Addison.

Can despots compass aught that hails their sway?
Or call with truth one span of earth their own,
Save that wherein at last they crumble, bone by bone!
Byron. *Childe Harold's Pilgrimage*.

DESPOT originally signified the same with
herus, a master. Nicephorus having ordered
his son, Stauracius, to be crowned, the son,
out of respect, would only take the name
ΔΕΧΙΟΤΗC, leaving to his father that of
ΒΑCΙΑΕΥC. The following emperors, however,
preferred ΔΕΧΙΟΤΗC to ΒΑCΙΑΕΥC; particu-
larly Constantine XII., Michael Ducas, Roma-
nus Diogenes, Nicephorus Botoniates, the
Comneni, and some others. In imitation of the
princes, the princesses likewise assumed the title
of ΔΕΧΙΟΙΝΑ. It was the emperor Alexius
Angelus that created the dignity of despot, and
made it the first after that of emperor, or Au-

gustus, above those of Sebastocrator and Cæsar. The despots were usually the emperor's sons or sons-in-law, and their colleagues, or co-partners, in the empire, as well as their presumptive heirs. Those who were sons of the emperors had more privileges and authority than those who were only sons-in-law. Codin, p. 38, describes the habit and ornaments of the despot. See the notes of Father Goar on that author. Under the successors of Constantine the Great, the title Despot of Sparta was given to the emperor's son or brother, who had the city of Sparta or Lacedæmon by way of appendage.

DESSQUAMATION, *n. s.* Lat. from *squama*. The act of scaling foul bones. A surgical term.

DESSAU, or DESSAW, a strong town of Germany, in Upper Saxony, the capital of the principality of Anhalt. It was first fortified by prince Leopold in 1341, and has one Lutheran and two Calvinist churches, besides a Catholic and Jewish chapel. Inhabitants about 10,000, of which the Jews form one-tenth. Dessau, the surrounding district, contains 53,500 inhabitants: its chief products are corn and flax: it has also considerable pastures. The people manufacture cloths, hats, and stockings. It is seated on the Mulda, a branch of the Elbe, twenty-eight miles south-east of Magdeburg, thirty-seven north of Leipsic, forty-eight south-west of Potsdam, and sixty north-west of Dresden. One of the most remarkable objects here is a dyke at the side of the Elbe, nearly five miles long, from ten to eleven feet high, and sixty feet thick at the base. Long. $12^{\circ}17'1''$ E., lat. $51^{\circ}50'6''$ N.

DESSALINES (John James), brother of the brave Toussaint l'Ouverture, of St. Domingo, was born in slavery, and first emerged with him to notice in the active part they both took in the commotions excited in St. Domingo in 1791. Dessalines particularly distinguished himself by his defence of Crete le Perrot against the French general, Leclerc. When Toussaint was obliged to make peace with the French, Dessalines was included in the treaty, though he by no means approved it; and what followed, but too well confirmed his suspicions of the French. Toussaint was treacherously seized, and carried to France, where he died. Dessalines was now unanimously elected commander-in-chief of the forces, which rose upon Rochambeau, who had succeeded Leclerc, and who treated the black inhabitants of St. Domingo with no less cruelty than his predecessor. He, at once, attacked Rochambeau with the main body of his army, near Cape François, the capital of the island, and defeated him with great slaughter, compelling him to retreat into the town, and finally to surrender to the English. Dessalines now exerted himself to provide for the future security, and concerted a variety of measures for the internal regulation, of the island. He first caused a proclamation of independence to be issued on the 29th of November, 1803, in which the colony was solemnly declared to be for ever separated from France. His next step was to abolish the name of St. Domingo, and substitute in its place the original appellation of Hayti. He was subsequently chosen governor of Hayti during his

life, with authority to appoint his successor; and on the 8th of October, 1804, proclaimed emperor. This dignity, the acceptance of which forms the only conspicuous act of folly in his course, he only enjoyed about two years. In October, 1806, Christophe, the second emperor, headed a successful conspiracy against him, and murdered him, by surprise, in his palace.

DESSAULT (Peter Joseph), an eminent French surgeon, born at Magny Vermois, near Macon, in 1744. He received the early part of his education among the Jesuits, with a view to the priesthood, which profession he afterwards declined, and became a student in the military hospital of Besort. When about twenty years of age, he removed to Paris, where the greater part of his time was spent at the anatomical theatres and hospitals; and, in the winter of 1766 he commenced teacher of anatomy. His fame soon spreading, he was in a short time attended by 300 pupils; and, in 1776, was admitted a member of the corporation of surgeons. In 1782 he was appointed surgeon-major to the hospital of Charity. At this time Dessault was considered as one of the first surgeons in Paris; and having succeeded to the next vacancy at the Hotel Dieu, he was entrusted with almost the whole surgical department of that hospital, after the death of Moreau. A clinical school of surgery, on a liberal and extensive plan, was here instituted by him, which attracted a concourse of students, not only from all corners of France, but from foreign countries, and his lectures were frequently attended by 600 students; so that it may be said, the greater part of the surgeons in the French army derived the knowledge of their profession from his school. In 1791 he commenced his *Journal de Chirurgie*, a work of considerable reputation. In the midst, however, of his useful and important labors, the prevailing parties of this turbulent period took offence at him as standing neutral; and in 1792, after being twice examined, he was seized, while delivering a lecture, and confined in the Luxembourg prison, where he remained three days; but his usefulness restored him to his former situation. Upon the establishment of the school of health, he was made clinical professor for external maladies; and he was particularly instrumental in the conversion of the Evecché into an hospital for surgical operations. So deeply, however, was he affected by the horrid scenes which were exhibited in May, 1795, that he was seized with a fever, accompanied with delirium, and died on the 1st of June, aged fifty-one.

DESSERT, *n. s.* Fr. *desserte*. The last course at an entertainment; the fruit or sweetmeats set on the table after the meat.

To give thee all thy due, thou hast the art
To make a supper with a fine *dessert*. *Dryden.*

At your *dessert* bright pewter comes too late,
When your first course was well served up in plate. *King.*

And here, assembled cross-legged round their trays,
Small social parties just begun to dine;
Above them their *dessert* grew on its vine,
The orange and pomegranate nodding o'er,
Dropped in their laps, scarce plucked, their mellow store. *Byron*

DESTINE, *v. a.* } Lat. *destino*. To
 DESTINATE, *v. a.* } doom; design for a
 DESTINATION, *n. s.* } given purpose; ap-
 DESTINY, } point irreversibly.

Out of this prison helps that we may 'scape,
 And if so be our *destine* be shape
 By eterne word to dien in prison
 Of our lignage have som compassion.

Chaucer. *Cant. Tales.*

But who can turn the stream of *destiny*,
 Or break the chain of strong necessity,
 Which fast is tied to Jove's eternal seat?

Faerie Queene.

Thou art neither like thy sire or dam;
 But, like a foul mis-shapen stigmatick,
 Marked by the *destinies* to be avoided. Shakespeare.

The *destinies* of old put poverty upon the celestial
 herald as a punishment; and ever since those Ge-
 mini, or twin-born brats, Poetry and Poverty, have
 been inseparable companions. Burton.

Wherefore cease we then?

Say they who counsel war: we are decreed,
 Reserved and *destined* to eternal woe;
 Whatever doing, what can we suffer more? Milton.

They'll find it th' physiognomies
 O' th' planets, all men's *destinies*;
 Like him that took the doctor's bill,
 And swallowed it instead of th' pill. Hudibras.

There is a great variety of apprehensions and fan-
 cies of men, in the *destination* and application of
 things to several ends and uses. Hale.

All altars flame; before each altar lies,
 Drenched in his gore, the *destined* sacrifice. Dryden.

Birds are *destinated* to fly among the branches of
 trees and bushes. Ray on the Creation.

The infernal judge's dreadful power
 From the dark urn shall throw thy *destined* hour.
 Prior.

May heaven around this *destined* head,
 The choicest of its curses shed. Id.

Some against hostile drones the hive defend,
 Others with sweets the waxen cells distend;
 Each in the toil his *destined* office bears,
 And in the little bulk a mighty soul appears. Gay.

DESTITUTE, *adj.* } Fr. *destitué*; Span.
 DESTITUTION, *n. s.* } *destituydo*; Ital. *desti-*
 tute, from Lat. *destituo*, (*de* and *statuo*), to for-
 sake. Forsaken; abandoned; taking of; friend-
 less, low.

He will regard the prayer of the *destitute*, and not
 despise their prayer. Psalm cii. 17.

That *destitution* in food and cloathing is such an
 impediment, as, till it be removed, suffereth not the
 mind of man to admit any other care. Hooker.

The order of paying the debts of contract or resti-
 tution is set down by the civil laws of a kingdom; in
destitution or want of such rules, we are to observe the
 necessity of the creditor, the time of the delay, and
 the special obligations of friendship. Taylor.

Take the *destined* way
 To find the regions *destitute* of day. Dryden.

Nothing can be a greater instance of the love that
 mankind has for liberty, than such a savage mountain
 covered with people, and the Campania of Rome,
 which lies in the same country, *destitute* of inhabi-
 tants. Addison.

DESTROY, *v. a.* } Fr. *destruire*; Span.
 DESTROYER, *n. s.* } *destruire*; Ital. *distrug-*
 gere; Lat. *destruere*, *de* privative, and *struo*, Gr.

σρῶω, to build. To overturn an edifice; hence
 to ruin; lay waste; put an end to; kill.

Neither grutchē ghe as somme of hem grutchiden,
 and thot perisscheden of a *distriere*. Wiclif. 1 Cor. x.

The Lord will *destroy* this city. Gen. xix. 14.

'Tis safer to be that which we *destroy*,
 Than by destruction dwell in doubtful joy.

Shakespeare.

Triumph, to be styled great conquerors,
 Patrons of mankind, gods, and sons of gods!
Destroyers rightlier called, and slayers of men.

Milton.

The wise Providence has placed a certain antipathy
 between some animals and many insects, whereby
 they delight in their destruction, though they use
 them not as food; as the peacock *destroys* snakes and
 adders; the weazel, mice and rats; spiders, flies;
 and some sorts of flies *destroy* spiders. Hale.

Do we not see that slothful, intemperate, and in-
 continent persons *destroy* their bodies with diseases,
 their reputations with disgrace, and their faculties
 with want? Bentley.

Yet, guiltless too, this bright *destroyer* lives;
 At random wounds, nor knows the wound she gives.

Pope.

Armies, though always the supporters and tools of
 absolute power, for the time being, are always the
destroyers of it, too; by frequently changing the hands
 in which they think proper to lodge it. Chesterfield.

When Nero perished by the justest doom

Which ever the *destroyer* yet *destroyed*,
 Amidst the roar of liberated Rome,
 Of nations freed, and the world overjoyed,
 Some hands unseen strewed flowers upon his tomb.

Byron.

DESTRUCTION, *n. s.* } Lat. *destructio*,
 DESTRUCTIBLE, *adj.* } from *destruo*. See
 DESTRUCTIBILITY, } DESTROY. The
 DESTRUCTIVE, *adj.* } act or consumma-
 DESTRUCTIVEEY, *adv.* } tion of destroying;
 DESTRUCTIVENESS, *n. s.* } hence, killing, mur-
 DESTRUCTOR. } der. Destructible
 is, liable to be destroyed; destructive is, having
 the quality of destroying; wasteful; tending to
 ruin, or causing it. The adverb and noun fol-
 lowing, express a similar sense. Destructor is
 used by Boyle for destroyer.

For the armouris of our knyghthood ben not fleischli,
 but myghti bie God to the *destruction* of strengthis.

Wiclif. 2 Cor. 10.

Broad is the way that leadeth to *destruction*.

Matthew.

'Tis safer to be that which we *destroy*,
 Than by *destruction* dwell in doubtful joy.

Shakespeare.

What a favour is it to men, to be reserved from
 common *destruction*, to be sacrificed to their Maker
 and Redeemer. Bp. Hall. *Contemplations.*

Helmont wittily calls the fire the *destructor* and the
 artificial death of things. Boyle.

In ports and roads remote,
Destructive fires among whole fleets we send.

Dryden.

Excess of cold, as well as heat, pains us; because
 it is equally *destructive* to that temper which is neces-
 sary to the preservation of life. Locke.

He will put an end to so absurd a practice, which
 makes our most refined diversions *destructive* of all
 politeness. Addison.

What remains but to breathe out Moses's wish?
 O that men were not so *destructively* foolish!

Decay of Piety.

The vice of professors exceeds the *destructiveness* of the most hostile assaults, as intestine treachery is more ruinous than foreign violence. *Id.*

Waste cannot be accurately told, though we are sensible how *destructive* it is. *Johnson.*

If he was

Anght but a phantasy, and could be classed
With forms which live and suffer—let that pass—
His shadow fades away into *destruction's* mass.

Byron.

DESUDATION, *n. s.* Lat. *desudatio*. A profuse and inordinate sweating, from what cause soever.

DESUETUDE, *n. s.* Fr. *desuetude*; Latin, *desuetudo*, from *desuesco*, *desuetus*; *de* privative and *suesco*, to be accustomed. Cessation of custom or habit.

How come they to be prejudiced, rescinded, abrogated, by contrary laws, and *desuetude*, by change of times and opinions. *Bp. Taylor.*

By the irruption of numerous armies of barbarous people, those countries were quickly fallen off, with barbarism and *desuetude*, from their former civility and knowledge. *Hale.*

DESULTOR, in antiquity, a vaulter or leaper, who, leading one horse by the bridle, and riding another, jumped from the back of the one to the other. This practice required great dexterity, being performed before the use of either saddles or stirrups. The custom was practised in the army chiefly among the Numidians, who always carried with them two horses for that purpose, changing them as they tired: the Sarmatæ also were great masters of this exercise.

DESULTORY, *adj.* } Latin *desultorius*.

DESULTORIOUS. } Vaulting or leaping to and fro. See above. Unsettled; without method in thought or action; wavering.

'Tis not for a *desultory* thought to atone for a lewd course of live: nor for any thing but the superinducing of a virtuous habit upon a vicious one, to qualify an effectual conversion. *L'Estrange.*

Let but the least trifle cross his way, and his *desultorious* fancy presently takes the scent, leaves the unfinished and half-mangled notion, and skips away in pursuit of the new game, *Norris.*

Take my *desultory* thoughts in their native order, as they rise in my mind, without being reduced to rules, and marshalled according to art.

Felton on the Classics.

DESUME, *v. a.* Lat. *desumo*. To take from any thing; to borrow.

This pebble doth suppose, as pre-existent to it, the more simple matter out of which it is *desumed*, the heat and influence of the sun, and the due preparation of the matter. *Hale.*

They have left us relations suitable to those of *Ælian* and *Pliny*, whence they *desumed* their narrations. *Browne.*

DETACH, *v. a.* } Fr. *detacher*, from *dis* Lat.

DETACHMENT. } and **ATTACH**, which see. To separate; disengage: hence to select and send out a body of military: a detachment is applied to the body so sent out.

Mean while the Squire was on his way,

The knight's late orders to obey;

Who sent him for a strong *detachment*

Of headles, constables, and watchmen.

Hudibras.

If ten men are in war with forty, and the latter *detach* only an equal number to the engagement, what benefit do they receive from their superiority?

Addison.

The several parts of it are *detached* one from the other, and yet join again, one cannot tell how.

Pope.

Besides materials, which are brute and blind, Did not this work require a knowing mind, Who for the task should fit *detachments* chuse From all the atoms?

Blackmore.

DETACHMENTS are sometimes formed of entire squadrons and battalions; but more generally of a number of men picked out from several regiments or companies equally, to be employed as the general may see proper; whether on an attack, or to scour the country. A detachment of 2000 or 3000 men is a command for a brigadier general: 800 for a colonel: 400 or 500 for a lieutenant-colonel. A captain never marches on a detachment with less than fifty men, a lieutenant, an ensign, and two serjeants. A lieutenant is allowed thirty, and a serjeant; and a sea-jeant ten or twelve men.

DETAIL, *v. a. & n. s.* Fr. *detailler*. From *de* and **TELL**, which see. To relate in particulars, or with minuteness.

They will perceive the mistakes of these philosophers, and be able to answer their arguments, without my being obliged to *detail* them. *Cheyne.*

I was unable to treat this part of my subject more in *detail*, without becoming dry and tedious. *Pope.*

His train of reasoning is ingenious and whimsical; but I am not at leisure to give you a *detail*.

Franklin.

DETAİN, *v. a.* } Fr. *detiner*; Span. *de-*

DETAİN'ER, *n. s.* } *ncr*, from Lat. *detinere*, *de* **DETAİN'DER**. } and *teneo*; Gr. *τενω*, to stretch. To hold or keep back; to restrain; to keep in custody. See **DETINUE**.

Let us *detain* thee until we shall have made ready a kid. *Judges*, xiii. 13.

These doings sting him

So venomously, that burning shame *detains* him From his Cordelia. *Shakspeare.*

Detain not the wages of the hireling; for every degree of detention of it, beyond the is injustice and uncharitableness. *Taylor.*

Judge of the obligation that lies upon all sorts of injurious persons; the sacrilegious, the *detainers* of tithes, and cheaters of men's inheritances. *Id.*

Had Orpheus sung it in the nether sphere,
So much the hymn had pleased the tyrant's ear,
The wife had been *detained* to keep her husband there. *Dryden.*

DETECT, *v. a.* } Lat. *detectus*, from *dete-*
DETECT'ER, *n. s.* } *gere*, *de* privative, and *tego*
DETECTION. } to hide. To discover a crime, or scheme; to discover generally.

There's no true lover in the forest; else sighing every minute, and groaning every hour, would *detect* the lazy foot of time as well as a clock. *Shakspeare.*

Should I come to her with any *detection* in my hand, I could drive her then from the ward of her family. *Id.*

Though should I hold my peace, yet thou Wouldst easily *detect* what I conceal. *Milton.*

Detection of the incoherence of loose discourses was wholly owing to the syllogistical form. *Locke.*

The utmost infinite ramifications and inoculations of all the several sorts of vessels may easily be detected by glasses.

Ray.

Not only the sea, but rivers and rains also, are instrumental to the detection of amber, and other fossils, by washing away the earth and dirt that concealed them.

Woodward.

DETENTION, *n. s.* From **DETAIN**, which see. The act of keeping back, or withholding; restraint; custody.

How goes the world, that I am thus encountered With clamorous claims of debt, of broken bonds, And the detention of long-since due debts, Against my honour?

Shakespeare.

This worketh by detention of the spirits, and constitution of the tangible parts.

Bacon.

DETENTS, in a clock are those stops which, by being lifted up or let fall down, lock and unlock the clock in striking. See **CLOCK**.

DETENT-WHEEL, or **HOOP-WHEEL**, in a clock, a wheel which has a hoop almost round it, wherein there is a vacancy, at which the clock locks.

DETER, *v. a.* } Lat. *deterreo*, from *de*
DETERMENT, *n. s.* } and *terreo*, to frighten;
Gr. *τρεω*, to tremble. To discourage by terror; to affright from.

I never yet the tragick strain assayed,
Deterred by the inimitable maid.

Waller.

These are not all thy determents that opposed my obeying you.

Boyle.

Many and potent enemies tempt and deter us from our duty; yet our case is not hard, so long as we have a greater strength on our side.

Tillotson.

Beauty or unbecomingness are of more force to draw or deter imitation, than any discourses which can be made to them.

Locke.

The ladies may not be deterred from corresponding with me by this method.

Addison.

Death is not sufficient to deter men who make it their glory to despise it; but if every man who fought a duel were to stand in the pillory, it would quickly lessen the number of these imaginary men of honor.

Id.

Get a habit of doing right, whatever pain it costs you; let no difficulties deter you in the way of virtue; and account every thing else despicable, in comparison of this.

Johnson.

I do not give you to posterity as a pattern to imitate, but as an example to deter.

Junius.

DETERGE, *v. n.* } Fr. *deterger*; Lat. *de-*
DETERGENT, *adj.* } *tergere*, to cleanse.
To cleanse, applied particularly to the cleansing of sores. Detergent, having the quality of cleansing.

The food ought to be nourishing and detergent.

Arbuthnot.

Sea salt preserves bodies through which it passeth, from corruption; and it detergeth the vessels, and keeps the fluids from putrefaction.

Id.

Consider the part and habit of body, and add or diminish your simples as you design to deterge or incarn.

Wiseman.

DETERIORATION, *n. s.* From Lat. *deterior*. The act of making, or state of growing worse.

When the deterioration of a commodity, seized by an officer, arises from the fault of the keeper, he is answerable for the same.

Dr. A. Rees.

DETERMINE, *v. a. & v. n.*

DETERMINATE, *v. a. & adj.*

DETERMINATELY, *adv.*

DETERMINATION, *n. s.*

DETERMINATIVE, *n. s. & adj.*

DETERMINATOR.

Fr. *determiner*; Span. *determinar*; Ital. and Lat. *determinare*, from *de* and *terminus*; Gr. *τεμα*, a bound. To mark or fix a bound; hence to conclude; settle; adjust generally; and to choose or influence choice. As a neuter verb, to conclude; settle an opinion; decide and resolve. Determine and determine seem synonymous as verbs active, but the former is obsolete.

And maad of oon al the kynde of men to enhabite on all the face of the erthe, *determinynge* tymes ordeyned and teermys of the dwellyng of hem.

Wiclif. *Dedid*. xvii.

Jonathan knew that it was determined of his father to slay David.

1 Sam. xx. 33.

In those errors they are so determinately settled, that they pay unto falsity the whole sum of whatever love is owing unto God's truth.

Hooker.

Now, noble peers, the cause why we are met
Is to determine of the coronation.

Shakespeare.

I' the progress of this business,

Ere a determinate resolution, he,

I mean the bishop, did require a respite.

Id.

The fly-slow hours shall not determinate

The dateless limit of thy dear exile.

Id.

They have acquainted me with their determination, which is to go home, and trouble you no more.

Id. *Merchant of Venice*.

The knowledge of men hitherto hath been determined by the view or sight; so that whatsoever is invisible, either in respect of the fineness of the body itself, or the smallness of the parts, or of the subtilty of the motion, is little enquired.

Bacon.

They were apprehended, and, after conviction, the danger determined by their deaths.

Hayward.

Eve! now expect great tidings, which perhaps

Of us will soon determine or impose

New laws to be observed.

Milton.

The proper acts of the intellect are intellection, deliberation, and determination, or decision.

Hale's *Origin of Mankind*.

Whether all plants have seeds, were more easily determinable, if we could conclude concerning hart-tongue, fern, and some others.

Browne's *Vulgar Errors*.

Like men disused in a long peace, more determinate to do, than skilful how to do.

Sidney.

Think thus with yourselves, that you have not the making of things true or false; but that the truth and existence of things is already fixed and settled, and that the principles of religion are already either determinately true or false, before you think of them.

Tillotson.

Revolutions of state, many times, make way for new institutions and forms, and often determine in either setting up some tyranny at home, or bringing in some conquest from abroad.

Temple.

A man may suspend the act of his choice from being determined for or against the thing proposed, till he has examined it.

Locke.

Demonstrations in numbers, if they are not more evident and exact than in extension, yet they are

more general in their use, and *determinate* in their application. *Id.*

¶ As soon as the studious man's hunger and thirst makes him uneasy, he, whose will was never *determined* to any pursuit of good cheer, is, by the uneasiness of hunger and thirst, presently *determined* to eating and drinking. *Id.*

When we voluntarily waste much of our lives, that remissness can by no means consist with a constant *determination* of will or desire to the greatest apparent good. *Id.*

That individual action, which is justly punished as sinful in us, cannot proceed from the special influence and *determinative* power of a just cause.

Bramhall against Hobbes.

All pleasure springing from a gratified passion, as most of the pleasure of sin does, must needs *determine* with that passion. *South.*

Probability, in the nature of it, supposes that a thing may or may not be so, for any thing that yet appears, or is certainly *determined*, on the other side. *Id.*

Destruction hangs on every word we speak,

On every thought, till the concluding stroke

Determines all, and closes our design. *Addison.*

No sooner have they climbed that hill, which thus *determines* their view at a distance, but a new prospect is opened. *Atterbury.*

To make all the planets move about the sun in circular orbs, there must be given to each, by a *determinate* impulse, those present particular degrees of velocity which they now have, in proportion to their distances from the sun, and to the quantity of the solar matter. *Bentley.*

Consult thy judgment, affections, and inclinations, and make thy *determination* upon every particular; and be always as suspicious of thyself as possible. *Calamy.*

He confined the knowledge of governing to justice and lenity, and to the speedy *determination* of civil and criminal causes. *Gulliver's Travels.*

The long dispute among the philosophers about a vacuum, may be *determined* in the affirmative; that it is to be found in a critic's head. *Swift.*

If the term added to make up the complex subject does not necessarily or constantly belong to it, then it is a *determinative*, and limits the subject to a particular part of its extension; as, every pious man shall be happy. *Watts.*

How far this unexpected distinction can be rated among the happy incidents of life, I am not yet able to *determine*. *Johnson. Plan of Dictionary.*

DETERRA'TION, *n. s.* Lat. *de* and *terra*; Fr. *deterrier*. Discovery of any thing by removal of the earth that hides it; the act of unburying.

This concerns the raising of new mountains, *deter-rations*, or the devolution of earth down upon the valleys from the hills and higher grounds. *Woodward.*

DETER'SION, *n. s.* } From Lat. *deter-*
DETER'SIVE, *adj.* & *n. s.* } *go*. See DETERGE.
The act of cleansing a sore. Having the power to cleanse. An application that cleanses wounds.

I endeavoured *deterision*, but the matter could not be discharged. *Wiseman.*

We frequently see simple ulcers afflicted with sharp humours, which corrode them, and render them painful sordid ulcers, if not timely relieved by *deterisives* and lenients. *Id.*

DETEST, *v. a.*

DETEST'ABLE, *adj.*

DETEST'ABLY, *adv.*

DETESTA'TION, *n. s.*

DETEST'ER.

Fr. *detester*; Span. *detestar*; Lat. *detestare*, according to Minshew, from *deum testari* (*odium illud est*), a form of declaring hatred to, and innocence of any crime. Detestatio was the swearing a thing to be hateful and odious. To hate; abominate: hateful; abhorred: a detester is one who hates or abhors.

He was deadly made,

And all that life preserved did *detest*.

Faerie Queene.

That *detestable* sight him much amazed,

To see the' unkindly imps of heaven accurst

Devoure their dam. *Spenser. Faerie Queene.*

I've lived in such dishonour, that the gods

Detest my baseness. *Shakespeare.*

Glory grows guilty of *detested* crimes,

When for fame's sake, for praise, an outward part,

We bend to that the working of the heart. *Id.*

He desired him to consider that both armies consisted of Christians, to whom nothing is more *detestable* than effusion of human blood. *Hayward.*

Then only did misfortune make her see what she had done, especially finding in us rather *detestation* than pity. *Sidney.*

There is that naturally in the heart of man which abhors sin as sin, and consequently would make him *detest* it both in himself and others too. *South.*

Who dares think one thing, and another tell, My heart *detests* him as the gates of hell. *Pope.*

Our love of God will inspire us with a *detestation* for sin, as what is of all things most contrary to his divine nature. *Swift.*

It is the peculiar condition of falsehood, to be equally *detested* by the good and bad. *Johnson.*

The *detestable* maxim, Qui nescit dissimulare nescit regnare, will not be heard of in heaven. *Bp. Watson.*

DETHRONE, *v. a.* Fr. *detroner*; *de* and throne (Lat. *thronus*). To divest of regal dignity.

The queen became the object of public hatred, the *dethroned* king was regarded with pity. *Hume.*

DETINUE, *n. s.* Fr. *detenue*. A writ that lies against him, who, having goods or chattels delivered him to keep, refuses to deliver them again.

DETINUE lies for any thing certain and valuable, wherein one may have a property or right; as for a horse, cow, sheep, hens, dogs, jewels, plate, cloth, bags of money, sacks of corn, &c. It must be laid so certain, that the thing detained may be known and recovered: and therefore, for money out of a bag, or corn out of a sack, &c., it lies not; for the money or corn cannot in this case be known from other money or corn; so that the party must have an action on the case, &c. Yet detinue may be brought for a piece of gold of the price of 22s. though not for 22s. in money. In this action, the thing detained is generally to be recovered, and not damages; but if one cannot recover the thing itself, he shall recover damages for the thing, and also for the detainer.

DET'ONATE, *v. n.*

DETONA'TION, *n. s.*

DET'ONISE, *v. a.*

Lat. *detono*, from *de* emphatic, and *tonus*, a sound. To thunder or make a great noise. It is used for various explosions in chemistry. To detonise is to calcine with detonation.

A new coal is not to be cast on the nitre, till the *detonation* occasioned by the former be either quite or almost altogether ended; unless it chance that the puffing matter do blow the coal too soon out of the crucible. *Boyle.*

ineteen parts in twenty of *detonized* nitre is destroyed in eighteen days. *Arbuthnot on Air.*

The nitrates yield oxygen gas mingled with nitrogen gas by the action of fire; they give out a white vapour of nitric acid when acted on by concentrated sulphuric acid; and, when mixed with combustible substances, produce, at a red heat, inflammation and *detonation*. *Parke's Chemical Catechism.*

DETONATION, in chemistry, signifies an explosion with noise made by the sudden inflammation of some combustible body: such as are the explosions of gunpowder, and fulminating powders. See CHEMISTRY.

DETORT, *v. a.* Lat. *detortus*, of *detorqueo*. To wrest from the original import, meaning, or design.

They have assumed what amounts to an infallibility in the private spirit, and have *detorted* texts of scripture to the sedition, disturbance, and destruction of the civil government. *Dryden.*

DETOUR DES ANGLAIS, or English Turn, a circular direction of the river Mississippi, in North America, so very considerable, that vessels cannot pass it with the same wind that conducted them to it, and must either wait for a favorable wind, or make fast to the bank, and haul close; there being sufficient depth of water for any vessel that can enter the river. The two forts and batteries at this place on both sides the river, are more than sufficient to stop the progress of any vessel whatever. Dr. Cox, of New-Jersey, ascended the Mississippi to this place, anno 1698, took possession, and called the country Carolina. It lies eighteen miles below New Orleans, and eighty-seven above the Balize.

DETRACT *v. a.* } Fr. *detracter*; Span.
DETRACTER, *n. s.* } *detratar*; Lat. *detra-*
DETRACTION, } *here*, from *de* (down-
DETRACTIOUS, *adj.* } (ward) and *trahere*;
DETRACTORY, } Gr. *δρασσω*, to draw.
DETRACTRESS, *n. s.* } To take away or subtract; generally to take away, or derogate from, character. Detractory, and detractious, alike mean, dishonorable to character.

Least perauenture stryuyngis, enuyes, sturdnessis, dissenciouns, and detractiouns, priuy spechis of discord ben among ghout. *Wiclif. 1 Cor. 12.*

I am right glad to be thus satisfied, in that I yet was never able till now to choke the mouth of such detractors with the certain knowledge of their slanderous untruths. *Spenser on Ireland.*

I put myself to thy direction, and
Unspak mine own detraction; here abjure
The taints and blames I laid upon myself,
For strangers to my nature. *Shakespeare.*

Those were assistants in private, but not trusted to manage the affairs in public; for that would detract from the honour of the principal ambassador. *Bacon.*

You shall enquire of the unlawful taking of partridges, and pheasants, or fowl, the *detraction* of the eggs of wild-fowls, &c. *Id.*

By the largeness of the cornices they hinder both the light within, and likewise detract much from the view of the front without. *Wotton.*

Fame, that her high birth to raise
Seemed erst so lavish and profuse,
We may justly now accuse
Of detraction from her praise. *Milton.*

The painters are most envious, if they want
Good colours for preferment; virtuous ladies
Love this way to be flattered, and accuse
The workman of detraction, if he add not
Some grace they cannot truly call their own. *Massinger.*

This is not only derogatory unto the wisdom of God, who hath proposed the world unto our knowledge, and thereby the notion of himself; but also detractory unto the intellect and sense of man. *Broune.*

The multitude of partners does detract nothing from each private share, nor does the publickness of it lessen propriety in it. *Boyle.*

No envy can detract from this: it will shine in history, and, like swans, grow whiter the longer it endures. *Dryden.*

Away the fair detractors went,
And gave by turns their censures vent. *Swift.*

If any shall detract from a lady's character, unless she be absent, the said detractress shall be forthwith ordered to the lowest place of the room. *Addison.*

The detractory lye takes from a great man the reputation that justly belongs to him. *Arbuthnot.*

Detraction, in the native importance of the word, signifies the withdrawing or taking off from a thing; and, as it is applied to the reputation, it denotes the impairing or lessening a man in point of fame, rendering him less valued and esteemed by others, which is the final aim of detraction. *Ayliff.*

Hard is his fate on whom the public
Is fixed for ever to detract or praise;
Repose denies her requiem to his name,
And folly loves the martyrdom of Fame. *Byron.*

DETRANCHIE, in heraldry, a line bend-wise, proceeding always from the dexter side, but not from the very angle diagonally athwart the shield.

DETRIMENT, *n. s.* } Fr. *detriment*; Spa.
DETRIMENTAL, *adj.* } Portug. and Ital. *detrimento*; Lat. *detrimentum*, from *detero*, *detritus*, worn, because that which is worn is thereby injured. Injury; diminution; harm. Detrimental is, mischievous; causing injury.

Difficult it must be for one Christian church to abolish that which all had received and held for the space of many ages, and that without any detriment unto religion. *Hooker.*

I can repair
That detriment, if such it be, to lose
Self-lost. *Milton.*

He with the foe began to buckle,
Vowing to be revenged for breach
Of crowd and skin upon the wretch,
Sole author of all detriment
He and his fiddle underwent. *Hudibras.*

Let a family burn but a candle a night less than the usual number, and they may take in the Spectator without detriment to their private affairs. *Addison.*

Obstinacy in prejudices, which are detrimental to our country, ought not to be mistaken for virtuous resolution and firmness of mind. *Id.*

And the reason seems to be, because an apprehension of the displeasure of their superiors, and the detrimental consequences which may accrue from thence, may be a check upon them, and engage them to pay the just regards which they expect. *Mason.*

DETRITION, *n. s.* Lat. *detero*, *detritus*, from *de* and *tero*; Gr. *ρῆω*, to rub. The act of wearing away.

DETROIT RIVER, or Strait of St. Clair, the strait or river which flows from lake St. Clair into lake Erie, and forms part of the boundary between the United States and Upper Canada. It is forty miles long, and the great channel by which the waters of the lakes of Canada, Huron, Superior, and Michigan, are conveyed to the ocean. On the east side cultivation has made great progress.

DETROIT, a flourishing town of the United States, on the west side of the above river. The fort and military works are very strong; but they were taken in 1812, by the British, under general Brock.

DETRUDE, *v. a.* } Lat. *Detrudo*; *de* and
DETRUSION, *n. s.* } *trudo*, to thrust; to push down; the act of thrusting or forcing down.

Philosophers are of opinion, that the souls of men may, for their miscarriages, be *detruded* into the bodies of beasts. *Locke.*

From this *detrusion* of the waters towards the side, the parts towards the pole must be much increased. *Keil against Burnet.*

At thy command the vernal sun awakes
The torpid sap, *detruded* to the root
By wintry winds. *Thomson.*

Such as are *detruded* down to hell,
Either for shame they still themselves retire,
Or, tied in chains, they in close prison dwell. *Davies.*

TO DETRUNCATE, *v. a.* } Lat. *detrunco*;
DETRUNCATION, *n. s.* } *de* and *trunco*.
To lop; to cut; to shorten by deprivation of parts.

It may sometimes happen by hasty *detruncation*, that the general tendency of a sentence may be changed. *Johnson. Pref. to Dictionary.*

DETTINGEN, a village of Germany, in the electorate of Mentz, situated on the east side of the Maine, where a battle was fought between the English, under the command of king George II. in person and the earl of Stair, and the French, under the command of the duke of Noailles. The English had the honor of the day; but were soon obliged to leave the field of battle, which was taken possession of by the French, who treated the wounded English with great clemency. It is nine miles south of Hanau, and six north-west of Aschaffenburg. Long. 9° 5' E., lat. 49° 55' N.

DETURBATION *n. s.* Lat. *deturbo*. The act of throwing down; degradation.

DEVAPORATION, *n. s.* Lat. from *de* and *vapor*. The condensation of vapor.

For the wind blows uniformly upon this hot part of the coast of Peru, but no cause of *devaporation* occurs till it begins to ascend the mountainous Andes, and then its own expansion produces cold sufficient to condense its vapour. *Darwin.*

DEVAPRAYAGA, a town of the province of Serinaghur, Northern Hindostan, situated at the junction of two branches of the most sacred part of the Ganges. It is built on the side of a mountain, about 100 feet above the stream. The houses are of stone, covered with shingles. The celebrated temple of Ramachandra, containing

VOL. VII.

a statue of the deity, of black stone, is constructed of large blocks of cut stone, piled up, without mortar, to the height of sixty feet. It is at the upper part of the town, and surrounded by twenty-five villages, which belong to the Brahmins. This place suffered much by an earthquake in 1803.

DEVASTATION, *n. s.* Lat. *devastō*, *de* and *vastus*. Waste; havoc; desolation; destruction.

By *devastation* the rough warrior gains,
And farmers fatten most when famine reigns. *Garth.*

That flood which overflowed Attica, in the days of Ogyges, and that which drowned Thessaly in Deucalion's time, made cruel havoc and *devastation* among them. *Woodward.*

If it excite a man to wicked attempts, make him willing to sacrifice the esteem of all wise and good men to the acclamations of a mob; to overleap the bounds of decency and truth, &c. it is then not only vanity but vice; a vice, which of all others hath made the greatest havoc and *devastation* among men. *Mason.*

DEUCALION, king of Thessaly, is said to have been the son of Prometheus. A flood recorded to have happened in this time (about A. A. C. 1500), is supposed to have been only an inundation of the neighbouring country, occasioned by heavy rains, and an earthquake that stopped the course of the river Peneus. He governed his people, we are told, with great equity; but the rest of mankind, being extremely wicked, were destroyed by a flood, while Deucalion and Pyrrha his queen saved themselves by ascending mount Parnassus. When the waters decreased, they went and consulted the oracle of Themis, on the means by which the earth was to be re-peopled, and were ordered to veil their heads and faces, to unloose their girdles, and throw behind their backs the bones of their great mother. At this advice Pyrrha was seized with horror; but Deucalion explained the mystery, by observing, that their great mother must mean the earth, and her bones the stones; when taking them up, those Deucalion threw over his head became men, and those thrown by Pyrrha women. M. Bryant and others have supposed, that Deucalion was the same with the patriarch Noah; and that his flood in Thessaly, and those of Ogyges in Attica, and Prometheus in Egypt, were the same with that of Noah recorded in Scripture. See DELUGE.

DEUCE, Goth. *duz*; Lat. *duſius*; Arm. *teus*, once applied to good as well as evil spirits. See DEMON.

'Twas the prettiest prologue, as he wrote it;
Well, the *deuce* take me if I ha'n't forgot it.

Congreve.

DEUCE, *n. s.* Fr. *deux*. Two: a word used in games.

You are a gentleman and a gamester; then, I am sure, you know how much the cross sum of *deuce* ace amounts to. *Shakespeare.*

DEVELOP, *v. a.* Fr. *developper*; Lat. *develo*. To disengage from something that enfolds or conceals; to disentangle.

Take him to *develop*, if you can,
And hew the block off, and get out the man.

Dunciad.
(1)

In his eye

And awful, beautiful disdain, and might,
And majesty, such their full lightnings lay,
Developing in that one glance the Deity. Byron.

DEVENTER, the capital of a district in the province of Overysse, Netherlands, situated in a fertile country, on the right bank of the river Yssel, is not a town of great size, but is strong, being surrounded by a wall, well flanked with towers, and defended with broad and deep ditches. The cathedral is a fine structure. There are besides three parish churches, and several convents; and an atheneum, or provincial academy. The manufacture of this place is linen, and the trade is in butter, cheese, and cattle. There is a beautiful promenade on the Yssel. Population 10,100. It is eight miles N. N. W. of Zutphen, and forty-six east of Amsterdam.

DEVEREUX (Robert), earl of Essex. See **ESSEX**.

DEVEST, *v. a.* Fr. *devestir*; Lat. *de* and *vestis*. See **DIVEST**. To strip; to deprive of clothes.

What are those breaches of the law of nature and nations, which do forfeit and *devest* all right and title in a nation to government? Bacon.

Friends all but now,

In quarter and in terms, like bride and groom
Devesting them for bed. Shakespeare.

Come on, thou little inmate of this breast,
Which for thy sake from passions I *devest*. Prior.

DEVEX, *adj.* } Lat. *deverus*. Bending
DEVEXITY, *n. s.* } down; declivous; incur-
vated downwards; declivity.

DEVIATE, *v. n.* } Lat. *de via decedere*.
DEVIATION, *n. s.* } To wander from the
DEVIOUS, *adj.* } right or common way;
to go astray.

In this minute *devious* subject, I have been necessitated to explain myself in more words than may seem needful. Holder.

A story should, to please, at least seem true,
Be apropos, well told, concise, and new:
And whencesoe'er it *deviates* from these rules,
The wise will sleep, and leave applause to fools.

Stillington.

The rest to some faint meaning make pretence,
But Shadwell never *deviates* into sense. Dryden.

Some lower muse, perhaps, who lightly treads
The *devious* paths where wanton fancy leads. Rowe.

What makes all physical and moral ill?
There Nature *deviates*, and here wanders Will. Pope.
These bodies constantly move round in the same
tracks, without making the least *deviation*. Chayne.

One *devious* step at first setting out, frequently leads
a person into a wilderness of doubt and error.

Clarissa.

Worthy persons, if inadvertently drawn into a *deviation*, will endeavour instantly to recover their lost ground, that they may not bring error into habit. Id.

Every muse,

And every blooming pleasure, wait without
To bless the wildly *devious* morning walk.

Thomson.

To what falls

A single *deviation* from the track
Of human duties leads even those who claim
The homage of mankind as their born due,
And find it, till they forfeit it themselves!

Byron.

DEVICE, *n. s.* See **DEVISE**.

DEVIL.

DEVILISH, *adj.*

DEVILISHLY, *adv.*

Span. *diablo*, from Lat. *diabolus*; Gr. *δαιμόνιον*, from *δία*, through and *βάλω*, to cast; to strike through as with a dart; and thence as with slander. The great spiritual enemy of man, called in Scripture 'an accuser'; a term of reproach, expressing extreme wickedness, real, or supposed: a ridiculous expletive: the adjective and adverb seem plain.

Clothe thou with the armour of God, that the moon stande aghens apyingis of the *devil*.

Wiclif. *Ecclesias* 6.

Have not I chosen you twelve, and one of you is a *devil*? Bible. John vi. 70.

This wisdom descendeth not from above, but is earthly, sensual, *devilish*. Id. James iii. 15.

For grief thereof and *devilish* despatch,

From his infernal furnace forth he threw
Huge flames, that dimmed all the heaven's light,
Enrolled in dusky smoke and brimstone blue.

Spenser.

The *devil* was ill and the *devil* a monk would be,
The *devil* was well the *devil* a monk was he.

Old Proverb.

See thyself, *devil*;

Proper deformity seems not in the fiend

So horrid as in woman.

Shakespeare.

A *devilish* knave! besides, the knave is handsome, young, and blyth; all those requisites are in him that delight. Id.

Worldly wealth is the *devil's* bait; and those whose minds feed upon riches, recede, in general, from real happiness, in proportion as their stores increase; as the moon when she is fullest of light is farthest from the sun. Burton.

Be frustrate all ye stratagems of Hell,
And *devilish* machinations come to nought.

Milton.

Those trumpeters threatened them with continual alarms of damnation, if they did not venture life, fortune, and all, in that which wickedly and *devilishly* those impostors called the cause of God. South.

The things, we know, are neither rich nor rare;
But wonder how the *devil* they got there! Pope.

With all these tokens of a knave complete,
If thou art honest, thou 'rt a *devilish* cheat.

Addison.

DEVIL, an evil angel, one of those celestial spirits cast down from heaven for aspiring to be equal with God. The Ethiopians paint the devil white. Satan and Belial are equivalent to this term in the Old Testament: nor do we meet with it in any heathen authors, in the sense it is taken among Christians, that is, as a creature revolted from God, although their theology was familiar with evil genii and demons. See **DEMON** and **DEMONIAC**. Some of the aboriginal nations of America have a notion of two collateral independent beings, one of whom is good, and the other evil; which last they imagine has the superintendence of the earth, for which reason they chiefly worship him; and hence they have been said to worship the devil. The Chaldeans and Persians, in like manner, believed in both a good principle and an evil one; which last they imagined was an enemy to mankind. Isaiah, according to some commentators, when speaking of

the fall of the king of Babylon, alludes to that of the devil, calling him Lucifer, son of the morning. The Arabians call Lucifer, Eblis; which some writers suppose to be a diminutive or corruption of the word Diabolus.

DEVIL IN A BUSH, in botany. See NIGELLA.

DEVISE', *v. a.* } Fr. *deviser*; Span. and
DEVISER, *n. s.* } Portug. *devisar*, according
DEVICE', *n. s.* } to Skinner, from Lat. *devisare*, to look about. 'To contrive; consider: a device is the scheme or plan contrived: hence also a sketch or drawing on a shield; a token.

Behold I frame evil against you, and devise a device against you. Jer. xiii. 11.

Her merry fit she freshly 'gan to rear,
And did of joy and jollity devise,
Herself to cherish and her guest to cheer.

Faerie Queene.

At last the nourse in her fool hardy wit
Conceived a bold device, and thus bespake. *Id.*

Touching the exchange of laws in practice with laws in device, which they say are better for the state of the church, if they might take place; the farther we examine them, the greater cause we find to conclude, although we continue the same we are, the harm is not great. *Hooker.*

Devise but how you'll use him when he comes, and let us two devise to bring him thither. *Shakespeare.*

He's gentle; never schooled, and yet learned; full of noble device, of all sorts enchantingly beloved. *Id.*

This is our device,

That Falstaff at that oak shall meet with us. *Id.*

Being divided from truth in themselves, they are yet farther removed by advenient deception; for true it is, if I say they are daily mocked into error by devices. *Browne.*

Then change we shields and their devices bear;
Let fraud supply the want of force in war. *Dryden.*

The authors of useful inventions, the devisers of wholesome laws, as were the philosophers of ancient times, were honoured as the fathers and prophets of their country. *Grew.*

Hibernia's harp, device of her command,

And parent of her mirth, shall there be seen. *Prior.*

He intended it as a politick device to lessen their interest, and keep them low in the world. *Atterbury.*

Ye sons of art, one curious piece devise,
From whose constructure motion shall arise. *Blackmore.*

A tavern with a gaudy sign,
Whose bush is better than the wine,
May cheat you once—will that device,
'Nent as imported,' cheat you twice? *Garrick.*

Device, in heraldry, painting, and sculpture, an emblem used to represent a certain family, person, action, or quality; with a suitable motto, applied in a figurative sense. The essence of a device consists in metaphorical similitude between the things representing and represented: thus a young nobleman, of great courage and ambition, is said to have borne his device, in a carousal at the court of France, a rocket mounted in the air, with this motto in Italian, 'poco duri purché m'inalzi;' importing, that he preferred a short life, provided he might thereby attain to glory and eminence. The Italians have reduced the making of devices into an art.

DEVISE', *v. a. & n. s.* } Old Fr. *deviser*, a
DEVISEE', *n. s.* } will. To give by will; the act of giving or bequeathing by will: devisee, he to whom something is bequeathed by will. Devisour, he who bequeaths it.

The alienation is made by devise in a last will only, and the third part of these profits is there demandable. *Locke.*

This word *devisee* is properly attributed, in our common law, to him that bequeaths his goods by his last will or testament in writing; and the reason is, because those that now appertain only to the *devisour*, by this act are distributed into many parts. *Cowell.*

DEVITABLE, *adj.* } Lat. *devitabilis*. Pos-
DEVITATION, *n. s.* } sible to be avoided; avoidable: the act of escaping or avoiding.

DEVIZES, a town of Wiltshire, six miles north from Lavington, and eighty-nine west from London. It contains two churches and a chapel, besides a place of worship for dissenters, and returns two members to parliament. Here was formerly a castle, supposed to be one of the strongest in England; but it is now nearly destroyed. Two markets are held weekly, one on Monday, principally for butcher's meat; the other on Thursday for corn, wool, cattle, &c., considered one of the best in England. Considerable manufactures are carried on, particularly of serges, kerseymeres, and broad-cloth. In the market place is erected a stone with an inscription, as a memorial of divine vengeance inflicted on a woman who called God to witness a falsehood concerning some money. The corporation consists of a mayor, recorder, ten magistrates, and twenty-four common-council-men. The number of burgesses is unlimited, and they have a right to vote for representatives in parliament as soon as they are made free. Its name is to be derived from the Latin *divisus*, divided, from its having been anciently divided between the king and the bishop of Salisbury; and it is supposed to have been the Punctuobice of Ravennus. The Romans enclosed it with a vallum and ditch, in which there is now a road almost round the town. Brass figures of household gods, coins, bricks, and urns, evidently Roman, have been dug up here.

DEVOID', *adj.* Fr. *vuide*. Empty; vacant; void.

When I awoke and found her place devoid,
And nought but pressed grass where she had lyen,
I sorrowed all so much as eart I joyed.

Faerie Queene

That the soul and angels are devoid of quantity and dimension, and that they have nothing to do with proper locality, is generally opinioned. *Glanville.*

DEVOIR', *n. s.* Fr. *devoir*; Lat. *debere*. To owe service.

DEVOLVE' *v. a. & n. s.* } Lat. *devolvere*; de
DEVOLUTION, *n. s.* } and *volvo*, to roll. To roll down or upon; hence, to give in succession. Devolution is the art of so removing or giving, or the removal so effected.

DEVON, a river of Scotland, in the counties of Perth and Clackmannan, which rises in the Ochil hills, and after running ten miles directly east, makes a turn to the west at a place hence called the Crook of Devon; then passes through

the vale of Glendovan to the Rumbling Bridge and Caldron Linn, where it forms a scenery, wild, beautiful, and romantic.

DEVONPORT, a sea-port, market, and borough town, in the county of Devon, England, returning two members to parliament under the Reform Bill of 1832. It is in the parish of Stoke Dancarel, on the Hamoaze, a creek in the estuary of the Tamar, and received its present name by command of George IV., in 1824. Its foundation may be attributed to the docks constructed here originally by William III., and enlarged in the reign of George III. The royal dock yard occupies an area of seventy-one acres and thirty-six poles, and includes one wet and three dry or graving docks, formed in so many excavations of a slaty stratum, and faced with Portland stone. In the dock yard is a chapel, opened in 1817, a magazine, gun-wharf, covering five acres of ground, a surgery and permanent medical establishment, besides officers' apartments, store houses, and other necessary buildings. The town is governed by commissioners, elected by those of the inhabitants who contribute eight pounds annually to the poor's rate, and for the election of members to parliament a returning officer is appointed by the sheriff of the county. Courts leet and baron are held by the constable of the manor, and petty sessions by the county magistrates. The commercial interests have been promoted by the erection of an exchange in Ker Street, and general traffic is conducted in a market place. The trade and manufacture peculiar to this place are block, sail, rope making, and such others as are connected with nautical equipment. The town is strongly fortified. The fort and battery on Mount Wise, command the harbour entrance and the sound, and here also is the house of the port admiral. There is one ferry at Crimble Passage, one to Mount Edgcumbe, and a flying bridge preserves an easy communication with Saltash, in Cornwall. Devonport is 218 miles southward of London, and contains a population of 44,454 souls.

DEVONSHIRE is a maritime county, one of the most valuable in England; and is bounded on the north and north-west by the Bristol Channel; on the west by Cornwall, the river Tamar, and a small rivulet called Marsland Water; on the south and south-east it is skirted by the British Channel; on the east and north-east it borders on the counties of Dorset and Somerset, the dividing limits being artificial. In point of extent this county is second only to Yorkshire, and the fourth in population. Its greatest length, which is from north to south, is about seventy-three miles; and its greatest breadth, from east to west, sixty-five miles. It contains about 1,600,000 acres, or upwards of 2,493 square miles. This county is divided into thirty-three hundreds, 349 parishes, 117 vicarages, 1733 villages, one city, and thirty-seven market towns. It is in the diocese of Exeter, and the western circuit of the province of Canterbury.

It was incorporated by the Romans with Cornwall, under the general appellation of *Danmonium*, its original name being *Dynvaint*, signifying deeps or hollows. During the Heptarchy

it belonged to the West Saxons, and was then called *Devonsceyre*. It was included in the first Roman district, or *Britannia Prima*.

The climate of Devonshire differs materially in the northern and southern districts. It is, however, in general mild and genial. The northern district, considered in its most extensive sense, as comprehending the whole district between Dartmoor and the British Channel, but, more generally speaking, embracing only the parts round Biddeford, Barnstaple, South Moulton, and the north coasts, is by no means comparable to the temperature which characterises the southern parts of the county; yet even here, and along the sea coasts, from the northern extremity of the district to the most southern, snow seldom lies longer than a few hours, except indeed on the summits of some of the high hills. In the southern parts the progress of vegetation is but little impeded during winter, and the ground almost constantly wears an aspect of verdure and beauty. The climate of Devonshire has been frequently recommended by the faculty as preferable for delicate invalids, even to Lisbon or the South of France. The face of the country is exceedingly varied and uneven. The heights in many parts, but particularly in Dartmoor and its vicinity, swell into mountains; the altitudes of the principal eminences being from 1500 to 1800 feet. 'On approaching this tract from the south and south-east, the eye is bewildered by an extensive waste, exhibiting gigantic tors, large surfaces covered with masses of scattered granite, and immense rocks, which seem to have been precipitated from the steep declivities into the valleys. These huge and craggy fragments are spread confusedly over the ground, and have been compared to the ponderous masses ejected by volcanoes, to the enormous ruins of formidable castles, and to the wrecks of mountains torn piecemeal by the raging elements.' Taking the plane of high water in the Bristol Channel as a base, it appears that the highest hill, which is Dunkery Beacon, on part of Exmoor Forest, is 1890 feet; the next, Castle Head-down, High Bray parish, 1500 feet. The lowest, which is Hilsborough, overhanging the town of Ilfracombe to the east, is about 300 feet. Exmoor has recently been disforested by act of parliament.

The principal rivers of Devonshire are the Exe, the Torridge, the Teign, the Taw, the Oke, the Dart, the Plym, the Otter, the Axe, and the Tamar: though this last belongs more properly to Cornwall. It forms at its mouth the harbour of Hamoaze, or Plymouth Sound. All these rivers abound in fine salmon. Sufficient attention does not appear to have been paid to the inland navigation of this extensive county, though it contains one of the most ancient specimens of canal navigation in the kingdom: this is the Haven at Exeter, which was formed in the year 1544. It is properly a canal, and conveys shipping from the tideway above Topsham to the quay at Exeter, which is effected by an embanked navigation, with a large lock placed near the middle of the line. The Crediton and Exeter Canal is also a fine work; as is the Tavistock Canal, undertaken in the year 1803, under the superintendence of Mr. John Taylor. The Tamar Canal skirts the western edge of this county.

The principal mineral waters in the county are at Bampton, Cleeve, Lomerton, Lifton and Tavistock.

The soils of this county divide themselves into four kinds, the first of which is found to occupy the smallest space. Risdon, in his Survey of Devon, says that 'on the east side of the shire the mould standeth most upon white chalk, which is passing good for sheep and corn.' The second is the red land, surrounding Exeter, and extending considerably east and west of it; this is deemed good pasture land. The third is the peat soil, of which Dartmoor furnishes the principal example. Of this soil Risdon speaks somewhat disparagingly, saying that it is richer in its bowels than in the face thereof, yielding tin and turf.' The fourth, which pervades by far the greater part of the county, though varied in its appearances by casual admixtures, is what has lately obtained the name of dun-land. It is furnished probably by the decomposition of schistus rock, on which it lies, and is found in almost every state, from the most fertile to the most sterile. The writer of most excellent and accurate 'Remarks on the present State of the County of Devon, introductory to the new edition of Risdon's Survey,' published in 1811, observes that 'the soil most prevalent is remarkable in two circumstances; its rapid spontaneous production of grass when under good management, and its total want of calcareous principle.'

The cattle of Devonshire are in the highest request in all parts of the kingdom; and distinguished by fineness of bone and skin: the sheep are small and subject to the rot. This county has also long been famed for its cyder, which is the beverage of the lower classes. Two hundred years ago, many copyholders might pay their lords' rent with their cyder only. The above writer adds, that 'this is even now probably in some parts and in some seasons the case, though the orchards are not either so large and productive, or so numerous as they used to be.' Much butter is made in the grass lands and that without the churn. This writer has given a truly interesting and scientific outline of the mineralogy of Devon, which, as he very justly observes, is a feature of distinguished importance in this county, whether we regard the value of the mineral productions, or the phenomena which it presents to the scientific enquirer. The general character of this mineralogy is that of an elevated tract of granite, running from north to south across the district, and passing into or under a superstratum of primitive schistus on its western side, and of alluvial sand-stone and chalk on the eastern limits. A vein of culm was found some years ago near Chittlehampton, varying from about four inches to one foot in thickness, and dipping about one foot in three to the southward. It was wrought for a short time, but the expense being considerable, it was abandoned. In Bovey Heathfield, which seems to have been formerly covered by the tide, that remarkable substance called Bovey coal, is found. It runs nine miles to the southward, keeping to the west of large beds of potters' clay. The uppermost strata are within a foot of the surface, and from eighteen inches to four feet thick: the

deepest stratum is sixteen feet thick. At the bottom is a bed of clay and sand. This coal retains the vegetable structure, and has the appearance of charred wood, impregnated with bitumen. It is divided into two kinds, the stone coal and the wood coal; the last has more of the peculiar properties. When this coal is burning, a thick heavy smoke, of a fetid and disagreeable nature, arises from it. The small coal, thrown into a heap, and exposed to the weather, will take fire of itself. Its specific gravity is from 1.4 to 1.558, and its proportion of pure carbon from 54 to 75 per cent.

The chief mineral productions are tin, which the granite hills of Dartmoor have produced probably for many ages, as traces of seam works and mines are to be seen in every part of this immense waste. Stone, which is justly esteemed as the best in existence for the purpose of building where durability is to be regarded. The same kind of granite rock, which produces tin, has also produced some lodes of copper. This county also produces lead and silver; also iron, zinc, antimony, manganese, wolfram, arsenic, and cobalt. 150 miles of this extensive county lies on the sea-coast, and contains many excellent bays, harbours, and sea-ports, of which the principal, and one of the best in the world, is that of Devonport (late Plymouth Dock). See PLYMOUTH. The coasts, as well as the rivers, abound with fish, and particularly the southern coast. Torbay is famous for its fine soles and turbot. Plymouth for John-dorey; Topsham, Starcross, and Lypmstone for oysters: and the rare fish, opah and torpedo, are sometimes caught on the coasts. Its pleasant situation, and the cheapness of all the necessaries of life, have induced a great number of the nobility and gentry to adorn it with seats.

This county sends twenty-two members to the Imperial Parliament under the provisions of the Reform Bill of 1832, viz. four for the county; two for the city of Exeter; two for Totness; two for Plymouth; two for Barnstaple; two for Honiton; two for Tavistock; one for Ashburton; one for Dartmouth; two for Tiverton, and two for Devonport.

Of the 'Worthies of Devon,' collected down to the commencement of the eighteenth century, in a folio volume, by the Rev. John Prince, we can only mention the following:—Sir John Fortescue Aland, an able judge; Bishop Barrington; Archbishop Baldwin, who accompanied Richard I. to the Holy Land, and died there in 1191; Henry de Bathe, a learned judge, who died 1261; Lady Mary Chudleigh; John Churchill, the immortal duke of Marlborough; The Rev. archdeacon Conant, on whom his friend Dr. John Prideaux used thus admirably to pun, 'Conanti nihil est difficile;' William Courtney, archbishop of Canterbury, who condemned Wicliffe and his followers; Mrs. Hannah Cowley, an ingenious dramatic writer; John Davis, the navigator who discovered the well-known straights in North America, which bear his name; Sir Francis Drake; John Dunning, lord Ashburton; Sir John Fortescue; Monk, duke of Albemarle; Sir Walter Raleigh; Sir Joshua Reynolds, &c. &c.

The principal manufactures of the county are serges, kerseys, shalloons, broad-cloth, and blond lace, in which, and in corn, cattle, fish, and its mineral productions, the inhabitants carry on a considerable trade. Barnstaple potteries have increased of late years; they consist of dairy and kitchen utensils. There is a considerable ship-building trade at Barnstaple. The woollen cloth manufactures at Tiverton, Great Torrington, and the wool-combing of Chumleigh were formerly extensive, but have now decayed or vanished. There is, however, a considerable trade in the gloving business at the former place. The iron, cordage works, &c., for the Royal Dockyard at Plymouth, have long been extensive sources of manufacture. Serges are manufactured at Totness, Moreton, Hempstead, Chafford, and other places; and the long ells of Devonshire have been long known. Silk and porcelain have been deemed the principal manufactures of the county; but the productions from the minerals of the county are perhaps equal to any, excepting indeed the woollen manufactory. There is also a considerable quantity of yarn manufactured in the county, as well as of laces.

DEVONSHIRE (Georgiana, duchess of), was the eldest daughter of John earl Spencer, and born June 9th, 1757. She married, in 1774, William duke of Devonshire, and was long the object of attraction to the fashionable world, and the patroness of taste in the fine arts. She became well acquainted with the history and polity of nations, but the belles lettres principally attracted her regard. She left an elegant poem on the passage of Mount St. Gothard, which Dellile translated into French. She died at Devonshire House, Piccadilly, March 30th, 1806.

DEVORATION, *n. s.* See DEVOUR.

DEVOTE, *v. a. & adj.* } Lat. *devotus*, *devotus*; to vow. To
DEVOTEE, *n. s.* }
DEVOTEDNESS, *n. s.* } dedicate to divine
DEVOTION, *n. s.* } or superior service;
DEVOTIONAL, *adj.* } hence to appropriate
DEVOTIONALIST, *n. s.* } in any particular

manner: to resign. Hence, also, to doom, to execrate. A devotee, Dr. Johnson defines as one erroneously or superstitiously religious; but it is also used for one warm in religion generally. Devotion is the act, habit, or state, of being devoted or given up to; devotional pertaining to devotion; devotionalist, synonymous with devotee.

With *devocion* we han avowid, that we schulen not taaste ony thing til we sleen poul.

Wiclif. *Dedis*, 23.

No *devoted* thing that a man shall *devote* unto the Lord, of all that he hath, both of man and beast, and of the field of his possession, shall be sold or redeemed.

Lev. xxvii. 21.

They tied were to stedfast chastity,
And continence of life, that all forgoon,
They mote the better tend to their *devotion*.

Spenser. *Faerie Queene*.

Religious minds are inflamed with the love of public devotion.

Hooker.

What black magician conjures up this fiend,
To stop *devoted* charitable deeds? *Shakspeare*.

Be opposite all planets of good luck
To my proceeding, if, with pure heart's love,
Immaculate *devotion*, holy thoughts,
I tender not thy beauteous princely daughter.

Id.

Nor are the soberest of them so apt for that *devotional* compliance and juncture of hearts, which I desire to bear in holy offices, to be performed with me.

King Charles.

In vain doth man the name of just expect,
If his *devotions* he to God neglect.

Denham.

To destruction sacred, and *devote*,
He with his whole posterity must die.

Milton.

Grateful to acknowledge whence his good
Descends, thither with heart, and voice, and eyes
Directed in *devotion*, to adore
And worship God supreme, who made him chief
Of all his works.

Id.

Whatever may fall from my pen to her disadvantage, relates to her but as she was, or may again be, an obstacle to your *devotedness* to seraphick love.

Boyle.

He had a particular reverence to the person of the king, and the more extraordinary *devotion* for that of the prince, as he had had the honour to be trusted with his education

Clarendon.

Goddess of maids, and conscious of our hearts,
So keep me from the vengeance of thy darts,
Which Niobe's *devoted* issue felt,
When, hissing through the skies, the feathered deaths
were dealt.

Dryden.

The owning of our obligation unto virtue, may be styled natural religion; that is to say, a *devotedness* unto God, so as to act according to his will.

Grew.

Your *devotion* has its opportunity: we must pray always, but chiefly at certain times.

Sprat.

The favourable opinion and good word of men comes oftentimes at a very easy rate, by a few demure looks, with some *devotional* postures and grimaces.

South.

Let her, like me, of every joy forlorn,
Devote the hour when such a wretch was born;
Like me to deserts and to darkness run.

Rowe.

From the full choir when loud hosannas rise,
And swell the pomp of dreadful sacrifice;
Amid that scene, if some relenting eye
Glance on the stone where our cold reliques lie,
Devotion's self shall steal a thought from heaven,
One human tear shall drop, and be forgiven.

Pope.

Ah why, Penelope, this causeless fear,
To render sleep's soft blessings insincere?
Alike *devote* to sorrow's dire extreme,
The day reflection and the midnight dream

Id.

Pilgrimages are often either enjoined by confessors, or undergone by *devotees*.

Serve.

Aliens were *devoted* to their rapine and despoil.

Decay of Piety.

Devotion may be considered either as an exercise of public or private prayers at set times and occasions, or as a temper of the mind, a state and disposition of the heart, which is rightly affected with such exercises.

Law on Christ's Perfection.

With such a cause as yours, my lord, it is not sufficient that you have the court at your *devotion*, unless you can find means to corrupt or intimidate the jury.

Junius.

He sue for mercy! He dismayed
By wild words of a timid maid!
He, wronged by Venice, vows to save
Her sons *devoted* to the grave.

Byron.

A more ideal, unattainable, notion, fit only for the chaste monk, or the religious devotee.

Porteus.

DEVOTION, among the ancient Romans, a kind of sacrifice or ceremony, whereby they consecrated themselves to the service of some person. The ancients thought that the life of one might be ransomed by the death of another; whence these devotions became frequent for the lives of the emperors. Devotion to any particular person was unknown among the Romans till the time of Augustus. The day after the title of Augustus had been conferred upon Octavius, Pacuvius, a tribune of the people, publicly declared, that he would devote himself to Augustus, and obey him at the expense of his life, if he was commanded. This example of flattery was immediately followed by all the rest; till at length it became an established custom never to go to salute the emperor, without declaring that they were devoted to him. Before this, the Roman practice was much more noble and patriotic, viz. that of devoting themselves to their country. See **DECIUS**.

DEVOUR, *v. a.*

DEVOUR'ER, *n. s.*

Lat. *devoro*; of Gr. *βοφα*, the food of beasts. **DEVORATION**, *n. s.* To eat up ravenously, as a beast or wild animal; to destroy: hence to consume or enjoy with eagerness. Devoration says Dr. Johnson, is 'the act of devouring,' but we have seen no instance of its occurrence.

And I took the book of the aungelis hond and deuoride it, and it was in mi mouthe as sweete as hony, and whanne I hadde deuoride it mi wombe was bitter.

Wiclif. Apoc. 10.

A fire deuoureth before them, and behind them a flame burneth.

Joel, ii. 3.

We've willing dames enough: there cannot be That vulture in you, to devour so many As will to greatness dedicate themselves, Finding it so inclined.

Shakespeare.

So looks the pent up lion o'er the wretch That trembles under his devouring paws.

Id.

Rome is but a wilderness of tygers; Tygers must prey, and Rome affords no prey But me and mine: how happy art thou, then, From these devourers to be banished!

Id.

Death stalks behind thee, and each flying hour Does some loose remnant of thy life devour.

Dryden.

Such a pleasure as grows fresher upon enjoyment; and though continually fed upon, yet is never devoured.

South.

Notwithstanding that Socrates lived in the time of this devouring pestilence at Athens, he never caught the least infection.

Addison.

Since those leviathans are withdrawn, the lesser devourers supply their place: fraud succeeds to violence.

Decay of Piety.

You, while amazed his hurrying hordes retire From the fell havoc of devouring fire.

Taught the first art! with piny rods to raise By quick attrition the domestic blaze.

Darwin.

DEVOUT,

Lat. *devotus*. See **DEVOUTLY**, *adv.*, **VOTION**. Pious; religious; devoted to holy duties.

Her twilights were more clear than our mid-day, She dreamt devoutlier than most use to pray.

Donne.

Her grace rose, and with meadest paces Came to the place, where she kneeled; and Cast her fair eyes to heaven, and prayed.

Porteus.

One of the wise men having a while attentively and devoutly viewed and contemplated this pillar and cross, fell down upon his face.

Bacon.

Anon dry ground appears, and from his ark The ancient sire descends with all his train; Then with uplifted hands, and eyes devout, Grateful to heaven.

Milton.

For this, with soul devout, he thanked the god; And, of success secure, returned to his abode.

Dryden.

Think, O my soul, devoutly think, How, with affrighted eyes, Thou saw'st the wide extended deep In all its horrors rise!

Addison.

We must be constant and devout in the worship of our God, and ready in all acts of benevolence to our neighbour.

Rogers.

To second causes we seem to trust, without expressing, as devoutly as we ought to do, our dependence on the first.

Atterbury.

DEUTEROCANONICAL, from *δευτερος*, second, and *κανονικος*, canonical, in the school of theology, an appellation given to certain books of holy scripture, which were added to the canon after the rest; either because they were not written till after the compilation of the canon, or by reason of some dispute about them. The Jews acknowledge several books in their canon, which were later than the rest. They say, that under Ezra a great assembly of their doctors, which they call by way of eminence the great synagogue, made the collection of the sacred books which we now have in the Hebrew Old Testament, including those which were not written before the Babylonish captivity, viz. Ezra, Nehemiah, Esther, Ezekiel, Daniel, Haggai, Zechariah, and Malachi; and the Romish church has since added others to the canon, that were not, and could not be, in the canon of the Jews, being written long after. Such are several of the apocryphal books, as the Maccabees, Ecclesiasticus, Wisdom, &c. Others were added still later. The deuterocanonical books in the modern canon are, the epistle to the Hebrews; those of James and Jude; the second of St. Peter, the second and third of St. John; and the Revelation.

DEUTEROG'AMY, *n. s.* *Δευτερος* and *γαμος* A second marriage;

DEUTERON'OMY, *n. s.* *Δευτερος νομος*. The second book of the law; the fifth book of Moses.

DEUTERONOMY was the last of the five books written by Moses, and contains, as its name imports, the repetition of the law. It was written in the fortieth year after the delivery from Egypt, Moses being then in the 120th year of his age. In the Hebrew it contains eleven paraches, though there are only ten in the editions of the rabbins at Venice, twenty chapters, and 955 verses. In the Greek, Latin, and other versions, it contains thirty-four chapters. The last is not by Moses. Some suppose it was written by Joshua immediately after Moses's death; which is the most probable opinion. Others say it was

added by EZRA. See PENTATEUCH. This book opens with an interesting address to the Israelites, in which Moses briefly recapitulates the many instances in which they had experienced the divine favor since their departure from Horeb. He describes the success and victories which had marked their progress; and the incredulous murmurs and ingratitude, by which the people had incensed God; so that of the multitude which were brought out of Egypt, few now remained. He proceeds to rehearse the various commandments, statutes, and judgments which had been delivered to them by God, that they might become 'a wise and understanding people;' and while he intersperses with those laws, frequent instances of their past misconduct, he unfolds the glorious attributes of God, and reiterates many persuasive motives. He enjoins them, on their first entrance into Canaan, to give a public display of their reverence for God's law, by erecting stones on which all its words and precepts might be inscribed. He renews the covenant with the people, including all that previously passed at Horeb; and ratifies those assurances of spiritual blessings, long since imparted to Abraham and his descendants. He then, in consistency with the promises and sanctions of both covenants, sets forth, for their instruction, life and good, and death and evil, temporal and eternal recompense, present and future punishment.

DEUTEROPOTMI, in Grecian antiquity, a designation given to such of the Athenians as had been thought dead, and, after the celebration of the funeral rites, unexpectedly recovered.

DEUTEROSCOPY, *n.s.* Δευτερος and σκοπεω. The second intention; the meaning beyond the literal sense: not in use.

Not attaining the *deuteroscopy*, or second intention of the words, they are fain to omit their consequences, coherences, figures, or tropologies.

Brown's Vulgar Errors.

DEUX PONTS, a ci-devant duchy and principality of Germany, in the circle of the Upper Rhine. It was composed of the ancient county of the same name, and the county of Veldentz, and bounded by the provinces of Alsace and Lorraine on the south and south-west, by the electorate of Treves on the north, and the Lower Palatinate on the east; but much intersected by the possessions of different princes. In the year 1385 it was annexed to the Palatinate. The descendants of the princes palatine having obtained the throne of Sweden, and given three princes to that kingdom, Charles X. XI. and XII., it remained under the dominion of Sweden during that period; but this line becoming extinct, it descended to the house of Birkenfeld, in the possession of which it continued till its late subjection to the power of France. The duchy was overrun by the French in 1793, and finally attached to that kingdom in 1797, when it was included in the department of the Sarre and Moselle. It is mountainous, and abounds in mines of copper, mercury, iron, and coals; as well as in vineyards, pastures, and corn-fields, which sufficiently supply the people. The principality, when under the German empire, paid for the Roman month 240 florins, and to the im-

perial chamber 172 rix-dollars, and thirty-six kruiters. The revenues were estimated at 500,000 florins. It returned in 1814 to the possession of Austria, and has since been exchanged for other districts with Bavaria. It is now a part of the Bavarian province of the Rhine, and has about 60,000 inhabitants.

DEUX PONTS, or Zweybrucken, as the Germans call it, a town of Germany, now annexed to France, and included in the department of Sarre and Moselle, of which it is the capital; as it was, till December, 1797, of the ci-devant duchy. It was the seat of justice for the principality, and has churches for Roman Catholics, Lutherans, and Calvinists. It is seated on the Erlbach, forty-six miles west of Mannheim, fifty south-west of Mentz, and forty-nine north by west of Strasburgh. Long. 7° 26' E., lat. 49° 16' N.

DEUX PONTS, LES, a town of the Bavarian States, the capital of the foregoing district, is situated on the right bank of the Little Erlbach, and has a castle, formerly the ducal residence. The chief objects of interest are a beautiful organ in the town church, the new Lutheran church and academy, and the orphan-house. In 1709 Stanislaus Leczynsky, king of Poland, took up his residence here, and built the palace of Schullflick, about half a mile from the town. The town is distinguished for its valuable editions of the Greek and Latin classics. Population 5000. It is forty-six miles west of Mannheim, and fifty-eight east of Mentz.

DEW, *n. s.*

DEWBERRY, *n. s.*

DEWBESPENT', *part.*

DEWBURNING, *adj.*

DEWDROP, *n. s.*

DEWLAP,

DEWLAPT, *adj.*

DEWORM, *n. s.*

DEW'X, *adj.*

flesh of the throat of oxen that laps the dew. The meaning of the other compounds is obvious. Dew is often used figuratively for bounty and love, as in the instance from Shakspeare.

At last the golden orientale gate
Of greatest heaven gan to open fayre,
And Phœbus fresh, as brydegroome to his mate
Came dauncing forth, shaking his dewie hayre.
Spenser. Faerie Queene.

A trickling stream of balm most sovereign
And dainty dew, which on the ground still fell,
And overflowed all the fertile plain,
As it had dewed been with timely rain. *Id.*

He, now to prove his late renewed might,
High brandishing his bright dew-burning blade,
Upon his crested scalp so sore did suite,
That to the scull a yawning wound it made. *Id.*

With him pour we in our country's purge
Each drop of us.

— — — Or so much as it needs

To dew the sovereign flower, and drown the weeds.
Shakspeare.

Never yet one hour in bed
Did I enjoy the golden dew of sleep,
But with his tim'rous dreams was still awak'd.
Id.

Goth, *doggwa*; Swe.

dafwa; Belg. *dauw*;

Teut. *tau*, from Gr.

δeww, to moisten. The

condensed moisture

of the atmosphere.

See the scientific article.

Dew-berry is a

fruit. Dew-lap, the

Feed him with apriocks and *dewberries*,
With purple grapes, green figs, and mulberries.

Id.

I must go seek some *dewdrops* here,
And hang a pearl in every cowslip's ear. *Id.*
And sometimes lurk I in a gossip's bowl,
In very likeness of a roasted crab;
And when she drinks against her lips I bob,
And on the withered *dewlap* pour the ale. *Id.*

Who would believe that there were mountaineers
Dewlapt like bulls, whose throats had hanging at 'em
Wallets of flesh? *Id.*

That Churchman bears a bounteous mind, indeed;
A hand as fruitful as the land that feeds us;
His *dew* falls every where. *Id.*

Dews and rain are but the returns of moist vapours
condensed. *Bacon.*

An host
Innumerable as the stars of night,
Or stars of morning, *dewdrops*, which the sun
Impearls on every leaf, and every flower. *Milton.*

From the earth a *dewy* mist
Went up, and watered all the ground, and each
Plant of the field. *Id.*

He ceased; discerning Adam with such joy
Surcharged, as had, like grief, been *dew'd* in tears,
Without the vent of words, which these he breathed. *Id.*

This evening late, by then the chewing flocks
Had ta'en their supper on the savoury herb
Of knot-grass *dewbesprent*, and were in fold,
I sat me down to watch upon a bank
With ivy canopied, and interwove
With flaunting honey-suckle. *Id.*

Dewberries, as they stand here among the more de-
licate fruits, must be understood to mean raspberries,
which are also of the bramble kind. *Hammer.*

For the trout, the *dew-worm*, which some call the
lob worm, and the braudling, are the chief. *Walton.*

Palemon above the rest appears
In sable garments, *dew'd* with gushing tears. *Dryden.*

Where two adverse winds,
Sutlind from *dewy* vapours in mid sky,
Engage with horrid shock, the ruffled brine
Roars stormy. *Philips.*

In Gallic blood again
He *dews* his reeking sword, and strows the ground
With beardless ranks. *Id.*

Large rowles of fat about his shoulder slung,
And from his neck the double *dewlap* hung. *Addison.*

The *dewlapt* bull now chases along the plain,
While burning love ferments in every vein. *Gay.*

Rest, sweet as *dewdrops* on the flowery lawns,
When the sky opens, and the morning dawns. *Tickell.*

Now sliding streams the thirsty plants renew,
And feed their fibres with reviving *dew*. *Pope.*

No more the morn, with tepid rays,
Unfolds the flower of various hue,
Noon spreads no more the genial blaze,
Nor gentle eve distils the *dew*. *Johnson. Ode to Winter.*

The spring is come; the violet's gon',
The first-born child of the early sun;
With us she is but a winter's flower,
The snow on the hills cannot blast her bower,
And she lifts up her *dewy* eye of blue
To the youngest sky of the self-same hue. *Byron.*

Dew is defined by Dr. Hutton 'a thin light insen-
sible mist, or rain, ascending with a slow motion,
and falling while the sun is below the horizon.'
He adds, 'that it appears to differ from rain, as
less from more' Its origin and matter are doubt-
less from the vapors and exhalations that rise
from the earth and water. See EXHALATION.

As it appears only during clear nights, when
the heavens seem to glow with constellations,
the ancients finely imagined it to be actually shed
from the stars, and therefore to partake of a
pure and celestial essence. 'Hence,' says Mr.
Leslie, 'the vulgar notion that dew falls, which
has prevailed through all ages, and continues to
tincture every language.' Plutarch asserts it to
be most abundant in the time of full moon. The
lunar beams themselves were supposed to contri-
bute some influence, being of a cold nature,
and therefore possessed of a humifying quali-
ty. The moon, it was imagined, performed
merely the office of an imperfect mirror, reflect-
ing the softened lustre of the sun without any
portion of his heat.' Certain abstergent quali-
ties were at the same period ascribed to dew.
Ammianus Marcellinus says that the health of
mountaineers is principally owing to their con-
stant exposure to bracing dews.

It was long disputed whether the dew is formed
from the vapors ascending from the earth during
the night time, or from the descent of such as
have been already raised through the day. M.
Huet shows that dew does not fall but rises.
Some of the most remarkable experiments in
support of this hypothesis are those of Mr. Du
Fay of the (Royal) Academy of Sciences at
Paris. He supposed, that if the dew ascended,
it must wet a body placed low down sooner than
one placed on a higher situation; and if a num-
ber of bodies were placed in this manner the
lowermost would be wetted first, and the rest
in like manner, gradually up to the top. To
determine this, he placed two ladders against
one another, meeting at their tops, spreading
wide asunder at the bottom, and so tall as to
reach thirty-two feet high. To the several steps
of these he fastened large squares of glass like the
panes of windows, placing them in such a man-
ner that they should not overshadow one another.
On the trial it appeared exactly as Mr. Du Fay
had apprehended. The lower surface of the first
piece of glass was first wetted, then the upper,
then the lower surface of the pane next above it;
and so on, till all the pieces were wetted to the
top. Hence it appeared plain to him, that the
dews consisted of the vapors ascending from the
earth during the night; which, being condensed
by the coldness of the atmosphere, are prevented
from being dissipated as in the day-time by the
sun's heat. He afterwards tried a similar experi-
ment with pieces of cloth instead of panes of
glass, and the result was quite conformable to
his expectations. He weighed all the pieces of
cloth next morning, to know what quantity of
water each had imbibed, and found those that
had been placed lowermost considerably heavier
than such as had been placed at the top; though
he owns that this experiment did not succeed so
perfectly as the former. M. Muschenbroeck, who
embraced the contrary opinion, thought he had

invalidated all Mr. Du Fay's proofs, by repeating his experiments with the same success, on a plane covered with sheet lead. But to this M. Du Fay replied, that there was no occasion for supposing the vapor to rise through the lead, nor from that very spot; but that, as it arose from the adjoining open ground, the continual fluctuation of the air could not but spread it abroad, and carry it thither in its ascent. This experiment of M. Muschenbroeck's was not considered sufficient to overthrow those of M. Du Fay. Yet one thing seemed to favor the hypothesis of its descent, i. e. that in cloudy weather there is little or no dew to be observed. And Muschenbroeck, continuing his experiments, made the interesting discovery that dew forms in very different proportions on different bodies, for that it will scarcely adhere to a polished metal surface, while it abounds on glass or porcelain. The color of the substance appeared also, he found, to alter the effects. A piece of red leather acquired, by exposure through the night, twice as much dew as another black or blue piece of the same size. He was afterwards, however, led to attribute this latter circumstance to the coloring matter of the morocco leather used.

M. Du Fay also continued his experiments: and the result was, that on neither side of this controversy was there a sufficient preponderance of proof to decide the question; but the old doctrine of Aristotle on the subject was revived, viz. that dew separates, under certain circumstances, from the air, and becomes attracted to particular bodies; or that the moisture, in which it directly originates, is suspended in the atmosphere by a perfectly chemical process, similar to that by which salts are dissolved in water, heat in both cases being found to increase the solvent power.

Professor Leslie's attention was first drawn to the subject as early as the year 1798. By means of his hygrometer he then established the curious fact, that the moisture of air is deposited on glass before it actually reaches the point of saturation. He thus explains, in his valuable Treatise on the Relations of Air to Heat and Moisture, the general result of his investigations at this and a subsequent period:—In fine calm weather, after the rays of the declining sun have ceased to warm the surface of the ground, the descent of the higher mass of air gradually chills the undermost stratum, and disposes it to dampness, till their continued intermixture produces a fog, or low cloud. Such fogs are, towards the evening, often observed gathering in narrow vales, or along the course of sluggish rivers, and generally hovering within a few inches of the surface. But in all situations, these watery deposits, either to a greater or a less degree, occur in the same disposition of the atmosphere. The minute suspended globules, attaching themselves to the projecting points of the herbage, form dew in mild weather, or shoot into hoar-frost when cold predominates. They collect most readily on glass, but seem to be repelled by a bright surface of metal.' In clear and calm weather, the air is always drier near the surface during the day than at a certain height above the ground, but it becomes damper on the approach of evening, while, at some elevation, it retains a moderate degree of dryness through the whole of the night. If the sky be

clouded, less alteration is betrayed in the state of the air, both during the progress of the day, and at different distances from the ground; and, if wind prevail, the lower strata of the atmosphere, thus agitated and intermingled, will be reduced to a still nearer equality of condition.' (pp. 92 and 192). See METEOROLOGY.

Some interesting experiments were now made in France, in regard to the tendency M. du Fay had observed in different bodies, to imbibe dew in different proportions. It had long been seen that dew is deposited on glass, when metals in its neighbourhood remain dry; M. Prévost of Montauban however discovered some new and curious facts relative to this deposition. When thin plates of metal are fixed on pieces of glass, it sometimes happens that they are as much covered with dew as the glass itself: but more frequently they remain dry; and in this case they are also surrounded by a dry zone. But when the other side of the glass is exposed to dew, the part which is opposite to the metal remains perfectly dry. If the metal be again covered with glass, it will lose its effect in preventing the deposition.

These experiments may be conveniently confirmed on the glass of a window, when moisture is attaching itself to either of its surfaces. Mr. Prévost remarks that it often happens that dew is deposited externally, even when the air within is warmer than without. A plate of metal fixed internally on the window receives a larger quantity of moisture than the glass, while the space opposite to an external plate remains dry: and, if the humidity is deposited from without, the place opposite the internal plate is also more moistened, while the external plate remains dry: and both these circumstances may happen at once with the same result. A small plate fixed externally, opposite to the middle of the internal plate, protects this part of the plate from receiving moisture; and a smaller piece of glass, fixed on the external plate, produces again a central spot of moisture on the internal one: and the same changes may be continued for a number of alternations, until the whole thickness becomes more than half an inch. Gilt paper, with its metallic surface exposed, acts as a metal; but when the paper only is exposed it has no effect. When a plate of metal, on which moisture would have been deposited, is fixed at a small distance from the glass, the moisture is transferred to the surface of the glass immediately under it without affecting the metal: if this plate is varnished on the surface remote from the glass, the effect remains; but if on the side next the glass, it is destroyed. The oxidation of metals renders them also unfit for the experiment. When glasses partly filled with mercury, or even with water, are exposed to the dew, it is deposited only on the parts which are above the surface of the fluid. But in all cases when the humidity is too copious the results are confused. In order to reduce these facts to some general laws, M. Prévost observes, that when the metal is placed on the warmer side of the glass, the humidity is deposited more copiously either on itself or on either surface of the glass in its neighbourhood: but that, when it is on the colder side, it neither receives humidity, nor permits its deposition on

the glass: that a coat of glass, or varnish, destroys the efficacy of the metal, but that an additional plate of metal restores it.

M. Prévost was at first disposed to attribute these phenomena to the effects of electricity, but he thinks it possible to explain them all by the action of heat only; for this purpose he assumes, first, that glass attracts humidity the more powerfully as its temperature is lower; secondly, that metals attract it but very little; thirdly, that glass exerts this attraction, notwithstanding the interposition of other bodies; and, fourthly, that metals give to glass, placed in their neighbourhood, the power of being heated by warm air, and being cooled by cold air, with greater rapidity. Hence, that the temperature of the glass approaches more nearly to that of the air on the side opposite to the metal, and attracts the humidity accordingly, more or less, either to its own surface, or to that of the metal. We should, indeed, have expected a contrary effect; that the metal would rather have tended to communicate to the glass the temperature of the air on its own side; but, granting that the assumptions of M. Prévost serve to generalise the facts with accuracy, their temporary utility is as great as if they were fundamentally probable.

Dr. Wells, however, has traced up the phenomena of dew to their legitimate sources. 'Very little,' he observes, with Aristotle, 'is deposited, except on calm and clear nights, or when the clouds are high. It is never seen on nights both cloudy and windy; and if, in the course of the night, the weather, from being serene, should become dark and stormy, dew, which had been deposited, will disappear. In calm weather, if the sky be partially covered with clouds, more dew will appear than if it were entirely uncovered.'

Dew probably begins in the country to appear upon grass, in places shaded from the sun, during clear and calm weather, soon after the heat of the atmosphere has declined, and continues to be deposited through the whole night, and for a little after sun-rise. Its quantity will depend, in some measure, on the proportion of moisture in the atmosphere, and is, consequently, greater after rain than after a long tract of dry weather; and in Europe, with southerly and westerly winds, than with those which blow from the north and the east. The direction of the sea determines this relation of the winds to dew. For in Egypt, dew is scarcely ever observed, except while the northerly or Etesian winds prevail. Hence, also, dew is generally more abundant in spring and autumn, than in summer. And it is always very copious on those clear nights which are followed by misty mornings, which show the air to be loaded with moisture. And a clear morning, following a cloudy night, determines a plentiful deposition of the retained vapor. When warmth of atmosphere is compatible with clearness, as is the case in southern latitudes, though seldom in our country, the dew becomes much more copious, because the air then contains more moisture. Dew continues to form with great copiousness, as the night advances, from the increased refrigeration of the ground.

Dew, according to Aristotle, is a species of

rain, formed in the lower atmosphere, in consequence of its moisture being condensed, by the cold of the night, into minute drops. Opinions of this kind, says Dr. Wells, are still entertained by many persons, among whom is the very ingenious professor, Leslie. (*Relations of Heat and Moisture*, pp. 37 and 132). A fact, however, first taken notice of by Gerstin, who published his *Treatise on Dew* in 1773, proves them to be erroneous; for he found that bodies a little elevated in the air, often become moist with dew, while similar bodies, lying on the ground, remain dry, though necessarily, from their position, as liable to be wetted, by whatever falls from the heavens, as the former. The above notion is perfectly refuted by what will presently appear relative to metallic surfaces exposed to the air in a horizontal position, which remain dry, while every thing around them is covered with dew.

After a long period of drought, when the air was very still and the sky serene, Dr. Wells exposed to the sky, twenty-eight minutes before sun-set, previously weighed parcels of wool and swan-down, upon a smooth, unpainted, and perfectly dry fir-table, five feet long, three broad, and nearly three in height, which had been placed, an hour before, in the sunshine, in a large level grass-field. The wool, twelve minutes after sun-set, was found to be 14° colder than the air, and to have acquired no weight. The swan-down, the quantity of which was much greater than that of the wool, was, at the same time, 13° colder than the air, and was also without any additional weight. In twenty minutes more, the swan-down was $14^{\circ} 30'$ colder than the neighbouring air, and was still without any increase of its weight. At the same time the grass was 15° colder than the air four feet above the ground.

Dr. Wells, by a copious induction of facts, derived from observation and experiment, establishes the proposition, that bodies become colder than the neighbouring air before they are dewed. The cold, therefore, which Dr. Wilson and Mr. Six conjectured to be the effect of dew, now appears to be its cause. But what makes the terrestrial surface colder than the atmosphere? The radiation or projection of heat into free space. Now the researches of professor Leslie and count Rumford have demonstrated, that different bodies project heat with very different degrees of force.

In the operation of this principle, therefore, conjoined with the power of a concave mirror of cloud, or any other awning, to reflect, or throw down again those calorific emanations which would be dissipated in a clear sky, we shall find a solution of the most mysterious phenomena of dew. Two circumstances must here be considered:—

I. The exposure of the particular surface to be dewed, to the free aspect of the sky.

II. The peculiar radiating power of the surface. 1. Whatever diminishes the view of the sky, as seen from the exposed body, obstructs the depression of its temperature, and occasions the quantity of dew formed upon it, to be less than would have occurred, if the exposure to the sky had been complete.

Dr. Wells bent a sheet of pasteboard into the shape of a pent-house, making the angle of flexure 90° , and leaving both ends open. This was placed one evening, with its ridge uppermost, upon a grass-plot, in the direction of the wind, as well as this could be ascertained. He then laid ten grains of white, and moderately fine wool, not artificially dried, on the middle part of that spot of the grass which was sheltered by the roof, and the same quantity on another part of the grass-plot, fully exposed to the sky. In the morning, the sheltered wool was found to have increased in weight only two grains, but that which had been exposed to the sky, sixteen grains. He varied the experiment on the same night, by placing, upright, on the grass-plot, a hollow cylinder of baked clay, one foot diameter, and two feet and a-half high. On the grass round the outer edge of the cylinder, were laid ten grains of wool, which, in this situation, as there was not the least wind, would have received as much rain as a like quantity of wool fully exposed to the sky. But the quantity of moisture acquired by the wool partially screened by the cylinder from the aspect of the sky, was only about two grains, while that acquired by the same quantity, fully exposed, was sixteen grains. Repose of a body seems necessary to its acquiring its utmost coolness, and a full deposit of dew. Gravel-walks and pavements project heat, and acquire dew, less readily than a grassy surface. Hence, wool placed on the former, has its temperature less depressed than on the latter, and, therefore, is less bedewed. Nor does the wool here attract moisture by capillary action on the grass, for the same effect happens if it be placed in a saucer. Nor is it by hydrometric attraction; for, in a cloudy night, wool placed on an elevated board acquired scarcely any increase of weight.

If wool be insulated a few feet from the ground, on a bad conductor of heat, as a board, it will become still colder than when in contact with the earth, and acquire fully more dew than on the grass. At the windward end of the board it is less bedewed than at the sheltered end, because, in the former case, its temperature is nearer to that of the atmosphere. Rough and porous surfaces, as shavings of wood, take more dew than smooth and solid wood; and raw silk and fine cotton are more powerful in this respect than even wool. Glass projects heat rapidly, and is as rapidly coated with dew. But bright metals attract dew much less powerfully than other bodies. If we coat a piece of glass, partially, with bright tin-foil, or silver leaf, the uncovered portion of the glass quickly becomes cold by radiation, on exposure to a clear nocturnal sky, and acquires moisture; which, beginning on those parts most remote from the metal, gradually approaches it. Thus, also, if we coat outwardly a portion of a window-pane with tin-foil, in a clear night, then moisture will be deposited inside, on every part except opposite to the metal. But if the metal be inside, then the glass under and beyond it will be sooner, or most copiously bedewed. In the first case,

the tin-foil prevents the glass under it from dissipating its heat, and, therefore, it can receive no dew; in the second case, the tin-foil prevents the glass, which it coats, from receiving the calorific influence of the apartment, and hence it is sooner refrigerated by external radiation than the rest of the pane. Gold, silver, copper, and tin, bad radiators of heat and excellent conductors, acquire dew with greater difficulty than platina, which is a more imperfect conductor; or than lead, zinc, and steel, which are better radiators. Hence, dew which has formed upon a metal will often disappear, while other substances in the neighbourhood remain wet; and a metal, purposely moistened, will become dry, while neighbouring bodies are acquiring moisture. This repulsion of dew is communicated by metals to bodies in contact with or near them. Wool laid on metal acquires less dew than wool laid on the contiguous grass.

If the night becomes cloudy, after having been very clear, though there be no change with respect to calmness, a considerable alteration in the temperature of the grass always ensues. Upon one such night, the grass, after having been 12° colder than the air, became only 2° colder; the atmospheric temperature being the same at both observations. On a second night, the grass became 9° warmer in the space of an hour and a half. On a third night, in less than forty-five minutes, the temperature of the grass rose 15° , while that of the neighbouring air increased only $3\frac{1}{2}^\circ$. During a fourth night, the temperature of the grass, at half past nine o'clock, was 32° . In twenty minutes afterwards, it was found to be 39° , the sky in the mean time having become cloudy. At the end of twenty minutes more, the sky being clear, the temperature of the grass was again 32° . A thermometer lying on a grass-plot will sometimes rise several degrees, when a cloud comes to occupy the zenith of a clear sky.

When, during a clear and still night, different thermometers, placed in different situations, were examined at the same time, those which were situated where most dew was formed, were always found to be the lowest. On dewy nights the temperature of the earth, half an inch or an inch beneath the surface, is always found much warmer than the grass upon it, or the air above it. The differences on five such nights, were from 12° to 16° .

In making experiments with thermometers, it is necessary to coat their bulbs with silver or gold leaf, otherwise the glassy surface indicates a lower temperature than that of the air, or the metallic plate it touches. Swandown seems to exhibit greater cold, on exposure to the aspect of a clear sky, than any thing else. When grass is 14° below the atmospheric temperature, swandown is commonly 15° . Fresh unbroken straw and shreds of paper, rank in this respect with swandown. Charcoal, lamp-black, and rust of iron are also very productive of cold. Snow stand 4° or 5° higher than swandown laid upon it in a clear night.

The following tabular view of observations by Dr. Wells, is peculiarly instructive :—

	6h. 45'	7h.	7h. 20'	7h. 40'	8h. 45'
Heat of the air four feet above the grass,	60 $\frac{1}{2}$ °	60 $\frac{3}{4}$ °	59°	58°	54°
— wool on a raised board,	53 $\frac{1}{2}$	54 $\frac{1}{2}$	51 $\frac{1}{2}$	48 $\frac{1}{2}$	44 $\frac{1}{2}$
— swandown on the same,	54 $\frac{1}{2}$	53	51	47 $\frac{1}{2}$	42 $\frac{1}{2}$
— surface of the raised board,	58	57	55 $\frac{1}{2}$	—	—
— grass-plot,	53	51	49 $\frac{1}{2}$	49	42

The temperature always falls in clear nights; but the deposition of dew, depending on the moisture of the air, may occur or not. Now, if cold were the effect of dew, the cold connected with dew ought to be always proportional to the quantity of that fluid; but this is contradicted by experience. On the other hand, if it be granted that dew is water precipitated from the atmosphere by the cold of the body on which it appears, the same degree of cold in the precipitating body may be attended with much, with little, or with no dew, according to the existing state of the air in regard to moisture; all of which circumstances are found really to take place. The actual precipitation of dew, indeed, ought to evolve heat.

A very few degrees of difference of temperature between the grass and the atmosphere are sufficient to determine the formation of dew, when the air is in a proper state. But a difference of even 30°, or more, sometimes exists, by the radiation of heat from the earth to the heavens. And hence, the air near the refrigerated surface must be colder than that somewhat elevated. Agreeably to Mr. Six's observations, the atmosphere, at the height of 220 feet, is often upon such nights, 10° warmer than what it seven feet above the ground. And had not the lower air thus imparted some of its heat to the surface, the latter would have been probably 40° under the temperature of the air.

Insulated bodies, or prominent points, are sooner covered with hoar-frost and dew than others; because the equilibrium of their temperature is more difficult to be restored. As aerial stillness is necessary to the cooling effect of radiation, we can understand why the hurtful effects of cold, heavy fogs, and dews, occur chiefly in hollow and confined places, and less frequently on hills. In like manner, the leaves of trees often remain dry throughout the night, while the blades of grass are covered with dew.

No direct experiments can be made to ascertain the manner in which clouds prevent or lessen the appearance of a cold at night, upon the surface of the earth, greater than that of the atmosphere. But it may be concluded from the preceding observations, that they produce this effect almost entirely by radiating heat to the earth, in return for that which they intercept in its progress from the earth towards the heavens. The heat extricated by the condensation of transparent vapor into cloud must soon be dissipated; whereas, the effect of greatly lessening, or preventing altogether, the appearance of a greater cold on the earth than that of the air, will be produced by a cloudy sky during the whole of a long night.

We can thus explain, in a more satisfactory manner than has usually been done, the sudden

warmth that is felt in winter, when a fleece of clouds supervenes in clear frosty weather. Chemists ascribed this sudden and powerful change to the disengagement of the latent heat of the condensed vapors; but Dr. Wells's thermometric observations on the sudden alternations of temperature by cloud and clearness, render that opinion untenable. We find the atmosphere itself, indeed, at moderate elevations, of pretty uniform temperature, while bodies at the surface of the ground suffer great variations in their temperature. This single fact is fatal to the hypothesis derived from the doctrines of latent heat.

'I had often,' says Dr. Wells, 'smiled, in the pride of half knowledge, at the means frequently employed by gardeners to protect tender plants from cold, as it appeared to me impossible that a thin mat, or any such flimsy substance, could prevent them from attaining the temperature of the atmosphere, by which alone I thought them liable to be injured. But when I had learned that bodies on the surface of the earth become, during a still and serene night, colder than the atmosphere, by radiating their heat to the heavens, I perceived immediately a just reason for the practice which I had before deemed useless. Being desirous, however, of acquiring some precise information on this subject, I fixed perpendicularly, in the earth of a grass-plot, four small sticks, and over their upper extremities, which were six inches above the grass, and formed the corners of a square whose sides were two feet long, I drew tightly a very thin cambric handkerchief. In this disposition of things, therefore, nothing existed to prevent the free passage of air from the exposed grass to that which was sheltered, except the four small sticks, and there was no substance to radiate downwards to the latter grass, except the cambric handkerchief.'

The sheltered grass, however, was found nearly of the same temperature as the air, while the unsheltered was 5° or more colder. One night the fully exposed grass was 11° colder than the air; but the sheltered grass was only 3° colder. Hence we see the power of a very slight awning to avert or lessen the injurious coldness of the ground. To have the full advantage of such protection from the chill aspect of the sky: the covering should not touch the subjacent bodies. Garden walls act partly on the same principle. Snow screens plants from this chilling radiation. In warm climates, the deposition of dewy moisture on animal substances hastens their putrefaction. As this is apt to happen only in clear nights, it was anciently supposed that bright moonshine favored animal corruption.

From this rapid emission of heat from the surface of the ground, we can now explain the formation of ice during the night in Bengal, while the temperature of the air is above 32°. The

nights most favorable for this effect, are those which are the calmest and most serene, and on which the air is so dry as to deposit little dew after midnight. Clouds and frequent changes of wind are certain preventives of congelation. 300 persons are employed in this operation at one place. The enclosures formed on the ground are four or five feet wide, and have walls only four inches high. In these enclosures, previously bedded with dry straw, broad, shallow, unglazed earthen pans are set, containing unboiled pump-water. Wind, which so greatly promotes evaporation, prevents the freezing altogether, and dew forms in a greater or less degree during the whole of the nights most productive of ice. If evaporation were concerned in the congelation, wetting the straw would promote it. But Mr. Williams, in the 83d vol. of the Philosophical Transactions, says, that it is necessary to the success of the process that the straw be dry. In proof of this he mentions, that when the straw becomes wet by accident it is renewed; and that when he purposely wetted it in some of the enclosures, the formation of ice there was always prevented. Moist straw both conducts heat and raises vapor from the ground, so as to obstruct the congelation. According to Mr. Leslie, water stands at the head of radiating substances.

DEWARCUNDAIL, a sterile, or rather a desolated district of Hindostan, province of Gollonda, extending along the south side of the river Godavery, and situated between the eighteenth and nineteenth degrees of northern latitude. The country contains the ruins of a number of forts and villages, which evince it to have been formerly well cultivated.

Dew-BORS, in country affairs, a distemper in cattle, being a swelling in the body, as much as the skin can hold, so that some beasts are in danger of bursting. It proceeds from greediness in feeding, when put into a rank pasture; but commonly when the grass is full of water. In this case the beast should be exercised, and made to purge well; but the proper cure is bleeding in the tail; then take a grated nutmeg, with an egg, and breaking the top of the shell, put out so much of the white as that you may have room to slip the nutmeg into the shell; mix them together, and then let shell and all be put down the beast's throat; that done, walk him up and down, and he will soon mend.

DE WITT (John), a celebrated Dutch statesman, born in 1625, at Dort. At the age of twenty-three, he published *Elementa Curvarum Linearum*; and, after taking his degrees, became, in 1650, pensionary of Dort, and distinguished himself very early in the management of public affairs. He opposed the war with the English as injurious to the States; and when the event justified his predictions, he was unanimously chosen pensionary of Holland. In this capacity he labored to procure a peace with Cromwell; in which peace a secret article was introduced for the exclusion of the House of Orange. In the war with England, after the Restoration, when it was thought expedient, on Opdam's defeat and death, that some of their own deputies should command the fleet, he was one of the three in commission, and wrote an accurate re-

lation of all that happened during the expedition; for which, at his return, he received the solemn thanks of the States-General. In 1667 he established the perpetual edict for abolishing the office of Stadtholder, which produced seditions and tumults; on which the pensionary begged dismissal from his post: this was granted, with thanks for his services. But the invasion of the French, and the internal division among the Hollanders, spread every where terror and confusion. Cornelius, the pensionary's brother, was imprisoned, and condemned to exile; and a report being raised that he would be rescued, the mob armed, and surrounded the prison where the two brothers were together, dragged them out, barbarously murdered them, hung the bodies on the gallows, and cut them to pieces. Such was the end of John De Witt, a man whose life had been devoted to the service of his country, without any consideration of his own emolument. Besides the work already mentioned, he wrote a book on the maxims of government, a translation of which, entitled, *The true Interest and Political Maxims of the Republic of Holland*, has been printed in London.

DE WITT'S LAND, part of the north-west coast of New Holland, discovered by a Dutch navigator of that name, in 1628. It is supposed to comprehend about ten degrees of latitude, and fifteen of longitude. Many low and sterile islands, were afterwards discovered along the coast, by the French.

DEX'TER, *adj.*

DEX'TRAL, *adj.*

DEXTRA'LITY, *n. s.*

DEXTER'ITY, *n. s.*

DEX'TEROUS, *adj.*

DEX'TEROUSLY, *adv.*

From Lat. *dexter*, the right hand. Gr. *δεξιτερως*, from *δεξιμα*, to receive, because we generally receive things with the right hand. The right, not the left; a term in heraldry. Dextral is a synonymous general term. Dextrality, the state of being on the right hand side. Dexterous is, clever; expert; because the right hand is generally more so than the left.

My mother's blood

Runs on the *dexter* cheek, and this sinister

Bounds in my sire's.

Shakspeare.

His wisdom, by often evading from perils, was turned rather into a *dexterity* to deliver himself from dangers, when they pressed him, than into a providence, to prevent and remove them afar off. *Bacon.*

In business *dexterous*, weighty in debate. *Johnson.*

As for any tunicles or skins, which should hinder the liver from enabling the *dextral* parts, we must not conceive it diffuseth its virtue by mere irradiation, but by its veins and proper vessels.

Brounne's Vulgar Errors.

If there were a determinate prepotency in the right, and such as ariseth from a constant root in nature, we might expect the same in other animals, whose parts are also differenced by *dextrality*. *Id.*

They attempted to be knaves, but wanted art and *dexterity*. *South.*

But then my study was to cog the dice,

And *dext'rously* to throw the lucky sice. *Dryden.*

They confine themselves, and are *dexterous* managers enough of the wares and products of that corner with which they content themselves. *Locke.*

For both their *dexterous* hands the lance could wield. *Pope.*

The measures, for instance, in which your Grace's activity has been chiefly exerted, as they were adopted without skill, should have been conducted with more than common dexterity. *Junius.*

DEXTER, in heraldry, an appellation given to whatever belongs to the right side of a shield or out of arms: thus we say, bend dexter, dexter joint, &c.

DEY, the title of the sovereign of Algiers, under the protection of the grand signior. A prince, under this title, was appointed by the sultan, at the request of the Turkish soldiers, in 1710. The term dey, in the Turkish language, signifies an uncle by the mother's side. The reason of the denomination is this: the Turkish military consider the grand seignior as their father; the state as their mother, by which they are nourished and maintained; and the dey as the brother of the state, and consequently the uncle of all who are under his dominion. See **ALGIERS**.

DIABETES, *n. s.* Διαβητης. A morbid copiousness of urine; a fatal colliquation by the urinary passages.

An increase of that secretion may accompany the general colliquations; as in fluxes, hectic sweats and coughs, diabetes, and other consumptions.

Derham's Physico-Theology.

A theory of the diabetes and dropsy, produced by drinking fermented or spirituous liquors, is explained in a treatise on the inverted motions of the lymphatic system. *Darwin.*

DIABETES, from δια, through, and βασιω, to pass. An immoderate flow of urine. A genus of disease in the class neuroses, order spasmi of Cullen. There are two species of this complaint: Diabetes insipidus, in which there is a superabundant discharge of limpid urine, of its usual urinary taste; and diabetes mellitus, in which the urine is very sweet, and contains a great quantity of sugar.

DIABOLICAL, *adj.* } From Lat. *diabolus*.
DIABOLICK. } See **DEVIL**. Devilish; partaking of the qualities of the devil; impious; atrocious.

This, in other beasts observed,
 Doubt might beget of *diabolick* power,
 Active within, beyond the sense of brute.

Milton.

The practice of lying is a *diabolical* exercise, and they that use it are the devil's children. *Ray.*

They are beautiful, and cannot, sure, be demons?
STRANGER. True;

The Devil's always ugly; and your beauty
 Is never *diabolical*. *Byron.*

DIACHYLON, in pharmacy, an emollient digestive plaster composed of mucilages or viscid juices drawn from certain plants. See **PHARMACY**.

DIACODIUM, *n. s.* Διακωδιον. The syrup of poppies.

DIACUSTICS, *n. s.* Διακυστικα. The doctrine of sounds.

DIACRII, in antiquity, the name of a faction at Athens. That city was divided into two parties: the one desired an oligarchy, and would only have a few persons employed in the government: the others were for a democratical government, wherein the whole people should

have a share. The first were called diacrii, and the latter pediacy; the latter inhabiting the lower, and the former the *ακρον*, or upper part of the city.—The laws of Solon imported, that Pisistratus should be chief of the diacrii; though the scholiast on Aristophanes's comedy of The Wasps, affirms that Pandion distributed the quarter of the diacrii among his sons, and put Lycus at their head.

DIADELPHIA, from δις twice, and αδελφος a brother, the seventeenth class in the sexual system, comprehending those plants which bear hermaphrodite flowers with two sets of united stamina; but this circumstance must not be absolutely depended on. They are the papilionacei of Tournefort, the irregulares tetrapetali of Rivinus, and the leguminosa of Ray. See **BOTANY**.

DIADEM, *n. s.* } Fr. *diadème*; Span. and
DI'ADEMED, *adj.* } Lat. *diadema*; Gr. διαδημα,
 from δια and δεω, to bind. The fillet, tiara, or crown of monarchs. See **CROWN**. Diademed is crowned.

And the ighen of him weren a flawme of fier, and
 in his heed manye *diademys*. *Wiclif. Apoc. xix.*

Thou shalt be a crown of glory in the hand of the
 Lord, and a royal *diadem* in the hand of thy God.

Isaiah liii. 3.

The sacred *diadem* in pieces rent,
 And purple robe gored with many a wound.

Spenser.

Methought I sat in seat of majesty,
 In the cathedral church of Westminster,
 And in that chair where kings and queens are
 crowned,

Where Henry and Dame Margaret kneeled to me,
 And on my head did set the *diadem*. *Shakspeare.*

A crown,
 Golden in show, is but a wreath of thorns;
 Brings dangers, troubles, cares, and sleepless nights,
 To him who wears the regal *diadem*. *Milton.*

A list the coblers' temples ties,
 To keep the hair out of their eyes;
 From whence 'tis plain the *diadem*,
 That princes wear, derives from them. *Swift.*

Not so, when *diademed* with rays divine,
 Touched with the flame that breaks from virtue's
 shrine,

Her priestless muse forbids the good to die,
 And opens the temple of eternity. *Pope.*

What is the exaltation of the meanest beggar from
 a dunghill to an earthly *diadem*, when compared with
 that of human nature from the grave to the throne of
 God.

Bp. Horne, Psal. cxlii. 7.

And she, proud Austria's mournful flower,

Thy still imperial bride;
 If still she loves thee hoard that gem,
 'Tis worth thy vanished *diadem*.

Byron. Ode to Napoleon.

DIADEM, in antiquity, a head-band or fillet, worn by kings as a badge of their royalty. It was made of silk, thread, or wool, and tied round the temples and forehead, the ends being tied behind, and let fall on the neck. It was usually white and plain, though sometimes embroidered with gold, and set with pearls and precious stones. In latter times it came to be twisted round crowns, laurels, &c., and even appears to have been worn on divers parts of the

body. The word is derived from the Greek, as mentioned in the preceding article.

DIADEM, in heraldry, is applied to circles or rims serving to inclose the crowns of sovereign princes, and to bear the globe and cross, or the fleurs-de-lis for their crest. The crowns of sovereigns are bound, some with a greater, and some with a less number of diadems. The bandage about the heads of Moors on shields is also called diadem, in blazoning.

DIADROM, *n. s.* Διαδρομή. The time in which any particular motion is performed.

A gry is one tenth of a line, a line one tenth of an inch, an inch one tenth of a philosophical foot, a philosophical foot one third of a pendulum; whose *diadroms*, in the latitude of forty-five degrees, are each equal to one second of time, or a sixtieth of a minute.

Locke.

DIÆRESIS, *n. s.* Διαίρεσις. The separation or disjunction of syllables, as *acr*.

Diæresis is also a kind of metaplasm, or addition to a word, by dividing one syllable into two; as *aulac*, by a *diæresis*, is a word of three syllables, instead of aule.

Dr. A. Rees.

DIÆRESIS, in medicine, is the consuming of the vessels of an animal body, when, from some corroding cause, certain passages are made which naturally ought not to have been, or certain natural passages are dilated beyond their ordinary dimensions, so that the humors which ought to have been contained in the vessels extravasate or run out.

DIÆRESIS, in surgery, an operation serving to divide and separate the part when the continuity is a hindrance to the cure.

DIÆTETÆ, in Grecian antiquity, a kind of judges, of which there were two sorts; viz. *Dietetæ cleroti*, public arbitrators, chosen by lot to determine all causes exceeding ten drachms, within their own tribe; and from their sentence an appeal lay to the superior courts. And *diætetæ diallecterii*, private arbiters from whose sentence there lay no appeal. They always took an oath to administer justice without partiality.

DIAGLYPHICA, the art of cutting or engraving figures on metals, such as seals, intaglios, matrices of letters, &c., or coins for metals. See **ENGRAVING**.

DIAGNOSTICK, *n. s.* Διαγνωστικόν. A symptom by which a disease is distinguished. Used also figuratively.

One of our physicians proved disappointed of his prognosticks, or rather *diagnosticks*.

Harvey on Consumptions

DIAGONAL, *adj. & n. s.* } Fr. *diagonal*,
DIAGONALLY, *adv.* } from Gr. διαγων-

ιος, δια and γωνία, an angle. A line drawn from one angle of a square to another.

The monstrosity of the badger is ill-contrived, and with some disadvantage; the shortness being fixed into the legs of one side, that might have been more properly placed upon the *diagonal* movers.

Browne's Vulgar Errors.

When a man has in his mind the idea of two lines, viz. the side and *diagonal* of a square, whereof the *diagonal* is an inch long, he may have the idea also of the division of that line into a certain number of equal parts.

Locke.

All sorts of stone composed of granules, will cut and rive in any direction, as well in a perpendicular, or in a *diagonal*, as horizontally and parallel to the side of the strata.

Woodward.

If a region of air be gradually removed from north to south, it would also blow *diagonally* between the north and east.

Darwin.

DIAGONAL, in geometry, a right line drawn across a quadrilateral figure, from one angle to another; by some called the diameter, and by others the diametral, of the figure. See **GEOMETRY**.

DIAGORAS, surnamed the Atheist, lived in the ninety-first Olympiad. He was not a native of Athens, but he taught there. He had composed a poem which a certain poet stole from him. He sued the thief, who swore it was his own, and obtained fame by it. This tempted *Diagoras* to deny a Providence. The Athenians summoned him to give an account of his doctrine. He fled, and they set a price upon his head, promising a reward to any who should kill him; but he took shipping, and was wrecked.

DIAGRAM, *n. s.* Διαγράμμα. A delineation of geometrical figures; a mathematical scheme.

Many a fair precept in poetry is like a seeming demonstration in the mathematics; very specious in the *diagram*, but failing in the mechanic operation.

Dryden.

Why do not these persons make a *diagram* of these cogitative lines and angles, and demonstrate their properties of perception and appetite, as plainly as we know the other properties of triangles and circles?

Bentley.

DIAGRYDIATES, *n. s.* From Lat. *diagrydium*. Strong purgatives made with *diagrydium*.

All cholerick humours ought to be evacuated by *diagrydiates*, mixed with tartar, or some acid, or rhu-barb powder.

Floyer.

DIALLING

DIAL, *n. s.* } Lat. *diale*, belonging to the
DIAL-PLATE, } day. An instrument for mark-
DIALLING, } ing the hour of the day. Dial-
DIALLIST. } ling is the art of making
 dials.

Full faire of windowes and delightful bowres,
 And on the top a *diall* told the houres.

Spenser. Faerie Queene.

O, gentlemen, the time of life is short :
 To spend that shortness basely were too long,
 Though life did ride upon a *dial's* point
 Still ending at the arrival of an hour.

Shakspeare. Henry IV.

It is not necessary in the arts of *dialling* or navigation to mention the true system or earth's motion.

Berkeley.

Strada tells us that the two friends, being each of them possessed of a magnetical needle, made a kind of *dial-plate*, inscribing it with the four-and-twenty letters, in the same manner as the hours of the day are marked upon the ordinary *dial-plate*.

Addison's Spectator.

Scientifick *diallists*, by the geometrick considerations of lines, have found out rules to mark out the irregular motion of the shadow in all latitudes, and, on all planes.

Moxon.

While dial is derived from the Latin *dies*, day, because it indicates the hour of the day, the ancients also called it *sciatherium*, from its effect by the shadow.

1. **DIALLING** may be defined the art of drawing dials on the surface of any given body, whether plane or curved. By the Greeks and Romans this art is called *gnomonica*, and *sciatherica*, because it distinguishes the hours by the shadow of the gnomon.

2. This art is of great antiquity, for we read in Isaiah, xxxviii. 8, of the dial of Ahaz, who began to reign 400 years before Alexander, and within twelve years of the building of Rome.

3. Among the ancients Anaximenes the Milesian, and Thales, are said to have made dials; and Vitruvius mentions one made by the ancient Chaldee historian Berosus, on a reclining plane almost parallel to the equator.

4. Aristarchus of Samos invented the hemispherical dial, and there were at the same time some spherical ones, with a needle for a gnomon. The discus of Aristarchus was an horizontal dial, with its rim raised up all around to prevent the shadow from stretching too far.

5. It was late before the Romans became acquainted with dials. The first sun-dial at Rome was set up by Papirius Cursor, about the year of the city 460; before which time, says Pliny, there is no mention of any reckoning of time but by the sun's rising and setting: it was set up at or near the temple of Quirinus, but was very inaccurate. About thirty years after M. Valerius Messala, being consul, brought out of Sicily another dial, which he set up on a pillar near the rostrum; but because it was not made for that latitude it did not show the time truly. They made use of it for

ninety-nine years; till Martius Philippus set up another more exact.

6. The first professed writer on dialling is Clavius: who demonstrates both the theory and the operations, after the manner of the ancient mathematicians; but with so much intricacy, that few perhaps ever read them all. Dechales and Ozanam give much simpler demonstrations in their Courses, and Wolfius in his Elements. M. Picard has given a new method of making large dials, by calculating the hour lines; and M. De la Hire, in his Dialling, printed in 1683, a geometrical method of drawing hour lines from certain points determined by observation. Eberhardus Welperus, in 1625, published his Dialling, in which he lays down a method of drawing the primary dials on a very easy foundation. The same foundation is described at length by Sebastian Munster, in his Rudimenta Mathematica, published in 1551.

7. Sturmius, in 1672, published a new edition of Welperus's Dialling, with the addition of a whole second part, about inclining and declining dials, &c. In 1708 the same work, with Sturmius's additions, was republished, with the addition of a fourth part, containing Picard's and De la Hire's methods of drawing large dials. Paterson, Michael and Muller, have each written on dialling in German; Coetsius, in his *Horologographia Plana*, printed in 1689; Gauppenius in his *Gnomonica Mechanica*; Bion in his *Use of Mathematical instruments*; the late ingenious Mr. Ferguson in his *Select Lectures*; Mr. Emerson in his Dialling; and Mr. W. Jones in his *Instrumental Dialling*, &c.

DEFINITIONS.

8. A dial is a surface, generally plane, upon which lines are described in such a manner, that the shadow of a wire, or of the upper edge of another plane, erected perpendicularly on the former, may show the time of the day.

9. The edge of the plane by which the time of the day is found is called the stile of the dial, which must be parallel to the earth's axis; and the line on which the said plane is erected is called the substile.

10. The angle included between the substile and stile is called the elevation, or height, of the stile.

11. Dials, the planes of which are parallel to the plane of the horizon, are called horizontal dials; and those which have their planes perpendicular to the plane of the horizon, are called vertical, or erect, dials.

12. Erect dials, the planes of which directly front the north or south, are called direct north, or south, dials: all other erect dials are called decliners, because their planes are turned away from the north or south.

13. Dials, the planes of which are neither parallel nor perpendicular to the plane of the horizon, are called inclining or reclining dials, according as their planes make acute or obtuse angles

with the horizon; and, if their planes are also turned aside from facing the south or north, they are called declining inclining, or declining reclining, dials.

14. The intersection of the plane of the dial, with that of the meridian, passing through the stile, is called the meridian of the dial, or the hour line of XII.

15. Meridians, the planes of which pass through the stile, and make angles of 15° , 30° , 45° , 60° , 75° , and 90° , with the meridian of the place, which marks the hour line of XII, are called hour circles; and their intersections with the plane of the dial are called hour lines.

16. In all declining dials the substile makes an angle with the hour line of XII., and this angle is called the distance of the substile from the meridian.

17. The declining plane's difference of longitude is the angle formed at the intersection of the stile and plane of the dial, by two meridians; one of which passes through the hour line of XII, and the other through the substile.

PRINCIPLES OF DIALLING.

18. If the whole earth, *a P c p*, fig. 1, plate I. were transparent and hollow, like a sphere of glass, and had its equator divided into twenty-four equal parts by so many meridian semicircles, *a, b, c, d, e, f, g, &c.*, one of which is the geographical meridian of any given place, as London, (which is supposed to be at the point *a*); and if the hour of XII were marked at the equator, both upon that meridian and the opposite one, and all the rest of the hours in order on the rest of the meridians, those meridians would be the hour circles of London: then, if the sphere had an opaque axis, as *P E p*, terminating in the poles *P* and *p*, the shadow of the axis would fall upon every particular meridian and hour when the sun came to the plane of the opposite meridian, and would consequently show the time at London, and at all other places on the meridian of London.

19. If this sphere were cut through the middle by a solid plane, *A B C D*, in the rational horizon of London, one-half of the axis *E P* would be above the plane, and the other half below it; and, if straight lines were drawn from the centre of the plane to those points where its circumference is cut by the hour circles of the sphere, those lines would be the hour lines of a horizontal dial for London: for the shadow of the axis would fall upon each particular hour line of the dial when it fell upon the like hour circle of the sphere.

20. If the plane which cuts the sphere be upright, as *A F C G*, fig. 2. touching the given place (London) at *F*, and directly facing the meridian of London, it will then become the plane of an erect direct south dial; and if right lines be drawn, from its centre, *E*, to those points of its circumference where the hour circles of the sphere cut it, these will be the hour lines of a vertical or direct south dial for London, to which the hours are to be set, as in the figure, and the lower half, *E p*, of the axis will cast a shadow on the hour of the day in this dial, at the same time that it would fall upon the like hour

circle of the sphere if the dial plane were horizontal.

21. If the plane (still facing the meridian) be made to incline, or recline, any given number of degrees, the hour circles of the sphere will still cut the edge of the plane in those points to which the hour lines must be drawn straight from the centre; and the axis of the sphere will cast a shadow on these lines at the respective hours.

22. The same will be the case if the plane be made to decline by any given number of degrees from the meridian towards the east or west: provided the declination be less than 90° , or the reclination be less than the co-latitude of the place; and the axis of the sphere will be a gnomon, or stile, for the dial. But it cannot be a gnomon when the declination is quite 90° , nor when the reclination is equal to the co-latitude; because, in these two cases, the axis has no elevation above the plane of the dial. And thus it appears that the plane of every dial represents the plane of some great circle upon the earth; and the gnomon the earth's axis, whether it be a fine wire, as in the above figures, or the edge of a thin plate, as in the common horizontal dials.

23. The whole earth, as to its bulk, is but a point, if compared to its distance from the sun; and therefore, if a small sphere of glass be placed upon any part of the earth's surface, so that its axis be parallel to the axis of the earth, and the sphere have such lines upon it, and such planes within it, as above described, it will show the hours of the day as truly as if it were placed at the earth's centre, and the shell of the earth were as transparent as glass.

24. But because it is impossible to have a hollow sphere of glass, perfectly true, blown round a solid plane; or, if it were, we could not get at the plane within the glass to set it in any given position; we make use of a wire sphere to explain the principles of dialling, by joining twenty-four semicircles together at the poles, and putting a thin flat plate of brass within it, as is shown in the preceding figures.

DIALLING BY THE TERRESTRIAL GLOBE.

25. A common globe of twelve inches diameter has generally twenty-four meridian semicircles drawn upon it. If such a globe be elevated to the latitude of any given place, and turned about until one of these meridians cut the horizon in the north point, where the hour of XII is supposed to be marked, the rest of the meridians will cut the horizon at the respective distances of all the other hours from XII. And if these points of distance be marked on the horizon, and the globe be taken out of the horizon, and a flat board or plate be put into its place, even with the surface of the horizon; then if straight lines be drawn from the centre of the board, to those points of distance on the horizon which were cut by the semicircles; these lines will be the hour lines of a horizontal dial for that latitude, the edge of whose gnomon must be in the very same situation in which the axis of the globe was before it was taken out of the horizon: that is, the gnomon must make an angle with the plane of the dial,

equal to the latitude of the place for which the dial is made.

26. If the pole of the globe be elevated to the co-latitude of the given place, and any meridian be brought to the north point of the horizon, the rest of the meridians will cut the horizon in the respective distances of all the hours from XII, for a direct south dial, the gnomon of which must form an angle with the plane of the dial equal to the co-latitude of the place; and the hours on this dial must be placed in a direction contrary to that in which they stand on the horizontal dial.

27. But if the globe have more than twenty-four meridian semicircles upon it, we must take the following method for making horizontal and south dials:—Elevate the pole to the latitude of the place, and turn the globe until any particular meridian (suppose the first) comes to the north point of the horizon, and the opposite meridian will cut the horizon in the south. Then set the hour index to the uppermost XII on its circle, and turn the globe westward until 15° of the equator pass under the brazen meridian, and the hour index will be at I, for the sun moves 15° every hour), and the first meridian will cut the horizon in the number of degrees from the north point that I is distant from XII. Turn on until other 15° of the equator pass under the brazen meridian, and the hour index will then be at II, and the first meridian will cut the horizon in the number of degrees that II is distant from XII: and so, by making 15° of the equator pass under the brazen meridian for every hour, the first meridian of the globe will cut the horizon in the distances of all the hours from XII to VI, which is just 90° ; and then the distances of XI, X, IX, VIII, VII, and VI, in the forenoon will be the same from XII, as the distance of I, II, III, IV, V, and VI, in the afternoon: and these hour lines continued through the centre, will give the opposite hour lines on the other half of the dial.

28. To make a horizontal dial for the latitude of London, which is $51^\circ 30'$ north, elevate the north pole of the globe $51^\circ 30'$ above the north point of the horizon; and then turn the globe, until the first meridian (which, on the British terrestrial globe, is that of London), cuts the north point of the horizon, and set the hour index to XII at noon. Then turning the globe westward until the index points successively to I, II, III, IV, V, and VI, in the afternoon, or until 15° , 30° , 45° , 60° , 75° , and 90° of the equator pass under the brazen meridian, the first meridian of the globe will cut the horizon in the following numbers of degrees from the north towards the east, viz. $11\frac{1}{2}$, $24\frac{1}{2}$, $38\frac{1}{2}$, $53\frac{1}{2}$, $71\frac{1}{2}$, and 90 ; which are the respective distances of the above hours from XII upon the plane of the horizon. To transfer these, and the rest of the hours, to a horizontal plane, draw the parallel right lines ac , and db , fig. 3, upon that plane, as far from each other as is equal to the intended thickness of the gnomon or stile of the dial, and the space included between them will be the meridian or twelve o'clock line on the dial. Cross this meridian at right angles with the six o'clock line, kh , and setting one foot of the compasses in

the intersection a , as a centre, describe the quadrant ke with any convenient radius or opening of the compasses; then setting one foot in the intersection b , as a centre, with the same radius describe the quadrant fh , and divide each quadrant into ninety equal parts or degrees, as in the figure.

29. As the hour lines are less distant from each other about noon than in any other part of the dial, it is best to have the centres of these quadrants at a little distance from the centre of the dial plane, on the side opposite to XII, in order to enlarge the hour distances thereabouts, under the same angles on the plane. Thus the centre of the plane is at C , but the centres of the quadrants are at a and b . Lay a ruler over the point b , and (keeping it there for the centre of all the afternoon hours in the quadrant fh), draw the hour line of I through $11^\circ 30'$ in the quadrant; the hour line of II through $24^\circ 30'$; of III through $38^\circ 5'$; IV through $53^\circ 30'$; and V through $71^\circ 4'$: and, because the sun rises about four in the morning on the longest days, at London, continue the hour lines of IV and V in the afternoon through the centre b to the opposite side of the dial.

30. the other quadrant is now to be divided, but it is very obvious that the same minute process need not be gone through in doing so, as the divisions already laid down may be readily transferred to the quadrant ek ; as the labor of dividing both may be much shortened by working from a scale, having a line of chords upon it, as will be shown presently.

31. If a plate similar to this triangle be made as thick as the distance between the lines ac and bd , and set upright between them, touching at a and b , its hypotenuse ag will be parallel to the axis of the world, when the dial is truly set; and will cast a shadow on the hour of the day.

32. To make an erect direct south dial, fig. 4, elevate the pole to the co-latitude of the place, and proceed in all respects as above for the horizontal dial, and from VI in the morning to VI in the afternoon; only the hours must be reversed, as in the figure; and the hypotenuse ag , of the gnomon $ag h$, must make an angle with the dial-plane equal to the co-latitude of the place. As the sun can shine no longer on this dial than from six in the morning until six in the evening, there is no occasion for having any more than twelve hours upon it.

33. To make a direct dial, declining from the south towards the east or west, elevate the pole to the latitude of the place, and screw the quadrant of altitude to the zenith. Then, if the dial decline towards the E. (which we shall suppose it does), count in the horizon the degrees of declination, from the E. point towards the N. and bring the lower end of the quadrant to that degree of declination at which the reckoning ends. Then bring any particular meridian of the globe (suppose the first) directly under the graduated edge of the upper part of the brazen meridian, and set the hour to XII at noon. Then, keeping the quadrant of altitude at the degree of declination in the horizon, turn the globe eastward on its axis, and observe the degrees cut by the

first meridian in the quadrant of altitude (counted from the zenith), as the hour circle comes to XI, X, IX, &c., in the forenoon, or as 15, 30, 45, &c. degrees of the equator pass under the brazen meridian at these hours respectively; and the degrees then cut in the quadrant by the first meridian, are the respective distances of the forenoon hours from XII on the plane of the dial.

34. Then, for the afternoon hours, turn the quadrant of altitude round the zenith until it comes to the degree in the horizon opposite to that where it was placed before; namely, as far from the W. point of the horizon towards the S. as it was set at first from the E. point towards the N.; and turn the globe westward on its axis, until the first meridian comes to the brazen meridian again, and the hour index to XII; then, continue to turn the globe westward, and as the index points to the afternoon hours, I, II, III, &c., or as 15°, 30°, 45°, &c., of the equator pass under the brazen meridian, the first meridian will cut the quadrant of altitude in the respective number of degrees from the zenith that each of these hours is from XII on the dial. And when the first meridian goes off the quadrant at the horizon in the forenoon, the hour index shows the time when the sun will come upon this dial, and when it goes off the quadrant in the afternoon, the index will point to the time when the sun goes off the dial. Having thus found all the hour distances from XII, lay them down upon the dial plane, either by dividing a semicircle into two quadrants of 90° each (beginning at the hour line of XII), or by the line of chords, as above directed.

35. In all declining dials, the line on which the stile or gnomon stands (commonly called the substile line) makes an angle with the twelve o'clock line, and falls among the forenoon hour lines, if the dial declines towards the E.; and among the afternoon hour lines, when the dial declines towards the W. that is, to the left hand from the twelve o'clock line in the former case, and to the right hand from it in the latter.

36. To find the distance of the substile from the twelve o'clock line, if the dial declines from the S. towards the E. count the degrees of the declination in the horizon from the E. point toward the N. and bring the lower end of the quadrant of altitude to that degree of declination where the reckoning ends; then, turn the globe until the first meridian cuts the horizon in the like number of degrees, counted from the S. point toward the E. and the quadrant and the first meridian will then cross one another at right angles; and the number of degrees of the quadrant, which are intercepted between the meridian and the zenith, is equal to the distance of the substile line from the twelve o'clock line; and the number of degrees of the first meridian, which are intercepted between the quadrant and the N. pole, is equal to the elevation of the stile above the plane of the dial.

37. If the dial declines westward from the S., count that declination from the E. point of the horizon towards the S. and bring the quadrant of altitude to the degree in the horizon at which the reckoning ends; both for finding the forenoon hours, and distance of the substile from the meridian: and for the afternoon hours, bring the qua-

drant to the opposite degree in the horizon, namely, as far from the W. towards the N. and then proceed in all respects as above.

38. Thus when our declining dial is finished, we have four dials, viz. 1. A north dial declining eastward by the same number of degrees; 2. A north dial declining the same number west; 3. A south dial, declining east; and, 4. A south dial declining west; only placing the proper number of hours, and the stile or gnomon respectively, upon each plane. For, in the S. W. plane, the substilar line falls among the afternoon hours; and in the S. E. of the same declination, among the forenoon hours, at equal distances from XII. And so all the morning hours on the W. decliner, will be like the afternoon hours on the E. decliner; and the S. W. decliner, the N. E. decliner, by only extending the hour lines, stile and substile, quite through the centre: the axis of the stile (or edge that casts the shadow on the hour of the day), being in all dials whatever, parallel to the axis of the world, and consequently pointing towards the north pole of the heaven in north latitudes, and towards the south pole, in south latitudes.

METHOD OF CONSTRUCTING DIALLING LINES.

39. Describe, with any opening of the compasses, as EA, fig. 5, according to the intended length of the scale, the circle ADCB, and cross it at right angles by the diameters CEA and DEB; divide the quadrant AB first into 9 equal parts, and then each part into 10; so shall the quadrant be divided into 90 equal parts or degrees. Draw the right line AFB for the chord of this quadrant; and, setting one foot of the compasses in the point A, extend the other to the several divisions of the quadrant, and transfer these divisions to the line AFB by the arcs 10, 20, 30, &c., and this will be a line of chords, divided into 90 unequal parts.

40. Divide the quadrant CD into 90 equal parts, and from each point of division draw right lines, as *i, k, l*, &c., to the line CE; all perpendicular to that line, and parallel to DE, which will divide EC into a line of sines; and although these are seldom put among the dialling lines on a scale, yet they assist in drawing the line of latitudes. For if a ruler be laid upon the point D, and over each division in the line of sines, it will divide the quadrant CB into 90 unequal parts, as *Ba Bb*, &c., shown by the right lines *12 a*, *20 b*, *30 c*, &c., drawn along the edge of the ruler. If the right line BC be drawn, subtending this quadrant and the nearest distances, *Ba*, *Bb*, *Bc*, &c., be taken in the compasses from B, and set upon this line in the same manner as directed for the line of chords, it will make a line of latitudes BC, equal in length to the line of chords AB, and an equal number of divisions, but very unequal as to their lengths.

41. Draw the right line DGA, subtending the quadrant DA; and parallel to it, draw the right line *rs*, touching the quadrant DB at the numeral figure 3. Divide this quadrant into six equal parts, as 1, 2, 3, &c., and through these points of division draw right lines from the centre E to the line *rs*, which will divide it at the points where the six hours are to be placed, as in the

figure. If every sixth part of the quadrant be subdivided into four equal parts, right lines drawn from the centre through these points of division, and continued to the line $r s$, will divide each hour upon it into quarters.

METHOD OF CONSTRUCTING DIALS BY DIALLING LINES.

42. This is the easiest of all mechanical methods, and by much the best, when the lines are truly divided: and not only the half hours and quarters may be laid down by all of them, but every fifth minute by most, and every single minute by those where the line of hours is a foot in length. Having drawn the double meridian line $a b, c d$, fig. 6, on the plane intended for a horizontal dial, and crossed it at right angles by the six o'clock line $f e$, as in fig. 3, take the latitude of the place with the compasses, from the scale of altitudes, and set that extent from c to e , and from a to f , on the six o'clock line: then, taking the whole six hours between the points of the compasses from the scale of hours, with that extent set one foot on the point e , and let the other foot fall where it will upon the meridian line $c d$, is at d . Do the same from f to b , and draw the right lines $c d$ and $f b$, each of them will be equal in length to the whole scale of hours. Then, setting one foot of the compasses in the beginning of the scale at XII, and extending the other to each hour on the scale, lay off these extents from a to e for the afternoon hours, and from b to f for those of the forenoon: this will divide the lines $d e$ and $b f$ in the same manner as the hour scale is divided at 1, 2, 3, 4, and 6, on which the quarters may also be laid down, if required. Then, laying a ruler on the point e , draw the first five hours in the afternoon, from that point, through the dots at the numeral figures 1, 2, 3, 4, 5, on the line $d e$; and continue the lines of IV and V through the centre c , to the other side of the dial, for the like hours of the morning: which done, lay the ruler on the point a , and draw the last five hours in the forenoon through the dots, 5, 4, 3, 2, 1, on the line $f b$; continuing the hour lines of VII and VIII through the centre a to the other side of the dial, for the like hours of the evening; and set the hours to their respective lines, as in the figure. Lastly, make the gnomon the same way as directed above for the horizontal dial, and the whole will be finished.

43. To make an erect south dial, take the co-latitude of your place from the scale of latitudes, and then proceed in all respects for the hour line as in the horizontal dial; only reversing the hours as in fig. 4, and making the angle of the stile's height equal to the co-latitude.

GEOMETRICAL METHOD OF DRAWING THE HOUR LINES.

44. I. To construct a horizontal dial, fig. 1, plate II.—Describe with any opening of the compasses, as $Z L$, the two semicircles $L F k$ and $L Q k$, upon the centres Z and z , where the six o'clock line crosses the double meridian line, and divide each semicircle into twelve equal parts, beginning at L (though strictly speaking, only the quadrants from L to the six o'clock line need be

divided); then connect the divisions which are equi-distant from L , by the parallel lines $K M$, $I N$, $H O$, $G P$, and $F Q$. Draw $V Z$ for the hypotenuse of the stile, making the angle $V Z E$ equal to the latitude of the place; and continue the line $V Z$ to R . Draw the line $R r$ parallel to the six o'clock line, and set off the distance $a K$ from Z to Y , the distance $b I$ from Z to X , $c H$ from Z to W , $d G$ from Z to T , and $e F$ from Z to S . Then draw the lines $S s$, $T t$, $W w$, $X x$, and $Y y$, each parallel to $R r$. Set off the distance $y Y$, from a to 11, and from f to 1; the distance $x X$ from b to 10, and from g to 2; $w W$ from c to 9, and from h to 3; $t T$ from d to 8, and from i to 4; $s S$ from e to 7, and from n to 5. Then laying a ruler to the centre Z , draw the forenoon hour lines through the points 11, 10, 9, 8, 7; and laying it to the centre z , draw the afternoon lines through the points 1, 2, 3, 4, 5; continuing the forenoon lines of VII and VIII through the centre Z , to the opposite side of the dial, for the like afternoon hours; and the afternoon lines IV and V through the centre z , to the opposite side for the like morning hours. Set the hours to these lines as in the figure, and then erect the stile or gnomon, and the dial will be finished.

45. II. To construct a south dial, draw the line $V Z$, making an angle with the meridian $Z L$ equal to the co-latitude of your place; and proceed in all respects as in the above horizontal dial for the same latitude, reversing the hours as in fig. 4, and making the elevation of the gnomon equal to the co-latitude.

46. III. To construct a north dial. See fig. 2. If the hour lines IV and V, as also VII and VIII on the south dial, fig. 4, plate I. be continued beyond the line $V I a V I$, and the triangle $a g h$ turned about the point a , till $a h$ fall on $a X I I$ produced, it is evident a north dial is thereby had. The hour line for VII in the morning on the south dial, when produced, forms the hour line for V in the morning on the north dial: and the hour line for V in the afternoon, on the south dial, forms the hour line for VII in the evening on the north dial. The manner of placing the characters for the other hours is therefore obvious.

47. IV. To construct an east dial. On the eastern side of the plane of the meridian, draw a line $A B$, fig. 3, parallel to the horizon, draw also a line $A K$, making with $A B$ an angle $K A B$ equal to the complement of the latitude of the place for which the dial is made. Take a point D in $A K$, and on that point for a centre describe a circle. Through D draw $E C$ perpendicular to $A K$, thus the circle will be divided into four quadrants; divide two of these quadrants into six equal parts, as in the figure. Draw a straight line $F E G$ perpendicular to $E C$, the diameter of the circle, and from the centre D through the several divisions, draw the right lines $D I V$, $D V$, $D V I$, $D V I I$, $D V I I I$, $D I X$, $D X$, $D X I$. Through $I V$, V , $V I$, $V I I$, &c.; draw lines $I V$, $I V$, V , V , &c. parallel to $E D C$. Lastly, in D erect a stile equal to the radius $D E$, perpendicular to the plane; or on two little pieces perpendicularly fixed in $E C$, and equal to the same $D E$, fit an iron rod parallel to

EC, thus will each index at the several hours project a shadow to the respective hour lines IV IV, V V, VI VI, &c. The east dial, it is obvious, can only show the hours till twelve o'clock.

48. V. To construct a west dial. The construction is perfectly the same as that of an east dial, only that its situation is inverted, and the hours are written accordingly. A west dial, it is obvious, can only be illuminated after noon, and therefore, joined with an east dial, shows all the hours of the day.

OF UNIVERSAL DIALS.

49. I. The universal dial, invented by Pardie, fig. 4, consists of three principal parts; the first whereof is called the horizontal plane A, because in practice it must be parallel to the horizon. In this plane is fixed an upright pin, which enters into the edge of the second part BD, called the meridional plane; which is made of two pieces, the lowest whereof, B, is called the quadrant, because it contains a quarter of a circle, divided into 90° ; and it is only into this part, near B, that the pin enters. The other piece is a semicircle D adjusted to the quadrant, and turning in it by a groove, for raising and depressing the diameter EF of the semicircle, which diameter is called the axis of the instrument. The third piece is a circle, G, divided on both sides into twenty-four equal parts, which are the hours. This circle is put upon the meridional plane, so that the axis EF may be perpendicular to the circle, and the point C be the common centre of the circle, semicircle, and quadrant. The straight edge of the semicircle is chamfered on both sides to a sharp edge, which passes through the centre of the circle. On one side of the chamfered part, the first six months of the year are laid down, according to the sun's declination for their respective days, and on the other side the last six months. And against the days on which the sun enters the signs, there are straight lines drawn upon the semicircle, with the characters of the signs marked upon them. There is a black line drawn along the middle of the upright edge of the quadrant, over which hangs a thread H, with its plummet I, for levelling the instrument. From the 23d of September to the 20th of March, the upper surface of the circle must touch both the centre C of the semicircle, and the line of \cap and \triangle ; and from the 20th of March to the 23d of September, the lower surface of the circle must touch that centre and line.

50. To find the time of day by this dial, set it on a level place in sun-shine, and adjust it by the levelling screws *k* and *l*, until the plumb-line hangs over the black line upon the edge of the quadrant, and parallel to the said edge; move the semicircle in the quadrant, until the line of \cap and \triangle (where the circle touches) comes to the latitude of the place in the quadrant: then turn the whole meridional plane BD, with its circle G, upon the horizontal plane A, until the edge of the shadow of the circle falls on the day of the month in the semicircle; and then the meridional plane will be due north and south; the axis EF will be parallel to the axis

of the world, and will cast a shadow upon the true time of the day among the hours of the circle.

51. When the instrument is thus rectified, the quadrant and semicircle are in the plane of the meridian, and the circle is then in the plane of the equinoctial. Therefore as the sun is above the equinoctial in summer (in northern latitudes), and below it in winter, the axis of the semicircle will cast a shadow on the hour of the day, on the upper surface of the circle, from the 20th of March till the 23d of September; and from the 23d of September to the 20th of March, the hour of the day will be determined by the shadow of the semicircle upon the lower surface of the circle. In the former case the shadow of the circle falls upon the day of the month, on the lower part of the diameter of the semicircle; and in the latter case on the upper part.

52. The method of laying down the months and signs upon the semicircle is as follows:— Draw the right line ACB, fig. 5, equal to the diameter of the semicircle ADB, and cross it in the middle at right angles with the line ECD, equal in length to ADB; then EC will be the radius of the circle FCG, which is the same as that of the semicircle. Upon E, as a centre, describe the circle FCG, on which set off the arcs *Ch* and *Ci*, each equal to $23\frac{1}{2}^\circ$, and divide them accordingly into that number for the sun's declination. Then laying the edge of a ruler over the centre E, and also over the sun's declination for every fifth day of each month, mark the points on the diameter AB of the semicircle from *a* to *g*, which are cut by the ruler; and there place the days of the months accordingly, answering to the sun's declinations. Then setting one foot of the compasses in C, and extending the other to *a* or *g*, describe the semicircle *abcdefg*; which divide into six equal parts, and through the points of division draw right lines parallel to CD, for the beginning of the signs (of which one half are on one side of the semicircle, and the other half on the other), and set the characters of the signs to their proper lines, as in the figure.

53. II. The universal, or astronomical equinoctial ring-dial is an instrument that serves to find out the hour of the day in any latitude. It consists of two flat rings or circles, usually from four to twelve inches diameter, and of a moderate thickness; the outward ring representing the meridian of the place it is used at, contains two divisions of 90° each, opposite to one another, serving to let a sliding piece and ring (by which the dial is usually suspended) be placed on one side, from the equator to the N. pole, and on the other side to the S., according to the latitude of the place. The inner ring represents the equator, and turns diametrically within the outer, by means of two pivots inserted in each end of the ring at the hours XII. Across the two circles is screwed to the meridian a thin pierced plate or bridge, with a cursor, that slides along the middle of the bridge: this cursor has a small hole for the sun to shine through. The middle of this bridge is conceived as the axis of the world, and its extremities as the poles; on the one side are delineated

the twelve signs of the zodiac, and sometimes opposite the degrees of the sun's declination; and on the other side the days of the month throughout the year. On the other side of the outer ring *A* are the divisions of 90° , or a quadrant of latitude. It serves, by the placing of a common pin in the hole, to take the sun's altitude, from which the latitude of the place may easily be found.

54. In using this dial, place the line in the middle of the sliding piece, over the degree of latitude of the place. Suppose, for example, $51\frac{1}{2}$ for London; put the line which crosses the hole of the cursor *C* to the day of the month of the degree of the sign. Open the instrument till the two rings be at right angles to each other, and suspend it by the ring, that the axis of the dial represented by the middle of the bridge may be parallel to the axis of the earth, viz. the north pole to the north, and vice versa. Then turn the flat side of the bridge towards the sun, so that his rays passing through the small hole in the cursor may fall exactly in a line drawn through the middle of the concave surface of the inner ring or hour-circle, the bright spot shows the hour of the day in the said concave surface of the dial. The hour XII cannot be shown by this dial, because the outer ring, being then in the plane of the meridian, excludes the sun's rays from the inner; nor can this dial show the hour when the sun is in the equinoctial, because his rays, then falling parallel to the plane of the inner circle or equinoctial, are excluded by it.

55. III. Figs. 6, 7, and 8, a universal dial on a plain cross, as described by Mr. Ferguson. It is moveable on a joint *C*, for elevating it to any given latitude on the quadrant *C* o 90° , as it stands upon the horizontal board *A*. The arms of the cross stand at right angles to the middle part; and the top of it, from *a* to *n*, is of equal length with either of the arms *nc* or *mk*. See fig. 6. The dial is rectified by setting the middle line *tu* to the latitude of the place on the quadrant, the board *A* level, and the point *N* northward by the needle; thus, the plane of the cross will be parallel to the plane of the equator. Then, from III o'clock in the morning till VI, the upper edge *kl* of the arm *io* will cast a shadow on the time of the day on the side of the arm *cm*; from VI till IX, the lower edge *i* of the arm *io* will cast a shadow on the hours on the side *og*. From IX in the morning to XII at noon, the edge *ab* of the top part *an* will cast a shadow on the hours on the arm *ncf*; from XII to III in the afternoon, the edge *cd* of the top part will cast a shadow on the hours on the arm *klm*; from III to VI in the evening, the edge *gh* will cast a shadow on the hours on the part *pu*; and from VI to IX, the shadow of the edge *ef* will show the time on the top part *an*. The breadth of each part *ab*, *ef*, &c., must be so great, as never to let the shadow fall quite without the part or arm on which the hours are marked, when the sun is at his greatest declination from the equator.

56. To determine the breadth of the sides of the arms which contain the hours, so as to be in just proportion to their length; make an angle *ABC*, fig. 7, of $23^\circ 30'$, which is equal to the sun's greatest declination: and suppose the

length of each arm, from the side of the long middle part, and also the length of the top part above the arms, to be equal to *Bd*. Then as the edges of the shadow, from each of the arms, will be parallel to *Be*, making an angle of $23^\circ 30'$ with the side *Bd* of the arm, when the sun's declination is $23^\circ 30'$; it is plain, that if the length of the arm be *Bd*, the least breadth that it can have, to keep the edge *Be* of the shadow *Begd* from going off the side of the arm *de* before it comes to the end of it *ed*, must be equal to *cd* or *dB*. But to keep the shadow within the quarter divisions of the hours, when it comes near the end of the arm, the breadth of it should be still greater, so as to be almost doubled, on account of the distance between the tips of the arms.

57. The hours may be placed on the arms, by laying down the cross *abcd*, fig. 8, on a sheet of paper; and with a black lead pencil held close to it drawing its shape and size on the paper. Then take the length *ae* in the compasses, and with one foot in the corner *a*, describe with the other the quadrant *ef*. Divide this arc into six equal parts, and through the points of division draw right lines *ag*, *ah*, &c., continuing three of them to the arm *ce*, which are all that can fall upon it; and they will meet the arm in those points through which the lines that divide the hours from each other are to be drawn right across it. Divide each arm for the three hours contained in it, in the same manner; and set the hours to their proper places, on the sides of the arms, as they are marked in fig. 6. Each of the hour spaces should be divided into four equal parts, for the half hours and quarters, to the quadrant *ef*; and right lines should be drawn through these division-marks in the quadrant, to the arms of the cross, in order to determine the places thereon where the subdivision of the hours must be marked. This kind of universal dial is easily made, and has a pretty uncommon appearance in a garden.

58. IV. The universal mechanical dial, fig. 9, affords, by its equinoctial circle, an easy method of describing a dial on any kind of plane. For example: suppose a dial is required on a horizontal plane. If the plane be immoveable, as *ABCD*, find a meridian line as *GF*; or, if moveable, assume the meridian at pleasure: then by means of the triangle *EKF*, whose base is applied on the meridian line, raise the equinoctial dial *H* till the index *GI* becomes parallel to the axis of the earth (which is so, if the angle *KFF* be equal to the elevation of the pole), and the XII o'clock line on the dial hang over the meridian line of the plane or the base of the triangle. If then, in the night, or in a dark place, a lighted candle be successively applied to the axis *GI*, so as the shadow of the index or style *GI* fall upon one hour line after another, the same shadow will mark out the several hour lines on the plane *ABCD*. Noting points, therefore, on the shadow, draw lines through them to *G*; then an index being fixed on *G*, according to the angle *IGF*, its shadow will point out the several hours by the light of the sun. If a dial were required on a vertical plane, having raised the equinoctial circle as directed, push

forward the index *GI* till the tip thereof, *I*, touch the plane. If the plane be inclined to the horizon, the elevation of the pole should be found on the same; and the angle of the triangle *KEF* should be made equal thereto.

59. V. Fig. 1, plate III., represents a universal dial, which shows the hour of the day by a terrestrial globe, and by the shadows of several gnomons, at the same time; together with all the places of the earth which are then enlightened by the sun; and those to which the sun is then rising, or on the meridian or setting. This dial is made of a thick square piece of wood, or hollow metal. The sides are cut into semicircular hollows, in which the hours are placed; the stile of each hollow coming out from the bottom thereof as far as the ends of the hollows project. The corners are cut out into angles, in the insides of which the hours are also marked; and the edge of the end of each side of the angle serves as a stile for casting a shadow on the hours marked on the other side. In the middle of the uppermost side, or plane, there is an equinoctial dial; in the centre of which an upright wire is fixed, for casting a shadow on the hours of that dial, and supporting a small terrestrial globe on the top.

60. The whole dial stands on a pillar, in the middle of a round horizontal board, in which there is a compass and magnetic needle, for placing the meridian stile towards the S. The pillar has a joint with a quadrant upon it, divided into 90° , for setting it to the latitude of any given place. The equator of the globe is divided into twenty-four equal parts, and the hours are laid down upon it at these parts. The time of the day may be known by these hours, when the sun shines upon the globe.

61. To rectify and use this dial, set it on a level table, or on the sole of a window, where the sun shines, placing the meridian stile due S. by means of the needle; which will be, when the needle points as far from the N. fleur-de-lis toward the W. as it declines westward at the place. Then bend the pillar in the joint, till the black line on the pillar comes to the latitude of the place in the quadrant. The machine being thus rectified, the plane of its dial part will be parallel to the equator, the wire or axis that supports the globe will be parallel to the earth's axis, and the N. pole of the globe will point toward the N. pole of the heavens.

62. The same hour will then be shown in several of the hollows, by the ends of the shadows of their respective stiles; the axis of the globe will cast a shadow on the same hour of the day, in the equinoctial dial, in the centre of which is it placed, from the 20th of March to the 23rd of September; and, if the meridian of the place on the globe be set even with the meridian stile, all that part of the globe that the sun shines upon will answer to those places of the real earth which are then enlightened by the sun. The places where the shade is just coming upon the globe, answer to all those places of the earth in which the sun is then setting; as the places where it is going off, and the light coming on, answer to all the places of the earth where the sun is then rising. And lastly, if the hour of VI

be marked on the equator in the meridian of the place (as it is marked on the meridian of London in the figure), the division of the light and shade on the globe will show the time of the day.

63. The northern stile of the dial is hid in the figure by the axis of the globe. The hours in the hollow to which that stile belongs, are also supposed to be hid by the oblique view of the figure: but they are the same as the hours in the front hollow. Those also in the right and left hand semicircular hollows are mostly hid from sight; and so also are all those on the sides next the eye of the four acute angles.

64. The construction of this dial is as follows: on a thick square piece of wood, or metal, draw the lines *ac* and *bd*, fig. 2, as far from each other as you intend for the thickness of the stile *abcd*; and in the same manner, draw the like thickness of the other three stiles, *efgh*, *iklm*, and *nopq*, all standing outright as from the centre. With any convenient opening for the compasses, as *aA*, so as to leave proper strength when *KI* is equal to *aA*, set one foot in *a*, as a centre, and with the other describe the quadrantal arc *Ac*. Then, without altering the compasses, set one foot in *b* as a centre, and with the other describe the quadrant *dB*. All the other quadrants in the figure must be described in the same manner, and with the same opening of the compasses, on their centres *efik*, and *no*, and each quadrant divided into six equal parts, for as many hours, as in the figure; each of which parts must be subdivided into four, for the half hours and quarters. At equal distances from each corner, draw the right lines *Ip* and *Kp*, *Lq* and *Mq*, *Nr* and *Or*, *Ps* and *Qs*: to form the four angular hollows *IpK*, *LqM*, *NrO*, and *PsQ*; making the distances between the tips of these hollows, as *IK*, *LM*, *NO*, and *PQ*, each equal to the radius of the quadrants: and leaving sufficient room within the angular points *pqr* and *s*, for the equinoctial in the middle.

65. To divide the inside of these angles for the hour spaces, take the following method:—Set one foot of the compasses in the point *I* as a centre, and open the other to *K*; and with that opening describe the arc *Kt*: then, without altering the compasses, set one foot in *K*, and with the other describe the arc *It*. Divide each of these arcs, from *I* and *K* to their intersection at *t*, into four equal parts; and from their centres *I* and *K*, through the points of division, draw the right lines *I3*, *I4*, *I5*, *I6*, *I7*: and *K2*, *K1*, *K12*, *K11*; and they will meet the sides *Kp* and *Ip* of the angle *IpK* where the hours thereon must be placed. And these hour spaces in the arcs must be subdivided into four equal parts, for the half hours and quarters. Do the like for the other three angles, and draw the dotted lines, and set the hours in the insides where those lines meet them, as in the figure; and the like hour lines will be parallel to each other in all the quadrants and in all the angles. Mark points for all these hours on the upper side: and cut out all the angular hollows, and the quadrantal ones quite through the places where their four gnomons must stand; and lay down the hours on their insides, and set in their gnomons, which must be as broad as the dial is thick, and this

breadth and thickness must be large enough to keep the shadows of the gnomons from ever falling quite out of the sides of the hollows, even when the sun's declination is at the greatest. Lastly, draw the equinoctial dial in the middle, all the hours of which are equidistant from each other; and the dial will be finished.

66. As the sun goes round, the broad end of the shadow of the stile *acbd* will show the hours in the quadrant *Ac*, from the sun-rise till VI in the morning; the shadow from the end M will show the hours on the side *Lg* from V to IX in the morning; the shadow of the stile *efgh* in the quadrant *Dg* in the long days, will show the hours from sun-rise till VI in the morning; and the shadow of the end N will show the morning hours, on the side *Or*, from III to VII. Just as the shadow of the northern stile *abtd* goes off the quadrant *Ac*, the shadow of the southern stile *iklm* begins to fall within the quadrant *Fh*, at VI in the morning; and shows the time, in that quadrant, from VI to XII at noon; and from noon till VI in the evening, in the quadrant *mE*. And the shadow of the end O shows the time from XI in the forenoon till III in the afternoon, on the side *rN*; as the shadow of the end P shows the time from IX in the morning till I o'clock in the afternoon on the side *Qs*.

67 At noon, when the shadow of the eastern stile *efgh* goes off the quadrant *hC*, in which it showed the time from VI in the morning till noon, as it did in the quadrant *gD*, from sun-rise till VI in the morning, the shadow of the western stile *nopq* begins to enter the quadrant *Hp*; and shows the hours thereon from XII at noon till VI in the evening; and after that till sun-set, in the quadrant *qG*; and the end Q casts a shadow on the side *Ps*, from V in the evening till IX at night, if the sun be not set before that time. The shadow of the end I shows the time on the side *Kp* from III till VII in the afternoon; and the shadow of the stile *abcd* shows the time from VI in the evening till the sun sets. The shadow of the upright central wire, that supports the globe at top, shows the time of the day, in the middle or equinoctial dial, all the summer half-year, when the sun is on the north side of the equator.

DIALLING BY SPHERICAL TRIGONOMETRY.

68. The construction of sun-dials on all planes whatever, may be included in one general rule; sufficiently intelligible, if that of a horizontal dial for any given latitude be well understood. For there is no plane, however obliquely situated with respect to any given place, but what is parallel to the horizon of some other place; and, therefore, if we can find that other place, by a problem, on the terrestrial globe, or by a trigonometrical calculation, and construct a horizontal dial for it; that dial applied to the place where it is to serve will be a true dial for that place.—Thus, an erect direct south dial in $51^{\circ} 30'$ N. lat. would be a horizontal dial on the same meridian, 90° southward of $51^{\circ} 30'$ N. lat.: which falls in with $38^{\circ} 30'$ S. lat. But if the upright plane declines from facing the south at the given

place, it would still be a horizontal plane 90° from that place, but for a different longitude, which would alter the reckoning of the hours accordingly.

69. To calculate the angles which the hour lines of a horizontal dial make with the meridian or twelve o'clock line, see fig. 3. Let N F S W represent the horizon of any place, PSN the meridian, and P the N. pole of the sphere: let KPH be any hour circle, for example, the circle which makes with the meridian an angle of 15° , then the arch of the horizon intercepted between N, the north, and PII the hour circle, in the plane of which the sun is at XI or I o'clock, measures the angle contained by the substile of the dial, and the hour lines corresponding to these hours. In the spherical triangle PNH, right angled at N, there are given the side PN, which is the elevation of the pole above the horizon, and the angle NPH which is contained by the meridian and hour circle, to find NII the arch of the horizon opposite that angle. By spherical trigonometry, radius is to the sine of PN as the tangent of NPH to the tangent of NII the side required. Hence we have this practical rule. To find the angle which any hour line of a horizontal dial makes with the meridian, or which is the same, to find the angle which the hour lines on any dial make with the substile.—To the logarithmic sine of the latitude of the place for which the dial is made, add the logarithmic tangent of the sun's distance from the meridian, for the hour required, the sum, 1—10, is the logarithmic tangent of the angle required.

70. *Example*.—To find the angles which the hour lines of XI or I make with the meridian of a horizontal dial for the latitude of London, which is $51^{\circ} 30'$.

To logarithmic sine of $51^{\circ} 30'$	9.89354
Add logarithmic tangent of 15°	9.42805
Sum, rejecting 10, is	9.32159

which is the tangent of $11^{\circ} 51'$ nearly. In like manner it will be found, that the hour lines of X and II make each with the meridian an angle of $24^{\circ} 18'$, &c. And by computing in this manner, with the sine of the latitude, and the tangents of 30° , 45° , 60° , and 75° , for the hours of II, III, IV, and V in the afternoon; or of X, IX, VIII, and VII in the forenoon; you will find their angular distances from XII to be $24^{\circ} 18'$, $38^{\circ} 3'$, $53^{\circ} 35'$, and $71^{\circ} 6'$; which are all that there is occasion to reckon. And these distances may be set off from XII by a line of chords; or rather, by taking 1000 from a scale of equal parts, and setting that extent as a radius from C to XII, fig. 4, and then, taking 209 of the same parts, which are the natural tangents of $11^{\circ} 50'$, and setting them from XII to XI and I, on the line HO, which is perpendicular to C XII: and so for the rest of the hour lines, which in the table of natural tangents, against the above distances, are 452, 782, 1355, and 2920, of such equal parts from XII, as the radius C XII contains 1000. And, lastly, set off 1257, the natural tangent of $51^{\circ} 30'$, for the angle of the

stile's height, which is equal to the latitude of the place.

DECLINING DIALS.

71. Let us suppose that an upright plane at London declines 36° westward from facing the south, and that it is required to find a place on the globe to the horizon of which the said plane is parallel; and also the difference of longitude between London and that place.

72. Let NESW be the horizon of London, fig. 5, whose zenith is Z, and P the N. Pole of the sphere; and let Zh be the position of a vertical plane at Z, declining westward from S (the south) by an angle of 36° ; on which plane an erect dial for London at Z is to be described. Make the semi-diameter ZD perpendicular to Zh, and it will cut the horizon in D, 36° west of the south S. Then a plane, in the tangent HD, touching the sphere in D, will be parallel to the plane Zh; and the axis of the sphere will be equally inclined to both these places. Let WQE be the equinoctial, whose elevation above the horizon of Z (London) is $38^\circ 30'$; and PRD be the meridian of the place D, cutting the equinoctial in R. Then it is evident, that the arc RD is the latitude of the place D, where the plane Zh would be horizontal, and the arc RQ is the difference of longitude of the planes Zh and DH.

73. In the spherical triangle WDR, the arc WD is given, for it is the complement of the plane's declination from S the south; which complement is 54° , viz. $90^\circ - 36^\circ$: the angle at R, in which the meridian of the place D cuts the equator, is a right angle; and the angle RWD measures the elevation of the equinoctial above the horizon of Z, namely $38^\circ 30'$. Say, therefore, as radius is to the co-sine of the plane's declination from the south, so is the co-sine of the latitude of Z to the sine of RD the latitude of D: which is of a different denomination from the latitude of Z, because Z and D are on different sides of the equator.

As radius	10.00000
To co-sine $36^\circ 0' = RQ$	9.90796
So co-sine $51^\circ 30' = QZ$	9.79415

To sine $30^\circ 14' = D$ it 9.70211 = the latitude of D, whose horizon is parallel to the vertical plane Zh at Z.

74. To find RQ the difference of longitude of the places D and Z; say, as radius is to the co-sine of RWD $38^\circ 30'$, the height of the equinoctial at Z, so is the co-tangent of DW 36° the plane's declination, to the co-tangent of RQ the difference of longitudes. Thus,

To the logarithmic sine of $51^\circ 30'$	9.89354
Add the logarithmic tangent of $54^\circ 0'$	10.13874

Their sum rejecting 10 . . . 10.03228

is the nearest tangent of $47^\circ 8' = WR$; which is the co-tangent of $42^\circ 52' = RQ$, the difference of longitude sought. Which difference, being reduced to time, is 2 h. $51\frac{1}{2}$ m.

75. And thus having found the latitude and longitude of the place D, to whose horizon the

vertical plane at Z is parallel, we proceed to the construction of a horizontal dial for the place D, whose latitude is $30^\circ 14'$ south; but anticipating the time at D by 2 h. 51 m., neglecting the half minute in practice, because D is so far westward in longitude from the meridian of London; and this will be a true vertical dial at London, declining westward 36° .

76. Assume any right line CSL, fig. 4, for the substile of the dial, and make the angle KCP equal to the latitude of the place, viz. $30^\circ 14'$, to the horizon of which the plane of the dial is parallel; then CRP will be the axis of the stile, or edge that casts the shadow on the hours of the day, in the dial. This done, draw the contingent line EQ, cutting the substilar line at right angles in K; and from K make KR perpendicular to the axis CRP. Then $KG = KR$ being made radius, that is, equal to the chord of 60° , or tangent of 45° on a good sector, take $42^\circ 52'$ (the difference of longitude of the places Z and D) from the tangents, and having set it from K to M, draw CM for the hour line of XII. Take KN, equal to the tangent of an angle less by 15° than KM; that is, the tangent of $27^\circ 52'$: and through the point N draw CN for the hour line of I. The tangent of $12^\circ 52'$ (which is 15° less than $27^\circ 52'$), set off the same way, will give a point between K and N, through which the hour line of II is to be drawn. The tangent of $2^\circ 8'$, the difference between 45° and $50^\circ 42'$ placed on the other side of CL, will determine the point through which the hour-line of III is to be drawn; to which $2^\circ 8'$, if the tangent of 15° be added, it will make $17^\circ 8'$; and this set off from K towards Q, on the line EQ, will give the point for the hour line of IV; and so of the rest. The forenoon hours line are drawn the same way, by the continual addition of the tangents 15° , 30° , 45° , &c., to $42^\circ 52' =$ the tangent KM for the hours of XI, X, IX, &c., as far as necessary; that is, until there be five hours on each side of the substile. The sixth hour, accounted from that hour or part of the hour on which the substile falls, will be always in a line perpendicular to the substile, and drawn through the centre C.

77. In all erect dials, CM, the hour line of XII is perpendicular to the horizon of the place for which the dial is to serve; for that line is the intersection of a vertical plane with the plane or the meridian of the place, both which are perpendicular to the plane of the horizon; and any line HO, or ho, perpendicular to CM, will be a horizontal line on the plane of the dial, along which line the hours may be numbered; and CM being set perpendicular to the horizon, the dial will have its true position.

78. If the plane of the dial had declined by an equal angle towards the east, its description would have differed only in this, that the hour-line of XII would have fallen on the other side of the substile CL, and the line HO would have a subcontrary position to what it has in this figure.

79. And these two dials, with the upper points of their stiles turned toward the N. Pole, will serve for other two planes parallel to them; the one declining from the N. towards

the E., and the other from the N. toward the W., by the same quantity of angle. The like holds true of all dials in general, whatever be their declination and obliquity of their planes to the horizon.

80. If the plane of the dial not only declines, but also reclines, or inclines. Suppose its declination from fronting the south S be equal to the arc SD, fig. 6, on the horizon; and its reclination be equal to the arc Dd of the vertical circle DZ: then it is plain, that if the quadrant of altitude ZdD on the globe cuts the point D in the horizon, and the reclination is counted upon the quadrant from D to d; the intersection of the hour-circle PRd, with the equinoctial WQE, will determine Rd, the latitude of the place d, whose horizon is parallel to the given place Zh at Z; and RQ will be the difference in longitude of the places at d and Z. Trigonometrically thus:—Let a great circle pass through the three points, W, d, E; and in the triangle WJd, right angled at D, the sides WD and Dd are given; and thence the angle DWd is found, and so is the hypotenuse Wd. Again, the difference, or the sum, of DWd and DWR, the elevation of the equinoctial above the horizon of Z, gives the angle dWR; and the hypotenuse of the triangle WRd was just now found; whence the sides Rd and WR are found, the former being the latitude of the place d, and the latter the complement of RQ, the difference of longitude sought. Thus, if the latitude of the place Z be 52° 30' N. the declination SD of the plane Zh (which would be horizontal at d) be 36°, and the reclination be 15°, or equal to the arc Dd; the south latitude of the place d, that is, the arc Rd, will be 15° 9'; and RQ, the difference of the longitude, 36° 2'. From these data, therefore, let the dial, fig. 7, be described, as in the former example.

81. There are several things requisite in the practice of dialling; the chief of which shall be given in the form of arithmetical rules, simple and easy to those who have learned the elements of trigonometry. For in practical arts of this kind, arithmetic should be used as far as it can go; and scales never trusted to, except in the final construction, where they are absolutely necessary in laying down the calculated hour distances on the plane of the dial,

82. The latitude of the place, the sun's declination, and his hour distance from the meridian, being given, to find, first, his altitude, second, his azimuth. Let d, fig. 6, be the sun's place, dR, his declination; and in the triangle P'Zd, Pd the sum, or the difference of dR, and the quadrant PR, being given by the supposition, as also the complement of the latitude PZ, and the angle dP'Z, which measures the horary distance of d from the meridian; we shall (by spheric trigonometry) find the base Zd, which is the sun's distance from the zenith, or the complement of his altitude. And, as $\sin Zd : \sin P'd :: \sin dP'Z : dZP$, or of its supplement DZS, the azimuthal distance from the south.

83. Or the practical rule may be as follows: Write A for the sine of the sun's altitude, L and l for the sine and co-sine of the latitude, D and d for the sine and co-sine of the sun's declina-

tion, and H for the sine of the horary distance from VI. Then the relation of H to A will have three varieties.

84. When the declination is towards the elevated pole, and the hour of the day is between XII and VI; it is $A = LD + Hld$, and $H = A - LD$,

ld

85. When the hour is after VI, it is $A = LD - Hld$, and $H = \frac{LD - A}{ld}$

85.* When the declination is toward the depressed pole, we have $A = Hld - LD$, and $H = \frac{A + LD}{ld}$

86. These theorems will be found useful and expeditious enough for solving those problems, in geography and dialling, which depend on the relation of the sun's altitude to the hour of the day.

87. *Example I.* Suppose the latitude of the place to be 51° 30' north: the time five hours distant from XII, that is, an hour after VI in the morning, or before VII in the evening; and the sun's declination 2° north. Required the sun's altitude?

Then to log. L = log. sin. 51° 30' - 1.89354
add log. D = log. sin. 20° 0' - 1.53405

Their sum - 1.42759 gives

LD = logarithm of 0.267664, in the natural sines.

And, to log. H = log. sin. 15° 0' - 1.41300

add $\begin{cases} \log. l = \log. \sin. 38° 0' - 1.79414 \\ \log. d = \log. \sin. 70° 0' - 1.97300 \end{cases}$

Their sum - 1.18014 gives

Hld = logarithm of 0.151408, in the natural sines. And these two numbers (0.267664 and 0.151408) make 0.419072 = A; which, in the table, is the nearest natural sine of 25° 47', the sun's altitude sought.

88. In these calculations the radius is considered as unity, and not 10.00000, by which, instead of the index 9, we have -1, which only makes the work a little easier.

89. The same hour distance being assumed on the other side of VI, then LD - Hld is 0.116256, the sine of 60° 40' 30"; which is the sun's altitude at V in the morning, or VII in the evening, when his N. declination is 20°. But when the declination is 20° S. (or towards the depressed pole) the difference Hld - LD becomes negative; and thereby shows, that an hour before VI in the morning, or past VI in the evening, the sun's centre is 6° 40' 30" below the horizon.

90. *Example II.* From the same data to find the sun's azimuth. If H, L, and D, are given, then from H having found the altitude and its complement Zd: and the arc Pd (the distance from the pole) being given; say, As the co-sine of the altitude is to the sine of the distance from the pole, so is the sine of the hour distance from the meridian to the sine of the azimuth distance from the meridian. Let the latitude be 51° 30' N., the declination 15° 9' S., and the time 2 h. 24 m. in the afternoon, when the sun begins to illuminate a vertical wall, and it is required to find the position of the wall. Then, by the fore-

going theorems, the complement of the altitude will be $81^{\circ} 32' 30''$, and Pd the distance from the pole being $109^{\circ} 5'$, and the horary distance from the meridian, or the angle dPZ , 36° .

To log. sin. $74^{\circ} 51'$	-1.98464
Add log. sin. $36^{\circ} 0'$	-1.76922

And from the sum	-1.75386
Take the log. sin. $81^{\circ} 32\frac{1}{2}'$	-1.99525

Remains $-1.75861 = \log. \sin. 35^{\circ}$, the azimuth distance sought.

91. When the altitude is given, find from thence the hour, and proceed as above. This praxis is of singular use on many occasions; as, 1. In finding the declination of vertical planes more exactly than in the common way, especially if the transits of the sun's centre are observed by applying a ruler with sights, either plain or telescopic, to the wall or plane whose declination is required. 2. In drawing a meridian line, and finding the magnetic variation. 3. In finding the bearings of places in terrestrial surveys; the transits of the sun over any place, or his horizontal distance from it, being observed, together with the altitude and hour; and thence determining small differences of longitude. 4. In observing the variations at sea, &c.

OF FINDING THE DECLINATION, INCLINATION, AND RECLINATION OF PLANES.

92. The declination, inclination, and reclination of planes are frequently taken with a sufficient degree of accuracy by an instrument called the declinator or declinatory.

92.* The construction of this instrument, as somewhat improved by Mr. Jones, is thus: On a mahogany board is inserted a semicircular arch of ivory or box-wood, divided into two quadrants of 90° each, beginning from the middle. On the centre of this arch turns a vertical quadrant, which is divided into 90° , beginning from the base; on which is a moveable index, with a small hole for the sun's rays to pass through, and form a bright spot on a certain mark. The lower extremity is pointed, to mark the linear direction of the quadrant when applied to any other plane; as this quadrant takes off occasionally, and a plumb-line hangs at the centre, for taking the inclinations and reclinations of planes. On the plane of the board is inserted a compass of points and degrees, with a magnetical needle turning on a pivot over it. See DECLINATORY.

93. The addition of the moveable quadrant and index considerably extend the utility of the declinator, by rendering it convenient for taking equal altitudes of the sun, the sun's altitude, and bearing, at the same time, &c. To apply this instrument in taking the declination of a wall or plane: Place the back part of it in a horizontal direction to the plane proposed, and observe what degree or point of the compass the N. part of the needle stands over from the north or the south, and it will be the declination of the plane from the north or south accordingly. In this case, allowance must be made for the variation of the needle (if any) at the place; and which,

if not previously known, will render this operation very inaccurate.

94. But the most exact way for taking the declination of a plane, or finding a meridian line, by this instrument, is, in the forenoon, about two or three hours before twelve o'clock, to observe two or three heights or altitudes of the sun; and at the same time the respective angular polar distances. Write these down; and in the afternoon watch for the same, or one of the same altitudes, and mark the angular distances or distance on the quadrant; the division or degree exactly between the two noted angular distances will be the true meridian, and the distance at which it may fall from the centre of the divisions, will be the declination of the plane. The reason for observing two or three altitudes and angles in the morning is, that in case there should be clouds in the afternoon, we may have the chance of one corresponding altitude.

OF THE RIGHT PLACING OF DIALS.

95. The plane on which the dial is to rest being duly prepared, and every thing necessary for fixing it, you may find the hour with tolerable exactness by a large equinoctial ring-dial, and set your watch to it. And then the dial may be fixed by the watch at your leisure.

96. If you would be more exact, take the sun's altitude by a good quadrant, noting the precise time of observation by a clock or watch. Then compute the time for the altitude observed; and set the watch to agree with that time, according to the sun. Hadley's quadrant is very convenient for this purpose: for by it you may take the angle between the sun and his image reflected from a basin of water; the half of which angle, subtracting the refraction, is the altitude required.

97. This is best done in summer; and the nearer the sun is to the prime vertical, the east or west azimuth, when the observation is made, so much the better. Or, take two equal altitudes of the sun in the same day; one any time between seven and ten in the morning, the other between two and five in the afternoon; noting the moments of these two observations by a clock or watch: and if the watch shows the observations to be at equal distances from noon, it agrees exactly with the sun: if not, the watch must be corrected by half the difference of the forenoon and afternoon intervals; and then the dial may be set true by the watch.

98. For example, suppose you had taken the sun's altitude when it was twenty minutes past VIII in the morning by the watch; and found, by observing in the afternoon, that the sun had the same altitude ten minutes before IV; then it is plain, that the watch was five minutes too fast for the sun: for five minutes after XII is the middle time between VIII h. 20 m. in the morning, and III h. 50 m. in the afternoon; and, therefore, to make the watch agree with the sun, it must be set back five minutes.

99. In many cases, where the situation is suitable, it is very desirable to have a true meridian line for the regulation of clocks and watches; we shall, therefore, here insert Mr. Ferguson's method of constructing one.

Make a round hole, about a quarter of an inch diameter, in a thin plate of metal; and fix the plate in the top of a south window, in such a manner that it may recline from the zenith at an angle equal to the colatitude of your place, as nearly as you can guess: for then the plate will face the sun directly at noon on the equinoctial days. Let the sun shine freely through the hole into the room; and hang a plumb-line to the ceiling of the room, at least five or six feet from the window, in such a place as that the sun's rays, transmitted through the hole, may fall upon the line when it is noon by the clock; and having marked the said place on the ceiling, take away the line.

Having adjusted a sliding bar to a dovetail groove, in a piece of wood about eighteen inches long, and fixed a hook into the middle of the bar, nail the wood to the above-mentioned place on the ceiling parallel to the side of the room in which the window is; the groove and the bar being towards the floor: then hang the plumb-line upon the hook in the bar, the weight or plummet reaching almost to the floor; and the whole will be prepared for further and proper adjustment.

This done, find the true solar time by either of the last two methods, and thereby regulate your clock. Then, at the moment of the next noon by the clock, when the sun shines, move the sliding bar in the groove, until the shadow of the plumb-line bisects the image of the sun, made by his rays transmitted through the hole, on the floor, wall, or on a white screen placed on the north side of the line; the plummet at the end of the line hanging freely in a pail of water placed below it on the floor.—But because this may not be quite correct for the first time, on account that the plummet will not settle immediately, even in water; it may be farther corrected on the following days, by the above method, with the sun and clock; and so brought to a very great exactness.

The rays transmitted through the hole will cast but a faint image of the sun, even on a white screen, unless the room be so darkened that no sunshine may be allowed to enter but what comes

through the small hole in the plate. And always, for some time before the observation is made, the plummet ought to be immersed in a jar of water, where it may hang freely; by which means the line will soon become steady, which otherwise would be apt to continue swinging.

OF THE DOUBLE HORIZONTAL, THE BABYLONIAN AND ITALIAN DIALS.

100. Sometimes a stereographic projection of the hour circles, and the parallels of the sun's declination, is added to the gnomonic projection, on the same horizontal plane; the upright side of the gnomon being sloped into an edge, standing perpendicularly over the centre of the projection: so that the dial, being in its due position, the shadow of that perpendicular edge is a vertical circle passing through the sun, in the stereographic projection. The months being duly marked on this dial, the sun's declination, and the length of the day at any time, are had by inspection; as also his altitude, by means of a scale of tangents. But its chief property is, that it may be placed true, whenever the sun shines, without the help of any other instrument.

101. The Babylonian and Italian dials reckon the hours, not from the meridian as with us, but from the sun's rising and setting. Thus, in Italy, an hour before sun-set is reckoned the twenty-third hour; two hours before sun-set the twenty-second hour; and so of the rest. And the shadow that marks them on the hour-lines, is that of the point of a stile. This occasions a perpetual variation between their dials and clocks, which they must correct from time to time, before it arises to any sensible quantity, by setting their clocks so much faster or slower. And in Italy, they begin their day, and regulate their clocks, not from sun-set, but from about mid-twilight, when the *Ave Maria* is said; which corrects the difference that would otherwise exist between the clock and the dial. The improvements which have been made in all sorts of instruments and machines for measuring time, have rendered these dials of little account.

DIALLING in a mine, called also plumbing, is the using of a compass, which the miners call dial, and a long line to know which way the load or vein of ore inclines, or where to shift an air-shaft, or bring an adit to a desired place.

DIALLING LINES, or DIALLING SCALES. See DIALLING, Index.

DIALLING SECTOR is a sector having upon it, besides other lines, the dialling lines, the construction of which is shown under DIALLING. It is evident that some advantage will be obtained in the practice of dialling by having the line placed on a sector. See SECTOR.

DIALLING SPHERE, is an instrument made of brass, with several semicircles sliding over one another, on a moving horizon, to demonstrate the nature of the doctrine of spherical triangles, and to give a true idea of the drawing of dials on all manner of planes.

DIALLING TRIGON, an instrument invented by Mr. Benjamin Martin, consisting of two graduated scales and a plane, used by some in the practice of dialling.

DIALECT, *n. s.* Fr. *dialecte*; Span. *dialecto*; Ital. *dialetto*; Lat. *dialectus*; Gr. *ῥαλεκτος*, from *ῥα* and *λέγω*, to speak. Language; style; the mode of expression peculiar to a certain district.

When themselves do practise that whereof they write, they change their *dialect*; and those words they shun, as if there were in them some secret sting.

Hooker.

In her youth

There is a prone and speechless *dialect*,

Such as moves men.

Shakspeare. *Measure for Measure.*

If the conferring of a kindness did not bind the person upon whom it was conferred to the returns of gratitude, why, in the universal *dialect* of the world, are kindnesses still called obligations?

South.

The Tuscan language is greatly admired for its elegance, and the meanest inhabitants of Florence speak a *dialect* which the rest of Italy are proud to imitate.

Johnson.

DIALECT is an appellation given to the language of a province, in so far as it differs from that of the whole kingdom. The term is particularly used in speaking of the ancient Greek, whereof there were four dialects, each of which was a perfect language in its kind, that took place in certain countries. In Great Britain, besides the two dialects of English and Scotch, almost every county has a dialect of its own, all differing considerably in pronunciation, accent, and tone, although one and the same language.

DIALECTICS, in the literary history of the ancients, that branch of logic which taught the rules and modes of reasoning. See LOGIC. Zeno Eleates was the first who discovered the natural series of principles and conclusions observed in reasoning, and formed an art thereof in form of a dialogue; which, for this reason, was called dialectica. The dialectica of the ancients is usually divided into several kinds: The first was the eleatica, that of Zeno Eleates, which was threefold; viz. consecutionum, colloquutionum, and contentiunum. The first consisting of rules for deducing or drawing conclusions. The second, the art of dialogue; which became of such universal use in philosophy, that all reasoning was called interrogation: then, syllogism being laid aside, the philosophers used dialogue, and required the respondent to conclude and argue from the several concessions made. The last part of Zeno's dialectics, *επιστημη*, was contentious, or the art of disputing and contradicting; though some, particularly Laetius, ascribe this part to Protagoras a disciple of Zeno.

The second is the dialectica megarica, whose author is Euclid, as of Megara. He gave much

into the method of Zeno and Protagoras; though there are two things appropriated to him: the first, that he impugned the demonstrations of others, not by assumptions, but conclusions; continually making illations, and proceeding from consequence to consequence: the second, that he set aside all arguments drawn from comparisons of similitude as invalid. He was succeeded by Eubulides, from whom the sophistic way of reasoning is said to be derived. In his time the art is described as manifold: *mentiens, fallens, electra, obvelata, arcevalis, cornuta, and calva*. See *SOPHRISM*.

The third is the dialectica of Plato, which he proposes as a kind of analysis to direct the human mind, by dividing, defining, and bringing things to the first truth; where being arrived, it applies itself to explain sensible things, but with a view to return to the first truth where alone it can rest. Such is the idea of Plato's analysis.

The fourth is Aristotle's dialectica: containing the doctrine of simple words, delivered in his book of *Prædicaments*; the doctrine of propositions, in his book *De Interpretatione*; and that of the several kinds of syllogism, in his books of *Analytics*, *Topics*, and *Elenchuses*.

The fifth is the dialectica of the Stoics; which they call a part of philosophy, dividing it into rhetoric and dialectic; to which some add the definitive, whereby things are justly defined; comprehending likewise the canons or criterions of truth. The Stoics, before they treat of syllogisms, have two principal places; the one about the signification of words, the other about the things signified. On occasion of the first, they consider abundance of things belonging to the grammarian's province: what, and how many letters; what is a word, diction, speech, &c. On occasion of the latter, they consider things themselves, not as without the mind, but as in it, received in it by means of the senses. Accordingly, they first teach, that nil sit in intellectu, quod non prius fuerit in sensu; 'whatever is in the mind came thither by the senses;' and that aut incursione sui, as Plato, who meets the sight; aut similitudine, as Caesar by his effigy; aut proportionem, either by enlarging as a giant, or by diminishing as a pygmy; aut translatione, as a Cyclops; aut compositione, as a Centaur; aut contrario, as death; aut privatione, as a blind man.

The sixth is Epicurus's dialectica: who had recourse to certain canons, the collection whereof he called *Canonica*; and as all questions in philosophy are either *de re* or *de voce*, he gave separate rules for each.

DIALECTICK, *n. s.* *Διαλεκτική*. Logic; the art of reasoning. See **DIALECT**.

DIALECTICAL, *adj.* Logical; argumentative.

Those *dialectical* subtleties, that the schoolmen employ about physiological mysteries, more declare the wit of him that uses them, than increase the knowledge of sober lovers of truth. *Boyle*.

DIALITHA, in the writings of the ancients, a word used to express the elegant ornaments of the Greeks and Romans, composed of gold and gems. They also called these lithocolla, cemented stones or gems; the gold being in this

case as a cement to hold the stones together. They wore bracelets and other ornaments about their dress: and their cups and table-furniture were of the same kind. The green stones were found to succeed best, and the emerald and chrysolite were most in esteem for this purpose. Pliny says of them: 'Nihil jucundius aurum decet,' 'Nothing becomes gold better.'

DIALOGIST, *n. s.* } *Gr. διάλογος; δια*
DIALOGUE, *n. s. & v. n.* } and *λογος*, a word.
A speaker in a conference; a conference or conversation between two or more persons. To hold a conference.

Will you hear the *dialogue* that the two learned men have compiled in praise of the owl and cuckoo?

Shakspeare.

Dost *dialogue* with thy shadow?

Id. Timon.

In easy *dialogues* is Fletcher's praise;

He moved the mind, but had not power to raise.

Dryden.

With the stars

And the quick Spirit of the Universe

He held his *dialogues*; and they did teach

To him the magic of their mysteries. *Byron.*

DIALYSIS, in grammar, a mark or character, consisting of two points (· ·) placed over two vowels, because otherwise they would make a diphthong, as *Mosæic, Phææton, &c.*

DIAMASTIGOSIS, a festival of Sparta, in honor of Diana Orthia, which received that name *απο του μαστιγουν*, from whipping, because boys were whipped before the altar of the goddess. These boys, called *Bomonicae*, were originally free-born Spartans, but in the more delicate ages they were of mean birth, and generally of a slavish origin. This operation was performed by an officer in a severe and unfeeling manner; and that no compassion should be raised, the priest stood near the altar with a small light statue of the goddess, which suddenly became heavy and insupportable if the lash of the whip was less rigorous. The parents of the children attended the solemnity, and exhorted them not to show themselves, either by fear or groans, unworthy of Laconian education. These flagellations were so severe, that the blood gushed in profuse torrents, and many expired under the lash of the whip, without uttering a groan, or betraying any marks of fear. Such a death was reckoned very honorable, and the corpse was buried with much solemnity with a garland of flowers on its head. The origin of this festival is unknown. Some suppose that Lycurgus first instituted it to inure the youth of Lacedæmon to bear labor and fatigue, and render them insensible to pain and wounds. Others maintain, that it is a mitigation of an oracle, which ordered that human blood should be shed on Diana's altar; and according to their opinion, Orestes first introduced that barbarous custom, after he had brought the statue of Diana Taurica into Greece. There is another tradition which mentions that Pausanias, as he was offering prayers and sacrifices to the gods, before he engaged with Mardonius, was suddenly attacked by a number of Lydians who disturbed the sacrifice, and were at last repelled with staves and stones, the only weapons with which the Lacedæmonians were provided at that

moment. In commemoration of this, therefore, the whipping of boys was instituted at Sparta, and after that the Lydian procession.

DIAMETER, *n. s.* } Gr. διά and μέ-
DIAMETRAL, *adj.* } τρον, a measure. The
DIAMETRICALLY, *adv.* } line which, passing
DIAMETRICAL, *adj.* } through the centre of
DIAMETRICALLY, *adv.* } a circle, or other cur-
vilinear figure, divides it into equal parts. Dia-
metral and diametrical is describing or
relating to a diameter; also, in a figurative
sense, directly opposite; or perhaps, to the
greatest length opposed, as are the points of a
circumference touched by the ends of a diameter.
Diametrically and diametrically are also synony-
mous.

The space between the earth and the moon, accord-
ing to Ptolemy, is seventeen times the *diameter* of
the earth, which makes, in a gross account, about one
hundred and twenty thousand miles. *Raleigh.*

He made an instrument to know
If the Moon shine full or no.

----- Tell what her *diameter* to an inch is,
And prove that she's not made of green cheese.

Hudibras.

He persuaded the king to consent to what was *dia-*
metrically against his conscience and his honour, and,
in truth, his security. *Clarendon.*

Christian piety is, beyond all other things, *dia-*
metrically opposed to profaneness and impiety of actions.
Hammond.

Thus intercepted in its passage, the vapour, which
cannot penetrate the stratum *diametrically*, glides
along the lower surface of it, permeating the horizon-
tal interval, which is betwixt the said dense stratum
and that which lies underneath it. *Woodward.*

That the longer *diameter* of an ellipsis may be
shortened, till it shall differ little from a circle, is
indisputably true. *Johnson.*

DIAMETER. The line, which passing through
the centre of a circle, or other curvilinear figure,
divides it into equal parts. The impossibility
of expressing the exact proportion of the *diam-*
eter of a circle to a circumference, by any re-
ceived way of notation, and the absolute neces-
sity of bringing it as near the truth as possible,
has induced some of the most celebrated men
in all ages to endeavour to approximate it. The
first who attempted it with success was the ce-
lebrated Van Cuelen, a Dutchman, who, by the
ancient very laborious method, carried it to thirty-
six decimal places; these he ordered to be en-
graven on his tomb-stone, thinking he had set
bounds to improvement. However, the indefa-
tigable Abraham Sharp carried it to seventy-five
places in decimals; and since that time it has
been carried much further.

DIAMOND, *n. s.* } Fr. and Dut. *diamant*;

DIAMONDED, *adj.* } Ital. Span. and Port. *diaman-*
tante; Tent. *demant*, from Lat. *adamas*, *adaman-*
tis; Gr. ἀδάμας, ἀδαμαντος, i. e. a privative,
and ἀμαρζω to subdue, because too hard to break
or mould into shape. See the article below. A
precious stone. Diamonded is, shaped like a
diamond.

I see how thine eye would emulate the *diamond* :
thou hast the right arch bent of the brow.

Shakspeare.

Lop a bough of a tree, and one shall behold the grain
thereof (by some secret cause in nature) *diamonded*
or streaked in the fashion of a lozenge. *Fuller.*

Certainly the price and virtue of things consist not
in the quantity : one *diamond* is more worth than
many quarries of stone. *Bp. Hall. Contemplations.*

The *diamond* is by mighty monarchs worn,
Fair as the star that ushers in the morn.

Blackmore.

The lively *diamond* drinks thy purest rays,
Collected light, compact. *Thomson.*

Shakspeare opens a mine which contains gold and
diamonds in inexhaustible plenty, though clouded by
incrustations, debased by impurities, and mingled
with a mass of meaner minerals. *Johnson.*

The DIAMOND is a genus of siliceous earths,
called *adamas gemma* by the Latins, *demant* by
the Germans and Swedes, and *diamant* by the
French, and is the hardest of all stones hitherto
discovered. See ADAMAS. It was thought by
the ancients that the diamond became soft
and malleable, by steeping it in hot goat's-
blood. Diamonds are found only in the East
Indies, and in Brasil in South America. The
diamond mines are in GOLCONDA, VISAPOUR,
BENGAL, and the island of BORNEO. See these
articles. In the mines of Golconda are found a
great number of stones from ten to forty carats,
and upwards; and it was here that the famous
diamond of Aurangzebe, the great mogul, was
found, which before it was cut weighed 793 ca-
rats. The stones of this mine are not very clear;
their water is usually tinged with the quality of
the soil : being black where that is marshy; red
where it partakes of red; and sometimes green
and yellow, where the ground is of these colors.
Another defect is a kind of greasiness appearing
on the diamond, when cut, which takes off part
of its lustre. There are usually not fewer than
60,000 persons, men, women, and children, at
work in this mine. When the miners have found
a place where they intend to dig, they level ano-
ther somewhat bigger near it, and enclose it with
walls about two feet high, leaving apertures from
space to space, to give passage to the water.
They dig twelve or fourteen feet deep, and till
they find water. Then they cease, and the water
thus found serves to wash the earth two or three
times, after which it is let out at an aperture
reserved for that purpose. This earth being well
washed and dried, they sift it in a kind of open
sieve, as we do corn; then, thresh it, and sift it
afresh; and lastly, search it well with the hands
to find the diamonds. The miners work naked,
except that they have a thin linen cloth before
them. They have also inspectors, to prevent
their concealing diamonds; which, however,
they frequently do, by swallowing them when
not observed.

Diamonds are commonly clear and pellucid,
yet some are met with of a rose color, or inclin-
ing to green, blue, or black, and some have black
specks. Tavernier saw one in the treasury of
the mogul, with black specks in it, weighing
about fifty-six carats; and he informs us, that
yellow and black diamonds are produced in the
mines at Carnatica. Mr. Dutens also relates,
that he saw a black diamond at Vienna in the
collection of the prince de Lichtenstein. Some

diamonds have a greenish crust; and of these M. Tavernier relates, that they burst into pieces while working into a proper shape, or in the very act of polishing on the wheel. In confirmation of this, he mentions a large diamond worth upwards of £5000 sterling, which burst into nine pieces while polishing on the wheel at Venice. The finest diamonds are those of a color like pure water, of a regular form, and free from stains, spots, specks, flaws, and cross veins. Diamonds, tintured yellow, blue, green, or red, in a high degree, are next in esteem; but if they are tintured with these colors only in a low degree, the value is greatly diminished. There are also diamonds of a brown, and some of a dark hue; the first resembling the brownest sugar-candy, and the latter dusky iron. In the Philosophical Commerce of Arts, Dr. Lewis tells us of a black diamond that he himself had seen. At a distance it looked uniformly black, but on closer examination appeared in some parts transparent, and in others charged with foulness, on which the black hue depended. These gems are lamellated, consisting of very thin plates like tale, but very closely united, the direction of which must be found out by lapidaries before they can work them properly. Such as have their foliated substance not in a flat position, are called by the workmen diamonds of nature.

The first water in diamonds means the greatest purity and perfection of their complexion, which ought to be that of the purest water. When diamonds fall short of this perfection, they are said to be of the second or third water, &c., till the stone may be properly called a colored one: for it would be an impropriety to speak of an imperfectly colored diamond, or one that has other defects, as a stone of a bad water only.

Diamond is so hard, that it can only be cut and ground by itself and its own substance. To bring it to that perfection which augments its price so considerably, they begin by rubbing several against each other while rough, after having fixed them to the ends of two wooden blocks, thick enough to be held in the hand, with a mixture of rosin and brick dust. It is this powder, thus rubbed off, and received in a little box for that purpose, that serves to grind and polish the diamonds. This is done by a mill, which turns a wheel of soft iron, sprinkled over with diamond dust mixed with oil of olives. The same dust, well ground, and diluted with water and vinegar, is used in the sawing of diamonds, which is performed with an iron or brass wire as fine as a hair. Sometimes, in lieu of sawing, they cleave them, especially if there be any large shivers therein. But the Europeans are not usually daring or expert enough to run the risk of cleaving, for fear of breaking.

1. The greatest diamond ever known belongs to the king of Portugal, and was found in Brasil. It is still uncut; and Mr. Magellan informs us, that it was larger, but a piece was broken off by the ignorant countryman who chanced to find this great gem, and tried its hardness by the stroke of a large hammer upon an anvil. This prodigious diamond weighs 1680 carats; and although it is uncut, Mr. Rome de l'Isle says

VOL. VII.

that it is valued at £224,000,000 sterling, which gives the estimation of 79 36, or about £80 sterling for each carat; viz. for the multiplicand of the square of its whole weight. But even in case of any error of the press in this valuation, if we employ the general rule abovementioned, this great gem must be worth, at least, above £3,500,000 sterling. 2. The famous diamond which adorns the imperial sceptre of Russia under the eagle at the top of it, weighs 779 carats, and is worth at least £4,854,728 sterl., although it hardly cost 135,417 guineas. This diamond was one of the eyes of a Malabarian idol, named Scheringham. A French grenadier, who had deserted from the Indian service, contrived to become one of the priests of that idol, from which he stole one of its eyes; he then ran away to the English at Trichinapeuty, and thence to Madras. A ship's captain bought it for 20,000 rupees; afterwards a Jew gave £17,000 or £18,000 sterling for it: at last a Greek merchant, named Gregory Suffras, offered it to sale at Amsterdam in 1766; and the late prince Orloff purchased it, as he himself told Mr. Magellan in London, for the empress Catharine II. The figure and size of this diamond may be seen in the British Museum in London: it is not of a regular form. 3. The diamond of the great mogul is cut in rose; weighs 279½ carats, and is worth 380,000 guineas. This diamond has a small flaw underneath near the bottom; and Tavernier, page 389, who examined it, valued the carat at 150 French livres. Before this diamond was cut it weighed 793½ carats, according to Rome de l'Isle; but Tavernier, vol. 2, p. 339, says, that it weighed 900 carats before it was cut. If this is the same diamond, its loss by being cut was very extraordinary. 4. Another diamond of the king of Portugal, which weighs 215 carats, is extremely fine, and is worth at least 369,800 guineas. 5—7. The diamond of the emperor of Germany weighs 139½ carats; and is worth at least 109,520 guineas. Tavernier says, that this diamond has a little hue of a citron color; and he valued it at 135 livres tournoises the carat. Robert de Berquen the grandson of Louis, says, that this diamond was cut into two: that the grand Turk had another of the same size; and that there were at Bistiagar two large diamonds, one of 250 and another of 140 carats. 8. The diamond of the late king of France, called the Pitt or Regent, weighs 136½ carats: this gem is worth at least 208,333 guineas, although it did not cost above the half of this value. 9. The other diamond of the same monarch, called the Sancy, weighs fifty-five carats: it cost 25,000 guineas; and M. Dutens says, that it is worth much above that price.

For the valuation of diamonds of all weights, Mr. Jefferies lays down the following rules.—He first supposes the value when rough to be £2 per carat, at a medium; then to find the value of diamonds of greater weights, multiply the square of their weight by 2, and the product is the value required. *Example.* To find the value of a rough diamond of two carats, $2 \times 2 = 4$, the square of the weight; which, multiplied by 2 gives £8, the true value of a rough diamond of two carats. For finding the value of manufac-

tured diamonds, he supposes half their weight to be lost in manufacturing them. To find their value, multiply the square of double their weight by 2, which will give their true value in pounds. Thus to find the value of a wrought diamond weighing two carats; we first find the square of double the weight, viz. $4 \times 4 = 16$; then $16 \times 2 = 32$. So that the true value of a wrought diamond of two carats is £32.

The names of *oriental* and *occidental*, given by jewellers to this and all other precious stones, have a different meaning from the obvious sense; the finest and hardest being always called *oriental* whether they be produced in the east or not. Those called *occidental* are of inferior value; but according to Mr. Jefferies, who has written a treatise on the subject, the diamonds of Brasil equal the finest oriental ones. Diamonds are also distinguished according to their figure, by the names of rose diamonds, brilliants, and rough diamonds.

Brilliant diamonds are those cut in faces both at top and bottom; and whose table, or principal face at top, is flat. To make a complete square brilliant, if the rough diamond be not round of a square figure, it must be made so; and if the work be perfectly executed, the length of the axis will be equal to the side of the square base of the pyramid. Jewellers then form the table and collet by dividing the block, or length of the axis, into eighteen parts. They take 5-18ths from the upper part, and 1-18th from the lower. This gives a plane at 4-18ths from the girdle for the table; and a smaller plane at 5-18ths distance for the collet, the breadth of which will be 1-5th of the breadth of the table. In this state the stone is said to be a *complete square table diamond*. The brilliant is an improvement on the table diamond, and, according to Mr. Jefferies, was introduced within the last century. To render a brilliant perfect, each corner of the above described table diamond, must be shortened by 1-20th of its original. The corner ribs of the upper sides must be flattened, or run towards the centre of the table 1-6th less than the sides; the lower part, which terminates in the girdle, must be 1-8th of one side of the girdle; and each corner rib of the under sides must be flattened at the top, to answer the above flattening at the girdle, and at the bottom must be 1-4th of each side of the collet. The parts of the small work, which complete the brilliant, or the star, and skill facets, are of a triangular figure. Both of these partake equally of the depth of the upper sides from the table to the girdle; and meet in the middle of each side of the table and girdle, as also at the corners. Thus they produce regular lozenges on the four upper sides and corners of the stone. The triangular facets, on the under sides, joining to the girdle, must be half as deep again as the above facets, to answer to the collet parts. The stone here described is said to be a *full-substanced brilliant*. If the stone is thicker than in the proportion here mentioned, it is said to be an *over-weighted brilliant*. If the thickness is less than in this proportion, it is called a *spread-brilliant*. The beauty of brilliants is diminished by their being either over-weighted or spread. The true proportion of the axis, or depth of the

stone to its side, is as 2 to 3. *Brilliants* are distinguished into square, round, oval, and drops, from the figure of their respective girdles.

Rose diamonds are quite flat underneath, with their upper part cut in divers little faces, usually triangles, the uppermost of which terminate in a point. The depth of the stone from the base to the point must be half the breadth of the diameter of the base of the stone. The diameter of the crown must be 2-5ths of the diameter of the base. The perpendicular, from the base to the crown, must be 3-5ths of the diameter of the stone. The lozenges which appear in all circular rose diamonds, will be equally divided by the ribs that form the crown; and the upper angles or facets will terminate in the extreme point of the stone, and the lower in the base or girdle.

Rough diamonds are the stones, as nature produces them in the mines. They should be chosen uniform, of a good shape, transparent, not quite white, and free of flaws and shivers. Black, rugged, dirty, flawey, veiny stones, and all such as are not fit for cutting, they use to pound in a steel mortar made for that purpose; and when pulverised they serve to saw, cut, and polish the rest. Shivers are occasioned in diamonds by this, that the miners, to get them more easily out of the vein, which winds between two rocks, break the rocks with huge iron levers, which shakes, and fills the stone with cracks and shivers.

It has been proved that diamonds are capable of being dissipated, not only by the collected heat of the sun, but also by the heat of a furnace. Boyle says, that he perceived certain acrid and penetrating exhalations from diamonds exposed to fire. A diamond by exposure to a concave speculum, the diameter of which was forty inches, was reduced to an eighth part of its weight. In the *Giornale de Letteriti d'Italia*, there is a relation of experiments made on precious stones, by order of the grand duke of Tuscany, with a burning lens, the diameter of which was two-thirds of a Florentine ell, near the focus of which was placed another smaller lens. By these experiments we find, that diamonds were more altered by solar heat than most of the other precious stones, although not the least appearance of a commencing fusion was observable. A diamond weighing thirty grains, thus exposed during thirty seconds, lost its color, lustre, and transparency, and became of an opaque white. In five minutes bubbles appeared on its surface; soon afterwards it burst into pieces, which were dissipated; and the small fragment which remained was capable of being crushed into fine powder by the pressure of the blade of a knife. Neither the addition of glass, flints, sulphur, metals, or salt of tartar prevented this dissipation of diamonds, or occasioned any degree of fusion. By other experiments made by order of the emperor Francis I. we find, that diamonds were entirely dissipated by having been exposed in crucibles to a violent fire of a furnace during twenty-four hours; while rubies by the same heat were not altered in weight, color, or polish. By exposing diamonds during two hours only at a time, the following alterations produced on them by fire were observed. First, they lost their polish

then they were split into thin plates; and, lastly, totally dissipated. By the same fire, emeralds were fused. See *Magasin de Hambourg*, tom. xviii. The action of fire on diamonds was, notwithstanding the above-mentioned experiments, doubted in France, where numerous experiments have been made. M. D'Arcet, found, not only that diamonds included in porcelain crucibles, closed or covered with perforated lids, and exposed to the long and intense heat of a porcelain furnace, were perfectly dissipated; but also, that these stones could, in a few hours, be totally volatilised with a much inferior degree of heat, by exposing them in a coppel, under the muffle of an assay furnace. In this experiment, he observed that the dissipation was gradual, and that it was effected by a kind of exfoliation. The dissipation of diamonds exposed in coppels was confirmed by M. Macquer, who farther observed, that the diamonds were, before the dissipation began, rendered, by the fire, brilliant and shining, as it were, with a phosphoric light. To determine whether the dissipation of diamonds was effected by their reduction into vapor, or by a combustion or other effect of air upon them, Messrs. Lavoisier, Macquer, and Cadet, exposed diamonds to intense heat in an earthen retort, during several hours, but without any other effect than that their polish was destroyed, and about 1-7th of their weight diminished. M. Mitouard put diamonds in a tobacco-pipe filled with pounded charcoal accurately closed with lute. He further secured the diamonds from access of air or flame, by placing the tobacco-pipe in a crucible, to which another crucible was inverted and carefully luted. The diamonds, thus excluded from external air, having been exposed to the most intense heat which could be excited in a well constructed furnace, were not thereby altered or diminished.

Lavoisier, in a memoir published in 1772, showed that when the diamond is burnt, carbonic acid gas is obtained, and that there is a striking analogy between it and charcoal. In 1785 Guyton Morveau found that the diamond is combustible when dropped into melted nitre; that it burns without leaving any residuum, and in a manner analogous to charcoal. In 1797 Mr. Tennant repeated this experiment with much more precision; and the conclusion he drew from it was, that when a diamond is burnt, the whole of the product is carbonic acid gas; that a given weight of diamond yields just as much carbonic gas as the same weight of charcoal; and that diamond and charcoal are both composed of the very same substance.

Sir Humphry Davy, from the action of potassium on it, and its non-conduction of electricity, suggested in his third Bakerian lecture, that a minute portion of oxygen might exist in it; and in his new experiments on the fluoric compounds he threw out the idea, that it might be the carbonaceous principle, combined with some new, light, and subtle element, of the oxygenous and chlorine class.

This unrivalled chemist, during his residence at Florence in March, 1814, made several experiments on the combustion of the diamond and of plumbago, by means of the great lens in

the cabinet of natural history; the same instrument as that employed in the first trials on the action of the solar heat on the diamond, instituted in 1694 by Cosmo III., grand duke of Tuscany. He subsequently made a series of researches on the combustion of different kinds of charcoal at Rome. His mode of investigation was peculiarly elegant, and led to the most decisive results.

From the results of his different experiments, conducted with the most unexceptionable precision, it is demonstrated, that diamond affords no other substance by its combustion than pure carbonic acid gas; and that the process is merely a solution of diamond in oxygen, without any change in the volume of the gas.

DIAMOND, in the glass trade, an instrument used for squaring the large plates or pieces; and, among glaziers, for cutting their glass. These sorts of diamonds (which are small broken pieces of real diamonds), are differently fitted up. To be used for large pieces, as looking-glasses, &c. they are set in an iron ferrule, about two inches long, and a quarter of an inch in diameter, the cavity of the ferrule being filled up with lead, to keep the diamond firm: there is also a handle of box or ebony fitted to the ferrule, for holding it by. An application of the diamond, of great importance in the art of engraving, has been also made within a few years by the late Wilson Lowry, the eminent engraver, and first inventor of the mechanical methods now used in that part of the process called etching. He applied them to the purpose of drawing or ruling lines, which are afterwards to be deepened by aqua-fortis. Formerly steel points, called etching-needles, were used for that purpose, but they soon became blunt by the friction against the copper.

DIAMOND, in heraldry, a term used for expressing the black color in the achievements of peerage. Guillim does not approve of blazoning the coats of peers by precious stones, instead of metals and colors; but the English practice allows it. Morgan says the diamond is an emblem of fortitude.

DIAMONDS, CORNISH, a name given by many people to the crystals found in digging the mines of tin in Cornwall.

DIAMOND HARBOUR, a harbour in the Ganges, or Hoogly River, about thirty-four miles below Calcutta. The Company's ships are generally unloaded here, and take in their homeward-bound cargoes. The place is unhealthy; and owing to the heavy exhalations the sleeping in it is next to certain death. The country on both sides of the river abounds with tigers. The village is poor; but at Fulta, twelve miles up the river, there is a market and a good inn.

DIANA, the goddess of hunting. According to Cicero, there were three of this name: a daughter of Jupiter and Proserpine, who became mother of Cupid—a daughter of Jupiter and Latona—and a daughter of Upis and Glauce. The second is the most celebrated, and to her the ancients allude. She was early averse to marriage, and obtained leave of her father to live in perpetual celibacy, and to preside over the pains of women. To shun the society of

men she devoted herself to hunting, and was always accompanied by a number of chosen virgins, who, like herself, abjured marriage. She is represented with a quiver, attended with dogs, and sometimes drawn in a chariot by two white stags. Sometimes she appears with wings, holding a lion in one hand and a panther in the other, with a chariot drawn by two heifers, or two horses of different colors. She is tall, her face something manly; her legs are bare, well-shaped, and strong, and her feet covered with a buskin. She received many surnames, particularly from the places where her worship was established, and from the functions over which she presided. She was called Lucina, Illythia, or Juno Pronuba, when invoked by women in child-bed; and Trivia, when worshipped in the cross-ways, where her statues were generally erected. She was supposed to be the same as the moon, and Proserpine or Hecate; hence she was called Triformis; and some of her statues represented her with three heads,—that of a horse, a dog, and a boar. Her powers and functions under these three characters have been expressed in these lines:—

Terret, lustrat, agit, Proserpina, Luna, Diana,
Ina, suprema, feras, sceptris, fulgore, sagitta.

She was also called Agrotera, Orthia, Taurica, Delia, Cynthia, Aricia, &c., and supposed to be the same as the Isis of the Egyptians, whose worship was introduced into Greece with that of Osiris. When Typhon waged war against the gods, Diana metamorphosed herself into a cat to avoid his fury. The most famous of her temples was that of Ephesus. See EPHEUS. She was there represented with a great number of breasts, and other symbols of Cybele, or the earth. Though the patroness of chastity, yet she is said to have descended from her dignity to enjoy the company of Endymion, and to have granted favors to Pan and Orion. The inhabitants of Taurica were particularly attached to the worship of this goddess, and offered on her altar all the strangers that were shipwrecked on their coasts. Her temple in Aricia was always served by a priest who had murdered his predecessor; and the Lacedæmonians yearly offered her human victims till the time of Lycurgus, who changed this barbarous custom for the sacrifice of flagellation. See DIAMASTIGOSIS. The Athenians generally offered her goats; and others a white kid, a boar pig, or an ox. Among plants, the poppy and the dittany were sacred to her. She had oracles in Egypt, Cilicia, and Ephesus.

DIANÆ FANUM, in ancient geography, a promontory of Bithynia; now called Scutari, a citadel, opposite to Constantinople, on the east side of the Bosphorus Thracicus.

DIANDRIA, from δις twice, and ανηρ a man, the second class in Linnaeus's sexual system, consisting of hermaphrodite plants, which have flowers with two male organs. See BOTANY.

DIANIUM, in ancient geography, a town in Valentia, famous for a temple of Diana, whence the name; now called Denia.

DIANTHERA, in botany. See JUSTICIA.

DIANTHIUS, the clove-gilliflower, carnation, pink, sweet-william, &c., a genus of the digynia

order, and decandria class of plants; natural order twenty-second, caryophyllei: CAL. cylindrical, and monophyllous, with four scales at the base. There are five petals with narrow heels; the capsule is cylindrical and unilocular. There are many species, but not above four that have much beauty as garden flowers. But each of these furnishes several beautiful varieties: viz.

1. *D. barbatus*, or bearded dianthus, commonly called sweet-william. This rises with many thick leafy shoots, crowning the root in a cluster close to the ground; garnished with spear-shaped evergreen leaves, from half an inch to two inches broad. The stems are upright and firm, branching erect two or three feet high, having all the branches and main stem crowned by numerous flowers in aggregate clusters of different colors and variegations.

2. *D. caryophyllus*, clove-gilliflower, including all the varieties of carnation. It rises with many short trailing shoots from the root, garnished with long, very narrow, evergreen leaves; and amidst them upright slender flower-stalks, from one to three feet high, emitting many side shoots, all of which, as well as the main stalk, are terminated by large solitary flowers, having short oval scales to the calyx, and crenated petals. The varieties of this are very numerous, and unlimited in the diversity of flowers.

3. *D. chinensis*, Chinese, or Indian pink, is an annual plant, with upright firm flower-stalks, branching erect on every side, a foot or fifteen inches high, having all the branches terminated by solitary flowers of different colors and variegations, appearing from July to November.

4. *D. deltoides*, or common pink, rises with numerous short leafy shoots, crowning the root, in a tufted head close to the ground, closely garnished with small narrow leaves, and from the ends of the shoots many erect flower-stalks, from about six to fifteen inches high, terminated by solitary flowers of different colors, single and double, and sometimes firmly variegated. This species is perennial, as all the varieties of it commonly cultivated also are.

DIAPASE, or DIAPASON, *n. s.* Gr. δια πασων. A chord including all tones. The first is the old ord.

The sweet numbers and melodious measures,

With which I wont the winged words to tie,

And make a tuneful diapase of pleasures,

Now being let to run at liberty. *Spenser.*

It discovereth the true coincidence of sounds into diapasens, which is the return of the same sound.

Bacon.

Harsh din

Broke the fair musick that all creatures made

To their great Lord, whose love their motion swayed

In perfect diapason, whilst they stood

In first obedience, and their state of good. *Milton.*

From harmony, from heavenly harmony,

This universal frame began;

From harmony to harmony

Through all the compass of the notes it ran,

The diapason closing full in man. *Dryden*

Diapason denotes a chord which includes all tones: it is the same with that we call an eighth, or an octave: because there are but seven tones or notes, and then the eighth is the same again with the first.

Harri's

How musical! when all-devouring Time,
 Here sitting on his throne of ruins hoar,
 While winds and tempests sweep his various lyre,
 How sweet thy *diapason*, Melancholy. *Byron.*

DIAPASON among musical instrument makers, a kind of scale whereby they adjust the pipes of their organs, and cut the holes of their haut-boys, flutes, &c., in due proportion for performing the tones, semi-tones, and concords just.

DIAPASON, in music, a musical interval by which most writers on music express the octave of the Greeks.

DIAPASON DIAEX, a kind of compound concord, of which there are two sorts: the greater, which is in the proportion of 10:3; and the lesser, in that of 16:5.

DIAPASON DIAPENTE, a compound consonance in a triple ratio, as 3-9. This interval, says Martianus Capella, consists of nine tones and a semi-tone, nineteen semi-tones, and thirty-eight dieses. It is a symphony made when the voice proceeds from the first to the twelfth sound.

DIAPASON DIATESSARON, a compound concord, founded on the proportion of eight to three. To this interval Martianus Capella allows eight tones and a semi-tone, seventeen semitones, and thirty-four dieses. This is when the voice proceeds from its first to its eleventh sound. The moderns would rather call it the eleventh.

DIAPÉDESIS, in medicine, a transudation of the fluids through the sides of the vessels that contain them, occasioned by the blood's becoming too much attenuated, or the pores too open.

DIAPENTE, in ancient music, an interval marking the second of the concords, and with the diatessaron an octave. This is what in modern music is called a fifth.

DIAPER, *n. s. & v. a.* Fr. *diapre*: so called from Ypres (D'Ypres), as Denim from Nismes. Linen cloth woven in flowers, and other figures; the finest species of figured linen after damask. Hence, as a verb, to diversify or variegate with flowers, or to imitate diaper.

Not any damsel, which her vaunteth most

In skilful knitting of soft silken twine;

Nor any weaver, which his work doth boast

In *diaper*, in damask, or in lyne,

Might in their diverse cunning ever dare

With this so curious net-work to compare.

Spenser.

For fear the stones her tender foot should wrong,

The ground he strewed with flowers all along,

And *diapered* like the discoloured mead. *Id.*

Let one attend him with a silver bason

Full of rose-water, and bestrewn with flowers;

Another bear the ewer, a third a *diaper*.

Shakspeare.

If you *diaper* upon folds, let your work be broken,
 and taken, as it were, by the half; for reason tells
 you, that your fold must cover somewhat unscen.

Peacham on Drawing.

Flora used to cloath our grand dame earth with a
 new livery, *diapered* with various flowers and che-
 quered with delightful objects. *Howell's Vocal Forest.*

DIAPHANIC, *adj.* Gr. *διαφανής*. Trans-
DIAPH'ANOUS, *adj.* } parency: pellucidity;
DIAPHANEITY, *n. s.* } power of transmitting
 light.

Aristotle calleth light a quality inherent or cleaving
 to a *diaphanous* body. *Raleigh.*

Air is an element superior, and lighter than water,
 through whose vast, open, subtle, *diaphanick*, or
 transparent body, the light, afterwards created, easily
 transpired. *Id.*

Because the outward coat of the eye ought to be
 pellucid, to transmit the light, which, if the eyes
 should always stand open, would be apt to grow dry and
 shrink, and loose their *diaphaneity*; therefore are the
 eyelids so contrived as often to wink, that they so may,
 as it were, glaze and varnish them over with the
 moisture they contain. *Ray.*

DIAPHORE'SIS, in medicine, an elimination
 of the humors in any part of the body through
 the pores of the skin. See **MEDICINE**.

DIAPHHRAGM, *n. s.* Gr. *διαφραγμα*. The
 midriff which divides the upper cavity of the
 body from the lower. Any division or partition
 which divides a hollow body.

It consists of a fasciculus of bodies, round, about one
 sixth of an inch in diameter, hollow, and parted into
 numerous cells by means of *diaphragms*, thick set
 throughout the whole length of the body.

Woodward on Fossils.

DIAPHRAGM, or **DIAPHRAGMA**. See **ANA-
 TOMY**. Plato, as Galen informs us, first called
 this muscle diaphragm, from the verb *διαφραττω*,
 to separate or be between two.

DIAPHORE'SIS, *διαφορησις*, in rhetoric, a
 figure expressing the hesitation or uncertainty of
 the speaker. It is most naturally placed in the
 exordium of a discourse. We have an example
 in Homer, where Ulysses, about to relate his
 sufferings to Alcinous, begins thus:

Τι πρῶτον, τι δ' ἔπειτα, τι δ' ὕστατον καταλεξω;

Quid primum, quid deinde, quid postremo alloquar?

DIAPHORETICK, *adj.* Gr. *διαφορητικός*.
 Sudorific; promoting a diaphoresis or perspira-
 tion; causing sweat.

A *diaphoretick* medicine, or a sudorific, is something
 that will promote sweating. *Watts.*

Diaphoreticks, or promoters of perspiration, help
 the organs of digestion, because the attenuation of the
 aliment makes it perspirable. *Arbuthnot.*

DIARBECK, **DIARBEEK**, or **DIARBEKIR**,
 an extensive province of Asiatic Turkey; com-
 prehending, in its greatest extent, Diarbekir, pro-
 perly so called, Yerak or Chaldea, and Kurdistan,
 which were the ancient countries of Mesopotamia,
 Chaldea, and Assyria, with Babylon. See **KUR-
 NISTAN**. It is called Diarbek, and Diarbeker,
 from the word *dhyar*, a duke or ruler, and *beker*,
 country. It extends along the banks of the Ti-
 gris and Euphrates from N. N. W. to south-east,
 that is, from Mount Taurus, which divides it
 from Turcomania on the north, to the inmost re-
 cess of the Persian gulf on the south, about 600
 miles; and from east to west, that is, from Persia
 on the east, to Syria and Arabia Deserta on the
 west, in some places 200, and in others about
 300, miles; but in the southern or lower parts not
 above 150. It extends also from the thirtieth to the
 thirty-eighth degree of latitude, and lies under part
 of the fifth and sixth climates, whose longest day
 is about fourteen hours and a half, and enjoys a
 good temperature of air, as well as in the greater
 part of it a rich and fertile soil; although there
 are some large desert tracts in it. Having a con-

siderable frontier towards Persia, it is well guarded and fortified; but its many ancient cities are at present dwindled into heaps of ruins. *Diarbekir, Bagdad, and Mosul*, are however considerable places. The rivers Euphrates and Tigris have almost their whole course through this country.

DIARBEKIR, or DIARBECK PROPER, is bounded on the north by Turcomania, on the west by Syria, on the south by part of Arabia Deserta and Yrak Proper, and on the east by Kurdistan. It is the same country that is called Padanaram by Moses, signifying fruitful, which it still is in a very high degree, especially on the north side; where it yields corn, wine, oil, and fruits, in great abundance. Christianity flourished here in an eminent manner, till its purity was sullied about the beginning of the sixth century by the heresy of the Jacobites, whose patriarch resided here at a very recent period. It is now a pachalic or government of Turkey, subdivided into twelve districts. The principal towns are Diarbekir, Mosul, Orsa or Edessa, Nisibis, Gezir, Merdin, Zibin, Amadia, and Carasara; all of little note except Diarbekir and Mosul.

DIARBEKIR, DIARBECK, or CAHAMED, the capital of the above district, is situated in a delightful plain, on the banks and near the head of the Tigris, about 155 miles or fifteen caravan days' journey, north-east of Aleppo. A bridge of ten arches over the river is said to have been built by order of Alexander the Great. It is one of the richest and most mercantile cities in all Asiatic Turkey; and was once well fortified, being encompassed with a double wall, the outermost of which was flanked with seventy-two towers; but the whole is now in a very dilapidated state. The streets are narrow, but the houses, being of stone and lofty, look respectable; and it has several stately piazzas or bazaars, well stored with all kinds of merchandise, and twelve magnificent mosques, said to have been formerly Christian churches. The Armenian cathedral is a handsome structure, the roof of which is supported by two rows of pillars; and the whole floor covered by carpets. A very handsome fountain in the court in front throws the water to a considerable height. Extensive manufactures are carried on here in iron, copper, silk, wool, and cotton; but its chief article of trade and manufacture is Turkey leather, of which the sale is immense. It has also a manufacture of fine dyed linen and cotton cloths, which are nearly in the same request. There are many large and convenient inns on both sides of the river, for the caravans that go to and from Persia; and the place is much frequented by pilgrims of all nations and religions. The Turkish ladies are said here to enjoy an extraordinary degree of liberty, and are commonly seen on the walks of the city in company with the Christian women, with whom they live in great friendship. The citizens generally are said to be polite, affable, and courteous. A basha resides here, who has very extensive jurisdiction. He has commonly a body of 20,000 horse under him. The adjacent territory is very rich and picturesque; the bread, wine, flesh, and fruits, excellent. The inhabitants, who consist of Turks, Armenians, Kurds,

Catholics, and Jacobites, are computed at 80,000 by Gardanne, at 38,000 by Mr. M'Donal Kinner; the real number may probably be medium between the two. *Diarbekir* is six miles from Merdin, 172 from Malatia, and 54 E. S. E. of Constantinople.

DIARRHŒA, *n. s.* } *Gr. διαρροή.* A flux,
DIARRHŒICK, *adj.* } productive of frequent stools. The adjective signifies purgative.

In the midst of that service was I surprised with a miserable distemper of body; which ended in a *diarrhœa biliosa*, not without some beginning and further threats of a dysentery; wherewith I was brought so low, that there seemed small hope of my recovery.

Bp. Hall's Account of Himself.

Millet is *diarrhœick*, cleansing, and useful in distempers of the kidneys.

During his *diarrhœa* I healed up the fontanels.

Wiseman.

It is certain, that much swimming is the means of stopping a *diarrhœa*, and even of producing a constipation.

Franklin.

DIARRHŒA, in medicine, an excessive purging, distinguished by frequent stools with the natural excrement, not contagious, and seldom attended with pyrexia. It is a genus of disease in the class neuroses, and order spasmi of Cullen, containing the following species:—
1. *Diarrhœa crapulosa*. The feculent *diarrhœa*, from *crapulus*, one who overloads his stomach.
2. *Diarrhœa biliosa*. The bilious, from an increased secretion of bile.
3. *Diarrhœa mucosa*. The mucous, from a quantity of slime being voided.
4. *Diarrhœa hepatic*. The hepatic, in which there is a quantity of serous matter, somewhat resembling the washings of flesh, voided; the liver being primarily affected.
5. *Diarrhœa hienterica*. The hientery; when the food passes unchanged.
6. *Diarrhœa cœliaca*. The cœliac passion; the food passes off in this affection in a white liquid state like chyle.
7. *Diarrhœa verminosa*. Arising from worms.

DIARY, *n. s.* *Lat. diarium.* An account of the transactions, accidents, &c. of every day; a journal.

In sea voyages, where there is nothing to be seen but sky and sea, men make *diaries*; but, in land-travel, wherein so much is to be observed, they omit it.

Bacon.

I go on in my intended *diary*.

Tatler.

DIASTOLE, *n. s.* *Διαστολή.* A figure in rhetoric, by which a short syllable is made long; also, the dilation of the heart.

The systole seems to resemble the forcible bending of a spring, and the *diastole* its flying out again to its natural state.

Ray on the Creation.

If systole or diastole move

Quickest when he's in wrath or love. *Hudibras.*

DIASTYLE. *Δια* and *στυλος*, a pillar. A sort of edifice, where the pillars stand at such a distance from one another, that three diameters of their thickness are allowed for intercolumniation.

Harris.

DIATESSERON, *n. s.* Of *δια* and *τεσσαρα*, four. An interval in music, composed of one greater tone, one lesser, and one greater semitone; its proportion being as four to three. It is called, in musical composition, a perfect fourth. *Harris.*

DIATHESIS, ASTHENIC, is described to be that state of the body, wherein there is 'too little excitement of the whole living system, arising from the debilitating noxious powers, impairing all the functions, disturbing some, giving a false appearance of increasing others, but always debilitating.'

DIATHESIS, STHENIC, is that state of the body, wherein 'all the functions are first increased; a disturbance or irregularity then takes place in some; others are impaired; but not, as long as this diathesis lasts, by a debilitating operation.'

DIATONIC. Of *διὰ τὸν*. The ordinary sort of music which proceeds by different tones,

either in ascending or descending. It contains only the two greater and lesser tones, and the greater semi-tone. *Harris*.

DIATONIC, in music, is compounded of two Greek words, viz. the preposition *δια*, signifying a transition from one thing to another, and the substantive *τὸν*, importing a given degree of tension and musical note. It is indifferently applied to a scale or gamut, to intervals of a certain kind, or to a species of music, whether in melody or harmony, composed of these intervals. We copy the following scale of the Greek diatonics from Dannely's Musical Dictionary:—

28	Nete hyperbolaeon (second space treble clef)	a
27	Paranete hyperbolaeon diatonos	g
26	Paranete hyperbolaeon chromaticæ	g-flat) or f-sharp
25	Paranete hyperbolaeon enarmonios	f
24	Trite hyperbolaeon	e x) enhar. f-flat
23	Nete diezeugmenon	e
22	Paranete diezeugmenon diatonos	d
21	Paranete diezeugmenon chromaticæ	d-flat) c-sharp
20	Paranete diezeugmenon enarmonios	c
19	Trite diezeugmenon	b x) enhar. c-flat
18	Paramese (space above bass staff)	b-natural
17	Nete synemmenon (the space below the treble staff)	d
16	Paranete synemmenon diatonos	c
15	Paranete synemmenon chromaticæ	c-flat (b-natural)
14	Paranete synemmenon enarmonios	b-flat
13	Trite synemmenon	a x) enhar. b-flat
12	Mese	a
11	Lichanos meson diatonos	g
10	Lichanos meson chromaticæ	g-flat) f-sharp
9	Lichanos meson enarmonios	f
8	Parypate meson	e x) enhar. f-flat
7	Hypate meson	e
6	Lichanos hypaton diatonos	d
5	Lichanos hypaton chromaticæ	d-flat (c-sharp)
4	Lichanos hypaton enarmonios	c
3	Parypate hypaton	b x) enhar. c-flat
2	Hypate hypaton	b-natural
1	Proslambanomenos (first space bass)	a

DIAGOPHRAGMIA, in natural history, a genus of fossils of the order of septariæ, whose partitions, or septa, consist of spar with an admixture of crystal. Of this genus there are three species: 1. A red kind, with brownish-yellow partitions; 2. A brownish-yellow kind, with whitish partitions; 3. A bluish-white kind, with straw-colored partitions.

DIAZ (John), a martyr to the frantic zeal of his brother against the protestant religion, was born in the beginning of the sixteenth century, at Cuenza in Spain. He studied theology at Paris, and under the celebrated Calvin at Geneva. He was the companion of Bucer at the Ratisbon conference; and, going soon after to Neuburgh, was visited by his brother and murderer Alphonsus Diaz, an advocate of the court of Rome. This zealot, failing in his endeavour to reclaim him to popery, immediately plotted against his life. He pretended to close his visit and take his departure, but secretly returned at break of day to the apartment of Diaz, with a companion, who affected to be the bearer of a letter. Gaining admission on this pretence, while Diaz was reading the paper presented, Alphonsus's comrade

gave him a death-blow on the head with an axe, and fled. This murder took place in March 27th, 1546; and, though the assassins were taken, the emperor Charles V. put a stop to the proceedings against them. The miserable fratricide afterwards hanged himself. An account of his death was composed in Latin, under the title of *Historia vera de Morte J. Diazii*. It produced a great sensation at the time. J. Diaz was the author of *A Summary of the Christian Religion*.

DIAZEUTIC TONE. Of *δια* and *ζευγνυμι*. In the ancient Greek music, it disjoined two fourths, one on each side of it; and which, being joined to either, made a fifth. This is, in our musick, from A to B.

They allowed to this *diazæutic* tone, which is our La, Mi, the proportion of nine to eight, as being the unalterable difference of the fifth and fourth. *Harris*.

DIBBLE, *n. s. & v. a.* } Dut. *dipfel*, a
DIBBLER. } sharp point, Skinner; from *dabble*, Junius; or a corruption of dog-bill, according to Mr. Thomson. A small spade; a pointed instrument with which are made holes for planting or sowing. The verb is of recent introduction.

Through cunning, with *dibble*, rake, mattock, and spade,
By line and by level trim garden is made.

Tusser's Husbandry.

Wheat is generally *dibbled* in October, on land newly broken up from cloveley a man with an iron *dibble*, about three feet long, in each hand, walking backward and making two rows of holes in each furrow, slice, or flag; they are made about four inches distant from each other and from one to two inches deep. The *dibbler* is followed by two or three women, boys, or girls, who drop two or three grains into each hole.

Dixon's Agriculture.

DIBDIN (Charles), a celebrated writer of songs and musical composer, was the son of a silversmith of Southampton, where he was born about the year 1745. He was intended for the church, and received his early education at Winchester school. At the age of fourteen, however, he became a candidate for the situation of organist in a Hampshire village, and, relinquishing all views of entering the church, came at the invitation of an elder brother, a captain in the West India trade, to London. Here he was first engaged in composing ballads, and tuning pianofortes. He made his first appearance as a performer in 1762, at the Richmond theatre, and two years afterwards appeared on the London stage, as Ralph in *The Maid of the Mill*. The chief part of the music to *Lionel and Clarissa*, and the whole of that to the musical entertainment of *The Padlock*, now established his fame as a composer for the drama, which he rapidly increased. The most celebrated of his pieces, perhaps, are *The Deserter*, *The Waterman* (the dialogue of which is also his production), and *the Quaker*, which appeared between 1772 and 1775. Mr. Dibdin never shone as an actor; and, having quarrelled with Garrick and some other proprietors of the London theatres, he quitted the stage altogether, and made a successful attempt to entertain the public by accompanying himself, in his own songs, on the piano-forte. His saloon was near Leicester square, and known by the title of *Sans Souci*. His songs and entertainments produced at this time are said to have exceeded 1200. His sea songs are considered very superior: witness the immense popularity of his *Tom Bowling*, *Poor Jack*, &c. The former is said to have been a tribute of affection to the memory of his brother. Imprudence, however, always kept Dibdin poor; and, though assisted by government and many opulent individuals, he died in indigent circumstances in 1814. An edition of his best songs has been published by Dr. Kitchiner.

DIBRA, a town of European Turkey, in Macedonia, near Albania. It was besieged by the Turks in 1442, who conveyed a dead dog into the only spring that supplied the town with water, which compelled the inhabitants to surrender. It is thirty miles north of Akrida.

DIBSTONE, *n. s.* A little stone which children throw at another stone.

I have seen little girls exercise whole hours together, and take abundance of pains, to be expert at *dibstones*.

Locke

DICACITY, *n. s.* Lat. *dicacitas*. Pertness; sauciness.

DICEARCHUS, a scholar of Aristotle, who composed a great number of books which were valued highly by Cicero and Atticus. He wrote a work to prove that men suffer more mischief from one another than from all evils beside. Another work he composed, concerning the republic of Lacedæmon, was read every year before the youth in the assembly of the ephori. Geography was one of his principal studies, on which science there is a fragment of a treatise of his still extant, and preserved among the Veteris Geographiæ Scriptores Minores.

DICE, *n. s. & v. n.* } The plural of die.
DICER, *n. s.* } See **DIE**. To dice is to
DICE-BOX. } play with dice, or gam-
ble. A dicer; a gamester.

In prison! certes nay, but in paradise;

Wel hath Fortune yturned thee the *dice*;

That h'ath the sight of her, and I the absence.

Chaucer's Canterbury Tales.

They make marriage vows

As false as *dicers'* oaths. *Shakspeare. Hamlet.*

I was virtuously given as a gentleman need to be; virtuous enough; swore little; died not above seven times a week.

Shakspeare Henry IV.

It is above a hundred to one against any particular throw, that you do not cast any given set of faces with four cubical *dice*, because there are so many several combinations of the six faces of four *dice*. *Bentley.*

I look upon every man as a suicide from the moment he takes the *dicebox* desperately in his hand; and all that follows in his career from that fatal time is only sharpening the dagger before he strikes it to his heart.

Cumberland.

Dice, among gamesters, cubical pieces of bone or ivory, marked with dots on each side of their faces, from one to six. Sharpers have several ways of falsifying dice: by drilling and loading them with quicksilver; by filing and rounding them, &c.

The dice box is a narrow deep cornet, channelled within. It answers to what the Romans called *fritillus*; whence, *crepitantes fritilli*; and, in Seneca, *resonante fritillo*. Besides the *fritillus*, the Romans, for greater security, had another kind of dice-box called *pyrgus*, *πύργος*, and sometimes *turricula*. It was placed immoveable in the middle of the table, being open at both ends, and likewise channelled within; over the top was placed a kind of funnel, into which the dice were cast out upon the *fritillus*; whence descending, they fell through the bottom on the table; by which all practising on them with the fingers was effectually prevented. For want of some contrivance of this kind, our sharpers have opportunities of playing a variety of tricks with the box.

DICIL. This word seems corrupted, says Dr. Johnson from *dil* for *do it*.

Rich men sin, and I eat root:

Much ood *dich* thy good heart, Apemantus.

Shakspeare. Timon.

DICHOTOMY, *n. s.* *Διχοτομία*. Distribution of ideas by pairs.

Some persons have disturbed the order of nature, and abused their readers by an affectation of *dichotomies*, trichotomies, sevens, twelves, &c. *Watts.*

DICHROMY, a term used by astronomers for that appearance on the moon, wherein she is

bisected, or shows just half her disk. In this situation the moon is said to be in a quadrate aspect, or to be in her quadrature.

DICK'ENS. A kind of adverbial exclamation, importing, as it seems, much the same with the devil. Belg. *dicker*.

Where had you this pretty weathercock!

I cannot tell what the *dickens* his name is my husband had him of. *Shaks. Merry Wives of Windsor.*

What a *dickens* does he mean by a trivial sum?

But ha'n't you found it, Sir?

Congreve. Old Bachelor.

DICKINSON (Edmund), a celebrated English physician and chemist, born in 1624. He studied and took his degrees at Merton College, Oxford; and, in 1655, published there his *Delphi Phœnicizantes, &c.*, a learned piece, in which he attempted to prove, that the Greeks borrowed the story of the Pythian Apollo, and all that rendered the oracle at Delphi famous, from the Holy Scriptures, and from the book of Joshua in particular. He practised physic first at Oxford; but, removing to London in 1684, and restoring the earl of Arlington from a dangerous illness, he was promoted to be physician in ordinary to Charles II.; and continued in his appointments by his successor. After the Revolution, being afflicted with the stone, he retired from practice, and died in 1707. He published *Physica Vetus et Vera, &c.*, containing a system of philosophy chiefly framed on principles collected from the Mosaic history.

DICTAMNUS, white dittany, or fraxinella, a genus of the monogynia order and decandria class of plants; natural order twenty-sixth, multistiliquæ; cal. pentaphyllous; the petals are five, and patulous; the filaments sprinkled with glandulous points, the capsules five, coalited. There is only one species. It has thick, penetrating, perennial roots, collected into a head at top, sending up erect stalks annually two or three feet high, garnished with pinnated alternate leaves, of three or four pair of oblong stiff lobes, terminated by an odd one; and the stalks crowned by long pyramidal loose spikes of flowers, of white, red, and purple colors. They are very ornamental plants, and succeed in any of the common borders. The dittany which grows in Crete, Dalmatia, and the Morea, formerly constituted an article in the materia medica. The leaves in smell and taste somewhat resemble lemon thyme, but have more of an aromatic flavor, as well as a greater degree of pungency; when fresh, they yield a considerable quantity of essential oil.

DICTATE, *v. a. & n. s.* Fr. *dicter*; Ital.

DICTATION, *n. s.*

DICTATOR,

DICTATORIAL, *adj.*

DICTATORSHIP, *n. s.*

Fr. dicter; Ital. *dictare*; Lat. *dic-tare*; from *dico*, à *Gr. δῖκω*, to show; Chald. *ṭṭ*, to see;

to speak. To declare or prescribe with authority. As a substantive, dictate is the rule or maxim laid down; dictation, the act of dictating; dictator, one who delivers rules or orders; and particularly a Roman magistrate invested with absolute authority in certain exigencies. The other derivatives follow these meanings.

This is the solemnest title they can confer under the principedom, being indeed a kind of *dictatorship*.

Wotton.

Unanimous they all commit the care
And management of this main enterprise
To him their great *dictator*.

Milton.

He that was fetched from the plough to be made
dictator, had not half his (a clown's) pride and insolence.

Bulter.

Kind *dictators* made, when they came home,
Their vanquished foes free citizens of Rome.

Waller.

This is that perpetual *dictatorship* which is exercised by Lucæcius, though often in the wrong.

Dryden.

Those right helps of art, which will scarce be found by those who servilely confine themselves to the *dictates* of others.

Locke.

Then let this *dictate* of my love prevail.

Pope's Od.

That riches, honours, and outward splendour,
should set up persons for *dictators* to all the rest of mankind, is a most shameful invasion of the right of our understanding.

Watts.

Judgment, like other faculties, is improved by practice, and its advancement is hindered by submission to *dictatorial* decisions, as the memory grows torpid by the use of a table-book.

Johnson.

Thou, who with thy frown

Annihilated senates—Roman, too

With all thy vices, for thou didst lay down

With an atoning smile a more than earthly crown—

The *dictatorial* wreath,—couldst thou divine

To what would one day dwindle that which made

Thee more than mortal?

Byron.

A **DICTATOR** was first chosen during the Roman wars against the Latins. The consuls being unable to raise forces for the defence of the state, because the plebeians refused to enlist if they were not discharged from all the debts they had contracted with the patricians, the senate found it necessary to elect a new magistrate with absolute and uncontrollable power to take care of the state. The dictator remained in office for six months, after which he was again elected, if the affairs of the state seemed to be desperate; but if tranquillity was re-established, he generally laid down his power before the time was expired. He knew no superior in the republic, and even the laws were subjected to him. He was called dictator, quoniam dictis ejus parebat populus, because the people implicitly obeyed his command. He was named by the consul in the night *viva voce*, and his election was confirmed by the auguries. As his power was absolute, he could proclaim war, levy forces, conduct them against an enemy, and disband them at pleasure. He punished as he pleased, and from his decision there lay no appeal, at least till later times. He was preceded by twenty-four lictors with the fasces; during his administration, all other officers, except the tribunes of the people, were suspended, and he was the master of the republic. But amidst all this independence, he was not permitted to go beyond the borders of Italy; he was always obliged to march on foot in his expeditions, and he never could ride in difficult and laborious marches, without previously obtaining a formal leave from the people. He was chosen only when the state was in imminent danger from foreign enemies. or

intestine seditions. In the time of a pestilence, a dictator was sometimes elected; as also to hold the comitia, or to celebrate the public festivals, or drive a nail in the capitol; by which superstitious ceremony the Romans believed that a plague could be averted, or the progress of an enemy stopped. This office, so respectable and illustrious in the first ages of the republic, became odious by the perpetual usurpations of Sylla and Cæsar; and after the death of the latter, the Roman senate passed a decree which for ever forbade a dictator to exist in Rome. The dictator, as soon as elected, chose a subordinate officer, called his *magister equitum*, master of horse. This officer could do nothing without his express order. This subordination, however, was some time after removed; and during the second Punic war, the master of the horse was invested with a power equal to that of the dictator. A second dictator was also chosen for the election of magistrates at Rome after the battle of Cannæ. The dictatorship was originally confined to the patricians; but the plebeians were afterwards admitted to share it. Titus Lartius Flavus was the first dictator, A.U.C. 253. The institution has been revived in South America, in modern times, in the person of the illustrious Bolivar.

DICTION, *n. s.* Fr. *diction*; Lat. *dictio*. Style; language; expression.

There appears in every part of his *diction*, or expression, a kind of noble and bold purity. *Dryden*.

We are refined! and plain manners, plain dress, and plain *diction*, would as little do in life, as acorns, herbage, and the water of the neighbouring spring, would do at table. *Chesterfield*.

DIC'TIONARY, *n. s.* Fr. *dictionnaire*; Span. *diccionario*; Ital. *dittonario*; Lat. *diccionarium*, from *dictio*, *dico*, to speak. See **DICTION**. A book containing the words of a language, with their explanations; a lexicon; a nomenclature of words or things.

Some have delivered the polity of spirits, and left an account that they stand in awe of charms, spells, and conjurations; that they are afraid of letters and characters, notes and dashes, which, set together, do signify nothing; and not only in the *dictionary* of man, but in the subtler vocabulary of Satan.

Browne's Vulgar Errors.

Is it such a fault to translate simulacra images? I see what a good thing it is to have a good catholicic dictionary. *Stillingfleet*.

An army, or a parliament, is a collection of men; a *dictionary*, or nomenclature, is a collection of words. *Watts*.

It is not enough that a *dictionary* delights the critic, unless, at the same time, it instructs the learner. *Johnson. Plan of Dictionary.*

DICTYNNIA, in antiquity, feasts celebrated at Lacedæmon and in Crete, in honor of Diana, or of a nymph taken for her, who, having plunged herself into the sea, to escape the passion of Minos, was caught in fishermen's nets, *δικτυα*, whence the name.

DICTYS, a very ancient Cretan historian, who, serving under Idomeneus in the Trojan war, wrote the history of that expedition. Tzetzes tells us that Homer formed his *Iliad* upon the plan of that history. The Latin history of Dictys, which has come down to us, is spurious.

DIDACTICAL, *adj.* } Gr. *διδασκικός*. Pre-
DIDACT'ICK. } ceptive; giving pre-
cepts: thus a didactic poem is a poem that gives rules for some art; as the Georgics

The means used to this purpose are partly *didactical*, and partly *protreptical*; demonstrating the truth of the gospel, and then urging the professors of those truths to be steadfast in the faith, and to beware of infidelity. *Ward on Infidelity.*

But what shall I say to Junius, the grave, the solemn, the *didactic*! *Horne Tooke.*

DIDAPPER, *n. s.* From *dip*. A bird that dives into the water.

DIDASCAL'ICK, *adj.* Greek, *διδασκαλικός*. Preceptive; didactic; giving precepts in some art.

I found it necessary to form some story, and give a kind of body to the poem: under what species it may be comprehended, whether *didascalick* or heroic, I leave to the judgment of the critics. *Prior*.

DIDYDER, *v. a.* Teut. *diddern*; Ger. *zittern*. To quake with cold; to shiver. 'A provincial word,' says Skinner.

DIDELPHIS, in zoology, the opossum; a genus of quadrupeds belonging to the order of *feræ*, the characters of which are these:—They have ten fore-teeth in the upper jaw, and eight in the under one. The dog-teeth are long; the tongue is somewhat ciliated; and they have a pocket formed by a duplicature of the skin of the belly, in which the dugs are included. Kerr enumerates nineteen species; the chief are:—1. *D. brachyura*, the short-tailed opossum of Pennant, of a red color, has naked ears, and a short hairy tail, thick at the base, and gradually lessening to the extremity. The body is from three to five inches and a half long. The fur is very soft and glossy, and there is a beautiful red streak along the sides of the head and body. This species inhabits the woods of South America. The female has from nine to twelve young at a birth, which adhere to her teats as soon as born, and she has no pouch. This species agrees with the *Murina*, in the general form of the body. 2. *D. cancrivora*, the crab-eater of Buffon, or the Cayenne opossum, has a long slender face; ears erect, pointed, and short: the coat woolly, mixed with very coarse hairs, three inches long, of a dirty white from the roots to the middle; from thence to the ends, of a deep brown; sides and belly of a pale yellow; legs of a dusky brown; thumb on each foot distinct; on the toes of the fore-feet, and thumb of the hind, are nails, very long, taper, naked, and scaly. Length seventeen French inches; of the tail fifteen and a half. The subject measured was young. It inhabits Cayenne; is very active in climbing trees, on which it lives the whole day. In marshy places it feeds on crabs, which, when it cannot draw out of their holes with its feet, hooks them by means of its long tail. If the crab pinches its tail, the animal sets up a loud cry, resembling the human voice, which may be heard afar; but its common voice is a grunt like a young pig. It is well furnished with teeth, and will defend itself stoutly against dogs; brings forth four or five young, which it secures in some hollow tree. The natives eat

these animals, and say their flesh resembles a hare. They are easily tamed, and will then refuse no kind of food. 3. *D. cayopollin*, the Mexican opossum of Buffon and Pennant, is of an ash color on the head and upper parts of the body: the belly and legs are whitish: the tail is long and pretty thick, varied with brown and yellow; it is hairy near an inch from its origin, the rest naked: the length of the animal from nose to tail, about seven inches and a half; of the tail, more than eleven. It inhabits the mountains of Mexico, and lives in trees, where it brings forth its young: when in any fright, they embrace the parent closely. Her belly has no pouch. The tail is prehensile, and serves instead of a hand. 4. *D. gigantea*, the kangaroo. This animal has a small head, neck, and shoulders; the body increasing in thickness to the rump. The head is oblong, formed like that of a fan, and tapering from the eyes to the nose; end of the nose naked black; the upper lip divided. The nostrils are wide and open; the lower jaw is shorter than the upper; and the aperture of the mouth small: there are whiskers on both jaws, those on the upper longest; and strong hairs above and below the eyes. The eyes are not large; the irides are dusky; the pupil is of a bluish black. The ears are erect, oblongly ovated, rounded at the ends, and thin, covered with short hairs, four inches long. There are no canine teeth, but six broad cutting teeth in the upper jaw; two long lanceolated teeth in the lower, pointing forward; and four grinding teeth in each jaw, remote from the others. The belly is convex and great. The fore legs are very short, scarcely reaching to the nose, and useless for walking. The hind legs are almost as long as the body, and the thighs are very thick: on the fore feet are five toes, with long conic and strong claws; on the hind feet only three; the middle toe is very long and thick, like that of an ostrich; the two others are placed very distinct from it, and are small; the claws are short, thick, and blunt: the bottom of the feet, and hind part, black, naked, and tuberculated, as the animal rests often on them. The tail is very long, extending as far as the ears; thick at the base, tapering to a point. The scrotum is large and pendulous. The hair on the whole animal is soft, and of an ash color, lightest on the lower parts. It inhabits the western side of New Holland, and has as yet been discovered in no other part of the world. It lurks among the grass, and feeds on vegetables; it goes entirely on its hind legs, making use of the fore feet only for digging, or bringing its food to its mouth. The dung is like that of a deer. It is very timid; at the sight of men it flies from them by amazing leaps, springing over bushes seven or eight feet high, and going progressively from rock to rock. It carries its tail quite at right angles with its body when it is in motion; and when it alights, often looks back. 5. *D. murina*, the murine opossum, has the face and upper parts of the body of a tawny color; the belly of a yellowish white: the tail is slender, and covered with minute scales to the very rump: the length of the animal from nose to tail, about six inches and a half; the tail

of the same length; the female wants the false belly of the last; but on the lower part the skin forms on each side a fold, between which the teats are lodged. It inhabits the hot parts of South America; agrees with the others in its food, manners, and the prehensile power of its tail. Count de Buffon, from inspection, says the female has fourteen teats, and brings from ten to fourteen young ones at a time; they affix themselves to the teats as soon as they are born, and remain attached like inanimate things, till they attain growth and vigor to shift a little for themselves. 6. *D. opossum*, the sarigue of Buffon, or Molucca opossum of Pennant, has long, oval, and naked ears: the mouth is very wide; the lower side of the upper jaw, throat, and belly, is of a whitish ash color; the rest of the hair a cinereous brown, tipped with tawny, darkest on the back: the tail is as long as the body; near the base covered with hair; the rest naked; the claws are hooked. On the belly of the female is a pouch, in which the young shelter. Marcgrave found six young within the pouch. It has ten cutting teeth above, and eight below. Over each eye is an oblong white spot. The length of the animal from nose to tail is ten inches; and the tail exceeds the length of the head and body. Its whole figure is of a slender and elegant make. This species is found in great numbers in Aroe and Solor. It is called in the Indies pelandor Aroe, or the Aroe rabbit. They are reckoned very delicate eating, and are very common at the tables of the great, who rear the young in the same places in which they keep their rabbits. It inhabits also Surinam, and the hot parts of America. 7. *D. tridactyla*, Philip's opossum, or the kangaroo rat, is described as similar, both in the general shape of the body and the conformation of the legs, to the kangaroo; but the visage having a strong resemblance to that of the rat, and the color of the whole not ill resembling that animal, it has obtained the name of the kangaroo rat. It is an inhabitant of New Holland; and two of the species were seen alive at the exhibition of animals over Exeter 'Change in 1790, where one of them brought forth young. This species has two cutting teeth in front of the upper jaw, with three others on each side of them; and at a distance one false grinder, sharp at the edge, and channelled or fluted on the sides; and close to these, two true grinders: in the lower jaw there are two long cutting teeth, formed like those of the squirrel, with three grinders corresponding with those in the upper jaw. 8. *D. volans*, the flying opossum, a beautiful species, and clothed with fur of the most exquisite texture, is an inhabitant of New South Wales. In length, from the tip of the nose to the root of the tail, it is twenty inches; the tail itself is twenty-two inches; at the base, quite light, increasing gradually to black at the end: the ears are large and erect: the coat or fur is of a rich and most delicate texture, appearing on the upper parts of the body at first sight, of a glossy black; but on a nicer inspection, is found to be mixed with gray; the under parts are white, and on each hip is a tan-colored spot, nearly as big as a shilling; at this part the fur is thinnest. but at the

root of the tail it is so rich and close that the hide cannot be felt through it. The fur is also continued to the claws. On each side of the body is a broad flap or membrane (as in the flying squirrels), which is united to both the fore and hind legs. The jaws are furnished with teeth, placed as in some others of this genus: in the upper jaw forwards are four small cutting teeth, then two canine ones, and backwards five grinders: the under jaw has two long large cutting teeth and five grinders, with no intermediate canine ones, the space being quite vacant. The fore legs have five toes on each foot, with a claw on each; the hinder ones four toes, with claws (the three outside ones without any separation), and a thumb without a claw, enabling the animal to use the foot as a hand, as many of the opossum tribe are observed to do.

DIDEROT (Denys), a celebrated French writer, born at Langres in 1713. He was educated among the Jesuits, with a view to the church, and received the tonsure; but, disliking the profession, he was placed with a lawyer. This pursuit, however, he also abandoned, and thereby incurred his father's displeasure. He did not devote himself particularly to any one object of study; but his attention was at different times engrossed by geometry, metaphysics, and the belles lettres. In 1745 he published *Principles of Moral Philosophy*, 12mo. which first brought him into public notice as an author. Next year he published a piece, entitled *Peisces Philosophiques*, a work which gained him considerable fame, and was highly applauded by the partisans of the new philosophy, among whom he had now enrolled himself, and to the propagation of which he applied in the most zealous manner. He afterwards gave a second edition of this work, under the title of *Etrennes aux Esprits Forts*, which was eagerly read. About this period, having been concerned in a Medical Dictionary, it gave rise to the idea of the *Dictionnaire Encyclopédique*; and, in conjunction with his friend d'Alembert, the plan of this vast undertaking was formed. Diderot's share in this work was large, for, besides many articles in various departments of science, the whole of the arts and trades were furnished by him. Between the years 1751 and 1767, the first edition of the dictionary was completed; and although Diderot had labored almost twenty years upon it, he received but a small consideration. During this period, however, he composed various other works, particularly *A Letter on the Blind*, for the use of those who see; a work for which the author was confined six months at Vincennes, on account of the free sentiments it contained. About two years after, he published *A Letter on the Deaf and Dumb*, for the use of those who hear and see, 2 vols. 12mo. His next productions were two comedies, in prose, *Le Fils Naturel*, 1757; and *Le Pere de Famille*, 1758, which latter has been thought one of the best sentimental comedies that ever appeared on the French stage. Besides the above-mentioned works, Diderot wrote *A Panegyric on Richardson*; and *An Essay on the Life and Writings of Seneca*, which was published in 1779, and was the last work of his pen. At the conclusion of

the *Encyclopedie*, he was obliged to dispose of his library. The empress of Russia became a purchaser; the price which the philosopher received was 50,000 livres; while he was to be allowed the use of it during his life. Diderot was a member of the Academy of Sciences at Berlin. He died suddenly as he rose from table, July 31st, 1784. His works have been collected and published in two large octavo volumes.

DIDO, or ELISSA, a daughter of Belus, king of Tyre, who married Sichæus or Sicharbas her uncle, priest of Hercules. Her brother, Pygmalion, who succeeded Belus, murdered Sichæus, to get possession of his immense riches; and Dido, disconsolate for the loss of her husband, whom she tenderly loved, and by whom she was equally esteemed, set sail in quest of a settlement, with a number of Tyrians, to whom the cruelty of the tyrant had become odious. According to some writers, she threw into the sea the riches of her husband, which Pygmalion so greedily desired; and by that artifice compelled those ships to fly with her that had come by order of the tyrant to obtain the riches of Sichæus. But it is more probable that she carried the riches along with her, and by their influence prevailed on the Tyrian seamen to follow her. During her voyage, Dido visited the coast of Cyprus, where she obtained fifty wives for her Tyrian followers. A storm drove her fleet on the African coast, where she bought of the inhabitants as much land as could be surrounded by a bull's hide cut into thongs. Upon this land she built a citadel, called Byrsa; and the increase of population, and the rising commerce among her subjects, soon obliged her to enlarge her city, and the boundaries of her dominions. Her beauty, as well as the fame of her enterprise, gained her many admirers; and her subjects wished to compel her to marry Iarbas, king of Mauritania, who threatened them with a dreadful war. Dido begged three months to give her decisive answer; and during that time she erected a funeral pile, as if wishing by a solemn sacrifice to appease the manes of Sichæus, to whom she had promised eternal fidelity. When all was prepared, she stabbed herself on the pile in presence of her people; and by this uncommon action, obtained the name of Dido, 'valiant woman,' instead of Elissa. According to Virgil and Ovid, the death of Dido was caused by the sudden departure of Æneas, of whom she was deeply enamoured, and whom she could not obtain as a husband. This poetical fiction represents Æneas as living in the age of Dido, and introduces an anachronism of nearly 300 years. Dido left Phœnicia 247 years after the age of Æneas, and about A.A.C. 953. This chronological error proceeded not from the ignorance of the poets, but from a voluntary fiction. While Virgil describes, in a beautiful episode, the desperate love of Dido, and the submission of Æneas to the will of the gods, he traces the origin of the hatred between the republics of Rome and Carthage, and pretends that it was kindled by a more remote cause than the jealousy and rivalry of two flourishing empires. Dido, after her death, was honored as a deity by her subjects.

DIDOT (Ambrose), a celebrated French typographer, was born at Paris in 1730. His

father was a printer and bookseller, and, having received a classical education, he materially improved various branches of his business, and the trades connected with it. The manufacture of fine paper received his early attention, and he invented many machines and instruments in aid of stereotyping. His edition of the Delphin classics, and various other works, will long distinguish his name. One of his sons became a celebrated type-founder, another shared with his father the reputation of being one of the first printers in Europe. His anxiety for accuracy is said to have been so great, that at the age of seventy-three, he read five times over each sheet of his son's edition of Montaigne. He died at Paris in 1804.

DIDUCTION, *n. s.* Lat. *diductio*. Separation by withdrawing one part from the other.

He ought to shew what kind of strings they are which, though strongly fastened to the inside of the receiver and superficies of the bladder, must draw as forcibly one as another, in comparison of those that within the bladder draw so as to hinder the *diduction* of its sides. *Boyle.*

DIDUS, or *Dono*, in ornithology, a genus belonging to the order of gallinæ. The bill is contracted in the middle by two transverse rugæ; each mandible is inflected at the point; and the face is bare behind the eyes. Only one species, viz. the ineptus, is mentioned by Linnaeus: three are described by Buffon, viz.:—

1. *D. ineptus*, the dronte of Buffon, or hooded dodo, is somewhat bigger than a swan, and nearly three feet in length. The bill is strong, large, and hooked at the end; the gape stretches beyond the eyes: the color is a very pale blue, except the end of the upper mandible, which is yellowish, and a red spot on the bend of it; the end of the lower is blackish; the irides are white. The general color of the plumage is cinereous, and soft to the touch; the belly and thighs are whitish. The head is large, and seems as it were covered with a black hood or cowl. The wings are very short, and of a yellowish ash-color: the tail feathers are curled, stand up on the rump, and incline to yellow. The legs have four toes, three before and one behind; are very stout, short, and yellowish; the claws are black. It inhabits the islands of Mauritius and Bourbon in the Indian Ocean.

2. *D. Nazarenus*, the Nazarene dodo is bigger than a swan. The bill is a little bent downwards and large: instead of feathers, the whole is covered over with a black down; but the wings are feathered, and it has some frizzled ones upon the rump, which serve instead of a tail: the legs are long and scaly, and there are three toes on each foot. This was met with in the Isle of France, and described as above by Fr. Cauche; who adds, that the female lays only one egg, which is white, and as big as a penny loaf, and that there is always found with it a white stone of the size of a hen's egg; that it makes its nest of leaves and dry herbs, in the forests, on the ground; and that there is likewise found a gray stone in the gizzard of the young bird.

3. *D. solitarius*, the solitaire of Buffon, or solitary dodo, is a large bird, and the male is said to weigh sometimes forty-five pounds. The neck

is of a proportionable length, and the eye black and lively: the head is not crested, and the general color of the plumage is gray and brown mixed: it has scarce any tail, and the bastard wing swells out into a round knob: the wings are too short for flight; and the hind parts are rounded like a horse's rump, being clothed with feathers, which may be termed coverts. The females are covered with sometimes brown, and sometimes light yellow feathers, and appear very beautiful. The feathers on each side of the breast enlarge into two white tufts, somewhat resembling the bosom of a woman. Those of the thighs are rounded at the end like shells; and, according to Leguat, the bird has altogether a noble and elegant gait. It is an inhabitant of the Isle of Rodrigue, where it is not uncommon; but not met with in flocks, scarcely more than two being found together. It makes its nest in by-places, of the leaves of the palm, a foot and a half in thickness; and lays one egg, bigger than that of a goose. The male sits in his turn; and does not suffer any bird to approach within 200 yards of the spot while the hen is sitting, which is seven weeks. They are chased in the winter season, viz. from March to September, being then fat; and the young birds are much esteemed for the table.

DIDYMUS, of Alexandria, an ecclesiastical writer of the fourth century; who though he is said to have lost his sight at five years of age, when he had scarcely learned to read, yet applied so earnestly to study, that he was thought worthy to fill the chair in the famous divinity school at Alexandria. He was the author of a great number of works; but all we have now remaining are, a Latin Translation of his book upon the Holy Spirit, in the works of St. Jerome, who was the translator; Short Strictures on the Canonical Epistles; and a book against the Manichees.

DIDYNA'MIA; from *dic*, twice, and *δυναμις*, power; the name of the fourteenth class in Linnaeus's sexual method; consisting of plants with hermaphrodite flowers, which have four male organs, two long and two short. See *BOTANY*.

DIE, *v. n.* Goth. *deia*; Sax. *daedian*; Dan. and Swed. *do*; from Gr. *δειδω*, to fear, because death is generally an object of fear, says Minshew, ingeniously. To lose or depart from life; taking *by* before an instrument of death; *of* before a disease, or a positive cause of death; and *for* before a privative; to sink or faint; grow vapid; to vanish; perish; be doomed to hell.

For wher we lyuen, we lyeuen to the Lord, and whether we *dien*, we *dien* to the Lord, therefore wher we lyuen or *dien* we ben of the Lord.

Wiclif. Romayns. 14.

His heart *died* within him, and he became as a stone.

1 Samuel.

Except a corn of wheat fall into the ground, and *die*, it abideth alone; but if it *die*, it bringeth forth much fruit.

John.

If I *die* for it, as no less is threatened me, the king my old master must be relieved.

Shakspeare. King Lear

How now, my lord, why do you keep alone
Of sorriest fancies your companion making,
Using those thoughts which should indeed have *died*
With them they think on. *Id. Macbeth.*

This battle fares like to the morning's war,
When *dying* clouds contend with growing light. *Id.*

O, thou great power, in whom we move,
By whom we live, to whom we die,
Behold me through thy beams of love,
Whilst on this couch of tears I lie. *Wotton.*

So long as God shall live, so long shall the damned
die. *Hakevill on Providence.*

At first she startles, then she stands amazed;
At last with terror she from thence doth fly,
And loaths the watery glass wherein she gazed,
And shuns it still, although *for* thirst she *die.*

Davies.

Oh let me live my own, and *die* so too!
To live and *die* is all I have to do. *Denham.*

The dira only served to confirm him in his first
opinion, that it was his destiny to *die* in the ensuing
combat. *Dryden.*

If any sovereignty, on account of his property,
had been vested in Adam, which in truth there was
not, it would have *died* with him. *Locke.*

The young men acknowledged in love-letters, that
they *died* for Rebecca. *Tatler.*

He in the loaden vineyard *dies* for thirst. "
Addison.

Hipparchus being passionately fond of his own
wife, who was enamoured of Bathyllus, leaped and
died of his fall. *Id.*

The smaller stains and blemishes may *die* away and
disappear, amidst the brightness that surrounds them;
but a blot of a deeper nature casts a shade on all
the other beauties, and darkens the whole character.
Id. Spectator.

Trombling, hoping, lingering, flying,
Oh the pain the bliss of *dying*! *Pope.*

Talk not of life or ransom, he replies;
Patroclus dead, whoever meets me, *dies*:
In vain a single Trojan sues for grace;
But least the sons of Priam's hateful race;
Die then, my friend! what boots it to deplore?
The great, the good Patroclus is no more!
He, far thy better, was foredoomed to *die*;
And thou, dost thou, bewail mortality?

Pope's Homer.

They often come into the world clear, and with the
appearance of sound bodies; which, notwithstanding,
have been infected with disease, and have *died*
of it, or at least have been very infirm. *Wiseman.*

Thy body *dies*; but thou, *thou* must live for ever,
and thine eternity will take its tincture from the man-
ner of thy behaviour, and the habits thou contractest,
during this thy short co-partnership with flesh and
blood. *Mason.*

If the man who turnips cries,
Cry not when his father *dies*,
'Tis a proof that he had rather
Have a turnip than his father. *Dr. Johnson.*

'Tis solitude should teach us how to *die*;
It hath no flatterers; vanity can give
No hollow aid; alone—man with his God must strive.
Byron.

Like the figures on arras, that gloomily glare,
Stirred by the breath of the wintry air
So seen by the *dying* lamp's fitful light,
Lifeless, but life-like, and awful to sight. *Id.*

DIE, *n. s.* Fr. *dé*; Ital. Span. and Portug. *dádo*;
Lat. *tesseræ* (*dice*), from Gr. *τεσσαρά*, four, because
four sided. A small cube, marked on its faces
with numbers from one to six, which gamblers

throw in play. Hence hazard, chance; and gene-
rally any small cube.

Eftsoons his cruel hand Sir Guyon staid,
Tempering the passion with advisement slow,
And mustering might on enemy dismayed;
For the' equal *die* of war he well did know.

Faerie Queene.

I have set my life upon a cast,
And I will stand the hazard of the *die*.
Shakespeare. Richard III.

To put it to the chance and try,
I' the ballot of a box and *dye*,
Whether his money be his own,
And lose it, if he be o'erthrown. *Butler.*

Thine is the adventure, thine the victory:
Well has thy fortune turned the *die* for thee.

Dryden.

He knows which way the lot and the *die* shall fall,
as perfectly as if they were already cast. *South.*

Young creatures have learned spelling of words by
having them pasted upon little flat tablets or *dies*.

Watts.

DIE, *n. s.*, plural *dies*. The stamp used in
coinage.

Such variety of *dies* made use of by Wood in stamp-
ing his money, makes the discovery of counterfeits
more difficult. *Swift.*

DIEMEN (Anthony Van), governor of the
Dutch East India possessions, was born at Kui-
lenberg, of which place his father was burgo-
master. He went out to India in an inferior
station, but was employed there as accountant to
the government; and in 1625 became a member
of the supreme council. In 1631 he returned to
Holland as commander of the India fleet, but
the following year went out again as director
general; and not long after was appointed gover-
nor general, in which station he greatly extended
the Dutch interest and power in the east. In
1642 he sent Abel Tasman on a voyage to the
south, the consequence of which was the disco-
very of the island near the south coast of New
Holland, which Tasman named Van Diemen's
Land. He died in 1645.

DIEMEN'S (Van) LAND, an island of Aus-
traliasia, to the south of New Holland, from
which it is separated by Bass's Straits; having
its north coast in S. lat. 40° 41', and its southern
promontory in 43° 38' S. Its length is about
170 miles, and breadth about 154. It was first
seen by the Dutch commander, Tasman, in 1642,
who, mistaking it for a part of what was then
called the Great South Land, or New Holland,
gave it its present name, in honor of the Dutch
governor-general of Batavia, Anthony Van Die-
men. But the Dutch did not land here at this
time; Tasman's carpenter only swam through
the surf, 'with the prince's flag, and a post, to
set up as a memorial of their visit, to the poste-
rity of the inhabitants of this country.' Our
own enterprising navigators, Furneaux, Cook,
Hayes, and above all Mr. Bass, the companion
of captain Flinders, have far better pretensions
to be called its discoverers. Furneaux and
Cook anchored in Adventure Bay, and the latter
had some communication with the islanders;
subsequently, Blish and captain Cox put into
Adventure and Oyster Bay; and, in 1794, cap-
tain Hayes, of the Bombay marine, sailed up

what he named the Derwent River. But none of these navigators, nor yet the French, under d'Entrecasteaux, who discovered Storm Bay, supposed this to be an island; a fact which Mr. Bass first announced in the close of 1798, after tracing 600 miles of the coasts in this neighbourhood, in a small decked whale-boat. Together with captain Flinders, he also first visited Port Dalrymple.

The general appearance of this island is diversified by ranges of moderate hills and broad valleys, having a fine soil. The hills, the ridges of which 'form,' according to Mr. Evans, 'irregular circles, are for the greater part wooded; and, from their summits, are to be seen levels of good pasture-land, thinly interspersed with trees, the grass growing most luxuriantly. These beautiful plains are generally of the extent of 8000 or 10,000 acres; and this description is to be considered as common to the whole of the island.' The southern extremity terminates in a promontory, whose shape corresponds with, but whose height exceeds, that of the Table Mountain, of the Cape of Good Hope, and to which has been given the same name. The height of the Table, behind Hobart Town, is 3964 feet; that of the Cape 3315. The former is covered with snow for seven or eight months in the year. To the eastward of the Tamar is a considerable mountain, named Ben Lomond, whose height has not been ascertained; and another called Tasman's Peak. There is also a lofty mountain on the north-western part of the island, and a range of hills, called the Asbestos Hills, from the great quantity of that substance found in them. In the south-west part of the island, at the distance of about sixty miles to the north-west of Hobart Town, are the Western Mountains, whose height is computed to exceed 3000 feet. A beautiful lake, in the midst of the last-mentioned range, was visited, for the first time, in 1817, by Mr. Beaumont, the provost-marshal of the island. The principal branch of the Derwent is supposed to flow from it, and he describes it as about fifty miles in circumference, and having its banks moderately clothed with wood. About the middle of the island are salt-pan plains, on which are several small lakes, the waters of which are strongly impregnated with salt, and from which many tons of this article are annually extracted. On all the lakes and rivers are water-fowl in abundance.

The climate is described as exceedingly fine and congenial to Englishmen. 'It is in fact,' says the Quarterly Review, 'England with a finer sky, with less of its winter frosts and of its autumnal and spring moisture; all the fruits and vegetables of an English kitchen-garden are, without difficulty, raised here.' During summer the ordinary course of the weather is the alternate land and sea breeze, the former commencing early in the morning, and prevailing till noon, when it is succeeded by the latter, which usually lasts till after sun-set. Occasionally, however, a hot wind blows from the north or north-west, which, though resembling that of New South Wales, which there raises the thermometer to 106° in the shade, is greatly mitigated in Van Diemen's Land, by passing across Bass's Straits.

The autumn is generally a serene and delightful season, and the weather continues fine and open to the middle or end of May. In June, rain, sleet, and, in elevated situations, snow, set in, with strong southerly gales; but, even in winter, fine weather intervenes, and neither wind nor rains can be said to be periodical. Slight frosts occur at night, but neither ice nor snow remains throughout the day in the valleys and plains. In September the spring rapidly advances, and in October the weather resembles the 'faithless April of an English May.'

Van Diemen's Land has four principal ports, connected with its rivers: Storm Bay, terminating with the Derwent; Port Dalrymple, or the Tamar; Port Macquarie, and Port Davey. The river Derwent, besides its direct outlet into Storm Bay, has a lateral one into Storm Bay Passage, canal d'Entrecasteaux, a strait about thirty miles long; dividing the large island Bruny from the main land, and continuing from two to five miles wide, till it opens to the Southern Ocean, at Tasman's Head. This large inlet presents every where bold shores and deep water, perfectly sheltered from all winds, and forming a noble port. The Derwent, at its entrance, is two miles broad, and takes a northerly course, which varies in breadth from one to two miles, expanding, occasionally, into large basins equally deep and safe for the distance of twenty-five miles, to which point ships of 500 tons burden can navigate with ease. Here the river begins to freshen, and continues hence for the distance of forty miles, narrowing gradually, but affording a safe passage for vessels of fifty tons as far as New Norfolk, where a ridge of rocks forms a rapid, and abruptly terminates the navigation.

Twelve miles up the Derwent, on the western bank, stands Hobart Town, the capital of the island, picturesquely placed under the Table Mountain already named. Down its side trill several rivulets, one of the most considerable of which passes through the town, and discharges itself into Sullivan's Cove. The town is laid out on an extensive and regular plan, and has many handsome brick houses; but the majority of the buildings are of wood and plaster. There are very few that are not white-washed (for lime abounds in the neighbourhood), and glazed; and each has a paved garden. Several respectable public buildings are either completed or in progress; as a large church of brick and stone, a government-house, a county-jail, store and commissariat offices, a barrack for 100 men, and a small hospital, fenced in together; a battery, guard-house, magazine, &c. The farms of settlers extend principally along the banks of the Derwent, from the entrance of the river from Storm Bay Passage; for the shores of Van Diemen's Land have often a rich black mould close to the edge of the cliff. On the Hobart side, the most considerable group of settlements is New Town, about two miles from Hobart Town, and is watered by a fine stream. A little below Hobart Town, on the opposite bank, is the settlement of Clarence Plains.

To the eastward, upon the north and east sides of an extensive salt-water inlet, communi-

ating with what the settlers call Frederik Hendrik's Bay, is the more considerable settlement of Pittwater, the chief granary of the island. It is watered by two streams, and presents to view a vast extent of naturally clear ground. On the road from Hobart Town to Port Dalrymple, there is a plain extending, in one direction, for twenty miles, and clear land is frequent on that side of the island. To the north-west of Pittwater is the Coal River settlement. About twelve miles higher up are several farms; midway, stands Mount Direction, a remarkably picturesque hill. There are several scattered farms in this quarter, and on the east of the Derwent, as far as New Norfolk. Above the falls at this place the Derwent receives many rivulets; and a most beautiful and fertile country lies on its banks. All these settlements form together a county, under the name of Buckinghamshire, comprising about half the island, the other half being called the county of Cornwall.

The chief settlement near Port Dalrymple is Launceston, situated forty miles up the Tamar, at the confluence of two small streams, called the North and South Esk. This town is about 120 miles across the island from Hobart Town. The Tamar, not admitting large vessels more than seven or eight miles, George Town has been recently laid out near the mouth of the river, and governor Macquarie speaks of it being already in a flourishing state.

Port Macquarie and Port Davey are on the western coast. The channel inwards, of the former, is made between an island and the west head of entrance; it is very deep, but not more than thirty yards wide; the basin is navigable, but shoally for about eight miles, after which there is deep water. In its cliffs are veins of coal, and on its shores abundance of useful and valuable timber, particularly a sort of cedar called the Huon pine, much esteemed in the colony and in India, for its peculiar property of repelling insects. Port Davey is more to the southward, and is a spacious port, with an open entrance; but the country is rocky and barren, and the timber difficult of access. Into these two ports fall Gordon's and several other rivers.

The mineralogical productions of this island are iron, copper, slate, alum, limestone, asbestos, and basalt; together with crystal, cornelian, jasper, marble, and various petrifications. The first is most abundant towards Launceston, where entire mountains of this mineral, yielding twenty per cent. of ore, are said to be found. Its botany, and general natural history, resemble those of New South Wales. All kinds of European grain flourish; the harvests have never failed, it is said, for want of rain. 'Barley and oats produce most abundantly, and the wheat is superior to that which is grown in New South Wales; so greatly, indeed, that the difference of price which it bears in Sydney market will generally pay the expense of transport thither; and the average produce is generally greater, with the exception, perhaps, of the flood-lands on the banks of the Hawkesbury and Nepean. The natural grasses afford abundance of pasturage at all seasons of the year, and supersede the necessity of making provi-

sion for winter provender in the shape of hay or other artificial food; and, notwithstanding the greater severity of the winters, every description of stock attains a larger size here than in the neighbourhood of Port Jackson. The only advantage which the large island seems to enjoy over this, consists in the fineness of its wool, and the great excellence and variety of its fruits; particularly the grape, which promises to yield as good wine as any that is made in France, Spain, or Portugal. The temperature of Van Diemen's Land is not sufficiently high for the cultivation of the vine; but, by the introduction of the Merino sheep, the wool has been already so much improved, as to leave no doubt it will soon become a valuable article of export to the mother-country. Mr. Wentworth supposes, that twenty years hence, this single article will raise the colonists of New South Wales and Van Diemen's Land, to as high a pitch of happiness and prosperity as is enjoyed by any portion of his majesty's subjects in any quarter of the globe; and that they may be enabled to ship, for Great Britain, every year, at least to the value of a million sterling. The exports, at present, consist of cattle, sheep, wool, flour, corned meats, hams, tongues, dried fish, hides, tallow, barilla, bark for tanning leather, seal-skins and oil, whale-oil, and spars. The markets hitherto opened to the colonists are England, the Cape of Good Hope, Mauritius, and the East Indies. They have also sent considerable supplies of butcher's meat, corn, and potatoes to Port Jackson.'—*Quarterly Review*.

The wild animals are, the kangaroo, opossum, wombat, squirrel, kangaroo-cat, &c., and (rarely) the hyæna opossum. Horned cattle, and particularly sheep, thrive excellently well, the ewes generally dropping lambs twice a year. Goats and pigs run wild. Few indigenous plants were found here, but nearly all the European fruits have cultivated with success.

Van Diemen's Land has a lieutenant-governor and judge-advocate of its own, commissioned by his majesty; but it has not obtained the benefit of a separate criminal jurisdiction, so that prisoners for trial, prosecutors and witnesses, are compelled to make the voyage to Port Jackson. Its civil jurisdiction is confined to causes of £50 value; but the judge of the supreme court of New South Wales has lately made a circuit to the island for the trial of causes of greater value. The colony is peopled by free settlers and convicts from England as well as from New South Wales.

The remaining natives are few in number considering the extent of country which they yet hold free, and in that state of extreme wretchedness which probably forbids their increase. They are, at present, hostilely inclined to Europeans; a circumstance ascribed to a fatal quarrel at the first settling, in which several of them were killed by the rash command of a young officer, and the memory of which has been kept alive by occasional encounters in the interior. The stock-keepers of the settlers are often assaulted by them with spears and stones; but a more friendly intercourse has been effected on the Western Coasts.

The following Tables show:—1. The progress of POPULATION in this Colony, from 1818 to 1820 (omitting the military). 2. The IMPORTS and EXPORTS of the capital at the same period.

TABLE I.—ABSTRACT OF THE GENERAL MUSTER BOOKS OF VAN DIEMAN'S LAND, IN OCTOBER 1818 AND 1820.

DIEPHOLT, or **DIEPHOLZ**, a county of Westphalia, belonging to Hanover, bounded on the north by the county of Hoya, on the east by Minden, on the south by the bishopric of Osnaburg, and on the west by Munster. It is about twenty-four miles long, and twelve broad; and is full of briers, underwood, and morasses; except along the Dümme Lake. It contains four towns and about 16,000 inhabitants. The people are Lutherans, and subsist chiefly by feeding cattle, which they sell to Holland and the countries bordering on the Rhine, along with coarse woollens and linens. This territory was erected into a county by Maximilian I. In 1585 it passed to the duchy of Zell, and from them to the electorate of Hanover. The inhabitants rear cattle and flax.

DIEPPE, a town of Normandy, in the department of the Lower Seine, with a good harbour, formed by the mouth of the river Arques. It has an old castle westward, and two piers. Packet boats pass between this port and Brighton constantly. They are about sixty-six miles distant. The church of St. James is a very fine structure, and there is a tower from which, in fine weather, the coast of England may be seen. The principal trade consists in fish, ivory toys, and laces. It was bombarded, and great part of it burnt by the English, in 1694. Here is a navigation school very well conducted. It contains about 20,000 inhabitants; and lies thirty-four miles north of Rouen, and 100 north-west of Paris.

DIES MARCIÆ was the day of congress or meeting of the English and Scotch, annually appointed to be held on the marches or borders, in order to adjust all differences between them.

DIESIS, in music, is the division of a tone less than a semitone; or an interval consisting of a less or imperfect semitone. Diesis is the smallest and softest change or inflexion of the voice imaginable: it is called a faint, expressed thus (X) by a St. Andrew's cross or saltire.

DIESPITER, in antiquity, a name given to Jupiter; and signifying *dei pater*, father of the day.

DIET, *n. s.* From *dies*, an appointed day, Skinner; from *dict*, an old German word signifying a multitude.—Junius. An assembly of princes or estates. See the article.

An emperor in title without territory, who can ordain nothing of importance but by a *diet*, or assembly of the estates of many free princes, ecclesiastical and temporal.

Raleigh.

DIET, *v. a., v. n. & n. s.* Fr. Germ. and Dut.

DIETARY, *adj.* } *dicte*; Span. Port.

DI'ETER, *n. s.* } and Ital. *dicta*;

DI'ETICAL, *adj.* } from Gr. *diaeta*, the

DI'ET-DRINK, *n. s.* } manner of living.

To feed or live by rule; to give food to; as a neuter verb, to feed; eat: diet as a substantive is food, generally, or allowance of food. Dietary and dietetic, pertaining to diet.

For his diet, there was a continual *diet* given him by the king.

Jeremish.

She *diets* him with fasting every day,

The swelling of his wounds to mitigate,

And made him pray both early and eke late.

Faerie Queene.

I'm partly led to *diet* my revenge,
For that I do suspect the lusty Moor
Hath leapt into my seat. *Shakspeare. Othello.*

When we've stuffed
These pipes, and these conveyances of blood,
With wine and feeding, we have suppler souls,
Than in our priestlike fasts; therefore I'll watch him
Till he be *dicted* to my request. *Id. Coriolanus.*

Shew a while like fearful war,
To *diet* rank minds sick of happiness,
And purge the obstructions which begin to stop
Our very veins of life. *Id. Henry IV.*

He sauced our broth as Juno had been sick,
And he her *dieter*. *Id. Cymbeline.*

I commend rather some *diet* for certain seasons,
than frequent use of physick; for these *diets* alter the
body more, and trouble it less. *Bacon.*

He received no other counsel than to refrain from
cold drink, which was but a *dietetical* caution, and such
as culinary prescription might have afforded.

Browne's Vulgar Errors.

Time may come, when men
With angels may participate; and find
No inconvenient *dict*, nor too light fare. *Milton.*

Henceforth my early care
Shall tend thee, and the fertile burden ease;
Till, *dicted* by thee, I grow mature
In knowledge as the gods, who all things know. *Id.*

No part of *diet*, in any season, is so healthful, so
natural, and so agreeable to the stomach, as good and
well-ripened fruits. *Temple.*

Nature delights in the most plain and simple *diet*.
Addison.

We have lived upon expedients, of which no
country had less occasion; we have *dicted* a healthy
body into a consumption, by plying it with physick in-
stead of food. *Swift.*

This book of Chyenne's became the subject of con-
versation, and produced even sects in the *dictetick* phi-
losophy. *Arbuthnot on Aliments. Pref.*

Milk appears to be a proper *diet* for human bodies,
where acrimony is to be purged or avoided; but not
where the canals are obstructed, it being void of all
saline quality. *Id.*

As an article of *diet*, salt seems to act simply as a
stimulus, not containing any nourishment, and is the
only fossil substance which the caprice of mankind
has yet taken into their stomachs along with their
food. *Darwin.*

DIET, in medicine, according to some, com-
prehends the whole regimen of life, with regard
to air, meat, drink, sleep, watching, motion, rest,
the passions, retentions and excretions. Others
restrict the term to eating and drinking alone.
See Food. The natural constitution of the body
of man is such, that it can easily bear some
changes and irregularities without much injury.
Had it been otherwise, we should be almost con-
stantly put out of order by slight causes. This
advantage arises from those wonderful commu-
nications of the inward parts, whereby, when one
part is affected, another comes immediately to
its relief. Thus, when the body is too full, na-
ture causes evacuations through some of the out-
lets: and for this reason, diseases from absolute
inanition are generally more dangerous than
from repletion, unless the latter be excessive:
because we can more expeditiously diminish than
increase the juices of the body. Upon the same

account, though temperance be beneficial to all men, the ancient physicians advised persons in good health, now and then to eat and drink more plentifully than usual. But of the two, intemperance in drinking is safer than in eating. If a man be obliged to fast, he ought to avoid all laborious work. From satiety it is not proper to pass directly to sharp hunger, nor from hunger to satiety: neither will it be safe to indulge absolute rest immediately after excessive labor, nor suddenly to fall to work after long idleness. In a word, all changes in the way of living should be made by degrees. The softer and milder kinds of aliment are proper for children, and for youth the stronger. Old people ought to lessen the quantity of their food, and increase that of their drink: but some allowance is to be made for custom, especially in cold climates like ours: for as in these the appetite is keener, so is the digestion better performed. The article ALIMENT presents a regular table of all the ordinary articles of human food, or diet: in that of DIGESTION more remarks on this subject occur.

DIET, GENERAL, OF THE GERMAN EMPIRE, was usually held at Ratisbon. It consisted of the emperor, the nine electors, and the ecclesiastical princes; viz. the archbishops, bishops, abbots, and abbesses; the secular princes, being dukes, marquises, counts, viscounts, or barons; and the representatives of the imperial cities. It met on the emperor's summons, but any of the princes might send deputies. Peace and war, the levying of general taxes, and the assessment of different states, were among the principal subjects submitted to the deliberation of the diet. But it required the consent of the emperor to give their determinations the force of laws. The imperial dignity, though not hereditary, was possessed for several ages, without interruption, by the house of Austria. The Confederation of the Rhine, during the domination of Buonaparte, completely dissolved this ancient system, and compelled the house of Austria to resign the style and title of emperor of Germany, which it has not since resumed.

At the congress of Vienna, however, the constitution of Germany was so far remodelled on the former plan, that a new diet was created to watch over the interests of what was now called the Germanic Confederation. By this confederation, although the title of elector ceases, all the states have a vote in the diet according to their respective territories, and the population. The emperor of Austria has no other preponderance

than that which arises from the extent of his dominions within the limits of the confederacy. Two new kingdoms were created in the north, and two in the south. These were Hanover and Saxony, in the former; and Bavaria and Wirtemberg, in the latter.

The great powers of this new confederation are Austria, Prussia, Hanover, Saxony, Bavaria, and Wirtemberg. In the diet, each member of the confederacy has an equal vote. The members, as constituted by the act of congress, are seventeen, composed of the following separate or combined powers:—

1. Austria.
2. Prussia.
3. Bavaria.
4. Saxony, kingdom (not the duchies).
5. Hanover.
6. Wirtemberg.
7. Baden.
8. The electorate of Hesse.
9. The grand duchy of Hesse.
10. Denmark for Holstein and Lauenburg.
11. The Netherlands for Luxemburg.
12. The grand ducal, and the ducal houses of Saxony.
13. Brunswick and Nassau.
14. Mecklenburg, Schwerin and Strelitz.
15. Oldenburg, Anhalt, and Schwartzburg.
16. Hohenzollern, Lichtenstein, Reuss, Schaumburg-Lippe, Lippe, and Waldeck.
17. The free towns of Lubeck, Frankfort, Bremen, and Hamburg.

This list therefore exhibits the present political division of Germany, and the states included under the same number vote in the diet conjointly. The deliberations of this body embrace all ordinary discussions; but when general laws are to be enacted, or changes made in the *fundamental* rules or principles of the confederation, the diet forms itself into a general assembly, in which each state votes separately. But as it would evidently have been an unequal partition of power to have given each an equal voice in this assembly, the number of votes possessed by the several states are regulated by their territorial extent and importance. For this purpose, the whole of the confederacy is divided into four classes, which, with the population of each state, according to the official returns of 1818, and the number of votes it possesses in the general assembly, are as follow, viz:—

FIRST CLASS.

States.	Population.	Votes.
1. Austria (for her possessions within the limits of the confederacy)	9,482,227—	4
2. Prussia (exclusive of her Polish territories)	7,923,439—	4
3. Saxony, kingdom of	1,200,000—	4
4. Bavaria, do.	3,560,000—	4
5. Hanover, do.	1,305,350—	4
6. Wirtemberg, do.	1,395,463—	4

SECOND CLASS.

1. Baden, grand duchy of	1,000,000—	3
2. Hesse-Cassel, electorate of	540,000—	3
3. Hesse-Darmstadt, grand duchy of	619,500—	3
4. Holstein and Lauenburg, duchies of	360,000—	3
5. Luxemburg, grand duchy of	214,058—	3

THIRD CLASS.

States.	Population.	Votes.
1. Brunswick, duchy of	209,600—	2
2. Mecklenburg-Schwerin, grand duchy of	358,000—	2
3. Nassau, duchy of	302,767—	2

FOURTH CLASS.

1. Saxe-Weimar, grand duchy of	201,000—	1
2. Saxe-Gotha, duchy of	185,682—	1
3. Saxe-Coburg	80,012—	1
4. Saxe-Meiningen	54,400—	1
5. Saxe-Hildburghausen	27,706—	1
6. Mecklenburg-Strelitz, grand duchy of	71,769—	1
7. Oldenburg	217,769—	1
8. Anhalt-Dessau, duchy of	52,947—	1
9. Anhalt-Bernburg	37,046—	
10. Anhalt-Köthen	32,454—	
11. Schwartzburg-Sondershausen, principality of	45,11—	
12. Schwartzburg-Rudolstadt	53,937—	1
13. Hohenzollern-Hechingen	14,500—	1
14. Lichtenstein	5,546—	1
15. Hohenzollern-Sigmaringen	35,360—	1
16. Waldeck, county of	51,877—	1
17. Reuss (Elder Branch), principality of	22,255—	
18. Reuss (Younger Branch)	52,205—	
19. Hesse-Homburg	20,000—	
20. Schaumburg-Lippe	24,000—	
21. Lippe-Detmold	69,062—	
22. Lubeck, the free town of	40,650—	1
23. Frankfort	47,850—	1
24. Bremen	48,500—	1
25. Hamburg	129,800—	1

30,091,489— 69

This federative body keeps up a military armament, composed in time of peace of 120,000 men, including 96,000 infantry, 18,000 cavalry, and 6000 artillery. In war the contingent is to be increased; the forces being one in every hundred of the population, which, according to the preceding scale, would be 301,000. A reserve of one in every 200 is also to be maintained; which would therefore at present amount to 150,000 men. Of this army

Austria furnishes	94,822
Prussia	79,234
Bavaria	35,600
Wurtemberg	23,955
Hanover	13,054
Saxony, kingdom of	12,000
Baden	10,000
The other states :	32,335

301,000

The pecuniary contributions of the several members of the confederacy have also been voted for five years; after which the proportions are subject to revision. The fortresses that are considered as essential to the defence of the dominions, belong in common to the confederation, and are to be repaired and supported at the general expense. Germersheim, as commanding the passage of the Rhine, is to be made a place of great strength; as well as Homburg and Ulm. For completing the fortifications of the last of these places, the sum of £800,000 was voted by the diet in 1818. In time of war, a generalis-

simo is to be chosen by the diet, and who is to be accountable to them alone for his conduct.

DIETRICH, or **DIERICH** (Christian William Ernest), a modern artist, born at Weimar in 1712. He resided chiefly at Dresden, where he was professor of the Academy of Arts. He succeeded both in history and landscape, and painted above 150 small subjects, which he engraved in the style of Salvator Rosa. Some of these etchings are exceedingly rare.

DIEU ET MON DROIT, Fr. i. e. God and my right. The motto of the arms of England, first assumed by Richard I. to intimate that he did not hold his empire in vassalage of any mortal. It was afterwards taken up by Edward III. and was continued without interruption to the time of king William III. who used the motto *Je maintiendray*, though the former was still retained upon the great seal. After him queen Anne used the motto *Semper eadem*, which had been before used by queen Elizabeth; but ever since queen Anne, *Dieu et mon droit* has been the royal motto.

DIEU ET SON ACTE, in common law, a maxim that the act of God shall hurt no man: so that if a house be beat down by a tempest, the lessee shall not only be free from an action of waste, but also have a right to take the timber to rebuild the house.

DIEU, ISLE DE, an island in the Atlantic, near the coast of France, about seven miles long, and two wide, fifteen miles S.S.W. of Noirmoutier. Long. 15° 17' E. of Ferro, lat. 46° 42' N.

DIEZ (Juan or John Martin), better known as the Empecinado of modern Spanish guerilla warfare, was the son of a peasant of Valladolid,

(Old Castile, and born in 1775. Having twice before served in the army, as a private dragoon, he first distinguished himself on the invasion of Spain by Buonaparte in 1808, when placing himself at the head of a party of four or five of his neighbours, he commenced killing the French couriers, seizing their horses, arms, &c. After the massacre committed by the French army at Madrid, Martin openly defied and harassed them in various directions; and besetting the roads, seized their convoys, and exceedingly harassed their small parties. He and his twelve principal comrades are said to have slaughtered 600 Frenchmen in three months. He at first neither gave nor expected quarter; but when at the head of about fifty men, abandoned this mode of warfare, but continued to signalise himself by great personal efforts. In one affair, being opposed to the commander of an enemy's party, the Empecinado received a sword-thrust through his arm into his side; when, enraged by the pain, he seized his adversary by the neck, dragged him from his horse, and fell with him to the ground, keeping himself uppermost. The struggle was violent, until both were disarmed, when, as the Frenchman refused to surrender, the Empecinado holding him down with one hand, snatched up a stone with the other and dashed his brain's out. In September, 1809, Martin commanded 170 men, mounted, and placed them under the orders of the junta of Guadalaxara. He afterwards received the rank of a brigadier general of cavalry, but very unwillingly exchanged his peasant's dress for uniform.

When the duke of Wellington entered Madrid in triumph, Diez attended him, and received his commands to join the army in the neighbourhood of Tortosa, at the head of 4850 men. After the peace he addressed a letter to king Ferdinand, dated February 13th, 1815, and evincing considerable powers of mind. It was published in 1823, in 'The Military Exploits of D. Juan Martin Diez, the Empecinado, who first commanded, and then organised the System of Guerrilla Warfare in Spain.' Yet he could write, it is said, no more than his name. On the establishment of the present wretched system of government in Spain the Empecinado became obnoxious to the ruling powers, and, notwithstanding all his former services, was seized on a charge of conspiracy, tried, and executed at Rueditz, the 19th of August, 1825.

DIF, the name of an instrument in music among the Arabs, serving chiefly to beat time to the voice; it is a hoop, sometimes with pieces of brass fixed to it to make a ginging, over which a piece of parchment is distended. It is beat with the fingers, and is the true tympanum of the ancients.

DIFFARRICATION, in Roman antiquity, a ceremony whereby the divorce of their priests was solemnised. The word comes from the preposition *dis*, used in composition for division, and *farreatio*, a ceremony with wheat, of far, wheat. Diffarreation was properly the dissolving of marriages contracted by confarreation, which were those of the pontifices or priests. Festus says, it was performed with a wheaten cake. Venerus will have confarreation and

diffarreation to be the same thing, contrary to the obvious derivation of the words.

DIFFER, *v. n.*

DIFFERENCE, *v. a. & n. s.*

DIFFERENT, *adj.*

DIFFERENTIAL,

DIFFERENTLY, *adv.*

DIFFERINGLY, *adv.*

French *différer*;

Span. *deferenciar*;

Ital. *differire*, Lat.

differre, from *dis*

different, and *ferre*,

to scatter. To be

distinguished from; to contend; to be at variance. To difference is to make things to differ; a difference, the diversity or contrariety made: hence a dispute; quarrel; and the evidence or ground of distinction, or quarrel. Differential is a scientific term explained below. The two adverbs seem synonymous.

Where the faith of the holy church is one, a difference between customs of the church doth no harm. Hooker.

You shall see great difference betwixt our Bohemia and your Sicilia. Shakspeare. *Winter's Tale*.

Oh the strange difference of man and man!

To thee a woman's services are due;

My soul usurps my body. Id. *King Lear*.

What was the difference?

— It was a contention in publick. Id. *Cymbeline*.

This nobility, or difference from the vulgar, was not in the beginning given to the succession of blood, but to the succession of virtue. Raleigh.

A man of judgment shall sometimes hear ignorant men differ, and know well within himself that those which so differ mean one thing, and yet they themselves never agree. Bacon.

If the pipe be a little wet on the inside, it will make a differing sound from the same pipe dry. Bacon.

This is notoriously known in some differences of brake or fern. Browne's *Vulgar Errors*.

Opiniators naturally differ

From other men; as wooden legs are stiffer

Than those of pliant joints, to yield and bow,

Which way so'er they are designed to go.

Butler.

Such protuberant and concave parts of a surface may remit the light so differing, as to vary a colour.

Boyle.

Nothing could have fallen out more unluckily than that there should be such differences among them about that which they pretend to be the only means of ending differences. Tillotson.

Most are apt to seek all the differences of letters in those articulating motions; whereas several combinations of letters are framed by the very same motions of those organs which are commonly observed, and are differed by other concurrent causes. Holder.

Thus, born, alike, from virtue first began

The difference that distinguished man from man;

He claimed no title from descent of blood;

But that, which made him noble, made him good.

Dryden.

Though it be useful to discern every variety that is to be found in nature, yet it is not convenient to consider every difference that is in things, and divide them into distinct classes under every such difference. Locke.

Grass differenceth a civil and well cultivated region from a barren and desolate wilderness. Ray.

In things purely speculative, as these are, and no ingredients of our faith, it is free to differ from one another in our opinions and sentiments.

Bacon's *Theory*.

The world's a wood, in which all lose their way,
Though by a *different* path each goes astray.
Buckingham.

There are certain measures to be kept, which may
leave a tendency rather to gain than to irritate those
who *differ* with you in their sentiments.
Addison's Freeholder.

He may consider how *differently* he is affected by
the same thought, which presents itself in a great
writer, from what he is when he finds it delivered by
an ordinary genius. *Id.*

By *different* methods *different* men excel;
But where is he that can do all things well?
Churchill.

Plutarch, discoursing of the effects of the air on the
minds of men, observes, that the inhabitants of the
Piræum possessed very *different* tempers from those
of the higher town in Athens, which was distant about
four miles from the former: but I believe no one at-
tributes the *difference* of manners in Wapping and
St. James's to a *difference* of air or climate. *Hume.*

The *difference* of natural tempers seems to be
chiefly owing to the *different* degrees of influence the
several passions have upon the mind. *Mason.*

The powers of the letters, when they were applied
to a new language, must have been vague and un-
settled, and therefore *different* hands would exhibit
the same sound by *different* combinations.
Johnson. Preface to Dictionary.

Differential method, is applied to the doctrine of
infinitesimals, or infinitely small quantities, called the
arithmetick of fluxions. It consists in descending
from whole quantities to their infinitely small *differ-
ences*, and comparing together these infinitely small
differences, of what kind soever they be: and from
thence it takes the name of the *differential* calculus, or
analysis of infinitesimals. *Harris.*

DIFFERENCE, in heraldry, a term given to the
figures added to coats of arms, serving to distin-
guish one family from another; and to show how
distant younger branches are from the elder or
principal branch.

DIFFERENCE, in logic, an essential attribute
belonging to some species, and not found in the
genus; being the idea that defines the species.
Thus, body and spirit are the two species of sub-
stance, which, in their ideas include something
more than is included in the idea of substance.
In body, for instance, is found impenetrability,
and extension; in spirit, a power of thinking and
reasoning; so that the difference of body is im-
penetrable extension, and the difference of spirit
is cogitation.

DIFFERENCE, in mathematics, is the remainder,
when one number or quantity is subtracted from
another.

DIFFERENTIAL, in the higher geometry, is
an infinitely small quantity, or a particle of quan-
tity so small as to be less than any assignable
one. It is called a differential, or differential
quantity, because frequently considered as the
difference of two quantities; and, as such, is the
foundation of the differential calculus. Sir Isaac
Newton, and the English, call it a moment, as
being considered as the momentary increase of
quantity. See CALCULUS.

DIFFICILE, *adj.* } Fr. *difficile*; Span.
DIFFICILENESS, *n. s.* } *difficil*; Ital. and Lat.
DIFFICULT, *adj.* } *difficile*, *de*, privative,
DIFFICULTLY, *adv.* } and *facilis*, easy. Hard;
DIFFICULTY, *n. s.* } not easy; not obvious;
distressing; scrupulous. Difficile and difficult
are synonymous adjectives; the former being
common in our old writers. The synonymous
substantives are difficulty and diffidence.

It is *difficult* in the eyes of this people.

Zachar.
The cardinal finding the pope *difficil* in granting
the dispensation, doth use it as a principal argument,
concerning the king's merit, that he had touched
none of those deniers which had been levied by popes
in England. *Bacon.*

There be that in their nature do not affect the good
of others: the lighter sort of malignity turneth but to
a crossness or frowardness, or aptness to oppose, or
difficilness, or the like; but the deeper sort to envy
and mere mischief. *Id.*

The way he came, not having marked, return
Was *difficult*, by human steps untrod. *Milton.*

Latin was not more *difficil*
Than to a blackbird 'tis to whistle. *Hudibras.*
Some write in Hebrew, some in Greek,
And some, more wise, in Arabic,
To avoid the critic, and the expense
Of *difficult*, wit, and sense. *Id.*

A man, who has always indulged himself in the
full enjoyment of his station, will *difficultly* be per-
suaded to think any methods unjust that offer to con-
tinue it. *Rogers's Sermons.*

They mistake *difficulties* for impossibilities; a per-
nicious mistake certainly; and the more pernicious,
for that men are seldom convinced of it, till their
convictions do them no good. *South.*

Men should consider, that raising *difficulties* con-
cerning the mysteries in religion, cannot make them
more wise, learned, or virtuous. *Swift.*

It is very *difficult* to praise a man without putting
him out of countenance. *Addison.*

If, therefore, we would have the benefit of seeing
our language more generally known among mankind,
we should endeavour to remove all the *difficulties*,
however small, that discourage the learning of it.
But I am sorry to observe, that of late years those
difficulties, instead of being diminished, have been
augmented. *Franklin.*

Some of the cases which occurred about this time
are of such a kind, that it is *difficult* to imagine by
what casuistry the jury could have been reconciled to
their verdict. *Sir S. Romilly.*

Nothing so *difficult* as a beginning

In poetry, unless perhaps the end;

For oftentimes when Pegasus seems winning

The race, he sprains a wing, and down we tend,

Like Lucifer, when hurled from heaven for sinning.
Byron.

DIFFIDE, *v. n.* } Fr. *désier*; from Lat.
DIFFIDENCE, *n. s.* } *diffido*; *de*, privative,
DIFFIDENT, *adj.* } and *fide*, confidence;
trust. To distrust; have no reliance on: diffi-
dence, the more common word, is therefore,
doubt; distrust; whether applied to ourselves or
others.

No man almost thought himself secure, and men
durst scarce commune or talk one with another; but
there was a general *diffidence* every where.

Bacon's Henr. VII.

I am not so confident of my own sufficiency, as not willingly to admit the counsel of others; but yet I am not so *diffident* of myself, as brutishly to submit to any man's dictates. *King Charles.*

You have brought scandal
To Israel, *diffidence* of God, and doubt
In feeble hearts, propense enough before
To waver. *Milton's Agonistes.*

Be not *diffident*
Of wisdom; she deserts thee not, if thou
Dismiss not her, when most thou need'st her nigh. *Milton.*

If the evidence of its being, or that this is its true sense, be only on probable proofs, our assent can reach no higher than an assurance or *diffidence* arising from the more or less apparent probability of the proofs. *Locke.*

With hope and fear
The woman did the new solution hear:
The man *diffides* in his own augury,
And doubts the gods. *Dryden.*

The generality of mankind, either out of laziness, or *diffidence* of their being able to judge right in points that are not very clear, are apt rather to take things upon trust, than to give themselves the trouble to examine whether they be true or no. *Buckingham.*

Be silent always when you doubt your sense;
And speak, though sure, with seeming *diffidence*. *Pope.*

Distress makes the humble heart *diffident*. *Clarissa.*

Pliny speaks of the Seres, the same people with the Chinese, as being very shy and *diffident* in their manner of dealing. *Arbutnot.*

My memory of past errors makes me *diffident* for the future. *Hume on the Human Understanding.*

DIFFIND, *v. a.* Lat. *diffindo*. To cleave in two; to split.

DIFFISSION, *n. s.* Lat. *diffissio*. The act of cleaving or splitting.

DIFFLATION, *n. s.* Lat. *diffilare*. The act of scattering with a blast of wind.

DIFFLUENCE, or } Lat. *diffluo*; *dis*, *diffuency*, *n. s.* } versely, and *fluo*,
 } slow; Gr. *βλωω*. To
DIFFLUENT, *adj.* } flow diversely. The flowing away on all sides, as a fluid.

Ice is water congealed by the frigidity of the air, whereby it acquireth no new form, but rather a consistence or determination of its *diffluency*; and admitteth not its essence, but condition of fluidity.

Broune's Vulgar Errors.

DIFFORM, *adj.* } From Lat. *forma*. Con-
DIFFORMITY, *n. s.* } trary to uniform; having
parts of different structure; dissimilar; unlike; as a difform flower, of which the leaves are unlike each other.

While they murmur against the present disposure of things, they desire in them a *difformity* from the primitive rule, and the idea of that mind that formed all things best. *Broune's Vulgar Errors.*

The unequal refractions of *difform* rays proceed not from any contingent irregularities; such as are veins, an uneven polish, or fortuitous position of the pores of glass. *Newton.*

DIFFRA'NCHEMENT, *n. s.* Fr. *franchise*. The act of taking away the privileges of a city.

DIFFUS'E, *v. a. & adj.*

DIFFUSE'D, *part. adj.*

DIFFU'SEDLY, *adv.*

DIFFU'SEDNESS, *n. s.*

DIFFU'SION,

DIFFU'SIVE, *adj.*

DIFFU'SIVELY, *adv.*

diffuse, as an adjective, therefore, sometimes means obscure of meaning; difficult to gather; also extended. Diffusion is a state of dispersion; copiousness; exuberance.

He grows like savages,
To swearing and stern looks, *diffused* attire,
And every thing that seems unnatural.

Shakspeare. Henry V.

Whereas all bodies act either by communication of their natures, or by the impressions and signatures of their motions, the *diffusion* of species visible seemeth to participate more of the former operation, and the species audible of the latter. *Bacon's Natural History.*

Wisdom had ordained

Good out of evil to create; instead
Of spirits malign, a better race to bring
Into their vacant room, and thence *diffuse*
His good to worlds, and ages, infinite. *Milton.*

A sheet of very well sleeked marble paper did not cast distinct colours upon the wall, nor throw its light with an equal *diffusion*; but threw its beams, unstained and bright, to this and that part of the wall.

Boyle on Colours.

A chief renowned in war,

Whose race shall bear aloft the Latian name,
And through the conquered world *diffuse* our fame. *Dryden.*

The stars, no longer overlaid with weight,
Exert their heads from underneath the mass,
And upward shoot, and kindle as they pass,
And with *diffusive* light adorn their heavenly place. *Id.*

No man is of so general and *diffusive* a lust, as to prosecute his amours all the world over. *South.*

They are not agreed among themselves where infallibility is seated; whether in the pope alone, or a council alone, or in both together, or in the *diffusive* body of Christians. *Tillotson.*

All liquid bodies are *diffusive*; for their parts being in motion, have no connexion, but glide and fall off any way. *Burnet's Theory of the Earth.*

The fault that I find with a modern legend is its *diffuseness*; you have sometimes the whole side of a medal overrun with it. *Addison on Medals.*

The wisdom of the ignorant somewhat resembles the instinct of animals; it is *diffused*, but in a very narrow sphere; but within the circle it acts with vigour, uniformity, and success. *Goldsmith.*

Some glossy-leaved and shining in the sun,

The maple, and the beech of oily nuts

Prolific, and the lime at dewy eve,

Diffusing odours. *Comper.*

DIG, *v. a. & v. n.* Saxon, *dic*; Dan. *dyger*; Belg. *dyken*; from *dic*, a ditch. To pierce and turn over the earth; to cultivate ground; to form by digging; to pierce; to obtain any thing by this operation. As a neuter verb, to work with the spade.

They long for death, but it cometh not; and *dig* for it more than for hid treasures. *Job iii. 21.*

If I *digged* up thy forefathers' graves,
And hung their rotten coffins up in chains,
It would not slake mine ire. *Shakspeare.*

The walls of your garden, without their furniture, look as ill as those of your house: so that you cannot dig up your garden too often. *Temple.*

When we visited mines, we have been told by diggers, that even when the sky seemed clear, there would suddenly arise a steam so thick, that it would put out their candles. *Boyle.*

Nor was the ground alone required to bear
Her annual income to the crooked share;
But greedy mortals, rummaging her store,
Digged from her entrails first the precious ore.
Dryden's Ovid.

A rav'nous vulture in his opened side
Her crooked beak and cruel talons tried;
Still for the growing liver digged his breast;
The growing liver still supplied the feast.
Id. Æneid.

The Italians have often dug into lands, described in old authors as the places where statues or obelisks stood, and seldom failed of success.

Addison's Travels.

It is digged out of even the highest mountains, and all parts of the earth contingently; as the pyrites.

Woodward.

The bushman spade is a pointed stick about three feet long, to which there is affixed about the middle a stone to increase its power in digging up bulbous roots.

Burchell's Travels.

DIGAMMA, a letter of the Greek language retained in the Æolic dialects. Dr. Jones observes that such letters were formerly aspirates, as they derived their origin from the strong gutturals, which the Greeks borrowed from the oriental tongues; and hence he traces the origin of the Æolic digamma. It is the tendency of every guttural, says this writer, when become habitual, to soften down in the rapidity of utterance into a mere aspirate. The digamma, he contends, did not belong, as Dr. Bentley and others supposed, to the Æolic dialect only, but to all the dialects of Greece in their more ancient mode of pronunciation; and he observes, in opposition to the opinion of the learned, who say that the digamma at first prevailed, and was afterwards succeeded by the aspirate, that the gutturals at first prevailed, which were softened into mere aspirates, and that these were again changed for a more easy and agreeable letter, which being simply a labial, was diversified by different people into *g*, *w*, *v*, *φ*, *b* or *f*.

Dr. Marsh would have it called, the *Pelasgic* digamma. 'The connexion,' says he, 'between the Pelasgi and the Æolic dialect has been fully established. Indeed, it might properly be called the Pelasgic dialect: for it was used by the Pelasgi, before the name of Æolic existed. The principal migrations of the Pelasgi, both to Italy, and to the islands in the Ægean sea, took place from Thessaly, as we have already seen, during the reign of Deucalion. They carried, therefore, their dialect to Italy, and to the islands in the Ægean sea, before that dialect had acquired the appellation of Æolic. The character, therefore, which distinguishes the Æolic dialect, might properly be called the Pelasgic digamma.'—*Horo Pelasga*, p. 50.

This, however, the learned bishop of Salisbury disputes.—'By the Æolians,' he says, 'the Digamma, as he states, 'was anciently called Vau, or Wau, the name which is given to the sixth letter in the

Hebrew, Syriac, and Samaritan Alphabets, and to the letter corresponding to it in the Arabic and Ethiopic Alphabets. The term Digamma has little or no relation to its power, and must have been given to it after the knowledge of its origin was lost. The Greek grammarians, comparing it with the third letter of their alphabet, called it a double gamma; but it was in fact a double Vau. Its new name must have followed its new figure, which was probably given it to distinguish the consonant power of the letter from the vowel.'—*Letter to the Bishop of Durham*. 1815.

However this may be, Homer has so frequently used it, as to give it with some writers the name of the Homeric digamma. His object was clearly to avoid every hiatus of vowels: but when the introduction of aspirates had insensibly abolished the use of this letter with the transcribers, its existence could only be traced in a few ancient inscriptions. To remove the harshness thus often apparent in this great poet, the commentators interposed the final *v*, or the particles *ν'*, *δ'*, *ρ'*, altering, with respect to the first, the case of words sometimes and consequently the sense. 'Numberless passages,' says Dr. Valpy, 'remained in their naked deformity, and exercised the conjectural sagacity of grammarians and commentators. Thus in the verse in the opening of the *Iliad*; 'Πρώων ἀντοῖς ἐὶ ἐλώρια τεύχε κύνεσσιν;' aware of the inharmonious effect of the concurrence of the two *ε*, they cut off the former. The quantity of the latter created another difficulty. Some doubled the *λ*, and others asserted that *ε* was lengthened before the liquid. But there were passages, to which even these and similar expedients were inapplicable. A successful effort was made by the great Bentley to remove these embarrassments. The restoration of the digamma has at length vindicated the poet, and displayed the harmonious beauties of his original versification.' Dr. V. furnishes us with the following Table of words in Homer, which either constantly, or generally, admit the digamma in the initial vowel.

ἄγω,	ἔθνος,	ἐλέος,
ἄγνημι,	εἰδέω,	ἐλικες,
ἄζω,	εἰώω,	ἐλικοπες,
ἄλημι,	εἰκόλοσ,	ἐλίσσω,
ἄλις,	εἰκοσι,	ἐλπες,
ἄλωμι,	εἰκω, to resemble,	ἐλπω,
ἄναξ,	εἰλαρ,	ἐλωρ,
ἄναων,	εἰλιω,	ἐλῶριον,
ἄραως,	εἰλῶ,	ἐντοῖ,
ἄσιω,	εἰληράω,	ἐννυμι,
ἄρη,	εἰλω,	ἐουκα,
ἄριστον,	εἰμα,	ἑος,
ἄρις,	εἰργω,	ἑπος,
ἄστη,	εἰρω,	ἑπω,
ἄσταλιός.	ἑκω,	ἑγινε,
	ἑκαθεν,	ἑργω,
	ἑκάς,	ἑρώω,
	ἑκαπτος,	ἑρω,
	ἑκατος,	ἑρήρη,
	ἑκηλος,	ἑρώω,
	ἑκτη,	ἑρώω, to draw
	ἑκνός,	ἑσθής,
	ἑκόν,	ἑσθος,

ἴσπερος,	ἴαχη,	ἴτυς,
ἴσπρη,	ἴάω,	ἴφι,
ἴτης,	ἴδρις,	ἴψ,
ἴτος,	ἴμαι,	ἴωη,
ἴώσιος,	ἴκελος,	ἴωκη,
ἔω, to put on.	ἴλως,	
	ἴνες,	ἴσπερος,
H	ἴνιον,	οἶδμα,
ἴνις,	ἴον,	οἶκος,
ἴνω,	ἴονθα,	οἶνος,
ἴθος,	ἴρις,	ἴς,
ἴνιος,	ἴς,	οἶλαμος,
ἴκα, adv.	ἴσημι,	οἶλος,
ἴνωψ,	ἴσος,	οἶνον.
ἴρι,	ἴστω,	
ἴρα,	ἴστιν,	Ω
ἴρη,	ἴστωρ,	ὠλε,
ἴριον,	ἴτα,	ὠξ,
ἴχνη.		

The form of the digamma in the first instance was that of a gamma reversed; then that of a gamma; afterwards it was written in the shape of a double gamma *Γ*, whence it derives its name; and hence it has been written *Γ* as *Γαβαιο* for *Εαβαιο*, *Γεθεν* for *Εεθεν*, *Γεγτο* for *Εεγτο*, *Εολ* for *Ετο*, *Δορ* for *Ελτο*, from *Ελω*, &c. Claudius ordered that it should be written *Δ*, or *Γ* reversed, but that form seems to have ceased after it was used in the inscription on the tomb of that emperor 'TERMINAUIT.' It has often been expressed by *Β*, and sometimes by *Κ*, *Μ*, *Η*, *Ρ*, *Φ*, *Χ*. See letter *Ε*.

DIGAMY, *n. s.* Gr. *διγάμια*. Second marriage; marriage to a second wife after the death of the first: as bigamy, having two wives at once.

Dr. Champuy only proves, that archbishop Cranmer was twice married; which is not denied: but brings nothing to prove that such bigamy, or *digamy* rather, deprives a bishop of the lawful use of his power of ordaining.

Bishop Ferne.

DIGBY, a town of Nova Scotia, on the south-east side of Annapolis Bay, eighteen miles south-west of Annapolis, and fifty-three north by east of Yarmouth. It is one of the most considerable of the new settlements of Nova Scotia.

DIGBY (Sir Kenelm), an illustrious author and statesman of the seventeenth century, was descended of an ancient English family. His father, Everard, was beheaded under king James, I. for being engaged in the gunpowder plot. King Charles I. made the son a gentleman of the bed-chamber, commissioner of the navy, and governor of the Trinity House. He granted him letters of reprisals against the Venetians, by virtue of which he took several prizes, with a small fleet. He fought the Venetians near the port of Scanderoon, and bravely made his way through them with his booty. He also translated various authors into English; and his Treatise on the Nature of Bodies and the Immortality of the Soul, discovers great penetration and knowledge. In the beginning of the civil wars, he exerted himself vigorously in the king's cause; but was afterwards imprisoned, by order of the parliament, in Winchester-house, and had leave to depart thence in 1643. He afterwards compounded for his estate, but was ordered to leave the nation; when he went to France, and was sent on two

embassies to pope Innocent X. from the queen, widow of Charles I. whose chancellor he then was. On the Restoration he returned to London, where he died in 1665, aged sixty.

DIGEST, *v. a. & n. s.*

DIGESTER, *n. s.*

DIGESTIBLE,

DIGESTION, *n. s.*

DIGESTIVE, *adj. & n. s.*

DIGESTURE.

into the proper classes, or sorts: hence to concoct in the stomach, and soften or adapt by heat; and to receive with enjoyment. The derivatives all follow these meanings.

First, let us go to dinner,

—Nay, let me praise you while I have a stomach.

—No, pray thee, let it serve for table talk,

Then, howsoe'er thou speak'st, 'mong other things

I shall digest it. *Shakspeare.*

Now good digestion wait on appetite

And health on both. *Id.*

I had a purpose to make a particular *digest*, or recompilement to the laws of mine own nation.

Bacon.

We conceive, indeed, that a perfect good concoction, or *digestion*, or maturation of some metals, will produce gold. *Id.*

Those medicines that purge by stool are, at the first, not *digestible* by the stomach, and therefore move immediately downwards to the guts. *Id.*

A chylifactory menstruum, or a *digestive* preparation, drawn from species or individuals, whose stomachs peculiarly dissolve lapideous bodies.

Brown's Vulgar Errors.

It is not good to devour the favours of God too greedily: but to take them in, that we may *digest* them.

Bp. Hall. Contemplations.

The earth and sun were in that very state; the one active, piercing, and *digestive*, by its heat; the other passive, receptive, and stored with materials for such a production. *Hale.*

The *digestion* of the counsels in Sweden is made in senate, consisting of forty counsellors, who are generally the greatest men. *Temple.*

Rice is of excellent use for all illnesses of the stomach, a great restorer of health, and a great *digestive*. *Id.*

When men comfort themselves with philosophy, it is not because they have got two or three sentences, but because they have *digested* those sentences, and made them their own; so upon the matter, philosophy is nothing but discretion. *Selden.*

Every morsel to a satisfied hunger, is only a new labour to a tired *digestion*. *South.*

Did chymick chance the furnaces prepare,

Raise all the labour-houses of the air,

And lay crude vapours in *digestion* there?

Blackmore.

People that are bilious and fat, rather than lean, are great eaters and ill *digesters*. *Arbutnot.*

Laws in the *digest* shew that the Romans applied themselves to trade. *Id. On Coins.*

I dressed it with *digestives*. *Wiseman.*

The first stage of healing, or the discharge of matter, is by surgeons called *digestion*.

Sharp's Surgery.

Chosen friends, with sense refined,

Learning *digested* well. *Thomson.*

Britain has not yet well *digested* the loss of its dominion over us; and has still at times some flattering hopes of recovering it. *Franklin.*

As Life discordant elements arrests,
Rejects the noxious, and the pure *digests*,
Combines with Heat the fluctuating mass,
And gives awhile solidity to gas. *Darwin.*

Oh, the souls of some men
Thou wouldst *digest* what some call treason, and
Fools treachery. *Byron.*

DIGEST, DIGESTUM, is a collection of the Roman laws, ranked and digested under proper titles by order of the emperor Justinian. That prince gave his chancellor Tribonianus a commission for this purpose: who, in consequence of this, chose sixteen jurisconsulti, or lawyers, to work upon them. These, accordingly, took the best decisions from the 2000 volumes of the ancient jurisconsulti, and reduced them all into one body; which was published A. D. 533, under the name of the Digest. To this the emperor gave the force of a law, by a letter at the head of the work, which serves it as a preface. The Digest makes the first part of the Roman law, and the first part of the corpus or body of the civil law contained in fifty books. It was translated into Greek under the same emperor, and called *Pandecta*. See **PANDECTS**. Cujas says, that Digest is a common name for all books disposed in a good order and economy; and hence Tertullian calls the gospel of St. Luke a digest. Hence also abridgments of the common law are denominated digests of the numerous cases, arguments, readings, pleadings, &c., dispersed in the year books and other reports and books of law, reduced under proper heads. The first was that of Statiam, which comes as low as Henry VI.

DIGESTER, an instrument invented by Mr. Papin about the beginning of the last century. It is a strong vessel of copper or iron, with a cover adapted to screw on with pieces of felt or paper interposed. A valve with a small aperture is made in the cover, the stopper of which valve may be more or less loaded, either by actual weights, or by pressure from an apparatus on the principle of the steelyard. The purpose of this vessel is to prevent the loss of heat by evaporation. The solvent power of water when heated in this vessel is greatly increased.

DIGESTION. For the rationale of this process, see **PHYSIOLOGY**. See also the word **BILE** for an account of part of the changes which aliment undergoes, before it may in one sense be said to be duly digested; and, for an account of the derangements in the process of digestion see the article **MEDICINE**, and the word **STOMACH**; under which last word, the reader will find a detailed account of those modern theories which have recently excited so much attention in respect of stomach derangements and their general influence over the frame. It is under this word, that we propose discussing the merits and demerits of these theories, and engaging in a somewhat comprehensive disquisition on the subject in all its bearings.

DIGESTIVES, in medicine, such remedies as strengthen and increase the tone of the stomach, and assist in the digestion of food. To this class belong all stomachics and strengtheners, or corroborants.

DIGGING, among miners, is appropriated to the

operation of freeing any kind of ore from the bed or stratum in which it lies, where every stroke of their tools turns to account: in contradistinction to the openings made in search of ore, which are called hatches, or essay hatches: and the operation itself, tracing of mines or hatching. When a bed of ore is discovered, the beeie-men free the ore from the fossils around it; and the shovel-men throw it from one shamble to another, till it reaches the mouth of the hatch. In most mines, to save the expense as well as fatigue of the shovel-men, they raise the ore by means of a winder and two buckets, one of which goes up as the other comes down.

DIGHT, v. a. Goth. & Swed. *daga*; Sax. *lihten*. To arrange; dress; embellish. It seems always to signify the past; the participle passive is *dighted* in Hudibras is perhaps improper.

Every spirit as it is most pure
And hath in it the more of heavenly light,
So it the fairer body doth procure
To habit in, and it more fairly *dight*
With cheerful grace, and amiable sight.

Spenser.

On his head his dreadful hat he *dight*,
Which maketh him invisible to sight.

Hub. Talc.

Let my due feet never fail
To walk the studious cloisters pale;
And love the high embowed roof,
With antick pillar, massy proof;
And storied windows richly *dight*,
Casting a dim religious light. *Milton*

Just so the proud insulting lass
Arrayed and *dighted* Hudibras. *Hudibr.*

DIGIT, n. s. Lat. *digitus*; from Gr. *Digitated, adj.* *δείκτω, δείκτερος*, to show, because we point out any thing with the finger. Any of the numbers expressed by a single finger. Also a measure of about three-fourths of an inch, from the width of the finger; or the twelfth part of the sun's or moon's diameter. Digitated is branched out.

Not only the numbers seven and nine, from considerations abstruse, have been extolled by most, but all or most of other *digits* have been as mystically applauded. *Brown's Vulgar Errors.*

For animals multifidous, or such as are *digitated*, or have several divisions in their feet, there are but two that are uniparous; that is, men and elephants. *Id.*

If the inverted tube of mercury be but twenty-five *digits* high, or somewhat more, the quicksilver will not fall, but remain suspended in the tube, because it cannot press the subjacent mercury with so great a force as doth the incumbent cylinder of the air, reaching thence to the top of the atmosphere. *Boyle.*

DIGIT, in astronomy, is used to express the quantity of an eclipse. Thus an eclipse is said to be of six digits, when six of these parts are hid.

DIGIT, is also a measure taken from the breadth of the finger. It is properly three-fourths of an inch, and contains the measure of four barley-corns laid breadthwise.

DIGITALIS, fox-glove, a genus of the angiospermia order, and didynamia class of plants; natural order twenty-eighth, *luridæ*: *cal.* quin-

quepartite; cor. campanulated, quinquefid, and ventricose; caps. ovate and bilocular. There are six species: five of which are hardy, herbaceous, biennial, and perennial plants, and the sixth a tender shrubby-exotic. The herbaceous species rise two or three feet high, crowned with spikes of yellow, iron-colored, or purple flowers. The shrubby sort rises five or six feet high, having spear-shaped rough leaves, four or five inches long, and half as broad; the branches being all terminated with flowers growing in loose spikes. All the species are easily raised by seeds. An ointment made of the flowers of purple fox-glove and May butter, is much commended by some physicians for scrophulous ulcers which run much and are full of matter. Taken internally this plant is a violent purgative and emetic; and is therefore only to be administered to robust constitutions: indeed it often proves even then a poison. An infusion of two drachms of the leaf in a pint of water, given in half-ounce doses every two hours or so, till it begin to purge, is recommended in dropsy, particularly that of the breast. It is said to have produced an evacuation of water so copious and sudden, in ascites, by stool and urine, that the compression of bandages was found necessary. The plentiful use of diluents is ordered during its operation. But besides being given in infusion, it has also been employed in substance. And when taken at bedtime to the extent of one, two, or three grains of the dried powder, it often in a short time operates as a very powerful diuretic, without producing any other evacuation. Even this quantity, however, will sometimes excite very severe vomiting, and that too occurring unexpectedly.

DIGLADIATION, *n. s.* Lat. *digladiatio*. A combat with swords; any quarrel or contest.

Aristotle seems purposely to intend the cherishing of controversial *digladiations*, by his own affection of an intricate obscurity. *Glanville.*

GLIGGYHEUR, a town in the island of Ceylon, about ten miles to the eastward of Candy, on the road to Battacolo. The district around is very wild and impenetrable, for which reason it was once a royal residence; and when the king was driven out of Candy, and his capital burned by the British in 1803, he found here a retreat, to which no European army could penetrate. There are a few villages among the surrounding hills, and some rice grounds.

DIGLYPH, in architecture, a kind of imperfect triglyph, console, or the like: with two channels or engravings either circular or angular.

DIGNE, the chief town of the department of the Lower Alps, France, famous for the baths near it. It is seated on the Bleone, and is a bishop's see. The streets are steep and winding, and the houses mean; but the cathedral is a respectable edifice, and there are four other churches. Not far from the town there is an extinct volcano. It contains about 3500 inhabitants. Thirty miles south of Apt, and thirty-four south by west of Embrun.

DIGNIFY *v. a.*

DIGNIFICATION, *n. s.*

DIGNIFIED, *adj.*

DIGNITARY, *n. s.*

DIGNITY, *n. s.*

From Lat. *dignus* (Gr. *δίκην*: right) worthy; and *facio* to make. To advance; promote; raise to honor. Digni-

fication and dignity are synonymous substantives; and the cognates of the latter. *Fr. dignité; Span. dignidad; It. dignità*. Dignities is used by Browne for the general or chief maxims of a science. Ayliffe says, that among ecclesiastics, 'we understand by a dignity that promotion or preferment to which any jurisdiction is attached.' Dignitary has also a peculiar application to clergymen, above the rank of a parish-priest; but is likewise used generally.

Angels are not any where spoken so highly of as our Lord and Saviour Jesus Christ, and are not in dignity equal to him. *Hooker.*

Such a day,

So fought, so followed, and so fairly won,

Came not till now to dignify the times

Since Caesar's fortunes! *Shakspeare. Henry IV.*

Not that we think us worthy such a guest,
But that your worth will dignify our feast.

Ben Jonson.

The sciences concluding from dignities, and principles known by themselves, receive not satisfaction from probable reasons, much less from bare asseverations. *Brown.*

I grant that where a noble and ancient descent and merit meet in any man, it is a double dignification of that person. *Walton's Angler.*

Abbots are stiled dignified clerks, as having some dignity in the church. *Ayliffe's Parergon.*

If there be any dignitaries, whose preferments are perhaps not liable to the accusation of superfluity, they may be persons of superior merit. *Swift.*

Some men have a native dignity, which will procure them more regard by a look, than others can obtain by the most imperious commands. *Clarissa.*

The peaceable lawyers are, in the first place, many of the benchers of the several inns of court, who seem to be the dignitaries of the law, and are endowed with those qualifications of mind that accomplish a man rather for a ruler than a pleader. *Addison.*

No turbot's dignify my boards;
But gudgeons, flounders, what my Thames affords.

Pope.

We all know, that those who loll at their ease in high dignities, whether of the church, or of the state, are commonly averse to all reformation. *Burke.*

Or, turning to the Vatican, go see

Laocoon's torture dignifying pain—

A father's love and mortal's agony

With an immortal's patience blending. *Byron.*

DIGNITY, as applied to the titles of noblemen, signifies honor and authority. And dignity may be divided into superior and inferior; as the titles of duke, marquis, earl, baron, &c. are the highest names of dignity; and those of baronet, knight, serjeant at law, &c., the lowest. Nobility only can give so high a name of dignity as to supply the want of a surname in legal proceedings; and as the omission of a name of dignity may be pleaded in abatement of a writ, &c., so it may be where a peer who has more than one name of dignity is not named by the Most Noble. No temporal dignity of any foreign nation can give a man a higher title here than that of Esquire: The first personal dignity after the nobility is a knight of the order of St. George, or of the garter, first instituted by Edward III. A. D. 1344. Next (but not till after certain official dignities, as privy-counsellors, the chancellors of the ex-

chequer and duchy of Lancaster, the chief justice of the king's bench, the master of the rolls, and the other English judges,) follows a knight banneret; who indeed by statutes 5 Richard II. c. 4, and 14 Richard II., c. 11, is ranked next after barons; and his precedence before the younger sons of viscounts was confirmed by order of king James I. But to entitle him to this rank, he must have been created by the king in person, in the field, under the royal banners, in time of open war; else he ranks after baronets, who are the next in order; which title is a dignity of inheritance, created by letters patent, and usually descendible to the issue male. Next follow the knights of the Bath. The last of these inferior nobility are knights bachelors; the most ancient though the lowest order of knighthood amongst us. See BACHELOR. The above, with those enumerated under the article NOBILITY, Sir Edward Coke says, are all the names of dignity in this kingdom; Esquires and Gentlemen being only names of worship. But before these last the heralds rank all colonels, serjeants at law, and doctors of law, physic, and divinity.

DIGNOTION, *n. s.* From Lat. *dignosco*. Distinction; distinguishing mark.

That temperament all dignotions, and conjecture of prevalent humours, may be collected from spots in our nails, we are not averse to concede.

Brown's Vulgar Errors.

DIGRESS, *v. n.* } Span. and Port *digre-*
DIGRESSION, *n. s.* } *dir*; Ital. *digredire*; Lat.

DIGRESSIVE, *adj.* } *digrediri*, *digressus*, from *dis* and *gradior*, *gressus*, to step; to go aside from a road, or design; to wander; expatiate. Digressive is wandering.

Thy noble shape is but a form of wax,
Digressing from the valour of a man.

Shakespeare.

The *digression* of the sun is not equal; but, near the equinoctial intersections, it is right and greater; near the solstices, more oblique and lesser.

Brown's Vulgar Errors.

He, she knew, would intermix

Grateful *digressions*, and solve high dispute
With conjugal caresses.

Milton.

The good man thought so much of his late conceived commonwealth, that all other matters were but *digressions* to him.

Sidney.

In the pursuit of an argument, there is hardly room to *digress* into a particular definition, as often as a man varies the signification of any term.

Locke.

Digressions in a book are like foreign troops in a state, which argue the nation to want a heart and hands of its own; and often either subdue the natives, or drive them into the most unfruitful corners.

Swift.

The excellence of this work is not exactness but copiousness. The wild diffusion of the sentiments, and the *digressive* sallies of imagination, would have been compressed and restrained by confinement to rhyme.

Johnson.

DIGYNIA; from *δις*, twice, and *γυνή*, a woman; the name of an order in the first thirteen classes, except the ninth, in Linnaeus's sexual method; consisting of plants, which have two female organs.

DII, the divinities of the ancient heathens, were very numerous. Every object which caused

terror, inspired gratitude, or bestowed affluence, received the tribute of veneration. Man saw a superior agent in the stars, the elements, or the trees, and supposed that the waters which communicated fertility to his fields and possessions, were under the influence and direction of some invisible power inclined to favor and to benefit mankind. Thus arose a train of divinities which imagination arrayed in different forms and armed with different powers. They were supposed to be endowed with understanding, and actuated by the same passions which daily afflict the human race; and to be appeased or provoked, like the imperfect beings whose fears gave them birth. Their wrath was to be mitigated by sacrifices and incense; and sometimes human victims bled, and thus real crimes were committed, to expiate crimes, which superstition alone supposed to exist. The sun, from his powerful influence and animating nature, first claimed the adoration of the uncivilised inhabitants of the earth. The moon also was honored with sacrifices, and addressed in prayers; and after immortality had been liberally bestowed on all the heavenly bodies, mankind classed among their deities the brute creation, and the cat and the sow shared equally with Jupiter himself, the father of gods and men, the devout veneration of their votaries. This immense number of deities has been divided into different classes according to the fancy of the mythologists. The Romans generally reckoned two classes of the gods. Among the demi-gods, who were said to have merited immortality by the greatness of their exploits and services to mankind, were Vertumnus, Hercules, Jason, Castor, and Pollux, whose parents were some of the immortal gods. All the passions and moral virtues were also reckoned powerful deities, and temples were raised to the goddesses of concord, peace, &c. According to Hesiod, there were no less than 30,000 gods that inhabited the earth, and were guardians of men, all subservient to Jupiter. To these, succeeding ages added an almost equal number; and indeed they were so numerous, and their functions so various, that we find temples erected and sacrifices offered, to unknown gods. All the gods of the ancients were supposed to have once lived upon earth as mere mortals; and even Jupiter himself, the ruler of heaven, is represented by the mythologists as once a helpless child; and all the particulars, attending the birth and education of Juno, are recorded. In process of time, not only virtuous men, who had been the patrons of learning and the supporters of liberty, but also thieves and pirates, were admitted among the gods, and the Roman senate servilely granted immortality to the most cruel and worthless of their emperors.

DIJAMBUS, in Latin poetry, the foot of a verse of four syllables; it is compounded of two iambs, as *sévêritas*.

DIJON, or **DIGON**, an ancient and handsome city of France, a bishop's see, in the department of the Cote d'Or and ci-devant province of Burgundy. It has a university which has long been among the most celebrated and best regulated in France. The public structures, and particularly the churches, are very fine. In front of the ci-devant Place Royale, is the ancient palace of the

DIL

dukes of Burgundy; and at the gates of Dijon is a late Chartreuse founded in 1383, in which are some magnificent tombs of those princes. The Place Royale, in the form of a horse-shoe, is the principal part of the city. Among the churches worth notice are, that of St. Benigne, the spire of which has an elevation of 370 feet; the church of St. Michael, remarkable for the richness of its portal; that of St. Stephen, now the cathedral church; and the church of Notre Dame, esteemed one of the best models of Gothic architecture in Europe. Of the old monastic institutions, the richest was the Cistercian abbey, the origin of all of that order throughout Europe. Here is also a citadel built by Louis XI. The streets are well paved, and regular, and the houses in general neat and commodious; the population, including the suburbs, is 21,600. Here are manufactures of silk, cotton, and wool, the trade in which has been much improved by the recent construction of a canal from this place to St. Jean de Loire. Three great annual fairs are held here: March 10th, June 14th, and November 10th, lasting eight days each. Dijon is built on an oval plan and seated in a pleasant plain, which produces excellent wine, between two small rivers, forty-eight miles north-east of Autun, 100 miles north of Lyons, and 175 south-east of Paris; contains professorships of theology, philosophy, mathematics, Latin, German, history, rhetoric, eloquence and poetry. Here are also a drawing school, a library of 4000 volumes, a museum of paintings and engravings, and a theatre. The academy of sciences was founded in 1725. Among the eminent characters of Dijon, may be mentioned the celebrated Bossuet, and the poets Crebillon and Piron. It has several public walks; of which the most frequented are the ramparts.

DIJUDICATION, *n. s.* Lat. *dijudicatio*. Judicial distinction.

DIKE, *n. s.* Goth and Swed. *dike*; Saxon, *dic*; Erse *dyk*; Fr. *digue*; from Gr. *τιχος*; Heb. *קִיָּא* wall, or mound. A boundary of lands made by water, and often by embankments on the side; a channel for water.

God, that breaks up the flood-gates of so great a deluge, and all the art and industry of man is not sufficient to raise up *dykes* and ramparts against it.

Cowley.

The *dykes* are filled, and with a roaring sound
The rising rivers float the nether ground.

Dryden's Virgil.

The king of *dykes*! than whom no sluice of mud
With deeper sable blots the silver flood.

Pope's Dunciad.

DIKE denotes also a ditch or drain, made for the passage of waters. The word seems formed from the verb to dig; though others derive it from the Dutch *diik*, or *dyke*, a dam, sea-bank, or wall.

DIKE, or *dyke*, is a work of stone, timber, or fascines, raised to oppose the entrance or passage of the waters of the sea, a river, lake, or the like. See **HOLLAND**.

DILACERATE, *v. a* } Lat. *dilacero*. To
DILACERATION *n. s.* } tear; to rend; to
force in two.

DIL

The infant, at the accomplished period, struggling to come forth, *dilacerates* and breaks those parts which restrained him before. *Broun's Vulgar Errors.*

The greatest sensation of pain is by the obstruction of the small vessels, and *dilaceration* of the nerve fibres. *Arbuthnot.*

DILANIATE, Lat. *dilanio*. To tear; to rend in pieces.

Rather than they would *dilaniate* the entrails of their own mother, and expose her thereby to be ravished, they met half way in a gallant kind.

Howel's Eng. Tears.

DILAPIDATE, *v. n.* } Lat. *dilapido*. To
DILAPIDATION, *n. s.* } go to ruin; to fall by decay. The incumbent's suffering the chancel, or any other edifices of his ecclesiastical living, to go to ruin or decay, by neglecting to repair the same: it likewise extends to his committing, or suffering to be committed, any wilful waste in or upon the glebe-woods, or any other inheritance of the church. (Aylyffe's Parergon.) This word has also been applied generally of late.

'Tis the duty of all church-wardens to prevent the *dilapidations* of the chancel and mansion-house belonging to the rector or vicar. *Aylyffe.*

DILATE, *v. a. & v. n.* } Fr. *dilater*; Span.
DILATABILITY, *n. s.* } *dilatar*; Ital. & Lat.
DILATABLE, *adj.* } *dilatarc*, from *de* and
DILATATION, *n. s.* } *latus*; Gr. *πλωτος*,
DILATOR. } broad, from Heb.

דלל, to set at large. To extend; spread out; enlarge; hence to relate at length or diffusely: as a neuter verb, to widen; speak largely. Dilatability is admitting of extension. Dilatation, the act of extending, or state of being extended.

But ye thereby much greater glory gate,
Than had ye sorted with a prince's peer;
For now your light doth more itself dilate,
And in my darkness greater doth appear.

Spenser.

But he would not endure that woful team
For to dilate at large.

Fucrie Queene.

Do me the favour to dilate at full
What hath befallen of them, and thee, till now.

Shakspeare.

Joy causeth a cheerfulness and vigour in the eyes; singing, leaping, dancing, and sometimes tears: all these are the effects of the *dilatation*, and coming forth of the spirits into the outward parts.

Bacon's Natural History.

It may be behoveful for princes, in matters of grace, to transact the same publicly, and by themselves; or their ministers to *dilate* upon it, and improve their lustre, by any addition or eloquence of speech.

Clarendon.

Satan alarmed,

Collecting all his might, dilated stood,

Like Teneriff, or Atlas, unremoved. *Milton.*

The motions of the tongue, by contraction and dilatation, are so easy and so subtle, that you can hardly conceive or distinguish them aright. *Holder.*

We take notice of the wonderful dilatability or extensiveness of the gullets of serpents: I have taken wo adult mice out of the stomach of an adder, whose neck was not bigger than my little finger. *Ray.*

Diffused, it rises in a higher sphere;

Dilates its drops, and softens into air. *Prior.*

His heart dilates and glories in his strength,

Addison.

The second refraction would spread the rays one way as much as the first doth another, and so *dilate* the image in breadth as much as the first doth in length.

Newton.

The windpipe divides itself into a great number of branches called bronchia: these end in small air-bladders, *dilatable* and contractible, capable to be inflated by the admission of air, and to subside at the expulsion of it.

Arbuthnot on Aliments.

The buccinators, or mowers up of the cheeks, and the *dilators* of the nose, are too strong in cholerick people.

Id.

This fluid may possibly be the same with that which, being attracted by and entering into other more solid matter, *dilates* the substance, by separating the constituent particles, and so rendering some solids fluid, and maintaining the fluidity of others.

Franklin.

Here, there, he points his threatening front, to suit His first attack, wide waving to and fro His angry tail; red rolls his eyes, *dilated* glow.

Byron.

DILATATION, in physics, a motion of the parts o. any body, by which it is so expanded as to occupy a greater space. This expansive motion depends upon the elastic power of the body; whence it appears that dilatation is different from rarefaction, this last being produced by the means of heat.

DILATORY PLEAS, in law, are such as are put in merely for delay, and there may be a demurrer to a dilatory plea, or the defendant shall be ordered to plead better, &c. The truth of dilatory pleas is to be made out by affidavit of the fact, by stat. 4 and 5 Anne.

DILATRIS, in botany, a genus of the monogynia order, and triandria class of plants: *cal.* none: *cor.* has six petals, and is shaggy; the stigma simple. Species three; all natives of the Cape.

DILATORY, *adj.* Fr. *dilatatoire*; Lat. *dilatatorius*. See **DILATE**. (For a dilatory person spreads or extends his work.) Slow; delaying; tardy.

These cardinals trifle with me: I abhor This *dilatory* sloth, and tricks of Rome.

Shakspeare. Henry VIII.

An inferior council, after former tedious suits in a higher court, would be but *dilatory*, and so to little purpose.

Hayward.

All promise is poor *dilatory* man, And that through every stage.

Young.

A *dilatory* temper commits innumerable cruelties without design.

Addison's Spectator.

DILECTION, *n. s.* Lat. *dilectio*. The act of loving; kindness.

So free is Christ's *dilection*, that the grand condition of our felicity is our belief.

Boyle's Seraphic Love.

DILEMMA. Fr. *dilemme*; Lat. *dilemma*; Gr. *ἐπιλημμα*, from *ἐν* and *λημμα*, an assumption, *ὁ λαμβανω*, to take. An argument or sophism capable, apparently, of two equally correct, but opposite conclusions.

A *dilemma*, that Morton used to raise benevolence, some called his fork, and some his crotch.

Bacon's Henry VII.

Quoth he, in all my past adventures
I ne'er was set so on the tenters,
Or taken tardy with dilemma,
That every way I turn does hem me.

Hudibras

Hope, whose weak being ruined is
Alike if it succeed, and if it miss;
Whom good or ill does equally confound,
And both the horns of fate's dilemma wound.

Cowley.

A dire dilemma; either way I'm sped;
If foes they write, if friends they read, me dead.

Pope.

DILIGENCE, *n. s.* } Fr. *diligent*; Span.,
DILIGENT, *adj.* } Port., and Ital. *dili-*
DILIGENTLY, *adv.* } *gênte*; Lat. *diligens*,
from *diligere*, to favor (work). Industry; constancy in business; continued application. Hence a name, not seldom misapplied, of stage coaches.

Seest thou a man *diligent* in his business, he shall stand before kings.

Prov. xxii. 29.

Brethren, give *diligence* to make your calling and election sure.

2 Pet. i. 10.

Still when she slept he kept both watch and ward;
And when she wakt he wayted *diligent*,
With humble service to her will prepared.

Spenser. Faerie Queene.

If you inquire not attentively and *diligently*, you shall never be able to discern a number of mechanical motions.

Bacon.

But the power of nature is only the power of using to any certain purpose the materials which *diligence* procures, or opportunity supplies.

Johnson.

Now, who would have suspected your friend Miss Prim of an indiscretion! Yet such is the illnature of people, that they say her uncle stopped her last week, just as she was stepping into the York *diligence* with her dancing master.

Sheridan.

DILLE, *n. s.* Sax. *ðile*; Pers. *dilec*, from *dil*, the heart, a cordial. It hath a slender, fibrous, annual root; the leaves are like those of fennel; the seeds are oval, plain, streaked, and bordered.

Dill is raised of seed, which is ripe in August.

Mortimer.

DILLEMBURG, or **DILLENBURG**, a town of Germany, in Westphalia, and capital of Nassau Dillenburg, situated on the Dille. Near it is a furnace for the smelting of copper. The sovereignty of this town was added to the grand duke of Berg, by the late treaty of confederation between the states of the Rhine. It is fourteen miles north-west of Wetzlar. Long. 8° 22' E., lat. 50° 36' N.

DILLINGEN, a neat town of Bavaria, on the left bank of the Danube, with a university or lyceum. The bishop of Augsburg resided here formerly, and it is still a bishop's see. It contains a chapter and three convents; and was formerly a county; the princes of which were powerful. Near this town Louis XVIII. was fired at, and wounded in the forehead, by some unknown assassin, July 12th, 1796. Population 3120. It is twenty-three miles north-east of Augsburg and twenty-four north-east of Ulm.

DILLEENIA, in botany, a genus of the polygynia order, and polyandria class of plants: *cal.* pentaphyllous; the petals five: *cav.* nu-

merous, polyspermous, coalited and full of pulp. Species eight; all Indian plants.

DILLENIUS (John James), an eminent botanist, born at Darmstadt in Germany, in 1687, and educated at the university of Gießen. He contributed several curious papers to the *Miscellanea Curiosa*, and, in 1721, accompanied Dr. Sherard to England, where he spent the remainder of his days. Soon after his arrival he undertook a new edition of Ray's *Synopsis Stirpium Britannicarum*. He was appointed the first botanical professor at Oxford, on Dr. Sherard's foundation, and in 1735 the university admitted him to the degree of M. D. He died in 1747. He published an elaborate work, entitled *Hortus Elthamensis*, and also a History of Mosses.

DILLON (Wentworth), earl of Roscommon, a British poet of celebrity, was the son of James, earl of Roscommon, by a sister of the earl of Strafford. Though born in Ireland (in 1633) he received his education at lord Strafford's seat in Yorkshire, and finally entered the Protestant university of Caen in Normandy, under the celebrated Bochart. After travelling into Italy he returned, soon after the Restoration, to England, and was made captain of the band of pensioners. He now ruined his estate by gaming; and, being involved also in quarrels, he returned to Ireland, where his property lay. Here, however, he followed nearly the same course as in England, until his marriage with a daughter of the earl of Burlington. He now appears to have cultivated letters, and to have reformed himself. He projected, among other modes of promoting literature, an academy for improving and fixing the English language; but the scheme was never accomplished. On the accession of James II. he visited Italy, and took up his residence at Rome, where he died of the gout in 1684. Lord Roscommon was not a voluminous writer, his principal piece being a poetical Essay on Translated Verse, in which he lays down the rules that ought to govern translations. Other poems of this writer are translations of Horace's Art of Poetry, of Virgil's sixth Eclogue, of the Dies Irv, of a scene in Pastor Fido, &c. Dr. Johnson calls him the most correct writer of English verse before Dryden; and Pope has said of him, addressing a poet of rather different character,

Unhappy Dryden! in all Charles's days,
Roscommon only boasts unspotted lays.

DILUCIDATE, *v. a.* } From Lat. *dilucidare*. To make clear,
DILUCID, *adj.* }
DILUCIDATION, *n. s.* } or plain; to explain;
to free from obscurity.

I shall not extenuate, but explain and dilucidate, according to the custom of the ancients.

Brown's Vulgar Errors.

DILUTE, *v. a. & adj.* } From Lat. *diluo*,
DILUTER, *n. s.* } *de* and *luo*, Gr. *λυω*
DILUTION, } (Heb. *בָּלָה*, to waste)
DILUTENT, } to wash. To make
thin or fluid-like; to weaken; make rapid. Dilution is the act of making thin or weak, or the thing so made.

Drinking a large dose of diluted tea, as she was ordered by a physician, she got to bed. *Locke.*

If the red and blue colours were more dilute and weak, the distance of the images would be less than an inch; and if they were more intense and full, that distance would be greater. *Newton.*

Water is the only diluter, and the best dissolvent of most of the ingredients of our aliment.

Arbuthnot on Aliments.

There is no real diluent but water: every fluid is diluent, as it contains water in it. *Id.*

Opposite to dilution is coagulation, or thickening, which is performed by dissipating the most liquid parts by heat, or by insinuating some substances, which make the parts of the fluid cohere more strongly. *Id.*

DILUVIAN, *adj.* From Lat. *diluvium*, *de* and *luo*, to wash. Relati to the deluge.

Suppose that this diluvian lake should rise to the mountain tops in one place, and not diffuse itself equally into all countries about. *Burnet's Theory.*

DIM, *v. a. & adj.* } Goth. *dimma*; Sax. *dim-*
DIMISH, *adj.* } me; Swed. *dimn*; Welsh
DIMISHLY, *adv.* } *dy*; Erse *dow*. According
DIMISHNESS, *n. s.* } to Minshew from *δειμος*,
fear, because the dark occasions fear. To becloud; darken; make less bright, or obscure: as an adjective, somewhat dark; and hence not seeing clearly; dull. Dimish is a diminutive of dim.

When Isaac was old his eyes were dim that he could not see. *Gen. xxvii. 1.*

The statu of Mars began his hauberke ring,
And with that sound he herd a murmuring
Full low and *dym*, that saied, 'Victory!'

Chaucer.

And her fair eyes, like stars that dimmed were
With darksome cloud, now shew their goodly beams. *Spenser.*

As where the Almighty's lightning brand does
light,
It *dims* the dazed eyen, and daunts the senses
quite. *Id. Faerie Queene.*

All of us have cause
To wail the *dimming* of our shining star.
Shakspeare. Richard III.

It hath been observed by the ancients, that much use of Venus doth *dim* the sight; and yet eunuchs, which are unable to generate, are nevertheless also *dim* sighted. *Bacon.*

Thus while he spake, each passion *dimmed* his face,
Thrice changed. *Milton.*

Unspeakable! who sittest above these heavens,
To us invisible, or *dimly* seen,
In these thy lowest works *Id.*

In the beginning of our pumping the air, the match appeared well lighted, though it had almost filled the receiver with fumes; but by degrees burnt more and more *dimly*. *Boyle's Spring of the Air.*

The principal figure in a picture is like a king among his courtiers, who *dims* all his attendants. *Dryden.*

Every one declares against blindness, and yet who almost is not fond of that which *dims* his sight? *Locke.*

'Tis true, but let it not be known,
My eyes are somewhat *dimish* grown;
For nature, always in the right,
To your decays adapts my sight. *Swift.*

For thee I *dim* these eyes, and stuff this head,
With all such reading as was never read. *Pope's Dunciad.*

Add to all these improvements backwards another modern fancy, that *grey* printing is more beautiful than black. Hence the English new books are printed in so *dim* a character, as to be read with difficulty by old eyes, unless in a very strong light, and with good glasses. *Franklin.*

But when the fading eye grows *dim*,
And fails each faint and wasted limb,
And short and frequent pantings show
The sad disease that lurks below. *Bowdler.*

I linger yet with Nature, for the night
Hath been to me a more familiar face
Than that of man; and in her starry shado
Of *dim* and solitary loveliness,
I learned the language of another world. *Byron.*

DIMACHÆ; from *δις*, double, and *μαχω*, I fight; in antiquity, a kind of horsemen, first instituted by Alexander. Their armour was lighter than that of the infantry, and at the same time heavier than that used by horsemen, so that they could act as horse or foot as occasion required.

DIMCHURCH, or **DINCHURCH**, a village of England, in Kent, situated by the side of a strong dyke, called Dimchurch Wall, between Romney and Hythe, made to prevent the encroachments of the sea, with a road on the top which is mostly wide enough for carriages to pass each other. Here are kept the records of the Romney Marsh; and the court is held here by the lords of the Marsh and the members of the corporation, to regulate all affairs concerning it. It is four miles and a half N. N. E. of New Romney, and four and a half S. S. W. of Hythe.

DIMENSION, *n. s.* } Fr. and Span. *di-*
DIMENSIONLESS, *adj.* } *mension*; Ital. *dimen-*
DIMENS } *sione*; Lat. *dimensio*
de and *mensio*, from *metior*, Gr. *μετρεω*, to measure. Extent; capacity; solid contents. Dimensionless is used by Milton for without bulk. Dimensive is marking the boundary or dimensions.

Wherefore base
When my *dimensions* are as well compact,
My mind as generous, and my shape as true,
As honest Madam's issue? *Shakspeare.*

All bodies have their measure, and their space
But who can draw the soul's *dimensive* lines? *Davies.*

In they passed
Dimensionless through heavenly doors. *Milton.*
My gentleman was measuring my walls, and taking
the *dimensions* of the room. *Swift.*

To judge rightly of our own worth, we should retire
a little from the world, to see its pleasures, and pains
too, in their proper size and *dimensions*. *Sterne.*

Thus mingled still with wealth and state,
Cresus himself can never know;
His true *dimensions* and his weight
Are far inferior to his show. *Watts.*

DIMENSION, in geometry, is either length, breadth, or thickness; hence a line has one dimension, viz. length; a superficies two, viz. length and breadth; and a body or solid has three, viz. length, breadth, and thickness.

DIMICATION, *n. s.* Lat. *dimicatio*. A battle; the act of fighting; contest.

DIMIDIATION, *n. s.* Lat. *dimidiatio*. The act of halving; division into two equal parts.

DIMINISH, *v. a. a. & n.* } Fr. *diminuer*;
DIMINISHINGLY, *adj.* } Ital. *diminuire*;
DIMINUTION, *n. s.* } Span. and Port.
DIMINUTIVE, *n. s. & adj.* } *diminuyr*; Lat.
DIMINUTIVELY, *adv.* } *diminuere, di*
DIMINUTIVENESS, *n. s.* } *minuo*. To make
less; to impair; take from in any way; degrade:
as a neuter verb, to grow less; be impaired or
degraded. Diminutive, as a substantive, and
diminutiveness, express littleness. Diminutive
also means, that makes little; any thing small.

Ye shall not add unto the word which I command
you, neither shall you *diminish* aught from it.
Deut. iv. 2.

The poor wren,
The most *diminutive* of birds, will fight,
Her young ones in her nest, against the owl.
Shakspeare. Macbeth.

Follow his chariot; monster-like, be shown
For poor'st *diminutives*, for doits! *Shakspeare.*
The one is not capable of any *diminution* or augmen-
tation at all by men; the other apt to admit both.
Hooker.

He afterwards proved a dainty and effeminate
youth, was commonly called, by the *diminutive* of his
name, Peterkin or Perkin. *Bacon's Henry VII.*

Make me wise by thy truth, for my own soul's sal-
vation, and I shall not regard the world's opinion
diminution of me. *King Charles.*

Impiously they thought
Thee to *diminish*, and from thee withdraw
The number of thy worshippers. *Milton.*

O thou that with surpassing glory crowned
Look'st from thy sole dominion like the God,
Of this new world; at whose sight all the stars,
Hide their *diminished* heads *Id.*

Sim, while but Sim, in good repute did live;
Was then a knave, but in *diminutive*. *Cotton.*

What judgment I had, increases rather than *dimin-*
ishes; and thoughts, such as they are, come crowding
in so fast upon me, that my only difficulty is to clus-
or to reject. *Dryden.*

The light of man's understanding is but a short,
diminutive, contracted light, and looks not beyond the
present. *South.*

Finite and infinite seem to be looked upon as the
modes of quantity, and to be attributed primarily to
those things which are capable of increase or *diminution*. *Locke.*

I never heard him censure, or so much as speak
diminishingly, of any one that was absent. *Id.*

The gravitating power of the sun is transmitted
through the vast bodies of the planets without any
diminution, so as to act upon all their parts, to their
very centres, with the same force, and according to
the same laws, as if the part upon which it acts were
not surrounded with the body of the planet. *Newton.*

They know how weak and awkward many of those
little *diminutive* discourses are. *Watts.*

Crete's ample fields *diminish* to our eye;
Before the Boreal blasts the vessels fly.
Pope's Odyssey.

Security *diminishes* the passions; the mind, when
left to itself, immediately languishes. *Hume.*

Check then the solicitations of the flesh; and dare
to do nothing that may *diminish* thy native excellence,
dishonour thy high original, or degrade thy noble
nature. *Mason.*

Thence with what pleasure have we just discerned
The distant plough, slow moving, and beside
Its labouring team, that swerved not from the track,
The sturdy swain diminished to a boy. Cowper.

DIM'ISSORY, *adj.* Lat. *dimissorius*. That by which a man is dismissed to another jurisdiction.

A bishop of another diocese ought neither to ordain or admit a clerk, without the consent of his own proper bishop, and without the letters *dimissory*.

Ayliffe.

DIMISSORY LETTERS, *literæ dimissoriæ*, in the canon law, a letter given by a bishop to a candidate for holy orders, having a title in his diocese, directed to some other bishop, and giving leave for the bearer to be ordained by him. When a person produces letters of ordination or tonsure, conferred by any other than his own diocesan, he must at the same time produce the letters *dimissory* given by his own bishop, on pain of nullity. Letters *dimissory* cannot be given by the chapter, *sede vacante*; this being deemed an act of voluntary jurisdiction, which ought to be reserved to the successor.

DIM'ITY, *n. s.* A fine kind of fustian, or cloth of cotton.

I directed a trowze of fine *dimity*. Wiseman.

DIM'PLE, *n. s. & v. n.* } Dint, a hole; *dimple*,
DIM'PLED, *adj.* } tle, a little hole; by

DIM'PLY, *adv.* } a careless pronunciation made *dimple*, says Skinner. A small hollow, or depression, often applied to the face.

On each side her

Stood pretty *dimpled* boys like smiling cupids.

Shakspeare.

By *dimpled* brook, and fountain brim,

The wood-nymphs decked with daisies trim

Their merry wakes and pastimes keep :

What hath night to do with sleep ? Milton.

The wild waves mastered him, and sucked him in,
And smiling eddies *dimpled* on the main. Dryden.

As the smooth surface of the *dimpled* flood

The silver-slippered virgin lightly trod.

Warton's Isis.

In her forehead's fair half round,

Love sits in open triumph crowned ;

He in the *dimple* of her chin,

In private state, by friends is seen. Prior.

The *dimple* [laugh] is practised to give a grace to the features, and is frequently made a bait to entangle a gazing lover. Steele.

How frail is Beauty's bloom !

The *dimpled* cheek—the sparkling eye—

Scarce seen, before their wonders fly

To decorate a tomb. Robinson.

DIMORITÆ; from *δια*, and *μοιραι*, to divide; a name given to the Apollinarists, who at first held that Christ only assumed a human body without taking a reasonable soul; but, being at length convinced by texts of Scripture, they allowed that he did assume a soul, but without understanding, the Word supplying that faculty. From this way of separating the understanding from the soul they were denominated *Dimoritæ*, or *separators*.

DIMOTUC, a town of European Turkey, in Rumania, with a Greek archbishop's see. It is seated on a mountain surrounded by the river

VOL. VII.

Meriza, twelve miles south-west of Adrianople Long. 26° 15' E., lat. 41° 35' N.

DIMSDALE (Thomas), a celebrated English physician, the son of a surgeon at Theydon Gar non in Essex, where he was born in 1712. He studied some time at St. Thomas's Hospital, London; and, about 1734, commenced practitioner at Hertford. In 1745 he accompanied the army under the duke of Cumberland as assistant surgeon, and continued in that capacity till Carlisle had surrendered to the royal army, when he returned to Hertford. In 1761 he took the degree of M. D., commenced physician, and became celebrated by his successful mode of inoculating for the small pox. He published a treatise on it in 1767, which was quickly translated, and circulated all over the continent. His fame as a skilful practitioner occasioned his being invited to Russia to inoculate the empress Catherine and her son, in 1768, for which he was appointed counsellor of state and physician to her imperial majesty, with an annuity of £500: he was at the same time created a baron of the Russian empire, and the same title was conferred on his son. At Moscow he inoculated also a considerable number of the people; but refused the invitation of the empress to reside in Russia as her physician, and after being admitted, at Sans Souci, to a private audience of Frederic II. king of Prussia, he returned to England. In 1780 he was elected M. P. for the borough of Hertford; upon which he declined his practice, except for the relief of the poor. In 1781 he again visited Russia to inoculate the late emperor Alexander and his brother, in which he experienced the same success as before. On his resignation, in 1790, his son Nathanael was elected representative of the borough of Hertford. Baron Dimsdale died at Hertford, after a short illness, in 1800.

DIN, *v. a. & n. s.* Sax. *dȳn*, from *dȳnan*, to make a noise; Ice *dýna*, to thunder. To sun with a noise; stupify; overpower with clamour; the noise made.

And all the way he roared as he went,

That all the forest with astonishment

Thereof did tremble, and the beasts therein

Fled fast away from that so dreadful *din*.

Hubbard's Tale.

O, 'twas a *din* to fright a monster's ear;

To make an earthquake: sure, it was the roar

Of a whole herd of lions. Shakspeare.

Now night, over heaven

Inducing darkness, grateful truce imposed,

And silence on the odious *din* of war. Milton.

Rather live

To bait thee for his bread, and *din* your ears

With hungry cries. Otway.

Some independent ideas, of no alliance to one another, are, by education, custom, and the constant *din* of their party, so coupled in their minds, that they always appear there together, and they can no more separate them in their thoughts than if they were but one idea, and they operate as if they were so. Locke.

What shall we do if his majesty puts out a proclamation commanding us to take Wood's half-pence? This hath been often *dinned* in my ears. Swift.

Nature's eye is melancholy

O'er the city high and holy :

*But without there is a din
Should arouse the' saints within,
And revive the heroic ashes
Round which yellow Tiber dashes. Byron.*

DINAGEPORE, a district of Bengal, situated between the twenty-fifth and twenty-sixth degrees of northern latitude. It is bounded on the north and west by Purneah, on the east by Rungpore and Ghoragot, and on the south by Bettorial. The soil is much diversified, and the general face of the country is divided into small valleys of two or three miles broad. These are watered by rivers, which, in the rainy seasons, inundate the low lands and swell into large lakes fifty or sixty miles long, till the falling of the Ganges permits the water to retire, after which these lowlands are covered with luxuriant pasture, and are capable of producing abundant crops of rice. The soil does not answer for grain, but indigo, tobacco, and hemp are cultivated successfully. It is on the whole, however, one of the poorest districts of Bengal. Three-fourths of the inhabitants are Hindoos.

DINAGEPORE, or Rajgunge, the capital of the above district, is situated on an island formed by the Pernabubah, and is the residence of the rajah. It is a considerable place of trade.

DINAH; Heb. דִּינָה, i. e. judgment; the only daughter of the patriarch Jacob. Her misfortune with the prince of Shechem; his honorable proposal of repairing the injury by marriage; and the prevention of the fulfilment of his generous intention by the treachery and barbarity of her bloody brethren, Simeon and Levi, are recorded in Gen. xxxiv. See **LEVI**.

DINAN, or **DINANT**, a town of the department of the Cotes du Nord, Brittany, containing manufactures of cotton, linen, and flannel, and about 4200 inhabitants. It is surrounded with walls, and has an old castle, situated on the river Rance, a few miles from the sea. The small harbour is about thirteen miles south of St. Malo.

DINAPORE, a town, or rather a military cantonment, belonging to the British, situated on the southern bank of the river Ganges, in the province of Bahar, eleven miles and a half west of the city of Patna, for the defence of which it was constructed, in the year 1767. It consists of two handsome brick squares that will contain 1200 men, and superior barracks for the European officers. 'The officers,' says Mr. Hamilton, 'have more accommodations than in any barracks in England; and the private soldiers of the European regiments are provided with large and well aired apartments. The native soldiers are quartered in small huts, which to them is no hardship. The magazine built by Mr. Hastings has had £15,000 expended on it. In the vicinity is an excellent house in the European style, built by the soudah Ali, nabob of Oude.

DINDIGUL, or **DANDIGALA**, a district in the south of India, situated between the tenth and eleventh degrees of north latitude. It is bounded on the north by Coimbetoor and Kistnagerry, on the east by the Polygar territory and Madura, on the south by Travancor and Madura, and on the west by Travancor, Cochín, and Malabar. The principal rivers are the

Noil and the Amravati; and the chief towns Dindigul, Balny, and Palapetty. Particular inhabitants are here in the enjoyment of a portion of land, rent free, and the hereditary occupiers of the rest. This district was ceded to the British by Tippoo, in 1792, and, together with Madura, the Manapara Pollams, Ramnad, and Shevavunga, now forms one of the collectorships of the Madras presidency. The Dindigul districts and sequestered pollams have been converted into forty zemindaries.

DINDIGUL, the capital of the district of the same name, in southern India; has a fort, situated on a strong rock, in the midst of a plain, which is bounded on the west by the great range of mountains which separates it from the coast of Malabar, and on the east by a lower range, which runs between it and the district of Madura. This place was taken in 1755 by the Mysore rajahs, and by the British army in May, 1783, but restored to Tippoo at the peace of 1784. Travelling distance from Seringapatam 198 miles, from Madras 275 miles.

DINDYMA, or **DINDYMUS**, a mountain or ridge, allotted by many to Phrygia. Strabo mentions two mountains of this name, one in Mysia, near Cyzicus, the other in Gallogræcia, near Pessinus, and none in Phrygia. Ptolemy extends this ridge from the borders of Troas, through Phrygia to Gallogræcia: though, therefore, there were two mountains called Dindymus in particular, both sacred to the mother of the gods, and none of them in Phrygia Major, yet there might be several hills and eminences in it, on which this goddess was worshipped, and therefore called Dindyma in general.

DINE, *v. a. & v. n.* } Fr. *diner*, to take the
DINING-ROOM, *n. s.* } day-meal, from Sax.
DINER, } daegman, a day. See
DINER-TIME. } **DAY**. To give the day,
or principal, meal to. To feed; to eat that meal.
The dining-room, dinner, and dinner-time, are in this country well understood.

Pernaps some merchant hath invited him,
And from the mart he's somewhere gone to dinner:
Good sister let us *dine*, and never fret. *Shakespeare.*

At dinner-time,

I pray you have in mind where we must meet. *Id.*

He would *dine* with him the next day. *Clarendon.*

Before dinner and supper, as often as it is convenient, or can be had, let the public prayers of the church, or some parts of them, be said publicly in the family. *Taylor.*

The apartments within were very splendid, especially the *dining-room*; and many other of the rooms were well adorned with mouldings and fret-work; some of whose marble clavils were so delicately fine, that they would reflect an object true and lively from a great distance. *Fuller. Worthies of Devon.*

Boil this restoring root in generous wine,
And set beside the door the sickly stock to *dine*. *Dryden.*

Thus, of your heroes and brave boys,
With whom old Homer makes such noise,
The greatest actions I can find,
Are, that they did their work and *dined*. *Prior.*

Then from the mint walks forth the man of rhyme,
Happy to catch me just at dinner-time. *Pope.*

On carcases of every kind,
This man hath elegantly dined. *Gay.*

DINETICAL, *adj.* Δινητικός. Whirling round; vertiginous.

Some of late have concluded, from spots in the sun, which appear and disappear again, that, besides the revolution it maketh with its orbs, it hath also a *dinetical* motion, and rolls upon its own poles.

Browne's Vulgar Errors.

A spherical figure is most commodious for *dinetical* motion, or revolution upon its own axis. *Ray.*

DING. Goth. *denga*; Sax. *dengan*; Dutch *dringen*, to beat about. To dash violently; to bluster; bounce.

Let us all ring fancy's knell;
Ding, dong bell. *Shakspeare.*

He huffs and *dings*, because we will not spend the little we have left, to get him the title of lord Strut. *Arbutnot.*

DINGELFINGEN, a well-built old town of Lower Bavaria, situated on the Iser, in the circle of the Danube, and containing 2080 inhabitants. It is divided into the upper and lower towns; the former standing on a steep eminence, communicating with the hills by a sort of dry aqueduct. It is eighteen miles north-east of Landshut, and forty-eight north-east of Munich.

DINGLE, *n. s.* From Sax. *den*, or *ðin*, a hollow. A hollow between hills; a dale.

I know each lane, and every alley green,
Dingle or bushy dell of this wild wood;
And every bosky bourn from side to side,
My daily walks and ancient neighbourhood.

Milton.

DINGLE, in geography, a sea-port of Ireland, in Kerry, Munster, seated on the north side of a bay, and formerly a place of great trade, particularly with Spain. Several of the houses are built in the Spanish fashion, with ranges of stone balcony windows. It is a borough, and sent two members to the Irish parliament. It is twenty-four miles W.S.W. of Tralce, and 166 of Dublin.

DINGWALL, an ancient and flourishing royal borough, in the county of Ross, Scotland, erected by king Alexander II., in 1226. Its charter of that date was confirmed and renewed by James IV., and the inhabitants empowered to elect a provost, two baillies, dean of guild, treasurer, and ten counsellors. It joins with Kirkwall, Wick, Dornoch, and Tain, in sending a representative to the British parliament. From the remains of some old causeways, Dingwall appears to have been anciently much more extensive than it is now. The ruins of its castle are still to be seen, consisting of 'stones so strongly cemented with mortar that it is easier to break a solid rock than to separate those of which it is composed.' It was surrounded with a deep ditch, and a regular glacis remains. The town has been much enlarged and improved, and a considerable inland trade is carried on in it. It lies eighteen miles west of Cromarty, and is seated on the Frith.

DINOGRATES, a celebrated architect of Macedonia, who rebuilt the temple of Ephesus, when burnt by Erostratus, with much more magnificence than before. Vitruvius informs us, that Dinocrates proposed to Alexander the Great to convert mount Athos into the figure of a man, whose left hand should contain a walled city, and all the rivers of the mount flow into his right, and from thence into the sea! He also conceived a scheme for building the dome of the temple of Arsinoe at Alexandria, of loadstone, that should, by its attraction, uphold her iron image in the centre, suspended in the air.

DINT, *v. a. & n. s.* Sax. *ðynt*; Goth. *dunt*, a blow; a stroke. To give a blow that marks or indents: the blow given; force.

Much daunted with that *dint*, her sense was dazed; Yet, kindling rage, herself she gathered round.

Spenser.

A gentle knight was pricking on the plaine
Ycladd in mighty arms and silver shielde,
Wherewith old *dints* of deepe wounds did remaine,
The cruel marks of many 'a bloody fildie.

Spenser. Faerie Queene.

Leave, leave, fair bride, your solitary bone,
No more shall you return to it alone;
It nurseth sadness; and your body's print,
Like to a grave, the yielding down doth *dint*.

Donne.

Now you weep; and I perceive you feel
The *dint* of pity. *Shakspeare. Julius Cæsar.*

Neither vainly hope

To be invulnerable in these bright arms,
Though tempered heavenly; for that mortal *dint*.
Save he who reigns above, none can resist.

Milton.

Deep-*dinted* wrinkles on her cheeks she draws;
Sunk are her eyes, and toothless are her jaws.

Dryden's Æneid.

We are to wrest the whole Spanish monarchy out of the hands of the enemy; and, in order to it, to work our way into the heart of his country by *dint* of arms. *Addison.*

Fast by the rock, all menacing but mute,
He stood; and save a light beat of his foot,
Which deepened now and then the sandy *dint*
Beneath his heel, his form seemed turned to flint.

Byron.

DINUMERATION, *n. s.* Lat. *dinumeratio*. The act of numbering out singly.

DIO, surnamed Chrysostom, (golden mouth), a celebrated orator and philosopher of Greece, in the first century, born at Prusa, in Bithynia. He attempted to persuade Vespasian to quit the empire; and Domitian was so offended at his freedom of speech that he would have put him to death had he not fled into Thrace. After the death of that tyrant Dio returned to Rome, and acquired the esteem of Trajan, who made him ride with him in his triumphal chariot. There are still extant eighty of Dio's Orations, and some other of his works,—the best edition of which is that of Samuel Raimarus, in 1750, in folio.

DIOCESS, *n. s.* } Gr. *δια*, and *οικησις*,

DIOCESAN, *n. s. & adj.* } or see the article following. The circuit of a bishop's jurisdiction: diocesan is the bishop administering therein.

None ought to be admitted by any bishop, but such as have dwelt and remained in his *diocess* a convenient time.

Whitgift.

One younger man amongst the rest would take upon him to defend that every *diocesan* bishop was pope. I answered him with some scorn.

Bp. Hall's Hard Measure.

Although he (the bishop) had not all the *diocese* actually in communion and subjection, yet his charge, his *diocese* was so much. Just as with the Apostles, to whom Christ gave all the world for a *diocese*, yet at first they had but a small congregation. *Bishop Taylor.*

I have heard it has been advised by a *diocesan* to his inferior clergy, that they should read some of the most celebrated sermons printed by others.

Tatler.

This realm has two divisions, one into shires or counties, in respect of temporal policy; another into *dioceses*, in respect of jurisdiction ecclesiastical.

Council.

Oblige him to a longer residence in his *diocese* than is usually practised, that he may do the proper work of a bishop; that he may direct and inspect the flock of Christ; confirm the unstable, reclaim the reprobate, &c.

Bishop Watson.

DIocese is also used in ancient authors for the province of a metropolitan. Dioceses meant, originally, a civil government, composed of divers provinces. The first division of the empire into dioceses is ordinarily ascribed to Constantine, who distributed the whole Roman state into four: viz. those of Italy, Illyria, the east, and Africa. And yet, long before Constantine, Strabo, who wrote under Tiberius, takes notice (lib. xiii. p. 132) that the Romans had divided Asia into dioceses; and complains of the confusion such a division occasioned in geography, Asia being no longer divided by people, but by dioceses, each of which had a tribunal or court, where justice was administered. Constantine, then, was only the institutor of those large dioceses which comprehended several metropolises and governments; the former dioceses only comprehending one jurisdiction, or the country under one judge, as appears from this passage in Strabo, as well as from Cicero himself; lib. iii. epist. ad fam. 9. and lib. xiii. ep. 67. Thus, at first, a province included diverse dioceses; and afterwards a diocese came to comprise divers provinces. In after times the Roman empire became divided into thirteen dioceses or prefectures; though, including Rome and the suburbs, there were fourteen. These fourteen dioceses comprehended 120 provinces; each province had a proconsul, who resided in the capital; and each diocese of the empire had a consul, who resided in the principal city of the district. On this civil constitution the ecclesiastical one was afterwards regulated: each diocese had an ecclesiastical vicar or primate, whose judgment determined all the concerns of the church within his territory. At present diocese is confined to a single province, under a metropolitan, or more commonly to a single jurisdiction of a bishop. Brito affirms diocese to be properly the territory and extent of a baptismal or parochial church; whence the word is used by divers authors to signify a simple parish.

DIocLEIA, Διοκλεῖα, in antiquity, a solemnity kept in the spring, at Megara, in memory of the Athenian hero, who died in the defence of the youth he loved.

DIocLESIANUS (Caius Valerius Jovius), a celebrated Roman emperor, born of an obscure family in Dalmatia, in 245. He was first a common soldier, and by merit and success he gradually rose to the office of a general; and at the death of Numerian, in 284, was invested with imperial power. In this high station he rewarded the fidelity of Maximian, who had shared with him all the subordinate offices in the army, by making him his colleague on the throne. He created two subordinate emperors, Constantius and Galerius, by the title of Cæsars, whilst he claimed for himself and his colleague the superior title of Augustus. Dioclesian has been celebrated for his military virtues; and though he was not polished by education, was, nevertheless, a patron of learning. He was bold, resolute, and active; but his cruelty to the Christians has been deservedly branded with infamy. After he had reigned twenty-two years in the greatest prosperity, he publicly abdicated the crown at Nicomedia, in 305, and retired to a private station at Salona. Maximian, his colleague, was compelled to follow his example; and when he, some time after, endeavoured to rouse the ambition of Dioclesian and persuade him to re-assume the imperial purple, he received for answer, that Dioclesian took now more delight in cultivating his little garden, than he formerly enjoyed in a palace, when his power was extended over all the earth. He lived nine years after his abdication in the greatest security and enjoyment at Salona, and died in 314, in the sixty-eighth year of his age. His persecution of the Christians forms a chronological era, called the era of Dioclesian, or of the Martyrs. It was long used in theological writings, and is still followed by the Copts and Abyssinians. It commenced August 29th, A. D. 284.

DIocTAHPIDRIA, in natural history, a genus of pellucid and crystalliform spars, composed of two octangular pyramids, joined base to base, without any intermediate column. Of these some have long pyramids, others short and sharp-pointed ones, and others short and obtuse pointed ones; the two former species being found in the Harlz, and the last in the mines of Cornwall.

DIODATI (John), a Protestant divine, and professor of theology at Geneva, who was born at Lucca in 1579, and died at Geneva in 1652. He is distinguished by his translations: 1. Of the Bible into Italian, with notes, Geneva, 1607, 4to. This work is, however, rather a paraphrase than a translation, and the notes, divine meditations more than critical reflections. 2. Of the Bible into French, Geneva, 1614; and 3. Of Father Paul's History of the Council of Trent into French.

DIODIA, in botany, a genus of the monogynia order, and tetrandria class of plants; natural order, forty-seventh, stellata: cor. monopetalous and funnel-shaped: caps. bilocular and dispersuous. Species six, natives of the West Indies and of Mexico.

DIODON, the sun-fish, in ichthyology, a genus belonging to the order of branchiostega. There are three species: viz.

1. D. trystrix, or the globe-fish, common to

Europe and South Carolina. The form of the body is usually oblong; but when alarmed it has the power of inflating the belly to a globular shape of great size. This seems designed as a means of defence against fish of prey, as they have less means of laying hold of it, and are besides terrified by the numerous spines with which that part is armed, and which the animal can erect on every part. The mouth is small; the irides white, tinged with red; the back, from head to tail, almost straight, or at least very slightly elevated, of a rich deep blue color. It has the pectoral, but wants the ventral fins: the tail is almost even, divided by an angular projection in the middle; tail and fins brown. The belly and sides are white, shagreened, or wrinkled, and beset with innumerable small sharp spines, adhering to the skin by four processes.

2. *D. mola*, or the short sun-fish, differs from the oblong, in being much shorter and deeper. The back and the anal fins are higher, and the aperture to the gills not semilunar, but oval. The situation of the fins is the same in both. Both kinds are taken on the western coasts of this kingdom, but in much greater numbers in the warmer parts of Europe.

3. *D. oblongus*, the oblong sun-fish, grows to a great bulk: one examined by Sylvianus was above 100 pounds in weight; and Dr. Borlase mentions another taken at Plymouth in 1734, that weighed 500. In form it resembles a bream, or some deep fish cut in the middle. The mouth is very small, and contains in each jaw two broad teeth, with sharp edges. The eyes are small; before each is a small semilunar aperture; the pectoral fins are very small, and placed behind them. The color of the back is dusky, and dappled; the belly silvery; between the eyes and the pectoral fins are certain streaks, pointing downwards. The skin is free from scales. When boiled, it has been observed to turn into a glutinous jelly, resembling boiled starch when cold, and served the purposes of glue on being tried on paper and leather. The meat of this fish is uncommonly rank: it feeds on shell-fish. The sun-fish of the Irish, the *squalus* of Gmelin, differs in all respects from this.

DIODORUS, surnamed Siculus, an ancient historian, born at Agrigra, in Sicily. He wrote a history of Egypt, Persia, Syria, Media, Greece, Rome, and Carthage; and it is said that he visited all the places mentioned in his history, which was the labor of thirty years. He is, however, too credulous in some of his narratives; and often dwells too long upon fabulous reports and trifling incidents; while events of the greatest importance to history are treated with brevity, and sometimes passed over in silence. He lived in the age of Caesar and Augustus, and spent much time at Rome to procure information, and authenticate his history. This important work, which he composed in Greek, contained forty books of which there are only fifteen remaining. The best editions are that of Amsterdam, 1745, in 2 vols. folio, and Heyne, 10 vols. 8vo. 1793.

DICEIA, the twenty-second class in Linnaeus's sexual system, consisting of plants which, having no hermaphrodite flowers, produce male

and female flowers on separate roots. These last only ripen the seeds; but require for that purpose the vicinity of a male plant; for the aspersions or sprinkling of the male dust. From the seeds of the female flowers, thus impregnated, are raised both male and female plants. The plants in the class diceia are therefore all either male or female, on separate roots; not hermaphrodite, as in the greater number of classes; nor with male and female flowers upon one root, as in the class monœcia. See BOTANY.

DIOGENES of Apollonia, in the island of Crete, held a considerable rank among the philosophers who taught in Ionia before Socrates appeared at Athens. He was the scholar and successor of Anaximenes, and in some measure rectified his master's opinion concerning air being the cause of all things. It is said that he was the first who observed that air was capable of condensation and rarefaction. He taught with great reputation at Athens; but was at length banished for the freedom of his opinions. He died about A. A. C. 450.

DIOGENES the Cynic, an ancient philosopher, the son of a banker of Sinope. Being banished with his father for coinage money, he retired to Athens, where he studied philosophy under Antisthenes. Here he added new degrees of austerity to the sect of the Cynics, and never did any philosopher carry contempt for the conveniences of life so far. He lodged in a tub; and had no other property beside his staff, wallet, and wooden bowl, which last he threw away, on seeing a boy drink out of the hollow of his hand. He used to call himself a vagabond, who had neither house nor country; was obliged to beg, was ill clothed, and lived from hand to mouth. Such singularity soon gained him reputation; and Alexander the Great condescended to visit the philosopher in his tub. He asked if there was any thing in which he could oblige him: 'Get out of my sunshine' was the only answer from the philosopher. The conqueror was so struck with the independence of mind thus exhibited, that he declared, 'if he was not Alexander, he would choose to be Diogenes.' In reply to one who asked at what time he ought to dine, Diogenes said, 'If you are a rich man, when you *will*; if you are poor, when you *can*.' 'Would you be revenged upon your enemy,' said Diogenes, 'be virtuous, that he may have nothing to say against you.' As Diogenes was going over to the island of Egina, he was taken by pirates, who carried him into Crete, and there exposed him to sale. He answered the eric, who asked him what he could do, that 'he knew how to command men'; and perceiving Xenades, a Corinthian, going by, he said, 'Sell me to that gentleman, for he wants a master.' Xenades, struck with the singularity of Diogenes, bought him and carried him to Corinth, appointed him tutor to his children, and soon entrusted him with the management of his house. Diogenes's friends being desirous of redeeming him, 'You are fools,' said he; 'the lions are not the slaves of those who feed them, but they are the servants of the lions.' Some say that Diogenes spent the remainder of his life in Xenades's family; but Dio Chrysostom asserts that he passed the winter

at Athens, and the summer at Corinth. He died at Corinth when he was about ninety years old : but authors are not agreed either as to the time or manner of his death. The account of Jerom is, that as he was going to the Olympic games, a fever seized him ; upon which he lay down under a tree, and refused the assistance of those who accompanied him. 'Go you to the games,' said he, 'and leave me to contend with my illness. If I conquer, I will follow you : if I am conquered, I shall go to the shades below.' He despatched himself that very night ; saying, that 'he did not so properly die, as get rid of his fever.' He had for his disciples Onesicritus, Phocion, Stilpo of Megara, and several other great men. His works are all lost.

DIogenes, surnamed Laertius, from Laerta in Cilicia, his birth place, an ancient Greek author, who wrote ten books of the Lives of the Philosophers, still extant. In what age he flourished is not determined. The oldest writers who mention him are Sopater of Alexandria, who lived in the time of Constantine the Great, and Hesychius Milesius, who lived under Justinian. Diogenes often mentions Plutarch and Phavorinus ; and Menage has fixed the period of his appearance at the time of Severus, ~~about~~ about A. A. C. 200. He divided his Lives into books, and inscribed them to a learned lady of the Platonic school, as he himself intimates in his Life of Plato. There have been several editions of his Lives of the Philosophers ; but the best is that printed in 2 vols. 4to., at Amsterdam, 1693.

DIOMEDES, in fabulous history, a tyrant of Thrace, who is said to have fed his horses with the flesh of men. Hercules killed him, and threw him to be eaten by his own carnivorous horses ; Hyginus says there were four of them, and that the hero afterwards killed them, along with Abderus, their groom.

DROMEDES, king of Eolia, the son of Tydeus and Deiphyle, one of the bravest of the Grecian chiefs in the Trojan war. He went with Ulysses to steal the Palladium from the temple of Minerva in Troy ; and assisted in murdering Rhesus king of Thrace, and carrying off his horses. At his return from the siege of Troy, he lost his way in the darkness of the night, and landed in Attica, where his companions plundered the country, and lost the Trojan Palladium. During his long absence, his wife Egiale had prostituted herself to Cometes, one of her servants. This was attributed to the resentment of Venus, whom Diomedes had wounded in a battle before Troy. He resolved to abandon his native country, which was the seat of his disgrace ; and the attempts of his wife to take away his life, hastened his departure. He came to that part of Italy which has been called Magna Græcia, where he built a city, which he called Argyrippa, and married the daughter of Daunus, the king of the country. He died there in extreme old age ; or, according to a certain tradition, he perished by the hand of his father-in-law. His death was greatly lamented by his companions, who, in the excess of their grief, were changed into birds resembling swans. These birds took flight into a neighbouring island in the Adriatic, and became remarkable for the tameness with which they ap-

proached the Greeks, and for the horror with which they shunned all other nations. They are called the birds of Diomedes. Altars were raised to Diomedes, as to a god, one of which Strabo mentions at Timavus.

DIOMEDIA, in ornithology, a genus belonging to the order of anseres. The bill is strait ; the superior mandible is crooked at the point, and the lower one is truncated ; the nostrils are oval, open, a little prominent, and placed on the sides. There are four species : the principal are :—

1. *D. demersa*, has no quill-feathers on the wings ; and the feet have four toes, connected together by a membrane. It is the black penguin of Edwards, about the size of a goose, and is found at the Cape of Good Hope. It is an excellent swimmer and diver ; but hops and flutters in a strange awkward manner on the land ; and, if hurried, stumbles perpetually, and frequently runs for some distance like a quadruped, making use of the wings till it can recover its upright posture, crying out at the same time like a goose, but in a much hoarser voice. It is said to clamber some way up the rocks in order to make the nest ; in doing which, it has been observed to assist with the bill. The eggs are two in number, white, as large as those of a duck, and reckoned delicious eating, at least are thought so at the Cape, where they are brought in great numbers for that purpose. At this place the birds are often seen kept tame ; but in general they do not survive the confinement many months.

2. *D. exulans*, has pennated wings, and three toes on each foot. It is the albatross of Edwards ; and is about the size of a pelican. These birds are found in the ocean betwixt the tropics, and at the Cape of Good Hope. They are also often seen in vast flocks in Kamtschatka, and the adjacent islands, about the end of June, where they are called great gulls ; but it is chiefly in the bay of Penschinnensi, the whole inner sea of Kamtschatka, the Kurile Isles, and that of Bhering ; for on the eastern coasts of the first they are scarce, a single straggler only appearing now and then. Their chief motive for frequenting these places seems to be plenty of food ; and their arrival is a sure presage of shoals of fish following. At their first coming they are very lean, but soon grow immensely fat. They are very voracious, and will often swallow a salmon of four or five pounds weight ; but as they cannot take the whole of it into their stomach at once, part of the tail end will often remain out of the mouth ; and the natives, finding the bird in this situation, easily knock it on the head on the spot. Before the middle of August they migrate elsewhere. They are often taken by a hook baited with a fish, not for the sake of their flesh (it being hard and unsavory) but on account of the intestines, a particular part of which is blown up as a bladder, and serves as a float to buoy up nets in fishing. Of the bones, tobacco-pipes, needle-cases, &c., are made. When caught they defend themselves stoutly with the bill. Their cry is harsh and disagreeable, not unlike the braying of an ass. The breeding places of the albatross, if at all in the northern hemisphere, have not yet been pointed out ; but we are certain of their multiplying in the southern, viz. Patagonia and Falk-

land Islands; to this last place they come about the end of September or beginning of October, among other birds, in great abundance. The nests are made on the ground with earth, are round in shape, a foot in height, indented at top. The egg is larger than that of a goose, four inches and a half long, white, marked with dull spots at the bigger end, and is thought to be good food, the white never growing hard with boiling. While the female is sitting, the male is constantly on the wing, and supplies her with food: during this time they are so tame as to suffer themselves to be shoved off the nest while their eggs are taken from them; but their chief destruction arises from the hawk, which, the moment the female gets off the nest, darts thereon, and flies away with the egg. The albatross itself likewise has its enemy, being greatly persecuted while on the wing by the dark gray gull, called skua. This bird attacks it on all sides, but particularly endeavours to get beneath, which is only prevented by the first settling on the water; and indeed they do not frequently fly at a great distance from the surface, except obliged so to do by high winds or other causes. As soon as the young are able to remove from the nest, the penguins take possession, and hatch their young in turn. It is probable that they pass from one part of the globe to another according to the season; being now and then met with by different voyagers at various times in intermediate places. The food is supposed to be chiefly small marine animals, especially of the molluscæ or blubber class, as well as flying fish.

DION, the son of Hipparinus, a Syracusan, famous for his power and abilities. He was related to Dionysius, and often joined with the philosopher Plato (who at his request had come to reside at the tyrant's court), in advising him to lay aside the supreme power. His great popularity rendered him odious in the eyes of the tyrant, who banished him to Greece. There he collected a numerous force, and resolved to free his country from tyranny. This he easily effected on account of his popularity. He entered the port of Syracuse with only two ships; and in three days reduced under his power an empire which had already subsisted for fifty years, and which was guarded by 500 ships of war, and above 100,000 troops. The tyrant fled to Corinth, and Dion kept the power in his own hands, fearful of the aspiring ambition of some of the friends of Dionysius: but he was shamefully betrayed and murdered by one of his familiar friends called Callicrates, or Callippus, 354 years before the Christian era.

DION CASSIUS, a native of Nicra in Bithynia. His father's name was Apronianus. He was raised to the greatest offices of state in the Roman empire by Pertinax, and his three successors. He was naturally fond of study, and he improved himself by unwearied application. He was ten years in collecting materials for a history of Rome, which he published in eighty books, after a laborious employment of twelve years in composing it. This valuable history began with the arrival of Æneas in Italy, and was carried down to the reign of Alexander Severus. The first thirty-four books are totally lost; the twenty fol-

lowing, that is from the thirty-fifth to the fifty-fourth, remain entire; the six following are mutilated; and fragments are all that we possess of the last twenty. In the compilation of this extensive history, Dion proposed Thucydides for a model, but he is not perfectly happy in his imitation. His style is pure and elegant, and his narrations are judiciously managed, and his reflections learned; but, upon the whole, he is credulous, and the bigoted slave of partiality, satire, and flattery. He inveighs against the republican principles of Brutus and Cicero, and extols the cause of Cæsar. Seneca is the object of his satire, and he represents him as debauched and licentious in his morals.

DIONÆA, in botany, a genus of sensitive plants lately discovered. It belongs to the order monogynia, in the decandria class. There is but one genus as yet known: viz. *D. muscipula*, or Venus's fly-trap. Every one skilled in natural history knows, that the sensitive plants close their leaves, and bend their joints, upon the least touch (see *MIMOSA*); but no design of nature has yet appeared to us from these surprising motions: they soon recover themselves again, and their leaves are expanded as before. But the *dionæa* shows that nature may have some view towards its nourishment, in forming the upper joint of its leaf like a machine to catch food; upon the middle of this lies the bait for the unhappy insect that becomes its prey. Many minute red glands that cover its inner surface, and which discharge a smell of carrion, tempt the poor animal to taste them; and the instant these tender parts are irritated by its feet, the two lobes rise up, grasp it fast, lock the two rows of spines together, and squeeze it to death. And lest the strong efforts for life, in the creature thus taken, should serve to disengage it, three small erect spines are fixed near the middle of each lobe among the glands, that effectually put an end to all its struggles. Nor do the lobes ever open again, while the dead animal continues there. The plant, however, cannot distinguish an animal from a general substance; for, if we introduce a straw or a pin between the lobes, it will grasp it full as fast as if it was an insect. It grows in North America, in about 35° lat. N., in wet shady places, and flowers in July and August. The largest leaves are about three inches long, and an inch and a half across the lobes, the glands of those exposed to the sun are of a beautiful red color; but those in the shade are pale, and inclining to green. The roots are squamous, sending forth but few fibres, and are perennial. The leaves are numerous, inclining to bend downwards, and are placed in a circular order; they are jointed and succulent; the lower joint, which is a kind of stalk, is flat, longish, two edged, and inclining to heart-shaped. In some varieties they are serrated on the edges near the top. The upper joint consists of two lobes; each lobe is of a semi-oval form, with its margins furnished with stiff hairs like eye-brows, which embrace or lock in each other when they close. The upper surfaces of the lobes are covered with small red glands; each of which appears, when highly magnified, like a compressed arbutus-berry. If the fly, enclosed in

these lobes, can be forced out so as not to strain the lobes, they expand again; but if force is used to open them, so strong has nature formed the spring of their fibres, that one of the lobes will generally snap off rather than yield. The stalk is about six inches high, round, smooth, and without leaves; ending in a spike of flowers. The flowers are milk-white, and stand on foot-stalks, at the bottom of which is a little painted bractea or flower leaf. The soil in which it grows, as appears from what comes about the roots of the plants when they are brought over, is a black, light mould, intermixed with white sand, such as is usually found in our moorish heaths. Being a swamp plant, a northern aspect will be properest for it at first, to keep it from the direct rays of the sun; and in winter, till we are acquainted with what cold weather it can endure, it will be necessary to shelter it with a bell glass, such as is used for melons. This should be covered with straw or a mat in hard frosts. By this means several of these plants have been preserved through the winter in a very vigorous state. Its sensitive quality will be found in proportion to the heat of the weather, as well as the vigor of the plant. Our summers are not warm enough to ripen the ~~seed~~; or possibly we are not yet sufficiently acquainted with the culture of it. To try further experiments on its sensitive powers, some of the plants might be placed in pots of light moorish earth, set in pans of water, in an airy stove in summer; where the heat of such a situation, being like that of its native country, will make it surprisingly active.

DIONYSIA, in Grecian antiquity, solemnities in honor of Bacchus, sometimes called by the general name of Orgia; and by the Romans Bacchanalia and Liberalia.

DIONYSIACA, in antiquity, a designation given to plays and all manner of sports acted on the stage: because play-houses were dedicated to Dionysius, or Bacchus, one of the deities of sports.

DIONYSIUS I. from a private secretary became general and tyrant of Syracuse and all Sicily. He patronised learning and men of letters, and made his court the resort of many of the greatest philosophers of Greece. He was also himself a poet; and having, by bribes, gained the prize for tragedy at Athens, he indulged himself so immoderately at table from excess of joy that he died of the debauch, A. A. C. 386. Some authors, however, say he was poisoned by his physicians.

DIONYSIUS II., his son and successor, was a greater tyrant than his father: his subjects were obliged to fly to the Corinthians for succour; and Timoleon their general having conquered the tyrant, he fled to Athens, where he was obliged to keep a school for subsistence. He died A. A. C. 343.

DIONYSIUS, surnamed Halicarnassus, or the Halicarnassian, a celebrated historian, and one of the most judicious critics of antiquity. He was born at Halicarnassus; and went to Rome after the battle of Actium, where he staid twenty-two years in the reign of Augustus. He there composed in Greek his History of the Roman Antiquities, in twenty books of which the first eleven

only are now remaining. There are also still extant several of his critical works. The best edition of the works of this author is that of Oxford, in 1704, in Greek and Latin, by Dr. Hudson.

DIONYSIUS, surnamed Periegetes, a learned geographer, to whom is attributed a Periegesis, or Survey of the Earth, in Greek verse. Some suppose that he lived in the time of Augustus; but Scaliger and Saumasius place him under the reign of Severus, or Marcus Aurelius. He wrote many other works, but his Periegesis is the only one we have remaining; the best and most useful edition of which is that improved with notes and illustrations by Hill.

DIONYSIUS, the Areopagite, was born and educated at Athens. He went afterwards to Heliopolis in Egypt; where, if we may believe some writers of his life, he saw that extraordinary eclipse which happened at our Saviour's passion, and was urged by some uncommon impulse to cry out, *Aut Deus Naturæ patitur, aut cum patiente dolet*: 'Either the God of Nature suffers, or condole with him who does.' At his return to Athens he was elected into the court of Areopagus, whence his title. About A. D. 50, he embraced Christianity (Acts xvii. 34); and, some say, was appointed first bishop of Athens by St. Paul. He is supposed to have suffered martyrdom; but whether under Domitian, Trajan, or Adrian, is uncertain. We have nothing remaining under his name, but what there is great reason to believe spurious.

DJOJOCARTA, a considerable town and European settlement of the island of Java, situated on a navigable stream. It is the capital of the sultan of Mataram, who has a palace here three miles in circuit, surrounded by a broad wet ditch with draw-bridges, and defended by 100 pieces of cannon. Within its precincts is a lake, on which stands an ancient mansion, which is entered by a long and spacious passage under the water. A guard of 300 Amazons, daughters of petty chieftains, are said to be trained here both to a military and domestic life. They are armed with spears, and are excellent equestrians. This place was taken by a coup de main, by the British, in 1812.

DIOPHANTINE PROBLEMS, in mathematics, certain questions relating to square and cube numbers, and right-angled triangles, &c., the nature of which was determined by Diophantus.

DIOPTRIC, *adj.* } Gr. διοπτρικαί. Af-
DIOPTRICAL, *adj.* } fording a medium for the
DIOPTRICS, *n. s.* } sight; assisting the sight
in the view of distant objects; a branch of the science of optics.

Being excellently well furnished with dioptrical glasses, he had not been able to see the sun spotted.

Boyle.

View the asperities of the moon through a dioptrick glass, and venture at the proportion of her hills by their shadows.

Morr's *Antid. against Atheism*.

DIOPTRICS; of δια, through, and οπτρομαι, I see; sometimes called also Anaclastics, the doctrine of refracted vision. A branch of the science of optics. The ancients treated distinctly of direct and reflected vision; but of refracted vision

their knowledge was very imperfect. An early treatise on refraction, in nine books, was written by J. Baptista Porta; but Kepler was the first who elucidated this subject in any great degree, having demonstrated the properties of spherical lenses very accurately, in a treatise published anno 1611. After Kepler, Galileo introduced the doctrine into his Letters; as also an Examination of the Preface of Johannes Pena upon Euclid's Optics, concerning the use of Optics in astronomy. Des Cartes also wrote a treatise on Dioptries, commonly annexed to his Principles of Philosophy, one of his best works: in which the true doctrine of vision is more distinctly explained than by any former writer, and in which is contained the law of refraction, discovered by Snell, though the name of the inventor is suppressed. Here are also laid down the properties of elliptical and hyperbolic lenses, with the practice of grinding glasses. Dr. Barrow has treated on Dioptries in a brief but very elegant manner, in his Optical Lectures, read at Cambridge. There are also Huygens's Dioptries, an excellent work of its kind. Molyneux's Dioptries, a heavy and dull work. Hartsocker's Essai de Dioptrique, Cherubin's Dioptrique Oculaire, et De Vision Parfaite, David Gregory's Elements of Dioptries, Traber's Nervus Opticus, and Zahn's Oculus Artificialis Teledioptricus. Dr. Smith's Optics is a complete work of its kind. Wolfius's Dioptries are contained in his Elementa Matheseos Universalis. Harris's Optics, Bouguer's Optics, and the second volume of Haüy's Natural Philosophy, may also be advantageously consulted. The Treatise on Optics, and the Optical Lectures of Newton, contain an account of inestimable experiments and reasonings in this science: and Mr. Dollond's discovery of achromatic glasses, by which colors are obviated in refracting telescopes, has been of great importance to this branch of optics. See OPTICS.

DIORTHOISIS, *n.s.* Gr. διορθωσις, of διορθωω to make straight. A surgical operation, by which crooked or distorted members are restored to their primitive and regular shape.

DIOSCOREA, in botany, a genus of the hexandria order and diœcia class of plants; natural order eleventh, samentaceæ. Male CAL. sexpartite: cor. none. Female CAL. sexpartite: STYL. three: CAPS. trilobular and compressed; and there are two membranaceous seeds. There are fifteen species, of which the only remarkable one is the *D. bulbifera*, or the yam. It has triangular winged stalks, which trail upon the ground, extend far, and frequently put out roots from their joints as they lie upon the ground, by which the plants are multiplied. The roots are eaten by the inhabitants of both the Indies; and, in the West India islands, make the greatest part of the negroes' food. The plant is supposed to have been brought from the East to the West Indies; for it has never been observed to grow wild in any part of America; but, in the island of Ceylon, and on the coast of Malabar, it grows in the woods, and there are in those places many different species. It is propagated by cutting the root in pieces, observing to preserve an eye in each, as in planting pota-

toes. One plant will produce three or four large roots. The skin of these roots is pretty thick, rough, unequal, covered with many stringy fibres or filaments, and of a violet color, approaching to black. The inside is white and of the consistence of red beet. It resembles the potatoe in its mealiness, but is of a closer texture. When raw, the yams are viscous and clammy; when roasted, or boiled, they afford very nourishing food; and are often preferred to bread by the inhabitants of the West Indies, on account of their lightness and facility of digestion. When first dug out of the ground, the roots are placed in the sun to dry; after which, they are either put in sand, dry garrets, or casks; where, if kept from moisture, they may be preserved whole years without being spoiled or diminished in their goodness. The root commonly weighs two or three pounds; though some yams have been found upwards of twenty pounds weight.

DIOSCORIDES, a physician of Anazarba, in Cilicia, who lived in the reign of Nero. He was originally a soldier; but afterwards he applied himself to study, and wrote a book upon Medicinal Herbs. See BOTANY.

DIOSCURI, in antiquity, a name given to Castor and Pollux, as *κουρσοι*, the children, *Διοι*, of Jupiter. They are often borne on the medals of the Roman consuls, and generally appear, as in the annexed diagram, on horse-back, armed with spears, and with helmets surmounted with stars.

DIOSCURIA, *διοσκουρία*, in antiquity, a festival in honor of Castor and Pollux. It was observed by the Cyreneans, but more especially by the people of Sparta, the birth-place of these heroes. The solemnity was full of mirth, being at a time wherein they shared plentifully of the gifts of Bacchus, and diverted themselves with sports, of which wrestling matches made a part.

DIOSMA, African spirea, a genus of the monogynia order and pentandria class of plants: cor. pentapetalous; nectarium crown-shaped, above the germ: CAPS. five, coalited: SEEDS hooded. There are nine species, of which the most remarkable are,

1. *D. hirsuta*, with narrow hairy leaves; a very handsome shrub, growing to the height of five or six feet. The stalks are of a fine coral color, the leaves come out alternately on every side of the branches; the flowers are produced in small clusters at the end of the shoots, and are of a white color. They are succeeded by starry seed-vessels, having five corners; in each of which corners is a cell, containing one smooth, shining, oblong, black seed; these seed-vessels abound with a resin which emits a grateful scent, as does also the whole plant.

2. *D. oppositifolia*, with leaves in the form of a cross. It rises to the height of three or four feet; the branches are slender, and produced from the stem very irregularly; the flowers are produced at the ends of the branches, between the leaves; the plants continue long in flower, and make a fine appearance, intermixed with other exotics in the open air.

DIOS NOMBRE DE, a town of Mexico, on the road from the mines of Sombrerete to Durango. It contains 6800 inhabitants.

DIOSZEGH, a large market town of Hungary, in the county of Bihar, thirty miles S.S.W. of Zathmar.

DIOSPOLITES NOMOS, a division of Thebais, or the Higher Egypt, to distinguish it from another of the Lower Egypt, or the Delta; south of the Nomos Thinites, on the west side of the Nile.

DIOSPYROS, the Indian date-plum, a genus of the diccia order and polygamia class of plants; natural order eighteenth, bicornes. *CAL.* hermaphrodite and quadrifid: *CON.* urceolated and quadrifid; *STAM.* eight: *STYL.* quadrifid: *BERRY* octospermous. There are two species, viz.

1. *D. lotus*, which is supposed to be a native of Africa, from whence it was transplanted into several parts of Italy, and also into the south of France. The fruit of this tree is supposed to be the lotus with which Ulysses and his companions were said to have been enchanted, and which made those who eat of it forget their country and relations. In the warm parts of Europe this tree grows to the height of thirty feet.

2. *D. Virginiana*, pinshamin, persimon, or pichumon plum, is a native of America, but particularly of Virginia and Carolina. The seeds of this sort have been frequently imported into Britain, and the trees are common in many nurseries about London. It rises to twelve or fourteen feet; but generally divides into many irregular trunks near the ground, so that it is very rare to see a handsome tree of this sort. Though plenty of fruit is produced on these trees, it never comes to perfection in this country. In America the inhabitants preserve the fruit till it is rotten, as is practised with medlars in England, when they are esteemed very pleasant. Both species are propagated by seeds, and the plants require to be treated tenderly while young; but when they are grown up, they resist the greatest cold of this country.

DIP, *v. a., v. n. & n. s.* *Goth. dopen; Sax.*

DIPCHICK, *n. s.* *S. dopen; Dutch doopen; Teut. tauffen; Hindoo duba*, from *Gr. διπτω*. To immerse; put into a liquid; wet; and, figuratively, to be deeply involved in any affair, and to engage as a pledge. As a neuter verb to sink; enter; immerge: as a substantive it is applied by miners to the direction of coal-shafts and minerals (see p. 268), and by scientific men to the depression of a part of the horizon, the needle of the compass, &c. Dip-chick the example explains.

Who, dipping all his faults in their affection,
Work like the spring that turneth wood to stone,
Convert his gyves to graces. *Shakspeare.*

Dipchick is so named of his diving and littleness. *Carew.*

And though not mortal, yet a cold shuddering dew
Dips me all o'er, as when the wrath of Jove
Speaks thunder. *Milton.*

To be baptized, is to be *dipped* in water; metaphorically, to be plunged in afflictions.

Poole's Continuators.

In Richard's time, I doubt, he was a little *dip*t in the rebellion of the commons. *Dryden. Fables.*

Be careful still of the main chance, my son;
Put out the principal in trusty hands,
Live on the use, and never *dip* thy lands.

Id. Perius.

When men are once *dip*t, what with the encouragements of sense, custom, facility, and shame of departing from what they have given themselves up to, they go on till they are stifled. *L'Estrange.*

So fishes, rising from the main,
Can soar with moistened wings on high;
The moisture dried, they sink again,
And *dip* their wings again to fly. *Swift.*

The kindred arts shall in their praise conspire,
One *dip* the pencil, and one string the lyre. *Pope.*

The vulture *dipping* in Prometheus's side,
His bloody beak with his torn liver dyed.

Granville.

The persons to be baptised may be *dipped* in water; and such an immersion or *dipping* ought to be made thrice, according to the canon. *Ayliffe's Parergon.*

Crowd round her baths, and, bending o'er the side,
Unclassed their sandals, and their zones untied,
Dip with gay fear the shuddering foot undressed,
And quick retract it to the fringed vest. *Darwin.*

In nautical observations it is necessary to know the depression or *dip* of the sea, to correct the apparent altitude of an observed object. *Dr. A. Rice.*

DIPETALOUS, *adj.* *Δις* and *πεταλον*. Having two flower leaves.

DIPHTHONG, *n. s.* *Fr. diphthongue; Ital. and Span. diftongo; Lat. diphthongus; Gr. διφθογγος*, from *δις*, double, and *φθογγη*, a sound.

We see how many disputes the simple and ambiguous nature of vowels created among grammarians, and now it has begot the mistake concerning *diphthongs*; all that are properly so are syllables, and not *diphthongs*, as is intended to be signified by that word. *Holder's Elements of Speech.*

Make a *diphthong* of the second eta and iota, instead of their being two syllables, and the objection is gone. *Pope.*

DIPHTHONGS are distinguished by some authors into those that regard the eye, and those that regard the ear; but a more accurate distinction was long ago made by that eminent grammarian, Mr. Ruddiman, into proper and improper. A third class, however, seems to exist in the English language, which may be styled neutral. 1. Improper diphthongs, are those wherein only one of the vowels is sounded, the other being sunk; as *æ* and *œ* in the Latin, and *ea*, *ei*, *eo*, *ie*, *ou*, *oe*, *ue*, and *ui*, in the English language. The Latins pronounced the two vowels in their diphthongs *æ* or *æ*, *oe* or *œ*, much as we do; only that the one was heard much weaker than the other, though the division was made with all the delicacy imaginable. 2. Neutral diphthongs are those combinations of vowels, wherein either a new sound, different from that of both, takes place, or neither of them is sounded; for instance, the sound of *eo* in people, is quite different from that of *eo* in jeopardy, or of either of the vowels separate; and the apparent diphthong, or diphthong of the eye, as others style it, *ue*, in *rogue*, *vogue*, &c.

is sunk altogether. Among the former of these classes may be ranked *ee* and *oo*, wherein the original sound of the vowels, instead of being lengthened, like that of *aa*, is changed to that of *i* and *u*. The diphthong *oe*, in *shoe*, also belongs to this class, with many others. 3. Proper diphthongs, are such as include the sound of both the component vowels, though still in one syllable; such as *au*, *eu*, and *ei*, in Latin; and *ai*, *au*, *ay*, *eu*, *ey*, *oi*, and *ou*, in English.

DIPLOE, n. s. The inner plate or lamina of the skull.

DIPLOE, in anatomy, the soft medullium, or medullary substance, which lies between the two laminæ of the bones of the cranium.

DIPLOMA, n. s. Fr. *diplome*; from Gr. *διπλωμα*. See the article following.

In 1728 he received from Edinburgh and Aberdeen an unsolicited *diploma*. Academical honours would have more value, if they were always bestowed with equal judgment. *Johnson's Life of Watts.*

DIPLOMA is peculiarly used for an instrument or licence, given by colleges, societies, &c., to clergymen or physicians, to exercise their respective professions, after passing examination, and being admitted to a degree.

DIPLOMATICS, the science of diplomas, or of ancient literary monuments, public documents, &c. It does not, however, nor can it, absolutely extend its researches to antiquity; but is chiefly confined to the middle age, and the first centuries of modern times. For though the ancients were accustomed to reduce their contracts and treaties into writing, yet they graved them on tables, or covered them over with wax, or brass, copper, stone, or wood, &c. And all that in the first ages were not traced on brass or marble, have perished by the length of time, and the destructive events, that have taken place. The word *diploma* signifies, properly, a letter, or epistle, folded in the middle, and not open. But, in more modern times, the title has been given to all ancient epistles, letters, literary monuments, and public documents, and to all those pieces of writing which the ancients called *syngrapha*, *chirographa*, *codicilli*, &c. In the middle age, and in the diplomas themselves, these writings are called *literæ*, *præcepta*, *placita*, *chartæ indiculæ*, *sigilla*, and *bullæ*; as also *panchartæ*, *pantochartæ*, *tractoria*, *descriptiones*, &c. The originals of these pieces are named *exemplaria*, or *autographa*, *chartæ authenticæ*, *originalia*, &c.; and the copies, *apographa*, *copiæ*, *particulæ*, &c. The collections that have been made of them, are called *chartariæ* and *chartulæ*. The place where these papers and documents were kept, the ancients named *scrinia*, *tabularium*, or *ararium*, words that were derived from the tables of brass, and, according to the Greek idiom, *archeum*, or *archivum*. To understand the nature of these ancient papers, diplomas, and MSS., and to distinguish the authentic from the counterfeit, it is necessary to observe, that the paper of the ancients came from Egypt, and was formed of thin leaves, or membranes, taken from the branches of a tree named *Papyrus*, or *Bibulum*

Ægyptiacum, and which were pasted one over the other with the slime of the Nile, and were pressed and polished with a pumice stone. This paper was very scarce; and it was of various qualities, forms, and prices, which they distinguished by the names of *charta hieratica*, *luria*, *augusta*, *amphitheatica*, *saitica*, *tanrica*, *emporetica*, &c. They cut it into square leaves, which they pasted one to the other, in order to make rolls of them; from whence an entire book was called *volumen*, from *volvendo*; and the leaves of which it consisted, *pagina*. Sometimes, also, they pasted the leaves all together by one of their extremities, as is now practised in binding; by this method they formed the back of a book, and these the learned called *codices*. They rolled the volume round a stick, which they named *umbilicus*; and the two ends which came out beyond the paper, *cornua*. The title, written on parchment, in purple characters, was joined to the last sheet, and served it as a cover. They made use of all sorts of strings or ribbands, and even sometimes of locks, to close the book; sometimes, also, it was put into a case. It is easy for those, who apply themselves to this study, to distinguish the parchment of the ancients from that of the moderns, as well as their ink and various exterior characters; but that which best distinguishes the original from the counterfeit, is the writing or character itself; which is, in most cases, very distinctly different from one century to another. There are two works which furnish the best lights on this matter, and which may serve as sure guides in judging of what are called ancient diplomas. The one is the celebrated *Treatise on the Diplomatic*, by F. Mabillon; and the other, the first volume of the *Chronicon Gotvicense*. We shall here only add, that all the diplomas are written in Latin, and consequently the letters and characters have a resemblance to each other; but there are certain strokes of the pen which distinguish not only the ages, but also the different nations; as the writings of the Lombards, French, Saxons, &c. The letters in the diplomas are usually longer, and not so strong as those of MSS. There has been also introduced a kind of court hand, of a very disproportionate length, and the letters of which are called, *Exiles litteræ*, *crispæ* ac *protractiores*. The first line of the diploma, the signature of the sovereign, that of the chancellor, notary, &c., are usually written in this character. The signature of the diploma consists either of the sign of the cross, or of a monogram, or cipher, composed of the letters of the names of those who subscribed it. The initial letters of the name, and sometimes also the titles, were placed about this cross. By degrees, the custom changed, and they invented other marks. They sometimes added also the date and epoch of the signature, the feasts of the church, the days of the calendar, &c. The successive corruption of the Latin language, the style, and orthography of each age, as well as their different titles and forms; the abbreviations, accentuations, and punctuation, and the various methods of writing the diphthongs; all these matters united, form so many characters and marks, by which the authenticity of a diploma

is to be known. The seal annexed to a diploma was anciently of white wax, and artfully imprinted on the parchment itself. It was afterwards pendent from the paper, and enclosed in a box or case, which they called *bullæ*. There are some also that are stamped on metal, and even on pure gold.

DIPONDIIUS, a coin, of very little value, mentioned by St. Luke, xii. 6. Our translation of the passage is, Are not five sparrows sold for two farthings? In St. Matthew, x. 29, it runs, Are not two sparrows sold for a farthing? The Greek has *assarion* instead of *as*, which some say was worth half an *as*, i. e. four French deniers and one-eighth; and, according to others, two deniers and five-sixteenths. *Dipondius* seems rather to signify half an *as*.—*Calmet*. Dr. *Arbuthnot*, however, says, that this coin was at first *libralis*, or of a pound weight; and, even when diminished, it retained the name of *libella*; so that *dipondius* denotes two *asses*.

DIPPEL (*John Conrad*), a German physician, born at Darmstadt in 1672. He studied theology at Giessen, and afterwards read medical lectures at Strasburgh, but took his doctor's degree at Leyden in 1711. He was much addicted to the study of alchemy, and, among other secrets, pretended to have discovered the philosopher's stone. After rambling from place to place, he at last settled at Hamburgh; but having used some indiscreet freedoms with the administration of Denmark, he was given up to the government of that country, by whom he was sentenced to perpetual imprisonment in the island of Bornholm. He, however, obtained his liberty at the end of seven years; and about the same time was invited to Sweden, to attend the king, who was dangerously ill, but through the influence of the clergy, whom he had ridiculed, he was obliged to leave the kingdom in 1727. He afterwards went to Germany, and in 1733 gave out publicly that he should not die till 1808, but next year he was found dead in his bed. He denied the inspiration of the Scriptures, and wrote a number of wild enthusiastic books, under the name of *Christianus Democritus*. His works were published in 5 vols. 4to. 1747. We are indebted to him for the discovery of the Prussian blue, and he invented a useful oil, which is called after him.

DIPPING, among miners, signifies the interruption, or breaking off the veins of ore; an accident that gives them a great deal of trouble before they can discover the ore again. A great part of the skill of the miners consists in the understanding of this dipping of the veins. In Cornwall they have this general rule to guide them in this respect: most of their tin-loads, which run from east to west, constantly dip towards the north. Sometimes they underlie; that is, they slope down towards the north three feet in height perpendicular. This must carefully be observed by the miners, that they may exactly know where to make their air-shafts when occasion requires; yet, in the higher mountains of Dartmoor, there are some considerable loads which run north and south; these always underlie towards the east. Four or five loads may run nearly parallel to each other in the same hill;

and yet, which is rare, they may meet all together in one hatch, as it were a knot, and so separate again, and keep their former distances.

THE DIPPING NEEDLE, or INCLINATORY NEEDLE, is defined, by Dr. Hutton, 'a magnetical needle, so hung, as that, instead of playing horizontally, and pointing out N. and S., one end dips or inclines to the horizon, and the other points to a certain degree of elevation above it. It is used for observing the quantity of inclination towards the earth assumed by the magnetic needle. The inventor of the dipping needle was Robert Norman, a compass-maker, at Ratcliffe, about 1580. This is not only testified by his own account, in his *New Attractive*, but also by Mr. Whiston, Dr. Gilbert, Mr. William Burrowes, Mr. Henry Bond, and other writers of that period. The occasion of the discovery he himself relates, viz. that it being his custom to finish, and hang the needles of his compasses, before he touched them, he always found that, immediately after the touch, the N. point would dip or decline downwards, pointing in a direction under the horizon; so that, to balance the needle again, he was always forced to put a piece of wax on the S. end, as a counterpoise. The constancy of this effect led him at length to observe the precise quantity of the dip, or to measure the greatest angle which the needle would make with the horizon. This, in 1576, he found at London to be $71^{\circ} 50'$.

It is not quite certain, however, whether the dip varies, as well as the horizontal direction, in the same place. Mr. Graham made many experiments with the dipping needle in 1723, and found the dip between 74° and 75° . Mr. Nairne, in 1772, found it somewhat above 72° . And, by many observations made since that time at the Royal Society, the medium quantity is $72\frac{1}{2}^{\circ}$. The trifling difference between the first observations of Norman, and the last of Mr. Nairne and the Royal Society, has led some philosophers to the opinion that the dip is unalterable; and yet it may be difficult to account for the great difference between these and Mr. Graham's numbers, considering the well-known accuracy of that ingenious gentleman. Philosophical Transactions, vol. xlv. p. 279; vol. lxii. p. 476; vol. lxix. lxx. lxxi. From a comparison of Mr. Gilpin's observations of the dip in August, 1805, when he found it $70^{\circ} 20'$, with those of Mr. Cavendish, in 1775, its annual decrease, on a mean, appears to have been $4'3''$; and its progressive annual decrease, on a mean, in the above-mentioned period of thirty years, to have been $1'4''$. It is certain, from many experiments and observations, that the dip is different in different latitudes, and that it increases in going northward. It appears from a table of observations, made with a marine dipping needle of Mr. Nairne's, in a voyage towards the north pole in 1773, that

in lat. $60^{\circ} 18'$ the dip was $75^{\circ} 0'$,
in lat. $70^{\circ} 45'$ the dip was $77^{\circ} 52'$,
in lat. $80^{\circ} 12'$ the dip was $81^{\circ} 52'$, and
in lat. $80^{\circ} 27'$ the dip was $82^{\circ} 2\frac{1}{2}'$.

See Phipps's Voyage, p. 122. See also the Observations of Mr. Hutchins, made in Hudson's Bay and Straits, Philosophical Transactions, vol. lxxv. p. 129. Messrs Burrowes, Gilbert, Ridley,

Bond, &c. endeavoured to apply this discovery of the dip to the finding of the latitude; and Bond first proposed finding the longitude by it; but for want of observations and experiments, he could not conduct his reasoning to any length. Mr. Whiston, being furnished with the farther observations of colonel Windham, Dr. Halley, Mr. Pond, Mr. Cunningham, M. Noel, M. Feuille, and his own, made great improvements in the doctrine and use of the dipping needle, brought it to more certain rules, and endeavoured to find the longitude by it. For this purpose, he observes: 1. That the true tendency of the N. or S. end of every magnetic needle is not to that point of the horizon to which the horizontal needle points, but towards another directly under it, in the same vertical, and in different degrees under it, in different ages, and at different places. 2. That the power by which the horizontal needle is governed, and all our navigation usually directed, it is proved, is only one quarter of the power by which the dipping needle is moved; which should render the latter by far the more effectual and accurate instrument. 3. That a dipping needle of a foot long will plainly show an alteration of the angle of inclination, in these parts of the world, in one-eighth of a degree, or seven and a half geographical miles; and a needle of four feet, in two or three miles; i. e. supposing these distances taken along, or near a meridian. 4. A dipping needle four feet long, in these parts of the world, will show an equal alteration along a parallel, as another of a foot long will show along a meridian, i. e. that will, with equal exactness, show the longitude, as this the latitude. This depends on the position of the lines of equal dip, in these parts of the world, which, it is found, do lie about 14° or 15° from the parallels. Hence he argues, that as we can have needles of five, six, seven, eight, or more feet long, which will move with strength sufficient for exact observation; and since microscopes may be applied for viewing the smallest divisions of degrees on the limb of the instrument, it is evident that the longitude at land may thus be found to be less than four miles. And as there have been many observations made at sea with the same instrument by Noel, Feuille, &c., which have determined the dip usually within a degree, sometimes within a half, or one-third of a degree, and this with small needles of five or six, or, at the most, nine inches long; it is inferred that the longitude may be found even at sea, within less than one-eighth of a degree.

The phenomena of the dipping needle are:—That about the equatorial parts of the earth it remains in an horizontal position, but depresses one end as we recede from these; the north end, if we go towards the north, and the south end, if we proceed towards the south pole. The farther north or south that we go, the inclination becomes the greater; but there is no place of the globe hitherto discovered where it points directly downwards, though it is supposed that it would do so in some part of it very near the pole. Its inclination is likewise found to vary very considerably at different times in different places of the earth, and by some changes of situation, in such a manner as must appear at first sight very unac-

countable. Of all those who have attempted the investigation of this obscure subject, none have been more successful than M. Cavallo, who, in his Treatise on Magnetism, has given particular attention to all the phenomena, and accounts for them upon plain and rational principles, in the following manner:—The dip of the magnetical needle, in general, may be understood from the following easy experiment: Lay an oblong magnet horizontally upon a table, and over it suspend another smaller magnet (a sewing needle to which the magnetic virtue has been communicated will answer the purpose), in such a manner as to remain in an horizontal position when not disturbed by another magnet. Now, if this last small magnet or sewing needle, suspended by the middle, be brought just over the middle of the large one, it will turn itself in such a manner that the south pole of the small magnet will point towards the north pole of the large one; and if at an equal distance from both, will remain in an horizontal position. But if we move it nearer to one of the poles than the other, it will be readily understood that the corresponding end of the needle will be attracted by the pole to which it approaches, and of consequence inclined downwards; the contrary end being proportionably elevated. It is likewise evident, that this inclination will be greater or less according to the distance at which the small magnet is placed from the pole of the large one; the attraction of the nearest pole having always the greatest effect upon it. And it is equally plain that, when brought directly over one of the poles of the large magnet, it will turn its own contrary one directly towards it, and thus lie exactly in the axis of the large one. The application of this experiment to the phenomena of the dipping needle is obvious, as nothing more is requisite for solving the whole mystery, than to suppose the earth itself to be the large magnet, and the magnetic needle, or any other magnetic body, the small magnet in the experiments: for admitting that the north pole of the earth possesses a south magnetism, and that the opposite pole is possessed of a north magnetical polarity; it appears, and the theory is confirmed by experiment, that when a magnet is suspended properly in the equatorial parts of the world, it must remain in an horizontal position; but when removed nearer to one of the poles, it must incline one of its extremities, viz. that which is possessed of the contrary magnetic polarity; and that this inclination must increase in proportion as the magnet or magnetic needle recedes from the equator of the earth; and, lastly, when brought exactly upon either of the poles of the earth, it must stand perpendicular to the ground, or in the same direction with the axis of the earth. The only difficulty in this explanation arises from the attributing a south magnetism to the north pole of the earth; but by this our author means only that its magnetism is contrary to that end of the magnetic needle which turns towards it; and in the same sense it must be understood, that the south pole of the earth has a north magnetic polarity. If the extremities of the axis of the earth, or the poles about which it performs its diurnal revolution, coincided with its magnetic poles, or even if the magnetic poles

were always at a certain distance from them, the inclination of the needle would be always the same at equal distances from the equator, and might be very useful for determining the latitudes. But it would seem, that these poles are perpetually shifting their places, since both the inclination and horizontal direction of the needle are continually varying even in the same place: so that its quantity of inclination cannot be exactly calculated. Two general remarks may be made upon this subject. 1. That the inclination of the needle does not alter regularly in going from N. to S. or from S. to N. in any meridian. 2. That its alteration in the same place, and at different times, is but small. Thus, in London, about the year 1576, the dip was $70^{\circ} 50'$ below the horizon, and in 1775 it stood at $72^{\circ} 3'$; the alteration in nearly 200 years, scarce amounting to three quarters of a degree, which may be attributed to the errors of the instruments; as these were at first exceedingly erroneous, and even yet are far from being perfect.

The general method of constructing dipping needles is, to pass an axis quite through the needle itself, and to let the extremities of the axis rest upon two supports, like the beam of a pair of scales, that the needle may move vertically round; and hence, when placed in the magnetic meridian, it will naturally assume that position which is called the magnetic line, viz. the two ends nearly north and south, and one of them inclined considerably to the horizon. The degrees of this inclination are shown upon a graduated circle; and when the instrument is made use of at land it has a stand, but at sea a ring is necessary to suspend it. When furnished with a stand, it has also a spirit-level; and the stand has three screws, by which the whole is adjusted in such a manner as to let the centre of motion in the needle, and the mark of 90° on the lower part of the divided circle, be exactly in the same line perpendicular to the horizon. The greatest imperfections attending this instrument are the balancing of the needle itself, and the difficulty of knowing whether, after being made magnetic, it be properly balanced or not. The inaccuracy here indeed can be but very small, as arising only from dust or moisture. The method recommended by Mr. Cavallo, to obviate these inconveniences, is first to observe the dip of the needle, then to reverse its magnetism by the application of magnets, so that the end of it which before was elevated above the horizon may now be below it; and, lastly, to observe its dip again; for a mean of the two observations will be pretty near the truth, though the needle may not be perfectly balanced. See MAGNETISM, and MAGNETICAL NEEDLE.

In order to determine the law that regulates the inclination or dip of the needle, Biot, in a memoir delivered by himself and Humboldt to the French National Institute, on the Variations of the Terrestrial Magnetism in different Latitudes, supposed in the axis of the magnetic equator, and at equal distances from the centre of the earth, two centres of attractive forces, the one austral and the other boreal, so as to represent the two opposite magnetic poles of the earth: he then calculated the

effect which ought to result from the action of these centres upon any point of the earth's surface, assuming the attractive force in the reciprocal ratio of the squares of the distances; he found that his results approximated more and more to the truth in proportion as the distance between the magnetic poles was assumed less; and, indeed, by supposing those two poles or centres to coincide, or the inclination of the magnetic needle to be produced by an indefinitely small magnet placed in the centre of the earth, his theorem gave the same numbers as had been observed by Humboldt both in Europe and in America, as well as what had been observed in Russia, Lapland, and various other places in both hemispheres: the results of theory being classed with those of observations in a comparative table, which clearly evinces their near coincidence. Let u be the angle included between a radius drawn from the earth's centre to any assumed point on its surface and the magnetic axis, β , the angle comprehended between the line coinciding with the real position of the needle and the said magnetic axis, and I the inclination of the needle with the horizon of the place; then we have

$$\text{I.} \quad \tan \beta = \frac{\sin. 2u}{\cos. 2u + \frac{1}{2}};$$

whence β is readily determined; and then we shall have the inclination by means of the following:

$$\text{II.} \quad I = 90^{\circ} + u - \beta.$$

Still it must be observed, that though these formulae, given by Biot, furnished in general results very near the truth; yet when he attempted to represent the inclinations in different latitudes by the supposition of a magnet infinitely small, very near the centre of the earth, and perpendicular to the magnetic equator, he did not pretend to consider the hypothesis as any thing real, but solely as a mathematical abstraction.

DIPSACUS, teal, in botany, a genus of the monogynia order, and tetrandria class of plants: CAL. is polyphillous, proper above; the receptacle palaeaceous. There are four species: the most remarkable is the *D. carluus fullonum*, which grows wild in many parts of England. It is of singular use in raising the knap upon woollen cloth. For this purpose the heads are fixed round the circumference of a large broad wheel, which is made to turn round, and the cloth is held against them. In the west of England, great quantities of the plant are cultivated for this use. It is propagated by sowing the seeds in March, upon a well prepared soil. About one peck of seed is sufficient for an acre, as the plants must have room to grow; otherwise the heads will not be large enough, nor in great quantity. When the plants come up, they must be hoed in the same manner as is practised for turnips, cutting down all the weeds, and thinning the plants to about eight inches distant; and as they advance, and the weeds begin to grow again, they must be hoed a second time, cutting out the plants to a wider distance, so that they may finally stand a foot distant from each other. The second year they will shoot up heads which may be cut about the beginning of August. They are then to be tied up in bunches, and set in the sun

if the weather is fair: or, if not, in rooms to dry them. The common produce is about 160 bundles or staves upon an acre, which are sold for one shilling each. The leaves of the common wild teasel, dried, and given in powder or infusion, are a very powerful remedy against flatulences and crudities in the stomach. There is also another, though somewhat whimsical, use for which this plant is famous among the country people in England. If the heads are opened longitudinally, about September or October, there is generally found a small worm in them: one of these only is found in each head, whence naturalists have named it the vermis solitarius dipsaci. They collect three, five, or seven of these, always observing to make an odd number; and sealing them up in a quill, give them to be worn as an amulet against the ague. This superstitious remedy is in much higher repute than the bark, in many parts of England.

DIPSAS. *n. s.* Lat. from *διψαω*, to thirst. A serpent whose bite produces the sensation of unquenchable thirst.

Scorpion, and asp, and amphibœna dire,

Cerastes horned, hydrus, and ellops drear,

And dipsas. Milton.

DIPTERA, from *δις* and *πτερον*, wing, in entomology, an order of insects, which have only two wings, and under each wing a style or oblong body, terminated by a protuberance, and called a balancer.

DIPTOTE, *n. s.* *Διπτωτα*. A noun consisting of two cases only.

DIPTYCH, *n. s.* Lat. *diptycha* (two leaves folded together). A register of bishops and martyrs.

The commemoration of saints was made out of the *diptycha* of the church, as appears by multitudes of plates in St. Austin.

Stillingfleet.

DIPTYCH, or **DIPTYCHA**, in antiquity, was a public register, wherein were written the names of the consuls, and other magistrates, among the heathens; and of bishops, and living as well as dead brethren, among the Christians. The word is Greek, *διπτύχα*, the plural of *διπτύχον*, q. d. a book folded in two leaves; though there were some in three, and others in four or five leaves. This name is supposed to have been first given them to distinguish them from the books that were rolled, called volumina. There were profane *diptycha* in the Greek empire, as well as sacred ones in the Greek church.

DIPUS, Gr. *διπυς*, i. e. two-footed, in zoology, the jerboa, a genus of quadrupeds, belonging to the order of glires, in the class mammalia. These animals were ranked by Linnaeus under the genus *mus*; but Gmelin has, with great propriety, distributed the numerous and very different species of that genus, into nine new divisions, forming so many distinct genera, of which the *dipus* is one. The characters are these: there are two fore-teeth in each jaw; the tail is long, and tufted at the end; but the most striking characteristic of this genus is the enormous length of the hind feet, and extreme shortness of the fore paws. From this conformation, instead of walking or running on all fours, they leap or hop on the hind feet like birds, making prodigious bounds, and only use the fore paws for burrowing, or for

carrying their food to the mouth like squirrels. 1. *D. cafer*, or the Cape jerboa, has four toes on the hind feet and five on the paws; the tail is very hairy, and tipped with black. This species inhabits the Cape of Good Hope, and is fourteen inches long; the tail fifteen, the ears three. It is called *aerdmannetje*, or little earth man, and *springen haas*, or leaping hare, by the Dutch at the Cape. It has a grunting voice; is very strong, and leaps twenty or thirty feet at one bound. It burrows with its fore feet; and sleeps sitting on its hind legs, with the knees separated, the head between, and holding its ears with the fore paws over its eyes. It is eaten by the natives; and is caught by pouring water into its hole, which compels it to come out. 2. *D. jaculus*, the common jerboa, or leaping mouse of Linnaeus, has four toes on all the feet, and a claw in place of a thumb or fifth toe on each fore foot. The body is somewhat more than seven inches long, and the hind legs and thighs are longer than the body. The upper parts are of a pale tawny color, and the under parts white: the ears and feet are flesh-colored. The female has eight teats distantly placed. These animals inhabit Egypt, Arabia, Calmuck Tartary, and southern Siberia. They frequent firm hard ground, and fields covered with grass and herbs, where they form burrows of several yards long in a winding direction, leading to a large chamber about half a yard below the surface; and from this a second passage is dug to within a very little of the surface; by which they can escape when threatened with danger. When at rest, they sit with their hind legs bent under their belly, and keep the fore legs so near the throat as hardly to be perceptible. They eat grain and herbage like the hare. Their dispositions are mild, and yet they can never be perfectly tamed. This animal is roasted and eaten by the Arabs, who call it the lamb of the children of Israel. It has been particularly described by Mr. Bruce in his Abyssinian Travels. 3. *D. sagitta*, the Arabian jerboa, the *mus διπυς* of the Greeks, and *mus bipes* of the Romans, has three toes on the hind feet, and no thumb or fifth toe on the fore paws. It is only about six inches long, and the tail rather shorter than the body; the soles of the hind feet and bottom of the toes are covered with a very thick coat of hair; the head is more rounded than that of the *jaculus*, and the ears are much longer than the head. It inhabits Arabia, and near the Irtysh in Siberia, where it frequents the sandy plains. 4. *D. Canadensis*, or Canadian jerboa, is thus described by general Davies: 'As I conceive there are very few persons, however conversant in natural history, who may have seen or known that there was an animal existing in the coldest parts of Canada of the same genus with the jerboa, hitherto confined to the warmest climates of Africa, I take the liberty of stating the following particulars. With respect to the food, or the mode of feeding, of this animal, I have it not in my power to speak with any degree of certainty, as I could by no means procure any kind of sustenance that could induce it to eat; therefore, when caught, it lived only a day and a half. The first I was so fortunate as to catch, was taken in a large field near the Falls of Montmorenci, and, by its having

strayed too far from the skirts of the wood, allowed myself, assisted by three other gentlemen, to surround it, and after an hour's hard chase, to get it unhurt, though not before it was thoroughly fatigued, which might in a great measure accelerate its death. During the time the animal remained in its usual vigor, its agility was incredible for so small a creature. It always took progressive leaps of from three to four, and sometimes of five yards, although seldom above twelve or fourteen inches from the surface of the grass; but I have observed others in shrubby places, and in the woods, among plants, where they chiefly reside, leap considerably higher. When found in such places it is impossible to take them, from their wonderful agility, and their evading all pursuit, by bounding into the thickest part of the covert they can find. With respect to the figure given of it, in its dormant state, I have to observe, that the specimen was found by some workmen, in digging the foundation for a summer-house in a gentleman's garden, about two miles from Quebec, in the end of May, 1787. It was discovered enclosed in a ball of clay, about the size of a cricket-ball, nearly an inch in thickness, perfectly smooth within, and about twenty inches under ground. The man who first discovered it not knowing what it was, struck the ball with his spade, by which means it was broken to pieces, or the ball would have been presented to me. How long it had been under ground it is impossible to say; but, as I could never observe these animals in any part of the country after the beginning of September, I conceive they lay themselves up some time in that month, or beginning of October, when the frost becomes sharp. Nor did I ever see them again before the last week in May or beginning of June. From their being enveloped in balls of clay, without any appearance of food, I conceive they sleep during the winter, and remain for that term without sustenance. As soon as I conveyed this specimen to my house, I deposited it as it was, in a small chip box in some cotton, waiting with great anxiety for its waking, but that not taking place at the season they generally appear, I kept it until they found it begin to smell; I then stuffed it, and preserved it in its torpid position. I am led to believe its not recovering from that state arose from the heat of my room during the time it was in the box, a fire having been constantly burning in the stove, and which in all probability was too great for its respiration.

DIRÆ, the general name of the three furies in the Pagan mythology. They were so called as being quasi Deorum iræ, the ministers of Divine vengeance in punishing guilty souls after death. They were the daughters of Acheron and Night.

DIRCA, in botany, a genus of the monogynia order and octandria class of plants: **CAL.** none: **COR.** tubular, with the limb indistinct: **STAM.** longer than the tube: **BER.** monospermous. Species one, a Virginian shrub.

DIRE, *adj.* } **Lat.** *dirus*. Dreadful;
DIREFUL, } terrible; dismal; extremely
DIRENESS, *n. s.* } evil.

But yet at last, whereas the *direful* fiend
 She saw not stir, off shaking vain affright,

She nigher drew, and saw that joyous end;
 Then God she prayed, and thanked her faithful knight.
Faerie Queene.

Dirful hap betide that hated wretch
 That makes us wretched by the death of thee.
Shakespeare.

Direness, familiar to my slaughterous thoughts,
 Cannot once start me. *Shakespeare. Macbeth.*
 Hydras, and gorgons, and chimeras *dire*.
Milton.

Or what the cross *dire*-looking planet smites,
 Or hurtful worm with cankered venom bites. *Id.*

The voice of God himself speaks in the heart of men, whether they understand it or no; and by secret intimations gives the sinner a foretaste of that *dirful* cup, which he is like to drink more deeply of hereafter.
South.

Discord! *dire* sister of the slaughtered power,
 Small at her birth, but rising every hour;
 While scarce the skies her horrid head can bound,
 She stalks on earth, and shakes the world around.
Page.

Achilles' wrath, to Greeks the *dirful* spring,
 Of woes unnumbered, heavenly goddess! sing. *Id.*

Ah me! the *dire* effect
 Of loitering here, of death defrauded long;
 Of old so gracious, and let that suffice,
 My very master knows me not.
 I've been so long remembered I'm forgot. *Young.*

Unnumbered maladies his joints invade,
 Lay siege to life, and press the *dire* blockade;
 But unextinguished avarice still remains
 And dreaded losses aggravate his pains.
Johnson. Vanity of Human Wishes.

A brave man knows no malice, but at once
 Forgets in peace the injuries of war,
 And gives his *direst* foe a friend's embrace.

Cowper.
DIRECT', *v. a. & adj.* } **Fr.** *diriger*; Span.
DIRECTER, *n. s.* } and Ital. *dirizzar*;
DIRECTOR, } Port. *dirigir*, from
DIRECTION, } **Lat.** *dirigo, directus*.
DIRECTIVE, *adj.* } à *de* and *rego*, to
DIRECTLY, *adv.* } govern. To aim or
DIRECTNESS, *n. s.* } project in a straight
DIRECTORY. } line; to order, regulate, prescribe: a director, or director, he who orders or commands; also a rule or ordinance, as well as any instrument that guides an operation, as in surgery: direction is having the power to guide or rule; directly is, rectilineally; in a straight course or line; apparently; immediately. Directness, straightness; plainness of conduct. See the following articles for particular uses of directory.

The nobles of the people digged it, by the *direction* of the lawgiver.
Numb. xxi. 18.
 It is not in man that walketh to *direct* his steps.
Jer. x. 23.
 Infidels, being clean without the church, deny *directly*, and utterly reject, the very principles of Christianity, which hereticks embrace erroneously by misconstruction.
Hooker.

They are glad to use counsellors and *directors* in all their dealings of weight, as contracts, testaments. *Id.*

A law, therefore, generally taken, is a *directive* rule unto goodness of operation. *Id.*

Even now
 I put myself to thy *direction*. *Shakespeare. Macbeth.*

There be, that are in nature faithful and sincere,
and plain and *direct*, not crafty and involved.

Bacon.
Men's passions and God's *directions* seldom agree.
King Charles.

The liker any thing is to wisdom, if it be not plainly
the thing itself, the more *directly* it becomes its oppo-
site.

Shaftesbury.
Two geomantick figures were displayed
Above his head, a warrior and a maid,
One when *direct*, and one when retrograde.

Dryden's Fables.
The spear flew hissing thro' the middle space,
And pierced his throat, *directed* at his face.

Id. Æneid.
I am her *director* and her guide in spiritual affairs.
Dryden.

He that does this, will be able to cast off all that is
superfluous; he will see what is pertinent, what co-
herent; what is *direct* to, what slides by, the question.

Locke.
All that is in a man's power, is to mind what the
ideas are that take their turns in his understanding;
or else to *direct* and sort, and call in such as he de-
sires.

Id.
Such was as then the state of the king, as it was no
time by *direct* means to seek her. And such was the
state of his captivated will, as he would delay no time
of seeking her.

Sidney.
On the *directive* powers of the former, and the regu-
larity of the latter, whereby it is capable of *direction*,
depends the generation of all bodies.

Grew.
His work *directly* tends to raise sentiments of hon-
our and virtue in his readers.

Addison. Frecholder.
If the refracted ray be returned *directly* back to the
point of incidence, it shall be refracted by the incident
ray.

Newton's Optics.
The *direction* of good works to a good end, is the
only principle that distinguishes charity.

Smatridge.
The manner of opening with a knife, is by sliding
it on a *director*, the groove of which prevents its being
misguided.

Sharp's Surgery.
They argued from celestial causes only, the constant
vicinity of the sun, and the *directness* of his rays; ne-
ver suspecting that the body of the earth had so great
an efficiency in the changes of the air.

Bentley.
No particle of matter, nor any combination of par-
ticles, that is, no body, can either move of itself, or
of itself alter the *direction* of its motion.

Cheyne.
Common forms were not designed
Directors to a noble mind.

Swift.
No reason can be assigned, why it is best for the
world that God Almighty hath absolute power, which
doth not *directly* prove that no mortal man should
have the like.

Id.
Two eagles from a mountain's height,
By Jove's command, *direct* their rapid flight.

Fope.
All nature is but art unknown to thee,
All chance, *direction* which thou canst not see.

Id.
Nor visited by one *directive* ray,
From cottage streaming, or from airy hall.

Thomson.
That revelation, which God hath been pleased to
make of his will to mankind, was designed rather to
fit us for the future happiness, and *direct* our way
to it, than open to us the particular glories of it, or
distinctly show us what it is.

Mason.
is better to fail, if fail we must, in the paths of
direct and manly, than of low and crooked wisdom.

Burke.

Call your light legions, tread the swampy heath,
Pierce with sharp spades the tremulous peat beneath;
With colters bright the rushy sward bisect,
And in new veins the gushing rills *direct*.

Darwin.

DIRECTION, in mechanics, signifies the line or
path of a body's motion, along which it endea-
vours to proceed according to the force impressed
upon it.

DIRECTION, ISLANDS OF, four small islands at
the west entrance of the straits of Magellan, in
the South Pacific Ocean. Long. 77° 19' W.,
lat. 52° 27' S.

DIRECTORS, in commercial polity, are conside-
rable proprietors in the stocks of their respective
companies, being chosen by plurality of votes
from among the body of proprietors. The Dutch
East India Company has sixty such directors;
that of France, twenty-one; the British East
India Company has twenty-four, including the
chairman, who may be re-elected for four years
successively. These last have salaries of £150
a year each, and the chairman £200. They
meet at least once a week, and commonly oftener,
being summoned as occasion requires. The di-
rectors of the Bank of England are twenty-four
in number, including the governor and deputy-
governor.

DIRECTOR, in surgery, a grooved probe, to
direct the edge of the knife or scissors, in open-
ing sinuses or fistulæ, that the adjacent vessel,
nerves, and tendons, may not be hurt.

The *DIRECTORY* OF PUBLIC WORSHIP was a
celebrated book drawn up by the assembly of
divines at Westminster, and established by an
ordinance of parliament in 1644, repealing the
statutes of Edward VI. and of Elizabeth, for
uniformity in the common prayer. The Direc-
tory set aside the use of the liturgy, and allowed
of no church-music besides that of singing the
Psalms. The Directory was so called, in part,
because it only points out certain topics of
prayer, on which the minister might enlarge.
The whole apocrypha was rejected; and both
private baptism and lay baptism, with the use of
godfathers and godmothers, and the sign of the
cross. In the sacrament of the Lord's supper,
no mention is made of private communion or
administering it to the sick. The altar with rails
was changed into a communion table, about
which the people might stand or sit; kneeling
not being thought so proper a posture. Light-
foot, Selden, and others, were for open com-
munion, to which the parliament also most
inclined, in opposition to those presbyterians
who were for granting powers of admission or
rejection to the ministers and elders, and to the
independents who were for committing them to
the whole brotherhood; but it was agreed, that
the minister, before the communion, should
'warn, in the name of Christ, all such as are
ignorant, scandalous, profane, or that live in any
sin or offence against their knowledge or con-
science, that they presume not to come to that
holy table, showing them, that he that eateth and
drinketh unworthily, eateth and drinketh judg-
ment to himself.' The prohibition of marriage
in Lent, and the use of the ring, were laid aside.
In the visitation of the sick no mention is made
of private confession, or authoritative absolution.

T

No service is appointed for the burial of the dead. All particular vestments for priests or ministers, and all saints'-days, were discarded. It has been remarked, as a considerable omission, that the Directory does not enjoin the reading of the apostles' creed, and the ten commandments. However, these were added to the assembly's confession of faith, which was published a year or two afterwards. This Directory continued in use till the restoration of king Charles II., when, the constitution being restored, the old liturgy took place again; the ordinance for its repeal having never obtained the royal assent. The revolution, thus occasioned in the form of public worship, did not take place for a considerable time over the whole kingdom. In some parts of the country the churchwardens could not procure a Directory; and in others they despised it, and continued the old common prayer book; some would read no form, and others used one of their own. In order to enforce the use of the Directory, the parliament, by an ordinance, dated August 23rd, 1645, called in all common prayer books, and imposed a fine upon those ministers who should read any other form than that contained in the Directory. By the same ordinance, which continued till the Restoration, to preach, write, or print any thing in derogation or depraving of the Directory, subjected the offender, upon indictment, to a discretionary fine, not exceeding £50.

DIRECTORY, in a more modern sense, was used as the title of the supreme executive power, according to the new constitution, formed by the French convention after the fall of Robespierre, and presented to the primary assemblies for acceptance in August, 1795. By this constitution the legislative body was composed of what they called a Council of Ancients and a Council of Five Hundred. The whole of this fabric, it is well known, was overturned by the successful ambition of Napoleon: but as it directed the energies of a numerous, if not a great, people for a considerable period, we may here perpetuate its forms. The executive power was entrusted to a Directory of five members, nominated by the legislative body as follows:—1. The Council of Five Hundred formed a list by ballot of three times the number to be nominated, and presented it to the Council of Ancients, which chose out of this list by ballot. 2. The members of the Directory were to be forty years of age at least. 3. After the ninth year of the republic, they were to be chosen only from among those citizens who had been members of the Legislative Body, or the Administration, or General Agents of Execution. 4. Members of the legislative body could not be elected members of the Directory, either during the continuance of their legislative functions, or during the first year after their expiration. 5. The Directory was partially renewed by the annual election of a new member. 6. No civil servant could be re-elected till after an interval of five years. 7. The ascendant and descendant in the direct line; the brother, uncle, and nephew; connexions by marriage in the same degrees, and cousins in the first degree, could not be members of the Directory at the

same time, nor succeed one another in it, till after an interval of five years. 8. In case of death, removal, or resignation of a member of the Directory, his successor was elected within ten days. The Council of Five Hundred were obliged to propose the candidates within the first five days, and the Council of Ancients to complete the election within the last five. The new member could only continue in office for the remaining period of the person he succeeded, unless it did not exceed six months, in which case, he continued five years and a half in office. 9. Each director was to preside in rotation for three months only. 10. The president was to sign and keep the seal. 11. The laws and acts of the legislative body were addressed to the Directory, in the person of its president. 12. The Directory could not deliberate unless three members were present. 13. A secretary was chosen (not one of its members), who countersigned despatches, and drew up deliberations, in a register, wherein each member might also enter his opinion, with his reasons. 14. The Directory could deliberate without the aid of the secretary, and one of the directors might record its resolutions in a particular register. 15. The Directory provided for the security of the public according to the laws, issued proclamations; &c. It disposed of the armed force; but none of its members could command it, either while they continued in office, or for two years after. 16. The Directory, upon hearing of any conspiracy against the republic, might order the supposed authors or accomplices to be apprehended, and interrogate them; but were bound, under the penalty of arbitrary imprisonment to remit them to an officer of police, within two days, to proceed with them according to law. 17. The Directory nominated the generals, but could not choose them among the relations of its members, within the degrees above-mentioned. 18. It superintended the execution of the laws by commissaries of its nomination. 19. It nominated the general agents of execution, but not of its own members, and recalled them at pleasure. 20. It determined their number and functions. 21. It nominated all receivers of direct taxes. 22. As well as the superintendants of indirect contributions, and the administration of national domains. 23. It superintended the coinage of money, and nominated the officers charged with it. 24. No Director could go out of the territory of the republic, till two years after he was out of office; but was obliged to certify his place of residence during that interval to the legislative body. 25. The Directory was responsible for the non-execution of laws, and for the abuses which it did not denounce. 26. Its agents were respectively responsible for the non-execution of the laws, and orders of the directory. 27. Its members might be tried by the legislative body for acts of treason, corruption, embezzlement of public money, and all capital crimes as to their official conduct. 28. They were subject to the jurisdiction of the tribunals for ordinary and private offences; but they could not be arrested except in the case of flagrans delictum, or brought to trial without the authority of the legislative body.

Every denunciation against the Directory, or

any of its members, was addressed to the Council of Five Hundred. If, after deliberation, the Council admitted the denunciation, it declared it in these terms: the denunciation against—for the fact of—dated—signed by—is admitted. The party was then cited, and heard in the interior place of the Council of Five Hundred; who declared whether there was ground for examining his conduct. He was then heard by the Council of Ancients at the bar; and, if he was deemed culpable, the Council proceeded to accusation, which was followed by suspension, when the accused was sent before the High Court of Justice, which was to proceed to trial without delay. If the party was acquitted, he resumed his functions.

The Legislative Body could not cite the Directory, nor any of its members, except in the case above specified. The accounts and information demanded of the Directory by the Legislative Body were furnished in writing. On the opening of a session of the Legislative Body, the Directory were obliged to present to it an estimate of expenses, the state of the finances, pensions, &c., with the abuses that had come to its knowledge. It might invite the Legislative Body to take a subject into consideration; but could not propose legislative dispositions, except with regard to peace and war. No member of the Directory durst be absent more than five days, nor remove above four myriamètres, or ten leagues, from his usual residence, without being authorised by the Legislative Body. The members of the Directory could only appear in an appropriate dress. They had a constant guard of 120 infantry and 120 cavalry, who attended them in public processions, in which they had always the first rank. Each member was attended out of doors by two guards; and was entitled to the superior military honors from every post of armed force. The Directory resided in the same commune with the Legislative Body, at the expense of the republic. The salary of each was fixed at the value of 50,000 myriagrammes, about 10,000 quintals of wheat.

DIREPTION, *n. s.* Lat. *direptio*. The act of plundering.

DIRGE, *n. s.* This is from the Teutonic *dyrke*, *laudare*, to praise and extol, says Dr. Johnson, after Verstegan, 'whence it is possible their *dyrke*, and our *dirge*, was a laudatory song to commemorate and applaud the dead. Bacon apparently derives it from *dirige*.' A mournful ditty; a song of lamentation.

The imperial jointress of this warlike state
Have we, as 'twere, with a defeated joy,
With mirth in funeral, and with *dirge* in marriage.
In equal scale weighing delight and dole,
Taken to wife.

Shakspeare. Hamlet.

Meanwhile, the body of Richard, after many indignities and reproaches, the *diriges* and obsequies of the common people towards tyrants, was obscurely buried.

Bacon.

All due measures of her mourning kept,
Did office at the *dirge*, and by infection wept.

Dryden.

What though no sacred earth allow these room,
Nor hallowed *dirge* be muttered o'er thy tomb,
Yet shall thy grave with rising flowers be drest,
And the green turf lie lightly on thy breast.

Pope.

Betrothed beauty bending o'er his bier
Breathes the loud sob, and sheds the incessant tear;
Pursues the sad procession, as it moves
Through winding avenues and waving groves;
Hears the slow *dirge* amid the echoing aisles,
And mingles with her sighs discordant smiles.

Darwin.

DIRIBITORES, among the Romans, officers appointed to distribute tablets to the people at the comitia. See **COMITIA**.

DIRIGENT, *adj.* Lat. *dirigens*.

The *dirigent* line in geometry is that along which the line described is carried in the generation of any figure.

Harris.

DIRK, *n. s.* Goth. *dorg*; Sax. *dork*; Isl. *turric*. A kind of dagger used in the Highlands of Scotland.

In vain thy hungry mountaineers
Come forth in all their warlike geers,
The shield, the pistol, *dirk*, and dagger,
In which they daily wont to swagger.

Tickell.

And in the fire his recent rags they scatter'd,
And dress'd him, for the present, like a Turk,
Or Greek—that is, although it not much mattered,
Omitting turban, slippers, pistols, *dirk*.

Byron. Don Juan.

DIRKE, *v. a.* To spoil; to ruin. Obsolete.

Thy waste bigness but cumpers the ground,
And *dirkes* the beauties of my blossoms round.

Spenser.

DIRT, *n. s.* Dut. and Goth *dryt*;
DIRT'LY, *adv.* } Islandic, *dirt*. Mud;
DIRT'INESS, *n. s.* } filth; mire; any thing
DIRT'Y, *v. a. & adj.* } that sticks to the clothes
or body; any thing mean.

For whom I made all things payement and I
deeme as *dyrt*, that I wyne Crist.

Wiclif. Filipensis, 3.

Their fell contention still increased more,
And more thereby increased furor's myght,
That he his foe has hurt and wounded sore,
And him in blood and *dirt* deformed quite.

Spenser. Faerie Queene.

Or were it such gold as that whereof hal
Almighty chimiques from each mineral,
Having by subtle fire a soul out-pulld,
Are *dirtyly* and desperately gulld,

Donne.

Thy Dol and Helen of thy noble thoughts
Is in base durance, and contagious prison,
Hauled thither by mechanic, *dirty* hands.

Shakspeare.

Such employments are the diseases of labour, and
the rust of time, which it contracts not by lying still,
but by *dirty* employment.

Taylor's Holy Living.

Marriages would be made up upon more natural
motives than mere *dirty* interests, and increase of
riches without measure or end.

Temple.

Numbers engage their lives and labours to heap
together a little *dirt* that shall bury them in the end.

Wake.

Pound an almond, and the clear white colour will
be altered into a *dirty* one, and the sweet taste into an
oily one.

Locke.

They come at length to grow sots and epicures,
mean in their discourses, and *dirty* in their practices

South.

Is yellow *dirt* the passion of thy life,
Look but on Gripus, or on Gripus' wife.

Ill company is like a dog, who *dirts* those most
whom he loves best.

Swift.

The god of day

A tripod gives, amid the crowded way,
To raise the *dirty* foot, and ease his toil. *Gay.*

The lords Strutts lived generously, and never used
to *dirty* their fingers with pen, ink, and counters.

Arbutnot.

DIRUPTION, *n. s.* Lat. *diruptio*. The act
or state of bursting or breaking.

DIS, in mythology, a god of the Gauls, the
same as Pluto, the god of hell. The ancient
inhabitants of Gaul supposed themselves de-
scended from that deity.

DISA, in botany, a genus of *diandria*
order and *gynandria* class of plants. The spathe
is univalvular; the petals three; the third
smaller than the rest, bifid, and gibbous, at the
base. Species four, all Cape plants.

DISABLED, *v. a.* } Of *dis*, and **ABLE**.
DISABILITY, *n. s.* } which see. To deprive
of force or power; to disqualify; impair; to
declare deficient. Disability is the want of
power, aptitude, or legal right to do a thing.

Our consideration of creatures, and attention unto
scriptures, are not in themselves things of like *disa-*
bility to breed or beget faith. *Hooker.*

Many withdrew themselves out of pure faintness,
and *disability* to attend the conclusion. *Raleigh.*

I have *disabled* mine estate,
By shewing something a more swelling port
Than my faint means would grant continuance.
Shakespeare.

Farewell, Monsieur Traveller; lock you lisp, and
wear strange suits; *disable* all the benefits of your own
country. *Id.*

The invasion and rebellion did not only *disable*
this king to be a conqueror, but deprived him both of
his kingdom and life. *Darvies's Ireland.*

I will not *disable* any for proving a scholar, nor yet
dissemble that I have seen many happily forced
upon the course to which by nature they seemed
much indisposed. *Wotton.*

Nor so is overcome
Satan, whose fall from heaven, a deadlier bruise
Disabled not to give thee thy death's wound.
Milton.

A Christian's life is a perpetual exercise, a wrest-
ling and warfare, for which sensual pleasure *disables*
him, by yielding to that enemy with whom he must
strive. *Taylor's Holy Living.*

I have known a great fleet *disabled* for two months,
and thereby lose great occasions by an indisposition
of the admiral. *Temple.*

Your days I will alarm, I'll haunt your nights,
And worse than age *disable* your delights. *Dryden.*

He that knows most of himself, knows least of his
knowledge, and the exercised understanding is con-
scious of its *disability*. *Glanville.*

The ability of mankind does not lie in the impo-
tency or *disabilities* of brutes. *Locke.*

This disadvantage which the dissenters at present
lie under, of a *disability* to receive church prefer-
ments, will be easily remedied by the repeal of the
test. *Swift.*

A suit is commenced in a temporal court for an
inheritance; and the defendant pleads, in *disability*,
that the plaintiff is a bastard. *Ayliffe's Parergon.*

Foiled, bleeding, breathless, furious to the last,
Full in the centre stands the bull at bay,
Mid wounds, and clinging darts, and lances brast,
And foes *disabled* in the brutal fray. *Byron.*

DISABILITY, in law, is when a man is dis-
abled, or made incapable to inherit any lands, or
take that benefit which otherwise he might have
done. This may happen four ways: 1st, by the
act of an ancestor: 2d, of the party: 3d, by the
act of God: or, 4th, of the law. 1. Disability
by the act of the ancestor is where the ancestor
is attainted of high treason, &c., which corrupts
the blood of his children, so that they may not
inherit his estate. 2. Disability by the act of
the party is where a man binds himself by ob-
ligation, that, upon surrender of a lease, he will
grant a new estate to a lessee; and afterwards
he grants over the reversion to another, which
puts it out of his power to perform it. 3. Dis-
ability by the act of God is where a man is non
sanæ memoriæ, whereby he is incapable to make
any grant, &c. So that, if he passes an estate
out of him, it may, after his death, be made
void; but it is a maxim in law, 'that a man of
full age shall never be received to *disable*, his
own person.' 4. Disability by the act of the law
is where a man, by the sole act of the law, with-
out any thing by him done, is rendered inca-
pable of the benefit of the law; as an alien
born, &c.

DISABUSE, *v. a.* *Dis* and **ABUSE**, which
see. To deliver from mistake or delusion.

The imposture and fallacy of our senses impose not
only on common heads, but even more refined in-
curies, who have the advantages of an improved rea-
son to *disabuse* you. *Glanville's Scepais.*

Those teeth fair Lyce must not show,
If she would bite: her lovers, though
Like birds they stoop at seeming grapes,
Are *disabused* when first she gapes. *Waller.*

If by simplicity you meant a general defect in those
that profess angling, I hope to *disabuse* you.

Wulton's Angler.
Chaos of thought and passion, all confused;
Still by himself abused or *disabused*. *Pope.*

DISACCOMMODATION, *n. s.* *Dis* and
accommodation. The state of being unfit or
unprepared.

Devastations have happened in some places more
than in others, according to the accommodation or
disaccommodation of them to such calamities.

Hale's Origin of Mankind.

DISACCUSTOM, *v. a.* *Dis* and *accustom*.
To destroy the force of habit by disuse, or con-
trary practice.

DISACKNOWLEDGE, *v. a.* *Dis* and ac-
knowledge. Not to acknowledge.

The manner of denying Christ's deity here pro-
hibited, was, by words and oral expressions verbally
to deny and *disacknowledge* it. *South.*

DISACQUAINTANCE, *n. s.* *Dis* and ac-
quaintance. Disuse of familiarity.

Conscience, by a long neglect of, and *disacquain-*
tance with itself, contracts an inveterate rust or evil.
South.

DISADVANTAGE, *v. a. & n. s.* } *Dis* and
DISADVANTAGEABLE, *adj.* } advantage.
DISADVANTAGEOUS, *adj.* } To injure;
DISADVANTAGEOUSLY, *adv.* } impair.

Loss; injury to interest; diminution of any thing desirable; a state of weak defence.

No fort can be so strong,
Ne fleshly breast can armed be so sound,
But will at last be won with battery long;
Or unawares at *disadvantage* found.

Faerie Queene.

In clearing of a man's estate, he may as well hurt himself in being too sudden, as in letting it run on too long; for hasty selling is commonly as *disadvantageable* as interest.

Bacon.

Chaucer in many things resembled Ovid, and that with no *disadvantage* on the side of the modern author.

Dryden.

A multitude of eyes will narrowly inspect every part of an eminent man, consider him nicely in all views, and not be a little pleased when they have taken him in the worst and most *disadvantageous* lights.

Addison's Spectator.

Their testimony will not be of much weight to its *disadvantage*, since they are liable to the common objection of condemning what they did not understand.

Swift.

An approving nod or smile serves to drive you on, and make you display yourselves more *disadvantageously*.

Government of the Tongue.

Mr. Pope's bodily *disadvantages* must incline him to a more laborious cultivation of his talent, without which he foresaw that he must have languished in obscurity.

Shenstone.

Methinks I am like a man who, having struck on many shoals, and having narrowly escaped shipwreck in passing a small firth, has yet the temerity to put out to sea in the same leaky weather-beaten vessel, and even carries his ambition so far as to think of compassing the globe under these *disadvantageous* circumstances.

Hume on Human Nature.

DISADVENTUROUS *adj.* Dis and adventurous. Unhappy; unprosperous.

Now he hath left you here,
To be the record of his rueful loss,
And of my doleful *disadventurous* death.

Faerie Queene.

DISAFFECT, *v. a.* Dis and affect. **DISAFFECTED**, *part. adj.* To fill with discontent; to make less faithful. **DISAFFECTEDLY**, *adv.* To deny in respect to authority, legality, or propriety; to refuse permission. **DISAFFECTEDNESS**, *n. s.* To deny in respect to authority, legality, or propriety; to refuse permission. **DISAFFECTION**.

They had attempted to *disaffect* and discontent his majesty's late army.

Clarendon.

In making laws, princes must have regard to the public dispositions, to the affections and *disaffections* of the people; and must not introduce a law with public scandal and displeasure.

Taylor's Rule of Holy Living.

By denying civil worship to the emperor's statues, which the custom then was to give, they were proceeded against as *disaffected* to the emperor.

Stillingfleet.

The disease took its original merely from the *disaffection* of the part, and not from the pecerancy of the humours.

Wiseman.

DISAFFIRMANCE, *n. s.* Dis and affirm. Confutation; negation.

That kind of reasoning which reduceth the opposite conclusion to something that is apparently absurd, is a demonstration in *disaffirmance* of any thing that is affirmed.

Male.

To DISAFFOREST, *v. a.* Dis and forest. To throw open to common purposes; to reduce from the privileges of a forest.

The commissioners of the treasury moved the king to *disafforest* some forests of his, explaining themselves of such forests as lay out of the way, not near any of the king's houses.

Bacon.

How happy's he, which hath due place assigned To his beasts; and *disafforested* his mind!

Donne.

DISAGREE, *v. n.*

DISAGREEABLE, *adj.*

DISAGREEABLY, *adv.*

DISAGREEABLENESS, *n. s.*

DISAGREEMENT.

Disagreement, dissimilitude; diversity of sentiment; quarrel.

They seemed one to cross another, as touching their several opinions about the necessity of sacraments, whereas in truth their *disagreement* is not great.

Hooker.

It containeth many improprieties, *disagreeing* almost in all things from the true and proper description.

Broune.

Why both the bands in worship *disagree*,
And some adore the flower, and some the tree.

Dryden.

A father will hug and embrace his beloved son, for all the dirt and foulness of his cloaths; the dearneess of the person easily apologizing for the *disagreeableness* of the habit.

South.

The mind clearly and infallibly perceives all distinct ideas to *disagree*; that is, the one not to be the other.

Locke.

To make the sense of esteem or disgrace sink the deeper, and be of the more weight, either agreeable or *disagreeable* things should constantly accompany these different states.

Id.

Strange it is, that they reject the plainest sense of scripture, because it seems to *disagree* with what they call reason.

Atterbury.

Some demon, an enemy to the Greeks, had forced her to a conduct *disagreeable* to her sincerity.

Broome.

Do you not sometimes find dull *disagreeable* ideas annexed to certain places, seasons, or employments, which give you a secret aversion to them?

Mason.

DISALLOW, *v. a. & n. s.*

DISALLOWABLE, *adj.*

DISALLOWANCE, *n. s.*

To deny in respect to authority, legality, or propriety; to refuse permission. Disallowance is prohibition.

God doth in converts, being married, allow continuance with infidels, and yet *disallow* that the faithful, when they are free, should enter into bonds of wedlock with such.

Hooker.

Neutrality is always a thing dangerous, and *disallowable*.

Raleigh.

When, said she,
Were those first councils *disallowed* by me?

Or where did I at sure tradition strike,

Provided still it were apostolic?

Dryden's Hind and Panther.

God accepts of a thing suitable for him to receive, and for us to give, where he does not declare his refusal and *disallowance* of it.

South.

It was known that the most eminent of those who professed his own principles, publicly *disallowed* his proceedings.

Swift.

DISANCHOR, *v. a.* From *dis* and anchor. To drive a ship from its anchor.

DISANIMATE, *v. a.* } *Dis* and *animate*.
DISANIMATION, *n. s.* } To deprive of life;
 to discourage; deject.

The presence of a king engenders love amongst his subjects and his loyal friends, as it *disanimates* his enemies.
Shakespeare. Henry VI.

They cannot in reason retain that apprehension after death, as being affections which depend on life, and depart upon *disanimation*.

Broune's Vulgar Errors.

To call the pearly drops from Pity's eye,
 Or stay Despair's *disanimating* sigh,
 Whether, O friend of art! the gem you mould
 Rich with new taste, with ancient virtue bold.

Darwin.

DISANNUL, *v. a.* } *Dis* and *annul*. This
DISANNUL'LING, *n. s.* } word, as Dr. Johnson
 observes, is formed, contrarily to analogy and
 by the needless use of the negative particle. It
 ought therefore to be rejected, as ungrammatical
 and barbarous. To annul; to deprive of au-
 thority; to vacate; to make void.

The covenant that was confirmed before of God in Christ, the law which was four hundred and thirty years after, cannot *disannul*, that it should make the promise of none effect.
Gal. iii. 17.

The Jews ordinances for us to resume, were to check our Lord himself, which hath *diannulled* them.

Hooker,

That gave him power of *disannulling* of laws, and disposing of men's fortunes and estates, and the like points of absolute power, being in themselves harsh and odious.
Bacon.

Wilt thou my judgments *disannul*? Defame
 My eternal rule, to clear thyself of blame?

Sundys.

DISAPPEAR, *v. n.* Fr. *disparoitre*. To be lost to view; to vanish out of sight; to fly; to go away.

She *disappeared*, and left me dark! I waked
 To find her, or for ever to deplore.
Milton.

When the night and winter *disappear*,
 The purple morning rising with the year
 Salutes the spring.
Dryden.

If at your coming princes *disappear*,
 Comets! come every day—and stay a year.

Dr. Johnson's Poems.

DISAPPOINT, *v. a.* } Old Fr. *desa-*
DISAPPOINTMENT, *n. s.* } *pointier*. To defeat
 expectation; to delude; cheat; deprive; taking
 of before the thing lost by disappointment.

Our comfortable expectations in earthly things do not seldom *disappoint* us. *Bp. Hall. Contemplations.*

The superior Being can defeat all his designs, and *disappoint* all his hopes.
Tillotson.

If we are *disappointed*, we are still no worse than the rest of our fellow mortals; and if we succeed in our expectations, are eternally happy.
Burnet.

How many *disappointments* have, in their consequences, saved a man from ruin!
Spectator.

Whilst the champion, with redoubled might,
 Strikes home the javelin, his retiring foe
 Shrinks from the wound, and disappoints the blow.
Addison.

There's nothing like surprising the rogues! How will they be *disappointed*, when they hear that thou hast prevented their revenge!

Arbuthnot's Hist. of John Bull.

DISAPPOINTMENT ISLANDS, a cluster of small islands in the South Pacific Ocean, discovered by commodore Byron in 1765, who gave them this name from the shores affording no anchorage for his ships. This obliged him to quit them without landing, or procuring any refreshments for his crew. The inhabitants appeared on the beach armed with spears full sixteen feet long; and they every where discovered hostile intentions. These islands abound with cocoa trees, and turtles are plentiful on the coast. Long. 145° 4' W. lat. from 14° 5' to 14° S.

DISAPPOINTMENT ISLAND is also a name given by captain Wilson in 1797 to an island in the South Sea, one of the Duff's group, in P. long. 167°, and S. lat. 9° 57'. See DUFF.

DISAPPROVE, *v. a.* } Fr. *desapprouver*.

DISAPPROBATION, *n. s.* } To dislike; to censure; expressive of dislike.

I reasoned much, alas! but more I loved;
 Sent and recalled, ordained, and *disapproved*.

Prior.

Without good breeding truth is *disapproved*;
 That only makes superior sense beloved.
Pope.

He was obliged to publish his letters, to shew his *disapprobation* of the publishing of others.
Id.

DISARM, *v. a.* Fr. *desarmer*. To spoil or divest of arms; to deprive of arms.

An order was made by both houses, for *disarming* all the papists in England.
Clarendon.

I am all the same,
 By different ways still moving to one fame;
 And by *disarming* you I now do more
 To save the town, than arming you before.

Dryden.

Then, where Nemca's howling forests wave,
 He drives the lion to his dusky cave;
 Seized by the throat the growling fiend *disarms*,
 And tears his gaping jaws with sinewy arms.

Darwin.

DISARMING, in law, the prohibiting people to wear arms. It is an offence by the common law of England for persons to go or ride armed with dangerous and uncommon weapons: though gentlemen may wear common armour, according to their quality. It is also ordained by statute, that no persons shall come before the king's justices with force of arms, on pain of imprisonment, &c. We have noticed the introduction of the celebrated *disarming* act of Scotland into the Highlands, under the article CLAN.

DISARRAY, *v. a. & n. s.* *Dis* and *array*. To undress any one; to divest of clothes; undress; disorder.

So, as she bad, the witch they *disarrayed*.

Fairie Queene.

He returned towards the river, to prevent such danger as the *disarray*, occasioned by the narrowness of the bridge, might cast upon them.
Hayward.

Disarray and shameful rout ensue,
 And force is added to the fainting crew.

Dryden's Fables.

Phrase that time hath flung away,
 Uncouth words in *disarray*,
 Tricked in antique ruff and bonnet,
 Ode, and elegy, and sonnet.

Dr. Johnson's Poems.

DISASSIDUITY, *n. s.* Absence of care or attention.

The Cecilians kept him back; as very well knowing that, upon every little absence or *disassiduity*, he should be subject to take cold at his back. *Wotton.*

DISASTER, *v. a. & n. s.* } Fr. and Span. *desas-*
DISASTROUS, *adj.* } *tre*; Ital. *desastro*;
DISASTROUSLY, *adv.* } from Lat. *dis*, ad-
verse, and *astra*, the stars, under adverse stars. Misfortune; grief, calamity: disastrous is, unfortunate; portending disaster.

Stars shone with trains of fire, dews of blood fall;
Disasters veiled the sun; and the moist star,
Upon whose influence Neptune's empire stands,
Was sick almost to doomsday with eclipse.

Shakespeare.

These are the holes where eyes should be, which pitifully *disaster* the cheeks. *Id.*

The moon,

In dim eclipse, *disastrous* twilight sheds
On half the nations. *Milton.*

Ah, chaste bed of mine, said she, which never heretofore couldst accuse me of one defiled thought, how canst thou now receive that *disastered* changeling? *Sidney.*

Immediately after his return from this very expedition, such *disastrous* calamities befel his family, that he burnt two of his children himself. *South.*

This day black omens threat the brightest fair,
That e'er deserved a watchful spirit's care;
Some dire *disaster*, or by force or slight;
But what, or where, the fates have wrapt in night.

Pope.

In his own fields, the swain

Disastered stands. *Thomson.*

DISAVOW, *v. a.* } *Dis* and *avow*. To dis-
DISAVOWAL, *n. s.* } own; to deny knowledge
DISAVOWMENT. } of; to deny concurrence
in any thing, or with any person: denial.

But being aged now, and weary too,
Of warres delight and worlds contentious toyle,
The name of knighthood he did *disavow*.

Spenser. Faerie Queene.

A man that acts below his rank, doth but *disavow* fortune, and seemeth to be conscious of his own want in worth, and doth but teach others to envy him

Bacon.

As touching the Tridentine history, his holiness will not press you to any *disavowment* thereof.

Wotton.

He only does his conquest *disavow*,
And thinks too little what they found too much.

Dryden.

We are reminded by the ceremony of taking an oath, that it is a part of that obedience which we learn from the gospel, expressly to *disavow* all evasions and mental reservations whatsoever.

Addison's Freeholder.

An earnest *disavowal* of fear often proceeds from fear.

Clarissa.

To **DISAUTHORIZE**, *v. a.* *Dis* and *authorize*. To deprive of credit or authority.

The obtrusion of such particular instances as these, are insufficient to *disauthorize* a note grounded upon the final intention of nature.

Wotton.

DISBAND, *v. a. & v. n.* Old Fr. *desbander*. To dismiss from military service; to retire; be dismissed; broke up.

Our navy was upon the point of *disbanding*, and many of our men come ashore.

Bacon. War with Spain.

The ranged powers

Disband, and wandering each his several way
Pursues. *Milton.*

The common soldiers, and inferior officers, should be fully paid upon their *disbanding*. *Clarendon.*

Pythagoras bids us in our station stand,
Till God, our general, shall us *disband*. *Denham.*

I am content to lead a private life;

Disband my army to secure the state.

Dryden's Aurengzebe.

Were it not for some small remainders of piety and virtue which are yet left scattered among mankind, human society would in a short space *disband* and run into confusion, and the earth would grow wild and become a forest.

Tillotson.

Bid him *disband* his legions. *Addison's Cato.*

Some imagine that a quantity of water, sufficient to make such a deluge, was created upon that occasion; and, when the business was done, all *disbanded* again, and annihilated.

Woodward.

DISBARK, *v. a.* Fr. *debarquer*. To land from a ship; to put on shore.

Together sailed they, fraught with all the things
To service done by land that might belong,
And, when occasion served, *disbarked* them.

Fairfax

The ship we moor on these obscure abodes;

Disbark the sheep an offering to the gods.

Pope's Odyssey.

DISBELIEVE, *v. a.* } From *dis* and be-
DISBELIEVER, *n. s.* } lieve. Not to credit; one who refuses belief; one who denies any position to be true.

The thinking it impossible his sins should be forgiven, though he should be truly penitent, is a sin, but rather of infidelity than despair; it being the *disbelieving* of an eternal truth of God's.

Hammond's Practical Catechism.

Our belief or *disbelief* of a thing does not alter the nature of the thing.

Tillotson.

Such who profess to *disbelieve* a future state, are not always equally satisfied with their own reasonings.

Atterbury.

An humble soul is frightened into sentiments, because a man of great name pronounces heresy upon the contrary sentiments, and casts the *disbeliever* out of the church.

Watts.

DISBENCH, *v. a.* *Dis* and *bench*. To drive from a seat.

Sir, I hope

My words *disbened* you not?

—No, Sir; yet oft,

When blows have made me stay, I fled from words.

Shakespeare.

DISBRANCH, *v. a.* *Dis* and *branch*. To separate, or break off, as a branch from a tree.

She that herself will sliver and *disbranch*

From her maternal sap, perforce must wither,

And come to deadly use. *Shakespeare. King Lear.*

Such as are newly planted need not be *disbranched* till the sap begins to stir, that so the wound may be healed without a scar.

Evelyn's Calendar.

DISBUD, *v. a.* With gardeners. To take away the branches or sprigs newly put forth, that are ill placed.

DISBURDEN, *v. a.* *Dis* and *burden*. To ease of a burden; to unload.

The river, with ten branches or streams, *disburdens* himself within the Persian Sea.

Peacham on Drawing.

We shall *disburden* the piece of those hard shadowings, which are always ungraceful.

Dryden's Dufrenoy.

They removed either by casualty and tempest, or by intention and design, either out of lucre of gold, or for the *disburdening* of the countries surcharged with multitudes of inhabitants.

Hale's Origin of Mankind.

Disburdened Heaven rejoiced. *Milton.*

Lucia, *disburden* all thy cares on me,

And let me share thy most retired distress.

Addison's Cato.

To *DISBURSE'*, *v. a.* Fr. *debourser*; *dis* and *burse*. To spend or lay out money.

The queen's treasure, in so great occasions of *disbursements*, is not always so ready, nor so plentiful, as it can spare so great a sum together.

Spenser's Ireland.

Nor would we deign him burial for his men,

Till he *disbursed* ten thousand dollars. *Shakspeare.*

As Alexander received great sums, he was no less generous and liberal in *disbursing* of them.

Arbuthnot on Coins.

DISC, in antiquity, a quoit made of stone, iron, or copper, five or six fingers broad, and above a foot long, somewhat of an oval figure. It was hurled like a bowl to a vast distance, by the help of a leathern thong, tied round the thrower's hand and put through a hole in the middle. According to Ovid, Met. 10, Apollo laid down his divinity, and abandoned the charge of his oracle at Delphi, to go to Sparta to play at the *discus*, where he mortally wounded his favorite Hyacinthus. Pausanias gives the invention of the game to Perseus, the son of Jupiter and Danae, who had the misfortune to kill his maternal grandfather Acrisius with his *disc*.

The game of *discus* was in practice at the time of the Trojan war. The myrmidons of Achilles practised it, during their leader's inaction, on the sea-shore, while burning with ire against Agamemnon. Homer also records it as among the gymnastic sports given at the funeral obsequies of Patroclus, with an iron *discus*.

Disc, in astronomy, the face of the sun and moon, as they appear to us on the earth; or the face of the earth as it appears to a spectator in the moon.

Disc, in optics, the wideness of the aperture of a telescopic glass, whether plain, convex, concave, or of any other form.

DISCALCEATED, *adj.* } Lat. *discalceatus*.

DISCALCEATION, *n. s.* } Stripped of shoes: the act of pulling off the shoes.

The custom of *discalceation*, or putting off their shoes at meals, is conceived to have been done, as by that means keeping their beds clean.

Brown's Vulgar Errors.

DISCANDY, *v. n.* From *dis* and *candy*. To dissolve; to melt.

The hearts

That spanieled me at heels, to whom I gave

Their wishes, do *discandy*, melt their sweets

On blossoming Cæsar. *Shakspeare.*

DISCARD', *v. a.* *Dis* and *card*. To throw out of the hand such cards as are useless: hence to dismiss or eject from service or employment.

Their captains, if they list, *discard* whom they please, and send away such as will perhaps willingly be rid of that dangerous and hard service.

Spenser's State of Ireland.

These men being certainly jewels to a wise man, considering what wonders they were able to perform, yet were *discarded* by that unworthy prince, as not worthy the holding. *Sidney.*

And laughter where it reigns unchecked,

Discards and dissipates respect. *Shenstone.*

Should we own that we have a very imperfect idea of substance, would it not be hard to us with *discarding* substance out of the world?

Locke.

Justice *discards* party, friendship, kindred, and is always therefore represented as blind.

Addison's Guardian.

DISCARNATE, *adj.* *Dis* and *caro*, *carnis*, flesh; Ital. *scarnuto*. Stripped of flesh.

'Tis better to own a judgment, though but with a curta suppellex of coherent notions; than a memory, like a sepulchre, furnished with a load of broken and *discarnate* bones. *Glanville.*

To *DISCASE'*, *v. a.* *Dis* and *case*. To strip; to undress.

Fetch me the hat and rapier in my cell:

I will *discase* me, and myself present.

Shakspeare. Tempest.

DISCERN', *v. a. & v. n.* }

DISCERN'ER, *n. s.* }

DISCERN'IBLE, *adj.* }

DISCERN'IBLENESS, }

DISCERN'IBLY, }

DISCERN'ING, *part. adj.* }

DISCERN'INGLY, *adv.* }

DISCERN'MENT, }

Fr. *discerner*; Sp.

and Portug. *discernir*; Ital. and Lat.

discernere; *dis* and

cernere; Gr. *καρνω*;

to judge or deter-

mine. To descry;

discover; distin-

guish; judge: as a neuter verb to make distinction. *Discerning* is knowing; discreet; wise. The meaning of the other derivatives seems plain.

And behold among the simple ones, I *discerned* among the youths a young man void of understanding. *Prov. vii. 7.*

You shall be ruled and led

By some discretion, that *discerns* your state

Better than you yourself. *Shakspeare. King Lear.*

Does any here know me? This is not Lear:

Does Lear walk thus, speak thus? Where are his eyes?

Either his motion weakens, or his *discernings*

Are lethargied. *Id.*

'Twas said they saw but one; and no *discerner*

Durst wag his tongue in censure.

Id. Henry VIII.

They follow virtue for reward to-day;

To-morrow vice, if she give better pay:

We are so good, or bad, just at a price;

For nothing else *discerns* the virtue or vice.

Ben Jonson.

It *discerneth* of forces, frauds, crimes various of stellationate, and the inchoations towards crimes capital, not actually perpetrated. *Bacon.*

Consider what doctrines are infused *discernibly* amongst Christians, most apt to obstruct or interrupt the christian life. *Hammond.*

He was a great observer and *discerner* of men's natures and humours, and was very dexterous in compliance, where he found it useful. *Clarendon.*

All this is easily *discernible* by the ordinary discourses of the understanding. *South.*

To *discern* such buds as are fit to produce blossoms, from such as will display themselves but in leaves, is no difficult matter. *Boyle.*

What doth better become wisdom than to discern
what is worthy the loving? *Sidney.*

The custom of arguing on any side, even against
our persuasions, dims the understanding, and makes
it by degrees lose the faculty of discerning between
truth and falsehood. *Locke.*

These two errors Ovid has most discerningly
avoided. *Garth.*

It is indeed a sin of so gross, so formidable a bulk,
that there needs no help of optics to render it dis-
cernible, and therefore I need not farther expatiate on
it. *Government of the Tongue.*

A reader that wants discernment, loves and admires
the characters and actions of men in a wrong place.
Freeholder.

Safe in his power, whose eyes discern afar

The secret ambush of a specious prayer;

Implore his aid, in his decisions rest,

Secure, whate'er he gives, he gives the best.

Johnson. Vanity of Human Wishes.

DISCERN', *v. a.* } Lat. *discerpo*. To
DISCERN'IBLE, *adj.* } tear in pieces; to break;
to destroy by separation of its parts.

What is most dense, and least porous, will be
most coherent and least discernible.

Glanville's Scepis.

Matter is moveable, this immovable; matter dis-
cernible, this indiscernible. *More.*

DISCHARGE', *v. a., v., n., & n. s.* } Dis and
DISCHARG'ER, *n. s.* } charge, or
Fr. *descharger*. To disburden, throw off, deliver
from a load, a debt, crime, or obligation; hence
to perform duty, as well as to dismiss from office,
or employ; to emit. As a neuter verb, to ex-
plode. As a substantive, discharge is emission,
or explosion; matter emitted; disruption; dis-
mission, or release, from duty or punishment.
Performance of duty.

There is no discharge in that war, neither shall
wickedness deliver those that are given to it.

Eccles. viii. 8.

They wanted not reasons to be discharged of all
blame, who are confessed to have no great fault, even
by their very word and testimony, in whose eyes no
fault of ours hath ever hitherto been esteemed to be
small. *Hooker.*

Infected minds

To their deaf pillows will discharge their secrets.

Shakspeare. Macbeth.

If he had

The present money to discharge the Jew,

He would not take it. *Id. Merchant of Venice.*

Trial would also be made in herbs poisonous and
purgative, whose ill quality perhaps may be discharged,
or attempered, by setting stronger poisons or purga-
tives by them. *Bacon.*

The cloud, if it were oily or fatty, would not dis-
charge. *Bacon's Natural History.*

The galleys also did oftentimes, out of their prows,
discharge their great pieces against the city.

Knoller's History.

A grateful mind

By owing owes not, but still pays; at once

Indebted and discharged. *Milton.*

He warns

Us, haply too secure of our discharge

From penalty, because from death released

Some days. *Id.*

To abate the bomilation of punpowder, a way is
promised by Porta, by borax and butter, which he says

will make it so go off, as scarcely to be heard by the
discharger. *Broune.*

They are imprudent enough to discharge themselves
of this blunder, by laying the contradiction at Virgil's
door. *Dryden.*

Had I a hundred tongues, a wit so large

As could their hundred offices discharge.

Dryden's Fables.

The text expresses the sound estate of the con-
science, not barely by its not accusing, but by its not
condemning us; which word imports properly an
acquittance or discharge of a man upon some prece-
dent accusation, and a full trial and cognizance of his
cause. *South.*

If one man's fault could discharge another man of
his duty, there would be no place left for the common
offices of society. *L'Estrange.*

When foreign trade imports more than our com-
modities will pay for, we contract debts beyond sea; and
those are paid with money, when they will not take
our goods to discharge them. *Locke.*

As the heat of all springs is owing to subterraneous
fire, so wherever there are any extraordinary discharges
of this fire, there also are the neighbouring springs
hotter than ordinary. *Woodward.*

The man who builds, and wants wherewith to pay,
Provides a house from which to run away.

In Britain what is many a lordly seat

But a discharge in full for an estate? *Young.*

We discharged a pistol, and had the sound returned
upon us fifty-six times, though the air was foggy.

Addison on Italy.

Soon may kind heaven a sure relief provide;

Soon may your sire discharge the vengeance due,

And all your wrongs the proud oppressors rue.

Pope's Odyssey.

The matter being suppured, I opened an inflamed
tubercle in the great angle of the left eye, and dis-
charged a well concocted matter. *Wiseman's Surgery.*

The hæmorrhage being stopped, the next occurrence
is a thin serous discharge. *Shark's Surgery.*

DISCINCT', *adj.* Lat. *discinctus*. Ungirded;
loosely dressed.

DISCIND', *v. a.* Lat. *discindo*. To divide;
to cut in pieces.

We found several concretions so soft, that we could
easily discind them betwixt our fingers. *Boyle.*

DISCIPLE', *v. a. & n. s.* } Fr. *disciple*;
DISCIPLESHIP. } Span. and Port.

discipulo; Lat. *discipulus*, from *disciplina*. One
who submits himself to discipline as a scholar.
See DISCIPLINE. Discipleship is the state of
being a disciple.

So that the disciples weren named at Antioch cris-
ten men. *Wiclif. Dedis. 11.*

She, bitter penance! with an iron whip

Was wont him to disciple every day. *Spenser.*

He did look far

Into the service of the time, and was

Discipl'd of the bravest. *Shakspeare*

That to which justification is promised, is the giving
up of the whole soul intirely unto Christ, undertaking
discipleship upon Christ's terms.

Hammond's Pract. Catech.

He rebuked disciples who would call for fire from
heaven upon whole cities, for the neglect of a few.

King Charles.

A young disciple should behave himself so well, as
to gain the affection and the ear of his instructor

Watts.

For, as Christians, we are the *disciples*, the followers, and the servants of Christ, redeemed by him.

Mabon.

Yea, a *disciple*, that would make the Founder Of your belief renounce it, could he see Such proselytes.

Byron.

DISCIPLE, in a more restrained sense, is the designation applied to those who were the immediate followers and attendants on Christ's person, of whom there were seventy or seventy-one. The terms *disciple* and *apostle* are often used synonymously in the gospel history; but sometimes the apostles are distinguished from disciples, as persons selected out of the number of disciples, to be the principal ministers of his religion: of these there were only twelve. The Latins kept the festival of the seventy or seventy-two disciples on July 15th, and the Greeks on January 4th.

DISCIPLINE, *v. a. & n. s.*

DISCIPLINABLE, *adj.*

DISCIPLINABLENESS, *n. s.*

DISCIPLINARIAN, *n. s. & adj.*

DISCIPLINARY.

disco, to learn, because discipline is necessary to teaching. To educate, instruct, with power to punish; to advance by instruction. As a substantive discipline is, instruction; rule; any thing taught; system of government; mortification; punishment. Disciplinable is, docile; capable of discipline. Disciplinarian, relating to, and as a substantive one zealous for, discipline. Disciplinary, pertaining to discipline.

If ony vertue, if ony preisyng of *discipline*, thenke ghe these thingis, that also ghe han lerned.

Wiclif. Filipensis 4.

He had charge my *discipline* to frame,

And tutors nouriture to oversee.

Spenser.

As we are to believe for ever the articles of evangelical doctrine, so the precepts of *discipline*, we are, in like sort, bound for ever to observe.

Hooker.

The cold of the northern parts is that which, without aid of *discipline*, doth make the bodies hardest, and the courage warmest.

Bacon.

This opens all your victories in Scotland, Your *discipline* in war, wisdom in peace.

Shakespeare.

The law appeared imperfect, and but given

With purpose to resign them in full time

Up to a better covenant, *disciplined*

From shadowy types to truth, from flesh to spirit.

Milton.

These are the studies wherein our noble and gentle youth ought to bestow their time in a *disciplinary* way.

Id.

The love of God makes a man chaste without the laborious arts of fasting and exterior *discipline*; he reaches at glory without any other arms but those of love.

Taylor.

Art may be said to overcome and advance nature in these mechanical *disciplines*, which, in this respect, are much to be preferred.

Wilkins.

We find in animals, especially some of them, as foxes, dogs, apes, horses, and elephants, not only perception, phantasy, and memory, common to most, if not all animals, but something of sagacity, providence, and *disciplinableness*.

Hale.

Let crooked steel invade

The lawless troops which *discipline* disclaim,
And their superfluous growth with rigour tame.

Dryden.

What eagerness in *disciplinarian* uncertainties, when the love of God and our neighbour, evangelical unquestionables, are neglected!

Glan. Sceptris.

The most perfect, who have their passions in the best *discipline*, are yet obliged to be constantly on their guard.

Rogers.

They look to us, as we should judge of an army of well-disciplined soldiers at a distance.

Derham's Astro-Theology.

They were with care prepared and *disciplined* for confirmation, which they could not arrive at till they were found, upon examination, to have made a sufficient progress in the knowledge of Christianity.

Addison on the Christian Religion.

They draw those that dissent into dislike with the state, as puritans, or *disciplinarians*.

Sanders. Pax Eccl.

Those canons in behalf of marriage were only *disciplinary*, grounded on prudential motives.

Bp. Ferne.

It is by the assistance of the eye, and the ear especially, which are called the senses of *discipline*, that our minds are furnished with various parts of knowledge.

Watts.

The passions may be humoured till they become our master, as a horse may be pampered till he gets the better of his rider; but early *discipline* will prevent mutiny, and keep the helm in the hands of reason.

Cumberland.

In colleges and halls in ancient days,

When learning, virtue, piety, and truth,

Were precious and inculcated with care,

There dwelt a sage called *Discipline*.

Cowper.

DISCIPLINE, ECCLESIASTICAL, consists in putting those laws in execution by which the church is governed, and inflicting the penalties enjoined by them against the several sorts of offenders. The primitive church never pretended to exercise discipline upon any but such as were within her pale in the largest sense, by some act of their own profession: and even upon these she never pretended to exercise her discipline so far as to cancel or disannul their baptism: all that she pretended to was, to deprive men of the benefits of external communion, such as public prayer, receiving the eucharist, and other acts of divine worship. The church discipline was confined to the admonition of the party, and to the lesser and greater excommunication. As to the objects of ecclesiastical discipline, they were all such delinquents as fell into great and scandalous crimes after baptism. Discipline, in a more peculiar sense, is used for the bodily punishments inflicted on a religious of the Romish church who has been found a delinquent; or even for that which the religious voluntarily undergo or inflict on themselves, by way of mortification.

DISCIPLINE, THE BOOK OF, in the history of the church of Scotland, is a common Order, drawn up by the assembly of ministers in 1650, for the reformation and uniformity to be observed in the discipline and policy of the church. In this book the government of the church by prelates is set aside, kirk sessions are established, the observation of fast days and saints' days is condemned, and other regulations for the government of the church are determined. This book was approved by the privy council, and is called the First Book of Discipline.

DISCLAIM', v. a. } *Dis* and *claim*. To
DISCLAIMER, n. s. } disown; to deny any
 knowledge of; to retract any union with; to abro-
 gicate: a disclaimer is both one that disclaims,
 disowns, or renounces, and a legal or other plea
 containing an express denial or refusal.

You cowardly rascal! nature *disclaims* all share in
 thee: a taylor made thee. *Shakspeare. King Lear.*

He calls the gods to witness their offence;
Disclaims the war, asserts his innocence.

Dryden's Æneid.

We find our Lord, on all occasions, *disclaiming* all
 pretensions to a temporal kingdom. *Rogers.*

Very few, among those who profess themselves
 Christians, *disclaim* all concern for their souls, disown
 the authority, or renounce the expectations, of the
 gospel. *Id.*

DISCLOSE, v. a. } *Lat. discludo, dis* and
DISCLOSER, n. s. } *close*. To uncover; to
DISCLOSURE, n. s. } produce to open view.
DISCLOSURES, n. s. } Disclosure is emission.

There may be a reconciliation, except for upbraiding,
 or pride, or *disclosing* of secrets, or a treacherous
 wound; for from these things every friend will depart.

Ecclus.

The producing of cold is a thing very worthy the
 inquisition, both for the use and *disclosure* of causes.

Bacon.

Hé that proportioned wonders can *disclose*,
 At once his fancy and his judgment shows. *Waller.*

Judge what a ridiculous thing it were, that the con-
 tinued shadow of the earth should be broken by sud-
 den miraculous eruptions and *disclosures* of light, to
 prevent the art of the lantern-maker. *More.*

Then earth and ocean various forms *disclose*.

Dryden.

If I *disclose* my passion,

Our friendship's at an end; If I conceal it,
 The world will call me false. *Addison's Cato.*

Ten brother-youths with light umbrillas shade,
 Or fan with busy hands the panting maid;
 Loose wave her locks, *disclosing*, as they break,
 The rising bosom and averted cheek. *Darwin.*

ANGIOLINA. Ah! why

Do you still keep apart, and walk alone,
 And let such strong emotions stamp your brow,
 As not betraying their full import, yet
Disclose too much?

DOGE. *Disclose* too much?—of what?
 What is there to *disclose*.

Byron.

DISCOLOUR, v. a. } *Lat. decoloro*. To
DISCOLOURATION, n. s. } change from the natu-
 ral hue; to stain. The change produced, or art
 of changing, is discoloration.

All in a kirtle of *discoloured* say
 He clothed was, ypaynted full of eies.

Spenser. Faerie Queene.

Many a widow's husband grovelling lies,
 Coldly embracing the *discoloured* earth.

Shakspeare. King John.

Drink water, either pure, or but *discoloured* with
 malt. *Temple.*

Suspensions, and fantastical surmise,

And jealousy, with jaundice in her eyes,
Discolouring all she viewed. *Dryden.*

Have a care lest some beloved notion, or some dar-
 ling science, so prevail over your mind as to *discolour*
 all your ideas. *Watts.*

In a depravation of the humours from a sound state
 to what the physicians call by a general name of a
 cacochymy, spots and *discolorations* of the skin are
 signs of weak fibres. *Arbuthnot.*

DISCOMFIT, v. a. & n. s. } *Fr. desconfire;*
DISCOMFITUDE, n. s. } *Ital. sconfiggere,*
 from *Lat. disconfigere*. To defeat; to conquer;
 overpower; subdue.

Joshua *discomfited* Amalek and his people with the
 edge of the sword. *Exodus.*

The pillowes dide hir besinnesse and cure,
 After the bataille and *discomfiture*.

Chaucer. Cant. Tales.

For in this world there ne is no creture
 Walking, alas! in more *discomfiture*
 Than I, ne that more sorrowe doth endure.

Donne.

Fight against that monstrous rebel, Cade,
 Whom, since, I heard to be *discomfited*.

Shakspeare.

Fly you must: incurable *discomfit*

Reigns in the hearts of all our present party. *Id.*

Dagon must stoop, and shall ere long receive
 Such a *discomfit*, as shall quite despoil him
 Of all these boasted trophies. *Milton's Agonistes.*

While my gallant countrymen are employed in pur-
 suing rebels half *discomfited* through the consciousness
 of their guilt, I shall improve those victories to the
 good of my fellow subjects. *Addison.*

DISCOMFORT, v. a. & n. s. } *Dis* and *com-*
DISCOMFORTABLE, adj. } *fort*. To grieve;
 sadden; deject: as a substantive, uneasiness;
 sorrow; melancholy.

Therefore whanne ye seen the abomynacioun of
discomfourt, that is seid of Danyel the profete ston-
 dyng in the hooly place, he that redith undirstonde
 he. *Wiclif. Matt. 24.*

This himself did foresee, and therefore armed his
 church, to the end they might sustain it without *dis-*
comfourt. *Hooker.*

Discomfort guides my tongue,

And bids me speak of nothing but despair.

Shakspeare.

Discomfortable cousin, knowest thou not

That when the searching eye of Heaven is hid
 Behind the globe, it lights the lower world? *Id.*

It is no *discomfort* for a man to flee, when his con-
 science pursues him not.

Bp. Hall. Contemplations.

What! did that help poor Dorus, whose eyes could
 carry unto him no other news but *discomfortable*?

Sidney.

In solitude there is not only *discomfort*, but weak-
 ness also. *South.*

DISCOMMEND, v. a. }

DISCOMMENDABLE, adj. }

DISCOMMENDABLENESS, n. s. }

DISCOMMENDATION, n. s. }

DISCOMMENDER, n. s. }

Dis and *com-*
mend. To
 blame; to cen-
 sure: *discom-*
mendable is
 blameable, deserving censure: *discommenda-*
tion, censure: *discommender*, he who expresses or
 bestows it.

Absolutely we cannot *discommend*, we cannot abso-
 lutely approve, either willingness to live, or forward-
 ness to die. *Hooker.*

Now you will all be wits: and he, I pray,

And you, that *discommend* it, mend the play.

Denham.

Neither do I *discommend* the lofty style in tragedy,
 which is naturally pompous and magnificent.

Dryden.

Pusillanimity is, according to Aristotle's morality,
 a vice very *discommendable*. *Ayliffe's Purgon.*

Tully assigns three motions, whereby, without any *discommendation*, a man might be drawn to become an accuser of others. *Id.*

DISCOMMODOE, *v. a.* } Fr. *dis* and *com-*
DISCOMMODOUS, *adj.* } *mode*. To put to

DISCOMMODY, *n. s.* } inconvenience; to
molest; to incommode. The adjective and substantive follow this meaning.

So many thousand soldiers, unfit for any labour, or other trade, must either seek service and employment abroad, which may be dangerous; or else employ themselves here at home, which may be *discommodious*.

Spenser's State of Ireland.

We speak now of usury, how the *discommodities* of it may be best avoided, and the commodities retained: or how, in the balance of commodities and *discommodities*, the qualities of usury are to be reconciled.

Bacon.

It is better that a ship should be preserved with some *discommody* to the sailors, than that, the sailors being in health, the ship should perish. *Hayward.*

DISCOMPOSE, *v. a.* } Fr. *décomposer*.

DISCOMPOSURE, *n. s.* } To disorder; to unsettle: hence to offend; vex; irritate. *Discomposure* is the effect thus produced.

Though he was a dark prince, and infinitely suspicious, he never put down or *discomposed* a counsellor or near servant. *Bacon.*

He threw himself upon his bed, lamenting with much passion, and with abundance of tears; and continued in this melancholick *discomposure* of mind many days. *Clarendon.*

No more, dear mother: ill in death it shows,
Your peace of mind by rage to *discompose*. *Dryden.*

Men who possess all the advantages of life, are in a state where there are many accidents to disorder and *discompose*, but few to please them. *Swift.*

DISCONCERT, *v. a.* *Dis* and *concert*. To unsettle; *discompose*; disturb a scheme.

You need not provoke their spirits by outrages: a careless gesture, a word, or a look, is enough to *disconcert* them. *Collier.*

DISCONFORMITY, *n. s.* *Dis* and *conformity*. Want of agreement; inconsistency.

Lies arise from error and mistake, or malice and forgery; they consist in the disagreement and *disconformity* betwixt the speech and the conception of the mind, or the conceptions of the mind and the things themselves, or the speech and the things.

Hakewill on Providence.

DISCONGRUITY, *n. s.* *Dis* and *congruity*. Disagreement; inconsistency.

There is want of capacity in the thing, to sustain such a duration, from the *intrinsic discongruity* of the one to the other.

Hale's Origin of Mankind.

DISCONSOLATE, *adj.* } *Dis* and *console*.
DISCONSOLATELY, *adv.* } Void of comfort.
DISCONSOLATENESS, *n. s.* } hopeless; sorrowful; melancholy.

See Cassius all *disconsolate*,
With Pindarus his bondman on this hill.

Shakspeare.

In his [God's] absence, there is nothing but *dolour*, *disconsolateness*, and despair. *Bp. Hall.*

If patiently thy bidding they obey,
Dismiss them not *disconsolate*. *Milton.*

The ladies and the knights, no shelter nigh,

Were dropping wet, *disconsolate* and wan,
And through their thin array received the rain.

Dryden.

The moon reflects the sunbeams to us, and so, by illuminating the air, takes away in some measure the *disconsolate* darkness of our winter nights. *Ray.*

I am first affrighted and confounded with that forlorn solitude in which I am placed by my philosophy, and fancy myself some strange uncouth monster, who, not being able to unite and mingle in society, has been expelled all human commerce, and left utterly abandoned and *disconsolate*.

Hume. On the Human Understanding.

DISCONTENT, *n. s. & adj.*

DISCONTENTED, *part. adj.*

DISCONTENTEDLY, *adv.*

DISCONTENTEDNESS, *n. s.*

DISCONTENTMENT.

Dis and *Content*, which see. Uneasiness; dissatisfaction with one's present state. *Discontentment* is an old word, expressing the same meaning.

These are the vices that fill them with general *discontentment*, as though the bosom of that famous church, wherein they live, were more noisome than any dun-geon. *Hooker.*

I see your brows full of *discontent*,
Your hearts of sorrows, and your eyes of tears.

Shakspeare.

The politick and artificial nourishing and entertaining of hopes, and carrying men from hopes to hopes, is one of the best antidotes against the poison of *discontentment*. *Bacon.*

The misery which is supposed to follow poverty, arises, not from want, but from peevishness and *discontent*. *Burton.*

Pride is ever *discontented*, and still seeks matter of boasting in her own works.

Bp. Hall. Contemplations.

The rest were seized with sullen *discontent*,
And a deaf murmur through the squadrons went.

Dryden.

These are, beyond comparison, the two greatest evils in this world; a diseased body, and a *discontented* mind. *Tillotson.*

A beautiful bust of Alexander the Great casts up his face to heaven with a noble air of grief, or *discontentedness*, in his looks. *Addison's Travels.*

As a man incriminated only by vapours, soon recovers in the open air; a nation *discontented* to madness, without any adequate cause, will return to its wits and allegiance, when a little pause has cooled it to reflection. *Johnson.*

DISCONTINUE, *v. a. & v. n.* } Fr. *dis-*

DISCONTINUITY, *n. s.*

To leave off; to cease; break off; interrupt: as a neuter verb, to lose cohesion, or any established right.

Thyself shall *discontinue* from thine heritage that I give thee, and I will cause thee to serve thine enemies. *Jer.*

Twenty puny lies I'll tell,
That men shall swear I have *discontinued* school
Above a twelvemonth. *Shakspeare.*

Examine thy customs of diet, sleep, exercise, apparel, and the like; and try, in any thou shalt judge hurtful, to *discontinue* it by little and little; but so, as if thou find any inconvenience by the change, thou come back to it again. *Bacon.*

There is that property, in all letters, of aptness to be conjoined in syllables and words, through the valuable motions of the organs from one stop or figure to another, that they modify and discriminate the voice, without appearing to *discontinue* it.

Holder's Elements of Speech.

Let us consider whether our approaches to him are sweet and refreshing, and if we are uneasy under any long *discontinuance* of our conversation with him.

Atterbury.

Upon any *discontinuation* of parts, made either by bubbles, or by shaking the glass, the whole mercury falls.

Newton.

That *discontinuity* of parts is the principal cause of the opacity of bodies, will appear by considering that opaque substances become transparent by filling their pores with any substance of equal, or almost equal, density with their parts.

Id.

The effect of *discontinuance* of possession is, that a man may not enter upon his own land or tenement alienated, whatsoever his right be unto it, or by his own authority; but must seek to recover possession by law. The effect of *discontinuance* of plea is, that the instance may not be taken up again, but by a new writ to begin the suit afresh.

Cowell.

DISCONVENIENCE, *n. s.* *Dis* and convenience. Incongruity; disagreement; opposition.

Fear ariseth many times out of natural antipathies of nature; but, in these *disconveniencies* of nature, deliberation hath no place at all.

Bramhall's Answer to Hobbes.

DISCORD, *v. n. & n. s.*

DISCORDANCE, *n. s.*

DISCORDANCY,

DISCORDANT, *adj.*

DISCORDANTLY, *adv.*

Fr. discord; Sp. Ital. and Lat. discordia; from dis and cors, cordis, the heart; an adverse heart.

To disagree; not to accord with. As a substantive, disagreement; opposition; jangling; contrariety of, or ill agreement between, sounds. Discordance and discordancy both seem synonymous with discord.

These things doth the Lord hate, the false witness that speaketh lies, and he that soweth discord among brethren.

Proverbs.

See what a scourge is laid upon your hate, That heaven finds means to kill your joys with love! And I, for winking at your discords too, Have lost a brace of kinsmen.

Shakspeare. Romeo and Juliet.

It is sound alone that doth immediately and incorporeally affect most; this is most manifest in music, and concords and discords in music: for all sounds, whether they be sharp or flat, if they be sweet, have a roundness and equality; and if they be harsh, are unequal: for a discord itself is but a harshness of divers sounds meeting.

Bacon.

This is the slowest, yet the daintiest sense;

For even the ears of such as have no skill

Perceive a discord, and conceive offence;

And knowing not what's good, yet find the ill.

Davies.

How doth music amaze us, when of discords she maketh the sweetest harmony!

Peacham.

Hither conscience is to be referred; if by a comparison of things done with the rule there be a consonancy, then follows the sentence of approbation; if discordant from it, the sentence of condemnation.

Hale's Origin of Mankind.

Two strings of a musical instrument being struck together, making two noises that arrive at the ear at the same time as to sense, yield a sound differing from either of them; and as it were compounded of both; inasmuch, that if they be discordantly tuned, though each of them struck apart would yield a pleas-

ing sound, yet being struck together they make a harsh and troublesome noise.

Boyle on Colours.

Discord, like that of music's various parts,

Discord that makes the harmony of hearts;

Discord that only this dispute shall bring,

Who best shall love the duke and serve the king.

Dryden.

All nature is but art unknown to thee;

All chance, direction which thou canst not see;

All discord, harmony not understood;

All partial evil, universal good.

Pope.

DISCORD, in music, every sound which, joined with another, forms an assemblage disagreeable to the ear; or, rather, every interval whose extremes do not coalesce. Now, as there are no other concords, or consonances, except those which form amongst themselves, and with their fundamental sound, perfect chords, it follows that every other interval must be a real dissonance or discord: even the third and sixth were reckoned such among the ancients, who excluded them from the number of consonant chords. The term dissonance, which is synonymous with discord both in a literal and metaphorical sense, signifies disagreement or disunion. In reality, that which renders dissonances grating is, that the sounds which form them, far from uniting in the ear, seem to repel each other, and are heard each by itself as two distinct sounds though produced at the same time. This repulsion or violent oscillation of sounds is heard more or less as the vibrations which produce it are more or less frequently coincident. When two vocal strings are gradually tuned, till they approach a consonant interval, the pulsations become slower as the chord grows more just, till at last they are scarcely heard, if heard at all; whence it appears certain that the pleasure, produced in us by harmony, results from the more or less exact and frequent coincidence of vibrations; though the reason why this coincidence should give pleasure, more than any other modification or combination of sounds, appears to us inscrutable. The agreeable effects of dissonance, in harmony, are no objection to this theory: since it is allowed that the sensations excited by discord are not in themselves immediately and necessarily pleasing, but only please by auricular deception. The ear is surprised with the shock it receives; and, in proportion as it is harsh and grating, we feel the pleasure of returning harmony enhanced, and the disappointment of being artfully and insensibly extricated more agreeable. The name of dissonance is given sometimes to the interval, and sometimes to each of the sounds which form it. But, though two sounds equally form a dissonance between themselves, the name is most frequently given to that sound in particular which is most extraneous to the chord. The number of possible dissonances is indefinite; but as in music we exclude all intervals which are not found in the system received, the number of dissonances is reduced to a very few: besides, in practice, we can only select from those few such as are agreeable to the species, and the mode, in which we compose; and from this last number we must exclude such as cannot be used consistently with the rules prescribed. But what are these rules? Have they any foundation in nature

or are they merely arbitrary? This is what Rousseau has endeavoured to investigate and to deduce, with more ingenuity than success, from principles purely mechanical.

DISCOVER, *v. a.* } Fr. *découvrir*; *dis*
DISCOVERABLE, *adj.* } and cover. To see or
DISCOVERER, *n. s.* } explore; to show;
DISCOVERY. } disclose; bring to
light; make plain or visible.

He *discovereth* deep things out of darkness, and bringeth out to light the shadow of death.

Job xii. 22.

When we had *discovered* Cyprus, we left it on the left hand. *Acts.*

Let that man with better sense advise,
That of the world least part to us is read;
And daily how through hardy enterprize
Many great regions are *discovered*.

Spenser. *Faerie Queene.*

The utter wauls of it yet stound. The kepe is exceeding fair and strong; and in the waulles be certain strong towers. The lodgings that were within the area of the castelle be *discovered* and faul to ruine.

Leland.

Here stand my lords, and send *discoverers* forth,
To know the numbers of our enemies. *Shakspeare.*

What, must I hold a candle to my shame?
They in themselves, good sooth, are too, too light.
Why 'tis an office of *discovery*, love,
And I should be obscured. *Id. Merchant of Venice.*

Some high climbing hill,

Which to his eye *discovers* unaware
The goodly prospect of some foreign land,
First seen, or some renowned metropolis
With glistening spires and battlements adorned.

Milton.

Man with strength and free will armed
Complete, to have *discovered* and repulsed
Whatever wiles of foe or seeming friend. *Id.*
They were deceived by Satan, and that not in an invisible situation, but in an open and *discoverable* apparition, that is, in the form of a serpent.

Brown's *Vulgar Errors.*

If more be found out, they will not recompense the *discoverer's* pains, but will be fitter to be cast out.

Holder.

The cover of the coach was made with such joints, that as they might, to avoid the weather, pull it up close, so they might put each end down, and remain as *discovered* and open-sighted as on horseback.

Sidney.

Of all who since have used the open sea,
Than the bold English none more fame have won;
Beyond the year, and out of heaven's high way,
They make *discoveries* where they see no sun.

Dryden.

Things that appeared amiable by the light of this world, appear of a different odious hue in the clear *discoveries* of the next. *South.*

An old maiden gentlewoman is the greatest *discoverer* of judgments; she can tell you what sin it was that set such a man's house on fire.

Addison's *Spectator.*

It is concluded by astronomers, that the atmosphere of the moon hath no clouds nor rains, but a perpetual and uniform serenity; because nothing *discoverable* in the lunar surface is ever covered and absconded by the interposition of any clouds or mists.

Bentley.

Places receive appellations, according to the language of the *discoverer*, from observations made upon the people.

Broome.

Revelation may assert two things to be joined, whose connection or agreement is not *discoverable* by reason.

Watts.

DISCOUNSEL, *v. a.* *Dis* and counsel. To dissuade; to give contrary advice. Obsolete.

But him that palmer from that vanity
With temperate advice *discounselled*. *Spenser.*

DISCOUNT, *v. a. & n. s.* From *dis* and count. To count back; to pay back again. Interest so counted after a principal given.

My father's, mother's, brother's death I pardon:
My prayers and penance shall *discount* for these,
And beg of heaven to charge the bill on me.

Dryden.

The farmers, spitefully combined,
Force him to take his tithes in kind;
And Parvisol *discounts* arrears
By bills for taxes and repairs.

Swift.

His whole intention was, to buy a certain quantity of copper money from Wood, at a large *discount*, and sell them as well as he could. *Id.*

DISCOUNT, in commerce, a term among traders, merchants, and bankers. It is used by the two former on occasion of their buying commodities on the usual time of credit, with a condition that the seller shall allow the buyer a certain discount, at the rate of so much per cent. per annum, for the time for which the credit is generally given, upon condition that the buyer pays ready money for such commodities, instead of taking the time of credit. Traders and merchants also frequently taking promissory notes for moneys due, payable to them or order at a certain time, and sometimes having occasion for money before the time is elapsed, procure these notes to be discounted by bankers before the time of payment. Bills of exchange are also discounted by bankers; and in this consists one article of the profits of banking. See BANK.

DISCOURTENANCE, *v. a. & n. s.* From *dis* DISCOUR'TENANCER, *n. s.* [*n. s.*] and countenance. To discourage by cold treatment: one who discourages.

Rumours of scandal and murmurs against the king and his government, taxed him for a great taxer of his people, and *discourtenancer* of his nobility.

Bacon.

He thought a little *discourtenance* upon those persons would suppress that spirit.

Clarendon.

He came, and with him Eve, more loth, tho' first To offend; *discourtenance* both, and discomposed.

Milton.

The truly upright judge will always countenance right, and *discourtenance* wrong.

Atterbury.

In expectation of the hour of judgment, he patiently bears all the difficulties of duty, and the *discourtenance* he meets with from a wicked and prophane world.

Rogers.

Present time and future may be considered as rivals; and he who solicits the one, must expect to be *discourtenanced* by the other. *Sir Joshua Reynolds.*

DISCOURAGE, *v. a.* } Fr. *décourager*.
DISCOUR'AGER, *n. s.* } *Dis* and courage.
DISCOUR'AGEMENT. } To depress; deprive of confidence; dastardise; deter; taking from: discouragement is the cause of depression, or fear.

Wherefore *discourage* ye the heart of the children of Israel from going out into the land? *Numbers.*

I might neither encourage the rebels' insolence, nor *discourage* the protestants' loyalty and patience.

King Charles.

* You may keep your beauty and your health, unless you destroy them yourself, or *discourage* them to stay with you, by using them ill. *Temple.*

To things we would have them learn, the great and only *discouragement* is, that they are called to them. *Locke.*

The apostle with great zeal *discourages* too unreasonable a presumption. *Rogers.*

The books read at schools and colleges are full of incitements to virtue, and *discouragement* from vice. *Swift.*

Most men in years, as they are generally *discouragers* of youth, are like old trees, which, being past bearing themselves, will suffer no young plants to flourish beneath them. *Pope.*

The obscurity of the prophecies, great as it is in some parts, is not such as should *discourage* the Christian Laic from the study of them, nor such as will excuse him under the neglect of it. *Bp. Horsley.*

DISCOURSE', *v. a., v. n. & Span. and*
DISCOURSE', *n. s.* [*n. s.* Fr. *discourir* ;
DISCOURSIVE, *adj.*) It. *discorrere* ;

Lat. *discurrere*, *dis* and *curro*, to wander about ; because in discourse the mind travels from object to object. To treat of by speech or writing ; to discuss : as a neuter verb, to talk ; relate ; converse ; reason.

By reason of that original weakness in the instruments, without which the understanding part is not able in this world by *discourse* to work, the very conceit of painfulness is a bridle to stay us. *Hooker.*

Sure he that made us with such large *discourse*,
Looking before and after, gave us not
That capability and godlike reason
To rust in us unused. *Shakespeare.*

Go with us into the abbey here,
And let us there at large *discourse* all our fortunes. *Id.*

The tract of every thing
Would by a good *discourser* lose some life,
Which action's self was tongue to. *Id.*
He waxeth wiser than himself, more by an hour's
discourse, than by a day's meditation. *Bacon.*
Brutes do want that quick *discoursing* power. *Davies.*

In thy *discourse*, if thou desire to please,
All such is courteous, useful, new, or witty ;
Usefulness comes by labour, wit by ease,
Courtesy grows in court, news in the city. *Herbert.*

The soul
Reason receives, and reason is her being,
Discursive, or intuitive ; *discourse*
Is oftest yours, the latter is most ours. *Milton.*

Philologers and critical *discourers*, who look beyond the obvious exteriors of things, will not be angry at our narrower explorations. *Brounck.*

The act of the mind which connects propositions, and deduceth conclusions from them, the schools call *discourse* ; and we shall not miscall it, if we name it reason. *Glancville.*

Of various things *discoursing* as he passed,
Anchises hither bends. *Dryden.*

The *discourse* here is about ideas, which, he says, are real things, and seen in God. *Locke.*

The general maxims we are *discoursing* of are not known to children, ideots, and a great part of mankind. *Id.*

Flowers of rhetoric in sermons and serious *discourses* are like the blue and red flowers in corn, pleasing to those who come only for amusement, but prejudicial to him who would reap profit from it. *Pope.*

When a man's capacity does not enable him to entertain or animate the company, it is the best he can do to render himself inoffensive, and to keep his teeth clean ; but the person who has talents for *discourse*, and a passionate desire to enliven conversation, ought to have many improprieties excused, which in the other were unpardonable. *Shenstone.*

DISCOURTEOUS, *adj.* *Dis* and courteous. Uncivil ; uncomplaisant ; defective in good manners.

DISCOURTESY, *n. s.* } *Dis* and courtesy.
DISCOURTEOUS, *adj.* } Incivility ; rudeness ; act of disrespect.

Be calm in arguing ; for fierceness makes Error a fault, and truth *discourtesy.* *Herbert.*

As if cheerfulness had been tediousness, and good entertainment had been turned to *discourtesy*, he would ever get himself alone. *Sidney.*

He made me visits, maundering as if I had done him a *discourtesy.* *Wiseman.*

He resolved to unhorse the first *discourteous* knight he should meet *Mottens's Don Quixote.*

DISCOUS, *adj.* From Lat. *discus*. Broad ; flat ; wide. Used by botanists to denote the middle, plain, and flat part of some flowers, such as the flos solis, &c.

DISCREDIT, *v. a. & n. s.* Fr. *décrediter*. To deprive of credibility ; to make not trusted ; to disgrace ; distrust : as a substantive, reproach ; disgrace ; lower degree of infamy ; imputation of fault ; ignominy.

He, like a privileged spy, whom nothing can *Discredit*, libels now 'gainst each great man. *Donne.*

You had left unseen a wonderful piece of work, which not to have been blest withal, would have *discredited* you. *Shakespeare.*

Had I been the finder out of this secret, it would not have relished among my other *discredits*. *Shakespeare.*

Idlers will ever live like rogues, and not fall to work, but be lazy, and then certify over their country to the *discredit* of a plantation. *Bacon.*

He is commended that makes a saving voyage, and least *discredits* his travels, who returns the same man he went. *Wotton.*

'Tis the duty of every Christian to be concerned for the reputation or *discredit* his life may bring on his profession. *Rogers.*

Alas, the small *discredit* of a bribe
Scarce hurts the lawyer, but undoes the scribe. *Pope.*

Reflect how glorious it would be to appear in countenance of *discredited* duty, and by example of piety revive the declining spirit of religion. *Id.*

DISCREET', *adj.* } Fr. *discret* ; Span.
DISCREET'LY, *adv.* } Port. and Ital. *dis-*
DISCREET'NESS, *n. s.* } *creto* ; Lat. *discretus*,
DISCRE'TION, } from *discerno*, to judge.
DISCRE'TIONARY, *adj.* } Prudent ; wary ; cautious ; sober ; modest. Discretion and discreetness are synonymous substantives. Discretionary means unlimited, except by discretion.

But now parfourne ghe in dede, that as the *discracious* of wille is redi so be it also of parfourmyng of that that ghe han. *Wiclif. ii Cor. 8.*

The greatest parts without *discretion*, as observed by an elegant writer, may be fatal to their owner.

Hume.

Honest, *discreet*, quiet, and godly learned men, will not be withdrawn by you.

Whitgift.

Nothing then was further thought upon for the manner of governing; but all permitted unto their wisdom and *discretion* which were to rule.

Hooker.

Less fearful than *discreet*,

You love the fundamental part of state,

More than you doubt the charge of 't. *Shakspeare.*

It is not good that children should know any wickedness: old folks have *discretion*, and know the world.

Id.

Discretion is the victor of the war,

With lenity, and our directions followed

With cheerfulness, a prosperous end must crown

Our works well undertaken. *Massinger.*

Poets lose half the praise they should have got,
Could it be known what they *discreetly* blot.

Waller.

The labour of obedience, loyalty, and subjection, is no more but for a man honestly and *discreetly* to sit still.

South.

The major being a person of consummate experience, was invested with a *discretionary* power.

Tatler.

It is the *discreet* man, not the witty, nor the learned, nor the brave, who guides the conversation, and gives measures to society.

Addison's Spectator.

There is no talent so useful towards rising in the world, or which puts men more out of the reach of fortune, than *discretion*, a species of lower prudence.

Swift.

The dullest brain, if gently stirred,
Perhaps may waken to a humming bird;
The most recluse, *discreetly* opened, find
Congenial object in the cockle kind.

Pope's Dunciad.

A deacon may have a dispensation for entering into orders before he is twenty-three years of age; and it is *discretionary* in the bishop to admit him to that order at what time he thinks fit.

Ayliffe's Parergon.

Dear youth, by fortune favored, but by love,
Alas! not favoured less, be still as now

Discreet.

Thomson.

To Jeffrey go, be silent and *discreet*,
His pay is just ten sterling pounds per sheet:
Fear not to lie, 'twill seem a lucky hit,
Shrink not from blasphemy, 'twill pass for wit.

Byron.

DISCREP'ANCE, *n. s.* } Lat. *discrepantia*.
DISCREP'ANT, *adj.* } Difference; contra-
riety; disagreement.

Diversity of education, and *discrepancy* of those principles wherewith men are at first imbued, and wherein all our after reasonings are founded.

Lord Digby to K. Digby.

DISCRETE, *v. a. & adj.* } Lat. *discretus*.

DISCRE'TIVE, *adj.* } To separate; to discontinue; distinct; disjointed. For *discrete*, see the instance.

As for its diaphaneity, it enjoyeth that most eminently; as having its earthly and salinuous parts so exactly resolved, that its body is left imporous, and not *discreted* by atomical terminations.

Browne.

Discrete quantity, or different individuals, are measured by number without any breaking continuity; that is, in things that have continuity, as continued quantity and motion.

Hale's Origin of Mankind.

Discretive propositions are such wherein various, and seemingly opposite, judgments are made, whose variety or distinction is noted by the particles but, though, yet, &c. as, travellers may change their climate, but not their temper; Job was patient, though his grief was great.

Watts.

DISCRETE, or DISJUNCT, PROPORTION is that in which the ratio between two or more pairs of numbers is the same, and yet the proportion is not continued, as the ratio between 3 : 6 is the same as that between 8 : 16, and therefore the numbers are proportional; but it is only discretely or disjunctly, for 3 is not to 6 as 6 to 8; that is, the proportion is broken off between 8 and 3, and is not continued as in the following continual proportionals:—

3 : 6 :: 12 : 24.

DISCRIM'INATE, *v. a. & adj.* } Lat. *discrimino*, from
DISCRIM'INABLE, *adj.* } Gr. *diag* and
DISCRIM'INATELY, *adv.* } *κρινω*, to
DISCRIM'INATENESS, *n. s.* } judge. To
DISCRIMINA'TION, } mark a dif-
DISCRIM'INATIVE, *adj.* } ference; dis-
DISCRIM'INOUS. } tinguished by tokens; select; separate. As an

adjective, distinguished by marks. Discriminable is distinguishable. Discriminuous is an obsolete word for critical, hazardous.

Oysters and cockles and muscles, which move not, have no *discriminate* sex.

Bacon.

Take heed of abetting any factions, or applying any publick *discriminations* in matters of religion.

King Charles.

There are three sorts of it differing in fineness from each other, and *discriminated* by the natives by three peculiar names.

Boyle.

Discriminative Providence knew before the nature and course of all things.

More's Antidote against Atheism.

There may be ways of *discriminating* the voice; as by acuteness and gravity, the several degrees of raising and falling from one tone or note to another.

Holder.

Any kind of spitting of blood imports a very *discriminous* state, unless it happens upon the gaping of a vein opened by a plethora.

Harvey.

There is a reverence to be shewed them on the account of their *discrimination* from other places, and separation for sacred uses.

Stillingfleet.

The right hand is *discriminated* from the left by a natural, necessary, and never to be confounded distinction.

South.

The only standing test and *discriminative* characteristic of any metal or mineral, must be sought for in the constituent matter of it.

Woodward.

By that prudent *discrimination* made between the offenders of different degrees, he obliges those whom he has distinguished as objects of mercy.

Addison.

DISCROWN, *v. a.* From *dis* and crown. To deprive of a crown.

Through storm and darkness yawns the rending ground,

The gulf is thick with phantoms, but the chief
Seems royal still, though with her head *discrowned*,
And pale, but lovely, with maternal grief
She clasps a babe, to whom her breast yields no relief.

Byron.

DISCUBITORY, *adj.* Lat. *discubitorius*. Fitted to the posture of leaning.

After bathing they retired to bed, and refreshed themselves with a repast; and so that custom, by degrees, changed their cubicular beds into *discubitory*.
Browne's Vulgar Errors.

DISCUMBENCY, *n. s.* Lat. *discumbens*. The act of leaning at meat, after the ancient manner. See **ACCUBATION**.

The Greeks and Romans used the custom of *discumbency* at meals, which was upon their left side; for so their right hand was free and ready for all service.
Browne's Vulgar Errors.

DISCUMBER, *v. a.* *Dis* and *cumber*. To disengage from any troublesome weight; to disengage from impediment.

His limbs *discumbered* of the clinging vest,
He binds the sacred cincture round his breast,

Pope.

DISCURE, *v. a.* Fr. *decouvrir*. To discover; to reveal.

I will, if please you, it *discure*, assay
To ease you of that ill. *Faerie Queene.*

DISCURSIVE, *adj.* } Fr. *discursif*; from
DISCURSIVELY, *adv.* } Lat. *discursus*. Moving
DISCURSORY, *adj.* } here and there; roving;
ing; desultory; as a corruption of discursive. Proceeding by gradation from premises to consequences; and thus discursive is argumentative.

Some noises help sleep; as the blowing of the wind, and the trickling of water: they move a gentle attention; and whatsoever moveth attention, without too much labour, stilleth the natural and *discursive* motion of the spirits. *Bacon.*

There is a sanctity of soul and body, of more efficacy for the receiving of divine truths, than the greatest pretences to *discursive* demonstration.

More's Divine Dialogues.

There hath been much dispute touching the knowledge of brutes, whether they have a kind of *discursive* faculty, which some call reason.

Hale's Origin of Mankind.

We have a principle within, whereby we think, and we know we think; whereby we do *discursively*, and by way of ratiocination, deduce one thing from another. *Id.*

DISCUS, *n. s.* Lat. A quoit; a heavy piece of iron thrown in the ancient sports. See **Disc.**

From Elatreus' strong arm the *discus* flies,
And sings with unmatched force along the skies.

Pope.

DISCUSS, *v. a.* } Fr. *discuter*; Span. and
DISCUSSE, *n. s.* } Port. *discutir*; Ital. and
DISCURSIVE, *adj.* } Lat. *discutere*, *dis* and *qua-*
DISCUSSION, *n. s.* } *tio*, to shake down or at-
tack by battering. To examine, or clear by dis-
quisition; to ventilate; to clear up; to disperse
matter or humors of the body.

Many arts were used to *discuss* the beginnings of new affection. *Wotton.*

Consider the threefold effect of Jupiter's trisulc,
to burn, *discuss*, and terebrate.

Browne's Vulgar Errors.

Truth cannot be found without some labour and intention of the mind, and the thoughts dwelling a considerable time upon the survey and *discussion* of each particular. *South.*

VOL. VII.

His usage was to commit the *discussing* of causes privately to certain persons learned in the laws.

Ayliffe's Parergon.

If by the liberty of the press, we understand merely the liberty of *discussing* the propriety of public measures and political opinions, let us have as much of it as you please. *Franklin.*

DISCUTIENT, *n. s.* Lat. *discutiens*. A medicine that has power to repel or drive back the matter of tumors in the blood. It sometimes means the same as carminative.

The swellings arising from these require to be treated, in their beginning, with moderate repellents and *discutiens*. *Wieman.*

DISCUTIENTS, in surgery, are such external remedies as, by their subtilty, dissolve or disperse a stagnating or coagulated fluid in any part of the body.

DISDAIN, *v. a., v. n. & n. s.* } Fr. *dédaigner*;
DISDAIN'FUL, *adj.* } Sp. *desdignar*;
DISDAIN'FULLY, *adv.* } Lat. *dedignari*;
DISDAINFULNESS, *n. s.* } (*de* privative,
and *dignor*.) To esteem unworthy. As an active verb it signifies to scorn: as a substantive, contempt; scorn; indignation united with contempt. Disdainfulness is synonymous with disdain.

Children being haughty, through *disdain* and want of nurture, do stain the nobility of their kindred.

Ecclesi.

A proud *disdainfulness* of other men.

Ascham.

His angry steede did chide his foaming bitt,
As much *disdayning* to the curb to yield:
Full jolly knight he seemed and faire did sitt,
As one for knightly giusts and fierce encounters fitt.

Spenser. Faerie Queene.

There will come a time when three words, uttered with charity and meekness, shall receive a far more blessed reward, than three thousand volumes, writt aith *disdainful* sharpness of wit. *Hooker.*

The queen is obstinate,
Stubborn to justice, apt to' accuse it,
Disdainful to be tried by't. *Shakspeare.*

Either greet him not,
Or else *disdainfully*, which shall shake him more. *Id.*

Can I forget, when they in prison placing her,
With swelling heart, in spite and due *disdainfulness*,
She lay for dead, till I helped with unlacing her.

Sidney.

The *disdainful* soul came rushing through the wound. *Dryden.*

It is not to insult and domineer, to look *disdainfully*, and revile imperiously, that procures from any one *South.*

Tell him, Cato
Disdains a life which he has power to offer. *Addison.*

But against you, ye Greeks, ye coward train,
Gods? how my soul is moved with just *disdain*!
Pope's Odyssey.

But no one ever heard her speak or shrick,
Although her paroxysm drew towards its close:
Hers was a phrensy which *disdained* to rave,
Even when they snote her, in the hope to save.

Byron.

1

DISDIACLASTIC CRYSTAL, in natural history, a name given by Bartholine and some others to the pellucid fossil substance, more usually called, from the place whence it was first brought, Iceland crystal; though properly it is no crystal at all, but a fine pellucid spar, called by Dr. Hill from its shape parallelopipedum.

DISEASE' *v. a. & n. s.* } *Dis* and *ease*. To
DISEAS'EDNESS, *n. s.* } afflict with illness;
 to torment with pain or sorrow; to make morbid;
 infect: as a substantive, the malady, sickness,
 &c., endured.

In the world ghe schuler haue *diese*, but triste ghe,
 I haue ouercome the world. *Wiclif. Jon xvi.*

And *Asa*, in the thirty and ninth year of his reign,
 was *diseased* in his feet, and his *disease* was exceeding
 great; and in his *disease* he sought not to the Lord,
 but to the physicians. *Chron.*

Full of *diseases* was his carcase blew,
 And a dry dropsie through his flesh did flow,
 Which by misdiet daily greater grew.
Spenser. Faerie Queene.

We are all *diseased*,
 And with our surfeiting and wanton hours
 Have brought ourselves into a burning fever.
Shakespeare.

Food improperly taken, not only produces original
diseases, but affords those that are already engendered
 both matter and sustenance; so that, let the father of
disease be what it may, intemperance is certainly its
 mother. *Burton.*

A lazar-house it seemed, wherein were laid
 Numbers of all *diseased*, all maladies
 Of ghastly spasm, or racking torture. *Milton.*
 Authority is a *disease* and cure,
 Which men can neither want nor well endure.
Butler.

We cannot be too jealous, we cannot suspect our-
 selves too much to labour under the *disease* of pride,
 which cleaves the closer to us by our belief or confi-
 dence that we are quite without it. *Clarendon.*

Though great light be insufferable to our eyes, yet
 the highest degree of darkness does not at all *disease*
 them. *Locke.*

This is a restoration to some former state; not that
 state of indigency and *diseasedness*. *Burnet's Theory.*

Then wasteful forth
 Walks the dire power of pestilent *disease*.
Thomson's Summer.

But he was phrenzied,—wherefore, who may know?
 Since cause might be which skill could never find;
 But he was phrenzied by *disease* or woe,
 To that worst pitch of all, which wears a reasoning
 show. *Byron.*

DISEASE has been variously defined by physi-
 cians, almost every founder of a new system
 having given a definition of disease, differing
 in some respects from his predecessors. See
MEDICINE and **NOSOLOGY**. Of all animals, man
 is subject to the most diseases; and of men, the
 studious and speculative are most exposed to
 them. Other animals have their diseases; but
 they are in small number, because they live
 more according to nature: nor are plants with-
 out them; though their known maladies are few.
 The ancient Hebrews, who were versed in the
 study of natural philosophy, and not much ac-
 customed to recur to physical causes, and con-

sult physicians, when they were sick, imputed
 their diseases generally to evil spirits, the exe-
 cutiouners of divine vengeance.

DISEASES OF DOGS. See **DOG** and **HYDRO-
 PHOBIA**.

DISEASES OF HORSES. SEE **FARRIERY**.

DISEDG'ED, *adj.* *Dis* and *edge*. Blunted;
 obtunded; dulled

I grieve myself
 To think, when thou shalt be *disedged* by her
 Whom now thou tirest on, how thy memory
 Will then be panged by me.

Shakespeare. Cymbeline.

DISEMBARK', *v. a. & v. n.* *Dis* and *em-
 bark*. To carry to land; to go on land.

I must unto the road, to *diseimbark*

Some necessaries.

Shakespeare. Two Gentlemen of Verona.

There *diseimbarking* on the green sea-side,
 We land our cattle, and the spoil divide.

Pope's Odyssey.

DISEMBITTER, *v. a.* *Dis* and *embitter*.
 To sweeten; to free from bitterness; to clear
 from acrimony: an unusual word.

Encourage such innocent amusements as may *dis-
 embitter* the minds of men, and make them mutually
 rejoice in the same agreeable satisfactions.

Addison's Freeholder.

DISEMBOD'IED, *adj.* *Dis* and *embodied*.
 Divested of the body; discharged from military
 service.

Disembodied spirits are generally creatures of the
 imagination, and of old wondering wit. *Thomas.*

DISEMBOGUE', *v. a. & v. n.* Old Fr. *dise-
 moucher*.—*Skinner*. To pour out at the mouth or
 a river; to vent; to gain vent; flow.

Rivers

In ample oceans *disembogued*, or lost.

Dryden. Ovid.

By eminences placed up and down the globe, the
 rivers make innumerable turnings and windings, and
 at last *disembogue* in several mouths into the sea.

Chryme.

Rolling down, the steep Timavus raves,
 And through nine channels *disembogues* his waves.

Addison.

DISEMBOS'OMED, *part. adj.* *Dis* and *em-
 bosom*. Taken from the bosom.

He —

Who, *disembosomed* from the Father, bows
 The heaven of heavens to kiss the distant earth.

Young.

DISEMBOW'ELLED, *part. adj.* *Dis* and
embowel. Taken from out the bowels.

So her *disembowelled* web

Arachne in a hall or kitchen spreads,
 Obvious to vagrant flies.

Philips.

DISEMBROIL', *v. a.* Fr. *debrouiller*. To
 disentangle; to free from perplexity; to reduce
 from confusion.

Then earth from air, and seas from earth were
 driven,

And grosser air sunk from ethereal heaven;
 Thus *disembroiled*, they take their proper place.

Dryden.

The system of his politicks is *disembroiled*, and
 cleared of all those incoherences and independent
 matters that are woven into this motley piece.

Addison's Whig Examiner.

DISENABLE, *v. a.* *Dis* and *enable*. To
 deprive of power; to disable; to sink into
 weakness; to weaken.

Now age has overtaken me ; and want, a more insufferable evil, through the change of the times, has wholly *disenabled* me. *Dryden.*

DISENCHANT' *v. a.* *Dis* and *enchant*. To free from the force of an enchantment ; to deliver from the power of charms or spells.

Muse, stoop thy *disenchanted* wing to truth.

Alas ! let your own brain *disenchant* you. *Sidney.*

Haste to thy work ; a noble stroke or two
Ends all the charms, and *disenchants* the grove.

Dryden.

DISENCUMBER, *v. a.* } *Dis* and *encum-*
DISENCUMBRANCE, *n. s.* } *ber.* To discharge from encumbrances ; free from impediment or obstruction ; disburden.

Dim night had *disencumbered* heaven. *Milton.*

It will need the actual intention, the particular stress and application of the whole soul, to *disencumber* and set it free, to scour off its rust, and remove those hindrances which would otherwise clog and check the freedom of its operations. *Sprat.*

The *disencumbered* soul
Flew off, and left behind the clouds and starry pole. *Dryden.*

Dreams look like the amusements of the soul, when she is *disencumbered* of her machine ; her sports and recreations, when she has laid her charge asleep. *Spectator.*

There are many who make a figure below what their fortune or merit entitles them to, out of mere choice, and an elegant desire of ease and *disencumbrance*. *Id.*

The church of St. Justina, designed by Palladio, is the most handsome, luminous, *disencumbered* building, in the inside, that I have ever seen.

Addison on Italy.

DISENGAGE', *v. a.* & *v. v.* } *Dis* and *en-*
DISENGAGED', *part. adj.* } *gage.* To re-
DISENGAGEDNESS, *n. s.* } lieve from duty
DISENGAGEMENT. } or obligation ;

to withdraw from duty, obligation, or engagement. Hence *disengagement*, and *disengagedness*, are applied to any state of freedom or vacancy.

When our mind's eyes are *disengaged* and free,
They clearer, farther, and distinctly see. *Denham.*

Some others, being very light, would float up and down a good while, before they could wholly *disengage* themselves and descend. *Burnet's Theory.*

Providence gives us notice, by sensible declensions, that we may *disengage* from the world by degrees. *Collier on Thought.*

In the next paragraph, I found my author pretty well *disengaged* from quotations. *Atterbury.*

The consideration that should *disengage* our fondness from worldly things, is, that they are uncertain in their foundation ; fading, transient, and corruptible in their nature. *Rogers.*

It is very hard for the mind to *disengage* itself from a subject on which it has been long employed.

Addison.

The great use of light to vegetation would appear from this theory to be by *disengaging* vital air from the water which they perspire, and thence to facilitate its union with their blood exposed beneath the thin surface of their leaves. *Darwin.*

A man purposes his schemes of life in a state of abstraction and *disengagement*, exempt from the enticements of hope, the solicitations of affection, the importunities of appetite, or the depressions of fear. *Johnson.*

DISENTANGLE, *v. a.* *Dis* and *entangle*. To unfold or loosen the parts of a thing ; to free from impediment or perplexity ; separate ; distinguish.

Though in concretions particles so entangle one another, that they cannot in a short time clear themselves, yet they do incessantly strive to *disentangle* themselves, and get away. *Boyle.*

Till they could find some expedient to explicate and *disentangle* themselves out of this labyrinth, they made no advance towards supplying their armies. *Clarendon.*

The welfare of their souls requires a better judgment than their own, either to guide them in their duty, or to *disentangle* them from a temptation. *South.*

Neither can God himself be otherwise understood by us than as a mind free and *disentangled* from all corporeal mixtures. *Stillington.*

Wherever I turned my view, there was perplexity to be *disentangled*, and confusion to be regulated.

Johnson. Preface to Dictionary.

DISENTER', *v. a.* *Dis* and *Fr. enterrer.* To unbury ; to take out of the grave.

Though the blindness of some fanatics have savaged on the bodies of the dead, and have been so injurious unto worms as to *disenter* the bodies of the deceased, yet had they therein no design upon the soul. *Brown's Vulgar Errors.*

DISENTHRAL, *v. a.* *Dis* and *enthrall*. To set free ; to restore to liberty ; to rescue from slavery.

If religion were false, bad men would set the utmost force of their reason on work to discover that falsity, and thereby *disenthrall* themselves. *South.*

But God my soul shall *disenthrall* ;
For I upon his name will call. *Sandys.*

DISENTHRONE, *v. a.* *Dis* and *enthron*. To depose from sovereignty ; to dethrone.

Either to *disenthron* the King of heaven
We war, if war be best ; or to regain
Our own right lost. *Milton.*

DISENTRANCE, *v. a.* *Dis* and *entrance*. To awaken from a trance, or deep sleep.

Ralpho, by this time *disentranced*,
Upon his bum himself advanced. *Hudibras.*

DISESPOUSE', *v. a.* *Dis* and *espouse*. To separate after faith plighted.

Such was the rage
Of Tarnus, for Lavinia *disepossessed*. *Milton.*

DISESTEEM', *v. a.* & *n. s.* } From *dis* and
DISESTIMATION, *n. s.* } *esteem.* To dis-
regard, or regard slightly : slight regard.

But if this sacred gift you *diseesteem*,
Then cruel plagues shall fall on Priam's state. *Denham.*

When any one, by miscarriage, falls into *diseesteem*, he will fall under neglect and contempt. *Locke.*

I would not be thought to *diseesteem* or dissuade the study of nature. *Id.*

Should Mars see't,
That horrid hurrier of men, or she that betters him,
Minerva, never so incensed, they could not *diseesteem*. *Chapman.*

DISFA'VOR, *v. a. & n. s.* *Dis* and favor. To discountenance; withhold, or withdraw kindness: discountenance; slight regard; unfavorable circumstance; an unfavored state.

It was verily thought, that had it not been for four great *disfavourers* of that voyage, the enterprize had succeeded. *Bacon.*

While free from sacrilege, he was at peace, as it were, with God and man; but after his sacrilege he was in *disfavour* with both. *Spelman.*

Might not those of higher rank, and nearer access to her majesty, receive her own commands, and be countenanced or *disfavoured* according as they obey? *Swift.*

DISFIG'URE, *v. a.* } *Dis* and figure. To
DISFIGURA'TION, *n. s.* } deform; to change any
DISFIGUREMENT. } thing to a worse form; to mangle.

You are but as a form in wax
By him imprinted, and within his power
To leave the figure, or *disfigure* it. *Shakspeare.*

Subject is their punishment,
Disfiguring not God's likeness, but their own.
Or, if his likeness, by themselves defaced. *Milton.*

A nose flatter, or a mouth wider, could have consisted, as well as the rest of his figure, with such a soul and such parts as made him, *disfigured* as he was, capable to be a dignitary in the church. *Locke.*

That understanding, in which, though little is written, yet nothing is blotted; that which is not *disfigured* by ill impressions, is a subject most capable of the best. *Sprat.*

Nor would his slaughtered army now have lain,
On Afric's sands, *disfigured* with their wounds,
To gorge the wolves and vultures of Numidia. *Addison's Cato.*

The *disfigurement* that travel or sickness has bestowed upon him, is not thought great by the lady of the isle. *Suckling.*

Our foot half sunk in hillocks green and soft,
Raised by the mole, the miner of the soil.
He, not unlike the great ones of mankind,
Disfigures earth. *Cowper.*

DISFOREST, *v. a.* *Dis* and forest. To reduce land from the privileges of a forest to the state of common land.

DISFRANCHISE, *v. a.* } *Dis* and fran-
DISFRANCHISEMENT, *n. s.* } chise. To deprive of privileges or immunities.

DISFURNISH, *v. a.* *Dis* and furni To deprive; to unfurnish; to strip.

My riches are these poor habiliments,
Of which if you should here *disfurnish* me,
You take the sum and substance that I have. *Shakspeare.*

He durst not *disfurnish* that country either of so great a commander, or of the wonted garrisons. *Knolles's History.*

DISGARNISH, *v. a.* *Dis* and garnish. To strip of ornaments; to take guns from a fortress.
DISGLORIFY, *v. a.* *Dis* and glorify. To deprive of glory; treat with indignity.

So Dagon shall be magnified, and God,
Besides whom is no god, compared with idols,
Disglorified, blasphemed, and had in scorn. *Milton.*

DISGORGE, *v. a.* *Fr. degorger*, from gorge the throat. To discharge by the mouth; vomit: pour out violently.

So, so, thou common dog, didst thou *disgorge*
Thy glutton bosom of the royal Richard?
And now thou wouldst eat thy dead vomit up. *Shakspeare.*

The deep-drawing barks do there *disgorge*
Their warlike fraughtage. *Id.*

They move along the banks
Of four infernal rivers that *disgorge*
Into the burning lake their baleful streams. *Milton.*

Countries much annoyed with earthquakes have volcanoes; and these are constantly all in flames, whenever any earthquake happens; they *disgorging* that fire which was the cause of the disaster. *Derham.*

From the distant shore they loudly laugh,
To see his heaving breast *disgorge* the briny draught. *Dryden.*

DISGRACE, *v. a. & n. s.* } *Fr. disgrace.*
DISGRA'CEE, } To bring re-
DISGRACE'FUL, *adj.* } proach or dis-
DISGRACE'FULLY, *adv.* } honor upon; to
DISGRACE'FULNESS, } bring to shame,
DISGRA'CIOUS. } or disfavor. *Dis-*
graceful is, shameful; dishonorable: *disgracious*, unpleasing.

We may not so in any one special kind admire her, that we *disgrace* her in any other; but let all her ways be according unto their place and degree adored. *Hooker.*

Like a dull actor, now
I have forgot my part, and I am out
Even to a full *disgrace*. *Shakspeare.*

I do suspect I have done some offence,
That seems *disgracious* in the city's eye. *Id.*
The senate have cast you forth
Disgracefully, to be the common tale
Of the whole city. *Ben Jonson's Catiline.*

Masters must correct their servants with gentleness, prudence, and mercy; not with upbraiding and *disgraceful* language, but with such only as may express and reprove the fault, and amend the person. *Taylor's Rule of Living Holy.*

And he whose affluence disdained a place,
Bribed by a title, makes it a *disgrace*. *Browne.*

To such bondage he was for so many courses tied
by her, whose *disgraces* to him were graced by her excellence. *Sudney.*

And is it not a foul *disgrace*,
To lose the boltsprit of thy face? *Baynard.*

Men's passions will carry them far in misrepresenting an opinion which they have a mind to *disgrace*. *Burnet.*

I have given good advice to those infamous *disgracers* of the sex and calling. *Swift.*

To retire behind their chariots, was as little *disgraceful* then, as it is now to alight from one's horse in battle. *Pope.*

Grant me, kind heaven, to find some happier place
Where honesty and sense are no *disgrace*. *Dr. Johnson's Poem.*

DISGUISE, *v. a. & n. s.* } *Fr. deguisci*
DISGUI'SER, *n. s.* } *dis* and guise. To
DISGUISEMENT. } conceal by an u-
usual guise, or dress: the dress worn in disguise
disguiser, he who wears it.

How might we *disguise* him?

Alas! I know not: there is no woman's gown big enough for him. *Shaksp. Merry Wives of Windsor.*

We see we've burnt our cheeks; and mine own tongue

Splits what it speaks: the wild *disguise* hath almost Antick us. *Id. Antony and Cleopatra.*

Death's a great *disguiser*. *Shakspere.*

The marquis thought best to dismask his heard, and told him, that he was going covertly to take a secret view of the forwardness of his majesty's fleet: this did somewhat handsomely heal the *disguisement*

Wotton.

Disguised he came; but those his children dear Their parent soon discerned through his *disguise*.

Milton.

Under that *disguisement* I should find opportunity to reveal myself to the owner of my heart. *Sidney.*

Since I in Arcite cannot Arcite find,

The world may search in vain with all their eyes, But never penetrate through this *disguise*.

Dryden's Fables.

I hope he is grown more disengaged from his interest on his own affairs, which is quite the reverse to you, unless you are a very dexterous *disguiser*.

Swift.

I have just left the right worshipful, and his myrmidons, about a sneaker of five gallons; the whole magistracy was pretty well *disguised* before I gave them the slip. *Id.*

They generally act in a *disguise* themselves, and therefore mistake all outward show and appearances for hypocrisy in others. *Addison.*

Hence guilty joys, distaste, surmises, False oaths, false tears, deceits, *disguises*. *Pope.*

This discovers ourselves to us; pierces into the inmost recesses of the mind; strips off every *disguise*; lays open the inward part; makes a strict scrutiny into the very soul and spirit. *Mason.*

And is it thus Demetrius meets his friend, Hid in the mean *disguise* of Turkish robes?

Johnson. Irene.

My temper is naturally open and it ought, assuredly, to be without *disguise* to a man whom I wish no longer to look upon as an antagonist, but a friend.

Bp. Watson.

DISGUST, *v. a. & n. s.* } Fr. *degouter*; Lat. DISGUST-FUL, *adj.* } *degrusto*. To raise aversion in the stomach: hence, to cause distaste, or dislike generally. Disgustful is nauseous.

Pleasure is no rule of good; since, when we follow pleasure, merely, we are *disgusted*, and change from one sort to another; condemning that at one time, which at another we earnestly approve.

Shaftesbury.

The manner of doing is of more consequence than the thing done, and upon that depends the satisfaction or *disgust* wherewith it is received. *Locke.*

If a man were *disgusted* at marriage, he would never recommend it to his friend. *Atterbury.*

What *disgusts* me from having to do with answer-jobbers is, that they have no conscience. *Swift.*

I have finished the most *disgustful* task that ever I undertook. *Id.*

Those unenlarged souls are *disgusted* with the wonders which the microscope has discovered. *Watts.*

Thence dark *disgust* and hatred, winding wiles, Coward deceit, and ruffian violence. *Thomson.*

Paltry affectation, strained allusions, and *disgusting* fiery, are easily attained by those who chuse to wear them. *Goldsmith.*

DISH, *n. s. & v. a.*

DISH-CLOUT, *n. s.*

DI'SHING, *part. adj.*

DISH-WASHER.

dish; Erse. *dysc*; Wel. *dysgel*; Teut. *tisch*, from Gr. *δίσκος*; Lat. *discus*, (ἀ δίσκος, to hurl) a round plate of iron, or other metal, hurled in the games. See DISCUS. A broad vessel used for setting food on a table, or to contain liquids: hence the food contained in a dish, and a measure of quantity; and, as a verb, to place in a dish, or dishes; to serve up. Dish-clout, the useful cloth for cleaning dishes. Dishing, of a hollow, dish-like shape. Dish-washer, the name of a bird; mergus.

And siehe before warnid of hir modir seide give thou to me heere the head of Jon Baptist in a *diche*.

Wiclif. Matt. 14.

The earth's face is but a table; there are set Plants, cattle, men, *dishes*, for death to eat.

Donne.

Let 's kill him boldly, but not wrathfully; Let 's carve him as a *dish* fit for the gods, Not hew him as a carcass fit for hounds.

Shakspere.

For conspiracy,

I know not how it tastes, though it be *dished*

For me to try.

Id.

A *dish-clout* of Jaquenetta's he wears next his heart for a favor.

Id.

They measure block-tin by the *dish*, which containeth a gallon.

Carew.

Who would rob a hermit of his weeds,

His few books, or his beads, or maple *dish*;

Or do his grey hairs any violence? *Milton.*

Many people would, with reason, prefer the griping of an hungry belly, to those *dishes* which are a feast to others.

Locke.

A ladle for our silver *dish*,

Is what I want, is what I wish.

Prior.

Send them up to their masters with a *dish-clout* pinned at their tails. *Swift's Directions to the Cook.*

For the form of the wheels, some make them more *dishing*, as they call it, than others; that is, more concave, by setting off the spokes and felloes more outwardly.

Mortimer.

'Tis not the meat, but 'tis the appetite,

Makes eating a delight;

And if I like one *dish*

More than another, that a pheasant is. *Suckling.*

The same care and toil that raise a *dish* of peas at Christmas, would give bread to a whole family during six months.

Hume.

Suppose the ancient luxury of a *dish* of peacocks' brains were to be revived, how many carcasses would be left to the poor at a cheap rate! and as to the rout that is made about people who are ruined by extravagance, it is no matter to the nation that some individuals suffer.

Johnson.

DISHABILLÉ, *n. s. & adj.* Fr. *deshabillé*. Undress; loose, or negligently dressed.

Queens are not to be too negligently dressed or *dishabillé*.

Dryden's Dufresnoy.

A woman, who would preserve a lover's respect to her person, will be careful of her appearance before him when in *dishabillé*.

Clarissa.

DISHABIT, *v. a.* To throw out of place; to drive from their habitation.

But for our approach those sleeping stones
By the compulsion of their ordinance,

By this time from their fixed beds of lime
Had been *dishabited*, and wide havock made.
Shakespeare. King Lear.

DISHARMONY, *n. s.* *Dis* and harmony.
Contrariety to harmony.

DISHEARTEN, *v. a.* *Dis* and hearten. To discourage; to deject; to terrify; to depress.

To *dishearten* with fearful sentences, as though salvation could hardly be hoped for, is not so consonant with Christian charity.
Hooker.

Be not *disheartened* then, nor cloud those looks
That wont be more cheerful and serene.
Milton.

Yet neither thus *disheartened* nor dismayed,
The time prepared I waited.
Id.

Shortly, some harsh and unpleasing answer so *disheartened* me, that I resolved to embrace the first opportunity of my remove.

Bp. Hall's Account of himself.

It is a consideration that might *dishcarten* those who are engaged against the common adversaries, that they promise themselves as much from the folly of enemies, as from the power of their friends.

Stillfleet.

Men cannot say, that the greatness of an evil and danger is an encouragement to men to run upon it; and that the greatness of any good and happiness ought in reason to *dishcarten* men from the pursuit of it.
Tillotson.

A true christian fervour is more than the alliances of our potent friends, or even the fears of our *disheartened* enemies.
Atterbury.

DISHERIT, *v. a.* } See DISINHERIT.
DISHER'ISON, *n. s.* }

DISHEVEL, *v. a.* *Fr. decheveler.* To spread the hair disorderly; to throw the hair of a woman negligently about her head.

A gentle lady all alone,
With garments rent and hair *disherelled*,
Wringing her hands, and making piteous moan.
Spenser.

A troop of Trojans mixed with these appear,
And mourning matrons with *disherelled* hair.
Dryden's Æneid.

You this morn beheld his ardent eyes,
Saw his arm locked in her *disherelled* hair. *Smith.*
Headlong he rushes through the affrighted air
With limbs distorted, and *disherelled* hair,
Whirls round and round, the flying crowd alarms,
And death receives him in his sable arms!
Darwin.

Had you touched a hair
Of those *disherelled* locks, I would have thinned
Your ranks more than the enemy.
Byron.

DISHON'EST, *adj.* } *Dis* and honest.
DISHON'ESTLY, *adv.* } Void of probity: void of faith; faithless; wicked; fraudulent.

A wise daughter shall bring an inheritance to her husband; but she that liveth *dishonestly* is her father's heaviness.
Ecc. xxii. 4.

Mrs. Ford, the honest woman, the modest wife, the virtuous creature, that hath the jealous fool to her husband! I suspect without cause, mistress, do I?—Heaven be my witness you do, if you suspect me in any *dishonesty*.
Shakspeare.

I protest he had the chain of me,
Tho' most *dishonestly* he doth deny it. *Id.*

Dishonest with lopped arms the youth appears,
Spoiled of his nose, and shortened of his ears.
Dryden.

He lays it down as a principle, that right and wrong, honest and *dishonest*, are defined only by laws, and not by nature.
Locke.

Justice then was neither blind to discern, nor lame to execute. It was not subject to be imposed upon by a deluded fancy, nor yet to be bribed by a glozing appetite, for an utile or jucundum to turn the balance to a false or *dishonest* sentence.
South.

Their fortune depends upon their credit, and a stain of open public *dishonesty* must be to their disadvantage.
Swift.

She saw her sons with purple death expire,
Her sacred domes involved in rolling fire;
A dreadful series of intestine wars,
Inglorious triumphs, and *dishonest* scars.
Pope.

DISHON'OR, *v. a. & n. s.* } *Dis* and ho-
DISHON'ORER. } nor. To disgrace; to bring shame upon; to blast with infamy: a dishonorer is he who treats another with indignity.

He that is honoured in poverty, how much more in riches! and he that is *dishonourable* in riches, how much more in poverty!
Eccles. x. 31.

Let not my jealousies be your *dishonours*,
But mine own safeties. *Shakspeare. Macbeth.*

It is no vicious blot, murder, or foulness,
No unchaste action, or *dishonoured* step,
That hath deprived me of your grace and favour.
Id.

Preaching how meritorious with the gods
It would be, to ensnare an irreligious
Dishonourer of Dagon. *Milton.*

Take him for your husband and your lord;
'Tis no *dishonour* to confer your grace
On one descended from a royal race.
Dryden's Fables.

He was pleased to own Lazarus even in the *dishonours* of the grave, and vouchsafed him, in that despicable condition, the glorious title of his friend.
Boyle's Seraphick Love.

To pay for, personate, and keep in a man's hands a greater estate than he really has, is of all others, the most unpardonable vanity, and must in the end reduce the man who is guilty of it to *dishonour*.
Steele.

It is a mighty shame and *dishonour* to employ excellent faculties and abundance of wit, to humour and to please men in their vices and follies.
Sir. R. Blackmore.

But what is most *dishonourable* of all is, for a man at once to discover a great genius and an ungoverned mind.
Mason.

DOGE. Would'st thou repeat them?
Would'st thou repeat them—thou, a Faliero,
Harp on the deep *dishonour* of our house,
Dishonoured in its chief—that chief the prince
Of Venice, first of cities? To the sentence.
Byron.

DISHORN', *v. a.* *Dis* and horn. To strip of horns.

We'll *dishorn* the spirit,
And mock him home to Windsor.
Shakspeare.

DISHU'MOR, *n. s.* *Dis* and humor. Peevishness; ill humor; uneasy state of mind.

Speaking impatiently to servants, or any thing that betrays inattention or *dishumour*, are also criminal.
Spectator.

DISIMPROVEMENT, *n. s.* *Dis* and *improvement*. Reduction from a better to a worse state; the contrary to melioration; the contrary to improvement.

The final issue of the matter would be, an utter neglect and *disimprovement* of the earth. *Norris.*

I cannot see how this kingdom is at any height of improvement, while four parts in five of the plantations, for thirty years past, have been real *disimprovements*. *Swift.*

DISINCARCERATE, *v. a.* *Dis* and *incarcerate*. To set at liberty; to free from prison.

The arsenical bodies being now coagulated, and kindled into flaming atoms, require dry and warm air, to open the earth for to *disincarcerate* the same venene bodies. *Harvey.*

DISINCLINE, *v. a.* } *Dis* and *incline*.

DISINCLINATION, *n. s.* } To produce dislike to; to make disaffected; to alienate affection from. Want of affection or alienation.

They were careful to keep up the fears and apprehensions in the people of dangers and designs, and to *disincline* them from any reverence or affection to the queen, whom they begun every day more implacably to hate, and consequently to disoblige. *Clarendon.*

Disappointment gave him a *disinclination* to the fair sex, for whom he does not express all the respect possible. *Arbuthnot and Pope.*

What are those duties which we read or hear of from the word of God, to which we find ourselves most *disinclined*? This, in all likelihood, will help us to detect some of our peculiar sins of omission. *Mason.*

DISINGENUITY, *n. s.* From *disingenuous*. Meanness of artifice; unfairness.

They contract a habit of ill-nature and *disingenuity* necessary to their affairs, and the temper of those upon whom they are to work. *Clarendon.*

DISINGENUOUS, *adj.* } *Dis* and *ingenu-*
DISINGENUOUSLY, *adv.* } ous. Unfair; mean-
DISINGENUOUSNESS, *n. s.* } ly artful; subtle;
sly; illiberal.

'Tis *disingenuous* to accuse our age

Of idleness, who all our powers engage

In the same studies, the same course to hold,

Nor think our reason for new arts too old. *Denham.*

It was a *disingenuous* way of proceeding, to oppose a judgment of charity concerning their church, to a judgment of reason concerning the nature of actions. *Stillingfleet.*

There cannot be any thing so *disingenuous* and misbecoming any rational creature, as not to yield to plain reason, and the conviction of clear arguments. *Locke.*

I might press them with the unreasonableness, the *disingenuousness* of embracing a profession to which their own hearts have an inward reluctance. *Government of the Tongue.*

DISINHHERIT, *v. a.* } All from *dis* and *in-*
DISINHHERISON, *n. s.* } herit. To cut off he-
DISINHHERIT, *v. a.* } reditary succession or
DISINHHERISON, *n. s.* } inheritance. The last two words are only the older mode of spelling.

He tries to restore to their rightful heritage such good old English words as have been long time out of use, almost *disinherited*. *Spectator.*

If he stood upon his own title of the house of Lancaster, inherent in his person, he knew it was a title condemned by parliament, and generally prejudged in the common opinion of the realm, that it tended directly to the *disinherison* of the line of York. *Bacon's Henry VII.*

The chief minister of the revenue was obliged to prevent, and even oppose, such *disinherison*. *Clarendon.*

In respect of the effects and evil consequences, the adultery of the woman is worse, as bringing bastardy into a family, and *disinherisons* or great injuries to the lawful children. *Taylor.*

Is it then just with us to *disinherit*

The unborn nephews for the father's fault? *Davies.*

Unmuffle, ye faint stars; and thou, fair moon, Stoop thy pale visage through an amber cloud, And *disinherit* chaos that reigns here In double night of darkness, and of slander. *Milton.*

Of how fair a portion Adam *disinherited* his whole posterity by one single prevarication! *South.*

Nor how the Dryads and the woodland train, *Disinherited*, ran howling o'er the plain. *Dryden's Fables.*

DISINTER', *v. a.* From *dis* and *inter*. To unbury; to take as out of the grave.

The philosopher, the saint, or the hero, the wise, the good, or the great man, very often lie hid and concealed in a plebeian, which a proper education might have *disinterred*. *Addison.*

DISINTERESTED, *adj.* *Dis* and *Fr. interessé*. Written *disinterested* generally, and more properly. Without regard to private advantage; not biassed by particular views; impartial.

Not that tradition's parts are useless here, When general, old, *disinterested*, and clear. *Dryden.*

DISINTERESSMENT, *n. s.* *Dis* and *Fr. interessment*. Disregard to private advantage; *disinterest*; *disinterestedness*. This word is merely a Gallicism.

He has managed some of the charges of the kingdom with known ability, and laid them down with entire *disinterestment*. *Prior's Postscript.*

DISINTEREST, *n. s.* } *Dis* and *interest*.
DISINTERESTED, *adj.* } What is contrary to
DISINTERESTEDLY, *adv.* } one's interest, desire,
DISINTERESTEDNESS, *n. s.* } or prosperity; that which any one is concerned to prevent: indifference to one's own advantage.

These expressions of selfishness and *disinterestedness* have been used in a very loose and indeterminate manner. *Browne.*

They judge it the great *disinterest* to Rome. *Glanville.*

As *disinterested* as you appear to the world, no man is more in the power of that prevailing favourite passion than yourself. *Swift.*

It is usual with persons who mount the stage for the cure or information of the crowd about them, to make solemn professions of their being wholly *disinterested* in the pains they take in public good. *Steele.*

DISINTITLED, *part. adj.* *Dis* and *intitled*. Not entitled.

Yet J. S. and his little convention of four or five brothers of the tradition have clearly *disintitled* themselves to any use of these (the Scriptures, &c.) *Bp. Taylor*

DIS'INTRICATE, *v. a.* *Dis* and intricate. To disentangle.

DISJOIN, *v. a.* Fr. *disjoindre*; *dis* and join. To separate; to part from each other; to disunite; to sunder.

Never shall my harp thy praise
Forget, nor from thy father's praise *disjoin*.

Milton.

Lest different degree
Disjoin us, and I then too late renounce
Deity for thee, when fate will not permit. *Id.*

Happier for me, that all our hours assigned
Together we had lived; even not in death *disjoined*.
Dryden.

Never let us lay down our arms against France, till
we have utterly *disjoined* her from the Spanish
monarchy. *Addison.*

DISJOINT, *v. a., v., n., & part.* *Dis* and joint. To put out of joint. As a neuter verb, to fall in pieces.

Young Fontinbras,
Holding a weak supposal of our worth,
Thinking by our late dear brother's death
Our state to be *disjoint* and out of frame.
Shakespeare. Hamlet.

The constancy of your wit was not wont to bring
forth such *disjointed* speeches. *Sidney.*

Be all their ligaments at once unbound,
And their *disjointed* bones to powder ground.

Sandys.

Yet what could swords or poison, racks or flame,
But mangle and *disjoint* the brittle frame?
More fatal Henry's words: they murdered Emma's
fame. *Prior.*

I asked a gentleman the other day that is famous
for a good carver (at which acquisition he is out of
countenance, imagining it may detract from some
of his more essential qualifications) to help me to some-
thing that was near him; but he excused himself, and
blushing told me, of all things he could never carve
in his life; though it can be proved upon him that he
cuts up, *disjoints*, and uncases, with incomparable dex-
terity. *Spectator.*

Rotation must disperse in air
All things which on the rapid orb appear;
And if no power that motion should controul,
It must *disjoint* and dissipate the whole. *Blackman.*

Mouldering arches, and *disjointed* columns. *Trenc.*

Rocks reared on rocks in huge *disjointed* piles
Form the tall turrets, and the lengthened aisles;
Broad ponderous piers sustain the roof, and wide
Branch the vast rainbow ribs from side to side.

Darwin.

DISJUDICATION, *n. s.* Lat. *dijudicatio*. Judgment; determination: perhaps only mis-
taken for *dijudication*.

The disposition of the organ is of great importance
in the *dijudications* we make of colours.

Boyle on Colours.

DISJUNCT, *adj.* } Lat. *disjunctus*. Dis-
DISJUNCTION, *n. s.* } joined; separate: dis-
DISJUNCTIVE, *adj.* } union; incapable of
union.

You may

Enjoy your mistress now, from whom you see
There's no *disjunction* to be made, but by
Your ruin. *Shakespeare. Winter's Tale.*

There is a great analogy between the body natural
and politic, in which the ecclesiastical or spiritual

part justly supplies the part of the soul; and the vio-
lent separation of this from the other, does as certainly
infer death and dissolution, as the *disfunction* of the
body and the soul in the natural. *South.*

Such principles, whose atoms are of that *disjunc-
tive* nature, as not to be united in a sufficient number
to make a visible mass. *Grew.*

A *disjunctive* proposition, in logic, is when the parts
are opposed to one another by *disjunctive* particles.
The truth of *disjunctives* depends on the necessary and
immediate opposition of the parts. *Watts's Logick.*

There are such words as *disjunctive* conjunctions.

Id.

What he observes of the numbers *disjunctively* and
apart, reason suggests to be applicable to the whole
body united. *Causes of the Decay of Piety.*

DISK, *n. s.* Lat. *discus*. A quoit. The face of
the sun, or any planet, as it appears to the eye.

The *disk* of Phœbus, when he climbs on high,
Appears at first but as a blood-shot eye. *Dryden.*

The crystal of the eye, which in a fish is a ball, in
any land animal is a *disk* or bowl; being hereby fitted
for the clearer sight of the object. *Grew.*

It is to be considered, that the rays, which are
equally refrangible, do fall upon a circle answering to
the sun's *disk*. *Newton.*

In areas varied with mosaic art,
Some whirl the *disk*, and some the jav'lin dart.

Pope.

Mercury's disk

Can scarce be caught by philosophic eye,
Lost in the near effulgence. *Thomson.*

Where finds philosophy her eagle eye
With which she gazes at yon burning *disk*
Undazzled, and detects and counts his spots.

Cowper.

DISKINDNESS, *n. s.* *Dis* and kindness. Want of kindness or benevolence; injury; ma-
lignity.

This discourse is so far from doing any *diskindness*
to the cause, that it does it a real service.

Woodward.

DISLIKE, *v. a. & n. s.* } *Dis* and like. To
DISLIKEFUL, *adj.* } disapprove; to re-
gard without affection; to regard with ill will or
disgust.

He then them took, and tempering goodly well,
Their contrary *dislikes* with loved means,

Did place them all in order, and compel
To keep themselves within their sundry reigns,
Together linked with adamant chains. *Spenser.*

I think it best, by an union of manners and con-
formity of minds, to bring them to be one people, and
to put away the *dislikeful* conceit of the one and the
other. *Id. Ireland.*

What most he should *dislike*, seems pleasant to
him;

What like, offensive *Shakespeare. King Lear.*

Your *dislikes*, to whom I would be pleasing.

Do cloud my joys with danger and with sorrow.

Id.

God's grace, that principle of his new birth, gives
him continual *dislike* to sin.

Hammond's Practical Catechism.

True love to the person cannot long agree with
dislike of the religion. *Bp. Hall's Contemplations.*

This said Aletes, and a murmur rose

That shewed *dislike* among the Christian peers.

Fairfax.

Whosoever *dislikes* the digressions, or grows weary
of them, may throw them away. *Temple.*

Sorrow would have been as silent as thought, as severe as philosophy. It would have rested in inward senses, tacit *dislikes*. *South.*

The jealous man is not angry if you *dislike* another; but if you find those faults which are in his own character, you discover not only your *dislike* of another, but of himself. *Addison.*

There is a point, which whoever can touch, will never fail of pleasing a majority, so great that the *dislikers* will be forced to fall in with the herd. *Swift.*

DISLIK'EN, v. a. *Dis* and *liken*. To make unlike. Unusual.

Muffle your face,
Dismantle you; and, as you can, *disliken*
The truth of your own seeming. *Shakspeare. Winter's Tale.*

DISLIKE'NESS, n. s. *Dis* and *likeness*. Dissimilitude; not resemblance; unlikeness.

That which is not designed to represent any thing but itself, can never be capable of a wrong representation, nor mislead us from the true apprehension of any thing by its *dislikeness* to it; and such, excepting those of substances, are all our own complex ideas. *Locke.*

DISLIMB', v. a. *Dis* and *limb*. To dilaminate; to tear limb from limb.

DISLINN', v. a. *Dis* and *limn*. To unpaint; to strike out of a picture.

That which is now a horse, even with a thought
The rack *dislimns*, and makes it indistinct
As water is in water. *Shakspeare. Antony and Cleopatra.*

DISLOCATE, v. a. } *Lat. dis* and *locus*. To
DISLOCATION, n. s. } put out of the proper
place: a luxation.

Were't my fitness
To let these hands obey my boiling blood,
They're apt enough to *dislocate* and tear
Thy flesh and bones. *Shakspeare. King Lear.*

The posture of rocks, often leaning or prostrate,
shews that they had some *dislocation* from their natural site. *Burnet.*

It might go awry either within or without the upper, as often as it is forcibly pulled to it, and so cause a *dislocation*, or a strain. *Grew's Muscun.*

After some time the strata on all sides of the globe were *dislocated*, and their situation varied, being elevated in some places, and depressed in others. *Woodward.*

She neither broke nor *dislocated* any bones; but received such a contusion below the hip, as crippled her completely. *Cowper. Private Correspondence.*

DISLodge, v. a. & n. *Dis* and *lod*. To remove from a place; to go away.

The ladies have prevailed,
The Volscians are *dislodged*, and Marcus gone. *Shakspeare.*

Soon as midnight brought on the dusky hour,
Friendliest to sleep, and silence, he resolved
With all his legions to *dislodge*. *Milton.*

These senses lost, behold a new defeat,
The soul *dislodging* from another seat. *Dryden's Juvenal.*

The shell-fish which are resident in the depths live and die there, and are never *dislodged* or removed by storms, nor cast upon the shores; which the littoral fishes usually are. *Woodward.*

DISLOYAL, adj. } *Fr. desloyal, dis*
DISLOYALLY, adv. } *loyal*. Not true to allegiance; faithless; false to a sovereign; disobedient.

When that tumultuous rage and fearfull deene
Of northerne rebels ye did pacify,
And their *disloyal* powere defaced clene,
The record of enduring memory. *Spenser. Sonnets.*

The lady is *disloyal*.
—— *Disloyal!* The word is too good to paint out her wickedness. *Shakspeare.*

There shall appear such seeming truths of Hero's *disloyalty*, that jealousy shall be called assurance. *Id.*

Let the truth of that religion I profess be represented to judgment, not in the disguises of levity, schism, heresy, novelty, and *disloyalty*. *King Charles.*

Foul distrust and breach
Disloyal; on the part of man, revolt
And disobedience. *Milton.*

Disloyal town!
Speak, didst not thou
Forsake thy faith, and break thy nuptial vow?
Dryden.

DIS'MAL, adj. } *Lat. dies malus*, an evil
DIS'MALLY, adv. } day. Sorrowful; dire;
DIS'MALNESS, n. s. } horrid; melancholy; uncomfortable; unhappy; dark.

The thane of Cawder 'gan a *dismal* conflict. *Shakspeare.*

He hears
On all sides from innumerable tongues
A *dismal* universal hiss. *Milton.*
Nor yet in horrid shade or *dismal* den,
Nor nocent yet; but on the grassy herb
Fearless, unfeared, he slept. *Id.*

The *dismal* situation waste and wild,
A dungeon horrible! *Id.*
Such a variety of *dismal* accidents must have broken the spirits of any man. *Clarendon.*

On the one hand set the most glittering temptations to discord, and on the other view the *dismal* effects of it. *Decay of Piety.*

Dreadful gleams,
Dismal screams. *Pope.*

DISMAL, GREAT, or DISMAL SWAMP, a large swamp, or bog, extending from north to south nearly thirty miles, and from east to west, at a medium, about ten miles, partly in Virginia and partly in North Carolina. No less than five navigable rivers, besides creeks, rise out of it; two of which run into Virginia, viz. the south branch of Elizabeth, and the south branch of Nansemond river, and three into North Carolina, namely, North River, North West River, and Perquimons. All these hide their heads, properly speaking, in the Dismal, there being no signs of them above ground. There must, for this reason, be plentiful subterraneous stores of water here, or else the soil is so replete with this element, poured down from the high lands that surround it, that it can abundantly afford these supplies. This is, perhaps, most probable, as the ground of the swamp is a mere quagmire, trembling under the feet of those who walk upon it, and every footstep being instantly filled with water. The skirts of the swamp, towards the east, are overgrown with reeds, ten or twelve feet high, interspersed with strong bamboo briars. Among these grow

here and there a cypress or white cedar, commonly mistaken for the juniper. Towards the south end of it is a large tract of reeds, which, being constantly green and waving in the wind, is called the Green Sea. In many parts, especially on the borders, grows an ever-green shrub, very plentifully, called the gall-bush. It bears a berry which dyes a black color like the gall of an oak, whence its name. Near the middle of this swamp the trees grow much thicker, both cypress and cedar, and, being always green and loaded with very large tops, are much exposed to the wind and easily blown down. Neither beast, bird, insect, nor reptile, approach the heart of this horrible desert; perhaps deterred by the everlasting shade, occasioned by the thick shrubs and bushes, which the sun can never penetrate to warm the earth: nor indeed, on account of the noisome exhalations, do any birds fly over it. These noxious vapors infect the air all around. On the west border is a pine swamp, above a mile in breadth, great part of which is covered with water, knee-deep; the bottom, however, is firm, and the pines grow very tall. With all these disadvantages Dismal Swamp is, in many places, pleasing to the eye, though disagreeable to the other senses. It was judged impassable, till the line, dividing Virginia from North Carolina, was carried through it, in lat. 36° 28' N., in 1728, by order of king George II. Although this was undertaken in a very dry season, the men who were employed were ten whole days before they could accomplish their work. In the middle is a lake about seven miles long, called Drummond's Pond, whose waters run south into Pasquotank River, which falls into Albemarle Sound; and on the north into Elizabeth and Nansemond Rivers, which fall into James River. A navigable canal has, with immense labor, been cut through this swamp, connecting the waters of the Pasquotank, which fall into Albemarle Sound, and those of the Elizabeth, which is connected by means of James River with Chesapeake Bay. As the Dismal Swamp lies so near Norfolk, where there is a constant demand for shingles, staves, &c., for exportation; and as the best of these articles are made from the trees growing upon the swamp, it is on this account a valuable property. It chiefly belongs to two companies, the Virginia Company, who possess 100,000 acres of it, and the North Carolina Company, who possess 40,000.

DISMANTLE, *v. a.* *Dis* and *mantle*. To deprive of a dress; to strip; to denude.

This is most strange!

That she, who even but now was your best object,
Dearest and best, should in this trice of time
Commit a thing so monstrous, to *dismantle*
So many folds of favour. *Shakspeare. King Lear.*

It is not sufficient to possess our own fort, without the *dismantling* and demolishing of our enemies.

Hutchins.

His eyeballs, rooted out, are thrown to ground;
His nose *dismantled* in his mouth is found;
His jaws, cheeks, front, one undistinguished wound.

Dryden.

He that makes his prince despised and undervalued,
and beats him out of his subjects' hearts, may easily

strip him of his other garrisons, having already *dismantled* him of his honour, and seizing his reputation. *South.*

Sees dancing slaves insult his martial plains
Parts with chill stream the dim religious bower
Time-mouldered bastion, and *dismantled* tower.

Darwin.

DISMA'SK, *v. a.* *Dis* and *mask*. To divest of a mask; to uncover from concealment.

Fair ladies masked are roses in the bud,
Or angels veiled in clouds; are roses blown,
Dismasked, their damask sweet commixture shewn.

Shakspeare.

The marquis thought best to *dismask* his beard; and told him that he was going covertly. *Wotton.*

DISMAY, *v. a. & n. s.* *Sp. desmaycer*; old Fr. *DISMAY*'EDNESS, *n. s.* *Desmaycer*. Minshew after Sebastian, a Spanish etymologist, says, fancifully enough, 'from the moneth of Maye, for in that moneth the flowers of the field hang their heads and fade away;' to discourage; divert of self-possession; terribly.

He will not fail thee; fear not, neither be *dismayed*. *Deut.*

Nought could she say,
But sudden catching hold, did her *dismay*
With quaking hands, and other signs of feare.

Spenser. Faerie Queene.

Their mighty strokes their habergeons *dismayed*. *Spenser.*

Enemies would not be so troublesome to the western coasts, nor that country itself would be so often *dismayed* with alarms as they have of late years been. *Raleigh's Essays.*

All sate mute,
Pondering the danger with deep thoughts; and each
In others countenance read his own *dismay*.

Milton.

The valiantest feels inward *dismayedness* and yet the fearfullest is ashamed fully to shew it. *Sidney.*

Nothing can make him remiss in the practice of his duty; no prospect of interest can allure him, no fear of danger *dismay* him. *Atterbury.*

DISME, *n. s.* Fr. A tenth; the tenth part; tythe.

Since the first sword was drawn about this question,
Every title soul 'mongst many thousand *dismes*,
Hath been as dear as Helen.

Shakspeare. Troilus and Cressida.

The pope began to exercise his new rapines by a compliance with king Edward, in granting him two years *disme* from the clergy. *Ayliffe's Parergon.*

DISMEMBER, *v. a.* *Dis* and *member*. To divide member from member; to dilacerate; to cut in pieces.

Him booteth not resist, nor succour call,
His bleeding hart is in the venger's hand,
Who streight him rent in thousand pieces small,
And quite *dismembred* hath.

Spenser. Faerie Queene.

I am with both, each army hath a hand;
And in their rage, I having hold of both,
They whirl asunder and *dismember* me.

Shakspeare.

A state can never arrive to its period in a more deplorable crisis, than when some prince lies hovering, like a vulture, to devour or *dismember* its dying carcass. *Swift.*

Fowls obscene *dismembered* his remains,
And dogs had torn him on the naked plains.

Pope's Odyssey.

Those who contemplate only the fragments or pieces of science dispersed in short unconnected discourses, can never survey an entire body of truth, but must always view it as deformed and *dismembered*.

Watts.

DISMISS', *v. a.* } Lat. *dimissus*. To send
DISMISSION, *n. s.* } away; despatch.

He *dismissed* the assembly. *Acts*, xix. 41.

We commit thee thither,
Until his army be *dismissed* from him.

Shakespeare. Henry IV.

You must not stay here longer; your *dismission*
Is come from Cæsar. *Id. Ant. and Cleop.*

Not only thou degrad'st them, or remit'st
To life obscure, which were a fair *dismissal*;
But throw'st them lower than thou didst exalt them
high. *Milton's Agonistes.*

If our young Iulus be no more,
Dismiss our navy from your friendly shore.

Dryden's Virgil.

Dismiss, as soon as may be, all angry and wrathful
thoughts. These will but canker and corrode the
mind, and dispose it to the worst temper in the
world. *Mason.*

Puff not your cheeks, fond youths! *dismiss* the
flute!

Hushed be the harp, the soft guitar be mute:
Such signs of passion in contempt I hold:—
But there's substantial proof of love—in gold.

Sheridan.

DISMISSION OF A BILL, in chancery. If the
plaintiff does not attend on the day fixed for the
hearing, his bill is dismissed with costs. It may
be also dismissed for want of prosecution, which
is in the nature of a nonsuit at law, if he suffers
three terms to elapse without moving forwards in
the cause.

DISMORTGAGE', *v. a.* *Dis* and mortgage.
To redeem from mortgage.

He *dismortgaged* the crown demesnes, and left be-
hind a mass of gold. *Howell's Vocal Forest.*

DISMOUNT', *v. a. & v. n.* Fr. *démonter*. To
throw off a horse, or from an elevation: to
alight from a horse; to descend.

The champion stout

Atsoones *dismounted* from his courser brave,
And to the dwarfe awhile his needles speere he gave.

Spenser. Faerie Queene.

From this flying steed unreined, as once
Bellerophon, though from a lower cline,
Dismounted, on the Aleian field I fall. *Milton.*

The Turks' artillery, planted against that tower,
was by the Christian cannoners *dismounted* with shot
from the tower, and many of the gunners slain.

Knolles.

When he came within sight of that prodigious
army at Agincourt, he ordered all his cavalry to *dis-*
mount, and implore upon their knees a blessing.

Addison's Frecholder.

DISNATURALIZE, *v. a.* *Dis* and natural-
ize. To alienate; to make alien; to deprive of
the privileges of birth.

DISNATURED, *adj.* *Dis* and nature. Un-
natural; wanting natural tenderness; devoid of
natural affection. Unusual.

If she must teem,
Create her child of spleen, that it may live,
And be a thwart *disnatured* torment to her.

Shakespeare. King Lear.

DISNEY (John), an English divine and ma-
gistrate, born at Lincoln, in 1677. He received
the early part of his education at the grammar
school in his native city, after which, his father
being a dissenter, he was sent to an academy of
that persuasion. From this he removed to the
Middle Temple, where he studied the law,
though he never followed it as a profession; but
when he retired to his paternal estate, he distin-
guished himself greatly as an active magistrate,
particularly in the laudable but unpopular mea-
sures he took for the suppression of vice and im-
morality, for which he repeatedly received the
thanks of the judges on the circuits. When
about forty-two years of age he took orders in
the church, and was presented to the vicarage of
Croft, and the rectory of Kirby-Super-Baine,
in Lincolnshire. In 1722 he was preferred to
the living of St. Mary, in Nottingham, where he
died in 1730. He published, 1. Two Essays
upon the Execution of the Laws against Immo-
rality and Profaneness, 8vo. 2. *Primitive Sacra*,
the Reflections of a devout Solitude, 8vo. 3.
Flora, prefixed to a Translation of Rapin's
Poem on Gardens. 4. Remarks upon a Ser-
mon preached by Dr. Sacheverell. 5. A View
of ancient Laws against Immorality and Profane-
ness.

DISOBEY', *v. a.* } *Dis* and obey. To
DISOBEDIENCE, *n. s.* } break commands, or
DISOBEDIENT, *adj.* } transgress prohibi-
DISOBEDIENTLY, *adv.* } ons; move out of
order, or cease to follow a previous impulse.

The man of God was *disobedient* unto the word of
the Lord. *1 Kings* xiii. 26.

The offence is holy that she hath committed;
And this deceit loses the name of craft,
Of *disobedience*, or undutious title.

Shakespeare.

Disobedient children, if preserved from the gallows,
are reserved for the rack, to be tortured by their own
posterity. One complaining, that never father had
so undutiful a child as he had; Yes, said his sonne,
with less grace than truth, my grandfather had.

Fuller.

Of man's first *disobedience*, and the fruit
Of that forbidden tree, sing heavenly muse.

Milton.

Murder, adultery, or *disobedience* to parents, have
a general notion antecedently to laws. *Stillington.*

She absolutely bade him, and he durst not know
how to *disobey*.

Sidney.

He's loth to *disobey* the god's command,
Not willing to forsake this pleasant land.

Denham.

This *disobedience* of the moon will prove
The sun's bright orb does not the planets move.

Blackmore.

This *disobedience* of the fibres of age to their usual
stimuli, has generally been ascribed to repetition or
habit, as those who live near a large clock, or a mill,
or a waterfall, soon cease to attend to the perpetual
noise of it in the day, and sleep during the night un-
disturbed.

Darwin.

DISOBLIGE', *v. a.* } *Dis* and oblige.
DISOBLIGING, *part. adj.* } To offend; dis-
DISOBLIGINGLY, *adv.* } gust; give slight
DISOBLIGINGNESS, *n. s.* } offence to. All
DISOBLIGATION. } the derivatives fol-
low this sense.

Ashley had been removed from that charge, and was thereby so much *disobliged*, that he quitted the king's party.
Clarendon.

There can be no malice, and consequently no crime or *disobligation*.
L'Estrange.

Those, though in highest place, who slight and *disoblige* their friends, shall infallibly come to know the value of them, by having none when they shall most need them.
South.

If a woman suffers her lover to see she is loth to *disoblige* him, let her beware of an encroacher.
Clarissa.

My plan has given offence to some gentlemen, whom it would not be very safe to *disoblige*.
Addison's Guardian.

We love and esteem our clergy, and are apt to lay some weight upon their opinion, and would not willingly *disoblige* them.

Swift concerning the Sacramental Test.

Peremptoriness can befit no form of understanding : it renders wise men *disobliging* and troublesome, and fools ridiculous and contemptible.

Government of the Tongue.

DISORBED, *adj.* Dis and orb. Thrown out of the proper orbit.

Fly like chidden Mercury from Jove,
Or like a star *disorbed*.

Shakspeare. Troilus and Cressida.

DISORDER, *v. a. & n. s.* } *Fr. desordre.*
DISORDERED, *adj.* } Dis and order. To
DISORDEREDNESS, *n. s.* } disturb ; throw
DISORDERLY, *adv.* } out of arrange-
ment ; ruffle ; discompose.

We behaved not ourselves *disorderly* among you.
2 Thess.

By that *disorderedness* of the soldiers, a great advantage was offered unto the enemy.
Knolles.

Here do you keep a hundred knights and squires Men so *disordered*, so debauched and bold,
That this our court, infected with their manners,
Shews like a riotous inn. *Shakspeare. King Lear.*

Naked savages fighting *disorderly* with stones, by appointment of their commanders, may truly and absolutely be said to war.
Raleigh.

He is one that seldome takes care for old age, because ill diet and *disorder*, together with a consumption, or some worse disease, taken up in his full career, have onely chalked out his catastrophe but to a colon.
Micrologia, 1629.

Eve,
Not so repulsed, with tears that ceased not flowing,
And tresses all *disordered*, at his feet
Fell humble.
Milton.

Those obsolete laws of Henry I. were but *disorderly*, confused, and general things ; rather cases and shells of administration than institutions.
Hale.

Let him be stript, and *disordered* ; I would fain see him walk in quерpo, that the world may behold the inside of a friar.
Dryden's Span. Friar.

Pleasure and pain are only different constitutions of the mind, sometimes occasioned by *disorder* in the body, or sometimes by thoughts in the mind.
Locke.

A *disorderly* multitude contending with the body of the legislature, is like a man in a fit under the conduct of one in the fulness of his health and strength.
Addison.

From vulgar bounds with brave *disorder* part,
And snatch a grace beyond the reach of art. *Pope.*

The incursions of the Goths, and other barbarous nations, *disordered* the affairs of the Roman empire.

Arbuthnot.

Many a brave fellow, who has put his enemy to flight in the field, has been in the utmost *disorder* upon making a speech before a body of his friends at home.
Hughes.

DISORD'INATE, *adj.* } Dis and ordinate.
DISORD'INATELY, *adv.* } Not living by rules of virtue ; inordinate.

These not *disordinate*, yet causeless suffer
The punishment of dissolute days.

Milton. Agonistes.

DISO'RIENTATED, *adj.* Dis and orient.
Turned from the east ; turned from the right direction ; thrown out of the proper place.

Andrew Marvel uses the word *disoccidentated* instead of *disorientated* : ' Geneva had disoccidentated our geographer.'
Dr. A. Rees.

DISO'WN, *v. a.* Dis and own. To deny ; not to allow ; renounce.

Then they, who brother's better claim *disown*,
Expel their parents, and usurp the throne.

Dryden's Æneid.

When an author has publicly *disowned* a spurious piece, they have disputed his name with him.

Swift.

DISOR'GANIZE, *v. a.* } *Fr. desorganiser,*
DIS-ORGANIZATION, *n. s.* } *dis* and organize.
To derange a system in its parts ; subversion of system or order. A modern word altogether.

These *disorganizing* principles spread rapidly, and, had not the contagion been interrupted by the war with France, the consequences would have been far more serious to England.
Thomas.

DISPAND, *v. a.* } *Lat. dispanndo.* To dis-
DISPANSION, *n. s.* } *dis* and *pan* ; to play ; spread abroad ; the act of displaying or spreading.

DISPARAGE, *v. a.* } *Ital. dispareggiare,*
DISPARAGER, *n. s.* } from *Lat. dispar*, un-
DISPARAGEMENT, *n. s.* } *fit*, and *agere*, to do ;
Minshew. To match or compare for the worse ; to depreciate by comparison ; to treat contemptuously.

Gentle knight,

That doth against the dead his hand uprear,
His honour stains with rancour and despoight,
And great *disparagement* makes to his former might.
Spenser.

Yet doe not sdeigne to let thy name be writt
In this base poem, for thee far unfit ;
Nought is thy worth *disparaged* thereby.

Id. Sonnets.

She was much affectionate to her own kindred, which did stir great envy in the lords of the king's side, who counted her blood a *disparagement* to be mingled with the king's.
Bacon.

In a commonwealth, much *disparagement* is occasioned, when able spirits, attracted by a familiarity, are inflamed with faction.
Wolton.

It is no *disparagement* for greater persons to begin treaties of peace.
Bp. Hall's Contemplations.

Ahaz, his sottish conqueror, he drew
God's altar to *disparage* and displace,
For one of Syrian mode.

Milton's Paradise Lost.

They will defy
That which they love most tenderly ;
Quarrel with minced pies, and *disparage*
Their best and dearest friend, plum-porridge.
Hudibras.

'Tis no *disparagement* to philosophy, that it cannot
defy us. *Glanville.*

It is a hard and nice subject for a man to speak of
himself; it grates his own heart to say any thing of
disparagement, and the reader's ears to hear any thing
of praise from him. *Cowley.*

You wrongfully do require Mopsa to so great a
disparagement, as to wed her father's servant. *Sidney.*

The play was never intended for the stage; nor,
without *disparagement* to the author, could have suc-
ceeded. *Dryden.*

Reason is a weak, diminutive light, compared to re-
velation, but it ought to be no *disparagement* to a star
that it is not a sun. *South.*

His religion sat easily, naturally, and gracefully
upon him, without any of those forbidding appearances
which sometimes *disparage* the actions of men sin-
cerely pious. *Atterbury.*

DISPARATES, *n. s.* } From Lat. *disparata*.
DISPARITY, *n. s.* } Things so unlike that
they cannot be compared with each other; ine-
quality.

Between Elihu and the rest of Job's familiars, the
greatest *disparity* was but in years. *Hooker.*

Among unequals, what society
Can sort, what harmony or true delight?
Which must be mutual, in proportion due
Given and received; but in *disparity*,
The one intense, the other still remiss,
Cannot well suit with either, but soon prove
Tedious alike. *Milton.*

There was as great a *disparity* between the practical
dictates of the understanding, then and now, as there
is between empire and advice, counsel and command. *South.*

Men ought not to associate and join themselves to-
gether in the same office, under a *disparity* of condi-
tion. *Ayliffe's Parergon.*

DISPARK', *v. a.* *Dis* and *park*. To throw
open a park.

To set at large; to release from enclosure.

You have fed upon my signior's,
Disparked my parks, and felled my forest woods.
Shakespeare.

They were supposed
By narrow wits to be enclosed;
Till his free muse threw down the pale,
And did at once *dispark* them all. *Waller.*

DISPART', *v. a.* *Dis* and *part*. Fr. *depar-
tir*; Lat. *dispertior*. To divide in two; to sepa-
rate; to break; to burst; to rive.

Hard is the doubt, and difficult to deem,
When all three kinds of love together meet,
And do *dispart* the heart with power extreme,
Whether shall weigh the balance down. *Spenser.*

The rest to several places
Disparted, and between spun out the air.
Milton.

Disparted Britain mourned their doubtful sway,
And dreaded both, when neither would obey. *Prior.*

The pilgrim oft,
At dead of night, mid his oraison hears
Aghast the voice of Time, *disparting* towers,
Tumbling all precipitate down-dashed,
Rattling around, loud thunderin' to the moon.
Dyer.

DISPART, in gunnery, is the mark set upon
the muzzle ring of a piece of ordnance, so that a
sight-line, taken upon the top of the base ring,
against the touch-hole, by the mark set on or
near the muzzle, may be parallel to the axis of
the concave cylinder. The common way of
doing this is, to take the two diameters of the
base-ring, and of the place where the *dispart* is
to stand, and divide the difference between them
into two equal parts, one of which will be the
length of the *dispart*, which is set on the gun
with wax or pitch, or fastened there with a
piece of twine or marline. By means of an in-
strument it may be done with great nicety.

DISPASSION, *n. s.* } From *dis* and pas-
DISPASSIONATE, *adj.* } sion. Freedom from
DISPASSIONATED, *adj.* } mental perturbation;
exemption from passion.

Wise and *dispassionate* men thought he had been
proceeded with very justly. *Clarendon.*

What is called by the Stoicks apathy, or *dispassion*,
is called by the Scepticks indisturbance, by the Moli-
nists quietism, by common men peace of conscience.
Temple.

You have, as all *dispassionate* men may judge,
fulfilled the poet's definition of madness. *Dr. Maine.*

DISPEL', *v. a.* Lat. *dispello*. To drive by
scattering; to dissipate.

If the night
Have gathered aught of evil, or concealed,
Disperse it, as now light *dispels* the dark.
Milton.

When the spirit brings light unto our minds, it *dis-
pels* darkness; we see it, as we do that of the sun at
noon, and need not the twilight of reason to shew it.
Locke.

DISPENCE', *n. s.* - Fr. *dispençe*. Expense;
cost; charge; profusion.

It was a vault ybuilt for great *dispençe*,
With many ranges reared along the wall,
And one great chimney, whose long funnel thence
The smoke forth threw. *Fairie Queene.*

DISPEND', *v. a.* Lat. *dispendo*. To spend;
to consume; to expend.

Of their commodities they were now scarce able to
dispend the third part. *Spenser's State of Ireland.*

DISPENSE', *v. a. & n. s.* } Fr. *dispenser*;
DISPENSARY, *n. s.* } Span. *dispensar*;
DISPENSATION, } Ital. and Lat. *dis-
DISPENSATOR, } pensare*, from *dis*,
DISPENSATORY. } diversely, and

pendo, to weigh out money. To deal out; dis-
tribute by rule or measure: hence to excuse, or
suspend compliance with a rule; and to set free
from obligation. A dispensary is, strictly, a
place where medicines are weighed or dealt out; a
dispensatory a book prescribing them; dispensa-
tion, a rule of dealing between God and man;
distribution: hence, permission to do what may
have been forbidden.

So a man gesse us as mynystrie of Crist, and *dis-
penderis* of the mynysteries of God. Now it is sought
among the *dispenderis* that a man be foundun trowe.
Wiclif. i. Cor. 4.

One loving howre
For many years of sorrow can *dispençe*.
Spenser. Fairie Queene.

Hast thou not sworn allegiance unto me?
Canst thou *dispense* with heaven for such an oath?
Shakspeare.

How few kingdoms are there, wherein, by *dispensing* with oaths, absolving subjects from allegiance, and cursing, or threatening to curse, as long as their curses were regarded, the popes have not wrought innumerable mischiefs.
Raleigh.

As her majesty hath made them *dispensators* of her favour towards her people, so it behoveth them to shew themselves equal distributors of the same.
Bacon.

The description of the ointment is found in the chymical *dispensatory*.
Id. Natural History.

God delights in the ministries of his own choice, and the methods of grace, in the economy of heaven, and the *dispensations* of eternal happiness.

Taylor's Worthy Communicant.

Royal bounties

Are great and gracious, while they are *dispensed* With moderation.
Massinger.

Those now that were *dispensed*
The burden of many ages, on me light
At once by my foreknowledge.
Milton.

Then reliques, beads,
Indulgences, *dispenses*, pardons, bulls,
The sport of winds.
Id.
At length the muses stand restored again,
While you *dispense* the laws, and guide the state.
Dryden.

To thee the loved *dispensary* I resign.
Garth.

Neither are God's methods or intentions different in his *dispensations* to each private man.
Rogers.

Do thou, my soul, the destined period wait,
When God shall solve the dark decrees of fate;
His now unequal *dispensations* clear,
And make all wise and beautiful appear.
Tickell.

Our materia medica is large enough; and, to look into our *dispensatories*, one would think no disease incurable.
Baber.

A *dispensation* was obtained to enable Dr. Barrow to marry.
Ward.

I could not *dispense* with myself from making a voyage to Caprea.
Addison on Italy.

Those to whom Christ has committed the *dispensing* of his gospel.
Decay of Piety.

This perpetual circulation is constantly promoted by a *dispensation* of water promiscuously and indifferently to all parts of the earth.

Woodward's Natural History.

Those who stand before earthly princes, who are the *dispensers* of their favours, and conveyors of their will to others, challenge high honours.
Atterbury.

His peculiar doctrines are not like any thing of human contrivance. 'Never man spake like this man.' One of the first names given to that *dispensation* of things which he came to introduce, was 'the kingdom,' or the reign, 'of heaven.'
Beattie.

DISPENSARY, a kind of charitable institution, of late years very prevalent in Britain. They are designated the General Dispensary, the Universal Dispensary, the Dispensary of particular counties or districts, &c. They are supported by voluntary subscriptions, having each one or more physicians and surgeons, whose business is to attend at stated times, to prescribe for the poor; and, if necessary, to visit them at their own habitations. It is in this latter respect, that the patients of a dispensary differ from those called out-patients at an hospital. The poor are supplied gratis with medicine, and

many of these institutions also afford gratuitous assistance to lying-in women. Formerly there were three dispensaries established in London, for selling medicines to the poor at prime cost, under the direction of the College of Physicians. In China the medicines are not dispensed gratis, but money is given to the poor to purchase them. The Chinese have a stone, ten cubits high, erected in the public squares of their cities: on this stone are engraved the names of all sorts of medicines, with the price of each; and when the poor stand in need of any relief from physic, they go to the treasury, where they receive the price each medicine is rated at.

DISPENSATIONS are most generally dispensed by the pope, who claims the office *jure divino*, and has extended it to every thing. See INDULGENCES. His power to grant a dispensation for any thing contrary to the divine law, or the law of nature, has, however, been denied by the more moderate of the Romanists, who confine him to what is contrary to positive laws, or to things relating to facts, marriages, holding several benefices, &c.; and who limit him even in these things. The archbishop of Canterbury has a power, by statute, of dispensing in any cause wherein dispensations were formerly granted by the see of Rome, as well to the king as his subjects; and, during the vacancy of the archbishop's see, the guardian of the spiritualities may grant dispensations. Every bishop of common right has the power of instituting to benefices, and of dispensing in common cases, &c. A dispensation of the king makes a thing prohibited, lawful to be done by the person that has it, though a thing evil in itself will not admit of a dispensation. And where the subject has an immediate interest in an act of parliament, the king cannot dispense with it; but may, if the suit be the king's own, only for the breach of a penal law that is not to the damage of a third person. There is a dispensation by non obstante, which is where a statute tends to restrain some prerogative incident to the person of the king, as the right of pardoning, or commanding the service of the subjects for the benefit of the public, &c., each of which prerogatives is inseparable from the king, and therefore, by a clause non obstante, such statute may be dispensed with.

DISPEOPLE, *v. a.* γ Dis and people. To DISPEOPLE, *n. s.* δ depopulate; to empty of people: he who depopulates, or wastes.

The Irish, banished into the mountains, where they lived only upon white meats, seeing their lands so *dispeopled* and weakened, came down into the plains.
Spenser.

Conflagrations and great droughts, do not merely *dispeople*, but destroy.
Bacon.

His heart exalts him in the harm
Already done, to have *dispeopled* heaven.
Milton.

Nor drain I ponds the golden carp to take;
Nor trowle for pikes, *dispeoplers* of the lake.
Gay.

Kings, furious and severe,
Who claimed the skies, *dispeopled* air and floods,
The lonely lords of empty wilds and woods.
Pope.

DISPERGE, *v. a.* Lat. *dispergo*. To sprinkle; to scatter.

DISPERSE', *v. a.* } *Fr. disperser, from Lat.*
DISPERS'EDLY, *adv.* } *dispargere, dispersus ;*
DISPERSE'DNESS, *n. s.* } *à dis, diversely, and*
DISPERSE'N, } *spargo ; Gr. σπαργω,*
DISPERSION. } *to sprinkle. To scat-*
 ter ; dissipate into parts ; distribute.

And I scattered them among the heathen, and they were *dispersed* through the countries. *Exch. xxxvi. 19.*

The exquisite wits of some few, peradventure, are able, *dispersedly* here and there, to find now a word, and then a sentence, which may be more probably suspected, than easily cleared of error. *Hooker.*

Soldiers, *disperse* yourselves. *Shakespeare.*

Noah began from thence his *dispersion*. *Raleigh.*

Being a king that loved wealth, he could not endure to have trade sick, nor any obstruction to continue in the gate vein which *dispereth* that blood. *Bacon.*

Dispersed love grows weak, and fowness of objects useth to unite affection. *Jp. Hall's Contemplations.*

If the night

Have gathered aught of evil, or concealed,
Disperse it, as now light dispels the dark. *Milton.*

The torrid parts of Africk are by Piso resembled to a ribbard's skin, the distance of whose spots represent the *dispersedness* of habitations or towns in Africk.

Brerewood on Languages.

Those who are pleased with defamatory libels, so far as to approve the authors and *dispersers* of them, are as guilty as if they had composed them.

Spectator.

After so many *dispersions*, and so many divisions, two or three of *us* may yet be gathered together.

Pope.

Those minerals are either found in grains, *dispersedly intermixed* with the corpuscles of earth or sand, or also *amassed* into balls or nodules. *Woodward.*

They have built

More Babels without new *dispersion*, than
 The stammering young ones of the flood's dull ooze,
 Who failed and fled each other. *Byron.*

DISPERSION OF INFLAMMATION, in medicine and surgery, is the removing the inflammation, and restoring the inflamed part to its natural state

The **DISPERSION OF MANKIND**, in the early history of the world, was occasioned by the confusion of tongues, and took place in consequence of the overthrow of Babel at the birth of Peleg ; whence he derived his name. It appears by the account given of his ancestors, Gen. xi. 10—16, to have happened in the 101st. year after the flood, according to the Hebrew chronology, and by the Samaritan computation in the 401st. However, various difficulties have been suggested by chronologers concerning the true era of this event. Sir John Marsham and others, to reconcile the Hebrew and Egyptian chronologies, maintain a dispersion of mankind before the birth of Peleg. Others, unable to find numbers sufficient for the plantations of colonies in the space of 101 years, according to the Hebrew computation, fix the dispersion towards the end of Peleg's life, thus following the computation of the Jews. Petavius assigns the 153d year after the flood : Cumberland the 180th ; and Usher, though he generally refers it to the time of Peleg's birth, in one place assigns the 131st after the flood for this event. Mr. Shuckford supposes the dispersion to have been gradual, and to have commenced with the separation of

some companies at the birth of Peleg, and to have been completed thirty-one years after. According to the calculation of Petavius, the number of inhabitants on the earth at the birth of Peleg amounted to 32,768. Cumberland makes them 30,000. Mr. Mede states them at 7,000 men, besides women and children : and Mr. Whiston, who supposes that mankind now double themselves in 400 years, and that they doubled themselves, between the deluge and the time of David, in sixty years at a medium, when their lives were six or seven times as long as they have been since, by his computation, produces about 2,389 ; a number much too inconsiderable for the purposes of separating and forming distinct nations. This difficulty induced Mr. Whiston to reject the Hebrew, and to adopt the Samaritan chronology, as many others have done ; which, by allowing an interval of 401 years between the flood and the birth of Peleg, furnishes, by the last mentioned mode of computation, more than 240,000 persons. As to the manner of the dispersion of the posterity of Noah from the plain of Shinar, the sacred historian informs us that they were divided in their lands, every one according to his tongue, according to his family, and according to his nation. Gen. x. 5. 20. 31 : and thus, as Mr. Mede observes, they were ranged according to their nations, and every nation by its families ; so that each nation had a separate lot, and each family in every nation. The following abstract will serve to give a general idea of their respective settlements :—Japhet, Noah's eldest son, had seven sons, viz. Gomer, whose descendants inhabited those parts of Asia which lie upon the Ægean Sea and Hellespont northward, containing Phrygia, Pontus, Bithynia, and a great part of Galatia. The Galatians, according to Josephus, were called Gomerai ; and the Cimmerii, according to Herodotus, occupied this tract of country : and from these Gomerians, Cimmerii, or Celts, Mr. Camden derives our ancient Britons, who still retain the name Cymro, Cymru, or Cumbri. See BRITAIN. Magog, the second son of Japhet, was probably the father of the Scythians on the east and north-east of the Euxine Sea. Madai planted Media, though Mr. Mede assigns Macedonia to his share. Javan was the father of the Grecians about Ionia, whose country lies along the Mediterranean Sea ; the radicals of Javan and Ionia being the same, &c. To Tubal and Meshech belonged Cappadocia and the country which lies on the borders of the Euxine Sea ; and from them, migrating over the Caucasus, it is supposed the Russians and Muscovites are descended. And Tiras occupied Thrace. The sons of Shem were five ; Elam, whose country lay between the Medes and Mesopotamians, and was called by the Gentile writers Elymais ; and Josephus calls the Elamites the founders of the Persians ; Ashur, who was driven out of Shinar by Nimrod, afterwards settled in Assyria, and there built Nineveh and other cities ; Arphaxad, who gave name to the country which Ptolemy calls Arraphacitis, a province of Assyria, though Josephus makes him the father of the Chaldees, Lud, who inhabited and gave name to the country of Lydia about the river Meander, remarkable for its windings, in Asia Minor ; and Aram,

the father of the Syrians. Ham, the youngest son of Noah, had four sons, viz. Cush, whose posterity spread into the several parts of Arabia, over the borders of the land of Edom, into Arabia Felix, up to Midian and Egypt; Mizraim, the father of them who inhabited Egypt and other parts of Africa; Phut, to whom Bochart assigns the remaining part of Africa, from the lake Tritonides to the Atlantic Ocean, called Lybia; and Canaan, to whom belonged the land of Canaan, whence the Phenicians derived their origin. Dr. Bryant has advanced a new hypothesis on this subject, and supported it with his usual acuteness and learning. He maintains that the dispersion, as well as the confusion of tongues, was local, and limited to the inhabitants of the province of Babel; that the separation and distribution recorded to have taken place in the days of Peleg, Gen. x. 25, 31, 32, which was the result of Divine appointment, occasioned a general migration; and that all the families among the sons of men were concerned in it. The house of Shem, from which the Messiah was to spring, was particularly regarded in this distribution; the portion of his children was near the place of separation; they in general had Asia to their lot, as Japhet had Europe, and Ham the large continent of Africa. But the sons of Cush would not submit to the divine dispensation; they went off under the conduct of Nimrod, and seem to have been for a long time in a roving state. They, however, at last arrived at the plains of Shinar; and having ejected Ashur and his sons, seized his dominions, and laid there the foundation of a great monarchy. But afterwards, fearing lest they should be divided and scattered abroad, they built the tower of Babel as a land mark to which they might repair; and probably to answer the purposes of an idolatrous temple, or high altar, dedicated to the host of heaven. Here they were punished with the judgment of confounded speech through a failure in labial utterance, and with the dispersion recorded in Gen. x. 8, 9: in consequence of which they were scattered abroad from this city and tower, without any certain place of destination.

'Various, however,' as Dr. Kippis remarks, 'have been the opinions concerning the confusion of tongues at Babel. Some have thought that the change produced by it was of so total a nature, as to oblige men to speak in languages fundamentally different. But this is not probable, as, in that case, the whole set of their ideas, and the very organs of their speech, must have been altered. Neither is this hypothesis agreeable to experience, since most of the languages we are acquainted with have a certain degree of affinity. They either appear to be materially related, as sister languages, or show that they were originally derived from the same source.'

'Other persons therefore, with greater reason, suppose that the change was only partial, and brought about in a gradual manner. Dr. Gr. Sharpe is of opinion, that the confounding of the speech, or lip, does not relate to language, properly so called, but to a confusion of design, counsels, and purposes; so that the builders of Babel could not agree together, to carry on the undertaking they had begun.'

This last writer fairly enough observes—'The number of people at Babel before the dispersion is not known, and of the miraculous division of languages there is not one word in the Bible. In Psalm lv. 9, David says, 'Destroy, O Lord and divide their tongues, for I have seen violence and strife in the city;' where he certainly does not mean that God would make them speak new languages: for to divide their tongues is to divide their counsels, and to scatter dissension and animosity, not new-made words, amongst them. However, in Genesis xi. their language is not even said to be divided; but God says, 'Let us go down and confound their language, that they may not understand one another's speech. So the Lord scattered them abroad from thence upon the face of all the earth, and they left off to build the city. Therefore is the name of it called Babel (or confusion), because the Lord did there confound the language of all the earth.'

He thus concludes—'It is said that they (the whole earth) were together in the plain of Shinar, and that the language of all the earth was there confounded. No person is excepted. However, it is not presumed that Noah consented to the building, much less that he assisted in the work, or that he was ignorant that men were to be dispersed, and the world peopled by their dispersion, or that he did not oppose the raising an edifice to prevent their dispersion, which, from the natural increase of men and cattle, must in time have happened without a miracle. But it is apprehended, that there could be no occasion for a lofty fortress to defend the whole earth; for what enemies had the whole earth, against whom it was necessary to build a high tower? There is a like difficulty in assigning any reason for making themselves men of name or renown; for who were to esteem them men of name or of renown? Or where and when were they to be famous, before there were any human inhabitants but themselves?'

The Cushites seem afterwards to have invaded Egypt or the land of Mizraim in its infant state, seized the whole country, and held it for some ages in subjection: they extended themselves likewise to the Indies and Ganges, and still farther into China and Japan. From them the province of Cushan or Goshen in Egypt probably derived its name. Here they also obtained the appellation of 'royal shepherds;' and when they were by force driven out of the country, after having been in possession of it for 260 or 280 years, the land which they had been obliged to quit was given to the Israelites, who were also denominated shepherds, but should not be confounded with the former or the antecedent inhabitants of Goshen. See EGYPT.

DISPERSION, POINT OF, in dioptrics, the point from which refracted rays begin to diverge, where their refraction renders them divergent.

DISPIRIT, *v. a.* } Dis and spirit. To
DISPIRITEDNESS, *n. s.* } discourage; deject;
depress; intimidate; exhaust.

Certain it is, that the poor man appeared so *dispirited*, that he spoke but few words after he came upon the scaffold. *Clarendon.*

The providence of God strikes not in with them,

but dashes, and even *dispirits*, all their endeavours, and makes their designs heartless and ineffectual.

Steady to my principles, and not *dispirit* afflictions, I have overcome all difficulties.

Dryden.

Amidst all the honours that are paid him, he feels nothing in himself but a poor, weak, *dispirited* mortal, yielding to the laws of corruption.

Rogers.

He has *dispirited* himself by a debauch, and drank away his good humour.

Collier.

I cannot bring myself to believe that the King was either the first projector or the principal actor in the sorry farce of neglecting a man whom they could not dishonour, of distressing a man whom they could not *dispirit*, which has been playing at Court for near twenty-six years.

Bp. Watson.

DISPITEOUS, *adj.* *Dis* and *piteous*. Un pitying.

The Knight of the Red Crosse, when him he spide, Spurring shote with rage *dispiteous*, Gan fairly couch his speare.

Spenser. Faerie Queene.

DISPLACE, *v. a.* *Dis* and *place*. To put out of place, state, office, or trust.

You have *displaced* the mirth, broke the good meeting,

With most admired disorder.

Shakespeare.

One then may be *displaced*, and one may reign ; And want of merit render birthright vain.

Dryden.

A religion, established by God himself, should not be *displaced* by any thing, under a demonstration of that divine power that first introduced it.

South.

Whose arch or pillar meets me in the face,

Titus or Trajan's ? No—'tis that of Time :

Triumph, arch, pillar, all he doth *displace*

Scotting ; and apostolic statues climb

To crush the imperial urn, whose ashes slept sublime.

Byron.

DISPLACENCY, *n. s.* *Lat. displacentia* Incivility ; any thing displeasing.

The *displacencies* that he receives, by the consequences of his excess, far outweigh all that is grateful in it.

Decay of Pity.

DISPLANT, *v. a.* } *Dis* and *plant*. To
DISPLANTATION, *n. s.* } remove a plant ; hence to drive a people from their place of residence.

All those countries, which, lying near unto any mountains, or Irish deserts, had been planted with English, were shortly *displanted* and lost.

Spenser.

I may justly account new plantations to be the children of former kingdoms : I like a plantation in a pure soil ; that is, where people are not *displanted*.

Bacon.

The Edenites were garrisoned to resist the Assyrians, whose *displantation* Senacherib vaunted of.

Ralagh.

DISPLAY, *v. a. & n. s.* *Fr. déployer*, from *lat. dis* (privative) and *plico*, to fold. To unfold ; to exhibit, spread open to view.

His glistening armor made

A little gloomy light, much like a shade,

By which he saw the ugly monster plaine,

Halfe like a serpent horribly *displaid*.

Spenser. Faerie Queene.

You speak not like yourself, who ever yet

Have stood to charity, and *displayed* the effects

Of disposition gentle.

Shakespeare.

Our enobled understandings take the wings of the morning to visit the world above us, and have a glo-

VOL. VII.

rious *display* of the highest form of created excellencies.

Glanville.

Thou heaven's alternate beauty can'st *display*,

The blush of morning, and the milky way.

Dryden.

The works of nature, and the words of revelation, *display* truth to mankind in characters so visible, that those who are not quite blind, may read.

Locke.

It is a noble and great thing to cover the blemishes, and to excuse the failings of a friend ; to draw a curtain before his stains, and to *display* his perfections.

South.

He carves, *displays*, and cuts up to a wonder.

Spectator.

So the gay lady, with expensive care,

Borrows the pride land, of sea and air ;

Furs, pearls, and plumes, the glittering thing *displays*,

Dazzles our eyes, and easy hearts betrays.

Gay.

The storm the dark Lyecean groves *displayed*,

And first to light exposed the sacred shade.

Pope's Statius.

DISPLEASANCE, *n. s.*

DISPLEASE, *v. a. & n. s.*

DISPLEASING, *n. s.*

DISPLEASINGNESS, *n. s.*

DISPLEASURE, *v. a. & n. s.* } *Dis* and *please*.
To offend ; make
angry or sad :
as a neuter verb,
to disgust ; make
averse. Displeasingness is the quality of giving
offence ; displeasure the offence given.

God was *displeased* with this thing.

1 Chron. xxi. 7.

Cordell said, she loved him as behoved :

Whose simple answer, waiting colours fair

To paint it forth, him to *displeasure* moved.

Faerie Queene.

True repentance may be wrought in the hearts of such as fear God, and yet incur his *displeasure*, the deserved effect whereof is eternal death.

Hooker.

He should beware that he did not provoke Solomon's heavy *displeasure* against him.

Knolies.

Oft our *displeasures*, to ourselves unjust,

Destroy our friends, and after weep their dust.

Shakespeare.

When the way of pleasuring or *displeasuring* lieth by the favourite, it is impossible any other should be over great.

Bacon.

Undoubtedly he will relent, and turn

From his *displeasure*.

Milton.

What to one is a most grateful odour, to another is noxious and *displeasing* ; and it were a misery to some to lie stretched on a bed of roses.

Glan. Scopsie.

It is a mistake to think that men cannot change their *displeasingness* or indifference, that is in actions, into pleasure and desire, if they will do what is in their power.

Locke.

On me alone thy just *displeasure* lay ;

But take thy judgments from this mourning land.

Dryden.

Nothing is in itself so pernicious to communities of earned men, as the *displeasure* of their prince.

Addison's Freeholder.

DISPLODE, *v. a.* } *Lat. displodo*. To dis-

DISPLETION, *n. s.* } perse with a loud noise ;
to vent with violence : a sudden bursting forth.

Stood ranked of seraphim another row,

In posture to *displode* their second tire

Of thunde

Milton.

DISPORT, *v. n. & n. s.* *Dis* and *sport*. To play ; sport : pastime ; diversion ; amusement.

She list not hear, but her *disports* pursued ;

And ever bade him stay, till time the tide renewed.

Spenser.

X

He often, but attended with weak guard,
Comes hunting this way to *disport* himself.

Shakspeare.

His *disports* were ingenuous and manlike, whereby
he always learned somewhat.

Hayward on Edward VI.

Fresh gales and gentle airs
Whispered it to the woods, and from their wings
Flung rose, flung odours, from the spicy shrub
Disporting! *Milton.*

Loose to the winds their airy garments flew;
The glittering textures of the filmy dew
Dipt in the richest tincture of the skies,
Where light *disports* in ever mingling dyes. *Pope.*

DISPOSE, <i>v. a., v. n., & n. s.</i>	} Fr. <i>disposer</i> ; Ital. <i>disporre</i> ; Span. and Port. <i>disponer</i> ; Lat. <i>disponere</i> , from <i>dis</i> and <i>pono</i> ,
DISPOSER, <i>n. s.</i>	
DISPOSITION, <i>n.</i>	
DISPOSITIVE, <i>adj.</i>	
DISPOSITIVELY, <i>adv.</i>	
DISPOSURE, <i>n. s.</i>	

posui, to place, à Gr. *πονω*, to labour. To employ; place; order; give an impulse; taking to: to make fit; taking for; to transfer, put away, conduct: as a neuter verb, to make terms or a bargain: as a substantive, it signifies power; right or management; taking at or to; distributive: dispositive is distributive. The other substantives follow the verb, dispose, in their meaning.

The tabernacle of witnessyng was with oure fadris
in desert as god *disposide* to hem and spak to moises,
that he schulde make it aftir the fourme that he saigh.
Wiclif. Dedis. vii.

The lot is cast into the lap; but the whole *disposing*
thereof is of the Lord. *Proverbs.*

These when the knights beheld, they *gan dispose*
Themselves to court, and each a damsel chose. *Spenser.*

But if thee list unto the court to throng,
And there to haunt after the hoped prey,
Then must thou thee *dispose* another way.

Hubbert's Tale.

Touching musical harmony, whether by instrument
or voice, it being of high and low, in due proportion-
able *disposition*, such notwithstanding is the force
thereof, and so very pleasing effects it hath, in that
very part of man which is most divine, that some have
been thereby induced to think, that the soul itself by
nature is, or hath in it, harmony. *Hooker.*

As she is mine, I may *dispose* of her:
Which shall be either to this gentleman,
Or to her death. *Shakspeare.*

When she saw you did suspect
She had *disposed* with Cesar, and that your rage
Would not be purged, she sent word she was dead. *Id.*

I have suffered more for their sakes, more than the
villanous inconstancy of man's *disposition* is able to
bear. *Id.*

He carries on the stream of his *dispose*
Without observance or respect of any,
In wit peculiar. *Id. Troilus and Cressida.*

I crave fit *disposition* for my wife,
Due reference of place and exhibition,
As levels with her breeding. *Id. Othello.*

Suspensions *dispose* kings to tyranny, husbands to
jealousy, and wise men to irresolution and melancholy.
Bacon.

They must receive instructions how to *dispose* of
themselves when they come, which must be in the
nature of laws unto them. *Id. to Villiers.*

They remained in a kind of warlike *disposure*, or
perhaps little better. *Wotton.*

Whilst they murmur against the present *disposure* of
things, they do tacitly desire in them a difformity
from the primitive rule, and the idea of that mind
that formed all things best.

Browne's Vulgar Errors.

That axiom in philosophy, that the generation of
one thing is the corruption of another, although it be
substantially true, concerning the form and matter, is
also *dispositively* verified in the efficient or producer.

Id.

How sweetly doth God *dispose* of all second causes,
that, while they do their own will, they do his!

Bp. Hall. Contemplations.

Tax not divine *disposal*; wisest men
Have erred, and by bad women been deluded.

Milton.

All is best, though oft we doubt
What the' unsearchable *dispose*
Of highest wisdom brings about,
And ever best found in the close.

Milton. Agonistes.

He knew the seat of Paradise;
And, as he was *disposed*, could prove it
Below the moon, or else above it. *Hudibras.*

The memory of what they had suffered, by being
without it, easily *disposed* them to do this.

Clarendon.

I think myself obliged, whatever my private appre-
hensions may be of the success, to do my duty, and
leave events to their *disposer*. *Boyle.*

Would I had been *disposer* of thy stars,
Thou shouldst have had thy wish, and died in wars.

Pryden.

Of all your goodness leaves to our *dispose*,
Our liberty's the only gift we chuse.

Id. Indian Emperor.

Under this head of invention is placed the *disposition*
of the work, to put all things in a beautiful order and
harmony, that the whole may be of a piece.

Id. Dufresnoy, Preface.

In his *disposure* is the orb of earth,
The throne of kings, and all of human birth.

Sandys.

This may *dispose* me, perhaps, for the reception of
truth; but helps me not to it. *Locke.*

We shall get more true and real knowledge by one
rule, than by taking up principles, and thereby put-
ting our minds into the *disposals* of others. *Id.*

Disposition is when the power and ability of doing
any thing is forward, and ready upon every occasion
to break into action. *Id.*

All the reason of mankind cannot suggest any
solid ground of satisfaction, but in making that God
our friend, who is the absolute *disposer* of all things.
South.

Although the frequency of prayer and fasting may
be of no efficacy to *disposse* God to be more gracious,
yet it is of great use to *dispose* us to be more objects of
his grace. *Smalridge.*

They require more water than can be found, and
more than can be *disposed* of, if it was found. *Burnet.*

Of what you gathered, as most your own, you
have *disposed* much in works of public piety.

Spratt.

Thus, whilst she did her various power *dispose*,
The world was free from tyrants, wars, and woes.

Prior.

I have *disposed* of her to a man of business, who
will let her see, that to be well dressed, in good

humour, and chearful in her family, are the arts and sciences of female life. *Tatler.*

If mere moralists find themselves *disposed* to pride, lust, intemperance, or avarice, they do not think their morality concerned to check them. *Swift.*

I take myself to be as well informed as most men in the *dispositions* of each people towards the other. *Id.*

Refrangibility of the rays of light is their *disposition* to be refracted, or turned out of their way, in passing out of one transparent body or medium into another. *Newton.*

Are not the blessings both of this world and the next in his *disposal*? *Atterbury.*

The love we bear to our friends is generally caused by our finding the same *disposition* in them which we feel in ourselves. *Pope.*

Bleeding is to be used or omitted according to the symptoms which affect the brain; it relieves in any inflammatory *disposition* of the coat of the nerve. *Arbuthnot on Diet.*

There is a sort of masonry in poetry, wherein the pause represents the joints of a building, which ought in every line and course to have their *disposition* varied. *Shenstone.*

Under his futherly rebukes then let us be ever humble and submissive. Such now is the true filial *disposition*. *Mason.*

DISPOSSESS, *v. a.* *Dis* and *possess*. To put out of possession; to deprive; to disseize.

The children went to Gilead, and took it, and *dispossessed* the Amorite which was in it. *Numbers xxxii. 39.*

The blow from saddle forced him to fly;
Else might it needs down to his manly breast
Have cleft his head in twain, and life thence *dispossest*.
Spenser. Faerie Queene.

I will chuse
Mine heir from forth the beggars of the world,
And *dispossess* her all. *Shakespeare. Timon.*

Let us sit upon the ground, and tell
How some have been deposed, some slain in war,
Some haunted by the ghosts they *dispossest*.
Id. Richard II.

In thee I hope; thy succours I invoke,
To win the crown whence I am *dispossest*;
For like renown awaiteth on the stroke,
To cast the haughty down, or raise the' oppressed.
Fairfax.

They arrogate dominion undeserved
Over their brethren, and quite *dispossess*
Concord and law of nature from the earth.
Milton.

This inaccessible high strength, the seat
Of Deity supreme, us *dispossest*,
He trusted to have seized. *Id.*

No power shall *dispossess*
My thoughts of that expected happiness. *Denham.*

O fairest of all creatures, last and best
Of what heaven made, how art thou *dispossest*
Of all thy native glories!
Dryden. State of Innocence.

Nothing can create more trouble to a man than to endeavour to *dispossess* him of this conceit. *Tillotson.*

It will be found a work of no small difficulty to *dispossess* and throw out a vice from that heart, where long possession begins to plead prescription. *South.*

DISPRAISE, *v. a., & n. s.* } *Dis* and *praise*.
DISPRAISER, *n. s.* }
DISPRAISIBLE, *adj.* } To blame; cen-
DISPRAISINGLY, *adv.* } sure; dishonor:
another: *dispraisable* is, unworthy of commendation.

In praising Antony, I've *dispraised* Cæsar.
Shakespeare.

If I can do it
By aught that I can speak in his *dispraise*,
She shall not long continue love to him. *Id.*
Michael Cassio!

That came a wooing with you: many a time,
When I have spoke of you *dispraisingly*,
Hath ta'en your part. *Id. Othello.*

Nothing is here for tears, nothing to wail
Or knock the breasts; no weakness; no contempt.
Dispraise, or blame. *Milton's Agonistes.*

I need not raise
Trophies to thee from other men's *dispraise*.
Denham.

Looks fright not men: the general has seen Moors
With as bad faces; no *dispraise* to Bertran's.
Dryden.

The critics, while they like my wares, may *dispraise*
my writing. *Spectator.*

My faults will not be hid, and can be no *dispraise*
to me that they will not; the clearness of one's mind
is never better proved than in discovering its own
faults. *Pope.*

DISPREAD, *v. a.* } *Dis* and *spread*. To
DISPREADER, } spread different ways.
in this word, and a few others, says Johnson
truly, *dis* has the same force as in Latin com-
position, and means different ways.

As morning sun her beams *dispreaden* clear,
And in her face fair truth and mercy doth appear
Spenser.

Over him art, striving to compare
With nature, did an arbour green *dispread*,
Framed of wanton ivy, flowing fair,
Through which the fragrant celandine did spread
His pricking arms, entrail'd with roses red. *Id.*

Above, below, around, with art *dispread*,
The sure enclosure folds the genial bed.
Pope's Odyssey.

DISPROFIT, *n. s.* *Dis* and *profit*. Loss;
damage; detriment.

DISPROOF, *n. s.* *Dis* and *proof*. Confu-
tation; conviction of error or falsehood.

His remark contains the grounds of his doctrine,
and offers at somewhat towards the *disproof* of mine.
Atterbury.

I need not offer any thing farther in support of
one, or in *disproof* of the other. *Rogers.*

DISPROPERTY, *v. a.* *Dis* and *property*.
To dispossess of any property.

DISPROPORTION, *v. a. & n. s.* } *Dis* and
DISPROPORTIONABLE, *adj.* } propor-
DISPROPORTIONABLENESS, *n. s.* } tion. To
DISPROPORTIONABLY, *adv.* } apportion,
DISPROPORTIONAL, *adj.* } or join un-
DISPROPORTIONALLY, *adv.* } fitly, or
DISPROPORTIONATE, *adj.* } without
DISPROPORTIONATELY, *adv.* } symmetry:
DISPROPORTIONATENESS, *n. s.* } disproportion-

able is unsuitable in the parts, or in compa-
rison: *disproportional* and *disproportionate*
seem to express the same idea, and the adverbs
follow these adjectives in their meaning.

There sits deformity to mock my body,
To shape my legs of an unequal size.

To *disproportion* me in every part. *Shakespeare.*

Had the obliquity been greater, the earth had not been able to endure the *disproportionable* differences of season. *Browne.*

Musick craveth your acquaintance: many are of such *disproportioned* spirits, that they avoid her company. *Peachment.*

We on earth, with undiscording voice,
May rightly answer that melodious noise;
As once we did, till *disproportioned* sin
Jarred against nature's chime. *Milton.*

Perhaps, from greatness, state and pride,
Thus surprised, she may fall:
Sleep does *disproportion* hide,
And, death resembling, equals all. *Waller.*

For their strength,
The *disproportion* is so great, we cannot but
Expect a fatal consequence. *Denham's Sophy.*

We have no reason to think much to sacrifice to God our dearest interests in this world, if we consider how *disproportionably* great the reward of our sufferings shall be in another. *Tillotson.*

We are apt to set too great a value on temporal blessings, and have too low and *disproportionable* esteem of spiritual. *Smalridge.*

None of our members are crooked or distorted, or *disproportionate* to the rest, either in excess or defect. *Ray.*

It is plain that men have agreed to a *disproportionate* and unequal possession of the earth. *Locke.*

Distance and men's fears have so enlarged the truth, and so *disproportioned* every thing, that we have made the little troop of discontents a gallant army, and already measured by the evening shadow. *Sachling.*

There is no wine of so strong a body as to bear such a *disproportionable* quantity of water as sixty. *Broom.*

That we are designed for a more exalted happiness than can be derived from the things of this life, we may infer from their vast *disproportion* to the desires and capacities of our soul. *Rogers.*

DISPROVE, v. a. } *Dis* and *prove*. To
Dr'sPROVER, n. s. } confute; to convict of error or falsehood. A disprove, as well as expressing this sense, seems corruptly used by Wotton for disapprover.

This exposition they plainly *disprove*, and shew by manifest reason, that of David the words of David could not possibly be meant. *Hooker.*

This Westmoreland maintains,
And Warwick shall *disprove* it. *Shakespeare.*

The single example that our annals have yielded of two extremes, within so short time, by most of the same commendators and *disprovers*, would require no slight memorial. *Wotton.*

It is easier to affirm than to *disprove*. *Holder.*

The traitor's odious name
I first return, and then *disprove* thy claim.

Dryden's Fables.

That false supposition I advanced in order to *disprove* it, and by that means to prove the truth of my doctrine. *Atterbury.*

The cit—a common-council-man by place
Ten thousand mighty nothings in his face,
By situation as by nature great,
With nice precision parcels out the state;

Proves and disproves, affirms and then denies
Objects himself, and to himself replies.

Churchill.

DISPUNISHABLE, adj. *Dis* and *punish*—able. Without penal restraint.

No leases of any part of the said lands shall ever be made, other than leases for years not exceeding thirty-one in possession, and not in reversion or remainder, and not *dispunishable* of waste.

Swift's Last Will.

DISPURGE, v. a. *Dis* and *purge*; *dis* being used expletively. To cleanse or purge.

Thou, then, that hast *dispurged* our score,
And dying wert the death of death,
Be now, whilst on thy name we call,
Our life, our strength, our joy, our all!

Wotton.

DISPURSE, v. a. *Dis* and *purse*. To pay; to disburse. 'It is not certain that the following passage should not be written disburse,' says Johnson.

Many a pound of my own proper store,
Because I would not tax the needy commons,
Have I *dispursed* to the garrisons,
And never asked for restitution.

Shakespeare. Henry VI.

DISPUTE, v. a., v. n. & n. s. } Fr. *dispu-*
DISPUTABLE, adj. } *ter*; Spanish

DISPUTANT, n. s. & adj. } and Portug.

DISPUTATION, disputar; Ger.

DISPUTATIOUS, adj. } and Dutch

DISPUTATIVE, adj. } *disputeren*;

DISPUTELESS, adj. } Ital. and Lat.

DISPUTER, n. s. } *disputare*,

from *dis* (diversely) and *pulo*, to think. To contend for; discuss: as a neuter verb, to debate; argue; controvert: as a noun, contest; controversy; quarrel. Disputable means both liable to be contested, and fond of disputation. Disputations and disputative have a similar sense to this last. Disputer and disputant are synonymous; and disputeless means incontrovertible.

Things were *disputed* before they came to be determined: men afterwards were not to *dispute* any longer, but to obey. *Hooker.*

Dispute it like a man.

— I shall do so;

But I must also feel it as a man.

Shakespeare. Macbeth.

Now was I called to public *disputations* often, with no ill success. *Bp. Hall's Account of himself.*

Thou there wast found

Among the gravest rabbies, *disputant*

On points and questions fitting Moses' chair. *Milton.*

Well do I find, by the wise knitting together of your answer, that any *disputation* I can use is as much too weak as I unworthy. *Sidn. J.*

So *dispute* the prize,

As if you fought before Cydaria's eyes.

Dryden's Indian Emperor.

The question being about a fact, it is begging it, to bring as a proof an hypothesis which is the very thing in *dispute*. *Locke.*

Notwithstanding these learned *disputants*, it was to the unscholastick statesman that the world owed their peace, defence and liberties. *Id.*

If they are not in themselves *disputable*, why are they so much *disputed*? *South.*

Both are vehement *disputers* against the heathen idolatry. *Stillfleet.*

The atheist can pretend no obligation of conscience, why he should *dispute* against religion. *Tillotson.*

Our *disputants* put me in mind of the skuttle fish, that, when he is unable to extricate himself, blackens all the water about him till he becomes invisible. *Spectator.*

A man must be of a very *disputatious* temper, that enters into state controversies with any of the fair sex. *Addison.*

Until any point is determined to be a law, it remains *disputable* by every subject. *Swift.*

The earth is now placed so conveniently, that plants thrive and flourish in it, and animals live; this is matter of fact, and beyond all *dispute*. *Bentley.*

Did not Paul and Barnabas *dispute* with vehemence about a very little point of conveniency? *Atterbury.*

These conclusions have generally obtained, and have been acknowledged even by *disputers* themselves, till with labour they had stifled their convictions. *Rogers.*

Perhaps this practice might not so easily be perverted, as to raise a cavilling *disputative*, and sceptical temper in the minds of youth. *Watts's Improvement of the Mind.*

There is nothing displays a genius (I mean a quickness of genius) more than a *dispute*; as two diamonds encountering, contribute to each other's lustre. But, perhaps, the odds is much against the man of taste, in this particular. *Shenstone.*

As to the capacity of sitting in parliament, after all the capacities for voting, for the army, for the navy, for the professions, for civil officers, are conceded, it is a *dispute de lana caprina*, in my poor opinion, at least on the part of those who oppose it. *Burke.*

She breathes! But no, 'twas nothing, or the last faint flutter life *disputes* with death. *Egmont.*

DISQUALIFY, *v. a.* } *Dis* and qualify.
DISQUALIFICATION, *n. s.* } To make unfit; to disable by a natural or legal impediment.

Such persons as shall confer benefices on unworthy and *disqualified* persons, after a notice or correction given, shall for that turn be deprived of the power of presenting unto such benefices. *Aylmer's Paragon.*

I know no employment for which piety *disqualifies*. *Swift.*

My common illness utterly *disqualifies* me for all conversation; I mean my deafness. *Id.*

The church of England is the only body of Christians which *disqualifies* those, who are employed to preach its doctrine, from sharing in the civil power, farther than as senators. *Id. on the Sacramental Test.*

It is recorded as a sufficient *disqualification* of a wife, that, speaking of her husband, she said, God forgive him. *Spectator.*

The power of a member of parliament is uncertain and indirect; and if power rather than splendor and fame were the object, I should think that any of the principal clerks in office, (to say nothing of their superiors) several of whom are *disqualified* by law for seats in parliament, possess far more power than nine-tenths of the members of the House of Commons. *Burke.*

DISQUANTITY, *v. a.* } *Dis* and quantiv.
To lessen; to diminish. Not used.

Be entreated

Of fifty to *disquantity* your train;
And the remainders, that shall still depend,
To be such men as may besort your age. *Shakespeare.*

DISQUIET, *v. a., n. s., & adj.* } From *dis*
DISQUIETER, *n. s.* } and quiet.
DISQUIETLY, *adv.* } To disturb;
DISQUIETNESS, *n. s.* } make un-
DISQUIETUDE. } easy; harass;
fret. The substantives are synonymous.

Why art thou so vexed, O my soul? and why art thou so *disquieted* within me. *Psalms.*

All otherwise, said he, I riches rede,
And deem them root of all *disquietness*. *Faerie Queene.*

Arius won to himself both followers and great defenders; whereupon much *disquietness* ensued. *Hooker.*

I pray you, husband, be not so *disquiet*;
The meat was well if you were so content. *Shakespeare.*

Treachery, and all ruinous disorders, follow us *disquietly* to our graves. *Id. King Lear.*

If we give way to our passions, we do but gratify ourselves for the present, in order to our future *disquiet*. *Tillotson.*

Thou happy creature, art secure
From all the torments we endure;
Despair, ambition, jealousy,
Lost friends, nor love, *disquiets* thee. *Roscommon.*

Contentment produces, in some measure, all those effects which the alchymist usually ascribes to what he calls the philosopher's stone; and if it does not bring riches, it does the same thing by banishing the desire of them. If it cannot remove the *disquiets* arising from a man's mind, body, or fortune, it makes him easy under them. *Addison.*

I had rather live in Ireland than under the frequent *disquiets* of hearing you are out of order. *Swift.*

He rested *disquietly* that night; but in the morning I found him calm. *Wise man.*

DISQUISITION, *n. s.* Lat. *disquisition*. Examination; disputative enquiry.

God hath reserved many things to his own resolution, whose determinations we cannot hope from flesh; but with reverence must suspend unto that great day, whose justice shall either condemn our curiosity, or resolve our *disquisitions*. *Brown.*

The royal society had a good effect, as it turned many of the greatest geniuses of that age to the *disquisitions* of natural knowledge. *Addison's Spectator.*

'Tis indeed the proper place for this *disquisition* concerning the antediluvian earth. *Woodward's Natural History.*

The nature of animal diet may be discovered by taste, and other sensible qualities, and some general rules, without particular *disquisition* upon every kind. *Arbutnot.*

I am apprehensive that I shall not be able to find leisure for making all the *disquisitions* and experiments which would be desirable on this subject. [Swimming.] I must, therefore, content myself with a few remarks. *Franklin.*

DISRANK, *v. a.* } *Dis* and rank. To de-
grade from his rank

DISREGARD, *v. a. & n. s.* } *Dis* and re-
DISREGARDFUL, *adj.* } gard. To treat
DISREGARDFULLY, *adv.* } with slight notice or neglect; contempt.

Since we are to do good to the poor, to strangers, to enemies, those whom nature is too apt to make us

despise, *disregard*, or hate, then undoubtedly we are to do good to all. *Sprat.*

Those fasts which God hath *disregarded* hitherto, he may regard for the time to come. *Smalridge.*

Studious of good, man *disregarded* fame,
And useful knowledge was his eldest aim.

Blackmore.

DISRELISH, *v. a. & n. s.* *Dis* and *relish*.
To make, or feel a distaste: bad taste; nauseous-

Oft they assayed,
Hunger and thirst constraining; drugged as oft
With hatefullest *disrelish*, writhed their jaws
With soot and cinders filled. *Milton.*

Fruits of taste to please
True appetite, and not *disrelish* thirst
Of nectarous draughts between, from milky stream. *Id.*

Bread or tobacco may be neglected, where they are shewn not to be useful to health, because of an indifferency or *disrelish* to them. *Locke.*

The same anxiety and solicitude that embittered the pursuit, *disrelishes* the fruition itself. *Rogers.*

The world is become too busy for me: every body is so concerned for the publick, that all private enjoyments are lost, or *disrelished*. *Pope.*

DISREPUTE, *n. s.* } *Dis* and *reputation*.

DISREPUTATION, *n. s.* } Disgrace; dishonor;
want of reputation.

I will tell you what was the course in the happy days of queen Elizabeth, whom it is no *disreputation* to follow. *Baron.*

The king fearing lest that the bad success might discourage his people, and bring *disreputation* to himself, forbade any report to be made. *Hagyard.*

Gluttony is not of so great *disreputation* amongst men as drunkenness. *Taylor's Holy Living.*

How studiously did they cast a slur upon the king's person, and bring his governing principles under a *disrepute*. *South.*

DISRESPECT, *n. s.* } *Dis* and *respect*.

DISRESPECTFUL, *adj.* } Incivility; want of

DISRESPECTFULLY, *adv.* } reverence; irreverence; rudeness.

Any *disrespect* to acts of state, or to the persons of statesmen, was in no time more penal. *Clarendon.*

Aristotle writ a methodical discourse concerning these arts, chusing a certain benefit before the hazard that might accrue from the vain *disrespects* of ignorant persons. *Wilkins.*

What is more usual to warriors than impatience of bearing the least affront or *disrespect*? *Pope.*

We cannot believe our posterity will think so *disrespectfully* of their great grandmothers, as that they made themselves monstrous to appear amiable. *Addison's Spectator.*

DISROBE, *v. a.* *Dis* and *robe*. To undress; to uncover; to strip.

The holy saints of their rich vestiments
He did *disrobe*, when all men careless slept,
And spoiled the priests of their habiliments.

Spenser. Faerie Queene.

Kill the villain straight,
Disrobe him of the matchless monument,
Thy father's triumph o'er the savages.

Shakespeare. King John.

These two great peers were *divrobed* of their glory, the one by judgment, the other by violence. *Wotton.*

Who will be prevailed with to *disrobe* himself at once of all his old opinions, and pretences to know-

ledge and learning, and turn himself out stark naked in quest afresh of new notions? *Locke.*

When the trees are all bare, not a leaf to be seen,
And the meadows their beauty have lost;

When Nature's *divrobed* of her mantle of green,
And the streams are fast bound with the frost.

Brerewood.

DISRUPTION, *n. s.* Lat. *disruptio*. The act of breaking asunder: the breach made.

This secures them from *disruption*, which they would be in danger of, upon a sudden stretch or contortion. *Ray.*

The agent which effected this *disruption*, and dislocation of the strata, was seated within the earth. *Woodward.*

If raging winds invade the atmosphere,
Their force its curious texture cannot tear,
Nor makes *disruption* in the threads of air.

Blackmore.

DISSATISFY, *v. a.*

DISSATISFACTION, *n. s.*

DISSATISFACTORY, *adj.*

DISSATISFACTORINESS, *n. s.* } *Dis* and *satisfy*.
To displease; dis-
content; fail to
please: dissatis-
faction is the state of being dissatisfied: dissatis-
factory, and dissatisfactoriness, express inability
to give satisfaction.

He that changes his condition, out of impatience and *dissatisfaction*, when he has tried a new one, wishes for his old again. *L'Estrange.*

I still retain some of my notions, after your lordship's having appeared *dissatisfied* with them. *Locke.*

The ambitious man has little happiness, but is subject to much uneasiness and *dissatisfaction*. *Addison's Spectator.*

In vain we try to remedy the defects of our acquisition, by varying the object: the same *dissatisfaction* pursues us through the circle of created goods. *Rogers.*

The advantages of life will not hold out to the length of desire; and, since they are not big enough to satisfy, they should not be big enough to *dissatisfy*. *Collier.*

If we see a universal spirit of distrust and *dissatisfaction*, a rapid decay of trade, dissensions in all parts of the empire, we may pronounce, without hesitation, that the government of that country is weak, distracted, and corrupt. *Junius.*

DISSECT, *v. a.*

DISSECTION, *n. s.*

DISSECTOR, *n. s.*

Fr. *disséquer*; Lat. *dis* } *dis* and *secare*, from *dis* and *seco*,
To carve or cut. To divide
an animal body into its parts: applied also figuratively.

Let no man say, the world itself being dead,

'Tis labour lost to have discovered

The world's infirmities, since there is none
Alive to study this *dissection*. *Dimmer.*

She cut her up; but, upon the *dissection*, found her
just like other hens. *L'Estrange.*

No mask, no trick, no favour, no reserve;

Dissect your mind, examine every nerve.

Roscommon.

Critics to plays for the same end resort,
That surgeons wait on trials in a court:

For innocence condemned they've no respect,
Provided they've a body to *dissect*. *Congreve.*

Such strict enquiries into nature so true and so perfect a *dissection* of human kind, is the work of extraordinary diligence. *Graville.*

Following life in creatures we dissect,
 * We lose it in the moment we detect. Pope.

With strict propriety their care's confined
 To weigh out words, while passion halts behind :
 To syllable-dissectors they appeal,
 Allow their accent, cadence,—fools may feel.

Churchill.

I shall enter upon the *dissection* of a coquet's heart,
 and communicate that curious piece of anatomy.

Addison.

DISSEISE', *v. a.* From Fr. *dessaisir*, i. e. action; *de saisir* an action concerning seizing. To dispossess; deprive of legal right. See the following articles on DISSEISIN and DISSEISOR.

He so *disseized* of his graping gross,

The knight his thrillant spear again assayed,

In his brass-plated body to emboss,

Fuerie Queene.

If a prince should give a man, besides his ancient patrimony which his family had been *disseized* of, an additional estate, never before in the possession of his ancestors, he could not be said to re-establish lineal succession.

Locke.

DISSEISIN, in law, an unlawful dispossessing a man of his land, tenement, or other immoveable and incorporeal right. It is a species of injury by ouster, or a privation of the freehold, consisting in a wrongful putting out of him that is seised of the freehold. It differs from abatement and intrusion, which denote a wrongful entry where the possession was vacant, by its being an attack upon him who is in actual possession, and turning him out of it. The former were an ouster from a freehold in law, this is an ouster from a freehold in deed. Disseisin may be effected either in corporeal inheritances, or incorporeal. Disseisin of things corporeal, as of houses, lands, &c., must be by entry and actual dispossession of the freehold (Co. Litt. § 181); as if a man enters either by force or fraud into the house of another, and turns, or at least keeps, him or his servants out of possession. Disseisin of incorporeal hereditaments cannot be an actual dispossession; for the subject itself is neither capable of actual bodily possession, nor dispossession; but it depends on their respective natures and various kinds; being, in general, nothing more than a disturbance of the owner in the means of coming at, or enjoying them. With regard to freehold rent in particular, our ancient law-books (Finch. L. 165, 166. Litt. § 237, &c.) mention five methods of working a disseisin thereof:—1. By enclosure; where the tenant so encloseth the house or land, that the lord cannot come to distrain thereon, or demand it. 2. By forestaller, or lying in wait; when the tenant besetteth the way with force and arms, or by menaces of bodily hurt, affrights the lessor from coming. 3. By rescous; that is, either by violently retaking a distress taken, or by preventing the lord, with force and arms, from taking any at all. 4. By replevin; when the tenant replevies the distress at such time when his rent is really due. 5. By denial; which is, when the rent being lawfully demanded, is not paid. All, or any of these circumstances amount to a disseisin of rent; that is, they wrongfully put the owner out of the only possession, of which the subject matter is capa-

ble, namely, the receipt of it. But all these disseisins of hereditaments incorporeal, are only so at the election and choice of the party injured; if, for the sake of more easily trying the right he is pleased to suppose himself disseised. (Litt. § 588, 589.) Otherwise, as there can be no actual dispossession, he cannot be compulsively disseised of any incorporeal hereditament. Thus also, even in corporeal hereditaments, a man may frequently suppose himself to be disseised, when he is not so in fact, for the sake of entitling himself to the more easy and commodious remedy of an assise of novel disseisin, instead of being driven to the more tedious process of a writ of entry. (4 Burr. 110.)

The true injury of compulsive disseisin seems to be that of dispossessing the tenant, and substituting one's self to be the tenant of the land in his stead; in order to which, in the times of pure feudal tenure, the consent or connivance of the lord, who, upon every descent or alienation, personally gave, and who, therefore, alone could change the seisin or investiture, seems to have been considered as necessary. But when, in process of time, the feudal form of alienations was off, and the lord was no longer the instrument of giving actual seisin, it is probable that the lord's acceptance of rent or service, from him who had dispossessed another, might constitute a complete disseisin. Afterwards, no regard was had to the lord's concurrence, but the dispossessor himself was considered as the sole disseisor; and this wrong was then allowed to be remedied by entry only, without any form of law, or against the disseisor himself; but required a legal process against his heir or alienee. And when the remedy by assise was introduced, under Henry II., to redress such disseisins as had been committed within a few years next preceding, the facility of that remedy induced others, who were wrongfully kept out of the freehold, to feign, or allow themselves to be disseised, merely for the sake of the remedy. Blackst. Comm. book iii. ch. 10.

If a feme sole be seised of lands in fee, and is disseised, and then taketh husband; in this case the husband and wife, as in right of the wife, have right to enter, and yet the dying seised of the disseisor shall take away the entry of his wife after the death of the husband. (Co. Lit. 246.) If a person disseises me, and, during the disseisin, he or his servants cut down the timber growing upon the land, and afterwards I re-enter into the land, I shall have action of trespass against him; for the law, as to the disseisor and his servants, supposes the freehold to have been always in me; but if the disseisor be disseised by another, or if he makes a feoffment, gift in tail, lease for life or years, I shall not have an action against the second disseisor, or against those who come in by title: for all the mesne profits shall be recovered against the disseisor himself. (11 Rep. 52. Keilw. 1.)

By Magna Charta, 9 Henry III., c. 29, no man is to be disseised, or put out of his freehold, but by lawful judgment of his peers, or by the law of the land; and by stat. 32 Henry VIII. c. 33, the dying seised of any disseisor of, or in any lands, &c., having no right therein, shall not

be a descent in law, to take away an entry of a person having lawful title of entry, except the disseisor hath had peaceable possession five years, without entry or claim by the person having lawful title.

According to some writers, disseisin is of three sorts, viz. simple disseisin, committed by day, without force and arms: and disseisin by force, and fresh disseisin. Assises are called writs of disseisin, which lie against disseisors in any case: whereof some are termed little writs of disseisin, as being vicintial, that is, suable before the sheriff in the county court, because determinable by him without assise.

DISSEISOR is he who disseiseth, or puts another out of his land: as the disseisee is he who is put out. If a disseisor, after he has expelled the right owner, gains peaceable possession of the lands five years without claim, and continues in possession, so as to die seised, and the land descends to his heirs, they will have a right to the possession till the owner recovers at law; and the owner shall lose his estate for ever, if he doth not prosecute his suit within the time limited by the statute of limitations.

And if a disseisor levy a fine of the land whereof he is disseised unto a stranger, the disseisor shall keep the land for ever; for the disseisor against his own fine cannot claim, and the conusee cannot enter, and the right which the disseisor had, being extinct by the fine, the disseisor shall take advantage of it. (2 Rep. 56.) But this is to be understood, where no use is declared of the fine by the disseisee; when it shall enure to the use of the disseisor, &c. (1 Lev. 128.) A disseisor in assize, where damages are recovered against him, shall recover as much as he hath paid in rents chargeable on the lands before the disseisin. (Jenk. Cent. 189.) But if the disseisor or his feoffee sows corn on the land, the disseisee may take it before or after severance. (Dyer 31. 173. 11 Rep. 46.) Where a man hath a house in fee, &c., and locks it, and then departs; if another person comes to his house, and takes the key of the door, and says that he claims the house to himself in fee, without any entry into the house, this is a disseisin of the house. (2 Danv. Abr. 624.) If the feoffor enters on the land of the feoffee, and makes a lease for years, &c., it is a disseisin; though the intent of the parties to the feoffment was, that the feoffee should make a lease to the feoffor for life. (2 Rep. 59.) If lessee for years is ousted by his lessor, this is said to be no disseisin. (Cro. Jac. 678.) A man who enters on another's land, claiming a lease for years, who hath not such lease, is a disseisor; though if a man enters into the house of another by his suffrance, without claiming any thing, it will not be a disseisin. (9 Henry VI., 21, 31. 2 Danv. 625.) If a person enters on lands by virtue of a grant or lease, that is, void in law, he is a disseisor. (2 Danv. 630.) As the king in judgment of law can do no wrong, he cannot be a disseisor. (1 Ed. V. 3.) A disseisor is to be fined and imprisoned; and the disseisee restored to the land, &c., by stat. 20, Henry III. c. 3. Where a disseisin is disseised, it is called disseisin upon disseisin.

DISSEMBLE, *v. a. & v. n.*

DISSEMBLER, *n. s.*

DISSEMBLING, *n. s.*

DISSEMBLINGLY, *adv.*

dissimulate, from *dis* privative, and *simulare*, signifying to feign that not to be which is.' Minshew.

Ye *dissembled* in your hearts when ye sent me unto the Lord your God, saying, Pray for us.

Jeremiah xlii. 20.

Your son Lucentio

Doth love my daughter, and she loveth him,
Or both *dissemble* deeply their affections.

Shakespeare.

I that am curtailed of this fair proportion,

Cheated of feature by *dissembling* nature,
Deformed, unfinished. Id. Richard III.

Such an one, whose virtue forbiddeth him to be base and a *dissembler*, shall evermore hang under the wheel.

Raleigh.

The French king, in the business of peace, was the greater *dissembler* of the two. Bacon. Henry VII.

She answered, that her soul was God's; and touching her faith, as she could not change, so she would not *dissemble* it.

Hayward.

Man is to man all kind of beasts; a fawning dog, a roaring lion, a thieving fox, a robbing wolf, a *dissembling* crocodile, a treacherous decoy, and a rapacious vulture.

Cotley.

Thy function too will varnish o'er our arts,
And sanctify *dissembling*.

Rousse's Ambitious Stepmother.

If tho' show of any thing be good for any thing, I am sure sincerity is better; for why does any man *dissemble*, or seem to be that which he is not, but because he thinks it good to have such a quality as he pretends to?

Tillotson.

In vain on the *dissembled* mother's tongue

Had cunning art and sly persuasion hung;

And real care in vain, and native love,

In the true parents panting breast had strove.

Prior.

Men will trust no farther than they judge a person for sincerity fit to be trusted: a discovered *dissembler* can achieve nothing great and considerable.

South.

It is true indeed that we should not *dissemble* and flatter in company; but a man may be very agreeable, strictly consistent with truth and sincerity, by a prudent silence where he cannot concur, and a pleasing assent where he can.

Spectator.

They are the happiest, who *dissemble* best

Their weariness; and they the most polite

Who squander time and treasure with a smile,

Though at their own destruction. Cowper.

DISSEMINATE, *v. a.*

DISSEMINATION, *n. s.*

DISSEMINATOR.

From Lat. *disse-*

mino, *dis* diversely,

and *semino*, to sow.

To diffuse, or scatter, as seed. The act of sowing or diffusing.

All uses are made of it many times in stirring up seditions, rebellions, in *disseminating* of heresies, and infusing of prejudice.

Hammond.

Though now at the greatest distance from beginning of error, yet we are almost lost in its *dissemination*, whose ways are boundless, and confess no circumscription.

Romney.

There is a nearly uniform and constant fire of heat *disseminated* throughout the body of the earth.

Woodward.

The Jews are so disseminated through all the trading parts of the world, that they are become the instruments by which the most distant nations converse with one another, and by which mankind are knit together in a general correspondence. *Spectator.*

By firmness of mind, and freedom of speech, the gospel was disseminated at first, and must still be maintained. *Atterbury.*

DISSENT, *v. a. & n. s.* Fr. *dissenter*; It. and Lat. *dissentire*; DISSEN'SION, *n. s.* from *dis* (diversely); DISSEN'SIOUS, *adj.* and *sentio*, to perceive or discern. DISSENTA'NEOUS, *adj.* DISSENT'ER, *n. s.*

To disagree in judgment; to differ; applied particularly to a difference of opinion with the established church of England. Dissension is disagreement in any degree: dissensious, quarrelsome.

We han founden this wicked man styringe dissension to alle iewis in alle the world, and auctour of dissensious of the secte of Nazarens. *Wiclif. Dedis. 24.*

Either in religion they have a dissensious head, or in the commonwealth a factious head. *Ascham's Schoolmaster.*

We see a general agreement in the secret opinion of men, that every man ought to embrace the religion which is true, and to shun, as hurtful, whatever dissenteth from it, but that most which doth farthest dissent. *Hooker.*

You dissensious rogues.

That rubbing the poor itch of your opinion,
Make yourselves scabs. *Shakspeare. Coriolanus.*

Friends now, fast sworn,

Whose hours, whose bed, whose meal, whose exercise,

Are still together; who twine, as 'twere in love
Unseparable, shall within this hour,

On a dissension of a doit, break out

To bitterest enmity. *Id.*

Let me not be any occasion to defraud the publick of what is best, by any morose or perverse dissentings. *King Charles.*

How will dissenting brethren relish?

What will malignants say? *Hudibras.*

Grown

In wealth and multitude, factions they grow;

But first among the priests dissension springs. *Milton.*

Debates, dissensions, uproars are thy joy;
Provoked without offence, and practised to destroy. *Dryden.*

In propositions, where though the proofs in view are of most moment, yet there are grounds to suspect that there is proof as considerable to be produced on the contrary side; there suspense or dissent are voluntary actions. *Locke.*

They will admit of matter of fact, and agree with dissenters in that; but differ only in assigning of reasons. *Id.*

There are many opinions in which multitudes of men dissent from us, who are as good and wise as ourselves. *Addison.*

What could be the reason of this general dissent from the notion of the resurrection, seeing that almost all of them did believe the immortality of the soul? *Bentley's Sermons.*

DISSENTERS. Of the comprehensiveness of this term as designating, in strict language, all who differ in opinion from the Established Church, few of our readers can be altogether ignorant. Mr. Justice Blackstone considers a

cognate legal term, non-conformists, as embracing all who absent themselves from the public worship of the Church, whether, 1. Through total irreligion, they attend the service of no other persuasion; or, 2. Through a mistaken zeal, 'weakness of intellect,' or 'perverseness and acerbity of temper, which,' he adds, 'is often the case,' they unite in worship with other communities, 'herding with a party.' This latter class of dissenters is divisible again, according to the same learned authority, into 'the papists,' who divide from the national church, 'upon material though erroneous reasons,' and the Protestant Dissenters, many of whom divide from it 'upon matters of indifference; or, in other words, upon no reason at all.'

These terms in fact, then, though constantly used to describe large bodies of religionists, are neither of them, religious terms: they simply express the political relation of a heterogeneous multitude of their fellow-subjects to the established church; a multitude including the wide extremes of the devout catholic and the avowed unbeliever; the Painite and the Southcoteite; the ultra-Calvinist and the rational Unitarian. They are terms too, which, unlike the vast majority of those in our Lexicon, we trust, will be found to vary in their meaning according to that particular part or subdivision of our common, happy country in which these observations may meet the eye of our readers. In England, for instance, his majesty's good and acute subjects of the kirk of Scotland, in common with the other Presbyterians, are dissenters; in Scotland, the Episcopalian of the ever-loyal church of England is a dissenter; in Canada, the Protestant of whatever denomination; all of them in their respective situations, in the places 'aforesaid,' and for reasons by them deemed 'material' or 'no reason at all,' dividing from the established church.

We can only, therefore, in this place affix to so vague a term its more common and popular meaning. Connected necessarily with no religion, as we, after Mr. Justice Blackstone, contend, it has still too much of the savour of piety about it to be affiliated by the unbeliever; on the other hand it has too little of antiquity and dignity to be acknowledged by the consistent Catholic; to the Protestant dissenters, therefore, whatever the sages of the law may determine, and whatever may be its unhappy or discreditable associations, it seems, at last to belong: they are THE DISSENTERS of common parlance; and we propose, therefore, to offer to our readers in this paper, 1st, Some account of their existing legal situation and rights; 2dly, Of the principles common to this body as separatists from the establishment; and, 3dly, Of their political history.

1. *Of the legal situation of Dissenters.*—The basis of the existing law of England, on the subject of separatists, is still to be found in the statutes of 1 Eliz. c. 2. §. 14.; 23 Eliz. c. 1.; and 29 Eliz. c. 6. The first of these enacts, that every person, not having reasonable excuse, shall resort to his parish church or chapel, or upon reasonable let thereof to some usual place where common prayer shall be used, on every Sunday and holiday, 'on pain of punishment by the censures

of the church, or of forfeiting, for every offence, 12*d*. The second, that every person above the age of sixteen, who shall not repair to some church or chapel, or usual place of common prayer, shall forfeit for every month £20; and if he shall forbear for twelve months, he shall be bound to the good behaviour till he conform. The third, that every offender in not repairing to church, having been once convicted, shall, without any other indictment or conviction, pay half yearly into the exchequer £20 for every month afterwards till he conform; which if he shall omit to do, the king may seize all his goods, and two parts of his lands. And by 3 Jac. I. c. 4, §. 11, the king may refuse the £20 a month, and take two parts of the land at his option.

By the 3 Jac. I. c. 5, no recusant, not repairing to church, being convicted thereof, shall enjoy any public office; or shall practise law or physic, or be executor, administrator, or guardian. And by the 35 El. c. 1, if any person refusing to repair to church, shall be present at any assembly, meeting, or conventicle, under pretence of any exercise of religion, he shall be imprisoned till he conform; and if he shall not conform in three months, he shall abjure the realm, which if he shall refuse to do, or after abjuration shall not go, or shall return without license, he shall be guilty of felony, without benefit of clergy. And whether he shall abjure or not, he shall forfeit his goods and his lands during life.

These severe injunctions and penalties are suspended, but not repealed, by the celebrated Toleration Act, 1 W. & M. st. 1. c. 18, 'for exempting their majesty's protestant subjects, dissenting from the church of England, from the penalties of certain laws;' which is confirmed by stat. 10 An. c. 2, and declares that neither the laws above-mentioned, nor any other penal laws made against popish recusants (except the corporation and test acts), shall extend to any dissenters, other than papists, and such as deny the Trinity: provided, 1. That they take the oaths of allegiance and supremacy (or make a similar affirmation, being Quakers—see stat. 8 Geo. I. c. 6); and subscribe the declaration against popery. 2. That they repair to some congregation certified to, and registered in, the court of the bishop or archdeacon, or at the county sessions. 3. That the doors of such meeting-house shall be unlocked, unbarred, and unbolted; in default of which the persons meeting there are still liable to all the penalties of the former acts.

The offence of non-conformity is therefore not to be considered as legally abrogated, although it 'ceases to exist,' as Blackstone says, 'with regard to protestant dissenters, during their compliance with the condition imposed by the act of toleration: and, under these conditions, all persons, who will approve themselves no papists or opposers of the Trinity, are left at full liberty to act as their consciences shall direct them in the matter of religious worship. And if any person shall wilfully, maliciously, or contemptuously disturb any congregation, assembled in any church or permitted meeting-house, or shall misuse any preacher or teacher there, he shall (by virtue of the same statute), be bound over to the sessions of the peace, and forfeit £20. But by statute 5 Geo. I. c. 4, no mayor or principal

magistrate must appear at any dissenting meeting with the ensigns of his office, on pain of disability to hold that or any other office; the legislature judging it a matter of propriety, that a mode of worship set up in opposition to the national, when allowed to be exercised in peace, should be exercised also with decency, gratitude, and humility. Neither doth the act of toleration extend to enervate those clauses of the statutes 13 and 14 Car. II. c. 4, and 17 Car. II. c. 2, which prohibit (upon pain of fine and imprisonment), all persons from *teaching school*, unless they be licensed by the ordinary, and subscribe a declaration of conformity to the liturgy of the church, and reverently frequent divine service established by the laws of the kingdom.'

Since the time of Blackstone, by stat. 53 Geo. III. c. 160, so much of 1 W. & M. c. 18, as excepts persons denying the Trinity, from the benefit of that act, and so much of stat. 9 and 10 W. III. c. 32, as imposes penalties on persons denying the Trinity, are repealed; 57 Geo. III. c. 70, also repeals the like provisions of the Irish act 6 Geo. I. c. 5.

So far, therefore, has our statute-book been cleared of all that directly or practically imposes penal restrictions on Protestant dissenters in the exercise of their religion. But important barriers are still placed around them in regard to what they consider as their civil rights. The statute 13 Car. 2, st. 2, c. 1, usually called the Corporation Act, disqualifies for offices relating to the government of any city or corporation, such as have not, within a twelvemonth before their election, received the sacrament of the Lord's Supper, according to the rites of the church of England (enjoining also the oaths of allegiance and supremacy); and the 25 Car. II. c. 2, commonly called the Test Act, directs all officers civil and military, to take the oath, and make the declaration against transubstantiation six months after their admission, and also within the same time to receive the sacrament of the Lord's Supper, according to the usage of the church of England. If, without taking the sacramental qualification within the time prescribed by the act, a person continues to occupy a civil office, or to hold a military commission, and is lawfully convicted, then he is disabled from thenceforth, for ever, from bringing any action in course of law, from prosecuting any suit in any court of equity, from being guardian of any child, or executor or administrator of any person, as well as from receiving any legacy. Such is the legal situation of the dissenting laity.

Dissenting teachers in order to be exempted from the penalties of the statutes 13 and 14 Car. II. c. 1; 15 Car. II. c. 6, must subscribe the articles of religion mentioned in stat. 13 Eliz. c. 12 (which only concern the confession of the true Christian faith, and the doctrine of the sacraments); with an express exception of those relating to the government and powers of the church, and to infant baptism; or, if they scruple subscribing the same, are to make and subscribe the declaration prescribed by 19 Geo. III. c. 44, professing themselves to be Christians and Protestants, and that they believe the Scripture to contain the revealed will of God, and to be the rule of doctrine and practice.

‘And the justices at the sessions where any Protestant dissenting minister shall live, are required to tender and administer the said last-mentioned declaration to such minister, upon his offering himself to make and subscribe the same, and thereof to keep a register; for the registering of which he shall pay 6d. to the officer of the court, and no more; and 6d. for a certificate thereof signed by such officer.’

By stat. 10 Ann. c. 2, § 9. Any preacher or teacher of any congregation of dissenting protestants, duly qualified according to the act of W. & M., shall be allowed to officiate in any congregation, although the same be not in the county where he was so qualified; provided that the place of meeting hath been duly certified and registered: and such teacher or preacher shall, if required, produce a certificate of his having so qualified himself, under the hand of the clerk of the peace where he was qualified; and shall also, before any justice of such county or place where he shall so officiate, make and subscribe such declaration, and take such oaths as aforesaid, if required.

And by 1 W. & M. c. 18. § 11., and 19 Geo. III., c. 44. § 1. Every such teacher and preacher, that is a minister, preacher, or teacher of a congregation, having taken the oaths, and subscribed as aforesaid, shall from thenceforth be exempted from serving on any jury, or from being chosen or appointed to bear the office of churchwarden, overseer of the poor, or any other parochial or ward office, or other office, in any hundred of any shire, city, town, parish, division, or wapentake, and by 42 Geo. III., c. 90, and 43 Geo. III., c. 10, from serving in the militia, either personally or by substitute, if he be a licensed teacher of any separate congregation, and has been licensed twelve months previous to the yearly general meeting appointed to be held in October, &c.: and by 43 Geo. III., c. 96, § 12, from serving under the army of reserve act, if he be a licensed teacher of any separate congregation in holy orders, or pretended holy orders, and not carrying on any other trade, or exercising any other occupation for his livelihood, except that of a school-master.

By stat. 52 Geo. III., c. 155, § 2, no congregation of Protestants for religious worship, where more than twenty persons shall be present besides the preacher's family, shall be permitted (unless registered under former acts) until duly certified to the bishop, &c., or to the sessions, and a due return shall be made thereof once a year to the bishop or archdeacon, and registered in the court of the bishop, &c., on penalty of £20 on every person allowing any such congregation, to meet in any place occupied by him. Persons preaching in any place without consent of occupiers, are liable to a penalty of £30.

And by § 4. Every person who shall teach or preach at, or officiate in, or shall resort to any congregation or assembly for religious worship of protestants, whose place of meeting shall be duly certified according to the provisions of this act, or any other act or acts relating to the certifying and registering of places of religious worship, shall be exempt from all such pains and

penalties under any act or acts relating to religious worship, as any person who shall have taken the oaths and made the declaration prescribed by or mentioned in the 1 W. & M. or any act amending the said act, is by law exempt. And by § 6, it is provided, that no person shall be required by any justice to go to any greater distance than five miles from his own home, or from the place where he shall be residing at the time of such requisition, for the purpose of taking such oaths as aforesaid.

§ 7. Any of his majesty's protestant subjects may appear before any one justice, and produce to such justice a printed or written copy of the said oaths and declaration, and require such justice to administer such oaths, and to tender such declaration to be made, taken, and subscribed by such person; and thereupon such justice shall administer such oaths, and tender such declaration to the person requiring to take and make and subscribe the same; and such person shall take and make and subscribe such oaths and declaration in the presence of such justice accordingly; and such justice shall attest the same to be sworn before him, and shall transmit or deliver the same to the clerk of the peace for the county, &c., for which he shall act as such justice, before or at the next general or quarter sessions of the peace for such county, &c. And for the making and signing of which certificate, where the said oaths and declaration are taken and made on the requisition of the party taking and making the same, such justice shall be entitled to demand and have a fee of 2s. 6d. and no more: and such certificate shall be conclusive evidence that the party named therein has made and taken the oaths and subscribed the declaration in manner required by this act.

Dissenters chosen to any parochial or ward offices, and scrupling to take the oaths, may execute the office by deputy, who shall comply with the law in this behalf. Stat. 1 W. & M. st. 1, c. 18.—But it appears that they are not subject to fine on refusing to serve corporation offices. For where a freeman of London was elected one of the sheriffs, but refused to take the office on account of his being a dissenter, and, as such, not having received the sacrament according to the rites of the Church of England, within a year before his election, an action was brought in the Sheriff's Court, for the penalty incurred by such refusal, and a judgment recovered; which judgment was affirmed in a writ of error brought in the court of Hastings. But the defendant having obtained a commission of errors, the judges' delegates reversed both judgments; and, on a writ of error in parliament, this judgment of reversal was affirmed; the judges being (except one) of opinion that the defendant was at liberty to object to the validity of his election, on the ground of his own non-conformity.

And thus the reader has before him a summary view of the existing legal situation and rights of the Protestant Dissenting body.

2. *Of the principles common to this body as separatists from the establishment, we know of no general authentic summary: but dissenters at large are very familiar with those arguments for*

the liberty of conscience, the right of private judgment, and final obedience to God alone in religion, which they consider as involving the right and duty of the course they adopt. They are also not without respectable publications on the subject, by learned individuals of their body. It will be sufficient to mention those of Doddridge, Watts, Dr. John Taylor, Neal, Delaune, Palmer, and Towgood, all of whom have produced able defences of the dissenting system.

The celebrated Richard Baxter declared, what is true, perhaps, of a majority of the existing dissenters, that the Non-conformists of his day agreed with the doctrines of the thirty-nine articles, and differed only from the church in the form of government. He says, that the Independents, as well as Presbyterians, offered to subscribe to the articles, except as to prelacy and ceremony. 'We are one,' he adds, 'with the church of England in all the necessary points of faith and Christian practice.'

Yet these men departed from the church of England, at the expense of all their earthly comforts; and some of them braving persecution, 'even to death;' laid the foundation of the existing dissent, by denying the authority of any body of fallible men to 'decree rites and ceremonies' in the church. They contended, as do the modern dissenters, that what was left indifferent by the only lawgiver of his church, should not be made important and peremptorily enjoined upon his followers. They revolted, particularly, at subscribing to the principle of 'a power in the church to decree rites and ceremonies, and to have authority in matters of faith,' as so indefinite and extensive, that under the shadow of it, all the enormous usurpations and superstitions of the church of Rome might be and have been included. If the church of England, it is moreover said, claims and exercises this power, and obliges all its ministers to subscribe to articles of faith, which it hath authoritatively decreed, and to use in religious worship ceremonies and rites, which it hath authoritatively enjoined; hath not the church of France, or the church of Spain, the same authority and power? It cannot be an exclusive privilege of any one church. And if it be allowed that the church of Rome has this prerogative, such a claim would overthrow the Reformation and the foundations of the church of England itself. They say, with a modern divine of the church of England, 'Whenever useless rites and ceremonies are imposed, corruptions are passed into a law, and the terms of communion are such as are not authorised by the law of Christ, then it becomes a duty to dissent, and they are the separatists who compel others to divide, not they who deplore the necessity of so doing.'

But dissenters have further enquired, who are the persons that are, in point of fact, invested with this authority and power? In other words, who are the church? This power to order the manner of God's worship, and to settle articles of faith, is not lodged in the bishops and clergy, who are usually denominated our spiritual pastors and guides, but entirely in the king and parliament of these realms, under whose direction and control the clergy are to act. Accord-

ingly, the dissenters allege, that the church of England is a parliamentary church; not properly an ally, but a mere creature of the existing government, depending entirely upon the acts and authority of parliament for its essence and frame. The qualifications of its ministers, their power to officiate, the manner in which they are to administer the sacraments, are all limited and prescribed by authority of parliament: and this authority, which at first made, can alone alter and new make it; can abolish, or add to, its articles or rites, according to its pleasure, even though the whole body of bishops and clergy ever so much dislike or ever so earnestly protest against it. Therefore, while some dissenters justify their dissent from the establishment, because, for example, they think that some ceremonies imposed, or the various orders of ministers, or the received subjects of baptism, or the mode of administering baptism and the Lord's supper, or the state of her discipline, are incompatible with the scriptural pattern; others go farther, and attempt to prove, that every religious establishment is neither more nor less than a direct violation of some of the strongest injunctions of the great Head of the church.

These quote the words of Jesus Christ, 'My kingdom is not of this world,' as virtually forbidding all such attempted alliances between church and state, as every ecclesiastical establishment involves. They say that such a system debases Christianity into an engine of state, secularises its ministers and institutions, argues a concealed distrust of the apostolic weapons of faith, prayer, and 'the words of truth and soberness,' and is, in its influence on the conduct of the dominant party towards those who differ from them, essentially persecuting.

In confirmation of this view of the subject, they adduce the existing state of the laws with regard to dissenters. They argue that, every man has a right to the common privileges of the society in which he lives; and among these common privileges is a legal capacity for serving his sovereign and country; a right, so important, that the forfeiture of it is made the punishment of some of the greatest crimes. No man who does not forfeit that capacity of serving his sovereign and country, which is his natural right, as well as the honor and emoluments that may happen to be connected with it, by overt-acts, ought to be deprived of them; and disabilities that are not thus incurred, are unjust penalties, implying both disgrace and privation. Punishment, without the previous proof of guilt, cannot be denied to be an injury; and injuries inflicted, on account of religion, are undoubtedly persecutions.

The dissenters, therefore, contend, that the subjection to higher powers, and obedience to magistrates, which the Scriptures enjoin on Christians, relates only to civil, not at all to religious matters; and that so far is Christianity from enjoining, that it actually forbids obedience to civil governors in things of a religious nature. It commands us to 'call no man upon earth father or master,' Matthew xxiii. 8, 9, i.e. to acknowledge no authority or jurisdiction of any in matters of religion, but to remember that

'One only is our master' and lawgiver, even Christ; and that all Christians are brethren, Matthew xx. 25.

We cannot follow out the dissenting system into its numerous separate lines of divergence from the established church. Under the particular names of each of their well-known denominations will these be fully discussed. But many pious and excellent men, we may add, have divided from the church of England, on account of her laxity in discipline; others from the evident disagreement, as they allege, between the doctrines of the desk, or liturgy, and those of the pulpit; and while the major part of dissenters, as we have stated, profess agreement with her doctrinal articles, a respectable minority would object to several of them. The entire system of Wesleyan Methodism, a species of modern dissent, has grown out of the first of these complaints against the church. We do not feel ourselves called upon to add more as to the general principles of this body. See METHODISTS.

3. Their *history*, dissenters, of course, contend, commences with the persecutions of that early set of our religion with whose affairs the book of the Acts of the Apostles is occupied: but, in this country, they consider themselves the successors of the Wickliffites and Lollardites of the fourteenth century. Of John Wickliff Mr. Gilpin says, 'The authority claimed by the church he strenuously opposed. It was a scandal, he would say, to the Christian church, that any of its members should set up their own authority against that of their Saviour. The great argument of that day (which was indeed a subtle one) for the authority of the church, was this. Many persons, besides Mathew, Mark, Luke, and John, wrote gospels; but the church rejected them all, excepting these four: and this it did by its own proper authority. It might, by the same authority, have rejected those four gospels, and have received others. It follows, therefore, that the authority of the church is above that of any gospel.—To this Wickliff replied, that the evidence for the received gospels was so strong, and that for the rejected ones so weak, that the church could not have done otherwise than it did, without doing violence to reason. But the best argument, he said, if it were proper to avow it, for supporting the authority of the church, was the necessity of it to support the tyranny of the pope. This was what made it worth defending at the expense of truth. In another place, speaking on the same subject, he says, that the pope would not submit his actions to the same criterion, by which Christ was contented to have his actions tried. If I do not, says Christ, the works of my father which is in heaven, believe me not. But the pope's authority, it seems, must be acknowledged, though he manifestly does the works of the devil. Thus, says he, Christians are in greater thralldom than the Jews under the old law; and that liberty, by which Christ hath made us free, is, by the wickedness of designing men, changed into the most absolute spiritual bondage. The days, says he, I hope, will come, when men will be wise enough to shake from their necks the dominion of human ordinances; and disdain

submission to any ecclesiastical injunctions, but such as are plainly authorised by the word of God.'

Early in the Reformation, a respectable party of the church of England contended for a more complete departure from the popish models of church government and discipline. Bishop Hooper, perhaps, led the way to the practical secession that afterwards took place, by refusing to be consecrated in the Roman pontificals. This was in the reign of Edward VI. On the persecutions that arose under queen Mary, a considerable number of the British exiles settled at Frankfort, and agreed to conduct their worship, without answering aloud after the minister, and without using the liturgy and surplice; to begin the public service with a general confession of sins, then to sing a psalm, after which the minister prayed for the divine assistance, and next proceeded to the sermon; after sermon, to use a general prayer for all estates, and particularly for England, at the end of which were subjoined the Lord's prayer, and a rehearsal of the articles of belief; then the people were to sing another psalm, and the minister to dismiss them with a blessing. Such was the order which they had unanimously adopted; and, having chosen a minister and deacons, they invited their dispersed brethren to join with them. In the year 1556 Dr. Cox joined them, with several of his friends; who interrupted the public service by answering aloud after the minister, and read the whole litany, in violation of the agreement upon which the congregation was formed. They out-numbered the first settlers, and, obtaining leave of the magistrates for the free use of king Edward's service-book, performed divine worship according to the rites that had been authorised by that prince. The original party, upon this, left the city of Frankfort, and removed to Basil and Geneva. Here commenced the distinction of Puritans and Conformists, by which the two parties were ever afterwards known, the former being called Conformists, on account of their compliance with the ecclesiastical laws of Edward VI., and the latter, Nonconformists and Puritans, from their insisting upon a form of worship of a purer kind, as they alleged.

On the accession of queen Elizabeth, the schism became more important. Dr. Cox was appointed bishop of Ely; and the standard of orthodoxy, according to this divine, and the majority of the bishops, was 'the queen's supremacy and the laws of the land;' whilst the Puritans contended for 'the decrees of provincial and national synods,' allowed and enforced by the civil magistrate; for neither party, it must be allowed, was for admitting full liberty of conscience, and freedom of religious profession.

Ministers were now obliged to comply with an act for the uniformity of common prayer and service in the church and administration of the sacraments; to subscribe a declaration of faith, issued by order of the archbishops and bishops, for the unity of doctrine; to take the oath of supremacy to the queen, &c. The question about habits was revived; and in 1566 these and several other ceremonies, imposed by law, compelled the puritans to an open separation. In

the following year they published other objections against the hierarchy and various ceremonies, for the use of which, they contended, there was no foundation in Scripture or antiquity. The leaders of this separation were chiefly, benefited persons of the diocese of London; who first assembled, with such of their flocks as chose to follow them, in woods and private houses, subjecting themselves to a variety of legal penalties and frequent imprisonment. The adherence of the puritans to Calvinistic principles seems, in no small degree, to have urged the established clergy at this time to adopt the intricate distinctions of Arminius on the subject of grace, free-will, &c. But several episcopal divines remained attached to the puritan system in the reign of James I.; and all these abettors of Calvinism, whether episcopal or presbyterian, were called doctrinal puritans. At length, according to Fuller (Church Hist. book ix. p. 97, book x. p. 100), the name was extended to stigmatise all those who endeavoured in their devotions to accompany the minister with a pure heart, or who were remarkably holy in their conversation.

Queen Elizabeth and James I. treated these early dissenters with that rigor which induced many of them to emigrate to the colonies. In the year 1629 they founded Massachusetts Bay. The colony of Connecticut was formed by emigrants of the same class in 1636, and that of New Haven by those who, in 1637, fled from the persecution of Laud, and the oppressions of the star-chamber and high commission courts. The puritans were afterwards not allowed to transport themselves to New England; we have seen, in the article CROMWELL, how singularly the future lord protector was then prevented expatriating himself; and many of them removed, with their families, to the Low Countries.

On the restoration of Charles II., in the year 1660, the name of Puritans, says bishop Burnet, was changed into that of Protestant Nonconformists, who were subdivided into Presbyterians, Independents, Anabaptists, and Quakers. At this time a second Act of Uniformity was passed, by which all who refused to observe the rites, and subscribe the doctrines, of the church of England, were entirely excluded from power. From this period until the reign of king William III. the Nonconformists were in a very precarious situation, sometimes involved in calamity and trouble, and at other times enjoying intervals of tranquillity, according to the varying temper of the court and ministry. But in the year 1689 the memorable bill for the toleration of all Protestant dissenters from the church of England, except impugnors of the Trinity, passed in parliament almost without opposition, and delivered those who could comply with the conditions it imposed from the penal laws to which they had been so long subjected.

Fluctuations have taken place in the political treatment of dissenters since this period, and in the close of the reign of queen Anne the act of Occasional Conformity, which was pushed forward by the high-church party, threatened the extinction of their new liberties. But the accession of the present illustrious House of Brunswick to the throne of these realms has confirmed and

enlarged them; and each of the successive monarchs has renewed and redeemed his pledge to keep the toleration act inviolate: and while the parties interested are still hopeful of the abrogation of all excluding statutes, on the subject of religion, they wait with patience the final conviction of the government and country as to the period of awarding their rights.

DISSENTIENT; a word literally signifying they dissent or disagree, prefixed to protests, or rather to the reasons of dissent, given in by protesting peers, in the upper House of Parliament, to be entered on the journals of the house.

DISSERTATION, *n. s.* Lat. *dissertatio*. A discourse; a disquisition; a treatise.

Plutarch, in his *dissertation* upon the Poets, quotes an instance of Homer's judgment in closing a ludicrous scene with decency and instruction.

Broome on the Odyssey.

I have known a woman branch out into a long extempore *dissertation* upon the edging of a petticoat, and chide her servant for breaking a china cup in all the figures of rhetoric.

Addison.

The following relation is so curious and entertaining, and the *dissertations* that accompany it so judicious and instructive, that the translator is confident his attempt stands in need of no apology.

Johnson. Preface to Father Lobo's Voyage.

DISSEERVE, *v. a.*

DISSERVICE, *n. s.*

DISSERVICEABLE, *adj.*

DISSERVICEABLENESS, *n. s.*

} *Dis* and *serve*.
} To do injury to;
} to damage; hurt.

Having never done the king the least service, he took the first opportunity to *disserve* him, and engaged against him from the beginning of the rebellion.

Clarendon.

All action being for some end, and not the end itself, its aptness to be commanded or forbidden, must be founded upon its serviceableness or *disserviceableness* to some end.

Norris.

We shall rather perform good offices unto truth, than any *disservice* unto claters who have well deserved.

Broune.

Great sicknesses make a sensible alteration, but smaller indispositions do a proportionable *disservice*.

Collier.

Desires of things of this world, by their tendency, promote or *disserve* our interests in another.

Rogers.

DISSETTLE, *v. a.* *Dis* and *settle*. To unsettle; to unsettle.

DISSEVER, *v. a.* *Dis* and *sever*. In this word the particle *dis* makes no change in the signification, and therefore, says Dr. Johnson, the word, though supported by great authorities, ought to be ejected from our language. To part in two; to break; divide; rend asunder; disunite.

Discover your united strengths,

And part your mingled colours once again.

Shakspeare.

The *discovering* of fleets hath been the overthrow of many actions.

Raleigh.

Shortly had the storm so *discovered* the company, which the day before had tarried together, that most of them never met again, but were swallowed up.

Sidney.

The meeting points the sacred hair *discover*
From the fair head, for ever and for ever. *Pope.*

For surprise is only produced when any external impressions suddenly obtrude themselves, and *discover* our passing trains of ideas. *Darwin.*

DISSIDENCE, n. s. } Lat. *dissideo*. Dis-
DIS'SIDENT, } cord; disagreement.
See the article DISSIDENTS.

DISSILLIENCE, n. s. } Lat. *dissilio*. The
DISS'ILIENT, adj. } act of starting asun-
DISS'ILIATION, n. s. } der.

The air having much room to receive motion, the *dissilation* of that air was great.

Boyle's Spring of the Air.

DISSIMILAR, adj. } *Dis* and similar. Un-
DISSIM'ILARITY, n. s. } like; heterogeneous :
DISSIMIL'ITUDE. } want of similitude.

Thereupon grew marvellous *dissimilitudes*, and by reason thereof jealousies, heartburnings, jars, and discords. *Hooker.*

Simple oil is reduced into *dissimilar* parts, and yields a sweet oil, very differing from sallet oil.

Boyle.

The *dissimilitude* between the Divinity and images, shews that images are not a suitable means whereby to worship God. *Stillington.*

As human society is founded in the similitude of some things, so it is promoted by some certain *dissimilitudes*. *Grew.*

The light whose rays are all alike refrangible, I call simple, homogeneal, and similar; and that, whose rays are some more refrangible than others, I call compound, heterogeneal, and *dissimilar*. *Newton.*

If the principle of reunion has not its energy in this life, whenever the attractions of sense cease, the acquired principles of *dissimilarity* must repel these beings from their centre. *Cheyne.*

Women are curious observers of the likeness of children to parents, that they may, upon finding *dissimilitude*, have the pleasure of hinting unchastity.

Pope's Odyssey, Notes.

Ideas of the same race, though not exactly alike, are sometimes so little different that no words can express the *dissimilitude*.

Johnson. Preface to Dictionary.

DISSIMULATION, n. s. } Lat. *dissimula-*
DISSIM'ULATING, n. s. } *tio*. See DIS-
SEMBLE. The act of dissembling; hypocrisy; fallacious appearance or pretensions. See the extract from the Tatler.

Who coude tellen you the forme of daunces
So uncoutsh, and so freshe countenances,
Swiche subtil lokings and *dissimulings*,
For dred of jalous mennes apprecivings.

Chaucer. Cant. Tales.

Dissimulation is but a faint kind of policy; for it asketh a strong wit, and a strong heart, to know when to tell truth, and to do it. *Bacon.*

He added not; and Satan bowing low
His grey *dissimulation*, disappeared
Into thin air diffused. *Milton.*

Dissimulation may be taken for a bare concealment of one's mind; in which sense we commonly say, that it is prudence to dissemble injuries. *South.*

The learned make a difference between simulation and *dissimulation*. Simulation is a pretence of what is not, and *dissimulation* is a concealment of what is. *Tatler, 213.*

DISSIPATE, v. a. } Fr. *dissiper*; Span. and
DISSIP'ABLE, adj. } Portug. *dissipar*; Ital.
DISSIPATION, n. s. } and Lat. *dissipare*, from

dis and *seps, sepi*, a venomous serpent, because whatever is bitten thereby, putrifies.—Minshew To disperse; scatter; destroy: dissipation is the act or habit of dispersing or wasting: applied figuratively also to the mind, and particularly the attention. Dissipable is an obsolete adjective for, easily dispersed, or liable to dispersion.

The heat of those plants is very *dissipable*, which under the earth is contained and held in; but when it cometh to the air it exaleth.

Bacon's Natural History.

Abraham was contemporary with Paleg, in whose time the famous *dissipation* of mankind, and distinction of languages, happened.

Hale's Origin of Mankind.

It is covered with skin and hair, to quench and *dissipate* the force of any stroke, and retard the edge of any weapon. *Ray.*

Gold is a wonderful clearer of the understanding; it *dissipates* every doubt and scruple in an instant.

Addison.

I have begun two or three letters to you by snatches, and been prevented from finishing them by a thousand avocations and *dissipations*. *Swift.*

The parts of plants are very tender, as consisting of corpuscles which are extremely small and light, and therefore the more easily *dissipable*.

Woodward's Natural History.

The circling mountains eddy in,
From the bare wild, the *dissipated* storm.

Thomson.

This slavery to his passions produced a life irregular and *dissipated*. *Johnson. Savage's Life.*

DISSIPATION, in physics, an insensible loss or consumption of the minute parts of the body; or that flux whereby they fly off and are lost.

DISSIPATION, CIRCLE OF, in optics, that circular space upon the retina, which is taken up by one of the extreme rays issuing from an object. When the distance of an object from the eye is too small or too great for perfect or distinct vision, the rays of each pencil, issuing from the object, cannot be united at a point on the retina; consequently, the rays of each pencil will occupy a circular space upon the retina, which circle is called the circle of dissipation, because the rays of a pencil, instead of being collected into a central point, are dissipated all over this circle.

DISSIDENTS, a denomination applied in Poland to those of the Lutheran, Calvinistic, and Greek professions. The kings of Poland engaged by the pacta conventa to tolerate them in the free exercise of their religion, but they had often reason to complain of the violation of those promises. See POLAND.

DISSOCIATE, v. a. Lat. *dissocio*. To separate; disunite; part.

In the *dissociating* action, even of the gentlest fire, upon a concrete, there perhaps vanish some active and fugitive particles, whose presence was requisite to contain the concrete under such a determinate form.

Boyle.

DISSOLUBLE, adj. } Lat. *dissolubilis*. Ca-
DISSOLUB'ILITY, n. s. } pable of separation;
having one part separable from another. Disso-
lubility is liableness to dissolution.

Nodules, reposed in cliffs amongst the earth, being hard and not so *dissoluble*, are left behind.

Woodward's Natural History.

Bodies seem to have an intrinsic principle of alteration, or corruption, from the *dissolubility* of their parts, and the coalition of several particles endued with contrary and destructive qualities each to other.

Hale's Origin of Mankind.

DISSOLVE, *v. a. & n.*

DISSOLV'ENT, *n. s. & adj.*

DISSOLV'ER, *n.*

DISSOLV'IBLE, *adj.*

Lat. *dissolvere*, from *dis*, asunder, and *solvere*, to loose. To disunite the parts of a thing by moisture or by heat; to melt; liquefy: hence, figuratively, to destroy a union, compact, or delusion, as well as to dissipate obscurity or doubt. Dissolvent is having the power of dissolving; dissolver is synonymous with it as a substantive: dissolvable is, liable to liquefy or disperse by dissolution.

I have a desire to be *dissolved* and to be with Christ, it is mych more better. *Wielif. Filipensis l.*

And I have heard of thee, that thou canst make interpretations and *dissolve* doubts. *Dan. v. 16.*

If there be more, more woeful, hold it in;

For I am almost ready to *dissolve*,

Hearing of this. *Shakspeare. King Lear.*

She and I, long since contracted,

Are now so sure that nothing can *dissolve* us. *Id.*

By the king's authority alone, and by his writs, parliament's are assembled; and by him alone they are prorogued and *dissolved*, but each house may adjourn itself. *Bacon to Villiers.*

Down fell the duke, his joints *dissolved* asunder, Blind with the light, and stricken dead with wonder. *Fairfax.*

Witness these ancient empires of the earth

In height of all their flowing wealth *dissolved*. *Milton.*

Angels *dissolved* in hallelujahs lie. *Dryden.*

The commons live, by no divisions rent;

But the great monarch's death *dissolves* the government. *Id.*

In man and viviparous quadrupeds, the food, moistened with the spittle, is first chewed, then swallowed into the stomach, where, being mingled with *dissolvent* juices, it is concocted, macerated, and reduced into a chyle. *Ray.*

As wax *dissolves*, as ice begins to run And trickle into drops before the sun, So melts the youth, and languishes away. *Addison's Ovid.*

Such things as are not *dissoluble* by the moisture of the tongue, act not upon the taste. *Newton.*

Spittle is a great *dissolvent*, and there is a great quantity of it in the stomach, being swallowed constantly. *Arbuthnot.*

Fire, and the more subtle *dissolver*, putrefaction, by dividing the particles of substances, turn them black. *Id.*

The snow *dissolved*, no more is seen, The fields and wood, behold! are green. *Johnson.*

Despotic love *dissolves* the bestial war. *Darwin.*

DISSOLUTE, *adj.*

DISSOLUTELY, *adv.*

DISSOLUTENESS, *n. s.*

DISSOLUTION.

Fr. *dissolu*; Italian, *dissolutely*, *adv.* Span. and Port. *dissolutus*, *n. s.* Lat. *dissolutus*, from *dis* and *solvere*, *solutus*, to loose. Unrestrained by law or morals; debauched; luxurious. Dissolution is more generally applied in the literal sense, and to death. Dissoluteness, to behaviour or manners: yet both occur in the latter sense; and dissolution is used by lord Bacon for the substance formed by dissolving a body.

A giant huge and tall,
Who him disarmed, *dissolute*, dismayed,
Unawares surprised. *Faerie Queene.*

He determined to make a present *dissolution* of the world. *Hoocher.*

Such stand in narrow lanes,
And beat our watch, and rob our passengers;
While he, young, wanton, and effeminate boy,
Takes on the point of honour, to support
So *dissolute* a crew. *Shakspeare. Richard II.*

I am as subject to heat as butter; a man of continual *dissolution* and thaw. *Id. Merry Wives of Windsor.*

The life of man is always either increasing towards ripeness and perfection, or declining and decreasing towards rottenness and *dissolution*. *Raleigh's History.*

Weigh iron and aqua-fortis severally; then dissolve the iron in the aqua-fortis, and weigh the *dissolution*. *Bacon.*

Neither doth God say, I was the God of Abraham, Isaac, Jacob; but I am. The patriarchs still live, after so many years of *dissolution*. *Id.*

Bp. Hall's Contemplations.
Yet, I deny not, but *dissolute* men, like unskilful horsemen, which open a gate on the wrong side, may, by the virtue of their office, open heaven for others, and shut themselves out. *Fuller.*

A longing after sensual pleasures is a *dissolution* of the spirit of a man, and makes it loose, soft, and wandering, unapt for noble or spiritual employments. *Bp. Taylor.*

We expected
Immediate *dissolution*, which we thought
Was meant by death that day. *Milton. Paradise Lost.*

They cooled in zeal,
Thenceforth shall practise how to live secure,
Worldly, or *dissolute*, on what their lords
Shall leave them to enjoy. *Id.*

If we look into the common management, we shall have reason to wonder, in the great *dissoluteness* of manners which the world complains of, there are any footsteps at all left of virtue. *Locke.*

Is a man confident of wealth and power? Why let him read of those strange unexpected *dissolutions* of the great monarchies and governments of the world. *South.*

The true spirit of religion banishes indeed all levity of behaviour, all vicious and *dissolute* mirth, but, in exchange, fills the mind with a perpetual serenity. *Addison's Spectator.*

That mind is *dissolute* and ungoverned, which must be hurried out of itself by loud laughter or sensual pleasures, or else be wholly inactive. *Steele.*

Would they have mankind lay aside all care of provisions by agriculture or commerce, because possibly the *dissolution* of the world may happen the next moment? *Bentley.*

In the next place, Sir, I am clear that the act of union, reciting and ratifying one Scotch and one English act of parliament, has not rendered any change whatsoever in our church impossible, but by a *dissolution* of the union between the two kingdoms. *Burke.*

A *dissolution* of all bonds ensued;
The curbs invented for the rashish monarch
Of headstrong youth were broken. *Conquer.*

Dissolution, in physics, a general name for all reductions of concrete bodies into their smallest parts, without regard either to solidity or fluidity; though in the usual acceptation of the word among authors, it is restrained to the reduction

of solid bodies into a state of fluidity; which is more properly expressed by solution. See CHEMISTRY.

DISSONANCE, *n. s.* } Fr. *dissonance*; Ital.

DISSONANT, *adj.* } *dissonanza*; Lat. *dissonantia*, from *dis*, diversely, and *sonans*, *sonantis*, sounding. Harshness, or jargon of sounds; disagreement: dissonant is inharmonious; and hence incongruous; disagreeing; followed by *from*, and less correctly by *to*.

Though he nought fonde yet would he lie
Discordant or fro armonie,
And *dissonid* fro melodie;
Controve he would, and foule faile,
With hornpipis of Corneweale.

Chaucer. *Runnart of the Rose.*

Still govern thou my song,
But drive far off the barbarous *dissonance*
Of Bacchus and his revellers.

Milton.

What can be more *dissonant* from reason and nature,
than that a man, naturally inclined to clemency,
should shew himself unkind and inhuman?

Hakewill on Providence.

With *to*; less properly.

When conscience reports any thing *dissonant* to
truth, it obliges no more than the falsehood reported
by it.

South.

Dire were the strain, and *dissonant*, to sing
The cruel raptures of the savage kind.

Thomson.

DISSUADE, *v. a.*

Fr. *dissuader*;

DISSUADE'R, *n. s.*

Span. *dessuadir*;

DISSUASION,

Lat. *dissuadere*;

DISSUASIVE, *adj. & n. s.* } *dis*, opposite, and
suadere, to persuade. To dehort; divert from, by
persuasion: dissuader is he who endeavours to do
this; and dissuasion the act or means of doing it.

We submit to Caesar, promising
To pay our wonted tribute, from the which
We were *dissuaded* by our wicked queen.

Shakspeare. *Cymbeline.*

Not diffident of thee do I *dissuade*
Thy absence from my sight.

Milton's *Paradise Lost.*

What is meant by *dissuading*; it is making a man
to change his opinion, and unfixing of the mind.

Bp. Taylor.

Endeavour to preserve yourself from relapse by
such *dissuasions* from love, as its votaries call invec-
tives against it.

Boyle.

I'd fain deny this wish, which thou hast made;
Or, what I can't deny, would fain *dissuade*.

Addison's *Ovid.*

What more powerful *dissuasive* from suspicion, jea-
lousy, and anger, than the story of one friend mur-
dered by another in a duel.

Bp. Horne.

DISSYLLABLE, *n. s.* Δισσύλλαβος. A word
of two syllables.

No man is tied, in modern poetry, to observe any
farther rule in the feet of his verse, but that they be
dissyllables; whether spondee, trochee, or iambic;
it matters not.

Dryden.

He (Shakspeare) seems to have been the very ori-
ginal of our English tragical harmony; that is, the
harmony of blank verse, diversified often by *dissyllable*,
and trissyllable terminations.

Dennis.

DISTAFF, *n. s.* Sax. *dæstaff*, from *diege*,
the thigh, and *staff*, 'because females while
spinning sit it to the thigh.'—Minsheu. The
staff from which the flax is drawn off in spinning:
used as an emblem of the sex.

Vol. VII.

Weave thou to end this web which I begin;
I will the *distaff* hold, come thou and spin.

Fairfax.

In some proud Boreas never ruled fleet,
Who Neptune's web on danger's *distaff* spins,
With greater power than she did make them wend
Each way, as she that age's praise did bend.

Silney.

See my royal master murdered,
His crown usurped, a *distaff* in the throne.

Dryden.

In my civil government some say the crosier, some
say the *distaff*, was too busy.

Howel's *England's Tears.*

I can no more pardon a fair one for endeavouring
to wield the club of Hercules, than I could him for at-
tempting to twirl her *distaff*.

Goldsmith.

DISTAIN, *v. a.* *Dis* and *stain*. To stain;
to tinge with an adventitious color; hence to blot
or obliterate.

For certainly all these mowe out suffice
To' apperin with my ladie in no wise,
For as the sunne woll the fire *distain*,
So passith all my ladie sovraign.

Chaucer. *Legend of Women.*

He understood,
That lady, whom I had to me assigned,
Had both *distained* her honourable blood,
And eke the faith which she to me did bind.

Faerie *Queene*

The worthiness of praise *distains* his worth,
If he that's praised himself bring the praise forth.

Shakspeare.

Nor ceased his arrows, till the shady plain
Seven mighty bodies with their blood *distain*.

Dryden's *Virgil.*

Place on their heads that crown *distained* with gore,
Which those dire hands from my slain father tore.

Pope.

DISTASTE, *n. s.* } *Dis* and *taste*. *Dis*.
DISTASTE'FUL, *adj.* } relish; aversion of the
palate; disgust: the verb being derived from
the noun, and both often applied figuratively.

Dangerous conceits are in their nature poisons,
Which at the first are scarce found to *distaste*,
But, with a little act upon the blood,
Burn like the mines of sulphur.

Shakspeare. *Othello.*

After *distasteful* looks,
With certain half-caps, and cold moving nods,
They froze me into silence.

Id. *Timon.*

The king having tasted of the envy of the people, for
his imprisonment of Edward Plantagenet, was doubt-
ful to heap up any more *distastes* of that kind by the
imprisonment of De la Pole also.

Bacon's *Henry VII.*

It is in the general behalf of society that I speak, at
least the more judicious part of it, which seems much
distasted with the immodest and obscene writing of
many in plays.

Ben Jonson.

The ground might be the *distasteful* averseness of
the Christian from the Jew.

Browne.

On the part of heaven,
Now alienated, distance and *distaste*,
Anger, and just rebuke.

Milton's *Paradise Lost.*

None but a fool *distasteful* truth will tell;
So it be new and please, 'tis full as well.

Dryden.

Distasteful humours, and whatever else may render
the conversation of men grievous and uneasy to one
another, are forbidden in the New Testament.

Tillotson.

Y

I am unwilling to believe that he doth it with a design to play tricks, and fly-blow my words to make others *distaste* them. *Stillingfleet.*

With stern *distaste* avowed,
To their own districts drive the suitor crowd.

Pope's Odyssey.

DISTANCE, *v. a. & n. s.* } Fr. *distance* ;
DISTANT, *adj.* } Span. *distancia* ;
Ital. *distanza* ; Lat. *distantia*, from *dis*, asunder, and *stans*, *stantis*, standing. The extent of space between two standing bodies. The verb seems here derived from the noun. Distant is, remote in place, time, or nature; and in any degree: hence, not obvious; not intelligible.

We come to see fight; to see thy pass, thy stock,
thy reverse, thy *distance*.

Shakespeare. Merry Wives of Windsor.

Banquo was your enemy,
So is he mine; and in such bloody *distance*,
That every minute of his being thrusts
Against my nearest of life. *Shakespeare. Macbeth.*

A good merchant never demands out of *distance* of the price he intends to take. If not always within the touch, yet within the reach of what he means to sell for. *Fuller.*

This heaven which we behold
Distant so high. *Milton.*

On the part of heaven,
Now alienated, *distance* and *distaste*,
Anger, and just rebuke, and judgment given. *Id.*

This was the horse that ran the whole field out of *distance*, and won the race. *L'Estrange.*

We have as much assurance of these things, as things future and at a *distance* are capable of. *Tillotson.*

That which gives a relieve to a bowl, is the quick light, or white, which appears to be on the side nearest to us, and the black by consequence *distances* the object. *Dryden's Dufresney.*

I hope your modesty
Will know what *distance* to the crown is due. *Dryden.*

Distance is space considered barely in length between any two beings, without considering any thing else between them. *Locke.*

It was one of the first distinctions of a well-bred man to express every thing obscene in modest terms and *distant* phrases. *Addison's Spectator.*

Cæsar is still disposed to give us terms,
And waits at *distance* till he hears from Cato. *Addison.*

If a man makes me keep my *distance*, the comfort is, he keeps his at the same time. *Swift.*

These dwell at such convenient *distance*,
That each may give his friend assistance. *Prior.*

I help my preface by a prescript, to tell that there is ten years *distance* between one and the other. *Id.*

Each daring lover, with adventurous pace,
Pursued his wishes in the dangerous race;
Like the swift hind the bounding damsel flies,
Strains to the goal; the *distanced* lover dies. *Gay.*
'Tis by respect and *distance* that authority is upheld. *Atterbury.*

The wondrous rock the Parian marble shone,
And seemed to *distant* sight of solid stone. *Pope.*

The senses will discover things near us with sufficient exactness, and things *distant* also, so far as they relate to our necessary use. *Watts's Logick.*

The worse living authors fare now, the better they will succeed with posterity; for the critics love the

sport too well to hunt any but those who can stand a good chase; and authors are the only objects in nature, which are magnified by *distance*, and diminished by approach. *Cumberland.*

Be silent! How the soldiers' rough strain seems
Softened by *distance* to a hymn-like cadence!
Listen! *Byron.*

DISTEMPER, *v. a. & n. s.* } *Dis* and *tem-*
DISTEMPERATE, *adj.* } *per.* To dis-
DISTEMPERATURE, *n. s.* } order; disease;
disturb; render disaffected; to temper colors anew. As a substantive, it expresses disorder; disproportion; or disease of any kind; and has the same use among painters as the adjective. Distemperate is, immoderate; and distemperature, habitual or extreme disorder; violence.

Tell how the world fell into this disease,
And how so great *distemperature* did grow. *Daniel.*

Thy earliness doth me assure
Thou art uproused by some *distemperature*. *Shakespeare.*

There is a sickness,
Which puts some of us in *distemper*; but
I cannot name the disease, and it is caught
Of you that yet are well. *Id. Winter's Tale.*
Young son, it argues a *distempered* head,
So soon to bid good-morrow to thy bed. *Id. Romeo and Juliet.*

Aquinas objecteth the *distemperate* heat, which he supposeth to be in all places directly under the sun. *Raleigh's History.*

The true temper of empire is a thing rare, and hard to keep; for both temper and *distemper* consist of contraries. *Bacon.*

I was not forgetful of those sparks, which some men's *distempers* formerly studied to kindle in parliament. *King Charles.*

He *distempered* himself one night with long and hard study. *Boyle's History of Fluids.*

Distempered zeal, sedition, cankered hate,
No more shall vex the church and tear the state. *Dryden.*

They heighten *distempers* to diseases. *Suckling.*

Sin is the fruitful parent of *distempers*, and ill lives occasion good physicians. *South.*

They were consumed by the discommodities of the country, and the *distemperature* of the air. *Abbot.*

When I behold a fashionable table set out in all its magnificence, I fancy that I see gout and dropsies, fevers and lethargies, with innumerable other *distempers*, lying in ambuscade among the dishes. *Addison.*

A night of fretful passions may consume,
All that thou hast of beauty's gentle bloom,
And one *distempered* hour of sordid fear
Print on thy brow the wrinkles of a year. *Sheridan.*

DISTEMPER, in painting, a term used for working up of colors with something besides water or oil. If the colors are prepared with water, that kind of painting is called limning; and if with oil, is called painting in oil, and simply painting. If the colors are mixed with size, whites of eggs, or any such proper glutinous or unctuous matter, and not with oil, then they say it is done in *distemper*. See COLOUR.

DISTEND', *v. a.* } Fr. *distendre* ;
DRSTENT', *n. s. & past. part.* } Lat. *distendere* ;
DISTENTION, *n. s.* } from *dis*, asunder, and *tendere*, to stretch. To stretch breadth-wise.

Some others were new driven and distent
Into great ingots and to wedges square,
Some in round plates withouten moniment.

Spenser.

Those arches are the gracefulest, which, keeping precisely the same height, shall yet be distended one fourteenth part longer, which addition of *distent* will confer much to their beauty, and detract but little from their strength.

Wotton.

Thus all day long the full distended clouds
Indulge their genial stores.

Thomson.

Wind and *distention* of the bowels are signs of a bad digestion in the intestines; for in dead animals, when there is no digestion at all, the *distention* is in the greatest extremity.

Arbutnot.

DIST'ICH, *n. s.* Fr. *distique*; Ital. Span. and Port. *disticho*; Lat. *distichon*; Gr. *διετιχον*, a song of two verses, i. e. *δύω* two, and *τιχος* a verse, from *τιχω* to step, because ancient verses were measured by the steps. A couplet; a couple of lines; an epigram consisting only of two verses.

The French compare anagrams, by themselves, to gems; but when they are cast into a *distich*, or epigram, to gems encased in enamelled gold.

Camden's Remains.

The bard, whose *distich* all commend,
In power, a servant; out of power, a friend.

Pope.

DISTICHIASIS, in surgery, a disease of the eye-lids, when under the ordinary eye-lashes there grows another extraordinary row of hair, which frequently eradicates the former, and pricking the membrane of the eye, excites pain, and brings on a defluxion. It is cured by pulling out the second row of hairs with nippers, and cauterising the pores out of which they issued.

DISTILL *v. a. & v. n.*

DISTILLA'TION, *n. s.*

DISTILLATORY, *adj.*

DISTILLER, *n. s.*

DISTILLERY, *n. s. & adj.*

DISTIL'MENT.

Fr. *distiller*; Sp. *destilar*; Ital. *destillare*; Lat. *distillare*, from *stillo*; Gr. *σταλαζω*, to drop.

To let fall in, or

reduce to, drops; to extract spirit in drops by a peculiar process; to diffuse. As a neuter verb, to drop, or fall in drops; to flow gently; to use a still. Distillation is the art of distilling; distillatory, belonging to that art. Distiller, one who practises it: and distillery, the place of distilling; or, as an adjective, belonging to such a place. Distilment is used by Shakspeare for that which is produced by distillation.

They pour down rain, according to the vapour thereof, which the clouds do drop and distil upon man abundantly.

Job.

Have I not been

Thy pupil long; Hast thou not learned me how
To make perfumes, distil, preserve?

Shakspeare.

There hangs a vapourous drop, profound;

I'll catch it ere it comes to ground;

And that, distilled by magick slights,

Shall raise up articial sprights.

Id.

Upon my secure hour thy uncle stole,

And in the porches of mine ears did pour

The leperous distilment.

Id.

The Euphrates distilleth out of the mountains of Armenia, and falleth into the gulph of Persia.

Raleigh's History.

Now, gentlemen, I go

To turn an actor, and a humourist,
Where, ere I do resume my present person,
We hope to make the circles of your eyes
Flow with distilled laughter.

Ben Jonson.

Besides those grosser elements of bodies, salt, sulphur, and mercury, ingredients of a more subtle nature, extremely little, and not visible, may escape at the junctures of the distillatory vessels.

Boyle.

The dew, which on the tender grass,
The evening had distilled,
To pure rose-water turned was,
The shades with sweets that filled.

Dayton.

From his fair head

Perfumes distil their sweets.

Prior.

Water by frequent distillations changes into fixed earth.

Newton.

Swords by the lightning's subtle force distilled,
And the cold sheath with running metal filled.

Addison.

When you set about composing, it may be necessary for your ease and better distillation of wit, to put on your worst clothes, and the worse the better.

Swift. Advice to a young Poet.

In vain kind seasons swelled the teeming grain;
Soft showers distilled, and suns grew warm in vain.

Pope.

The Arabians invented distillation; and thus, by obtaining the spirit of fermented liquors in a less diluted state, added to its destructive quality.

Darwin.

By act of parliament, distillers are not at liberty to draw off any low wines before they have charged their wash-stills with wash or wort.

Hey's Gauger.

We shall only here remark, that when a wash-back, or other distillery utensil, cannot be accurately measured by any other mode, recourse must be had to the method of equidistant ordinates.

Id.

DISTILLATION is the art of separating the volatile and spirituous from the fixed and watery parts of fermented liquors.

When a fluid which has undergone the vinous fermentation is exposed to the action of heat, the vapor which arises from it is, when collected and condensed by the reduction of its temperature, again converted into a fluid: but the fluid thus obtained is found to have different properties to that from which it was derived, and it receives the name of spirit. This spirit consists of water, and a peculiar fluid called alcohol. Alcohol, in combination with more or less water, and flavored by the aroma of the different substances from which it is obtained, forms brandy, rum, geneva, and all the various descriptions of spirit known in commerce. The art of the distiller consists in selecting the most convenient mode of heating the fermented fluid, and of condensing the vapor it affords, while he prevents the intermixture with his products of whatever would injure their flavor. To accomplish these purposes, although they are apparently simple, it is found that great care and skill are required.

The distillations performed by the chemist, with the retort, the alembic, the lamp-furnace, the pneumato-chemical and Woulfe's apparatus, for obtaining gaseous and volatile products in general, are essentially the same as the distillations conducted for the commercial purpose of obtaining spirit; but the scale is different, the chemist having his whole apparatus so completely

under his eye that he can adjust the heat and other circumstances with much nicety. In using, for example, when he has vapor to condense, the lamp-furnace, a wet sponge placed on the beak of the retort will suffice: but the commercial distiller requires, for the purpose of condensation, a large convoluted tube, passing through an immense body of water, which must be constantly renewed: the difference of scale, therefore, requires more than a mere enlargement of the apparatus, and there has in fact been found ample scope for improvements in the art.

The quantity and excellence of the spirit produced by the French, in consequence of the alterations they have made in the old method of distilling (the most improved form of which, by Saintmarc, we shall presently describe), have decisively shown the value of the new plans, which may be adopted without the disadvantage of increasing the first cost or complexity of the apparatus. They consist in the application of Woulfe's apparatus to this purpose. Wine being put into the boiler, and into all the intermediate receivers between the boiler and the worm, the tube from the boiler plunges into the wine of the first receiver, to which it communicates sufficient heat to raise its contents in vapor: this vapor has the same effect on the wine of the next receiver; and after the continuation of the process through as many receivers as may be thought proper, the whole of the vapor finally extricated is condensed in the usual way by passing through a worm. By this truly ingenious apparatus, spirit of various degrees of concentration may be obtained at one operation, according as the product of the first, the second, or any other receiver is taken; the consumption of fuel is extremely small, the product excellent, as well as greater in quantity than by any other means; and by using water instead of wine, in the boiler, the possibility of an empyreumatic taste is prevented.

In distilling from grain an oil is apt to come over, which injures the taste of the spirits; it is usual to keep it back by adding a little sulphuric acid to the wash.

The comparative salubrity of the spirit or *geneva* made in Holland is notorious, and it has been supposed that nothing like it can be produced in this country; but it appears to be entirely the result of the care they take in their processes. They use the most perfect grain, and use it only when perfectly malted, aware that a fourth part more spirit is obtained from such grain than from that of which the germination has been checked too soon, or suffered to continue too long. The best Hollands is prepared from wheat, which is the fittest grain for this use, and is more productive than barley; but rye yields about one-third more spirit than wheat, and is more extensively used in Holland. The fermentation is continued about three days: the first distillation is extremely slow, and the observation of this point is essential; the second distillation or rectification is done with juniper berries. The most rigid cleanliness is observed, and the vessels are cleansed with lime-water instead of soap, which would give the liquor a urinous taste. They use the rye grown on a calcareous soil, and never, if they can avoid it, that of fat clayey

ground: it is Prussian rye they employ. A little malt added to rye improves the flavor, but not the quantity of the spirit.

The substances from which spirit is obtained are usually barley, wheat, oats, rye, sugar, or molasses. In countries where the grape ripens in the open air, wine is distilled for this purpose: hence the superiority of the brandies of France; the spirit afforded by good wines containing the finest aroma of all products capable of yielding alcohol. When grain is used it is malted according to the usual process, like barley for brewing; and the fermentation is conducted in the same manner. After fermentation, the fluid intended to be distilled is called wash, and it is ready for the still.

A still consists of a boiler, which contains the wash; and a tube, in passing through which the vapors are condensed: the tube is convoluted, in order that it may have a great length in a moderate compass, and it is thence called the worm. The boiler formerly used was a cylinder, the height of which was in general one-half greater than its diameter; but the French, who have always been foremost in the improvements which this art has received, have introduced a much superior form. The height of the boiler has been considerably diminished, its width augmented, and instead of being cylindrical it widens upward gradually to within about three or four inches of the top; there the sides are curved into an arch, and become narrower. Hence its form is in fact similar to that of a common tea-kettle: the mouth *cd*, as is shewn in plate DISTILLATION, is of the same diameter as the bottom *ab*. To the boiler is fitted a conical head, in the interior of which, round the lower edge, is a channel, destined to receive the liquid condensed against the sides, and which, instead of returning to the boiler, is conveyed into the worm. In the old construction the head communicated with the worm by an inclined tube of a very small diameter; but now the tube in this situation, at its base *fg*, is as wide as the head, and diminishes in diameter as it approaches the worm, into which it opens. Another important difference, between the improved boiler and the old one, consists in the shape of the bottom: the old ones were flat; this is concave. By this means the heat received is nearly equal at every point directly exposed to the fire: and, as the bottom is convex within, the sediment from the wash falls round its edge, where, from its resting on the brick-work and not receiving the direct heat, it is not liable, from being burnt, to give an empyreumatic taste to the spirit. Two inches of the circumference of the bottom rest on brick-work. The boiler is filled by the aperture *o*.

In the old construction of the furnace the heat was applied only to the bottom of the boiler; and a further loss was sustained by placing, as is still common in furnaces generally, the centre of the grate under the centre of the boiler: without reflecting that the stream of air towards the chimney always carries the heat and flame in an oblique direction towards the end of the boiler. At present the end of the grate next the chimney is not placed further back than the middle of the boiler, and the heated air is conducted round the

boiler before it passes off, by which the whole mass of fluid in the boiler is heated at once, and the heat may be maintained with great regularity, while a much less quantity of fuel will suffice. The brick-work surrounding the boiler reaches as high as the circle *kk*.

The worm is generally made of tin or pewter, and is the same as that in common use, except that at the commencement *l*, where it is connected with the beak of the head of the boiler, it is wider than they were formerly made, and tapers gradually towards the discharging extremity *m*. The reason of this is evident, because vapor, only partly condensed, requires more room than where the whole is fluid. The refrigerator, or vessel *AB*, is kept constantly filled with cold water; this is effected by a tube *n*, which descends and opens nearly at the bottom of it, and brings a supply of cold water from a greater elevation; while another tube, *r*, conveys the hot water with equal rapidity from the top. By this means the condensation is so complete, that the spirit discharged at *m* exhales little or no odor. As it is often not possible to have the water from a greater elevation than the refrigerator, without raising it by mechanical means, the following plan, by Alexander Johnston, is highly entitled to attention, as in it the syphon is applied to the worm-tube as a refrigerator; and water is conveyed in any quantity to a worm-tub of the largest dimensions, if perfectly air-tight; it is represented at in the same plate *A*, is the feed pipe of cold water. *B*, the hot water, or waste pipe, the end of which must be about two feet below the feed pipe, to make it act with full effect.

When the work is commenced, the cocks must be shut, and the tub filled through a hole at the top, and of course, both pipes: and when full, the hole at the top is to be stopped, and the cocks opened together; the water will then commence running, and continue as long as the supply holds good, as it acts in every respect on the principle of a syphon. By this means pumps, horse-mills, and other machinery, are rendered unnecessary for that purpose. The application of this improvement is simple, and executed at a very little expense. The saving for the city of Dublin alone, is calculated at upwards of 100 horses per annum.

With respect to the usual mode in which distillation is conducted in the great public distilleries, the most interesting account that has been communicated to the public, is that contained in the deposition of James Forbes, of Dublin, who was for many years concerned in a large distillery. It is from the Appendix to the Fifth Report of the Commissioners of Enquiry into the Fees, &c., received in the public offices of Ireland; which report was printed by order of the house of commons.

'The corn is first ground, then mashed with water, and the worts, after being cooled, are set for fermentation, to promote which, a quantity of barm is added to them, and they become wash; the wash is then passed through the still, and makes singlings, and these, being again passed through the still, produce spirits; the latter part of this running, being weak, is called feints. When singlings are put into the still, a small

quantity of soap is added, to prevent the still from running foul; a desert spoonful of vitriol well mixed with oil is put into a puncheon of spirits, to make them show a bead when reduced with water: this is only done with spirits intended for home consumption, and no vitriol is used in any other part of the process. In this distillery, the former practice was to use about one-fourth part of malt, and the remainder a mixture of ground oats and barley, and oatmeal; latterly the custom has been to use only as much as would prevent the kieve (mash-vat) from setting. He had found that malt alone produced a greater quantity of spirits, than the mixture of malt and raw corn of the same quality with that of which the malt had been made. He generally put from fifty to fifty-four gallons of water to every barrel of corn of twelve stone (14 lb. to the stone). Each brewing was divided into three mashings, nearly equal: the produce of the two first was put into the fermenting backs; and the produce of the last, which was small worts, was put into the copper for the purpose of being heated, and used as water to the next day's brewing, when as much water was added as would make, with the small worts of the brewing, fifty-four gallons to each barrel of the corn. The kieves were so tabulated, that he always knew the quantity of worts which would come off at each mashing. Their strength he ascertained by Saunders's saccharometer, and at the above proportions he obtained, from a mixture of the two first worts, an increase of gravity from twenty pounds to twenty-two pounds per barrel, of thirty-six gallons, above water-proof, at a temperature of about 83°. The small worts gained at the same temperature about six pounds. The grain, after the last worts were off, remained nearly the same bulk as when put into the kieve; the whole of the grain was put in at the first mashing; he never knew any grain to be added to the second mashing. The worts of the first and second mashing were run through the mash-kieve into the under-back, in which state they were usually found to correspond with the computation made in the mash-kieve and under-back, in the latter of which a correct gauge might be taken of them. He usually commenced brewing at six o'clock in the morning: the first worts were run off into the under-backs, and required from an hour to an hour and a half to be forced up into the cooler; the second worts came off at the end of two hours from the discharge of the first, and required about the same time to pass into the coolers. The small worts were generally let off late at night; and being then, or early on the following morning, put into the copper to be used for the next brewing, were seldom shown on the coolers. He thinks that any decrease of the worts by evaporation whilst on the coolers, must have been very inconsiderable; and that a correct gauge of the worts may be taken in the coolers as well as in the underbacks. The quantity of wash in the backs was found to be nearly correspondent with that of the strong waters which had been on the kieve and in the cooler. The fermentation of the worts was produced by means of yeast, and was in general so contrived as to be apparently kept

up for the full time allowed by law (six days): he has, however, usually had his wash ready for the still in twenty-four hours from the time in which it was set. Backs are renewed in two ways; either by additions made to them from other backs in the distillery, each supplying a certain portion of wash to the back which is next before it in the order of fermentation, while the newest and least fermented wash is replenished by worts, or, when the fermentation is down, by an entire substitution of worts. He has ordinarily, in the course of work, charged a 500 gallon still with wash, and run it off in twenty to twenty-three minutes: he has seen a 1000 gallon still charged and worked off in twenty-eight or thirty minutes. He understands that it is now the practice of some distillers, to heat the wash nearly to the state of boiling before the still is charged with it; by which means he believes the process to be accelerated by three or four minutes. He has seen a 1000 gallon still charged with singlings, and worked off in from forty to fifty minutes, and thinks a 500 gallon still requires nearly an equal time. Feints from pot-ale (the name given to completely fermented wash) usually are run off in from six to seven minutes; making allowance for every delay, about six charges of spirits may be run off from a still of 500 gallons' contents, each charge estimated at 150 gallons. The feints were always put back into the pot-ale receiver; twenty gallons of feints is the usual quantity run from a 500 gallon still charged with singlings; he thinks there is more spirit extracted from feints than from pot-ale; there was no delay between one charge of pot-ale and another, or between one of singlings and another; the still could be cleaned in less than a minute; it very rarely occurred that the ordinary accidents which happened to the still delayed the work to any considerable degree. The still is never charged with wash beyond about seven-eighths of the still, nor with singlings beyond about four-fifths, exclusive of the head. The estimated produce (according to which the duty may be charged) is one gallon of singlings from three gallons of wash, and one gallon of spirits from three gallons of singlings, but it is very frequently somewhat more. Previous to the regulation (of Excise) which took place in June, 1806, from a still of 540 gallons, which is charged with 2075 gallons of spirits weekly, he has frequently drawn 530 gallons in one week, and thinks 500 gallons to be a fair average. He usually made spirits about fourteen per cent. above proof, by Saunders's hydrometer. Spirits exported by him from twelve to fourteen per cent. above proof by Saunders' and Hyatt's hydrometer, were charged in London at from twenty-four to twenty-six gallons per cent. Before he sent them to the custom-house, he either reduced them with water, or drew them at that strength from the still. To every six gallons of strong spirits, one gallon of water was added in the distillery, which reduced them to the strength usual for exportation. The reduced spirits are permitted to the king's warehouses, and the distiller given a credit for a decrease of stock equal to the quantity so permitted; by these means he has one gallon of private

spirits to dispose of for every gallon of water mixed with the spirits exported; besides this, the distiller draws back the allowance given in lieu of the malt-duty on every gallon of water added: when he warehoused spirits with the intention of afterwards using them for home consumption, he left them at their full strength.'

The absence of improvement in the process of distillation, as well as in the apparatus for effecting it, in this country, may be chiefly traced to the shackles which have proceeded from the regulations of excise, adopted and enforced for the protection of the revenue. Whether those regulations may have been indispensably requisite to that end, is, perhaps, very questionable; but it is quite certain that they have had the effect of restraining those extensive improvements in this branch of science and business, which have been almost universally accomplished, where the inventive genius of our countrymen has had free scope in the application of its powers to practical results. This is especially visible on a comparison of the means employed in France for the improvement of this branch. With an unlimited supply of the grape, a material certainly calculated to afford one of the finest spirits, they are enabled, almost at will, to effect such improvements in its quality as result from changes of process, and the adoption of superior apparatus; since, although in some respects under certain revenue regulations, they are not enforced in a manner calculated to prejudice the exercise of talent, whether mechanically or chemically applied to the art.

In the English language, too, there scarcely exists a treatise of any value on this subject; and that which has been published is little more than translations from works in the French language. There the scientific investigations of such men as Lavoisier, Chaptal, Gay Lussac, and Thenard, have laid a sure foundation for the more practical illustrations of Macquer, Dubrunfaut, Dubuisson, and others of less note, who have sent forth to the world the result of their labors.

With names as high on the list of science as our countrymen Davy, Woollaston, Dalton, Henry, Thomson, Ure, and Black, and with some of the most important departments of the art of distillation, up to the point of fermentation, as well understood, and as extensively practised as in France, the paucity of information on the subject generally, in this country, is not a little surprising. The French distillers have brought to notice several stills of curious construction, which have had for their object the saving of time and fuel, and the production of a spirit of superior strength and good quality. In some of these perpetual distillation has been aimed at, but it cannot be said with success. Indeed, it is difficult to conceive that the elements to be converted, and the practice necessary for their conversion, can be so nicely combined and adjusted as to bring about such a result, without a most elaborate and expensive series of machinery and vessels; costly in themselves, not easy of management, and leading to the risk of considerable loss, from some of those inconveniences and irregularities to which all complicated apparatus are subject. A still has lately been brought forward, which

is stated to be coming into extensive use, and to comprise all the advantages of perpetual distillation without its disadvantages; uniting moderate cost, the employment alike of a single vessel and a single operation, and the most perfect facility of management, with great economy of time, fuel, and other items of expense; and, which must be a primary object with all distillers, with the production of a fine and potent spirit. It has been introduced by two French gentlemen, M. Alégre, and M. Saintmarc; and is patented in this country in the name of the latter.

On a view of the plans and descriptions of this apparatus, there seems little reason to doubt its powers and advantages, as described; and, assuming the truth of the facts stated with regard to those powers as proved in practice, the invention is entitled to great praise; and must effect an extensive revolution in distillation, both in this country and in its colonies.

The plate of DISTILLATION presents a series of figures, exhibiting the construction and practical operation of this interesting combination of chemical and mechanical power.

Fig. 1 represents a sectional view of the still, with its furnace, and an elevation or outside view of the refrigerator, or worm tub. Figs. 2, 3, and 4, are plans of three portions of the still. Fig. 5 is a perspective view of one of the double tubes or pipes. Fig. 6 is an elevation of its front exterior, and fig. 7 is an elevation of its back exterior.

FIGURE I.

A. THE FIRE-PLACE OR FURNACE, above which the still is placed.

B. EIGHT COPPERS OR BOILERS, surmounting each other, constituting the apparatus or still, in the form of a column or cylinder, and numbered 1 to 8; the different coppers or compartments being put together by flanches and bolts.

C. (vide fig. 6 and 7), OPENINGS OR MANHOLES, tightly closed by screw boxes, or otherwise, calculated, when the still is of large diameter, to admit a person into the several coppers, No. 1 to 7, for the purpose of cleaning or repairing them; or, when on a smaller scale, intended to admit a person's arm for the same object.

D. AN EXTERIOR VESSEL, or INTERMEDIATE WASH CHARGER, surrounding the upper compartment of the still; and calculated to contain a quantity of wash equal to the proper charge of one copper.

E. SUPPLY PIPE communicating from the general wash charger, or vessel containing the liquid to be distilled, to the exterior vessel D; and furnished with a cock for the purpose of turning the wash into that vessel.

F. A PLUG OR VALVE fixed in the head of a pipe extending from the bottom of the vessel D into the lower part of the copper, 7; which plug or valve is raised by the aid of

G. A LEVER AND FULCRUM for the purpose of discharging the wash contained in the vessel D into the copper 7; from whence, as it reaches the upper end of the pipes H, it flows down from copper to copper, until it reaches No. 2; a quantity being displaced from the surface of the liquor in each copper equal to that which is thrown in from the copper next above.

H. FIVE PIPES, communicating from the copper, fig. 7 to fig. 6, and so on in succession, from vessel to vessel, down to fig. 2, extending from the level of the wash in one copper, marked by dotted lines to nearly the bottom of the copper below, in order to displace the warmest liquor, as shown in the description of G.

I. (Vide figs. 6 and 7), SIX PIPES FURNISHED WITH COCKS, communicating respectively from one copper to that next below, by which all the wash in the several coppers, from fig. 7 downwards, may be conveyed into the lower coppers, and finally drawn off from the lowest vessel.

K. (Vide figs. 6 and 7), SMALL TRIAL COCKS IN COPPERS 1 and 2, which, on being turned, indicate when those coppers are charged to the proper height, as denoted by the dotted lines on the same level as these cocks. They serve also as valves to admit air when the liquor is drawn off. A similar cock is likewise placed in copper, fig. 3, for the purpose last mentioned.

L. (Vide fig. 6), A SMALL PROOF COCK, placed vertically near the roof of the copper, No. 1, which, on being turned, determines by the application of a lighted taper or candle, whether or not there remains any portion of alcohol in this copper or boiler.

M. A DISCHARGE PIPE AND COCK to carry off the spent wash from the copper, fig. 1, when the spirit has distilled from it. This cock discharges down to about one inch above the crown, or highest part of the copper; and, in consequence, it is not necessary to damp the fire when it is opened.

N. A SECOND DISCHARGE PIPE AND COCK in the lowest part of the bottom, which carries off the whole contents of the copper; and, when opened, will generally require the fire to be damped, to prevent burning the bottom.

O. TEN DOUBLE TUBES or PIPES, of which five are fixed on the roof of copper 1, and five on that of 2. These pipes are closed at the top, and have openings in the upper part of the inner, communicating with the outer one. The vapor produced from the wash in copper 1, passes through the five double tubes on the roof of that copper into the copper 2, by rising up the inner tubes, passing therefrom through the openings at the upper part thereof, and descending down the outer tubes, discharging itself into the liquid in copper No. 2, where it becomes condensed. In like manner the vapor produced in the last mentioned copper passes up the double tubes on the roof thereof, into the copper fig. 3. (For a better description of these double tubes, vide the perspective view of one of them in fig. 5; and for the plan of the coppers containing them, vide fig. 4, and their respective explanations given below).

P. FIVE SEMISPHERICAL VESSELS OR DOMES (in French, CALOTTES), constructed upon, and tightly jointed to, the centres of the roofs of the several coppers, No. 3 to 7, both inclusive. These domes, except the highest, are surrounded with wash; but have internal communication only with each other, by means of pipes fixed on their centres, which pass into the pipes Q, next described.

Q. FIVE DOUBLE TUBES or PIPES (of the same

kind as those marked O.), which are tightly fixed on the centres of the roofs of the coppers Nos. 3 to 7, and stand within the domes last described. The vapor described above (O) to have reached the copper No. 3, becomes condensed in the wash contained therein. The vapor generated in this copper passes through the double tube Q into the dome which encloses it, and so in succession, through the several tubes and domes above, until it reaches the dome on the roof of the copper No. 7, where it finally passes off into

R. A LARGE PIPE, which conveys it to

S. A WORM TUB, or REFRIGERATOR (of which an elevation or outside view only is given in the drawing), through

T. A WORM contained therein; and runs it off as alcohol, at the bottom thereof into

U. A SPIRIT RECEIVER. (For the plan of the coppers containing the domes P, and double tubes Q, above described, as well as the reversed double tubes V, and the safety pipes W, both hereafter described, vide fig. 4, and the explanations of it given below).

V. FIVE REVERSED OR DESCENDING DOUBLE TUBES OR PIPES (constructed on the same principle as those already described, but of smaller diameter), which are suspended, reversed, from the roofs of the several coppers from No. 7, down to No. 3, both inclusive. Of these reversed tubes the four uppermost pass through the domes P, to which they are tightly fixed; and they serve to return to the lower domes in succession, the phlegms, or such results of the vapor, in a liquid form, as may have been condensed in its passage upwards through these several domes. These phlegms, or condensed liquids, are partially redistilled in their progress; and the remainder pass through the fifth, or lowest, of these reversed tubes, into the copper No. 3, where they become mixed with the wash contained therein, and are again distilled with it.

W. FOUR SAFETY PIPES, fixed in the roofs of the several coppers, Nos. 4, 5, 6, and 7, which are intended to carry off such vapor as may rise from the wash in those coppers, and terminate in

X. A PIPE, which passes on to the worm-tub or refrigerator S, and by a separate worm

Y. of two or three coils only, runs off the small portion of spirit it produces into the spirit-receiver U.

Z. A PIPE communicating between coppers No. 1 and 2, having its upper end carried about four inches above the level of the liquor in copper No. 2, in order to admit of the increase of its volume by the condensation of the vapor which passes into it from the copper No. 1 by the tubes O. It also serves to return from copper No. 2 to the lower part of No. 1 whatever liquor may pass up the tubes O, by any sudden or excessive action of the fire

FIGURE II.

a. A PIPE AND COCK for the supply of cold water into the copper No. 8, for the purpose of additional condensation when the spirit is required of high proof.

b. A WASTE PIPE, fixed near the top of the uppermost copper No. 8, to carry off the heated

water from the surface, in proportion as the pipe a furnishes cold water.

c. A PIPE AND COCK placed in the bottom of the copper No. 8, for the purpose of entirely drawing off, at pleasure, the water which may have been employed for additional condensation.

d. A PIPE AND COCK by which a stream of water may be thrown into the vessel D, and thence conveyed, by the valve or plug F, and pipes I or II, into the lowest vessels, either to be used as an occasional condensing power, or for the purpose of washing the still.

e. A PIPE AND COCK, by which a stream of clear water may be thrown into the uppermost of the domes P, and thence descend through the other domes below, in order to cleanse them from impurities.

F. THE PLUG OR VALVE F, fig. 1, with its pipe conveying the wash from the vessel D to the copper No. 7.

G. THE LEVER AND FULCRUM G, fig. 1, by which the valve or plug F is raised, to discharge the contents of the vessel D into the copper No. 7.

C. MANHOLE OR OPENING C, fig. 1, for the purposes there described. This figure only represents that in the copper No. 7; the remainder are shown in fig. 7.

I. EXTERIOR PIPE I, fig. 1, for the purpose of drawing off the wash from one copper to another. This figure only represents that communicating from copper No. 2 to No. 1; the remainder are shown in fig. 7.

K. SMALL TRIAL OR GAUGE COCK, K, fig. 1, to show when the wash is charged to the proper height, and to admit air when the liquor is drawn off. This figure only exhibits that in copper 1; those in Nos. 2, and 3, are shown in fig. 7.

L. SMALL PROOF COCK, L, fig. 1, to determine, by the application of a light, when all the spirit has distilled from the wash in copper No. 1.

M. A DISCHARGE PIPE AND COCK, M, fig. 1. for the purpose of discharging the wash above the crown or highest part of the copper.

N. A SECOND DISCHARGE PIPE AND COCK, N, fig. 1, for the purpose of discharging the wash entirely.

FIGURE VII.

Presents a back elevation of the still, as fixed, exhibiting the manner in which the several remaining pipes I, manholes C, and cocks K, referred to, but not shown in fig. No. 6, are arranged; the repetition of the description being considered unnecessary. The lowest manhole in this drawing is of a form different from the others; being on a scale to admit a person inside the vessel for the purpose of cleaning the bottom, the only part exposed to the action of the fire. The upper ones are of sufficient dimension to admit a person's arm to clean the coppers. But when the diameter exceeds materially that of the present view (which is in the original four feet two inches) it is necessary to have large manholes, the same as that in the lowest copper, to admit a person into them all. The command of all the pipes, cocks, and manholes is arrived at by means of a spiral staircase,

which makes a half revolution of the still, and is generally made of cast iron.

In this figure the various water pipes, described in fig. No. 2, are not shown; as they could only be represented in a very indistinct way. For the same reason the discharge pipes M and N are not repeated; and the chimney is omitted, which would have given the figure an additional appearance of confusion; and is not necessary to make it intelligible. The foregoing explanations have the advantage of being perfectly clear and intelligible, a quality not common to descriptions of a mechanical nature; which are usually more adapted to the comprehension of scientific, than to the understanding of ordinary readers. Although in the description of the different parts of the apparatus, the separate uses of each are well defined, the general effect of the whole combination is left unexplained. It may therefore be necessary to give an idea of the principles on which the advantages to be derived from it are founded.

The eight coppers, placed one upon the other, of which the seven lowest are intended to hold the wash, and the upper one to receive water,—distil in the following manner:—

The first three, of which the second and third alone are intersected by the double pipes, distil almost at the same time. The lowest, only, being submitted to the immediate action of the fire, is, consequently, the first whose wash enters into a boiling state. The vapor penetrates into the second, passing through the wash which is contained in it, by means of the above mentioned pipes, and is there condensed, yielding up its caloric to that liquid, which is thereby quickly brought into a boiling state; the vapor which proceeds from the wash in the second boiler passes into the third, producing the same effects as in the preceding. The new vapor, necessarily stronger than the first, rises and passes into the fourth, where it is received under a semi-spherical dome (or calotte), which prevents it from communicating directly with the cold wash contained in that copper.

On arriving in this dome it is easily conceived that the most watery portion of the vapor is there condensed, giving up its caloric, which contributes to heat the wash that surrounds the dome. The most spirituous part, which passes into the dome of the fifth copper, experiences the same effect on coming in contact with a cold body. The same operation takes place from one dome to another up to the last. As the vapor which rises is exposed to a cold temperature it is condensed, ceding its caloric; and it is after a succession of sufficient condensations, that the spirit is divested of all weak and watery particles, which, thus liquefied, return from one dome to another, being partially re-distilled in their progress, according to their degree of gravity, until the least spirituous reaches the third copper, there to undergo a new distillation. It has been observed that the upper copper is reserved to contain cold water; it is by this means, and by renewing this water, keeping it in a higher or lower temperature, according to circumstances, that the distiller can obtain the spirit at the strength he desires.

To explain by what physical law the watery vapor is forced to return from dome to dome to the third copper, and is there found totally separated from the alcohol, which arrives at the worm pure and free from any empyreuma, we shall call to mind what all chemists and distillers are, doubtless, aware of. It is known that water cannot boil under a heat of 212° of Fahrenheit; while alcohol boils at about 173° . It is evident, therefore, that whenever the watery and alcoholic vapors rise, and are successively received in one or more atmospheres of from 174° to 190° or 200° , the watery vapor becomes separated from the alcoholic, and is condensed; and the last, only, passes out, and is received at the desired strength; care being taken to regulate properly the temperature of the water contained in the uppermost copper, which is traversed by the strongest and most alcoholic vapor before it passes into the worm.

It may be affirmed that the advantages of this apparatus are the greatest that have, as yet, been obtained. There is a great economy in fuel, as well from the small surface exposed to the action of the fire, and productive employment of every portion of the caloric, as by the simplicity and rapidity of the operation. To the saving of fuel we shall shortly advert more particularly. It will be perceived that a large portion of the spirit is distilled by vapor; and it is, consequently, much purer than that obtained by the ordinary apparatus. It is to the immediate contact with the fire of the material to be distilled, that distillers owe the greater portion of those injurious flavors and qualities with which spirits are frequently impregnated. Those bad flavors are acquired chiefly by the length of time that the wash remains exposed on the bottom of the still; for during the period requisite to bring it up from the cold state to that of ebullition, at which distillation commences, deposits of the heavier particles contained in the wash are made on the bottom, which, being rather absorbents than conductors, prevent that constant and uniform transmission of caloric which is essential to good and pure distillation. It is in the earlier stages of the application of fire that this effect is mainly produced; for, as the wash approaches a state of ebullition, the struggles, to reach the surface, of those parts of the wash which are impregnated with caloric, and consequently decreased in gravity, and which, in the first instance, are sluggish in their motion, gradually bring the mass into a state of ebullition, which counteracts the tendency to burn, or otherwise acquire injurious flavor. Once arrived at the boiling point, the risk of this evil is almost entirely removed. But as, on the common principle of distillation, the still is every time charged with cold wash, so every distillation is equally exposed to the recurrence of the evil.

It is one of the peculiar merits of M. Saintmarc's still to have effectually provided against this disadvantage. In his apparatus, only the first charge of the lowest copper is entirely distilled by the direct action of the fire. The aqueous and alcoholic vapors, which rise together, on arriving in the second copper, become mixed with the wash contained in it and are re-distilled

before they pass into the third copper. A third distillation takes place in that copper before it passes under the correcting influence of the succeeding vessels. Thus he effects one distillation by fire, which is immediately succeeded by two vapor distillations; and, subsequently, by five purifying processes, which divest the spirit of all its impurities; and it comes over, at one operation, of the strength of thirty-five per cent. over proof, according to Sikes's hydrometer, used by the Excise and English distillers; which is equivalent to bubble seventeen or eighteen in the commerce of the West India Planter, and about $\cdot 870$ of the specific gravity of chemists. The strength at which M. Saintmarc brings over his spirit by a still of eight compartments, is limited to thirty-five or forty per cent. over proof; that being the highest degree generally required for purposes of commerce. But, by the addition of two or three more coppers or compartments to his still, he would succeed in obtaining, by one operation, the pure alcohol of the chemist, of the gravity of $\cdot 820$ or $\cdot 825$.

It has been observed, that only the first charge of the lowest copper is entirely distilled by the direct action of the fire; and that is the only portion of a distillation, however prolonged, which is exposed to the injury of burning. By making the first charge of the lowest copper water, instead of wash, even this small risk will be totally avoided; since the wash, when once heated, comes down invariably into the lowest copper in a boiling state; and during the short time that it remains there, being kept in a constant state of ebullition, it is not subject to the disadvantage of burning.

We speak of the shortness of the time during which the wash remains in the lowest copper. As soon as the whole of the spirit has distilled from the lowest copper, which is proved by the application of a light to the small proof cock L, fig. 6, already described, the wash is discharged from that copper and the cock I, communicating from copper No. 2 to No. 1, is immediately opened, which discharges the whole contents of No. 2 into No. 1, without at all suspending the distillation. In order to replace the wash drawn from copper No. 2, that contained in the vessel D is discharged, by raising the valve or plug F by means of the lever and fulcrum G, which displaces the same quantity down the pipes H, until the copper No. 2 is replenished. A fresh charge of wash is then drawn by the pipe E into the vessel D, ready for the next supply.

It is easy to conceive, that, when the first copper has furnished all the alcohol it contains, the wash of the second is chiefly distilled; and, therefore, when brought down into the lowest copper, in a state of perfect ebullition, and thus far advanced in the process, it remains for so short a time in contact with the fire, that it not only does not acquire any bad taste in consequence, but its perfect distillation is completed within fifteen or twenty minutes; the depth of the liquor being no more than ten or twelve inches. The process may thus be carried on ad infinitum, or so long as wash is furnished to feed the still. The supply displaced from the third

The copper has been already stated to be distilled; and the quantities contained in the copper with the domes have acquired a considerable degree of heat; graduated from a little below the boiling point in copper No. 4, down to 160° or 170° in copper No. 7. In imbibing the caloric brought by the vapor through the domes, which is continually renewed, the wash in the fourth and succeeding coppers becomes the first agent which contributes to divest the alcohol of the watery parts that rise with it.

It is among the advantages of this apparatus, that the continual and regular supply of wash, and the gradually advancing heat which it acquires in the manner just described, are calculated to prevent the occurrence of those accidents which arise in distilleries, chiefly from the mismanagement of the workmen employed: we mean by explosion or collapsion. When a large quantity of liquid, of a turbid and heavy nature, is collected in a body, and subjected to the action of a powerful fire, it happens, not unfrequently, that, before it arrives at the boiling point, it forms a strong head, which fills the space in the upper part of the still, and passes even down the worm; and, on some occasions, has caused an explosion of the still. The same result would follow the want of a proper outlet for the vapor. But the accident which more frequently occurs is collapsion. When a charge is worked off in the common still, it has frequently happened, that whilst it remains filled with vapor, a new charge of cold wash is thrown in for distillation, or of water for cleansing, without the precaution of opening the man-hole, or other aperture in the breast of the still, to admit air. A sudden condensation follows the admission of the cold liquor; and, a vacuum being formed, the still immediately collapses.

Against both these accidents, M. Saintmarc's still affords complete protection. If the wash acquire a head, which is only likely to happen with the first charge of the lowest copper, (and that may be prevented by using water for the first charge, as before stated), it can never penetrate further than the second copper; and is immediately returned by the pipe Z into the lower copper again. The pipes O and Q are ample security for the free passage of vapor which has to pass up them; and the safety-pipes W equally secure the coppers on which they stand, against all possibility of injury from the generation of vapor upon the surface of the wash in those coppers.

Against the risk of collapsion the same security seems to exist. The liquor brought down into the lowest copper being always at the boiling point, and that in the vessels above graduated below that point, the descent from vessel to vessel is accomplished without any material change in the temperature, which is acting upon the vapor within the domes; and, consequently, without, in any important degree, changing the course of condensation which is going forward. From this observation, in its strict sense, must be excepted the copper, No. 7; where a supply of wash being introduced from the vessel D, of a temperature considerably lower than that already existing in the copper, an additional condensing

power is acting in that copper for a few minutes; and the product in spirit, during that period, will be somewhat diminished in quantity, but of higher strength. One of the effects of discharging the wash from the vessel D into the bottom of the copper No. 7 is that, to a certain extent, an equalisation of temperature takes place, by the admixture of the two bodies, in the act of displacing, by the pipe H, a quantity equal to that admitted from above. The more immediate object of fixing the vessel D round the uppermost compartment of the still, rather than as a detached vessel, is also to encrease the temperature of its contents, by contact, during the period occupied in working off a charge below, with a body at a much higher degree than the wash which it contains. By the union of these two advantages, the diminution of temperature in copper No. 7, only produces a slight effect, as already observed; and nothing like a vacuum is, or can be, formed in consequence; which is further provided against by the connexion of the dome in copper No. 7, with those both below and above: and, through the latter, with the large pipe leading to the worm-tub. We have been thus particular in detailing these parts of the case, as it is of high importance in distilleries to be independent both of ignorance and carelessness on these points.

The first impression on our minds, on a view of the drawing of the still, was that it was complex in its nature and construction, and must be difficult to manage. It requires, however, but little attention to discover that such is not the case. On the contrary, it is entirely self-acting as to all its interior arrangements, and so simple and unerring in its principle and operation, that any person, whether previously conversant with distillation or not, will be quite competent to its management, with a few days' practice; a point of great importance, where the indifference or ignorance of the parties employed to work the stills (as is the case, particularly in the West Indies), renders all complexity unadvisable. The mere stirring of a fire, and the turning of two or three cocks, is the utmost extent of attention required to conduct its operations.

The construction of the still has been already spoken of, in the description of its various parts; and care seems to have been taken, in this respect, to meet all reasonable emergencies. The diameter of the still being small, in proportion to its powers, as compared with the common stills in use; and each compartment being separately manufactured, and finally put together by flanges and bolts, M. Saintmarc generally makes a spare lower compartment, precisely adapted to the higher part, which goes with the still; and especially to the West Indies. It does not appear that this still will be of less duration than any other in use, or require more repairs than the most simple ones. On the contrary, the lowest copper is the only one which is submitted to any severe action; and if, either by lapse of time or constant use, or by any accident, to which carelessness equally exposes stills of all sorts, the bottom should be injured, a period of two or three days would suffice for taking away the lower compartment,

fixing the spare new one, and replacing the still in its position ready for work, as sound and perfect as when quite new. This must be of great importance to a West India planter, who, if the same thing were to happen with a common still, at the beginning of a crop, would, in all probability, be deprived of the means of working during the whole season; as the consequence of such an accident to a common still is, generally, the necessity for a new one; so difficult and expensive is the repair. In like manner the principle of the construction of this still affords easy access to any copper or compartment, in the event of a little repair being necessary. But it would appear to be little liable to derangement in its upper compartments; the only action there being an equable and quiet transmission of vapor upwards, and of wash downwards; neither of them calculated to injure the interior works.

A question suggested itself to us, as to the power of introducing into the lower compartment of M. Saintmarc's still, the machinery employed in most malt distilleries, for disturbing the heavier ingredients in the wash, which may settle on the bottom. We have already shown that such a case may be prevented here; but, supposing our view of the non-liability of the wash to be burnt should be erroneous, there does not appear any difficulty in introducing the chains, or other proper machinery, for that purpose. In the common still it is fixed vertically, through the upper part of the still, and worked through a stuffing box. In this it would also be required to be worked through a stuffing box, but horizontally, through the side of the lowest copper, by the aid of a pair of bevil wheels in the interior.

A series of experiments and calculations have been made for the purpose of demonstrating the powers of M. Saintmarc's still, and proving the allegations with regard to its saving of fuel, water, and many other points of economy, advanced in its favor. These experiments and statements are of a sufficiently interesting character to induce us to add them to the preceding observations, as they are calculated to carry conviction to the mind, from the plain and simple manner in which they are advanced. They are made in a way likely to attract notice; the powers of the patent still being placed in juxtaposition or contrast, with those of the common still. As far as our means extend of judging of the correctness of the statement with regard to the powers of the old still, we should be inclined to think them not unfairly put. The data on which some of them rest are admitted by chemists, having been proved by the experiments of some of the ablest men in that branch of science, both in this country and in France. The deductions, therefore, are easy on those parts of the case. With regard to many points, such as cost and number of apparatus and vessels, space required, savings, and other considerations of a commercial nature, and some other points, they are not susceptible of check by any but practical persons.

It is of course, well known, that the ordinary process of distillation consists of three operations, and is usually performed in two stills of different dimensions; the larger one called a wash

still, being that in which the first operation takes place, of distilling the wash, the vapor proceeding from which, being of a weak nature, the product is an imperfect body, of about half the strength of proof spirit, and technically called low wine. This product is then conveyed to the smaller still called the low wine still, where it is subjected to a second distillation, from which results a spirit. A portion, however, of this latter product is separated from the remainder, it being of a weak and impure character; it is denominated feints by the excise laws and by the distillers, and is either submitted to a third distillation per se, or is mixed with the wash of the next distillation; being, however, generally separately distilled. These constitute three distinct operations. By M. Saintmarc's still, all this is effected at one operation; the weaker vapor, which constitutes the low wine of the first, and the feints of the second, distillation, on the old plan, being strengthened and purified by the subsequent processes to which it is subjected in the higher parts of his still; and all the weak part of the vapor, which, if passed into the worm, and there condensed, would be in the state of low wines or feints, being condensed within the still, long before it reaches the summit, and returned into the lowest coppers. This is the basis of one of the important savings of the still. On the old plan, the vapor generated by the first distillation is passed off immediately to the refrigerator or worm-tub, and there condensed; the vapor of the second distillation, the result of a new application of fuel, is again sent to the worm-tub and there condensed; and the third distillation, by the aid of a third fire, is again treated in the same way. M. Saintmarc makes the first application of fuel to his still effect all these objects. The vapor of the first copper heats the second; that of the second heats the third; that, again, passes through the several upper compartments, distributing a portion of its caloric to the wash in each of them, thus preparing them for distillation, in which process the vapor has the benefit of those condensing powers which each body of wash contains, for the separation, by liquefaction, of its aqueous or weaker, from its alcoholic or stronger, portions.

The advantages here described are demonstrated by experiments, showing the actual powers of a still on this principle, as compared with those of the two stills in use on the old plan, of equal powers of production; in which are shown the relative areas or superficies of each exposed to the action of the fire; the generation of vapor on both plans; and the quantity of water employed in condensing that vapor.

A still on M. Saintmarc's principle, containing 560 imperial gallons of wash, in seven coppers of eighty gallons each, estimated to work off thirty charges of one copper, amounting to 2400 gallons, will produce (supposing the wash to be attenuated sixty degrees, and, consequently, capable of yielding twelve per cent. of proof spirit on the wash), 213 gallons of spirit at thirty-five per cent. over proof, equal to 268 gallons at proof in a day of twelve hours. A common still of the total contents of about 1700 imperial gallons (to contain a charge of 1200 gallons of wash), will

work off twice in twelve hours; distilling 2400 gallons of the same gravity as above, into 960 gallons of low wine; and a low wine still containing a charge of 480 gallons, will produce, at twelve per cent. on the wash, the same quantity, or 288 gallons of proof spirit.

The cost of these two stills is described as double that of the new still.

Taking, next, the diameters and superficies of the stills on both systems, it will be found that, on the old plan, a wash still to contain a charge of 1200 gallons, will have

A diameter of seven feet, and an area of about 38½ feet
And a low wine still of 480 gallons, will have a diameter of five feet, and an area of 19½

Making a total superficial area in the two stills of 58 feet

The diameter of a still to contain a charge of 560 gallons on the patent principle
will be about fifty inches, and its area 13½ feet

Being less than one fourth of the superficial area, exposed to the action of the fire, as compared with the two stills on the old plan.

The consequences of these diminished proportions, are—

First.—That the construction of the furnace for the patent still, does not cost above one-third, or one-fourth, that of the two furnaces on the old plan.

Secondly.—That the consumption of fuel is proportioned to the areas of the respective stills, combined with the quantities of liquid raised into vapor, and the economy of caloric, or heat, in that operation, resulting from their different principles of construction.

It may be shown that, from the union of these considerations, results the fact (proved in practice), that the patent still does not consume, in any case, more than one-third, and, probably, less than one-fourth, of the fuel that is employed by the others. To present this more intelligibly (always bearing in mind the respective superficies of 13½ and 58 feet), the different quantities of vapor passed through the worms, and there condensed on the two plans, may be stated. For this purpose, taking the average volumes of vapor generated by the various liquids distilled, when entirely evaporated, to be in the proportion of 1500 to 1, it will be seen that, by the old plan, there is produced :—

Of low wines	960 gallons
Of spirit, (at proof)	288
Of feints, (one fourth)	72

Making 1320 gallons × 1500 = 1,980,000

being the gallons of vapor passed through the refrigerator on the old plan.—On the patent principle there is produced :—

Of spirit, (33 over proof) 213 gallons × 1500 = 319,500

being the gallons of vapor passed through the refrigerator on that principle; or less than one-sixth of that produced by the principle now in practice.

In pursuing this enquiry to the consumption of water, which is necessarily proportioned to the quantity of vapor condensed, it is assumed, that the vapor necessary to produce one gallon of liquid will raise to the boiling point, in its condensation, five gallons of water—and taking 50° of Fahrenheit as the mean temperature of water, it will be found that 1500 gallons of

vapor, equivalent to one gallon of liquid, will communicate to five gallons of water, caloric to the extent of 162°; but as the temperature of water, for the purpose of condensation, will be in a great measure ineffectual, when raised above 104°, it follows, that the absorption of caloric, by the water, to bring it to that point, is only 54°, or one-third of 162°—and, therefore, three times five gallons, or fifteen gallons of water, will be necessary to condense the vapor, which will produce one gallon of liquid.

Thus, on the old plan, (as shown before) 1320 × 15 = 19,800

And on the patent plan, (as shown before) 213 × 15 = 3195

To which must be added, for the water consumed in the upper-
most copper of the still 600

Making a total quantity of 3795

Which two sums of 19,800 and 3,795 are the respective numbers of gallons of water employed to condense the vapor, on the two principles; or, in the same proportion for any increased or diminished consumption, arising either from employing the water at a lower or higher temperature, or from the repeated use of the standing contents of the worm-tub, in consequence of its becoming cool when not worked.

A variety of estimates are given, exhibiting the diminished size and cost of the necessary buildings, and the decrease, in number and expense, of the various descriptions of vessels, pumps, pipes, &c., employed in one, as compared with the other, system. These, though essential to the distiller, are not necessary parts of our view of the question.

Another statement is given of the powers of

a still on M. Saintmarc's principle, which, were it not, as is stated, demonstrable in practice, would exceed belief.

A still of eight feet six inches diameter, containing 350 gallons of wash in each of the seven lower compartments, or a total charge of 2450 gallons, will run off in the day of twenty-four hours, at least 30,000 imperial gallons of wash, and produce between 3000 and 4000 gallons of spirit; a quantity unprecedented in the annals of distillation.

The results of some experiments are given, which were made in the presence of the officers of the board of excise in May 1826, by which, at one operation, some spirit was produced as high as fifty-eight per cent. over proof, and the mean strength of the whole day's distillation was forty-three per cent. over proof. The produce in quantity exceeded by ten per cent. what was required by the excise, according to the attenuation of the wash. A surplus to this extent, however, cannot be calculated upon; but it is manifest, that the evaporation and loss consequent upon one single distillation, is small as compared with that which results from three distillations, and two pumpings, or other removals from vessel to vessel, as hitherto practised. By experiments on this head made with the same wash, on the two modes of distillation, the result has shown a surplus product, in favor of M. Saintmarc's plan, varying, according to the delicacy of management, from three to six per cent.

M. Saintmarc and M. Alégre, have also introduced into practise in distillation, some changes in the previous process of fermentation, which effect an improvement in the quality of the wash, and give an increase in the quantity of spirit. See article FERMENTATION.

They have likewise constructed an apparatus, secured by patent, for improving the rectification of raw or feint spirits, by which a greater degree of purity is attained than by the common rectifying still; and the fine flavors necessary for making compounds are employed more beneficially and delicately than by the existing process. For a description of this still, see article RECTIFICATION.

We have devoted a large space to the examination of this question. But the apparatus and process united, present too interesting a subject of enquiry and investigation, as compared with the existing systems, to admit of its being slightly passed over.

We shall conclude with a few observations of the proprietors of the patent, addressed alike to the interest of the British distiller and the West India planter. They say, when speaking of the advantages the still offers:—'These advantages consist, shortly, in the comparatively low price of the still—the trifling expense of erecting the furnace—the small consumption of fuel and water—the diminished number, dimensions, and cost of the necessary vats, pumps, pipes, &c., connected with the still—the limited space required for its erection—the saving of time in the process of distillation resulting from its use—its uniform applicability to every liquid that has undergone, or is susceptible of, vinous fermentation (as well as to numerous other branches of chemical

science), and, especially, in the production, by one operation from the wash, of a spirit, exceeding in strength and purity all those which have hitherto been obtained in this country, by any single process. To these important considerations, which are alike applicable to the united kingdom and the colonies, may be added, as especially so to the latter, the no less important points of the production of rum one-third higher proof than the average of what is now obtained in many of them; and the extensive saving in puncheons, freight, and charges, when shipped in that concentrated state.'

'It is unnecessary to go into details of the saving in puncheons, freight and charges, when rum is shipped at a high proof. It is a matter of too much importance, and too easily estimated by a planter, to require figures in confirmation of the statement. But the actual saving to him in these items, however considerable, is only a part of the advantage. The spirit thus obtained, from its greater purity, bears a value in the market much above that determined by the relative degree of strength, as compared with rum of a lower standard. And as this improvement in strength and quality is effected, not at an augmentation, but at a considerable diminution of expense, it is unquestionable, that, when employed for purposes of barter, according to the practice of the colonies, at a reduced strength, that reduction from the high strength at which it is brought over by this apparatus, may be made consistently with a preservation of its purity; and its value, as an article of barter, thus enhanced in a considerable degree.'

They conclude—

'It must be recollected that this is not an apparatus the principle of which is untried. For some years a still of the same kind—less perfect, it is true, but still embodying the main principle of this, has been used in France, by the inventor there (who is also one of the proprietors of the present patent), with the most entire success. This has, therefore, the great advantage of having corrected, in its construction, whatever defects were found in the original invention, from which no new invention is entirely exempt; such corrections being founded on eighteen months' experience in France. And the opinion is warranted, that the apparatus constituting the subject of this patent, and of the present remarks, is, in its principle, the most sound and scientific, and the most sure and perfect in its operations, of any that has been adapted to the art of distillation in this country.'

The practical uses of distillation in chemistry are too numerous to be mentioned. By it the volatile part of any substance is separated from that which is fixed, as in the distillation of turpentine, in which the essential oil rises and the rosin is left behind; the more evaporable is separated from the less evaporable, as in the preparation or rectification of ardent spirit; liquids are freed from foreign or accidental impurities, as in the distillation of common water: volatile substances are united in an easy and commodious manner, as in preparing the odorous distilled waters of aromatic vegetables: bodies are decomposed and analysed, new compounds are formed, and a

knowledge is gained of the native and chemical properties of natural substances.

Common distillation of aromatic vegetables is a simple process, but gives room for some nicety of management, particularly in the regulation of the heat and the quantity of water, which can only be learned by experience. As an example, common peppermint water may be given, and is thus made: put a pound and a half of dry peppermint in a still, cover it with water, put on the capital, luting the joints with wet bladder or pasted paper; bring the liquor to boil quickly, and keep it just boiling till about a gallon of water has run over. The residue in the still is then thrown away as useless. The water that comes over first is somewhat turbid, owing to the excess of essential oil that it contains, and in consequence is by much the strongest. By rest it becomes clear, and a fine pellicle of oil rises to the top.

The following circumstances are chiefly observable in common distillation:—The substance from which the distillation is made in some cases requires previous treatment, in others none. The petals of flowers, such as roses and jasmine, may be used immediately, or only after the gentlest drying. The aromatic herbaceous vegetables, such as peppermint, may be used indiscriminately fresh or dry, observing, that as the plant is much more watery when fresh than when dry, more water may be added in the distillation of the latter than of the former. Hard woods should be rasped or bruised, and, as they are less easily penetrated by the water, they should be macerated in it without heat for from one or two days to as many weeks, before distillation.

The quantity of water to be used varies much according to circumstances. It should be always so much as during the whole process to cover all that part of the still which is immediately over the fire, otherwise the vegetable matter will scorch, and give a very disagreeable burnt taste and smell, or empyreuma, to the distilled liquor. On the other hand, too much water makes the distilled liquor unnecessarily dilute. In general, fresh vegetables require about thrice their weight of water; and when dry, five or six times. The still should never be more than about three-fourths full, or even less when succulent vegetables are used, to prevent boiling over. The management of the fire is of some consequence, to prevent boiling over and empyreuma on the one hand, and on the other to give heat enough for extraction of the aromatic principle. Where a water bath is used (which, however, is tedious, and seldom if ever necessary), all danger of excess of heat is avoided, but it is often requisite to increase the heat of the bath by adding salt to the water. When, in distilling without a bath, too much heat is used, there is danger either of blowing off the capital, not without risk to the by-stander, when the liquor boils with extreme vehemence (which is particularly likely to occur when the still is too full of bulky herbaceous vegetables, that rise in the capital and partly choke up the opening into the worm-pipe), or else the liquor boils over into the worm-pipe, and mixes a decoction of the vegetable with the distilled water. This is soon perceived by the condensed

liquor coming out at the bottom of the worm, not in a clear uniform streamlet, but by gushes and starts, with a gurgling noise, and fouled or colored. When this accident happens, the fire should be entirely slackened, the capital taken off, the liquor already come over returned into the still, and the distillation begun again with more care. When the stream of distilled water flows evenly, and the boiling liquor is heard to simmer moderately in the boiler, the operator will know that the process is going on properly.

The quantity of aromatic water to be obtained from a given weight of any vegetable cannot be laid down with accuracy, so as to obtain a liquor of uniform strength, as (independently of any difference in conducting the operation) the season of the year, the length of drying, and other causes, will materially affect the intensity of aroma in the vegetable. The taste, therefore, is a better criterion to judge when to stop the process, as the liquor will run nearly tasteless long before the water has all boiled away. Some advantage is gained by mixing all the distilled liquor together, as the first portion has generally rather more essential oil than it can retain, and the last portion has less.

The laws which relate to the management of a distillery are numerous and important; we subjoin a brief abstract. By 43 Geo. III. c. 69, every distiller or maker of low wines or spirits for sale, or exportation, within England, shall take out a licence, which shall be charged with the yearly sum of £10; and every rectifier of spirits within England, shall pay for such licence a duty of £5; and such licence shall be renewed annually before the end of the year, on pain of forfeiting, if a common distiller, £200; if a molass distiller or rectifier, £30. (24 Geo. III. c. 41.) No person shall be deemed a rectifier or compounder who shall not have an entered still capable of containing, exclusive of the head, 120 gallons, which shall have suitable tubs and worms, and be used for rectifying British spirits for sale, (26 Geo. III. c. 73. By 19 Geo. III. c. 50,) every such distiller shall cause to be put up in large characters, over the outward door of every place used for making or keeping of British-made spirits, the words *Distiller, Rectifier, or Compounder of Spirituous Liquors*, on pain of £100; and if any person shall buy any such spirits of any person not having such words over his door, he shall forfeit £50. By 21 Geo. III. c. 55, if any distiller or dealer shall buy any British-made spirits (except, as in the former case, at the public sales of condemned spirits by the commissioners of excise) he shall forfeit £500. By 19 Geo. III. c. 50, no person shall be permitted to make entry of any work-house or place, or of any still or utensil for making, distilling, or of keeping low wines or spirits, unless he shall occupy a tenement of £10 a year, assessed in his own name, and paying the parish-rates; and by 21 Geo. III. c. 55, in order to prevent private distillations, every person who shall make or distill any low wines or spirits, whether for sale or not for sale, shall be deemed a common distiller for sale, and shall enter his still and vessels at the next office of excise; and every person making or keeping any wash fit for dis-

tillation, and having in his custody any still, shall be deemed a common distiller for sale, and be liable to the several duties, and subject to the survey of the officers. No common distiller or maker of low wines, spirits, or strong waters, for sale, shall set up any tun, cask, wash-back, copper, still, or other vessel, for making or keeping any worts, wash, low wines, spirits, or strong waters; nor alter, nor enlarge the same, nor have any of them private or concealed, or any private warehouse, cellar, &c., for making or keeping any of the said liquors, without first giving notice at the next office of excise, on pain of £20; and he in whose occupation any of the same shall be, shall forfeit £50; 8 and 9 Wil. c. 19. And by 24 Geo. II. c. 40, every distiller shall, ten days before he distils or makes any spirituous liquors, enter every vessel, &c., at the next office of excise, on pain of £50 for every still or vessel used and not entered. And every distiller shall, four days before he begins to brew any grain, &c., make entry at the next excise office, of all coppers, vessels, &c., inserting in such entry the day on which he intends to begin, and the use to which such vessel is to be applied, which shall not be altered on pain of forfeiting £100, with the liquor, which may be seized by any officer of excise, 26 Geo. III. c. 73. And by 21 Geo. III. c. 55, no person shall make use of any vessel, room, &c., for making wash for the distillation of low wines and spirits, without giving a notice at the next office of excise, on pain of £50 for every vessel, room, &c., used without notice: Nor shall any person withdraw his entry whilst any duty is depending, or any vessels are standing, except by changing it on the day of its being withdrawn, (23 Geo. III. c. 70.; 26 Geo. III. c. 73.) No person is allowed to have any still or number of stills, which singly or together contain less than 100 gallons, under the penalty of £100 for every still; and the wash-still shall contain at least 400 gallons, exclusive of the head, under the same penalty. 2 Geo. III. c. 5; and 14 Geo. III. c. 73.

Distillers are to show to the officer every still or other vessel entered; and the vessels are to be marked by the gauger; and defacing the mark, or rubbing out, incurs a penalty of £20. 26 Geo. II. c. 40.

Distillers who use private pipes, &c., for conveyance of distilled liquors, forfeit £100. (10 and 11 Wil. c. 4.) They shall also make holes in the breast of the still for taking gauges and samples, and provide locks on the still-heads, the holes, discharge-cocks, and furnace-door, under a penalty of £50, and of £200 for breaking or wilfully damaging such lock or fastening, after it has been secured by the officer. 12 Geo. III. c. 46; 14 Geo. III. c. 73.

The distiller shall provide proper ladders for the officer to examine each still, and assist in setting them up, on pain of £200. 23 Geo. III. c. 70.

Distillers are required to give notice to the officer of excise before they receive any wine, cyder, &c., or any kind of fermented wash, on pain of £50, and also before they charge or open the still, expressing and describing the number and marks of the wash-batches used and they are prohibited

from charging the still with any other, under a penalty of £100. 24 Geo. II. c. 40; 12 Geo. III. c. 46; 14 Geo. III. c. 73.

Distillers, in preparing grist for wash, that use more in the proportion of one quarter of wheat to two quarters of any other grain, forfeit £50. 33 Geo. II. c. 9.

If any corn distiller, or maker of low wines or spirits from corn or grain, shall make use of any molasses, coarse sugar, honey, or any composition or extract of sugar, in brewing or preparing his wash for distillation, or receive such materials into his custody, exceeding 10 lbs. in weight, he shall forfeit £100; and officers may take samples of the wash in any vessel, paying for the same at the rate of 1s. 6d. a gallon; and if the distiller shall obstruct him, he shall forfeit £100. 23 Geo. III. c. 70.

Officers are to attend at the still-houses, after due notice, to see that the wash-stills are properly filled, and when they are fully charged to lock and secure them. And if any person shall open any still-head, &c., after they have been so locked and before they are opened by the officer of excise, or shall wilfully damage any lock or fastening, he shall forfeit £200. 12 Geo. III. c. 46.

Removing or concealing wash, &c., in the possession of any distiller, incurs a forfeiture of the same; and such distiller, and the person employed to remove, or who shall receive the same, shall severally forfeit 10s. for every gallon of it; and no wort, wash, &c., shall be put into the still or removed from the back or vessel in which it was fermented, till the same has been gauged, in the penalty of £200 and double duty.
